Liberton is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend £326 14s. 7d.; glebe £20. Unappropriated teinds £306 0s. 9d. The parish-church was built in 1815. Sittings 1,430. It is a handsome semi-Gothic structure, surmounted by a square tower with pinnacles, and forming a conspicuous and pleasing object in the landscape environing Edinburgh. The minister's survey, in 1835, showed the population to have then, from the rasure of a village and other causes, decreased to 3,562,—of whom 2,873 were churchmen, and 643 were dissenters. The populous village and district of Gilmerton are now detached *quoad sacra* from Liberton, and make a separate parish. A preaching-station of the Establishment is maintained at the village of Niddry. Parish schoolmaster's salary £34 4s. 4½d., with £46 fees, and £2 8s. 9½d. other emoluments. There are eight private schools.—An hospital anciently stood at Upper Liberton, a little west of Kirk-Liberton; and may have occasioned the name Leper-town, supposed to be the original form of the modern appellation Liberton. At the same place stood, till within the last ten years, a tall peel-house or tower, which made some pretensions to have belonged to a haron called Macheth, who held a considerable part of the lands of Liberton during the reign of David I., and witnessed some of David's charters. In connexion

with this barony, Liberton comes first ecclesiastically into notice, as a chapelry erected by him, and subordinated to the church of St. Cuthbert. The chapel, situated at Kirk-Liberton, was probably dedicated to the Virgin, there having been a spring near it called Our Lady's well; and it had attached to it a glebe of two oxgates of land. With St. Cuthbert's church, David I. granted the chapel to the canons of Holyrood; and he gave also to the same parties, from Crown property, brushwood of his woodlands of Liberton, and the tithes of a mill at Nether Liberton. In 1240, the chapelry, at the request of the abbot of Holyrood, was disjoined by the bishop of St. Andrews from the parish of St. Cuthbert's, and constituted a rectory belonging to the abbey; and thence till the Reformation, it was served by a vicar. For a brief period succeeding the year 1633, it was a prebend of the short-lived and inglorious bishopric of Edinburgh; and, at the final abolition of episcopacy, it reverted to the disposal of the Crown. Subordinate to the parish-church, there were in popish times two chapels. St. Catherine's, the more ancient, stood in the vicinity of the existing cognominal mansion and bituminous well. The chapel was surrounded by a burying-ground, but, along with that accompaniment, was completely demolished after the Reformation, and long ago has quite disappeared. The other chapel stood at Niddry, close to the site of the present mansion, and is commemorated by its burying-ground, which continues to be in use, and by some faint vestiges of its walls. It was founded in 1389 by Wauchope of Niddry, dedicated to the Virgin Mary; and was afterwards re-endowed by a descendant with a manse and glebe. At the Reformation, both the chapelry and its revenues were attached to Liberton church. A chapel built by James V. at Bridgend, and a presbyterian chapel, built at Craigmillar during the indulgence given by James VII., still exist, and are used as stables. The Borough-muir, as appears from a charter of confirmation dated 1516, belonged, at one time, to the nuns of Sheens, votaries of the Italian St. Catherine of Sienna.—Among distinguished natives of the parish have been Mr. Clement Little of Upper Liberton, who founded the College library of Edinburgh,—Sir Symon de Preston of Craigmillar, in whose house as provost in Edinburgh Queen Mary was lodged on the night after the affair of Carberry-hill,—Sir John Gilmour of Craigmillar, who was Lord-president of the Court-of-session about the period of the Restoration,—Gilbert Wauchope and Sir John Wauchope of Niddry, the former a member of the celebrated Reformation parliament of 1560, and the latter a distinguished Covenanter, and a member of the General Assembly of 1648,—and Sir James Stewart of Goodtrees, who, from 1692 till 1713, filled the office of Lord-advocate of Scotland. The Wauchopes of Niddry have had a seat in the parish for nearly 500 years, and are probably the oldest family in Mid-Lothian. In the Transactions of the Society of Scottish Antiquaries is a paper on Liherton, written by the Rev. Thomas Whyte, its minister from 1752 to 1789, and containing minute and learned notices of its families and localities.

**LICHART**, or **LUICHART (LOCH)**, a lake in Ross-shire, on the borders of the parish of Gairloch, about 4 miles in length, and from half-a-mile to 1 mile in breadth. It discharges itself by a river of the same name into the **CONAN**: which see.

**LIDDEL (THE)**, a river of the parish of Castletown, Roxburghshire, and of the western part of the boundary with England. It rises in the extreme north corner of Castletown, in a vast bog called Dead water, the source also at some miles' distance of the English Tyne; receives, in the early part of its

course, many considerable feeders, which all approach and enter it at considerably acute angles; and runs 16 miles south-westward, swollen at different stages by the Hermitage, the Twceden, the Blackburn, and the Tinnis, when it is joined, on its left bank, by Kershope-water, the boundary, for  $7\frac{1}{2}$  miles, with England. For 10 miles from its source its banks are bleak and naked,—in most places, a mountain gorge or glen; but afterwards they are spread out in a beautiful though not broad valley, carpeted with fine verdure, adorned with beautiful plantations, and screened by picturesque heights. After its confluence with the Kershope, it continues its south-westerly direction, becomes beautifully sinuous, and runs in a straight line  $7\frac{1}{2}$  miles to the Esk, dividing Castletown  $2\frac{1}{2}$  miles, and Canobie in Dumfries-shire 5 miles from England. Its additional tributaries are numerous, but all individually small. In all the lower part of its course, its banks are sylvan, picturesque, and, at intervals, romantic; and, at a cataract called Penton-linns, 3 miles from the confluence with the Esk, they are wildly yet beautifully grand. Stupendous rocky precipices fall sheer down to the bed of the stream, and wall up the water within a narrow broken channel; they have, along their face on the Scottish side a terrace-walk carried along a ledge, and affording a view of the vexed and foaming stream, torn into shreds and lashed into foam among the obstructing rocks of the cataract; and they are fringed and patched in their crevices with a rich variety and fine tinting of exuberant copsewood. In the middle of the cataract rises from the river's bed a solitary large rock crowned with sbrubs, whose broken and wood-adorned summit figures majestically in a conflict with the roaring waters during a high flood. At its confluence with the Esk a sort of promontory is formed, on which stand the ruins of a fort called in the district the Strength of Liddel. The Liddel is an excellent trouting-stream.

**LIDDESDALE**, a district of Roxburghshire, drained by the Liddel, taking its name from that stream, and identical, as to both limits and history, with the parish of **CASTLETOWN**: which see. The lordship of Liddesdale seems to have been early the property of remarkable men. It was forfeited, in 1320, by William Souils, when he plotted against Robert Bruce; it was granted by Robert Bruce to his son Robert, who soon after died; it was transferred, in 1342, by David II., to William, Earl of Douglas; and, after various forfeitures, it went finally into the possession of the prosperous and potent family of Scott. In 1747, the Duke of Buccleuch received £600 as compensation for its hereditary jurisdiction, which was then abolished.

**LIFF AND BENVIE**, an united parish in the south-east extremity of Forfarshire; bounded on the north by Auchterhouse; on the north-east by Strathmartine and Mains; on the east by Dundee; on the south by the frith of Tay; and on the south-west and west by Perthshire. It is nearly a parallelogram of  $3\frac{1}{2}$  miles by  $1\frac{1}{2}$  stretching north and south. The streams which drain it, with the exception of Dighty-water, which, with a small tributary, forms the northern boundary, are described in the article **INVERGOWRIE**: which see. The surface rises, in general, from the Tay, and forms, on the west, a part of the Carse of Gowrie. The soil, in the southern division, is either clay or a black-coloured loam; and, toward the north, it is, in general, light and sandy, and rests occasionally on rock or mortar. Agricultural prowess and taste are everywhere apparent. The eastern division approaching within  $1\frac{1}{2}$  mile of the populous burgh of Dundee, the lands of it pay high rents, and enjoy every appliance of improvement. Very exten-

sive plantations stretch along the north; and woods, abundant enough for shelter and ornament, fling their shade over the other districts. Near the centre of the parish stands Camperdown-house,—so named from Admiral Lord Duncan's victory of 1797, and built for that noble and gallant officer by Government. The edifice is constructed of white sandstone, exhibits a fine specimen of Grecian architecture, and is now the property of Admiral Lord Duncan's son, the Earl of Camperdown, raised to the earldom in 1831. Lundie, the paternal property of the Earl, stands in the north-east corner of the parish. Half-a-mile south of the village of Liff stands Gray-house, the family-mansion of Earl Gray, finely situated on a gentle ascent amid large old trees. Upwards of 2 miles west of Gray-house, near the extremity of the western projecting stripe of the parish, stands the spacious mansion of Balrudderie, erected by the keen and skillful agriculturist, Mr. Wehster. Close on the western boundary of the main body of the parish,  $4\frac{1}{2}$  miles from Dundee, stands the village of Liff, and, a mile south of it, stands the village of Benvie. Both are ancient, and were for some time prosperous, but have suffered grievous decay and desertion. Invergowrie, on the coast, and Lochec, on the extreme east—both, but especially the latter—places of considerable importance, will be found separately noticed. In these villages, in some hamlets, and in detached houses, reside a large population strictly suburban in position, employment, and character to Dundee. The weaving of linen fabrics for the Dundee manufacturers is extensively conducted. Freestone abounds in the parish, and there are several quarries of gray slate. In the neighbourhood of Lundie-house was discovered, toward the close of last century, a subterranean building of several apartments, rude in structure, and uncemented by mortar. Close on the boundary with Dundee is a place called Pitalpie, or Pit of Alpin, from having been the scene of that memorable engagement, in the 9th century, between the Scots and the Picts, when the former lost victory, many nobles, and their king: See DUNDEE. The parish is traversed by the Dundee and Newtyle railway, by the turnpikes from Dundee respectively to Newtyle, Blairgowrie, and Perth, and by various other roads, and enjoys other facilities of communication through its own port of Invergowrie, and by vicinity to Dundee. Population, in 1801, 2,194; in 1831, 4,217. Houses 740. Assessed property, in 1815, not returned.—The parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, Earl Gray. Stipend £267 17s. 4d.; glebe £18 18s. Unappropriated tithes £1,006 14s. 6d. A very populous part of the eastern division is included in the *quoad sacra* parish of Lochec. Liff and Benvie were united in 1758. The schools, exclusive of those in Lochec parish, are two,—one of them private. Parochial schoolmaster's salary, £34 4s.  $4\frac{1}{2}$ d., with £36 15s. fees.

LILLIESLEAF, a parish in the north-west division of Roxburghshire; bounded on the north-west by the Roxburghshire part of Selkirk parish; on the north by Bowden; on the east by Ancrum; on the south by Minto and a detached part of Selkirkshire; and on the west by Ashkirk. Its extreme length from east to west is 5 miles; its mean breadth is about 2 miles and a furlong; and its area is upwards of 7,000 acres. Ale-water, remarkable for the fine quality of its trouts, forms, for half-a-mile, the southern boundary; flows 3 miles north-eastward through the interior, runs 3 miles dechoungly along the northern and eastern boundaries, and passes away eastward into Ancrum. Several broad low ridges, and waving alternations of slope and valley, diversify the surface of the parish; and though all capable of

cultivation, and at one time subjected to the plough, are distributed in nearly equal proportions into arable lands and pasture. About 600 acres are planted, and about 50 are mossy and waste. The soil is partly a light sand, partly clay, and partly a rich loam. Two marl pits have given up much treasure to the arable grounds. Agriculture was greatly improved here by the example and exertions of Sir John Buchanan Riddell, Bart. of Riddell; but, upon the death of that gentleman in 1819, his extensive lands, which had been nearly all disposed in arable farms, were laid out in grass, and, for the most part, continue to be unploughed. On the left bank of Ale-water,  $\frac{3}{4}$  of a mile west of the village of Lilliesleaf, stands Riddell-house. Soon after the death of Sir John B. Riddell, Bart., this mansion and the Riddell estate were sold to a gentleman of the name of Sprot; yet, in spite of their having found a new proprietor, they possess a strong antiquarian interest. "The family of Riddell," says Sir Walter Scott, in his Notes to the 'Lay of the Last Minstrel,' "have been very long in possession of the harony called Riddell or Ryedale, part of which still bears the latter name. Tradition carries their antiquity to a point extremely remote, and is in some degree sanctioned by the discovery of two stone-coffins,—one containing an earthen pot filled with ashes and arms, bearing a legible date, A. D. 727, the other dated 936, and filled with the bones of a man of gigantic size. These coffins were discovered in the foundations of what was, but has long ceased to be, the chapel of Riddell, and, as it was argued with plausibility that they contained the remains of some ancestors of the family, they were deposited in the modern place of sepulture, comparatively so termed, though built in 1110." A well-informed and elegant historian supposes the family to have settled at Riddell in the 7th or the 8th century. Grants of land, or confirmation charters and bulls, were given to them before the close of the 12th century, by David I. and Malcolm II., and by Popes Adrian V. and Alexander III. From the earliest traceable ancestor of the family down to him who died in 1821, the lands of Riddell and the Whittunes descended, through a long train of ancestors, without once diverging from direct lineal succession. Mr. Archibald Riddell, brother to the laird of Riddell, was a devout, zealous, distinguished covenanting minister, a little after the middle of the 17th century, took part with the celebrated Blackadder in conducting field-preachings in the south, and, about the year 1679, suffered imprisonment from the persecutors, who truculently wielded the civil power. Lilliesleaf, or Lillsly-muir, was the scene of frequent 'conventicles,' as they are called,—multitudinous and endangered assemblies of the Covenanters for hearing the word of God. Many of the parishioners appear to have been stout opponents of the court-religion,—and several seem to have suffered for their principles. Frequent skirmishes occurred in the parish with the troops of the persecutors; and a numerous party of presbyterians, on their march to Bothwell-bridge, were attacked by an overpowering force, fled to Bewley-moss in the parish, and sank in the morass. In 1771, when the old church was pulled down, a coffin, containing several human skulls—lodged there, it is supposed, to prevent their being exposed on the ports of the neighbouring towns—was found beneath one of the seats.—The village of Lilliesleaf stands a little north of the centre of the parish, 6 miles east of Selkirk, 9 north of Hawick, and 10 west of Jedburgh, and 6 south-west of Lessudden. It has a population of about 400, is the site of the parish-church and of a meeting-house of the United Secession, and straggles to a great length along both sides of a road, in

houses of generally poor appearance. The place has no manufacture, no stir, no command of fine scenery, nothing whatever to relieve its pervading monotony and dullness. On the estate of Riddell is a saw-mill. The parish has no turnpike, but is not destitute of good subordinate roads. Population, in 1801, 673; in 1831, 781. Houses 146. Assessed property, in 1815, £6,328.—Lilliesleaf is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend £243 8s. 5d.; glebe £17. Unappropriated tithes £80 19s. 3d. Schoolmaster's salary £30, with £13 13s. 4d. fees, and about £10 other emoluments. A non-parochial school was attended, in 1834, by 72 scholars.—In 1128, David I. granted to the monks of Kelso the tithes of the mill of Lilliesleaf, and also 30 acres of land lying between the Ale and the village. The ancient church was of high but of unascertained date, and, in the Inquisitio of Earl David, was found to have belonged, before the year 1116, to the church of Glasgow, and was early confirmed to the bishopric of that city by several papal bulls. At Hermiston, in the southern extremity of the parish, there was anciently a church, which also belonged to Glasgow. At a place still called Chapel, half-a-mile north-east of the village, formerly stood a chapel, around which was a cemetery called Cbapel-park.

LIMEKILNS, a considerable village and sea-port in Fifeshire, in the parish of Dunfermline; 3 miles south of that town; 4 west of Inverkeithing; and 4 east of Torryburn. The harbour is excellent, admitting with ease, at stream-tides, vessels of 300 tons burden. It carries on an extensive trade in lime and coal. It had 1,127 inhabitants in 1836.—A United Secession congregation was established here in 1784. Church built in 1825; sittings 1,056; cost £2,000. Stipend £150, with manse.

LINCLUDEN, an ancient and ruined religious house, 1½ mile north of Dumfries, but situated on the right bank of the Cluden or Cairn at its confluence with the Nitb, in the parish of Terregles, Kirkcudbrightshire. The house was originally a convent for Benedictine or Black nuns, and was founded by Ucbred, son to Fergus, and father to Roland, lords of Galloway. But about the end of the 14th century, Archibald, Earl of Douglas, and Lord of Galloway, called the Grim, expelled the nuns on account of debauched conduct, and converted the establishment into a college or provosty, for a provost and 12 canons,—afterwards so altered as to admit a provost, 8 prebendaries, 24 beadsmen, and a chaplain. The Earls of Douglas, when in the zenith of their power, expended considerable sums in ornamenting the place, and, when wardens of the West marches, adopted it as their favourite residence. From what remains of the ancient building, which is part of the provost's house, the chancel, and some of the south wall of the church, an idea may easily be attained of its former splendour. The choir, in particular, was finished in the finest style of the florid Gothic; the roof was treble, in the manner of that of King's college, Cambridge; and the trusses, whence sprung the ribbed arch-work, are covered with armorial bearings. Over the door of the vestry are the arms of the Grim Earl, the founder of the provosty, and those of his lady, who was heiress of Bothwell. Both he and Ucbred, the founder of the nunnery, were buried in the place. In the chancel is the elegant tomb of Margaret, daughter of Robert III., and wife of Archibald, Earl of Douglas, 1st Duke of Teronan, and son of Archibald the Grim. "Her effigy," at full length, says Mr. Penman, "lay on the stone, her head resting on two cushions; but the figure is now mutilated; and her

bones, till lately, were scattered about in a most indecent manner, by some wretches who broke open the repository in search of treasure." The tomb is in the form of an arch, all the parts most beautifully carved. On the middle of the arch is the heart, the armorial bearing of the Douglasses, guarded by three chalices set crosswise, with a star near each,—the chalices supposed to be emblematic of the office of the Douglasses, as cup-bearers of Scotland, the stars the original bearings of the family, and the heart the proud addition made to their insignia after the good Sir James carried that of Robert Bruce to the Holy Land. On the wall is the inscription: "A l'aide de Dieu;" and at some distance beneath: "Hic jacet D—na Margareta regis Scotiæ filia quondam Comitessa de Douglas, D—na Gallovidiæ et Vallis Annandiæ." In the front of the tomb are nine shields, containing as many coats-of-arms, one with only the stars, others with the stars and heart, and others of their lordships of Galloway, Annandale and Liddesdale. Along the walls of the ruin are a profusion of ivy and a few dwarfish bushes, and around are a few trees which form an interrupted and romantic shade. On the north is a meadow, sleepily traversed by the Cluden, and sending up umbrageously over the stream a pile of alders. On the east is a lovely little plain, spread out like an esplanade, half its circle edged with the Cairn, and the beautifully majestic Nitb. On the south-east were, not long ago, very distinct vestiges of a bowling-green, flower-garden, and parterres; and beyond them is a huge artificial mound, cut round to its summit by a spiral walk, and surmounted all round by a turf-seat which commands a fascinating view of the 'meeting of the waters,' immediately below, and of the joyous and warm-hearted landscape which environs Dumfries. The place is much cherished, and fondly spoken of by the inhabitants of that polished burgh, and was a favourite haunt of the poet Burns.—The provosts of Lincluden were in general men of considerable eminence; and they, in several instances, held important offices in the state. The first was Euse; the second was Alexander Cairns, chamberlain to the Earl of Douglas; the third was John Cameron, who was appointed in 1424, and afterwards to be secretary, lord-privy-seal, and chancellor of the kingdom, archbishop of Glasgow, and one of the delegates of the church of Scotland to the council of Basil; the fourth was John Macgilbauck, rector of Parton, and secretary to the Countess-dowager of Douglas; the fifth was Halyburton, whose arms were carved on the south wall of the church; the sixth, John Winchester, who afterwards became bishop of Moray; the seventh, John Methven, who became secretary-of-state and an ambassador of the court; the eighth, James Lindsay, in 1449, who was made keeper of the privy-seal, and an ambassador to England; the ninth, tenth, and eleventh, were persons of the name of Livingstone, Herries, and Anderson, men of family and note; the twelfth was Andrew Stewart, 3d son of Sir James Stewart, the Black knight of Lorn, and he was, at the same time, dean of faculty of the university of Glasgow, and afterwards became bishop of Moray; the thirteenth was George Hepburn, uncle to the 1st Earl of Bothwell, and, while he held several benefices, he was also lord-treasurer of Scotland, and eventually fell at the side of his monarch on the field of Flodden; the fourteenth was William Stewart, son of Sir Thomas Stewart of Minto, and he became, in 1530, lord-treasurer of Scotland, and afterwards bishop of Aberdeen; and those who followed were a Maxwell and three Douglasses. The last was Mr. Robert Douglas, a bastard son of Sir James Douglas of Drumlanrig. He was appointed provost in 1547,

obtained an act of legitimation in 1559, and was allowed to enjoy the benefice during about 40 years after the Reformation. His grand-nephew, William Douglas, the heir of Drumlanrig, obtained a reversion of the provostry, and after Robert's death, enjoyed its property and revenues during his own life. Succeeding to the family estates of Drumlanrig, and created 1st Viscount Drumlanrig, and next Earl of Queensberry, he got vested in himself and his heirs the patronage and tithes of the churches of Terregles, Lochrutton, Colvend, Kirkhean, and Caerlaverock, belonging to the college, and also a small part of its lands. But the major part of the property of the establishment was, in 1611, granted, in different shares, to Sir Robert Gordon of Lochinvar, and to John Murray, one of the grooms of the King's bed-chamber.

LINDEAN. See GALASHIELS.

LINDORES (LOCH). See ABDIE.

LINGA, a small island on the west of the isle of Stronsay, from which it is separated by Linga sound. It is sometimes distinguished from another smaller islet of the same name to the north-west of Stronsay, by the title Muckle Linga.

LINGA, two of the smaller Shetland isles, one lying between Yell and the mainland, and the other between Yell and Unst.

LINGAY, a small island of the Hebrides, belonging to the parish of BARRA [which sec], and noted for its black cattle and deer.

LINKTOWN of KIRKCALDY, a village or burgh, adjoining to that burgh, hut lying in the parish of ABBOTSHALL: which see.

LINLITHGOW,\* a parish of nearly a square form, its sides parallel with the lines of latitude and longitude, with a projection on the west side, in Linlithgowshire or West Lothian. Measured generally, its square is a mile and a furlong deep, and its western projection 2 miles long, and a mile and a furlong in mean breadth; hut measured from extreme points, in the sinuosities of its outline, it extends  $4\frac{1}{2}$  miles due south from Bonside; and  $6\frac{1}{2}$  miles due east from the most westerly end of the Avon. Its area is supposed to be 7,600 Scottish acres. The parish is bounded on the north by Borrowstounness,

and on the east by Aherncorn and the eastern part of Ecclesmachan; on the south by Uphall, the western part of Ecclesmachan, and Bathgate; and on the west by Torphichen and Stirlingshire. The surface toward the south is hilly, or gently upland, and, at a distance of from 1 to  $1\frac{1}{2}$  mile from the southern boundary, sends up what, in a champaign country like West Lothian, are noticeable summits. These are three in number, all on a line, each two at an interval of  $1\frac{1}{2}$  milc. The eastern one, called Binny-craig, was once fabled by superstition to be a favourite haunt of the fairies; the middle one is properly a congeries of heights, called Riccarton-hills; and the western one, which is the highest and bears the name of Cocklerue, or Cuckold le Roi, rises about 500 feet above sea-level. The northern division, though diversified in surface, may be regarded as nearly a plain. The soil in the south and south-east is a pretty strong clay, stiff, and upon a retentive subsoil, more suited to pasturage than to the plough; and, in all other parts, is generally light and free, easily cultivated, and rich in its returns. Geographical skill, and the improver's taste, have walked athwart every section and corner of the parish, and frilled it with hedges and rows of trees, and brought it all into prime cultivation. The river Avon, beautiful in the features of the deep and tufted glen along which it flows, and not a niggard in its store of trouts, and aiding calico-printing and bleaching operations by the plenty and purity of its waters, runs along the western boundary  $3\frac{1}{2}$  miles in a straight line, but at least 5 along its sinuous channel. Nethermill-hum and Main-hum both rise in the south-west corner, and flow the former north-eastward, and the latter eastward, each briefly lingering on the boundary before passing into the common territory. Lochend, formed by an expansion of Mains-hum, a little south-east of Riccarton-hills, is a very tiny lake.—Linlithgow-loch, stretching  $\frac{3}{4}$  of a mile eastward, immediately north of the burgh, and covering about 80 acres, is a fine sheet of water, well stored with pike, perch, and eels, and having an islet toward its east end. This lake was anciently, and we believe is still occasionally frequented by wild swans.† A profusion of excellent spring water, particularly in the burgh and its

\* The orthography of the name of this place has been very various. The most ancient form in which it appears, is that of the charter of David I. This, in the Register of the Privy Seal, in a confirmation by Robert III., is *Linlithgu*. Maitland gives us *Linlithca*, from what he calls "the beautiful original in the archives of Edinburgh." Elsewhere, a charter of the same prince is referred to, in which he confers on the prior and canons of St. Andrews, "in puram et perpetuum elemosynam, ecclesiam suam de *Lintygu*." In Ayliffe's Charters, it appears both as *Lintiscu* and *Lynlithkou*. The accurate D. Macpherson had met with other varieties, as those of *Linticath*, *Lintisco*, and *Linlithquu*. Even so early as the era of Robert II. it occasionally appears in the abbreviated form of *Lithca*, nearly the same which is still retained as the vulgar name of this burgh. It is also written *Lithgu*. John Hardyng, most probably from the manner in which he heard the name expressed, in his peregrinations through Scotland, in the reign of Henry V., in order to collect proofs of the dependency of our ancient kingdom on the English crown, uses the orthography of *Lithcove*, *Lithkove*, and *Lythko*. "I can form no conjecture," says Dr. Jamieson, "as to Buchanan's reason for denominating this place *Linlithgow*. Irvine has explained Linlithgow as signifying 'the Lake of the black hound.' This corresponds with the Gaelic etymon that has been given, founded on some silly tradition about a black bitch, that was found fastened to a tree on the east side of the loch. Some, indeed, who have traced the word to a Gaelic origin, have asserted that *Linlith* *teachgu* signifies 'the Lake or Pool of the black ascent,' or 'heathy slant;' *dubh*, 'black,' taking the sound of *cu* or *gu*, from its construction with the preceding term, denoting ascent. It may, however, be from the old British. Baxter has fancifully deduced the latter part of the name, *Lithgow*, from C. B. *ladu coit*, which he renders 'curia sylvarum.' As *lyn* also denotes a lake, perhaps more strictly than the Gaelic synonyme, *lyth* is used to express that which spreads out, *led* breadth; and *cau* a hollow, *cu* a concavity. It may thus signify, 'the Broad hollow on the Lake,' or 'the Lake of the Broad hollow'; as the lake is undoubtedly the most striking object in this site."

† In the 'Mercurius Caledonius' of January 25, 1661, we find the following curious illustration of the wretched servility of the press in connexion with the swans of Linlithgow:—"At the town of Linlithgow, equally renowned for its antiquity and loyalty, his Majesty hath a palace upon the skirt of a most beautiful lake. This same lake hath been ever famous for the numbers of swans that frequented it: inasmuch, that some of our poetical philosophers are of opinion, that if there be a civil government amongst the birds, and if divided in several companies or corporations, that this same lake was the hall or meeting-place of the swans. But to the business which is most miraculous, and I hope shall serve for a good use, to convince such as are heretical in their allegiance to our dread sovereign, when this kingdom, as England, was oppressed with usurpers, they put a garrison in this same palace of his Majesty: which no sooner done, but these excellent creatures, scorning to live in the same air with the countenners of his Majesty, they all of them abandoned the lake, and was never seen these 10 years, till the first of January last, a daye remarkable, both for his Majesty's coronation at Scone, and the sitting down of this present parliament; but which is strange, they observed, just about the same time of the day that his Majesty's commissiour entered the parliament-house and sat in the chair of state, did a squadron of these royal birds alight in the lake, and by their extraordinary motions, and conceit interweavings of swearing, the country people fancied them revelling at a country dance for joy of our glorious restauration. Much might be said in praise of these stately animals, but that we have some butterfly-brained phanatiques amongst us, that hearing me mention the beauty of their silver down, and the excellencie of their melodious tunes, they will instantly conceive that I were metaphorically and mysteriously magnifying a quor of musicians in white surplices. Neither do I desire to incur the displeasure of the inhabitants of the Myre of Meagle, who are governed by a synod of black-necked geese; besides, I know the danger it's to jest with wooden-witted dolts, that have the seams of their understanding on the outside of their noddles."

neighbourhood, is celebrated in the rude rhymes known to almost every child in the Lowlands:—

“Glasgow for bells,  
Lithgow for wells,” &c.

When the Glasgow water-works, in consequence of a series of accidents, not long ago failed, for a series of weeks, to supply the city with water, many casks were daily sent along the canal for a supply from Linlithgow. A well at Canibher was formerly much resorted to as a reputed chalybeate of similar properties to the spa of Moffat; hut, for upwards of half-a-century, has been totally neglected. Coal abounds in several parts; and excellent limestone is worked in the south. Freestone is scarce, and so situated as not to be much quarried. A silver mine, in the southern extremity, is said to have anciently yielded much wealth to the Haddington family. Groat pieces, coined from its produce during the time of Linlithgow being a royal residence, are still in the repositories of the curious. The place where the metal was smelted, lies westward of the town, and is still called Silver-mill; but the ore is either exhausted, or hitherto has eluded modern search. On the tract of ground east of the town, still called Boronghmuir, though a muir no longer, but finely cultivated, Edward I. encamped on the night previous to his defeating the troops of Wallace in the battle of Falkirk. On the same ground, upwards of 50 years ago, were found in an earthen urn about 300 Roman coins, probably the collection of a virtuoso. Nearly a mile north-west of the town is the scene of a sanguinary conflict, begun opposite the priory of Manuel, but fought out here, between the Earls of Arran and of Lennox, during the minority of James V. Though the precise spot cannot now be exactly identified, it was long distinguished by one of those rude memorials to which every passenger contributed a stone, and which was called ‘Lennox’s cairn.’ Near this spot, and possibly identical with it, is a field anciently used for military exercises and feats, and still called the joisting-laugh. Immediately west of the town are two rising grounds, one of which is traditionally said to have been anciently the seat of feudal courts of justice. The plain below it still bears the name of Doomsdale. On the hill of Cuckold le Roi—alleged by some to have got its name from the infidelity of one of the Scottish queens—are vestiges of a military station. At the bottom also is the appearance of the ditch; and on the summit is a cavity, called Wallace’s cradle, which is reported to have given frequent shelter to the Scottish patriot. On an eminence in the south-east of the parish are more distinct traces of a camp. But the grand antiquities occur to be noticed in our account of the town. Among various mansions, Woodcockdale, Champfleurie, and others, are elegant and ornamental. Half-a-mile south-west of the town is a distillery; and at Bonnytown,  $1\frac{1}{2}$  mile north-east, is another. A calico printing establishment, a bleachfield, and several grain mills, are situated on the Avon. At the first of these, about a mile west of the town, stands, on the Edinburgh and Stirling mail-road, the village of Linlithgow-bridge, chiefly inhabited by the calico-printers. The establishment was begun in 1786, and set flourishingly out with an array of 200 workmen, but very soon fluctuated in its prosperity. The parish is traversed by the EDINBURGH and GLASGOW RAILWAY, the SLAMANNAN RAILWAY, and the UNION CANAL: See these articles. It is traversed also from east to west over  $4\frac{3}{4}$  miles, by the Edinburgh and Glasgow north road, and, in various directions, by turnpikes radiating from the town toward Borrowstounness,

Bridgeness, Blackness, Bathgate, and Whitburn.—Among noted persons, natives of the parish, or connected with it, may be mentioned Stewart of Purdovan; Ninian Winzet; James Kirkwood, Binnoch; and Rob Gib. Purdovan possessed considerable property in the parish, was repeatedly provost of the burgh, represented it in the last Scottish parliament, and wrote the remarkable statutory book as to the proceedings of Presbyterian church courts, which has long been the Vade mecum of every sciolist in the intricacies of Presbyterian law. Ninian Winzet was rector of the burgh school at the Reformation, and is said to have been preceptor to some of the Royal family; but figures chiefly as the elected champion of Popery in logical tiltings with John Knox, and as a sort of confessor for his worthless creed,—having been banished from the kingdom, and made abbot of the Scottish convent at Ratisbon. James Kirkwood was rector of the same school at the Revolution, and made himself remarkable by satirizing the pragmatic town-council in a piece entitled ‘The History of the Twenty-seven Gods of Linlithgow,’ by offering valuable suggestions to the parliamentary commissioners on colleges, and by composing, at the commissioners’ request, a Latin grammar, which held the place of universal textbook in Scotland till displaced by Ruddiman’s Rudiments. Binnoch figures in a story—afterwards to be told—which ascribes to him a singularly clever capture of the castle, and ranks him high as a patriot in the stirring period of Bruce’s struggle with Edward I., and reminds one of the stratagem ascribed to Ulysses in the Trojan war. Some lands in the south of the parish were given to Binnoch as a reward, and still bear his name, softened into Binny. The Binnings of Wallyford were said to be descended from him; and, in allusion to the transaction which brought him fame and wealth, had for their arms a hay wain, with this motto, “Virtute doloque.” Rob Gib, of facetious memory, acted as buffoon to James V.; and gave, on one occasion, a severe reproof to the obsequious courtiers, saying that he had always served his master “for stark love and kindness;” and received from the King the property of West Carriber on the Avon, which his descendants continued to enjoy till some time during last century.\* Population of the parish, in 1801, 3,596; in 1831, 4,874. Houses 504. Assessed property, in 1815, £17,627.

Linlithgow gives name to a presbytery in the synod of Lothian and Tweeddale. Patron, the Crown. Stipend £304 9s. 3d.; glebe £11. Unappropriated teinds £1,029 6s. 2d. The church,

\* The mansion-house of Carriber is only to be traced in the remnant of the foundation, near the banks of the Avon; but a stone on which the family-arms had been emblazoned, and which formed an ornament to Rob’s old mansion, is preserved in the southern gable of the farm-steading of Carriber, on the east side of the road, between Linlithgow and Torphichen. Not long ago, there was found, in the garden of Dr. Baird, Linlithgow—evidently at one time a part of the royal domain—a gold ring in excellent preservation, and having the words ‘Rob Gib’s Contract,’ engraved on the inside of it. From the fashion of the outside embellishment, as well as the engraving within, it is clearly of ancient manufacture: but whether it ever graced the finger of one of the beauties of the Scottish court, and had been dropt from her fair hand while walking in the royal park, we may conjecture, but cannot decide. In the Register of Retours for the county of Linlithgow are the following entries:—

“May 22, 1630.

“Jacobus Gib olim de Carriber, hæres Roberti Gib de Carriber, avi,” x. 364.

“April 14, 1631.

“Jacobus Gib de Carriher, Domini Joannis Gib de Knock, militis, patris,” xi. 170.

From these entries we may infer that King James knighted the son, though he did not deem it prudent to lay the weight of that honour on the shoulders of the father.

which is very ancient, and will be noticed in the account of the town, was repaired and enlarged in 1813. Sittings 1,100. The charge was once collegiate, but has long been single. In the town are three dissenting places of worship.—The first United Secession congregation was established in 1770, or earlier. Their present place of worship was built in 1834, and cost £1,150. Sittings 546. Stipend £140.—The second United Secession congregation was established in 1738. Their first place of worship stood at Craigmalen, between 3 and 4 miles of the town, and their present place was erected in the town in 1805–6. Sittings 480. Stipend £110, with a manse worth nearly £20.—The Independent congregation was established in 1802; and their chapel was built in the same year, and afterwards twice enlarged, at a total cost of about £600. Sittings 380. Stipend £80.—The population of 1831, assumed to be that also of 1838, was, in the latter year, stated by the parish-minister to contain 1,300 dissenters, and calculated by one of the Secession ministers to contain 1,526,—all the rest being churchmen. There were, in 1834, 9 schools, conducted by 11 teachers, and attended by at most 547 scholars. One of them was the hurch grammar-school, conducted by a rector and an assistant, and affording tuition in Greek, Latin, French, mathematics, and the more ordinary departments. Salary of the rectory £30, with £70 fees; of the assistant £15, with £35 fees. A school, additional to the 9, is situated a little out of the town, was founded by a lady, and affords gratuitous instruction to females.—The present parish comprehends the ancient parishes of Linlithgow and Binning, which were united after the Reformation. Binning parish is the eastern district. See article BINNING. The church of Linlithgow was dedicated to St. Michael, and, along with its pertinents, was given by David I. to the prior of St. Andrews. A perpetual vicar afterwards served it, and incidentally acted as the King's chaplain. John Laing, one of its vicars, rose, in 1474, to be bishop of Glasgow; and George Crichton, another of them, became, in 1500, abbot of Holyrood, and, in 1522, bishop of Dunkeld. Crichton's attachment to his old vicarage induced him to erect on the chancel of the church a durable roof, adorned with the arms of the see of Dunkeld, and with the initials of his name. Within the parish-church were erected several chaplainries; at the west part of the town anciently stood a chapel dedicated to St. Ninian; and at East Binning, in the southern extremity of the parish, stood another chapel. In 1606 and 1608, general synods were held at Linlithgow. In 1633, the minister of the parish was made one of the prebendaries of the diocese of Edinburgh; and in 1635, the advowson of the church, in common with other property which had belonged to the prior of St. Andrews, was given to the archbishop of St. Andrews as compensation for the loss of that part of his diocese which was erected into the see of the metropolis.—On the south side of the town, on an eminence still called Friars'-brae, in the vicinity of a well also still called the Friars', anciently stood a convent of Carmelites or White Friars, founded by the inhabitants in 1290, and dedicated to the Virgin Mary. In the east part of the town were not long ago some remains of a religious house,—probably those of a monastery of Dominican or Black Friars, which is said to have existed in the town. East of the town, there was of old an establishment of Lazarites; and on their extinction or secularization, it was converted by James I. into an hospitium, or place of entertainment for pilgrims, and dedicated to Mary Magdalene, and placed under the government of a preceptor. The eminence at the base of which it stood, still bears the name of

Pilgrim's-hill; and one of the anciently instituted fairs of the town is still called Mary Magdalene's fair. Sir James Hamilton of Finard obtained, in 1528, all the lands belonging to the hospitium; but he afterwards plotted against the life of his sovereign, and was executed as a traitor.

LINLITHGOW, an ancient royal hurch, the seat of a presbytery, the capital and county-town of West Lothian, and formerly the residence of kings, stands in 55° 58' 35" north latitude, and 3° 35' 50" longitude west from Greenwich; 16 miles west of Edinburgh; 8 east of Falkirk; 3 south of Borrowstounness; 7 north of Bathgate; and 31 from Glasgow. It is pleasantly situated in a hollow along the south side of Linlithgow-loch, sheltered by ridges of rising ground along both the north and the south. A single street running due-west 650 yards from the toll to the site of the ancient cross,—afterwards making two bends and ending in a south-westerly direction at the West Port, and measuring altogether  $\frac{3}{4}$  of a mile in length, constitutes the great body of the town. Very brief lanes and narrow alleys wing both its sides, running off from it at right angles. The road going off north-eastward to Blackness and Bonnytown from near the east end, is partly edified for about 250 yards; and a thoroughfare, branching off at an acute angle on the south side 160 yards from the toll, and wending sinuously to the West Port, has a number of houses, but no continuous street-line. The High-street is broad and airy toward the east, becomes contracted and gloomy for some distance westward of its middle, and again expands toward its south-western termination. Many of the houses belonged of old to the knights of St. John, who had their preceptory at Torphichen, and some were the property of grantees who nestled under the warm wing of the royal court. Nearly all these buildings have a mean and decayed yet substantial appearance, suggesting impressive moral lessons to a well-toned contemplative mind, and indicating contentment on the part of the great and wealthy of a former age with a modicum of domiciliary comfort at which many a proud hurgher or enriched speculating weaver of the present day would turn up his nose in scorn. A slow process of rebuilding has been going on during upwards of half-a-century; and has, to a considerable extent, modernized the street. But the town has, of late years, had very little enlargement; and during a long period after ceasing to be the home of kings and grantees—particularly after the union of the crowns, and again after the union of the kingdoms—it declined in opulence, in trade, and in every attribute of importance. Yet it continues to bear many marks of ancient grandeur, and is grouped with objects which make it a fine subject for the pencil. The magnificent ruins of its royal palace,—the venerable fabric used as the parish-church, and situated so near the palace as to form almost a part of it,—the grand terrace, which bears both aloft, and is sheeted on three sides with water,—the lofty trees which look as if they were coeval with the sacred and royal piles which they adorn,—the beautiful expanse of the lake half-encincturing these objects, and spread from end to end of the town like a mirror, to reflect a silvered copy of its features,—the plantations alternated with pasture-ground and waving fields all round the environs,—and even the motley architecture of the town, the mixation of cumhrous and dingy old houses with neat and sprightly new erections,—form altogether an agreeable and uncommon picture.

At the middle of the town, just before the High-street begins to debouch toward the south-west, and at the foot of the thoroughfare leading up to the church and the palace, stands the Town-house. It

was built in 1668 by Sir Robert Miln of Barnton, chief manager of the burgh, and afterwards altered by the substitution of a modern sloping roof for one of an oriental kind, leaden and flat. Besides other accommodations, it contains a large council-chamber, a completely furnished sheriff court-room, an apartment for a masonic lodge, and a spacious room occupied by a library. The ground-floor is occupied as a gaol; and the cells in use are without fire-places, very small, dark, damp, and cold, and accustomed to be indiscriminately tenanted by debtors and by felons. The Town-house is surmounted by a spire and clock, and has a not unpleasing appearance. Attached to it on the back is a building, erected about 60 years ago, disposed in the lower part as a corn-market, and originally in the upper part as a prison for debtors. Behind it is the burgh-school, rebuilt about the year 1816. Beside the Town-house, at the commencement of the thoroughfare leading northward, is a small open area, where anciently stood the market-cross. On the site of the cross stands the Crosswell, an object of great architectural elegance and local celebrity. The present structure was erected in 1805, and is believed to be an exact fac-simile of the original, except that the carvings are more finished, the proportions of the figures more symmetrical, and the general grouping more harmonious. It is of a fantastic and whimsical appearance, hexagonal in form, profusely adorned with grotesque sculpturings, constantly emitting 13 jets of water from the mouths of curious figures of animals, and surmounted by a lion rampant supporting the royal arms of Scotland. In its renovated form it was planned, and its richest sculpturing executed, by Robert Gray, an Edinburgh artist, who had only one hand, and wielded his mallet by a fixture upon the stump of his handless arm.

About 120 yards north of the well, or of the line of High-street, stands the church, a venerable and impressive pile, an exhibition of mingled elegance and strength, and one of the most entire and beautiful specimens of Gothic architecture in Scotland. It is 182 feet in length from east to west, 100 feet in breadth, including the aisles, and about 90 feet in height; and it sends up from its centre a lofty tower, formerly terminating in an imperial crown, and contributing a highly ornamental feature to the burghal landscape. The crown, however, no longer exists. Its weight being thought injurious to the structure beneath, it was removed a few years ago. Some of the windows are extremely elegant. An array of statues anciently figured on the exterior, but, with one exception, were demolished at the Reformation, and are now commemorated by their vacant niches. The statue which escaped was that of St. Michael, the adopted patron of the town; and it too might probably have shared the fate of its fellows, had it not stood higher both in popular estimation and especially in physical altitude,—occupying a place not easy of assault. St. Michael's name—whose real character even Protestants in general do not seem rightly to understand—is usually associated with both the church and the town, in a manner which has provoked the profane jests of witslings, and which ill accords with the enlightenment of modern times. At a well named after him near the East Port, he is figured as saying that “St. Michael is kind to strangers;” and in the town's arms he retains just the place and the character which a Popish age assigned him, while underneath is the motto: “Vis Michaelis collocet nos in cœlis.” The original edifice is of uncertain date, but very probably was erected by David I., the founder of so many rich and grand ecclesiastical structures. Its nave was, in 1424, destroyed by fire, and, in its present form, has a more modern ap-

pearance than the rest of the pile. The roof of the chancel, erected, as we formerly noticed, by George Crichton, and ornamented with his armorial bearings as bishop of Dunkeld, is both elegant and durable. A plan was formed and commenced by James V. to erect in the interior a throne and twelve stalls, for himself and the knights of the Thistle; but, in consequence of his sudden death, it was not carried into execution. The west end was of old used as a burying-place of the great, a sort of mimic Westminster Abbey; but it was stripped of its tombstones, and converted into a stable for the horses of his dragoons, by Oliver Cromwell. Only the east end is now used as a place of worship, separated from the other end; and when last repaired, it was put, at the expense of nearly £4,000, into a condition corresponding with the grandeur of the fabric. Of the various chaplainries and altars which anciently existed in the church, St. Catherine's is the only one whose name survives. The aisle in which the altar stood is a recess on the south side, covering the burying vault of the family of the attainted Earl of Linlithgow. While sitting “at evensong” in this aisle, says tradition—and certainly in the church, says history—James IV. saw the strange masquerade, passed off upon him as an apparition, which warned him against his fatal expedition to England, terminating in the battle of Flodden.\* In digging a grave

\* “We learn from Pitsoctie, that ‘at this tyme the king came to Lithgow, quhair he was at the counsell verrie sad and dolorous, makand his prayers to God, to send him an guid suces in his voyage.’ From the mode of expression, it might at first view be inferred, that his majesty was in the council-chamber when he received this warning. But it would appear, that the introductory language is meant merely to give the reason why the king came to Linlithgow at this time; that it was to hold a council on the state of public affairs. In some manuscripts, indeed, the reading is, ‘where he happened at the time to be for the council.’ Buchanan, accordingly, assigns this pretended apparition to the church during vespers. ‘*Rex Linnochi vespertinas in æde sacra cantiones (in tum moris erat) audit,*’ &c. The more generally received tradition is that given by Sir Alexander Seton, that the king was ‘at evening service in St. Catherine's aisle,’ when ‘the ghostly visitor appeared to him before his invasion of England.’ For, in the progress of the narrative, according to the more correct copies, Pitsoctie says, that the man who appeared came in at the Kirk door. He also states, that ‘the royal family had a private entry from the palace, by a door in the north wall of the church.’ This unearthly monitor is described as ‘a man clad in a blew gowne, belted about him with aue roll of linyng, and aine pair of brotkines on his feitt.—Bot he had nothing on his head, bot syd hair to his shouleris, and bald befor. He seemed to be aino man of fiftie yeeres.—When he saw the king he gave him no due reverence nor salutation, but leined him down grufiogiis vpon the dask, and said, ‘*Sir king, my mother has send me to the, desiring the not to goe quhair thow art purposed, quhilk if thow doe, thow sall not fair well in thy jorney, nor nou that is with the. Fardder, shoe forbad the, not to mell nor vse the counsell of vomen, quhilk if thow doe, thow wil be confoudit and brought to shame.*’” The story, as here related, breathes the genuine spirit of the Church of Rome, in that idiotic honour given to the Virgin Mary at the expense of the Son of God. For he is evidently represented by the ‘man of fiftie yeeres;’ and made to act and speak as inferior to his earthly mother. From her the message proceeds, as well as the prohibition and commination. No Protestant can hesitate in viewing the whole as a plot, on the part of the nobles, to deter the king from this mad undertaking. From that part of the prohibition which respects *melting* with women, it has been supposed, with much probability, that the queen was privy to the stratagem. Buchanan gives this story on the testimony of Sir David Lyndsay of the Mount, ‘a man of approved worth and honesty, and of a learned education, who, in the whole course of his life, abhorred lying;’ adding, ‘If I had not received this story from him as a certain truth, I had omitted it as a romance of the vulgar.’ His readers, however, might feel a strong curiosity to know why Buchanan has given it in so different a form. For he makes the pretended heavenly visitant entirely to draw a veil over the usurped rights of parental authority. According to his narrative, he merely says, ‘I am sent to warn thee—I am commanded also to tell thee.’ When relating the vision as a certain truth, he has deemed it most prudent to keep ‘The Mother of heaven’ in the shade, that he might not subject his whole narration to the ridicule of a more enlightened age? Sir Walter Scott has fitly introduced this vision into his ‘*Marmion*,’ making Sir David Lyndsay the narrator:

The wondering Monarch seemed to seek  
For answer, and found none;  
And when he raised his head to speak,  
The auditor was gone.

within the church near the end of last century, there was found a stone tablet of elegant sculpture. One compartment exhibits our Saviour praying, while the three select disciples are asleep; and the other represents his betrayal by Judas, his seizure by the guard, and his healing the ear of Malchus, while Peter sheathes the sword. The stone was broken, but not to the essential injury of the figures.

Immediately north of the church stands the magnificent ruin of the palace, the most remarkable object in Linlithgow. The eminence which bears it aloft advances almost into the middle of the loch, and, when viewed from the north, has the appearance of an amphitheatre, with a descent on the three sides, and terrace-walks on the west. The palace occupies about an acre of ground, and though heavy in appearance from its almost total want of windows, and care-worn and haggard in aspect from the ruinousness of its condition, is still a picturesque and beautiful object; and something has of late years been done by the Barons of exchequer to preserve it from further dilapidation. At the head of the avenue leading up to it from the street is a fortified gateway, formerly ornamented with now the scarcely traceable insignia of the knightly orders of the Garter and the Golden fleece, St. Michael and St. Andrew, the last founded by James V., and the others presented to him respectively by Henry VIII. of England, Charles V. of Germany, and Francis I. of France. On the east side, at the head of a sweeping avenue still lined with trees, stands the grand gateway, with the place for the portcullis, but in a neglected and obsolete condition. Over the interior is a niche in which formerly stood an elegant statue of Pope Julius II., with the tiara, or triple crown, or honnet; originally accompanied, as is said, by the statues of two cardinals in smaller niches, one on each side. Julius, quite an adept in popecraft, presented James V. with the sword of state which still, very ingloriously, forms part of the Scottish regalia; and bought him up, by flattery and a nursing of his vanity, to oppose the progress of the Reformation. The statue, in its moral associations, was more curious than offensive, and might, had it been allowed to remain, have suggested many a lesson on the text of folly and chicanery being self-outwitted; and, though it long escaped the rage of the pope-hating modern Scotch, it was eventually demolished, early in the last century, by a blacksmith of the town, who, in a neighbouring church, had heard Popery denounced, and who possessed the habits more of a good conscience than of a refined taste. East of the grand gate lay the gardens. The palace consists all of polished stone, and is a large hollow quadrangle, generally five stories high, with towers at the corners. In the centre of the interior area or square was a fine well, adorned with several statues, and so constructed as occasionally to form high and beautiful jets d'eau, but now a mass of confused ruin. On the east side above the grand entrance was the Parliament-hall, believed to have been commenced by James IV., and finished and decorated by his successor. Originally it was a splendid apartment, with a beautifully ornamented chimney at one end, and surmounting a magnificent piazza; but it is

The Marshal and myself had cast  
To stop him, as he outward past;  
But lighter than the whirlwind's blast,  
He vanished from our eyes,  
Like sunbeam on the billow cast,  
That glances but, and dies.

Cant. iv. st. 17.

This is a faithful version of the truly graphical description given by our old naive historian. 'Before the king's eyes, and in presence of all the lords that were about him,—this man vanished away, and could no ways be seen or comprehended, but vanished away as he had been a blink of the sun, or a whip of the whirlwind.'—*Dr. Jamieson.*

now a roofless, ragged, and despoiled ruin. On the south side was the chapel, supposed to have been built by James V. At the north-west angle is a small department, called the king's dressing-closet, curiously ornamented, and looking out upon the lake. In one of the sides is a room 90 feet long, 30½ feet wide, and 33 feet high; having at one end a gallery with three arches. Many of the windows, and some of the doors, on the north or most modern and magnificent side, have, with accompanying ornaments, the initials of the name of James VI., by whom it was erected shortly after his visit to Scotland in 1617, the pediments over the windows bearing the date of 1619. On the west or oldest side, where a tower or peel-house formed the nucleus of the whole palace, is shown the apartment in which Queen Mary was born. Narrow galleries run quite round this side, to preserve the communication with the apartments. In one of the vaults below James III. found shelter from an attempt at assassination on the part of some of his rebellious subjects. The site of the palace was, at the dawn of authentic history, a Roman fort or station, and sent off a communication, intended apparently to serve both as a road and as a line of defence, to Antoninus' wall, at a point in the parish of Falkirk nearly opposite Callendar-house. Edward I., according to Fordun, built a peel or castle on the spot in 1300, and spent there the Christmas of next year. On settling the kingdom, and retiring to England in 1305, he left it garrisoned under the charge of Peter Lubard. Two years afterwards it was taken and demolished by Bruce, aided by the curious device and successful stratagem of the peasant Binny or Binnock, the William Tell of Scotland. "Binny, who was known to the garrison, and had been employed in leading hay into the fort, communicated his design to a party of Scottish soldiers, whom he stationed in ambush near the gate. In his large wain he contrived to conceal eight armed men, covered with a load of hay, a servant drove the oxen, and Binny himself walked carelessly at his side. When the portcullis was raised, and the wain stood in the middle of the gateway, interposing a complete barrier to its descent, the driver cut the ropes which harnessed the oxen; upon which signal the armed men suddenly leapt from the cart, the soldiers in ambush rushed in, and so complete was the surprise, that with little resistance, the garrison were put to the sword, and the place taken." [Tytler's 'History of Scotland,' vol. i. p. 291.]—The castle was doomed to perpetual ruin by the manly Bruce, who relied chiefly on the moral energy of his followers' courage, and little on the appliances of physical strengths and fortifications; but it appears to have been rebuilt by the English during their brief possession of Scotland under the minority of David II., and seems afterwards to have been improved or renovated by David himself. A precept of David granted the "peel of Linlithgow" to John Cairns, and enjoined him to "huild it for the king's coming." The place was now occasionally, but in a very subordinate manner, a royal residence. Though James I. hut seldom occupied it, several of his coins bear the legend, "Villa de Linlitho." In 1424, in common with the town and the nave of the church, it was destroyed by fire, and is called by the continuator of Fordun, in narrating the event, "the palace;" but whether it was slightly or ruinously injured, is matter of debate, and who, in the supposition of its having been destroyed, was its re-edifier, is a fact not known to history. "The palace" of the period was probably a mere tower, provided with vaults below, and comfortable apartments above, and only a degree larger or more dignified than the peel-houses of the border;

and by some parties it is contended still to exist, though in a very ruinous condition, in the core of the west side or oldest part of the quadrangular edifice. James IV. preferred it to all his other residences, and built its eastern side. In the time of James V., who also made large additions to it, his consort, Mary of Guise, on being conducted to it, said "she had never seen a more princely palace;" and she afterwards proved the sincerity of her compliment, as far at least as the palaces of Scotland were concerned, by preferring it to any other of the king's residences, and spending in it a large part of her time. The pile, in its quadrangular and final form, was completed by James VI. Though, after the union of the crowns, it suffered from desertion, it continued to be habitable till January 1746. When the royal army were on their march in pursuit of the Pretender's forces, Hawley's dragoons occupied the hall on the north side of the quadrangle, and, in the hurry of their departure, left some fires in a condition to ignite the building. Before the danger was discovered, the roof was mantled in flame; and, being covered with lead, it sent down such a shower of melted metal as entirely precluded any attempt to arrest the conflagration. Its vestiges of splendour and the beauty of its site, aided a little by imagination, still bring before the visiter's view the princely pile so checerly sung in the 'Lay of the Last Minstrel':

"Of all the palaces so fair  
Built for the royal dwelling,  
In Scotland, far beyond compare  
Linlithgow is excelling;  
And in its park in jovial June  
How sweet the merry linnets' tune,  
How blithe the blackbird's lay!  
The wild buck bells from ferny brake,  
The coot dives merry on the lake,—  
The saddest heart might pleasure take  
To see a scene so gay."

No other edifices demand notice. Nor, even as to trade and commerce, is there much to interest. The Union canal is conducted along the rising ground on the south of the town, at the distance from the High-street of from 70 to 450 yards, and has a small basin less than 100 yards from the High-street, and near the east end of the town. But sensibly as the modern prosperity of the town has been aided by it, it will probably receive from the Edinburgh and Glasgow railway incalculably greater advantages, and possibly a great arousing to its half-dormant energies. The railway passes along between the town and the canal, and, as well as the latter, commands a very fine view of the church, the palace, and the lake. At the side of the canal, 400 yards from the West Port, is one tannery, and on the north side of the lake, near its west end, is another. These establishments form the pivot on which the chief trade of the town has, for generations, turned. The art of preparing leather is said to have been introduced by the soldiers of Cromwell; and, though still carried on with a degree of vigour, seems to be prosecuted with diminishing success. In 1793, there were 17 tanners, 18 curriers, and 13 skimmers; and, in 1826, there were only 12 of the first class, 6 of the second, and 5 of the third. Shoemaking has moved parallel with the sister art, and shared its vicissitudes. During the last war the town supplied very large quantities of shoes to the army, besides sending supplies to Edinburgh and other markets; and it still, though in a noiseless and declining way, competes in the art with the brisker and more productive towns of Ayrshire. In 1793, shoemaking employed about 100 persons; and in 1826, it was conducted by 17 master artisans. Trade in lint and linen yarn was at one time carried on to a great extent, and enriched several persons engaged in it with handsome fortunes;

but it long ago became extinct. Manufactures in the departments of beautiful damask linen, of diaper, of muslin, of carpets, of stockings, and possibly of other fabrics, have all been sanguinely introduced, flourishingly commenced, and carried coolly on to either extinction or insignificance. The Commissioners' Report on Handloom-weavers, published in 1839, knows nothing whatever of the town, and does not assign to it so much as one loom. A quarter of a mile from the west end of the lake, on a streamlet which carries off its superfluous waters toward the Avon, is a paper-mill. The town has also a brewery, and claims an interest in the two distilleries in its vicinity, and in the printfield at Linlithgow-bridge. A weekly market is held on Friday; and annual fairs are held on the Friday after the 2d Tuesday of January, on the 25th of February, on the 3d Friday of April, on the 2d Thursday of June, on the 2d day of August, and on the 1st Friday of November. In the town are a branch-office of the Commercial bank of Scotland, more than the usual proportion of inns and public houses, an excellent public library, and a fair amount of benevolent and religious institutions.

Linlithgow ranks as the sixth in order of the Scottish burghs. The town-council are 27 in number, of whom 19 were of the guildry, and 8 trades burghesses. The magistrates, chosen by the council from among its own members, are a provost—whose predecessors formerly exercised a right of sheriffship within the liberties of the burgh—four bailies, a dean-of-guild, and a treasurer. The council has no patronage except the appointment of the usual burgh-officers, and the nomination of the two teachers of the burgh-school. The magistrates have power of jurisdiction over a mile in every direction beyond the royalty, but practically exercise it only within burgh. The village of BLACKNESS [see that article] stands on the territory of the burgh, and is nominally under the jurisdiction of the council, receiving annually from their nomination a delegate or ballie. Except in the most trifling police offences, the magistrates are relieved from all judicial care, where criminal or civil, by the residence within the burgh of the sheriff-substitute. The burgh has, for a long period, been deeply in debt. So far back as 1692, the magistrates reported to the convention commissioners that they owed £18,235 6s. 8d. Scots; and in 1832 it had increased to £8,141 4s. 5d. sterling,—many of the recent obligations having been incurred by raising money for discharging older ones, and paying up accumulated and neglected interest of ancient burdens, the origin or first purpose of which had become untraceable. The annual revenue, as reported by the commissioners on the Municipal Corporations, probably that for the year 1832, was £710 17s. 6d.; and the annual expenditure £743 13s. 2d. In 1839–40, it amounted to £716. There is no local police statute, nor any assessment for police purposes. Water flows plentifully from the wells, but is not distributed into the houses. The town is well-lighted at night with gas; the streets are kept tolerably clean by a scavenger; and the public peace sufficiently preserved, in ordinary circumstances, by the two jailers,—all at a very small expense, and from the common funds of the burgh. A stranger pays only £1 1s. of a fee to be admitted a burgher; but must pay £5 to the corporation of the guildry. This corporation has an accumulated fund of £1,007, lent to the burgh at 4 per cent. interest; and has £35 10s. arising from rents of property,—about £3 yearly received for licenses granted to unfreemen to trade,—five shares, worth £50, in the gas company,—and a seat, purchased for £148, in the parish-church. The funds are rigidly applied to charitable and

proper purposes; and though strictly available to only decayed members, are used for the benefit of members' widows and daughters. There are eight incorporated trades; smiths, weavers, hakers, wrights, tailors, shoemakers, fleshers, and coopers,—possessing the usual exclusive privileges, but no right of presenting to hospitals or schools. Their funds are small and declining, and, in some instances, have been formally extinguished by a common distribution among the members. The corporations are generally and enlightenedly of opinion that their exclusive privileges are mischievous to society, and useless to themselves. Linlithgow unites with Falkirk, Airdrie, Hamilton, and Lanark, in sending a member to parliament. Constituency, in 1832, 115, of whom 71 were burghesses; in 1840, 80. The municipal constituency, in 1840, was only 77. There are, besides the corporations, seven unincorporated fraternities,—gardeners, dyers, hecklers, whipmen, wool-combers, skinners, and tanners. As at Hawick and some other places, the old practice—once probably of some use, but now unqualifiedly ridiculous—of ‘riding the marches,’ is still annually observed in June, and consists of a motley procession followed by conviviality or carousing. The magistrates, council, corporations, and fraternities, are mounted on horseback, and the treasurer and the deacon carrying silk flags embroidered with the town-arms, and, along with a general turn-out of the inhabitants, especially bawling children and friskish youngsters, they move round the boundaries of the burgh. Such idle tomfoolery is too stale for the improved taste of the 19th century, and must speedily share the fate of the Crispin processions and other vulgar pageants,—relics of a dark and vain age, which modern good sense has, in most localities in Scotland, consigned to extinction. The town's seal has on one side the figure of Michael the archangel,—his wings expanded, his foot treading on the belly of a serpent, and his spear piercing the reptile's head. The arms proper of the town allude to some obscure legend respecting a dog found chained to a tree on the islet of the lake; and consists of the figure of a dog tied to a tree with the motto—‘My fruit is fidelity to God and the King.’ By act of parliament in 1621, Linlithgow was made custodian of the standard furlot measure, and intrusted with the distribution of copies of it among other burghs; while Stirling was the appointed place of the jug for liquids, Edinburgh of the ell, Perth of the reel, and Lanark of the pound. The furlot for oats and barley contained 31 Scotch pints, or 3,205½ cubic inches; and for wheat and pease 21½ pints, or 2,197½ cubic inches; but, since the introduction of the imperial measures, is a matter merely of antiquarian curiosity. Linlithgow had once an exclusive right of trade on the coast from the water of Cramond to the mouth of the Avon, and had Blackness specially assigned to it as its port. At that place it conducted a considerable export and import trade; and there it had warehouses, and a custom-house establishment. Partly through its own decay, and partly through the influence of the family of Hamilton, Borrowstounness carried away its custom-house honours; and altogether, by successful rivalry, Queensferry took possession of its influence on the coast. So strenuous an opposition did Linlithgow make to the erection of Queensferry into a burgh, that it wrung by compromise, the hard terms from its rival, of the latter paying it annually the sum of 10 merks Scotch, admitting the freemen of Linlithgow to all its immunities without reciprocation, and giving the Linlithgow burghesses through their dean-of-guild the option of purchasing, before it was unloaded, half the cargo of every foreign ship which arrived. Population of the burgh, in 1811,

2,557; in 1821, 3,112; in 1831, 3,187. Houses, in 1821, 324; in 1831, 316. Assessed taxes payable from the burgh, £310 13s. 1d.

Linlithgow probably received its name from the Britons. King Achaius, according to fable and Sibbald, was the founder of the town, and erected on its site a cross which vulgar antiquaries have called King Cay's cross. From the similarity of name, but without any other evidence, the town has been identified with the Lindum of the Romans; and chiefly, if not altogether, on the vague testimony of tradition, it is thought to date as high as any existing town in Scotland. In the 12th century it comes distinctly into notice as a King's burgh,—the term royal burgh being then unknown in Scotland. But its possessing this character does not necessarily imply more than its being in itself a mere hamlet,—possibly of quite recent origin; every village or cluster of houses on a royal demesne having, according to the usage of the period, the name of a King's burgh. Before David I.'s accession, a chapel appears to have been erected on the promontory now occupied by the church and the palace; and during that monarch's reign, he had a castle in the place to overlook a grange which belonged to him, and to receive his person in the course of his ranging from manor to manor for consumption of the stock. But whether the castle occupied the site of the peel afterwards built and rebuilt by the English, and made the nucleus of the palace, is a point on which no document or monument seems to throw any light. David granted to the abbot and canons of Holyrood, “*omnes pelles arietinas, ovinas et agninas de Linlithgu de meo domine*,”—all the skins of the rams, sheep, and lambs, of his demesne of Linlithgow. The place was then the King's town in demesne; and the rents and profits, or ‘firms,’ were let by the King to the community. At the demise of Alexander III., before it had yet obtained a charter, it was governed by two bailies, John Raebuck and John de Mar, who, along with ten of the burghesses or principal inhabitants, were compelled, in 1296, to swear fealty to Edward I. The ‘firms’ had been mortgaged by Alexander III. to the King of Norway, and after the former's death, were allowed to run in arrear; and at two different dates writs of Edward I. were addressed “*prepositis de Linlithgow*,” requiring the payment respectively of £59 2s. 1d., and of £7 4s. 10d. as arrears to the Norwegian King. In 1334, Edward Balliol transferred to Edward III. the constabulary, the town and the castle of Linlithgow, as part of the price paid for the assistance given him to his short-lived usurpation. In the parliament of David II., held at Perth in 1348, it was ordained in reference to the four burghs which, according to the law of the period, exercised jurisdiction over the rest, “*that so long as the burghs of Berwick and Roxburgh are detained and holden by English men, the burghs of Lanark and Lithgow shall be received and admitted in their place*.” Linlithgow is proved, by this document, to have already been made a royal burgh, though at what previous date is not known. But its earliest ascertained charter was granted by Robert II. in the 18th year of his reign, “*burgensibus et communitati hurgi de Linlythqw*,” and conferred on them the small customs and profits of the town itself and the harbour of Blackness, subject to an yearly payment of £5 sterling. In 1386, Robert II. granted to his son-in-law, Sir William Douglas, £300 sterling out of the great customs of Linlithgow, Edinburgh, Dundee, and Aberdeen, and to other persons he granted various pensions out of the burgh-mails or great customs of Linlithgow. These grants are evidence that, in an age so uncommercial, the town possessed some trade, and had risen to

considerable importance. Under the Regent Albany and James I., Lintghow appears to have been unfortunate, and was twice burnt,—first in 1411, and next in 1424. James II., at his marriage in 1449, settled on his bride, Mary of Gueldres, as her dower, the lordship of Lintghow and other lands, amounting in value to 10,000 crowns; James III., at his marriage in 1468, to Margaret of Denmark, settled on her, as her dower in the event of his demise, the palace of Lintghow with its circumjaent territory;\* and James IV. at his marriage in 1503, with Margaret of England, gave her, in dower, the whole lordship of Lintghow, with the palace and its jurisdiction and privileges. In 1517, Stirling and his followers, who had attempted to assassinate Meldrum on the road to Leith, seized the palace, at a moment probably when it was very slenderly guarded; but they were speedily pursued by De la Bastie, the regent's lieutenant, and were beleagured and captured. In 1526 occurred the battle of Lintghow, already incidentally noticed, which was designed to rescue James V. from the domination of the Earl of Angus, and which led to the slaughter of the Earl of Lennox by Sir James Hamilton, after quarter had been given. Hamilton was rewarded by Angus for his truculent deed with the captaincy of the palace; and afterwards becoming a favourite of James V., he showed the faithlessness and atrocity of his nature by attempts, both in the palace of Lintghow and in that of Holyrood, to assassinate the King. In 1540, James V., by a special charter, empowered the town, for the first time, to add a provost to their magistracy; and in the same year, while Mary of Guise, after her marriage, festivities had been celebrated in Fife and at Stirling, was delighting herself with the beauty and luxuries of Lintghow palace, Sir David Lindsay's Satire of the three Estates was represented before the King, the Queen, the ladies of the court, and the authorities and common inhabitants of the town, and appeared, in spite of its utter grossness, to please all parties. On the 7th December, 1542, Mary of affecting memory, whose history invokes so many tears for both her crimes and her sufferings, and gives out such deep tintings of tragical romance, was born in the palace, and became, from the hour of her birth, the object of thrilling interest to all who had deep interests in the political framework of the period. Her father lay on his death-bed at Falkland, and on being told that a daughter was born to him, he instantly thought of his throne, and of the alliance which had brought it to the Stuarts, and exclaiming, "Is it so? Then God's will be done! It came with a lass, and it will go with a lass," he turned his face to the wall, and expired amid a paroxysm of grief. The infant remaining for many months in the palace with her mother, the place became the frequent scene of political intrigue; and next year, after it had been surfeited with English bribes and with plots and treason, the mother, warmly apprehensive for the child's safety, collected an army, and got themselves conveyed from the palace to Stirling-castle. In 1545 a parliament met at Lintghow on the 1st of October, and again on the 1st and the 19th of December. In 1552 a provincial council of the clergy was held in the town, to attempt measures for appeasing the popular outcry against the utter corruption of the Popish establishment; but it found itself too far

gone in moral rottenness to possess any virus of self-reformation. In 1559, the Earl of Argyle, Lord James Stewart and John Knox came to Lintghow on their celebrated march from Perth to Edinburgh, and demolished the monastic houses. About this period houses in the town were the property and occasionally the residence of the Duke of Chatelherault and other highly distinguished courtiers. On the 23d of January, 1569-70, the Regent Murray, in passing through the town, was shot, in revenge of a private injury, by Hamilton of Bothwellhaugh. The house from which the assassin took his aim belonged to Archbishop Hamilton of St. Andrews, and stood on a site now occupied by a plain lumpish tenement; and it had a projecting balcony overlooking a narrow part of the street, and affording full command of the Regent's person while he moved slowly and on horseback. The murder is the subject of Sir Walter Scott's ballad of 'Cadzow-castle'; and the earline with which it was perpetrated is preserved at Hamilton-palace. The assassin escaped, fled to France, and remained in voluntary exile. Murray, during his progress from Stirling, was fully apprised of his danger, but could not control the circumstances of his position. John Hume, an attached follower, entreated him, on the very morning of the murder, not to pass through the town, but to ride round the back of it, and offered to lead him to the spot where the assassin lay in wait, and might easily be seized. Murray consented to act on the advice, but found himself so wedged up by crowds of the populace, that he was obliged to follow the originally intended route. The body was removed to Stirling, thence by water to Leith, and thence to Holyrood-house, and was buried in St. Anthony's aisle in St. Giles' church.\* Some months after the murder, the

\* James Hamilton of Bothwellhaugh was nephew to the Archbishop of St. Andrews. He had been condemned to death, with six other gentlemen of distinction,—two of them of his own name, the barons of Innerwick and Kincauld,—and, with them, had been led out to execution for his share in the battle of Langside; but, at the intercession of the reformed clergy, the Regent spared their lives, and ordered them all back to prison. James Hamilton was a cadet of the ducal house of Chatelherault, his father, the first of his family, being David Hamilton, fifth son of John Hamilton of Orkney. His estate was situated in the parish of Bothwell and county of Lanark, whence he had his designation. He had married Isabella Sinclair, daughter and co-heiress of Sinclair of Woodhouselee in Mid-Lothian, and this lady was the innocent cause of the unfortunate catastrophe. Hamilton had contrived to make his escape from prison; but as the act of forfeiture remained in full force against him, he was compelled to lurk among his friends. Whether the Regent had any particular hatred towards him cannot now be ascertained; yet certain it is, that the act of forfeiture was removed from all the gentlemen taken prisoners in that affair, Bothwellhaugh excepted. After the confiscation of Hamilton's estate, his wife—who had remained there during her husband's absence, never imagining that her own inheritance was to be also doomed to the same calamity—proceeded to Woodhouselee, thinking that on her own patrimony she might with security await the issue of more prosperous times. But in this she was mistaken. Sir James Bellenden, Lord Justice-clerk, one of the favourites of the Regent, had asked and obtained the estate of Woodhouselee. As Bellenden knew that Hamilton's lady resided on the property, he applied to the Regent for an act of possession; and, accordingly, some officers were sent to Woodhouselee, who secured the house, and turned the unfortunate lady, in a cold and stormy night, and in a state of ill health, naked into the fields. Before the morning dawned, she had become furiously deranged. The enormity of the latter provocation, in addition to the injuries he had already borne, completely overcame Hamilton's prudence; and from that moment he resolved to avenge his wrongs on the Regent himself, whom he believed to be the grand author of this injustice. Nor did he conceal his intentions. He openly avowed, wherever he went, that he would endeavour to effect Murray's destruction; and he accordingly watched his enemy's motions for some time, but was invariably disappointed in his daring purposes. At length, unfortunately, an opportunity offered, which Hamilton determined to improve. There are a number of entries or passages—called in Scotland closes—which have an open outlet from the principal street of the town to the fields; and there is a tradition, that, on the night before the assassination, these were all choked up with whins. This tradition, if not true, is at least plausible, for Hamilton well knew that there would be an immediate pursuit, and the whins might contribute to his safety by causing a brief delay. The

\* Some specifications in the ratification by parliament of the marriage-settlements, show the sources of revenue possessed by the lordship: these, besides the estates or lands, were the palace, the lake, and the park of Lintghow; the great and small customs and firms of the burgh; the fines and escheats of the several courts of the judiciary, the chamberlain, the sheriff, and the bailies; the wards, relics, and marriages, within the lordship, and the patronage of the churches.

English army which entered Scotland to revenge the Regent's death, or readjust the arrangements which it had unsettled, burnt the Duke of Chaterhault's house in Linlithgow, and threatened to destroy the whole town. The parliament, during that distracted year, was proposed to be held in Linlithgow; but the Regent Lennox, marching thither in October, prevented the intended meeting. In 1584, the rents both of money and victual of the lordship of Linlithgow were appropriated for supporting Blackness-castle, estimated at much more than its real importance. In 1585, a parliament was held in the town for establishing the Protestant councillors who had recently placed themselves at the head of James the Sixth's government. In 1587, a grant of the park and woods and keeping of the castle was made, through the king's feebleness, to Sir Lewis Bellenden, the justice-clerk. In 1591, by a charter of James VI., all the lands and rents which had belonged to the choristers, chaplains, and prebendaries of Linlithgow-church, were granted to the burgh "in usum et sustentationem lectoris (et) campanarii in dicta ecclesie, et in sublevamen pauperum hospitalis dicti burghi." At the King's marriage in 1592, the harony, lands, and palace were, according to former usage, given in dowry to his bride, the Princess Anne of Denmark. In 1594 an act of parliament ratified a charter of James, confirming "twa auld infementis grantit of auld he his hienes predicessouris to the hurgh of Linlithgw, quhairof the anc is maid of the said hurgh with the small custumes and port of Blaknes, the uther of the frie custuming of certaine wearis, without ony dewtie to be payit thairfor." In 1596, Linlithgow afforded refuge to the King from the tumult of Edinburgh; and seven years later, it shared the grief and degradation of the metropolis, resulting from James' accession to the English crown, and his consequent abandonment of his native palaces. Some time in the beginning of the 17th century, the town was the scene of a singular instance of revenge. One Crawford, while at school, had been stripped of his coat by a person in the town, who found him trespassing on his ground. Having gone abroad, and risen in the army, he returned to Linlithgow many years after, and avenged the dignity, by stabbing the man who offered it on the very spot. Accounts vary with regard to some of the circumstances that followed, though they all agree with regard to his having been beheaded at the cross. According to some, after lying concealed a night or two in the Burgh-

assassin took his station in a wooden gallery fronting the street; and, that he might the more securely accomplish his purpose without exciting suspicion or notice, while in the act, he first spread on the floor of the room a large feather-bed, that the noise of his feet in his movement might not be heard, and then hung up a large black cloth opposite the window, that none without might observe his shadow. "His next care," says an author, who graphically describes this scene, "was to cut a hole a little below the lattice, sufficient to admit the point of his barquebus, and to add to the security of his flight, he examined the gate at the back of the house, and finding it too low for a man to pass under on horse-back, with the assistance of his servant he removed the lintel, and kept his horse in the stable ready saddled and bridled. After all these preparations he calmly and deliberately waited the approach of the Regent, who had slept the preceding night in the town." After the deed he was pursued several miles, and was at one time on the point of being taken; his horse, breathless and almost ready to sink, coming to a broad ditch, plunged into it, and stuck fast. A few moments' delay would have placed Hamilton in the hands of justice; but he drew his dagger, and plunged it into his steed behind. The horse thus stimulated to a desperate exertion, extricated himself, and leaped across the ditch. The assassin fled first to Hamilton, and then sought shelter with his brother-in-law, Muirhead of Lanchope, who received him, and protected him for the night. The following day he was accompanied a part of his way by this relative, and after a brief concealment about the town of Hamilton, he effected his final escape to France, where he died, some years afterwards, expressing great contrition for the execrable crime he had committed. His pursuers, having discovered that he had been sheltered at Lanchope, plundered and burnt it to the ground. See article BETHWELL.

muir, he was apprehended, convicted, and put to death. Others say, that some years after, being oppressed with the weight of blood, he surrendered himself to justice, requesting only to be indulged as to the mode of execution. His tomb is still to be seen on the south of the church,—and, though now defaced, is said to have had engraved on it the figure of the instrument by which he suffered, and which himself procured for the purpose. In 1617, James VI., in the course of his visit to Scotland, made a progress to Linlithgow; and at his entrance to the town, was met by James Wiseman, the hurgh pedagogue, enclosed in a plaster figure resembling a lion, and was addressed by him in the following doggerel speech:—

"Thrice royal sir, here do I you beseech,  
Who art a lion, to hear a lion's speech;  
A miracle! for since the days of Esop,  
No lion, till those days, a voice dared raise up  
To such a majesty! Then, king of men,  
The king of beasts speaks to thee from his den,  
Who, though he now enclosed he in plaster,  
When he was free, was Lithgow's wise schoolmaster."

"This," sarcastically remarks a cotemporary, "may look inestably ridiculous; but when people were accustomed to hear the familiar pedantic character of James emblemized by court-flattery as a lion, they might well be excused for such an anomalous masquerade as a schoolmaster in the guise of the same animal. In truth, there could not have been a more apt emblem of the King himself, who was neither more nor less at any time than a pedagogue enclosed within a plaster-cast of majesty." [Chambers' Gazetteer, Art. Linlithgow.]—In 1633, Charles I., when at Edinburgh, intended to visit Linlithgow, and had the palace put in order for his reception, but did not accomplish his object. A charter of this King, probably ratified by the parliament of 1640, extended the jurisdiction of the magistrates "infra omnes publicas vias, itinera, et semitas extra occidentalem portum dicti burghi ad pontem de Even occidentaliter, et similiter circum circa dictum hurghum undique per omnes alias partes infra dictas publicas vias et semitas per spatium mille passuum." The same charter granted the right of holding markets, and the jurisdiction of all fairs and markets held within the space prescribed as the extent of the hurgh jurisdiction, and likewise the right "custumas eorum, secundum donationes et cartas per majores nostros in favorem dicti prepositi, hallivorum, et consulum prius concessas, exigendi." In 1646, when Edinburgh was scourged by the plague, Linlithgow afforded refuge to the senatus of the university, and flung open her palace for the session of parliament. In 1662, on the anniversary of the Restoration, the town signalized itself by a surpassingly strange act of succumbency to the hierarchical and persecuting Stuarts,—an act which was without a parallel even in the excited and tumultuous times in which it occurred,—the burning of the Solemn League and Covenant. The deed must be regarded, however, rather as a wanton expression of zeal to which the many were impelled by a few, than as an act authorized by the magistrates, or approved by the sober portion of the community. The chief actors were Mr. Mylne, one of the bailies, and Mr. Ramsay, then minister of the parish. Ramsay's conduct was singularly foiled and set off in ignominiousness by his having formerly sworn the Covenant, and been so zealous on its behalf as rigorously to press it upon others. Changing his principles with the times, proclaiming himself an apostate, and courting an assiduous apostate's reward, he was first made dean of Glasgow, then bishop of Dumlhane, and afterwards was raised to the see of Ross. The town gave a sumptuous entertainment to James VII. when in

Scotland before his accession to the throne; and is said to have long felt—and perhaps may be feeling still—the pressure of the debt incurred by getting up, on the occasion, a magnificent display. The last historical event in which it figures was its suffering from the rebellion of 1745–6, and being then, as we have seen, denuded of the physical attractions as formerly of the political importance of its palace. Linlithgow gave the title of Earl to the family of Livingstone, also Earls of Callendar, attained in 1716 in consequence of James, the fifth Earl, taking part in the first rebellion in favour of the de-throned Stuarts.

LINLITHGOWSHIRE, or WEST LOTHIAN, lying along the south side of the frith of Forth, nearly midway between the German ocean and the frith of Clyde, has, in a general point of view, a triangular outline. Its sides face the north, the south-east, and the west. The northern side is nearly straight in outline, but suffers intrusions each about  $1\frac{1}{2}$  mile deep, upon both its angles; the south-west side is indented by the parish of Mid-Calder 2 miles by  $1\frac{1}{2}$ ; and the west side has an indentation of a square  $1\frac{1}{2}$  mile deep along the north side of Blairmuckhill-burn,—a projection, immediately north of this,  $3\frac{1}{2}$  miles long and  $2\frac{1}{4}$  broad,—and again an indentation nearly semicircular,  $4\frac{3}{4}$  miles along the chord, and  $2\frac{1}{2}$  miles deep. The county is bounded on the north by the frith of Forth, which divides it from the detached part of Perthshire and from Fifeshire; on the south-east, except at the indentation from Mid-Calder, by the river Almond and its tributary Briccch-water, which divide it from Edinburghshire; and on the west by Blairmuckhill-burn, Barbaehlaw-burn, Calder-water, and artificial lines which divide it from Lanarkshire, and mainly by Avon-water, and its tributary Polness-hurn, which divide it from Stirlingshire. Measuring in straight lines, it extends on the north side 15 miles; on the south-east side  $20\frac{1}{2}$ ; and on the west side  $14\frac{1}{4}$ . But, in consequence of the peculiar outline of the west side, the south-west half of the county is nearly a parallelogram  $10\frac{1}{2}$  miles by  $7\frac{1}{2}$ , while the other half is very nearly a regular isosceles triangle, the longest side lying along the Forth. The area, according to Armstrong's map of the Lothians, is only 112 square miles, or 71,680 statute acres; but, according to Arrowsmith's map of Scotland, it is 121 square miles, or 77,440 statute acres.

The surface, though almost all champaign, is waving and beautifully diversified, nowhere subsiding over more than a very small space into flatness. Its eminences, with a few gentle exceptions, are rising grounds, knolls, elongated hillocks, and considerable hills; and all, while they impart variety and picturesqueness to the landscape, very trivially subtract from the value of the ground, either bearing aloft arrays of thriving plantation, or affording verdant and good pasturage, or yielding their sides and their summits to the dominion of the plough. The most remarkable of them form a range or rather line of summits from Bowden, on the march of Torphichen and Linlithgow parishes, obliquely south-eastward through the middle of the county. Cairn-maple, the most prominent summit of the line, rising up on the march between the parishes of Torphichen and Bathgate, has an altitude of 1,498 feet above the level of the sea. The Kippshills, the Knock-bills, and the Drumcross-hills, all form conspicuous parts of this range, but do not rise to any great elevation. Cocklerue, or Cuckold le Roi, near its west end, is one of its principal summits, yet attains a height of only 500 feet. More noticeable eminences, because delightfully picturesque, are variously distributed throughout the

northern parts of the county along the Forth. The most conspicuous are Mous-hill, Craigie-hill and Dundas-hill in Dalmeny, Craigton-hill and Binus-hill in Abercorn, and Irongarth in the parish of Linlithgow. All the heights of the county command uncommonly varied and pleasing views of the Lothians,—of Stirlingshire,—of the fine expanse of the Forth, with its shores receding in gentle and undulating slopes, sprinkled with the seats of the nobility and gentry, and richly ornamented with wood,—of the varied and fine southern exposure of Fifeshire,—and of dimly-seen mountain ranges forming a serrated sky-line in the far perspective. The middle and western districts of the county are the most hilly; the northern are the most beautiful, and become at intervals nearly luscious in their sweetness; the southern are the most tame, and least valuable, containing much moorland and morass, and swelling into few considerable or pleasant rising grounds.

The principal streams of the county are the Almond, across its southern division and along its south-eastern boundary, and the Avon 12 miles along its western boundary. Logie-water, a tributary of the Avon in Torphichen parish, drains much of the western division, through its head-waters, Barbaehlaw-burn and Ballencrief-water. Brox-hurn and several smaller streamlets drain the eastern division, and run into the Almond. Nether-mill-hurn, Dolphinston-burn, and some tiny brooks, run northward to the Forth. The streams are sufficient for the purposes of draining and irrigation, and enrich the county with much water-power for the driving of machinery; but they are wholly uninteresting to the angler, the operations of agriculture and manufacture having forced the funny tribes from their haunts. The only lakes are one on the boundary between Dalmeny and Kirkliston, Lochcoat in Torphichen, and Lochend, and chief of all Linlithgow-loch, in the parish of Linlithgow. The Forth, both as an object of ornament and as a contributor of profit, is of great importance to the county, cheering the inhabitants by its changeful phases of beauty, and supplying fish for food, sites for salt-pans, and harbours for traffic. On the beach at the western extremity, 2,000 acres are left dry at every reflux of the tide, but except at this point, the coast, for the most part, suddenly rises into a ridge adorned by culture and plantations. The Forth, along the whole, assumes a singular variety of aspects; and, washing or forming hills and promontories, winding bays and mimic estuaries, lofty shores, cultivated fields, and brilliant mansions and demesnes, takes the appearance of a great lake, a noble river, or a broad sea, according to the points of view in which it is seen. Medicinal springs exist near the village of Torphichen, on the estate of Kipps in the same parish, near Carrilher-house, in the parish of Linlithgow, near the church of Ecclesmachan, and in the vicinity of the saltworks of Borrowstounness.

Linlithgowshire abounds with the most useful minerals. Coal, in a workable state, exists in almost every district, and was well-known, and generally worked, so early as during the reign of Alexander III. A coal mine at Borrowstounness was worked beneath the sea half-way across the frith, and had a principal outlet or shaft half-a-mile from the shore at a moat or quay in 12 feet depth of water. The average annual coal-produce of the county, about 20 years ago, was 44,000 tons; but it has been greatly increased since the opening of the Union canal.—Limestone everywhere abounds, and is manufactured at great profit, and distributed to general advantage. Freestone seems to stretch beneath the whole county; and, for the most part, but especially

toward the coast, it is of excellent quality. Slate-stone, wbinstone, and grey granite, occur in various localities. A basaltic rock, with many of its pillars in the form of well-defined regular prisms, and the rest columnar masses separated by channels, forms almost perpendicular breastwork 60 or 70 feet high, and 750 feet long, on the south side of Dundas-hill in the parish of Dalmeny. Shell-marl lies athwart a bog of about 9 acres near the foot of the basaltic colonnade, and occurs also in Linlithgow-loch, and in the parishes of Abercorn and Uphall. Ironstone abounds in Borrowstounness, Torpbichen, Bathgate, Abercorn, and probably other parishes. Veins of silver were formerly worked in the parishes of Bathgate and Linlithgow, but eventually became either uncompensating, or exhausted. Mundic has been found in the rivulets of Torpbichen. Fullers' earth, potters' clay, brick clay, and red chalk are found in the parish of Uphall.

The county, though aggregately rich in its agricultural capabilities, has all the varieties of soil from bad to the best, which can depress or invigorate husbandry. Of the whole area, according to proximate calculation, 19,900 acres are clay, either of prime earse kind, or otherwise of good quality; 22,700 are clay, on a cold bottom; 9,500 are loam; 9,500 are light gravel and sand; 14,000 are moorland and high rocky ground; 1,500 are moss; and the remaining 460 are occupied by lakes and rivers. Owing to the general lowness of the county, its nearness to the Forth, and the prevalence of south-west winds, its climate is, in general, temperate as to heat, and moderately dry, neither very cold nor very sultry, characterized rather by gentle showers than by violent rains, and is altogether, if not prime, at least of the second-rate character enjoyed in the kingdom. During the Scoto-Saxon period, a profusion of natural wood seems everywhere to have waved over the surface; and this, in an age when pasturage formed the prime object of attention to the exclusion or depreciation of tillage, must have been quite congenial to the interests of husbandry. An expanse of natural wood, 70 acres in extent, still exists near Kinneil house on the Forth. During very many years past, the land-owners have paid great attention to planting, and, besides richly embellishing the lower grounds, have spread out expanses of thriving wood on the moorland heights. About one-third, or probably more, of the entire area, is disposed either in woodlands, or in old pastures and artificial grasses. All the area, too, is, with fractional exceptions, enclosed by almost all the variety of stone and hedge fences which ingenuity has contrived. David I. was, in his day, the greatest farmer in West as well as in Mid-Lothian; was probably the introducer, or at least the improver, of horticulture; and certainly, on his grange at Linlithgow, practised husbandry with a skill and success which his barons could not excel, and which, however incognizant of the true principles of agriculture, must have had benign results at the midnight hour of the dark ages. Yet, while the cultivators were almost all villegyns who laboured, not for their own profit, but for the benefit of others, agriculture could not be carried on with much amelioration to its art. Throughout the Scoto-Saxon period, and for ages afterwards, every manor had its village, its mill, its kiln, its malthouse, and its common for the general use of the villagers. The husbandmen used oxen in their ploughs and waggons; they cultivated the same grain; they pastured the same beasts; they aimed at the same profits. Yet, throughout the Scoto-Saxon period, especially during the peaceful reign of Alexander III., there was a slow progress of molioration, similar in its causes and character to that experienced in BER-

WICKSHIRE, HADDINGTONSHIRE, and EDINBURGHSHIRE. [See these articles.] But the rancorous war of 70 years which followed the demise of Alexander III., plunged the whole county into ruin. The ebarsters of the period are crowded with records of devastation. Domestic feuds were to the full as destructive as foreign invasions. During the feud between Earl Douglas and Crichton, the Chancellor, for example, Crichton, in 1445, ravaged the Earl's manor of Abercorn, and, among other waste, drove away a race of mares which he had brought from Flanders. The whole intercourses of life were oppressive, the strong constantly overpowering the weak. The art of cultivating the ground, with the exception that gardening became general in the reign of James VI., appears to have helplessly withered under the blows inflicted on it till about the close of the first quarter of last century. The formation of the society of improvers in 1723 probably gave the first impulse to Linlithgowshire as to other counties. A sale of manure, at one shilling a busbel, by one Higgins and his copartners at Cuffabout, near Borrowstounness, in 1725, seals an indication of returning enterprise. John, Earl of Stair, began, in 1728, to introduce, from his residence in the parish of Kirkliston, new maxims of husbandry, and new modes of cultivation; he was the first who practised the horse-hoeing husbandry; he sowed artificial grasses; and he cultivated turnips, cabbages, and carrots by the plough. Charles, first Earl of Hopetoun, imitated and even excelled the illustrious Earl of Stair; but they both died in the decade of 1740, before their plans were matured, or their principles duly appreciated. About 25 years before the close of the century, a race of projectors arose who went beyond the noblemen in usefulness,—some practical farmers, who, with clear heads, enterprising hearts, and sufficient capital, professionally undertook to rent farms and estates with design to improve them, and then, for an adequate profit, relinquished them to farmers who had less skill but were willing to learn. Except that more attention is given to turnips and other green crops, the system of agriculture now pursued is, in all respects, similar to that of the other Lothians. Farmsteads are generally in a creditable and neat condition. Farms are, for the most part, from 70 to 200 acres in extent; but in some instances comprehend only 50 acres or less, and in some they rise to 300. Besides some small proprietors near Linlithgow and Borrowstounness, about 40 landholders possess the grounds of the county, and have incomes from them ranging between £200 and £6,000.

Considering its wondrously rich facilities as to coal, useful minerals, central position, and ample means of communication by both land and sea, Linlithgowshire is strangely poor in manufactures. A cotton mill and a flax mill at Blackburn, some tanneries and shoe-making establishments at Linlithgow, extensive salt-works at Borrowstounness, a soap-making establishment at Queensferry, 520 looms at Bathgate, and 218 at Whitburn, kept in motion by the manufacturers of Glasgow, small ship-building yards, and two or three distilleries and breweries, constitute nearly the whole amount of outward manufacturing display. The traffic in coal is very extensive, and employs more persons than any thing else except agriculture; the traffic in freestone and salt is also of some importance; but traffic in all other departments combined is very inconsiderable.

The first turnpike in Linlithgowshire was that from Edinburgh to Queensferry, made in 1751. But now it equals the best counties of Scotland, and surpasses most of them, in the number and excellence of its roads. All the three great roads between

Edinburgh and Glasgow, by way respectively of Linlithgow, Bathgate, and Whitburn, and also two other turnpikes, one near the coast and one near the southern boundary, run across it from east to west; several lines of turnpike traverse it from north to south; and subordinate roads are so numerous and so minutely ramified, in every district and nook, as to look on the map like the tracery of a pervading labyrinth. Both the UNION CANAL and the EDINBURGH and GLASGOW RAILWAY [which see] bisect it from east to west. Its sea-ports are Queensferry, Blackness, and Borrowstounness. Its royal burghs are Linlithgow and Queensferry. Its other towns and considerable villages are Bathgate, Whitburn, Blackburn, Borrowstounness, Broxburn, and Kirkliston. The county returns one member to parliament. Constituency, in 1839, 702. The valued rent of the whole county, in Scottish money, is £74,931 19s. 2d.; the real land-rent, in 1808, was £64,518; and the annual value of real property, as assessed in 1815, is £97,597. The population, owing probably to the want of large or manufacturing towns, and to the concentration of attention chiefly on a steady and judicious course of agriculture, has undergone less proportional increase during the last century than in most other districts of Scotland. Population, in 1801, 17,844; in 1811, 19,451; in 1821, 22,695; in 1831, 23,291. The total number of families in the last of these years, was 5,014; of males 10,995; of females 12,296; of occupiers of land employing labourers 295; of occupiers of land not employing labourers 179; of agricultural labourers 952; of labourers not agricultural 1,100; of manufacturing operatives 560; of persons employed in retail trades and handicrafts 1,547; of capitalists 233; of male servants 101; of female servants 858; of inhabited houses 3,400; of uninhabited houses 203.

Linlithgowshire is ecclesiastically divided into the *quoad civilia* parishes of Abercorn, Bathgate, Borrowstounness, Carriden, Dalmeny, Ecclesmachan, Kirkliston, Linlithgow, Livingstone, Queensferry, Torphichen, Uphall, and Whitburn,—one of which, Kirkliston, is but partly in the county. These 13 parishes, along with 4 in Stirlingshire and 2 in Edinburghshire, constitute the presbytery of Linlithgow. The seal of this presbytery, composed of brass and larger than a crown-piece, was discovered between 50 and 60 years ago in an old repository. Engraved round it are the words, 'Sigillum presbiterii Linlichovo,' and in the centre are some decorations, the date 1583, and the words, 'Verhum autem Dei nostri stahit in æternum. Esa. 40.' A Culdee establishment was organized at Abercorn about the year 650; and this, in 684, became the seat of the short-lived hishopric of the Picts. The county was for several generations part of the diocese of Lindisfarne, and was afterwards comprehended in that of St. Andrews. The ancient deaconry of Linlithgow had probably the same limits as the modern presbytery, and, at all events, included not only the whole county itself, but several parishes in Stirlingshire and Edinburghshire. At Kirkliston the hishop of St. Andrews had a sort of sovereignty under the king's grant, extending to all the lands of the see south of the Forth. During the short-lived Protestant hishopric of Edinburgh, Linlithgowshire was included in its territory. Though the knights of St. John had their seat at TORPICHEN [which see], there were anciently in the county few religious houses. Two monasteries and a hospitium at Linlithgow, and a Carmelite convent near Queensferry, were the chief. In 1834, there were 13 parochial schools, conducted by 13 teachers, and attended by a maximum of 787 scholars, and a minimum of 352; and 48 non-parochial schools, conducted by 55 teachers, and

attended by a maximum of 1,678 scholars, and a minimum of 650.

At the Christian epoch, Linlithgowshire was inhabited by the British tribe of the Gadeni. But its civil history, so far as peculiar to itself, has almost all been rapidly sketched in our articles on the town of LINLITHGOW, and the port and castle of BLACKNESS, and will be found told, in most of its small remnants, in our parochial or distinct notices of its respective scenes. Cairns and sepulchral tumuli, the monuments of the more ancient inhabitants, exist on the Lochcoat hills, on the Forth near Barnbougycastle, in the vicinity of the village of Kirkliston, and on the south bank of the Almond at Livingstone. Remarkable standing-stones, Druidical or monumental, occur in the wood of Abercorn, in the vicinity of Bathgate, and in the parish of Torphichen. Vestiges of British forts exist on Cuckold le Roi hill in Linlithgow, on Bowden-hill in Torphichen, and on Cairnpaple-hill and Binns-hill, south-eastward in the Bowden range. Agricola, after conquering the Lothians, passed, in the year 83, from Carriden to the opposite shore of the Forth in search of the Horestii. Twenty years later was constructed from Carriden to the Clyde ANTONINUS' WALL: which see. From the Roman station at Cramond, a Roman road proceeded by Barnbougycastle, and across Ecklin moor, where its remains continue distinct, westward to the end of the wall at Carriden. Roman towers were reared along the Forth, but cannot now be traced. Vestiges of a small Roman camp occur a little east of Abercorn. Edwin, who assumed the Northumbrian sceptre in the year 617, stretched his jurisdiction from the Humber to the Avon, and laid the foundation of a power over even the northern extremity of this kingdom which occasioned Linlithgowshire, in common with the other Lothians, to be known to Kenneth, the son of Alpin, and the leader of the Scots to the conquest of the country, by the name of Saxonia. The chief strengths of the ages succeeding the Scottish conquests, are the peel, afterwards enlarged or re-edified into the palace, of Linlithgow, the peel of Livingstone, the square tower of Newyearfield, the castles of Blackness, Barnbougycastle, Kinneil, Abercorn, Niddrie, Mannerston, and Bridgehouse, vestiges of a castle which gave a retreat to Walter Steward of Scotland, in a morass near Bathgate, the tower-house of Meidhope, Castlelyon below Kinneil-castle, and now overflowed by the frith, the tower of Torphichen, and a ruined baronial residence at West Binny. Existing peerages of the county are Hopetoun, Torphichen, and Abercorn, and extinct ones are Livingstone and Linlithgow.

West Lothian first appears on record as a sheriffdom, or shire, in the reign of Malcolm IV.; it continued to be so in full power during the long reign of William the Lion, and nominally, though the sheriffs passed away, till the accession of Robert Bruce. The district now became a constabulary, and remained under this subordinate form till probably the reign of James I. or James II. West Lothian was again in undoubted possession of the honours of a sheriffdom in the reign of James III., though when or how it reacquired them are points not known. In the progress of weakness and distraction, the office of sheriff became hereditary. In 1600, it was granted to James Hamilton, the eldest son of Claude, Lord Paisley, and to his heirs; and soon after the Restoration it was given hereditarily to John Hope of Hopetoun, the ancestor of the Earls of Hopetoun. At the abolition of hereditary jurisdictions in 1747, the Earl of Hopetoun claimed as compensation £3,000 for the sheriffdom of Linlithgow, and sums for the sheriffdom of Bathgate, the regality of St. Andrews at Kirkliston, the baliary of Crawfordmuir, and the

regality of Kirkcubright, sums which made a total of £7,500, and was allowed £4,569. Kirkcubright and other lands were a regality with an attached halliary. Bathgate was long a harony, and afterwards became a separate sheriffwick. Torphichen was a regality first of the knights of St. John, and next of the Lords Torphichen. Other regalities were Kinnell under the Duke of Hamilton, Philipston under the monks of Culross, and afterwards the Earl of Stair, and Brighouse and Ogleface under the Earl of Linlithgow. Linlithgow was a hereditary royal bailiary belonging, like the last-named regality, to the Linlithgow family. Baronial jurisdictions were Abercorn, Livingston, Carruther, Dalmeury, Barnhoulge, and Strathbrock. These various jurisdictions, solicited by the ambition, and granted by the impolicy, of former times, confounded rather than promoted the justice of Linlithgowshire, and were long prostituted to the interests of individuals rather than dedicated to general convenience.

LINN, the vulgar Scotch for a pool or deep reach, in the bed of a river. It is evidently derived from the Gaelic *Linne*, which is the Welsh *Llyn*, and perhaps radically the same with the Greek *λίμνη*. Ramsay, in his 'Gentle Shepherd,' uses the word to designate the rocky or precipitous hank which usually overhangs such a pool; and we suppose the unfortunate wight, so well-known to all lovers of our Doric muse, who 'spak' of putting an end to the tortures of slighted love by 'louping over a linn,' attached a similar construction to the term; otherwise the resolve to leap over the linn, was doubtless an infinitely more prudent one than that of leaping into it.

LINNHE (LOCH), an arm of the sea, stretching between the districts of Appin and Morvern in Argyleshire, in a north-easterly direction, from the sound of Mull, as far as Coran ferry, where it takes a northerly direction, and acquires the name of LOCH-ELL: which see. It gives off, on its eastern side, first LOCH-ETIVE, then LOCH-CRERAN, and farther inward, on the same side, LOCH-LEVEN: see these articles. The island of LISMORE [which see] lies in the mouth of Loch-Linnhe; and there are several smaller islands interspersed through it.

LINTON, a parish occupying the north-west corner of Peebles-shire; bounded on the north-west, north, and north-east, by Edinburghshire; on the east and south-east by Newlands; on the south by Kirkcubright; and on the south-west and west by Lanarkshire. It approaches the form of a flying kite, its apex pointing to the south; and measures, in its greatest length from Bore Stone on the north to the confluence of Dean-hurn and Tarth-water on the south,  $10\frac{1}{2}$  miles; and, in its greatest breadth, in a line due eastward from the point where it is first touched on the west by Dryhurn,  $7\frac{1}{2}$  miles. The North Esk rises in the northern extremity, and runs 4 miles along the north-eastern boundary, receiving from the parish the beautiful little tribute of Carlops-hurn, and partly washing, partly forming, just when entering Edinburghshire, the tranquil and classic scenery of HABBIE'S HOWE: see that article. Medwit-water flows  $3\frac{1}{2}$  miles along the western boundary to Garvaldfoot, there very curiously splits itself into two streams, the larger one, and that which retains the name of the Medwin, debouching into Lanarkshire to fall eventually into the Clyde, and the smaller one running  $4\frac{1}{2}$  miles farther along the boundary, to assume the name of the Tarth, and to join the Lyne in a progress to the Tweed. Lyne-water rises on the west side of Weather-law, within half-a-mile of the source of the North Esk, and flows  $5\frac{1}{2}$  miles south-eastward through the interior of the parish, and 2 miles southward along its eastern bound-

dary. Numerous tributaries of the Lyne drain the sides of the parish; but the most considerable of them is West-water, a streamlet  $4\frac{1}{2}$  miles long, and running obliquely through the interior to the Lyne's right hank. Slipperfield-loch,  $1\frac{1}{2}$  mile west of the mouth of West-water, measures about  $1\frac{1}{2}$  mile in circumference, abounds in pike and perch, and is frequented in summer by flocks of water-fowl, and in winter by crowds of curlews. Around it on all sides stretches an expanse of heathy moor, 2,000 or 2,500 acres in extent, apparently defying georgical art, yet receiving impressions from the practices of the improver. Two-thirds of the entire area are mountainous and hilly, strictly upland and pastoral, covered, to a considerable extent, with verdure, but clothed, in the case of many heights, with heath very slightly intermixed with grass. In the north-east corner is a moor similar to that around Slipperfield-loch, but smaller in extent. Beautiful stripes of arable land stretch along the Lyne, and the lower part of the North Esk. The soil on the low grounds of the Esk is clay superincumbent on limestone, and on other ploughed grounds, is either a sandy loam upon a gravelly bottom, remarkably well suited to the turnip and the potato, or a reclaimed and progressively improving moss. The parish is famous for its variety of the Cheviot breed of sheep, and sends off supplies for propagation in distant districts, and has usually on its pastures about 10,000. Agricultural operations are conducted here with an enterprise surpassing expectation on so disadvantageous an arena. Plantations, though aggregately scanty, beautify the finest part of the vales of the North Esk, the Lyne, and the Medwin, and are of noticeable extent in the extreme southern corner. Excellent white freestone is worked at Deepsykehead and at Spittlehaugh, and is carried from the former place to every part of Peebles-shire. Coal is mined at Carlops, at Coalyhurn, and at Harlamuir. Limestone is burnt at Carlops, and at Whitefield and Bents, to the extent of 21,000 holls annually; and occurs in abundance at Spittlehaugh and at Badensgill. Lead has been repeatedly but vainly searched for in the hill called Leadlaw. Fuller's earth occurs in a small seam below Bridgehouse on the Lyne. Blue marl lies in a stratum two feet thick above the lime-rocks of Carlops and Spittlehaugh. Many pebbles are found of great beauty, and similar in kind to the Cairngorin stone. A mineral spring, curiously called Heaven-aqua well, and somewhat resembling the spa of Tunbridge, bubbles up to the north of Linton village. The parish is traversed south-westward, and cut into not very unequal parts by the turpique from Edinburgh to Dunfries by way of Biggar, whence a branch strikes off a little north of the village of Linton, and runs southward pointing the way to Moffat; but it is otherwise very indifferently provided with roads. The village of CARLOPS [which see], and some interesting objects in its vicinity, are separately noticed. The village of Linton—or, as it is sometimes called to distinguish it from a namesake in Haddingtonshire, West Linton—stands on the left hank of the Lyne, on the road from the metropolis to Moffat,  $16\frac{1}{2}$  miles from Edinburgh, and 11 from Biggar. Its population is about 400. The place is irregularly built, and has an antique and curious appearance, a considerable proportion of the houses presenting their gables to the street. Most of its inhabitants are weavers, or traders dependent on its market. Though finely situated for a woollen manufacture, lying in the vicinity of coal, on a stream of much water-power, and in the midst of a sheep country, its manufacturing connexion is solely with cotton, and its subordination to Glasgow. In 1838 it had, jointly with

Carlops, 100 looms. The village has long been celebrated for its sheep-markets, which are of such proverbial importance, that a Tweeddale man exhorts his superlatives, and mounts the summit of a climax, when he affirms any throng or crowd to be 'as great as Linton mercat.' The first fair is held on the Friday before the first Monday of April. It is also a hiring-market for servants. The second fair is held on the day before the 3d Wednesday after the 11th June. It is for the sale of ewe and wether-hogs of the black-faced breed. The number of sheep on the ground varies from 15,000 to 25,000. The sheep disposed of are chiefly bogs or sheep of the first year, and are sent to Lammermoor, Fife, Forfar, and Perth shires, and to various parts of England. West Linton is a burgh-of-regality under the superiority of the Earl of March. Pennicuk, in his Poetical Address, in 1689, to the Prince of Orange, calls it 'the sub-metropolitan of Tweeddale.' The village gives the title of baron to the Earl of Traquair. Population of the parish, in 1801, 1,064; in 1831, 1,577. Houses 269. Assessed property, in 1815, £5,649.—Linton is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend £232 14s. 11d.; glebe £20. Unappropriated tithes £115 7s. At the village of Linton is a United Secession meeting-house. A number of the parishioners belong to a Relief congregation in the contemninous parish of Newlands.—The parish, or kirk-town, has its name from the Lyne or Lyn, and anciently had the adjunct to that name of Roderick. The church of Linton-Roderick, from the reign of David I. till the Reformation, was a vicarage under the monks of Kelso. In the 13th century, a chapelainry, dedicated to the Virgin Mary, was established at Ingliston, in the south-west corner of the parish. A chapel, attached to an hospital, anciently stood on the Lyne, at a place to which it gave the name of Chapel-hill. The parish-school had, in 1834, 96 scholars, and a private school 34. Parish-school-master's salary £34 4s. 4½d., with £35 10s. fees, and £10 other emoluments.

LINTON, a parish of an elongated but bent form, stretching the one-half northward, and the other half north-eastward, in the north-east extremity of Roxburghshire. It is bounded on the north-west by Sprouston; on the east by Northumberland; on the south-east by Yetholm and Morebattle; on the east of the southern part, and on the south by Morebattle; and on the west by Eckford. Its breadth varies from 1½ to 2¼ miles; its extreme length from south to north is 3½ miles, and thence to the north-east 3 miles,—in all 6½; and its area is 6,500 acres. Kail-water forms the boundary-line for a mile on the south, and a small tributary of that stream for 3½ miles on the west. The south-west corner is a beautiful level, 300 acres in extent, rising only a few inches above the Kail, subject to inundations, and forming part of a lovely plain of 12,000 or 15,000 acres, surrounded on all sides by green and arable ascents, and by mansions and demesnes which delight, not less by their local associations with Allan Ramsay, Thomson, and other names, than by their fine landscape features. In the Linton part of the valley lies Linton-loch, an interesting piece of water. It is nearly circular, and about thirty acres in area; hut, having been drained, it exhibits the appearance of a green morass, broadly dotted with several pools. Large trout, similar to those of Loch-Leven, tenant the pools; but, shielded by the entanglements of the morass, they cannot easily be reached by anglers. Moss, in several strata—aggregately about 12 feet deep, in which were found vast accumulations of hazel-nuts—forms the upper part of

the morass; and shell-marl, rich in quality, various in colour, and in some places nearly 20 feet deep, lies beneath it. In the marl have been found a surpassingly large set of deer's horns, and skeletons of various animals, one of them exceeding in size that of a horse. The lake obviously appears but a remnant of a magnificent sheet of water, which anciently covered the whole large valley in which it lies. All the valley abounds with pure and copious springs. Hoselaw-loch lies within a mile of the north-eastern boundary, and sends off a streamlet into England to become tributary to Beaumont-water. It is a beautiful sheet of water, of an oblong form, 30 acres in extent, abounding in perch and silver eels, and affording ample sport to anglers. Westward from the lake stretches a moss of great extent, and of bad quality of peats. A mile south-west of this moss, and about the centre of the parish, is another moss better in the quality of its peat, and covering some shell-marl. The south-east corner of the parish is an undulating ascent from the edge of the plain, terminating in Linton-hill on the boundary, the most considerable district of the summit. Along the north-west verge is an interrupted line of low heights, the principal of which are Blakelaw, Hoselaw, and Kiplaw; and parallel to it along the south-east boundary, runs a low ridge called the Gradon-hills. Swells and variform elevations also diversify the surface of the interior. All the eminences, excepting the summit of Linton-hill, are wholly arable; and the level and low grounds, excepting 70 or 80 acres under plantation, and the large expanses of moss, are in a state of rich cultivation. The proportions of arable and of waste grounds are to each other as 19 to 7. The soil, on the plain of the south-west corner, is partly a strong retentive clay, and partly a deep loam superincumbent on sand or gravel; and in other districts it consists variously and mixedly of clay, loam, sand, and gravel. Whinstone abounds, and occasionally encloses seams of rock-crystal. Sandstone is quarried at Froyden. Coal exists in thin seams, but does not compensate mining. On an ancient stone on the south wall of the parish-church is the figure of a horseman spearing the mouth of an animal resembling a dragon. Underneath it, according to tradition, were inscribed the words:—

"The wode laird of Lariestone,  
Slew the wode worm of Wirmieston,  
And won all Linton paroshine."

William de Somerville, to whom the monument refers, and who was founder of the noble family of Somerville, slew, in the reign of William the Lion, a monstrosity bear, wolf, or serpent, which greatly devastated the district, and is supposed to have been the last which infested it; and he obtained from the King, as a reward, a large part of the lands of the parish. A place is pointed out as the animal's den, and bears the name of 'the worm's hole,' and the ground in its vicinity is called Wornington. The crest of Lord Somerville's arms has the inscription, 'The wode laird,' and contains other allusions to his ancestor's exploit. William de Somerville, after obtaining the property in the parish, became chief falconer to the King and sheriff of Roxburghshire; he built Linton-tower, which was used as his family seat till their removal to CARNWATH [which see], in the end of the 14th century; and he was buried in the choir of Linton church, the sepulchre of many of his descendants. Linton-tower, now nearly untraceable, stood on a rising ground near the church, and seems to have been surrounded by a fosse. A hollow on its site is the vestige of its dungeon. The tower was hazarded in sturdy oppositions of its owners to the aggressions of England in the days of

Wallace and Bruce; and, in the reign of Henry VIII., it was first dilapidated by the warden of the English marches, and next utterly destroyed by the Earl of Surrey. The parish, both from lying immediately on the Border, and from its being part of what were anciently called 'the dry marches,' and one of the most facile thoroughfares between the kingdoms, was peculiarly exposed to the rough and sanguinary contacts of the Border wars. Graden-place,  $\frac{3}{4}$  of a mile south-west of Hoselaw-loch, shows traces of a fortalice surrounded by a moat, and was the seat of the Kerrs of Graden, little inferior in the coarse fame of Border warfare, to their namesakes of Fernihirst. On the summits of various rising grounds are remains of circular encampments. On the farm of Frogdan is a spot called the 'tryst,' marked by several upright stones, and anciently the place of rendezvous for parties about to make a foray into England. A narrow opening between two heights, along the side of Linton-loch, bears marks of having been fortified, was defended by the rising ground of artificial formation, which now bears aloft the parish-church, and seems to have been viewed as a pass or as a favourable point for standing at bay against a pursuing foe. In various localities tumulus abound, enclosing earthen urns with human bones; and, in one place, they are so numerous as to identify the spot with the scene of some extensively murderous onslaught. The principal landed proprietor is Robert Pringle, Esq. of Clifton, M.P. for Selkirkshire. Linton and Hoselaw, once villages of note, have become extinct. The parish is bisected eastward by the turnpike from Kelso to Yetholm, and has facilities of communication from being, at its nearest point, only 3 miles distant from Kelso. Population, in 1801, 403; in 1831, 462. Houses 79. Assessed property, in 1815, £4,324.—Linton is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, Pringle of Clifton. Stipend £239 2s. 10d.; glebe £12. Unappropriated tithes £308 2s. 3d. The parish, like that of the same name in Peebles-shire, was anciently called Linton-Roderick. Its church was, in the 12th century, given by Richard Comyn to the monks of Kelso; but it was maintained by them as a rectory. The present church is a small antique strong edifice, situated in the south end of the parish, half-a-mile from the Kail. Schoolmaster's salary £34 4s. 4½d., with £13 fees, and £7 other emoluments.

**LINTON (EAST)**, a large and prosperous village in the parish of Prestonkirk;  $5\frac{1}{2}$  miles east of Haddington; 6 west of Dunbar; and  $6\frac{1}{2}$  miles of North Berwick, Haddingtonshire. It stretches north and south along the left bank of the river Tyne, at a fine large bend made by the stream; and rests, at its south end, on the great mail-road between Edinburgh and London. The place had an extensive distillery, which has been recently dismantled, an inn, and an array of drinking-houses; and is the site of a United Secession meeting-house, two endowed schools, a subscription school, two private schools, a subscription library, and a branch of the East Lothian itinerating libraries. It was anciently a burgh-of-baron; and, during harvest, has a large weekly market, on Monday, for biring reapers. A few yards to the north of it stands the parish-church. The village, but without the modern affix of 'East,' gave name, from the epoch of record till the Reformation, to the parish in which it stands: see **PRESTONKIRK**. Population 720. The river Tyne, while sweeping round the southern side of the village, falls into a large and deep linn. A few salmon are occasionally caught at this fall.

**LINTRATHEN, LENTRATHEN, or GLENTRATHEN**, a parish in the Grampian district of Forfar-

shire; bounded on the north-east by the Grampian section of Kirriemuir; on the east by Kingoldrum; on the south by Airrie and Alyth; and on the west by Glenisla. Its greatest length from north to south is 12 miles, and its greatest breadth  $5\frac{1}{2}$ . Over two-thirds of the length from the south the breadth varies from 4 miles to the maximum; and over the remaining third it tapers regularly to a point. The parish lies in the outskirts of the Grampians, and is, for the most part, a sea of heights from 500 to 1,000 feet above the level of Stratbmore, of bleak, barren, and chilly aspect. Along the southern boundary, and some way up the middle of the interior on the banks of the principal streams, are sloping belts of arable ground, considerable in area, and not deficient in fertility. But most of the lands in tillage are thinly carpeted with a moorish soil, and produce corn of very inferior quality. Among the hills in the interior are several valleys fit only for pasturage. The heights are, for the most part, heathy; and, in the north corner, are wild and desolate. Few trees anywhere relieve the pervading dreariness. The river Isla flows for  $5\frac{1}{2}$  miles along the western and southern boundaries. Back-water rises in the extreme north corner, traverses a deep mountain furrow or narrow vale called Glendampf, receives several highland brooks, and, after having flowed due south from its source till within 2 miles of the southern boundary, runs 4 south-eastward in the interior, and 1 mile south-westward along the boundary to a confluence with the Isla. Opposite the parish-church,  $1\frac{1}{2}$  mile before touching the boundary, it forms a small eataract. Melgam-water drains the east side of the parish, and falls into Back-water a little above the church. Lintrathen-loch, circular in outline, upwards of a mile in diameter, fed by mountain rills, and sending off its superfluous waters to Back-water, lies  $\frac{1}{4}$  of a mile west of the church, and abounds in pike, perch, and trout. Communication between the northern district and the southern is interrupted by impracticable heights; but, in the most peopled parts, is accelerated by roads. Population, in 1801, 919; in 1831, 998. Houses 224. Assessed property, in 1815, £449.—Lintrathen is in the presbytery of Meikle, and synod of Angus and Mearns. Patron, the Earl of Airley. Stipend £159 2s.; glebe £12. The church was built in 1802, and slightly repaired in 1829. Sittings 408. The minister stated, in 1836, that, excepting six dissenters, all the parishioners belonged to the Establishment. The ancient church belonged to the priory of Inchmahome. Schoolmaster's salary £29 18s. 9½d., with £26 fees, and £5 other emoluments. Two private schools are open during winter.

**LINTROSE.** See **KETTINS**.

**LINWOOD**, a village in the north-east of the parish of Kilbarcan, Renfrewshire, on the left bank of the Black Cart, distant  $1\frac{1}{2}$  mile from Johnstone, and  $3\frac{1}{2}$  from the cross of Paisley. The river is here passed by a stone-bridge of one arch, erected about the year 1762. The village, which mostly stands on the estate of Blackston, was built on a regular plan. It is of modern origin, having arisen from a large mill for the spinning of cotton, which was established at this place in the end of the 18th century, and which gives employment to the most of the inhabitants. It is contemplated to build a church in Linwood, and for this purpose £500 has been subscribed. The population is about 1,000.

**LISMORE**, an island of the Hebrides, belonging to Argyleshire, and situated at the mouth of Loch-Linnhe, about 8 miles from Oban. It is a narrow uneven rocky ridge, about 9 miles long, and from 1 to 2 miles broad; containing about 8,000 acres, and lies entirely upon a limestone rock. The surface is

rugged and sprinkled with abrupt projecting rocks, but the soil is a rich black loam, formed from limestone, and extremely fertile. Deer and ox horns of uncommonly large size have been frequently dug up in the bogs and mosses. It was anciently the seat of the Bishop of Argyle, who was frequently named 'Episcopus Lismoriensis;' and a great part of the cathedral remains, the chancel of which is used as the parish-church. The walls of the bishop's castle remain pretty entire at Achindin, 4 miles west of the cathedral. There was formerly a Roman Catholic college on this island, at Kilcheran, but it has been recently removed to Aberdeenshire. There are several vestiges of fortified camps, and an old castle with a fosse and drawbridge, said to have been erected by the Danes. Lismore contained, in 1801, 1,329 inhabitants; in 1831, 1,790. Assessed property, in 1815, £1,250. Houses, in 1831, 303.—Between the island of Lismore and the coast of Mull lies a rock known by the name of 'The Lady's rock,' of which the following historical anecdote is related. "Laueblan Cattanach Maclean of Dowart had married Lady Elizabeth, daughter to Archibald, second Earl of Argyle; and, either from the circumstance of their union being unfruitful, or more probably owing to some domestic quarrels, he determined to get rid of his wife. Some accounts say that she had twice attempted her husband's life; but, whatever the cause may have been, Maclean, following the advice of two of his vassals, who exercised a considerable influence over him from the tie of fosterage, caused his lady to be exposed on a rock, which was only visible at low water, intending that she should be swept away by the return of the tide. From this perilous situation, the intended victim was rescued by a boat accidentally passing, and conveyed to her brother's house. Her relations, although much exasperated against Maclean, smothered their resentment for a time, but only to break out afterwards with greater violence; for the Laird of Dowart being in Edinburgh, was surprised, when in bed, and assassinated by Sir John Campbell of Calder, the lady's brother. The Macleans instantly took arms, to revenge the death of their chief, and the Campbells were not slow in preparing to follow up the feud; but the government interfered, and, for the present, an appeal to arms was avoided."—Gregory's 'History of the Islands and Isles,' pp. 127, 128.

LISMORE AND APPIN,\* an united parish in Argyleshire, extending, from the south-west end of Lismore, to the extreme part of Ceanlochbeg, 63 miles in length, by 10, and in some places by 16 in breadth. It is bounded by the seas that divide it from Ardhattan and Kilmore to the south and south-east; by Glenorchy or Clacbandysart on the east, at the King's house; by Kilmalie on the north-east; by Suinart, a part of the parish of Ardnamurchan, on the north-west; by Morven on the west; and by the Island of Mull, and the great Western ocean, on the west and south-west. It is intersected by several considerable arms of the sea, and comprehends the districts of AIRDS, APPIN, DUROR, GLENCRE-RAN, GLENCOE, and the island of LISMORE, [see these articles,] besides the district of Kingairloch, which stretches for about 12 miles along the north

side of the Linnhe-loch, and contains a population of about 300. The extent of sea-coast belonging to the united parishes is not less than 90 miles. There are two ferries from Lismore to the opposite coast of Appin. Population of the united parish, in 1801, 3,243; in 1831, 5,365. Assessed property, in 1815, £10,060. Houses, in 1831, 786.—This parish is in the presbytery of Lorn, and synod of Argyle. Patron, the Duke of Argyle. Stipend £212 12s. 2d.; glebe £17. Service is performed alternately at Lismore and Appin. The church of Lismore, part of the ancient cathedral, seats 540. The church of Appin was built in 1749, and enlarged in 1814; sittings 350.—The district of Kingairloch and the Braes of Morven were erected, in 1829, into a mission. Stipend of missionary £85, paid by the committee of the Royal bounty.—Glencrean also forms a mission. Salary £80.—There are Episcopalian congregations at Ballahulish and Portnacroish.—There are two parochial schools; the salary of one master is £27, with about £12 fees; of the other £19, with £11 fees. There is also one private school.

LISTON-SHIELDS, a district among the Pentland hills, belonging *quoad civilia* to the parish of Kirkliston, and *quoad sacra* to that of Kirknewton, Edinburghshire. It lies south-east of both parishes, distant, at the nearest point,  $\frac{1}{2}$  of a mile from the latter, and  $4\frac{1}{2}$  miles from the former. The district is nearly a square  $1\frac{3}{4}$  mile deep; bounded on the north by Currie; on the east by Pennicuik; on the south by Pennicuik and Peebles-shire; and on the west by Mid-Calder. It sends its tiny streams northward from near its southern limits, and is one of the most bleak parts of the Pentlands.

LITTLE DUNKELD. See DUNKELD (LITTLE).

LITTLE FERRY. See DORNOCH.

LIVET, a small river in Banffshire, is a tributary of the Avon. It gives the name Glenlivet to the district through which it flows. See GLENLIVET.

LIVINGSTONE, a parish in the south-east division of Linlithgowshire. It is, in a general point of view, a long narrow stripe, stretching south-westward and north-eastward, but has two expansions, the one sudden, narrow, and tapering, and the other more slow and less excursive. In extreme length it measures  $6\frac{1}{2}$  miles; for 2 miles from the south it has a mean breadth of less than a mile; over the next mile of its length it so projects westward as to have a breadth of nearly 3 miles; for a mile further it is narrowed to  $\frac{3}{4}$  of a mile, and over the rest of its length it has a mean breadth of about 2 miles. It is bounded on the north-west by the southern part of Ecclesmachan; on the north-east by Uphall; on the east and south-east by Edinburghshire; on the south-west by Whitburn; and on the west by Bathgate. Almond-water, for  $1\frac{3}{4}$  mile, runs along the south edge of its angular westerly projection, and then runs  $3\frac{1}{2}$  miles north-eastward, a mile of this distance across the interior, and the rest of it along the south-eastern boundary. Brieob-water comes down from the south-west, and flows along the south-eastern boundary to a junction with the Almond. The surface of the parish is gently diversified, all arable, all enclosed, finely adorned with rows of plantation, and generally carpeted with a loamish clay superincumbent on till. Agriculture has here made great achievements, and is joyous in their results. Dechmont-law, in the north corner, is the principal eminence. Coal, ironstone, limestone, and freestone abound. Livingstone-house and Blackburn-house are fine mansions embosomed in wood. The principal village is BLACKBURN: which see. Dechmont has about 170 or 180 inhabitants. Livingstone, the kirktown, 14 miles west of Edinburgh, and 6 east of Whitburn, is an

\* "Kilmluag, and Island Mund, were the old names of these parishes, and the only names by which they are designed in the Feind records at Edinburgh. *Kilmluag* literally signifies 'the Cell or Chapel of St. Muluag,' a saint of the 7th century, who was the first dignitary here, and probably laid the foundation of the cathedral. *Island Mund* signifies 'the Island of St. Mungo,'—a small island in Loch Leven in Glencoe, dedicated to that saint. The island has been long the common cemetery of the inhabitants of Glencoe. *Lismore*, the modern name of this parish, signifies 'Large, or extensive gardens.' *Lis*, or *Lios*, in the Celtic language, denotes 'a garden.'"—*Old Statistical Account*.

cient, and figures a little in history; but is now a small decayed hamlet on the bank of the Almond, on the south road between Edinburgh and Glasgow. 'The bonnie lass of Livingstone,' so well-known to Scottish song, is said to have kept a drinking-house a mile west of the village. The parish is traversed diagonally and across one of its projections by the Edinburgh and Glasgow road by way of Whitburn; and south-westward, close on its northern boundary by the Edinburgh and Glasgow road, by way of Bathgate; and, besides various subordinate roads, it has three other turnpikes, two of which connect the two Edinburgh and Glasgow roads, at points where they are less than 2 miles asunder. Population, in 1801, 551; in 1831, 1,035. Houses 216. Assessed property, in 1815, £6,608.—Livingstone is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Earl of Roseberry. Stipend £188 12s.; glebe £12. The parish-church, situated at the village of Livingstone, was built in 1732, and new roofed in 1837. Sittings 263. A school-room, in the village of Blackburn, was, in 1838, used as a preaching-station of the Establishment, precursory to the erection of a *quoad sacra* church. Sittings 120. Minister's salary £50. An independent chapel, in Blackburn, was built in 1825-6. Sittings 200. Maximum stipend £35. An ecclesiastical survey of 1838, showed the population then to consist of 631 churchmen, 349 dissenters, and 14 nondescripts,—in all 994; of whom 432 resided in Blackburn. The parish-school was attended, in 1834, by 53 scholars; and two private schools, by 98. Parochial schoolmaster's salary £34 4s., with a house and garden, £8 fees, and £2 other emoluments.—The peel of Livingstone, the undoubted memorial of a haronial strength, stands a little east of the church, with high ramparts, and with deep ditches full of water. Leving, whoever he was, probably resided here as early as the reign of Alexander I., and gave name to the manor and parish. 'Thurstanus filius Levingi,' Thurstan the son of Leving, witnessed a charter of Robert the bishop of St. Andrews, confirming a grant of the church by David I. to the monks of Holyrood. Under these monks the church was anciently a vicarage. The parish, till 1730, when two-thirds of its area was disjoined and made independent, comprehended, he-sides its present limits, all the parish of Whitburn.

**LOANHEAD**, a beautifully situated and populous village in the parish of Lasswade, Edinburghshire. It stands 5 miles south-east of Edinburgh, half-way between the villages of Lasswade and Roslin, half-a-mile from the left bank of the North Esk. The inhabitants are principally colliers or persons connected with the paper-mills. But the village has several good houses, offers a fine summer retreat from the metropolis, and rejoices in the vicinity of some beautiful mansions and pleasure-grounds, and of the exquisite river scenery between Roslin and Lasswade. It possesses the unusual village luxury of a supply of water by pipes, and is the site of a brewery, and of a Reformed Presbyterian meeting-house.

**LOANHEAD-BY-DENNY**, a manufacturing village in the parish of Denny, Stirlingshire. It stands at the point where the Great north-eastern turnpike from Glasgow forks into the roads to Perth by Stirling, and to Edinburgh by Falkirk, 5 miles west of Falkirk, and 4 north-east of Cumhernauld. There is here a United Secession meeting-house.

**LOCHABER**,\* a district of Inverness-shire,

bounded on the east by Badenoch; on the south by Athol, Rannoch, and Argyleshire; on the west by Moidart; and on the north by the lakes and rivers which occupy the Great Caledonian glen. It is perhaps one of the most dreary, mountainous, and barren districts in Scotland. The chief produce of the country is black cattle, for which it has been long famed. The final stand of the wolf in Great Britain was made in the Lochaber mountains, a region in appearance well-calculated for the kennel or retreat of these ferocious animals, where, in 1680, the last fell by the hand of Sir E. Cameron of Lochiel.\*

**LOCH-ACHRAY**. See **ACHRAY**.

**LOCH-ALINE**. See **ALINE**.

**LOCHALSH**, a parish on the west coast of Ross-shire. Its greatest length is about 28 miles; greatest breadth 8 miles. The inhabited part is computed to be 10 miles long, and 5 broad. The figure of the inhabited part approaches to a quadrangular peninsula, being enclosed by the sea on three sides. The kyle, or narrow sea, which separates the adjacent island of Skye from the main land of Scotland, is its western boundary; the bays of Loch-Duich and Loch-Long encompass it on the south; and the range of high hills which divides the east from the west coast of Scotland bounds it on the east. The general appearance is hilly, but not so mountainous as the other districts in the neighbourhood. On the coast the soil is rich, and a great part of it lies on a bed of limestone. The superficial area is about 55,000 Scottish acres, of which 1,500 only are under tillage, and about 2,000 under wood. Population, in 1801, 1,606; in 1831, 2,433. Houses, in 1831, 463. Assessed property £4,459.—This parish is in the presbytery of Lochcarron, and synod of Glenelg. Patron, the Crown. Stipend £160 17s. 10d.; glebe £48. Church built about 1806; sittings 650.—A district containing about 530 persons has been annexed to the *quoad sacra* parish of Plockton: which see.—Schoolmaster's salary £25 13s. 6d.; with about £25 fees. There are other two schools besides the parish school, supported the one by the Inverness Education society, the other by the General Assembly.

**LOCH-AN-EILAN**. See **DUTHIL**.

**LOCHANS**, a village in the Rhinns of Galloway, Wigtonshire. It stands on the mailroad between Stranraer and Portpatrick, distant 1½ mile from the former, and 5 miles from the latter, partly within the parish of Portpatrick, but chiefly within that of Inch. Population 200.

**LOCH-ARD**. See **ARD**.

**LOCH-ARKEGG**. See **ARCHAIG**.

**LOCHAR-MOSS**, an extensive morass, intermediate between the lower parts of Nithsdale and Annandale, Dumfries-shire, and distributed among the parishes of Dumfries, Caerlaverock, Tinwald, Torthorwald, Mousewald, and Ruthwell. It stretches northward from the Solway frith in a stripe, 10 miles long, and from 2 to 3 miles broad; and, over its whole extent, is nearly a dead level. Tradition asserts it to have been originally covered with wood, next inundated by the sea, and converted into a bay navigable to nearly its head, and next choked up by the wreck of vegetation, and the deposits of the Solway tide, and thus transmuted into a morass at

here and communicate with the Sound of Mull. Four large lochs of fresh water send their united waters by the river Lochy into the sea at Fort-William. The *ubers*, in Scotland, are uniformly applied to the confluence of waters: here it is applied to the confluence of lochs.

† Wolves continued in Ireland after this period; the last prevention was made for killing wolves in the county of Cork, about the year 1710; though a wolf is mentioned as having been killed in the sister-kingdom as late as the year 1750.

\* This extensive district is supposed to have derived its name from a small lagoon near Corrach, sometimes called Loch-na-Copper, or 'the Lake of Horns,' but it is more likely to be denominated from the confluence of lochs: viz. Linn-loch, Loch-Leven, and Loch-Jil, which are arms of the sea that meet

first impervious but gradually consolidated into a bog. The peasantry around it preserve the tradition in the following couplet:—

“First a wood, and then a sea,  
Now a moss, and e'er will be.”

Beneath the moss is a thick stratum of sea-sand, occasionally mixed with shells, and other marine deposits. From this stratum have been dug many large fragments of ancient vessels, some antique canoes or curraghs, formed from the trunk of single trees, and several iron grapples, small anchors, and other relics of local navigation. One of the excavated canoes was of large size, formed of the trunk of a venerable oak, and hollowed out apparently by fire. Antiquarian investigation has suggested curious probabilities as to the ancient existence of a sea-port near the north-east extremity of the morass. Above the stratum of sea-sand are found many large and seemingly aged trees. These are chiefly fir, but also include oak, birch, and hazel—the last with their nuts and husks; and they all lie with their tops towards the north-east, seemingly indicating by their position that they were eradicated and thrown prostrate by the rush of the impetuous tide, aided probably by the south-western blast. The river Nith, some persons contend, anciently flowed along this tract; but some swells in the ground between the head of the morass and the present bed of the river, seem unfavourable to the theory. Robert Bruce—if tradition may be credited—could not pass the moss in his progress from Torthorwald castle to meet Comyn at Dumfries, but pursued the very circuitous route of skirting it round by the Tinwald hills. The moss, even so late as his time, seems thus to have been impassable; but it is now traversed by four lines of road, three of them excellent, but all curiously, and, to a stranger, startlingly clastic beneath the motion of a loaded vehicle. One of the roads was formed by money which was due to a stranger from some merchants of Dumfries, which was never claimed by him or his heirs, and which, after lying out at interest upwards of 40 years in vain expectation of its being demanded, was obtained as a gift by the town, and expended on this important public work. The morass is far from being useless or of generally repulsive aspect. Portions of it abound with grouse and other game, and have their own attractions to the sportsman; other portions are regularly cut into excellent peats, and furnish supplies of fuel, large in quantity, and of great value to a county dependent on marine importation and inland carriage for coal; and other portions, of very considerable aggregate extent, are converted into pastures and arable grounds, and are tufted and filled with plantation. Much of it is green, and pleasant, resembling more a pastoral valley than a morass. Near its north end is the spacious racing-ground of Tinwald-downs, once surpassed in Scotland, as to the kind of celebrity which such an object possesses, only by the racing-ground of Kelso. On one of the roads which traverse it stands the pleasant little village of Trench; and close on its margin, in various directions, are the villages of Roucan, Collin, Blackshaws, Bankend, and Greenmill. In 1785, after a very dry summer, the moss accidentally caught fire, and burnt to a great extent till the fire was extinguished by a heavy fall of rain; and in the dry summer of 1826 it became once more ignited, burnt with rapidly-extended progress, and, before the destructive flames could be subdued, carried them beneath and around the sites of several cottages.

**LOCHAR-WATER**, a small river of Dumfriesshire, cutting Lochar-moss lengthways into nearly equal parts. It rises in the parish of Kirkmahoe, and, after running a mile eastward to the boundary,

assumes a southerly direction, and flows 11 miles between the parishes of Kirkmahoe, Dumfries, and Caerlaverock on the west; and those of Tinwald, Torthorwald, and Mousewald on the east. It now, over a distance of 4 miles, describes a demi-semicircle between Caerlaverock and Ruthwell; and, before losing itself in the Solway, it forms an estuary,  $1\frac{1}{2}$  mile in length, and half-a-mile in mean breadth. Between Dumfries and Tinwald it so splits its waters as to enclose an islet,  $\frac{3}{4}$  of a mile long, and  $\frac{1}{4}$  of a mile broad, called Tinwald Isle. The stream is, in the last degree, sluggish, and wears, in most places, the appearance of a mossy, stagnant, vegetating pool, entirely contrasted to the prevailing character of the gliding, the purling, the trotting, or the careering running waters of Scotland. From head to foot of Lochar-moss—a course, including windings, of at least 12 miles—it has a fall of only 11 feet. The stream contains pike, perch, trout, and eel, has a salmon-fishery at its mouth, and is frequented by otters.

**LOCH-AVICH.** See AVICH.

**LOCH-AWE.** See AWE.

**LOCH-BORLEY.** See DURNES.

**LOCH-BRACK.** See BALMACLELLAN.

**LOCHBROOM**, a parish in Ross-shire, bounded by Assynt on the north; Kincairdine and Contin on the east; Gailloch on the south; and the Minsh on the west. It is of an irregular figure, and is computed to be 36 miles long, and 20 broad. The greater part consists of wild uncultivated mountains and hills, covered with moss and heath, which, however, afford good pasture to numerous herds of black cattle and flocks of sheep. There is a considerable extent of arable land, chiefly on the coast and in the straths. The arable soil is shallow, but tolerably fertile. The parish is divided into four districts: namely, the Aird, Lochbroom Proper, the Little Strath, and the Laigh. There is a mountain-lake called Loch-Broom, about 3 miles in length, and 1 in breadth; from which a rapid river called the Broom or Braom descends into the Big-loch below the parish-church. The Laigh is watered by the meikle river which descends from Loch-na-Sealgh, a beautiful sheet of water about 6 miles in length. Ullapool, one of the villages established by the British Society, is in this parish; and there are two other fishing-stations, one at Isle-Martin, 5 miles north of Ullapool, and another at Isle-Tanera, a mile north of Isle-Martin. Besides the harbour of ULLAPOOL [which see], the whole coast is indented with numerous safe bays. The islands of Ristal, Tanera, Isle-Martin, Isle-Greenyard, and the Summer-isles, belong to this parish. The ruins of numerous ancient fortifications are to be seen in the parish. Population, in 1801, 3,533; in 1831, 4,615. Houses, in 1831, 917. Assessed property, in 1815, £1,995.—This parish is in the presbytery of Lochcarron, and synod of Glenelg. Patron, Mackenzie of Cromarty. Stipend £298 10s. 9d. Church built in 1817; repaired in 1835; sittings 1,200.—There is a Government-church at Ullapool.—Schoolmaster's salary £34 4s., with about £6 fees. Of the population about two-thirds can neither read nor write.

**LOCH-BROOM.** See MAUCHLINE.

**LOCHCARRON**, a parish in Ross-shire, situated on an arm of the Western ocean, into which the river Carron falls: see CARRON. It is upwards of 14 miles long, and from 5 to 6 broad, and is a beautiful Highland country. The arable soil is fertile, partly clay and partly sand; but the climate is wet and rainy. The number of cultivated acres is about 1,300. Assessed property, in 1815, £513. Present rental about £2,500. At the Ferrytown of Strouie are the remains of a castle, anciently the property of

the Macdonalds of Glengary; and there are the remains of two other fortified buildings at Janetown and at Laganduin. Lochcarron has produced several excellent Gaelic poets, particularly the three Mackenzies, some of whose poems are to be found in Macdonald's collection. Population, in 1801, 1,178; in 1831, 2,136. Houses 383.—This parish is the seat of a presbytery, in the synod of Glenelg. Patron, the Crown. Stipend £158 6s. 7d.; glebe £17 10s. Church built in 1751; sittings 300.—The parish-schoolmaster has the maximum salary.

LOCH-CATHERINE. See KATRINE.

LOCH-CLACHAN. See DAVIOT, Inverness.

LOCH-DOINE, a small picturesque loch in the parish of Balquhider, Perthshire. It is an expansion of the same river, the Balmag, which afterwards forms Loch-Voel and Loch-Lubnaig, and in time of floods, forms one sheet with Loch-Voel.

LOCH-DUICH, an arm of the sea, or rather of Lochalsh, which extends, in a north-east direction, into the parish of Glensheil, Ross-shire, about 6 miles. It sends off a branch to the north-east, about a mile long, called the Little loch.

LOCH-DUNDELCHACK. See DUNDELCHACK.

LOCH-DUNGEM. See KELLS.

LOCHEE, a *quoad sacra* parish, and a large manufacturing village, in the vicinity of Dundee, Forfarshire. The parish is  $1\frac{1}{2}$  mile in extreme breadth, and less than 2 miles in extreme length; it lies, *quoad civilia*, partly in the parish of Dundee, and partly in that of Liff and Bervie; and it was erected, in 1834, by act of the General Assembly. Its population, according to an ecclesiastical survey in 1835, was then 3,685; consisting of 2,497 churchmen, 829 dissenters, and 359 nondescripts; and it was supposed by the minister to have increased in November 1837, to 4,000. The church was built by subscription in 1829, and cost about £2,000. Sittings 1,144. Stipend £155. An United Secession chapel was built, by a newly-organized congregation, in 1826-7, and cost £800. Sittings 567. Stipend £132. There were, in 1834, seven schools, three of them conducted by females, and all attended, in the aggregate, by 318 scholars. The village occupies a comparatively large space, being uncontinuous and dispersed, and has a poor though industrious appearance. Its inhabitants—comprising the great hulk of the population of the parish—are, almost without exception, of the poor and working classes, labourers and handicraftsmen,—but principally weavers, employed by the manufacturers of Dundee. The village stands  $1\frac{1}{2}$  mile north-east of Dundee, is included within the parliamentary boundaries of that burgh, and may, in all respects, be viewed as its suburb.

LOCHENBRECK, a powerful and celebrated chalybeate spring, in the parish of Balmaghie, Kirkcubrightshire. The water is strongly impregnated with sulphate of iron and carbonic acid, flows copiously, is transparent, and not unpleasant to the taste, and acts as a powerful tonic and diuretic. In cases of dyspepsy and debility, patients given up by the faculty have found it a restorative; in cases of ague, patients have been relieved by it; and even in obstinate intermittents, they have found it a cure when other remedies have failed. Improved lodgings were erected 30 years ago in its vicinity, and an excellent road to it made from the town of Gatehouse-of-Fleet, 7 miles distant. See BALMAGHIE.

LOCHEND, a small lake, a mile north-east of Edinburgh, and  $\frac{1}{4}$  of a mile west of Restalrig, in the parish of South Leith, Edinburghshire. On the top of a rock overhanging it, and close to the modern farmstead, are the ruins of the Castle of Logan of Restalrig. Lochend, at one time, supplied the town

of Leith with water.—A small lake of the same name occurs in the parish of Linlithgow.

LOCHEND. See DUNBAR.

LOCH-FEOCHAN. See KILMINVER.

LOCH-FETTY. See BEATH.

LOCH-FITHIE. See FORFAR.

LOCH-GAIR. See GAIRLOCH.

LOCH-GELLY, a village in the parish of Auchterderran, Fifeshire; 8 miles north-west of Kirkcaldy, and 6 east of Dunfermline. The inhabitants are chiefly weavers and colliers. It has three annual fairs: viz. on the 1st Thursday in April, O. S.; 3d Wednesday in July, and 3d Wednesday in September. It contains about 785 inhabitants: See AUCHTERDERRAN.

LOCHGILPHEAD, a village and a *quoad sacra* parish in Argyleshire. The parish was divided from the parishes of Glassary and South Knapdale, by authority of the presbytery of the bounds, in 1828. It is a district of about 5 miles in length, and 3 in breadth; with a population estimated, in 1836, at 2,726. The church was built in 1828 at the expense of Government, and enlarged in 1834; sittings 506; cost £750. Stipend £120, paid by the Exchequer, with a manse and glebe; and a voluntary addition of £30 from the congregation.—A Baptist congregation has been established in the village of Lochgilphead since 1818. Chapel cost £450; sittings 300. Salary about £60.—The Congregational Union have a mission-station here.—There are two villages in the parish: viz. Lochgilphead at the northern extremity of Loch-Gilp, with a population of 1,300; and Ardrishaig, with a population of 300, at the distance of 2 miles. Lochgilphead is a thriving village, having daily communication with Glasgow and Inverary by the steam-boats on Loch-Fyne and the Crinan canal. There are a branch of the Glasgow Union bank here, a distillery, and a good school here.

LOCH-GLENGAP. See TWYNEHAM.

LOCHGILPHEAD, a parish in Argyleshire, in the district of Cowal, to which that of Kilmorich is joined. The united parish is about 30 miles in length, and from 6 to 20 in breadth; exclusive of a district belonging to it, 5 miles in length, which is annexed, *quoad sacra*, to the parish of Inverary. It lies along the western coast of Loch-Long; receives its name from the local situation of the church, at the head of Loch-Goil, a small arm of the sea which runs off in a north-west direction from Loch-Long. It is bounded on the north by Killin, Glenorchy, and Arrochar; on the east by Loch-Long; on the south and south-west by Kilmun and Strachur; and on the west by Loch-Fyne and Inverary. The surface in general is very rugged, consisting of barren mountains, are interspersed with huge rocks and precipices, and, till of late, covered with heath; but, since the introduction of sheep, they have begun to exhibit the appearance of verdure. Upon the west side of Loch-Long, and upon both sides of Loch-Goil, the coast is bold and steep, and the hills high and craggy. The shore, upon both sides of Loch-Fyne, as far as this parish extends, is more flat and accessible; the land is high, but not so rocky or steep. The barrenness of the ground along the coasts of Loch-Goil and Loch-Long is partly concealed, and the wildness of the scene agreeably diversified, by extensive natural woods which cover the land near the coast, and rise to a considerable distance from the shore. Some of the mountains, which form the western extremity of the Grampian range, are situated in this parish: as Benuna, so called from the richness of its grass; Benaulochan, from the fresh-water lake which washes its base; Benluibhain, abounding in herbs; Benthiolaire, remarkable for its springs and water-cresses; and Ben-

donich, called after a saint of that name. These, and some other hills in this parish, rise to a great height. There are two small lakes in the parish, well-stored with trout. The coast is well-cultivated, and its produce repays the farmer for the labour he bestows on it. This district lying on the banks of Loch-Fyne and Loch-Long, is well-situated for the prosecution of the fisheries. There are three castles in the district: viz. Dunduramb, Ardkiulass, and Carrick. The castle of Dunduramb is a large and strong tower, of an irregular figure, with small turrets above the angles in the wall. It is built in a low situation, close to the sea; and, as the access to it by land must have been very bad, the most frequent communication would probably be by boats. Above the gate of the castle is the following inscription:

1596.

J. MAN. BEHOLD. THE. END. OF. ALL. BENOUGHT.  
WISER. THAN. THE. HIESTES. I. TRUST. IN. GOD.

The castle of Ardkiulass\* is composed of three separate towers, each of them fronting an area within. The space, between the towers, is defended by a strong wall, about 15 feet high. In the course of this wall is the great gate, which is defended by small round turrets in flank, with apertures, through which those who assailed the gate might be annoyed with arrows, or with fire-arms. The gate is defended by a small tower rising immediately above it. Around the area, and within the walls, are smaller buildings, for lodging servants, for holding arms, and for storehouses and cellars. The period when it was built is not known; but there is evidence of its having been repaired in the year 1586. The old residence of the family of Ardkiulass—of which the ruins can now scarcely be traced—was at a small distance from the present castle, but in a more commanding situation.—The place of greatest antiquity and strength, in this district, is the castle of Carrick.† This castle is built upon a rock, which was formerly surrounded by the sea by means of a deep ditch. The entry to the castle from the land was by a drawbridge, which was defended by a strong wall and two small towers. The castle itself is of an oblong figure, but not perfectly regular, as the architects, in laying the foundation, kept in some places by the very edge of the rock. It is 66 feet long, and 38 broad, over walls, the side-wall is 64 feet high, and 7 feet thick. Between the castle and the sea, there is a part of the rock which was surrounded by a high and strong wall built round the edge of the rock; within this space 100 men might conveniently stand, for the defence of the castle, if it was attacked by sea. Before the invention of gunpowder, the castle of Carrick could only be taken by surprise; it was scarcely possible to storm it, nor could it be taken by blockade, as it had always a free communication with the sea, for a vessel of any burden may swim along the side of the rock. The time in which this castle was built is not ascertained: it can be traced up as far as the end of the 15th century, but it is probably much older. The tradition of the country is, that it was built by the Danes. It was burnt by the Athole-men. Nothing now remains but the walls; and these are not entire. The rocks are chiefly moorstone; spar of great variety of forms is often found. There is some granite and jasper, and limestone is found in several quarries. There is a vein

of lead ore, said to be very rich in silver, at the head of Loch-Fyne, which has never been wrought. Population, in 1801, 1,145; in 1831, 1,196, of whom 611 were resident in Kilmorick. Assessed property, in 1815, £4,690. Real rental, in 1790, £2,500. Houses, in 1831, 101.—This parish is in the presbytery of Inverary, and synod of Argyle. Patron, Callander of Ardkiulass. Stipend £167 9s. 9d.; glebe £37 10s. There are two congregations: one at Lochgoilhead, and another at Kilmorick. Sitings in Lochgoilhead church, 305; in Kilmorick church, which was built in 1816, 258.—Schoolmaster's salary £30. There were eight private schools in 1834.

LOCHGOIN, a small hamlet in the parish of Eaglesham, 4 miles from the village of that name, and 2 from Kingswell. Its situation is solitary and wild, there being no human dwelling near it, and the ground around it being chiefly a barren muir. The present house is but a late erection,—it occupies, however, the precise site of the old building which sheltered many an excellent Covenanter, in times when persecution in its worst form disgraced and polluted our then unhappy country. Its present occupant is a descendant of the worthy John Howie of Lochgoin, who, in times of extreme peril, divided his scanty meal with the proscribed Covenanters, and often braved the troubles and the dangers of dark nights and darker enemies, to carry food into their concealments. Though frequently in imminent hazard, he escaped every snare set for his life. At length he was obliged to banish himself from his country; but he lived to see the happy revolution of 1688, and to return to his native land, and to his own beloved solitude of Lochgoin, where he indited 'The Scots Worthies,' a volume which will be read when others of far more pretension are forgotten. Among those who were often indebted to the friendly shelter of Lochgoin, was Captain John Paton—a stern Covenanter—who was of much use to his companions and their cause in various skirmishes, and particularly at the battles of Pentland and Bothwell-bridge; and who, after escaping the fangs of his ruthless pursuers for many years, was at last seized, tried, and executed. To this worthy man John Howie was strongly attached; and various portions of his property constitute a few of the relics of our national struggle for religious independence which are to be found at Lochgoin.

LOCH-IN-DAAL, an arm of the sea deeply indenting the southern side of the island of Islay. It is shallow, but abounds in fish, and is much resorted to by shipping. The shores present good arable land.

LOCHINDORB. See EDENKEILLIE.

LOCHINVAR. See DALRY.

LOCHINVER. See ASSYNT.

LOCHLEE, a large parish in the extreme north of the Grampian district of Forfarshire; bounded on the north by Aberdeenshire; on the east by Edzell; on the south by Lethnot, Cortachie, and Clova; and on the west by Clova and Aberdeenshire. It is an oblong, 13 miles by 8, stretching east and west. Its area is about 104 square miles. Everywhere, except over 6½ miles on the east, it is hemmed in by a water-shedding line of mountains. Its whole surface is ruggedly highland, consisting of wild and high mountain-ranges, partially and narrowly cloven asunder by glens. Mount Keen and Mount Battoch, both on the boundary, the former on the north, and the latter on the north-east, rise respectively 4,000 and 3,465 feet above sea-level. Other summits along the boundary and in the interior attain altitudes of from 2,000 to 3,000 feet. The heights are, for the most part, steep, rocky, and covered with heath,

\* *Ardkiulass*, probably *Aird achoinglais*, 'the Residence of the gray dog.' The great extent of plain ground around Ardkiulass permitted the proprietors to indulge in the pleasures of the chase, the favourite amusement of the times. *Aird* generally means the residence of a great family; it seems to express the same meaning which the word *place* conveys in some parts of the low country of Scotland.—*Old Statistical Account*.

† *Carrick* signifies 'a Rock.'

bent, or moss; and even the lower slopes and the valleys are, to a considerable extent, dressed in russet. Only a trifle more than one-fourth of the area is inhabited; all the rest being triumphant mountain-wilderness, or the free walk of the wandering flock. Black-faced sheep and small cattle of the Angus breed browse on the pastures. Not more than 1,400 acres have ever been tilled; and but small additions could be advantageously reclaimed. The soils of the arable grounds is thin and light, generally superincumbent on gravel, but becomes productively stimulated by lime. Natural woods are small in extent, and plantations are unknown. Limestone abounds; and a vein of lead ore has been traced for several miles, but, after a trial, was found to be un-compensating to the miner. All the head-streams of East water, or the North Esk, rise in the parish, and swell the stream to considerable hulk, before it passes into Edzell. See *ESK (THE NORTH)*. Three-fourths of a mile west of the church, a little south of the centre of the parish, and in the course of the river Lee, is a very beautiful little lake  $1\frac{1}{2}$  mile long, and 3 furlongs broad, at the east end of which stood the ancient church, and which imposed its own name of Lochlee on the whole parish.—The author of ‘*Attic Fragments*,’ speaking of this lovely sheet of water, says—“Close by its eastern margin are the ruins of the little church and school-house of Lochlee, the latter interesting to the lovers of Scottish literature, by having been the residence of Ross,\* the author of ‘*Helenora*, or the Fortunate Shepherdess,’ a poem which, though it be now as much a sealed book to the fashionables of Scotland, as the writings of Gower, or even Alfred himself, are to those of England, yet contains some of the most romantic descriptions that ever were written, and preserves traces of customs and traditions not to be found elsewhere. We came to the house, or rather the ruin; and, as was fitting for meditation for such a scene, we came without a guide to break, by ill-timed though well-meant information, the chain of our reflections. It had been the very minimum of human dwellings. There were two apartments, the largest not ten feet square: and yet here the humble and contented bard had taught the youth of the glen, reared a numerous family, written poems and songs, and been the life and admiration of all around him. A single apartment had been his parlour, his bed-chamber, and his study; that apartment had but one little window, and near this we saw, or fancied we saw, the marks of his rude chair and little table in the clay floor. Within the garden, small in proportion to the house, was a little bank of camomile, upon which the hard used to rest when fatigued; and below, a few stunted trees in the deserted churchyard, was the walk along which he used to study. There was a wildness of desolation, but at the same time a calm boliness of repose, about the place that came over me, I know not how; and for the moment, I felt that, if (which is not very likely) my own bones should become objects of interest or inquiry, I would rather have them laid in the lone solitude of Glenlee, where they would be visited only by the casual traveller, amid the wild simplicity of nature, than huddled up in the church of St. Peter, Westminster, where, while the worms fed upon myself below ground, the dean and chapter would feed upon my monument above.” Opposite the manse are the ruined walls of the castle of Invermark, built in the early part of the 16th century, and

inhabited by the family of Lindsay of Edzell, the ancient lords of the soil. Lord Painmore is now the sole proprietor. Several roads penetrate far into the interior, and one leads across the bold mountain-boundary into Aberdeenshire. Population, in 1801, 541; in 1831, 553. Houses 119. Assessed property, in 1815, £395.—Lochlee is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend £158 6s. 7d.; glebe £20. The parish-church is of modern erection, and has about 270 sittings. Three miles east of it is a small but neat Episcopalian chapel. About one-fifth of the population are Episcopalians. The parish school was attended, in 1834, by 28 scholars. Master’s salary £34 4s. 4d., with £5 11s. 1d. and 6 bolls of meal other emoluments. Two other schools were attended, in 1834, by 73 children. One of them is endowed by the Society in Scotland for propagating Christian knowledge, and yields £10 salary, and £7 or £8 fees, with other advantages; and the other has attached to it about £15 salary, with hed, board, and washing.

**LOCHLIN.** See *FEARN*.

**LOCH-LING**, an arm of the Atlantic ocean, in the shire of Ross. It forms the northern boundary of the peninsula of Kintail.

**LOCH-LINNHE**, an arm of the Atlantic ocean which separates the shires of Inverness and Argyle; extending in a north-easterly direction from the sound of Mull, as far as Fort-William, where it takes a northerly direction, and acquires the name of **LOCH-EIL**: which see.

**LOCHMABEN**, a parish in Annandale, Dumfriesshire; bounded on the north by Johnstone; on the east by Applegarth, Dryfesdale, and Dalton; on the south by Dalton and Mousewold; on the west by Torthorwald and Tinwald; and on the north-west by Kirkmichael. Its extreme length from the point where it is first touched by the Annan on the north to the boundary near Breconrig-side on the south, is  $8\frac{3}{4}$  miles. Its breadth, for 2 miles on the north, averages  $1\frac{3}{4}$  mile; for  $3\frac{3}{4}$  miles further, it varies from  $2\frac{1}{4}$  to  $3\frac{1}{2}$  miles; and, in the south, the parish runs out in two projections, one  $1\frac{1}{4}$  long by  $\frac{1}{4}$  broad, and the other 3 miles long by half-a-mile broad. The area is  $16\frac{1}{2}$  square miles, or 10,750 English acres. The highest ground is along the western boundary, but it is the summit merely of a long waving swell, and all acknowledges the dominion of the plough. The surface descends in a very gentle and finely diversified gradient, till nearly mid-breadth of the parish; and thence, excepting some easy rising grounds toward the north, it everywhere subsides into a rich and beautiful plain. Excepting three small mosses, which are of great value to the inhabitants for fuel, the whole parish is arable, though a considerable proportion of it is disposed in meadow-land and pasture. The soil toward the west is light and gravelly, but, in other parts, is uncommonly rich, consisting over a large area of the finest alluvial loam, occasionally nine feet deep, and everywhere abundantly fructiferous in every description of crop. The land is too valuable to admit of much plantation; but it has fine enclosures, and is sheltered by wide files of trees, and, in three or four localities, beautified with little expanses of wood. The climate—though various topographical features would seem to evidence against it—is very healthy and promotive of longevity. Red sandstone is quarried in thin slabs for roofing, and in blocks for building. All the mineral strata, like this, are of the secondary formation, and dip to the south. Few districts in Scotland have such plenty of water, and probably none combine so abundantly wealth of waters with opulence of soil and quiet beauty of

\* In 1726, Ross married Jane Cattanaeh, the daughter of a farmer in Aberdeenshire, and descended by her mother from the ancient family of Duguid of Auchinchove. In 1732, by the influence of his friend, Mr. Garden of Troup, he was appointed schoolmaster of Lochlee, in Angus; and the rest of his life was spent in the discharge of the duties of this humble office.

landscape. The river Annan, in mazy folds, runs along most of the eastern boundary, and looks, on the bosom of the exuberant plain, like a waving thread of silver on a fabric of tessellated green and yellow velvet. The Kinnel runs diagonally across the north end, south-eastward to the Annan, over a distance of 2½ miles in a straight line, but at least 5 miles along its pebbly channel, musical in the gurgling sound of its motion, limpid in its waters, and graceful and sweetly varied in its banks. The Ae runs a mile on the north-west boundary, and one-fourth of a mile into the interior to the Kinnel, overlooked on the Lochmaben side by a fine natural bank or gentle ridgy elevation covered with alders, birches, and hazels, and rioting over a pebbly bed on the other side very much greater in breadth than fairly belongs to the volume of its waters. So large and expansive, and almost continuous, are the lakes of this parish, that the ancient burgh, which stands amongst them, appears from the rising grounds which command a view of it to be situated on an island, in the midst of a curiously outlined inland sea. Not many years ago one of the lakes, called Grumbly-loch, was drained and converted into a meadow; and so amazingly fertile is its ancient bed, that, in a withering season which exsiccates all vegetation, it produces two luxuriant crops of hay, and, in ordinary seasons, it has been known to yield no fewer than five. The lakes which still remain are eight in number,—five of them of considerable extent. The Castle-loch, immediately south of the burgh, measures 200 acres; Halleath-loch, east of the burgh, 80; the Mill-loch, north-west of the burgh, 70; the Kirk-loch, west of the burgh, 60; and Hightac-loch, south-west of Castle-loch, 52. Nowhere do they, at any season, exceed 52 feet in depth; and over a great aggregate extent they are shallow, and in many places, from the shore inward, they are thickly overtopped with reeds. Two kinds of loch-trout, one usually weighing from 2 to 5 pounds, and the other from 12 to 14 pounds,—pike, occasionally weighing from 25 to 35 pounds,—perch, loach, roach, skelly, banstickle, and eel, are taken in all the lakes; and green back, brean, and vendace or vendise, are taken in addition, in the Castle-loch. The last of these—the vendace—is believed to be peculiar to this lake, and has drawn great attention both from naturalists and from epicures. The fish measures from four to six inches in length, and resembles a herring in form, anatomy, and flavour, but exceedingly delicate, and esteemed by gourmands the most delicious of the finny tribes. When newly caught, it has a brilliant silvery white appearance, slightly azure along the back, and partially on the sides. Its head is curiously and beautifully crowned or marked with the well-defined figure of a heart, in a brownish transparent substance, through which the brain is seen. The fish cannot, so far as is known, be taken with bait or the artificial fly; but must be caught with a net, and generally frequents the deepest parts of the lake, or the vicinity of the mouth of a tiny rill, called the Vendace-burn. Many and very careful, but uniformly vain, attempts have been made to transfer a breed of the vendace to other waters. The fish is no sooner touched or exposed to the air than it dies. For protecting it, or rather for judiciously regulating the amount of its capture, a Vendace club has for a considerable time existed, composed of the gentlemen of the district.\* The Halleaths-

loch is frequented by the heron,—the Annan and the Ae are visited by the kingfisher,—the Castle and Hightac lochs swarm with the wild duck, the coot, and the teal, and occasionally are furrowed by the cormorant,—and all the lakes are the resort, during severe winters, of wild geese and swans. In the small mosses, and at the foot of turf-fences, the adler has so often a lodgment, and exercises so deadly a power, as to occasion general dread among the inhabitants; but it is supposed to be watched, and partly kept down, by the heron. The number of landowners, in consequence of the singular distribution of the lands of Fourtowns, and the minute parcelling out of the burgh-roods, is about 250; but the principal in the parish are Johnston of Halleaths, Dickson of Elshieshields, the Marquis of Queensberry, the Duke of Buccleuch, and Sir William Jardine, Bart. of Applegarth. Halleaths is a pleasant mansion, embosomed among wood between Halleaths-loch and the Annan. Newmains is a neat but unsheltered mansion, on the road between the burgh and Dumfries. Broomhill, Todhill-muir, and Righthead, are good houses. Elshieshields, situated on an eminence overlooking the Ae, at the termination of the wooded bank, is an old but not warlike structure, one part of it rising abruptly to a considerable height, and imparting to the whole, as seen from a distance, the appearance of a dilapidated tower. Spedlin's tower, the ancient residence of the Jardines of Applegarth, situated on the Annan opposite the modern mansion of Jardine-hall in the conterminous parish, is vastly thick in its walls, has round turrets at its angles, and is strongly vaulted. Over the centre of the arched and fortified door by which it is entered are the armorial bearings of the Jardines, with the date 1605; and along its exterior walls are green coatings of ivy, while around it are some beautiful trees. The parishioners, who are generally a full century behind most parts of the Lowlands in receding from the superstitions of the dark ages, have made this tower the scene of one of their most notable ghost-stories. In the southern district of the parish are four villages. See article FOURTOWNS. An excellent road communicates on the west with Dumfries, and on the east with Lockerbie,—a good but little frequented road between Glasgow and Carlisle runs from north to south; and other roads radiate from the burgh. Population, in 1801, 2,053; in 1831, 2,795. Houses 549. Assessed property, in 1815, £6,297.

The grand attraction of the parish is the paternal residence of the Bruce, and the objects with which it and its history are associated. Lochmaben-castle stands a mile from the burgh, on the extreme point of a heart-shaped peninsula which juts a considerable way into the south side of the Castle-loch. Across the isthmus at the entrance of the peninsula are vestiges of a deep fosse which admitted at both ends the waters of the lake, and converted the site of the castle into an island, and over which a well-guarded drawbridge gave ingress, or refused it to the interior. Within this outer fosse, at brief intervals, a second, a third, and a fourth, of similar character stretched from side to side of the peninsula immediately at the entrance of the castle; it was protected in front by a strong arched wall or ledge, behind which a besieged force could shield themselves while they galled, at a distance, an approaching foe: and it had at the centre a drawbridge which led into the interior building, and which was probably the last post an enemy required to force in order to be master of the fortress. Two archways at the north-eastern and south-western angles of the trace appear to constitute the greater part of the nourishment of this fish.

\* The local name of the Vendace is *Vangis* or *Juvangis*. Perhaps it is the same fish with the *Geminid* of Wales, and the *Pollen* of Lough-Neagh in Ireland; but Sir William Jardine is not sure whether there is any authentic station for it either in England or Wales. Professor Agassiz considers the Vendace of the Lochmaben lochs to be distinct from the *Coregonus Macræmulus* of the continental ichthyologists. *Minute Entomus-*

building, through which the water of the fosse was received or emptied, remain entire. But no idea can now be formed of the original heavy or polish either of this outwork or of the stupendous and magnificent pile which it assisted to defend. Gothic hands began generations ago to treat the castle of the Bruce as merely a vulgar and convenient quarry; and, for the sake of the stones, they have peeled away every foot of the ashler-work which lined the exterior and the interior of its walls. So far has barbarian rapacity been carried, that now only the heart or packing of some of the walls is left, exhibiting giant masses of small stones and lime, irregularly huddled together, and nodding to their fall. Many portions of the skinned and ghastly but once noble and aerial pile have been precipitated from aloft, and lie strewn in heaps upon the ground; the stone and the lime so firmly cemented, that scarcely any effort of human power can disunite them. The castle, with its outworks, covered about 16 acres, and was the strongest fortress in the Border, and, till the invention of gunpowder, all but impregnable. But what remains can hardly suggest, even to fancy itself, the greatness of what the Goths have stolen. Only one or two small apartments can be traced, and they stand in the remoter and less frequented part of the castle, and, therefore, excite but little interest. But a few years ago a farmer's dwelling-house and offices, built of the stones of the ancient edifice, profaned the precincts; the potato-house was dug into the brow of the third fosse; and the bold features of the military works around were smoothed down to suit the convenience of a man who cared exemplarily for his pigs and oxen, but had not a nook in his recollection for a line of patriot Kings, or the stirring occurrences of the most eventful periods of Scotland's history. Many houses in Lochmaben, including the new school-house, are built of materials torn from the castle; and one inhabitant of the burgh warms his toes beside a pair of fine jambs which once rested on the paternal hearth of the Bruce.\* The enclosed spot around the castle is naturally barren, and fitted only for the raising of wood; and its present growth of trees, if allowed to bend their branches quietly over the ruin to the solemn music of the winds, would harmonize well with the solitude of fallen greatness. The view of the loch and of the circumjacent scenery, from all points in the vicinity, is calmly and impressively beautiful, and strongly disposes a reflecting mind to indulge in teeming and pleasingly tumultuous reminiscences of the past. The date of the castle is uncertain, but probably was the latter part of the 13th century,—the period of the competition of the Crowns. Tradition, though unsupported by documentary evidence, asserts the castle to have been not the original Lochmaben residence of the Bruces, but only a successor of enlarged dimensions, and augmented strength.† At a brief distance south of the town, on the north-west

\* A curious example will illustrate the surpassingly Gothic spirit of the modern Lochmaben-men. An inhabitant of the Heck, one of the King's kindly tenants, in the immediate vicinity of the castle, found, many years ago, a key of very vast proportions, supposed to have been that of the castle's chief gate. The key was put up to auction among the boobals for 2s. 6d.; and not finding a purchaser at a price believed to exceed by a few farthings the value of its metal in pounds' weight, it was coolly handed to a blacksmith to be converted into a pair of spades for cutting turf!

† It is asserted in the Old Statistical Account, that "this castle was built by Robert Bruce, the first of that name, King of Scotland." This, however, is extremely improbable, for the following reasons urged by Dr. Jamieson. Before the assertion of his right to the Crown, he could not have engaged in the erection of so strong a fortress, without exciting the suspicion of Edward I. He had neither opportunity nor means for carrying on such a work during the time of his arduous struggle; and when this was terminated by the defeat of his enemies, and the establishment of peace, he had business of far more importance to occupy his attention. We discover no vestige, in any of our public records, of his being thus engaged.

side of the loch, is a large rising ground called Castle-hill, and pointed out as the site of the original castle, and even as the alleged birth-place of the first royal Bruce. That a building of some description anciently crowned the eminence, is evident from the remains of an old wall still dug up an inch or two beneath the surface of the summit, and from the vestiges of a strong and deep trenchment carried completely round the base. Tradition says that the stones of this edifice were transferred from the Castle-hill, across the intervening part of the lake, to the point of the heart-shaped peninsula on the southern shore, as materials for the more modern erection; and it adds, that a causeway was constructed, and still exists, across the bed of the lake, to facilitate the convenience. But here monuments, documents, and physical probabilities, concur in refusing corroborative evidence. The original castle, situated at such convenient nearness to the burgh, was, we may conclude, devoured piecemeal by the proved castle-eaters of the town, and the more modern castle seems, as to its ashler-work, to have been constructed of stone from Corncockle-moor, the quarry in the parish which continues to be worked. The Castle-hill commands a fine view of the burgh, of the beautiful lakes, and of a considerable expanse of the luxuriant How of Annandale. Near it is a lower hill or mount, called the Gallows-hill, on which, in ancient times, a formidable gallows constantly stood, and was seldom seen during the Border wars without the dangling appendage of one or two rivers. The baronial courts of Lochmaben, and even occasional warden courts, were probably held on the summit of the Castle-hill, whence the judges beheld their sentences promptly and rigidly carried into execution.

The first mention that is made of this place is by Humphrey Llyud, who has said that Constantine, King of Cumbria, was killed at Lochmaben about 870. But this seems to be a mere fabrication. Robert de Brus, the son of that noble knight of Normandy, who came into England with William the Conqueror, and first possessed the manor of Skelton, being in a state of friendship with our David I., while prince, received from him, when he came to the throne, the lordship of Annandale, with a right to enjoy his castle there, with all the customs appertaining to it. This grant was made A.D. 1124. A charter, granted by William

On the contrary, from one of them it seems probable that the castle of Lochmaben came into the possession of his nephew Randolph, Earl of Murray, who is recognised as Lord of Annandale. Besides, had King Robert been more partial to castle-building than he was, he would most likely have given the preference to Turnberry. It is to be observed that, in several deeds of Edward III., mention is made both of a castle and of a peel at Lochmaben; as in a letter from him to Adam de Corry, whom he designs his "seneschal of the castle, peel, and lands of Lochmaben and Annandale," in a grant to William de Bohun, and in another to Henry de Percy. [Rotul. Scot. i. 276, b.; 399, a.; 479, b.] Distinct from both these castles, there appears to have been one more ancient than either of them, erected in one of the seven or eight lochs reckoned up in this neighbourhood. According to tradition, there was a nursery in the largest of them, where a castle afterwards stood; and some who are acquainted with the Gaelic, contend, that *Lochmaben* signifies "the Loch of the Maidens," or "the Loch of the Fair." Dr. Jamieson says: "I should be disposed to doubt this derivation, were it for no other reason than this, that although *maighdean* is rendered in modern Gaelic, a maiden, it is obviously a term borrowed from the Gothic, as not a vestige of it appears, either in the old British, or in its kindred dialect, the Armorican. In the latter, the only similar words are the derivatives of the verb *maga*, which conveys rather a different idea from that of 'maid,' as signifying to act the part of a nurse. As this fortress was apparently within the limits of the kingdom of Strat-Clyde, the name may have been formed from the Welsh *loch*,—*maebyn* and *maban*,—"a babe." Another mode of orthography, however, occurs in one old deed. Robert I. grants a charter to Thomas, son of John of Carruthers, of Musfald, &c., dated at "our manor of Lochmaban." Could we view this as the original form of the word, it might be traced either to the Gaelic *loch mael ben*, or to the Welsh *loch mael ban*, both signifying "the lake of the bald," or "smooth eminence."—*Palaces of Scotland*, pp. 101, 102.

the Lion to Robert, 3d Lord of Annandale, confirming to him the property possessed by his father in that district, is dated at Lochmaben. This is supposed to have been granted between the years 1165 and 1174. The church of Lochmaben was one of those which Robert Bruce, Lord of Annandale, gave to the monks of Gyseburn, in Yorkshire, about the year 1183. Bruce, the competitor for the throne, and the grandfather of Robert I., died at his castle of Lochmaben, A.D. 1295, or, according to Leland, 1296. In the year preceding his death, he granted a charter, dated at this fortress, confirming a convention between the monks of Melrose, and those of Holmcultram. "This old castle of Lochmaben," it is said by Chalmers in his 'Caledonia,' [iii. 78, 79.] "continued the chief residence of this respectable family, during the 12th and 13th centuries. Robert de Brus, the first Earl of Carrick, of this dynasty, probably repaired the castle at Annan." As a stone, taken from the ruins of Annan-castle, bears his name, with the date 1300, the conjecture seems to be formed, with great probability, that the family had continued previously to reside at Lochmaben. According to the testimony of our venerable minstrel, that hero, who so long withstood all the power, and all the bribes, of the royal Norman usurper,—he whom English writers have called 'a public robber,'\* who could he vanquished only by the vilest treachery,—the immortal Wallace,—took the castle of Lochmaben. As he had only a few men with him, the deserted state of the place made it comparatively an easy acquisition. He thus addressed himself to the gallant Sir John Grahame, and his other companions:—

"I wald sailye, a gifb ye think it may be,  
Lochmaben house, quhilk now is left allayne;  
For well I waite power in it is leyst d mayne. e  
Carauerok als yeit f Maxwell has in hand;  
And we had this, thai mycht be bath g a wand  
Agayne h Sotheroun, i that now has our cuntre.  
Say quhat ye will, this is the best, think me, k  
Sair Jhone the Grayme gaif l fyrst his gud consent;  
Syne all the layff, m rycht with a hail entent, n  
To Lochmaben rycht haistely thair ryd.

The old hard subjoins a characteristic trait of the inviolable conduct of Wallace to the defenceless:

— Quhen the ladie had thaim seyne,  
"Grace," scho cryit, "for hym that deit o on tre."  
Thou Wallace said, "Mademe, your noyis lat be p  
To wemen yet we do bot hillit ill;  
Na young childir we lik for to spill. q

WALLACE, B. V. v. 997. 1033.

After the death of John Bohun, Earl of Hereford, this castle was given to Edward, of the same name. It was A.D. 1335, in the keeping of William Bohun, whom Randolph, Earl of Moray, "found in his own castle of Lochmaben, and bearing sway over all his own lands of Annandale, when he returned from his captivity in France." In the year 1366, it is spoken of as the property of Humphrey de Bohun, who is authorized to victual and repair it. In July 1298, Edward I. took possession of Lochmaben-castle; and, in 1300, when we find him here a second time, he strengthened this fortress, with that of Dumfries, placing adequate garrisons in them, with ample supplies, and appointing a governor for each. To this fortress Bruce fled, A.D. 1304, on his way from London, before erecting his royal standard. Having met, near the west marches, a traveller on foot, whose appearance was suspicious, he found, on examination, that he was the bearer of letters from Comyn to the English king, urging the death or the immediate im-

prisonment of Bruce. He beheaded the messenger, and pressed forward to his castle of Lochmaben, where he arrived on the seventh day after his departure from London. Hence he proceeded to Dumfries, where the fatal interview between him and Comyn took place.

At the accession of the Bruce to the Scottish throne [see article ANNANDALE], he conferred his paternal inheritance, with its chief seat, the castle of Lochmaben, on Randolph, Earl of Murray. When Edward III. obtained from the inglorious Edward Baliol the county of Dumfries as part of the price for helping him to a usurped and dependent throne, he appointed a variety of officers over Lochmaben-castle, and garrisoned the fortress in defence of the wrongful cause of England. In 1342 the Scots made a strenuous attempt to capture the castle, but were repulsed; and next year David II.'s particular forces, whom he was imprudently leading into England, were stoutly resisted and severely harassed by its garrison. David, exasperated by the repeated disasters inflicted on him, in 1346 vigorously assaulted the fortress, took it, and executed Selby its governor. By the fatal upshot of the battle of Durham, which speedily followed, the castle changed both its proprietor and its tenants. John, Earl of Moray, falling in that battle, the castle passed by inheritance to his sister, Agnes, the Countess of March, and from her was transmitted, through the reigns of Robert II. and Robert III., to her son, Earl George; and David II. becoming the English king's prisoner, the castle once more opened its gates to an English garrison. Even after David II.'s restoration, Edward III. retained the district of Annandale, and kept the fortress well-garrisoned to defend it; but though connived at by the pusillanimity of the Scottish king, his dominion was pent up; by the bravery of the people, within the castle's own narrow limits. Sallies and forages of the garrison, provoked frequent retaliations, occasioned incursions into England, and led, in particular, to a hostile race, in 1380, into Westmoreland, and the carrying away of great booty from the fair of Penrith. In 1384 the Earl of Douglas, and Archibald Douglas, lord of Galloway, whose territories had been infested by the garrison, marched in strong force against the castle, besieged and captured it, and, by effecting its reduction, drove the English from Annandale. In 1409 the castle was resigned by the Earl of March to the Regent Albany, and conferred, along with the lordship of Annandale, upon the Earl of Douglas. In 1450, when the Earl of Orkney was sent to quell some fierce outrages of the dependents of the Douglas, and, though acting by the King's authority, was opposed and defied, James II. marched an army into Annandale, and took and garrisoned Lochmaben-castle. In 1455 the castle, in common with the lordships of Annandale and Eskdale, became the property of the Crown by the attainder of the Earl of Douglas. Till the union of the Crowns it was preserved as a Border strength, and belonged either personally to the kings or to their sons; and it was maintained and managed by a special governor. In a progress made by James IV., in the year 1504, against the disorderly inhabitants of the south, he, on the 17th of September, left Lochmaben, on his way to Edinburgh, by Peebles. It appears, from the treasurer's accounts, that, in 1503-4, this prince built a large hall in the castle of Lochmaben, and made great repairs and improvements on that fortress, from 1503 to 1506. We may perhaps view it as a proof of the interest which James IV. took in the preservation of this royal fortress, that he consigned the custody of it to Robert Lauder of the Bass. For there is extant a grant, dated 16th March, 1511, to the said Robert, of the office of cap-

tain and keeper of Lochmahen castle, for seven years, with many perquisites. Among others, the 'land stolen frae the king' is bestowed upon the captain, as his property. During the minority of James V., Robert, Lord Maxwell, being a favoured counsellor of the queen-mother, was by her intrusted with the keeping of the castles of Lochmahen and Thrieff, for nineteen years, with the usual privileges. In the year 1565, when Queen Mary pursued, into Dumfries-shire, those who had broken out into rebellion on account of her marriage with Darnley, she, accompanied by him, visited Lochmahen-castle, which was then in the custody of Sir John Maxwell. In 1583, when James VI. was prosecuting his quarrel with Lord Maxwell, he summoned his various castles to surrender. They all obeyed, except Lochmahen, which was defended by one of the same name. It was given up, however, after two days firing. In consequence of the forfeiture of Lord Maxwell, and the vesting of all his estates and offices in the crown, A. D. 1609, James, in the year 1612, granted the government of this castle, with the barony of Lochmahen, to John Murray, 'grome of his Maiesties bedchamber,' who was created Viscount of Annand, and Lord Murray of Lochmahen, and afterwards Earl of Annandale. From him descended the noble family of Stormont, now merged in that of Mansfield. The title of Constable and Hereditary keeper of the palace of Lochmahen is claimed, both by the Earl of Mansfield and by the representative of the Marquis of Annandale. During the troubles in the reign of Charles I., the Earl of Nithsdale, (formerly Lord Maxwell,) having suffered greatly in consequence of his steady adherence to the king, was obliged to sell, not only great part of his estate, but also his offices of Steward of Annandale, and Constable of Lochmahen-castle, with the lands and emoluments which were attached to the constabulary. James Murray, the 2d Earl of Annandale, dying without issue, the honours of Lochmahen were, A. D. 1661, transferred to James Johnston, Earl of Hartfell. The governor had a salary of £300 Scotch—a considerable sum in former days—together with the fishing of the lochs. He had also, for the maintenance of the garrison, from every parish of Annandale, what was called *Laird a Mairt*, or, a lairdner mart cow, which, it was required, should be one of the fattest that could be produced, besides thirty-nine meadow geese, and 'Fasten's e'en' hens. A century has not elapsed since this tax was exacted. Although the right of fishing in all the lochs is granted, by a charter of James VI., to the borough of Lochmahen, yet the proprietors of the castle have always enjoyed the exclusive privilege of fishing in the castle and mill-lochs with boats, nets, &c. About the year 1730 the inhabitants of Annandale, galled with the exactions made upon them by the Marquis of Annandale, the hereditary constable and nominal governor, resisted payment of his wonted claims, stoutly litigated his rights, and obtained from the Court-of-session a decree forbidding the future levying of his usual receipts. At the abolition of hereditary jurisdictions, in 1747, the Marquis claimed £1,000 as compensation for his governorship; but was not allowed a farthing. The dilapidation of the castle was probably commenced not long after the place was abandoned as useless; but it must have been mainly incited by the triumph of the people over pretensions based on the ludicrously sinecure office of its noble hereditary governor. Our good old Bellenden, in his translation of Bocce, has given a very curious picture of the character of the ancient inhabitants of this district, and of the original reason of the erection of the castle. "In Annandail is ane loch namit Lochmahen, fyne mylis of lenth, and foure of breid,

full of uncouth fische. Besyde this loch is ane castell, vnder the same name, maid to dant the incursion of theuis. For nocht allanerlie in Annandail, hot in all the dalis afore reherst ar mony strang and wekit theuis, inuading the cuntre with perpetuall thift, reif, & slauchter, quhen thay sé ony trublis tyme. Thir theuis (becaus thay haue Inglismen thair perpetuall ennymes lyand dry marche apou thair nixt hordour) inuadis Ingland with contineual weris, or ellis with quiet thift: and leiffis ay ane pure and miserabill lyfe. In the tyme of peace, thay are so accustomed with thift, that thay can nocht desist, hot inuadis the cuntre—with ithand heirschippis.—This vail of Annand was sum tyme namit Ordouitia, and the pepill namit Ordouices, quhais cruelteis wes sa gret, that thay abborrit nocht to eit the fiesche of yolding prisoneris. The wyuis vvit to slay thair husbandis, quhen thay ver found cowartis, or discomfist be thair ennymes, to give occasion to otheris to be more bald & hardy quhen danger occurrit." Whatever might be their character in that early period, they have in later ages showed, at least, a good deal of humour in their depredations. Of this we have an amusing proof in the hallad of the 'Lochmahen Harper,' who, having been seized with a strong attachment to the Lord Warden's 'Wanton Brown,' made his way to Carlisle-castle, although blind, and so enchanted the whole company, and even the minions, by the charms of his music, that he found means, not only to send of the warden's charger, but to persuade him, that while he was exerting himself to the utmost to gratify the company, some one had stole his own 'gude gray mare,' and thus to secure far more than the value of all his pretended loss.

"Allace! allace! quo' the cunning auld harper,  
'And ever allace that I cam here!  
In Scotland I lost a brav cowt foal;  
In England they've stown my gude gray mare!"

"Then aye he harped, and aye he carped;  
Sae sweet were the harpings he let them hear:  
He was paid for the foal he had never lost,  
And three times ower for his 'gude gray mare.'"

Additional to the castles there are, in the landward part of the parish, two or three other civil antiquities. Half-a-mile north-west of the town, overlooking the Mill-loch, is a rising ground called Woody, or Dinwoody-castle. The summit, though possessing no vestige of building, is surrounded with a trench very distinctly marked, and hears a large crop of whins.—In a field south-west of the town is the circular trace of a tower, which anciently possessed a wild and stirring fame. It is called Cockie's-field, from one John Cock, or O'Cock, who resided in it, and was one of the most renowned freebooters of Annandale. An old hallad, still extant, details his feats of arms, dilates on his great personal strength, and narrates the manner of his death. A party of the King's foresters, to whom he had been an intolerable pest, and whom he had relieved of the care of many deer, chanced one day to find him asleep in the forest, cautiously beset him, and were determined upon his destruction. John, suddenly awaking, and perceiving at once the snare into which he had fallen, and the hopelessness of escape, resolved to make his captors pay dearly for his life; and before they could overpower him, he laid seven of their number corpses at his feet.—In the south-west corner of the parish is a large and very beautiful artificial mound of earth, perfectly circular, quite entire, and terminating in a sharp tower. It is called both Rockhall-moat and the Beacon-hill; and possibly served both as a moat or seat of feudal justice, and as a beacon-post for deservicing the movements of the Border marauders, and giving alarm in the event of predatory incursions.

Its position is on the summit of a low but conspicuous ridge which divides Nithsdale, or rather the district of Lochar-moss, from Annandale, and commands a map-like and very brilliant view of a very large part of the champaign country of Dumfriesshire, a portion of Galloway, and all the Solway frith.—The parish has remains of several Roman encampments; and must have been traversed, along a path easily pointed out, by Agricola on his march from Brunswark hill to Glota and Bodotria.

Lochmahen gives name to a presbytery in the synod of Dumfries. Patron, the Earl of Mansfield. Stipend £264 19s. 2d.; glebe £10. Unappropriated tiths £108 3s. 2d. The parish-church was built in 1819. Sittings 1,200. The minister stated the population, in 1835, to consist of 2,374 churchmen, 445 dissenters, and 9 nondescripts,—in all 2,828 persons. There are two dissenting places of worship. The United Secession meeting-house, situated in a suburb of the burgh, was built in 1818. Sittings 800. Stipend £80. The Reformed Presbyterian meeting-house, situated in Hightae, was built about 43 years ago by a Relief congregation, and bought from them by the present congregation, established in 1823, for £70. Sittings 325. Stipend £60. Parish schoolmaster's salary £34 4s. 4½d., with less than £25 fees, and interest of £200 other emoluments. There is an endowed school at Hightae [see *FOURTOWNS*]. This school, and the parochial one, were attended, in 1834, by 148 scholars; and four private schools were attended by 265.—The ancient church was given by Robert de Bruce, the ancestor of the royal Robert, and the husband of Isabel, the natural daughter of William the Lion, to the monks of Gishurn; but it afterwards, with reservation of some of the pertinents to the monks, resumed its status as a rectory, immediately inspected by the Bishop of Glasgow. In the 15th century the magistrates of the burgh endowed in the church an altarage or chaplainry dedicated to the Virgin Mary. On the lands of Rokele, now called Rockhall, in the south-west corner of the parish, anciently stood an endowed chapel; the pertinents of which, though seized by lay hands after the Reformation, now yields some proceeds to the parochial incumbent. Some other chapels existed in the parish; but cannot now be very distinctly traced.

LOCHMABEN, a very ancient town, a royal burgh, and the seat of a presbytery, is beautifully situated on the immediate banks of large, fine, and nearly encircling lakes, 4 miles from Lockerbie, 8 from Dumfries, 15 from Moffat, 30 from Carlisle, 70 from Glasgow, and 65 from Edinburgh. The town is 3½ furlongs in length, and, in its principal street-line, stretches due north and south. Over 1½ furlongs from the south end there is hut one street, overlooked by the parish-church on the south, and the cross and town-house on the north. This street is spacious, and has several genteel houses, most of them small and neat. The rest of the town consists of a narrowed continuation of the principal street on a straight line with it; a street contracting into an alley, running 250 yards north-west from the cross; a street longer than this, going off from it near the cross, and running due west along the road to Dumfries; and, a street of 400 yards, branching off from the last, and running north-eastward to the northern extremity of the town. All these thoroughfares are of mean appearance, relieved at long intervals by the form of a large or good house, but predominantly lined with one story buildings, which hold a middle character between plain cottages and dismal huts. Less than a furlong from the north end of the town, is the small suburb of Barrows; and a furlong beyond this is the smaller suburb of Bogle-hole. The

whole town and its adjuncts impress even a native of the parish, after he has moved from home and returns, with a feeling of utter dreariness. Were all swept away, and the site covered with forest, or even yielded up to the farmer, but especially were it decorated with grove and lawn in a style harmonious with the placid and beaming beauty of the landscape in which it lies, it would be one of the loveliest spots in Scotland, and aid, instead of marring, busy and tumultuous meditation on the crowding reminiscences which its historiographic neighbourhood pours upon the mind. But dingy, desolate, and leaden-eyed as its present aspect is, the place appears a mockery at once of its own ancient greatness, of the opulent scenes around it, and of the antiquarian magnificence of objects in its neighbourhood.

The public buildings of the town, existing, declining, and extinct, demand some notice. The church is a handsome edifice of ashler-work in the pointed style, with an elegant square tower, and is tastefully situated on a very gentle swell, overlooking the Castle-loch, and all the champaign country to the east. It cost upwards of £3,000, and is the chief, in fact the only ornament of Lochmahen. Its predecessor stood at the west side of the town, on the margin of the Kirk-loch; and was a Gothic edifice, with a large choir, and dedicated to Mary Magdalene. The Maxwells, after their defeat, in 1593, by the Johnstones, in the fight of Dryfe sands, [see *DRYFESDALE*,] having taken refuge in this church, the Johnstones fired it, and compelled them to surrender. Near the site of the church is St. Magdalene's well, enclosed with a stone and lime wall, and a covering or roof of freestone. The town-house is a small and very unimposing structure, surmounted by a comparatively new steeple, like an ancient matron trimmed out in a young girl's modern head-dress. Above is a court-house, in requisition chiefly by dancing-masters, and for gala-parties; and below is a miserable jail of two apartments, quite unfit for either the lodgement or the detention of a culprit, and superintended by an aged man who does not reside in its immediate vicinity. The steeple, according to the date upon it, was erected in 1745, the year in which the Pretender marched through Lochmahen on his way from Carlisle to Dumfries. In an arched shade beneath this structure the meal-market is held; and immediately before it is the public cross,—a tall stone fixed in a freestone socket, and presenting a very time-worn appearance. Lochmahen cross is remarkably like the burgh, both in its shabby plainness and in its improvident history. When Elshieshields-castle was built, the town-council, delighted with what they thought the goodly aspect of the stone which now forms the cross, and which lay among the rubbish accumulated by the masons, offered for its possession the mill and mill-lands of the burgh to the proprietor of Elshieshields and his heirs for ever, and joyously effecting their bargain, set up the stone in burgh-cross fashion as a proud monument to posterity of their taste and public spirit. The mill and mill-lands which formed the price have long yielded Dickson of Elshieshields the sum of £100 a-year. The only other noticeable building is the Secession meeting-house, a plain but airy and pleasing edifice surmounting a slight eminence between Barrows and Bogle-hole, and commanding a far-stretching view of the How of Annandale.

A considerable manufacture of coarse linen cloth, for sale unbleached in the English market, was at one time carried on, but has totally disappeared. The only manufacture now is the working of a few stocking-looms. A large trade—if trade it can be called—is driven both in the town and throughout

the parish, in the feeding of pigs, to aid supply for the smart demand of England for Dumfries-shire pork. A large proportion of the inhabitants farm small crofts, and rear their families as a sort of peddling farmers. Annual fairs—two of them more galadays for children and rustic idlers than occasions of any real business, and the other two hiring-fairs for farm-servants—are held four times a-year. A weekly market of some importance is held during winter for pork. A stage-coach maintains communication in transit between Dumfries and Langholm. The town has three inns and a subscription library. The authorities are a provost, three bailies, a dean-of-guild, and ten councillors, including a treasurer. The provost acts ex-officio as justice-of-peace for the county; but his jurisdiction, jointly with that of the other magistrates in the burgh, is extremely trifling. There are some corporate bodies with exclusive privileges; but the entrance-moneys are so trifling that they can hardly form an obstacle to any settler. The burgh is irretrievably bankrupt. Its only property and revenues amount to £118 15s. 6d. a-year, with the town-house and half an acre of land; and its debt is £3,605 17s. 8d. The whole property, so far as attachable, was sequestered some years ago by the Court-of-session, and is under the management of a judicial factor, who pays the small wonted allowance to town-clerks, gaoler, and officers. Gross negligence, if not wilful mismanagement, preceded the declaration of insolvency; and, in particular, a sale of a farm was effected for £1,350, to the provost of the day's father-in-law, and was not minuted in any of the books of the town-council. But though, in all senses of civil reference, fallen and woe-hegone, the burgh looms largely and magnificently to the view when seen through the haze of antiquity. Under the warm wing and fattening fosterage of the Bruces, it must have sprung into energy before the close of the 12th century, and speedily acquired probably more importance than any other town in the south-west of Scotland. Like other Border-towns, it suffered severely and lost its records from the incursions of the English; but it is traditionally asserted to have been erected into a royal burgh soon after Bruce's accession to the throne. Its last charter was granted, in 1612, by James VI., and confirms all the early charters. The town was twice burnt by the English,—first, in 1463, by the Earl of Warwick; and next, immediately before the granting of its last charter. In 1484 the recreant Earl of Douglas and the treacherous Duke of Albany attempted to plunder the town on St. Magdalene's fair day; but they were repelled by the inhabitants. Lochmaben unites with Dumfries, Annan, Sanquhar, and Kirkcudbright, in sending a member to parliament. Constituency, in 1839, 41. Population, in 1831, within the old royalty, 1,100; but within the new and more limited royalty assigned by the Reform act, 966.

LOCH-NA-GAR, or LOCH-NA-GARAIDH, a lofty mountain of the Grampian ridge, in the united parish of Crathy and Braemar, Aberdeenshire. Its elevation is 3,777 feet above sea-level. On the top there is snow all the year round. The 'dark Loch-na-gar' has been celebrated by Lord Byron in a well-known ballad of great beauty. In the 'Edinburgh New Philosophical Journal' for 1830, we find the view from the summit of the mountain thus described: "In one direction our view extended to the sea at Aberdeen; in another the vast granite group of Cairngorm, with its well-known summits, viz. Bin-na-uick-dui, Cairngorm, Bin-na-huird, Bin Aven, rose before us in massive magnificence: to the south, in the distance, rose the trap-hill named Dundee-law, the trap cones of the Lomonds in Fifeshire,

and the beautiful porphyry range of the Pentlands near Edinburgh; and, towards the west, the wild and rugged alpine country of Athole and Badenoch added to the interest of this varied scene. Around the mountain, we observed several frightful corries, bounded by dreadfully rugged precipices. We descended into one of them in order to examine the snow which it contained,—snow which remains all the year round. The mass of snow was thirty yards square, several feet thick; at the surface its texture was loose, but below was hard and composed of granular concretions, and had much of the glacier character. We met with parties of topaz-diggers in search of the topaz, heryl, and rock-crystal, which occur in this and other granite mountains of the district, in the granite, either in drusy cavities or as disseminated crystals. The topaz-diggers find the gems only in the alluvium, or broken granite, and generally in that covering the bottoms of corries, or spread round the foot of the higher granite summits."\*

LOCH-NA-GAUL, an inlet of the Atlantic ocean, on the confines of Inverness-shire and Argyle, nearly opposite to the point of Sleat in the island of Skye. There is an excellent parliamentary road from Arisaig, on the shores of this loch, to Fort-William, with a ferry over the Lochy river. Its length is 37 miles 1,087 yards.

LOCH-NA-MHOON. See AVIEMORE.

LOCH-NA-SEALGH. See LOCH-BROOM.

LOCHNAW. See LESWALT.

LOCHRUTTON, a parish in the eastern division of Kirkcudbrightshire; bounded on the north-west by Irongray; on the north by Irongray and Terregles; on the east by Troqueer; on the south-east by Troqueer and Newahbey; and on the south-west by Kirkgunzeon and Urr. Its form is nearly ellipsoidal, with a small angular protusion on the south. Its greatest length from east to west is 5½ miles; its greatest breadth is 4¼ miles; and its area is about 7,000 acres. Toward the south, the west, and the north-west, the surface is hilly; but elsewhere it is an arable valley, interspersed with knolls, mosses, and meadows. The whole prospect forms a kind of amphitheatre, and looks slopingly toward Dumfries, distant from the nearest part 3½ miles. The soil, though various, is, in general, a light shallow loam, either on white granite, or on a gravelly, and in many places a cold, springy bottom. Agriculture has walked very improvingly over it, and annually extracts from it a large surplus produce for exportation. The hilly district was originally heathy; but, for the most part, it has completely exchanged its russet for deep green, or waving yellow. About 350 acres are moss,—worth much in a district where fuel is expensive; and about the same number are marsh or woodland. A little east of the centre of the parish is Lochrutton, a lake, a mile in length, and half-a-mile in mean breadth, from which the district has its name. In the middle of it is a circular islet, about half-a-rood in extent, partly artificial, and everywhere covered with large stones, founded on a frame of oak planks, and thickly dotted in summer with flocks and nests of sea-gulls. The lake contains pike and perch, and emits a streamlet containing trout. Nearly 2 miles westward is a smaller lochlet called Deadston-loch. Merkland-well, long a celebrated and much-frequented spa in the parish, though now somewhat forgotten by whimsical fashion, is a strong chalybeate, effectual in agues and in dyspeptic and

\* Those, Dr. Macnught remarks, who employ themselves in searching for the gems, pay the proprietors a small rent for the liberty of searching. The part of the Cairngorm group which lies to the east, and is called Ben-Aven, is at present reckoned the most productive, yielding the proprietor about £150 or £200 a-year. The field is said now to be nearly exhausted.—Vide Wernerian Memoirs, vol. iii. pp. 117, 118.

nervous disorders, and exceedingly light and very diuretic. Limestone occurs, but of inferior quality. Shell-marl has been dug up in large quantities from the mosses. On a hill in the extreme east there is a Druidical circle of 9 stones and about 170 feet in diameter. The spot commands one of the richest and most extensive prospects in the east of Galloway. Vestiges exist of several peel-houses, some of which appear to have been surrounded with a fosse. One of them very ancient, and called Castle-of-hills, in a Scottish Chronicle of the reign of James VI., is still entire. On the corner-stone of a porter's lodge attached to it, as a modern excrescence, is the date 1598. The Dumfries and Portpatrick railroad runs across the parish near the northern boundary; and other excellent roads traverse it. Population, in 1801, 514; in 1831, 650. Houses 114. Assessed property, in 1815, £4,174.—Lochrutton is in the presbytery and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £182 6s. 4d.; glebe £15. Schoolmaster's salary £30, with £10 10s. fees, and £5 10s. other emoluments. There is a private school.—The parish was anciently a vicarage under, first, the nunnery; and next, the collegiate church of Lincluden.

LOCH-RYAN. See RYAN (LOCH).

LOCHS, a parish in Ross-shire, in the island of Lewis, so named from the great number of small lakes which are interspersed over its surface. It is about 18 miles in length, exclusive of numerous inlets which extend its line of coast to upwards of 90 miles; the average breadth is about 9 miles. A great part of it is a peninsula, called the Forest of Lewis, formed by Loch-Seafort and Loch-Erisort. Along the coast it has a hold and rocky appearance; in the interior, the surface is moory and inhospitable, and there is no soil fit for culture, except what has been forced into some kind of cultivation in the creeks by use of sea-weed as a manure, and the industry of the inhabitants. The Shiant or Holy Islands belong to this parish: see SHIANT. Population, in 1801, 1,875; in 1831, 3,067. Houses 630.—This parish is in the presbytery of Lewis, and synod of Glenelg. Patron, the Crown. Stipend £158 6s. 7d.; glebe £20.—Schoolmaster's salary £25.

LOCH-SPLANDER. See KIRKMICHAEL.

LOCH-STROAN. See KELLS.

LOCH-TAY-SIDE. See ARDEONAIK.

LOCHTIE (THE), a rivulet tributary to the Lossie, in the parish of DALLAS, Morayshire: which see.

LOCHTOWN. See LONGFORGAN.

LOCH-TURRET, a lake in the parish of Monivaird, Perthshire, about a mile long, and a quarter of a mile broad.

LOCHTY (THE), a small river in Fifeshire, which takes its rise in the parish of Kinglassie, and, after an easterly course of 8 or 9 miles, falls into the Orr a little above its junction with the Leven.

LOCHWINNOCH,\* a parish in Renfrewshire, bounded on the north by Kilmacolm; on the north-east by Kilbarchan; on the east by the Abbey parish of Paisley and Neilston; and on the south and west by Beith and Kilhirnie in Ayrshire. It ex-

\* The name is vulgarly pronounced *Lochinoch*, the accent being laid on the first syllable, and the guttural *n* being sounded. It was spelled in from 30 to 40 different ways before the present orthography was finally adopted. In Semple's work, published 1752, it is 'Loethinloch.' The first syllable of the name evidently refers to the lake or *loch* in the neighbourhood of the village, but the derivation of the remainder is doubtful: it may either be *innich*, the genitive of the Celtic word *innis*, a small island referring to an islet in the lake; or *Winnach*, a saint to whom it is said a chapel was here dedicated. There appear to have been three different saints of that name,—one, if not two of whom, was a native of Britain; another was an Irish saint. Other derivatives have been suggested, but they are quite fanciful.

tends about 12 miles from east to west, and, where broadest, about 6 miles from north to south; and contains 19,219 English acres, of which 9,000 are cultivated, or capable of cultivation; 9,119 are in pasture, of all sorts; 700 are covered by wood; 300 by water; and 100 by gardens and orchards. The value of raw produce is about £14,000. In aspect this parish is greatly diversified. Part consists of high and bleak hills in the hack ground; and part of a low winding valley of great fertility and beauty. This valley, with the shelving country towards it on both sides, contains nearly the whole population. In its centre is a fine lake, and it is also ornamented with plantations, whilst the houses of its numerous small proprietors are each set down under the shade of a few old trees in the midst of well-cultivated spots of ground. The whole strath has a warm and cheerful appearance, inasmuch that worthy George Robertson, in his description of 1818, waxing poetical for once, justly pronounced it "the very Vale of Tempe of Renfrewshire." The highest hills in the county are situated in the western extremity of this parish. One of these heights—appropriately called Misty-law—is about 1,240 feet above the level of the sea; and another, the hill of Staik, is a few feet higher. The prospect from Misty-law extends over 12 counties, including the frith of Clyde and its islands. This hill is surrounded by moorlands, which abound with game, and afford tolerable pasture for sheep. Another range of high land, mostly arable, passes through the eastern part of the parish. The lower grounds are clay and loam; the higher, exclusive of moor, are a light dry soil, on rotten rock or whinstone. Coal is wrought at Hallhill, and limestone at Howwood. Freestone and other kinds of stone for building abound, and quarries are opened when they are required. About 2 miles north-west of Castle-Semple house is a magnetic rock, of which the following description was given in the Statistical Account of 1795: "The compass was sensibly affected all round the rock to the distance of 150 yards. The effect was most remarkable on the east and west side of it, and, in every direction, it was greater as the compass was nearer to the rock itself. In its immediate vicinity, or nearly in a perpendicular direction above it, the position of the needle was very unsteady and irregular, and as the compass was gradually brought nearer the ground, the deviation from the magnetic meridian was more remarkable, and the vibrations more rapid. When the compass was set on the ground, the north pole of the needle invariably directed itself to one small space of the rock, on whatever side of it the needle was placed." † The lake already mentioned is properly called Loch-Winnoch, but more commonly from the estate it adjoins CASTLE-SEMPLÉ loch: which see. When covered with ice, it forms an excellent arena for the invigorating game of curling, which is keenly prosecuted by the parishioners. Here, upwards of half-a-century ago, a famous *bonspiel* was played between Douglas, Duke of Hamilton, popularly called 'the Sporting Duke,' and Mr. Macdowall of Castle-Semple, and their respective tenantry, when, after a long protracted contest, his Grace's party gained the day by one shot. In the north-west of the parish is a sheet of water called Queenside-loch, containing about 21 acres; and in the opposite extremity is one much less, called Wa's-loch, which is remarkable for the quantity of water-lilies it produces. The river Calder runs wholly within the parish. It rises on the north-west, on the borders of Ayrshire, and pursues a winding course towards Castle-Semple loch, which it enters near the vil-

† In the New Philosophical Journal for July—October, 1831, there is an article respecting such rocks.

lage. On this river are some romantic waterfalls, and its banks, which are overhung with wood, both natural and planted, are exceedingly picturesque. Their beauties were first pointed out by Alexander Wilson, the ornithologist of America, who, although not a native of this parish, resided in it for some years before his emigration, and founded several of his poems on its scenery and incidents. He thus lamented the neglect to which all his time the banks of the Calder had been doomed:—

“Say, ye blest scenes of solitude and peace,  
Scrayed e'er a bard along this hermit shore?  
Did e'er his pencil your perfections trace?  
Or did his muse to sing your beauties soar?  
Alas! methinks the weeping rocks around,  
And the lone stream, that murmurs far below,  
And trees, and caves, with solemn hollow sound  
Breathe out one mournful melancholy ‘No!’”

This river is crossed by three bridges. The highest, that of Brigend, is of considerable antiquity. The property adjacent to it occurs under that name in the 16th century, and is still so called. The arch of this bridge is very fine, and the mason-work more elegant than is now usually employed in such structures. Originally it was very narrow, but was repaired and widened in 1814. The second bridge, at Calderhaugh, was built in 1769, and the lowest upwards of twenty years ago. Several *burns* either flow within the parish or bound it. Next to the Castle-Semple property, the history of which has been described under that article, the second large property in the parish is Barr, which anciently belonged to a family named Glen. John de Glen, the first that occurs, swore fealty to Edward of England in 1296. The family became extinct in the person of Alexander Glen in 1616, and the lands of Barr were acquired by a branch of the Wallaces, who appear to have afterwards assumed the surname of Hamilton. Barr continued in the possession of the Hamiltons till about 1788, when it was sold to Mr. Macdowall of Castle-Semple. About 22 years afterwards it was purchased by James Adam, Esq., who, in 1820, sold it to William Macdowall, Esq., nephew of the gentleman just named, and representative of the Macdowalls of Garthland and Castle-Semple. By Mr. Macdowall the mansion-house, (which stands on that part of the barony called Garpel,) was principally built, and the thriving plantations which surround it formed. Here he resided, esteemed by the parishioners for his innate worth and deeds of unostentatious open-handed charity. He died at Barr-house in his 70th year, and was succeeded by his brother. At his death he was vice-president of the Maitland club, (a distinguished literary-association,) and one of the deputy-lieutenants of the county. Barr-loch, which covered about 250 English acres, was so well drained by Mr. Adam during his proprietorship, that its site is now only occasionally and partially inundated after a heavy fall of rain in winter. In summer it waves with luxuriant crops of oats and hay. The eastle of Barr is agreeably situated on an eminence on the south side of the road leading from Lochwinnoch to Kilbirnie. It is a high oblong tower, of 4 stories, the walls of which are entire, but without a roof. From the walls having both slits for arrows and ports for guns, the building may be referred to the 15th century, when the people of this country were passing from the one mode of warfare to the other. Above the door are the initials of one of the former proprietors, the Hamiltons, and his wife.—In the south-eastern extremity of the parish is a barony called Auchinbathie-Wallace, to distinguish it from another called Auchinbathie-Blair, which belonged to a different family. The former belonged to the Wallaces of Elderslie, and is mentioned by Blind Harry as one

of the places that Malcolm Wallace, father of the hero, “had in heritage.” On this property there are the remains of a small castle called the tower of Auchinbathie. The only other objects of antiquity we have to mention are the remains of two hill-forts, the one on the farm of Castlewa's, and the other on Knockmade, a hill near the Kame.\* On 18th June, 1685, a skirmish took place at Muirdykes, in the eastern part of the parish, between the Government troops commanded by Lord Ross of Hawkhead, and a remnant to the number of 75, of those who had joined in the rising under the Earl of Argyle. The latter, under the command of Sir John Cochran, having taken up a position within some enclosures, bravely repelled the enemy, and kept their ground till nightfall, after which both parties withdrew from the field. Sir John's men then dispersed, and the Earl himself having been previously taken prisoner near Inchinnan, the unfortunate enterprise came to an end.—Besides the proprietors of Castle-Semple and Barr, the chief land-owners in the parish, in the order of their valuations, are Mrs. Barr, Robert Fulton, Esq. of Hartfield; Ludovic Houston, Esq. of Johnston; the family of the deceased William Cochran, Esq. of Ladyland; and William Patrick, Esq., writer to the signet. The rest of the parish is broken down amongst small proprietors amounting to nearly 130. The lands of Beltrees belonged to a distinguished family, the founder of which was John Sempill, youngest son of the 3d Lord Sempill, and husband of Mary Livingston, sister of Lord Livingston, and one of the maids of honour to Queen Mary. His son, Sir James Sempill, enjoyed the confidence of James VI., and was the author of several works in prose and verse. Robert Sempill, the son, and Francis, the grandson, of Sir James, inherited his poetical talent. In our account of KILBARCHAN, there is some farther notice of this family, which is now represented by James Stuart, Esq., merchant in Greenock, great-grandson of that Robert Sempill who died in 1789.

In this parish there are two cotton-mills, namely, the old mill erected about 1788, and the new mill in 1789, which give employment to upwards of 500 workers. There is also a mill for carding and spinning wool, erected in 1814. It is in the third story of a building near the Calder, the under part of which is one of the largest and most complete corn-mills in the country. The bleaching of goods is extensively carried on. In 1835, there were about 200 handloom weavers, employed by Paisley and Glasgow houses. Population of the parish, in 1831, 4,515; in 1841, 4,716. Houses, in 1831, 538. Assessed property, in 1815, £13,730.—The parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patrons, the heritors. About 1813, the patronage was bought from Mr. Macdowall of Castle-Semple's trustees for £1,550, and disposed of among 77 heritors, holding more or less shares from 1 to 5, and having votes proportioned to the number of their shares, each of which cost £10. The church was built in 1806; sittings about 1,150. Stipend £277 1s. 6d.; glebe £19 10s. Unappropriated teinds £998 2s. 6d.—In the village there is a mission-station belonging to the Establishment, opened 7th December, 1834. The chapel is a school-room fitted up with a pulpit and moveable seats; sittings 237; salary of missionary £60. There is in the village a church belonging to the United Secession body, built in 1792 at the cost (including the manse, &c.) of about £1,200; sittings 503; stipend £100, with £6 for

\* The former is described in the New Statistical Account of the parish, p. 96; the latter is not, but a notice of it will be found in the Paisley Magazine, p. 524.

sacramental expenses, besides a house and garden. Salary of parochial schoolmaster £34 4s., (from which £5 is paid yearly to one of the schools not parochial,) with school-fees varying in the branches taught; and £25 annually arising from an endowment. There are 9 other schools, with one teacher to each. There is hardly a person in the parish who cannot read.

The village of **LOCHWINNOCH** is on the north-west side of Castle-Semple loch. The situation is very pleasant, being sheltered in all directions except the south-east, either by rising grounds or thick plantations. The place consists of a main street half-a-mile long, with some streets crossing it at right angles. The houses are generally of two stories and covered with slates. There is a branch bank in the village. The cross of Lochwinnoch is distant 9 miles and 6 furlongs from that of Paisley. Population of village, in 1838, 2,636. Besides How-wood, [which see,] the only other village in the parish is Glenhead, the population of which, in 1831, was 53.

**LOCHWOOD - CASTLE.** See **JOHNSTONE**, Dumfries-shire.

**LOCHY** (ЛОХ), a lake in the district of Lochaber, in Inverness-shire, forming one of the chain of lakes which occupy a large portion of Glenmore-nan-Alhin, or 'the Great glen of Scotland.' It is about 14 miles long, and not more than a mile broad. Its boundaries on either side, throughout its whole extent, are lofty mountains, which rise up sudden and unbroken. Their outline is without variety, and after passing the mouth of the water of Archaig, there is neither bay, promontory, nor turning of the lake, of size sufficient to break the disagreeable uniformity. A narrow valley, its bottom filled with an extensive sheet of water, presents a dreary vista, of which the termination cannot be seen; and a sense of tiresome vacuity is the result of a visit to Loch-Lochy. Near the western end of the lake, however, where the water of Archaig enters, there is some relief to the scenery here described. The fine hay which here sweeps on towards the glens of Achna-eary, the Mil-duhh,—the broken rocks and rich woods which ornament these little valleys,—the wooded and heathery knolls which are scattered about,—the mansion-house of Lochiel, and the pleasant farm-house of Clunes,—afford an agreeable relief to the tourist, who has sailed up Loch-Lochy from the east. From Loch-Lochy to Loch-Linnhe, a long dreary flat moss extends for about 10 miles, of which but a small portion has been attempted to be cultivated. Through this moss the river Lochy flows. The Spean—a rough mountain-torrent—joins its waters to the Lochy, near where it leaves the lake, and so rapid is the current of the united streams, that it is said they discharge into the sea with such force as to preserve their stream entire for a long way without any very perceptible mixture with the salt water. On the banks of the Lochy, near its junction with the sea, stands **INVERLOCHY-CASTLE**: which see.

**LOCHY** (THE), a river of the Glenmore-nan-Albin, Inverness-shire. It issues from the south-west end of Loch-Lochy by a new channel artificially cut for it, about 600 yards south-east of the point at which the lake receives the Caledonian canal. Continuing for some time to run in its new channel, it is conveyed at Mucomre-bridge, a mile below Loch-Lochy, into the course of its former tributary, the Spean, and it becomes lost in that stream for  $\frac{1}{2}$  of a mile, but resumes its name when the united current falls into the old channel of the parent stream at Garelochy. Its length of run is about 10 miles, generally parallel to the line of the canal, and it falls into Loch-Eil at Fort-William, within a few yards of

the embouchure of the Nevis, precipitating itself with such force and rapidly into the marine lake, as to preserve, for a considerable distance, both distinctness of current and freshness of water. An excellent ferry is maintained on the river, about 2 miles above Fort-William, and is provided on each side with a good quay; yet it forms for all classes, but especially for cattle-dealers, a poor succeededaneum for a substantial and commodious bridge.

**LOCHY** (THE), a small river of Breadalhan, Perthshire. It rises on the north side of Benchallin, in the extreme south of the most westerly detached part of Kenmore, and runs  $3\frac{1}{2}$  miles northward, and  $2\frac{3}{4}$  north-eastward to the eastern limit of that district. It now, for 3 miles eastward, bisects a part of Weem, but has on its north bank a small section of Killin; it next, for  $4\frac{1}{2}$  miles south-eastward, runs across parts of Kenmore, of Weem, and of Killin, and it finally flows  $1\frac{1}{2}$  mile through Killin to the Dochart, into which it gently flows a little above the entrance of that river into Loch-Tay. The Lochy is a stream of very varied and high attractions; and, in the lower part of its course, contributes its quota to the superb scenery round Loch-Tay-head. It is about 15 miles in length of course, and gives the name of Glenlochy to the vale which it traverses. See **GLENLOCHY**.

**LOCKERBY**, a neat, stirring, and prosperous little town in the parish of Dryfesdale, and district of Annandale, Dumfries-shire. It stands on the railroad between Glasgow and Carlisle, 4 miles from Lochmahon, 6 from Ecclefechan, 12 east from Dumfries, 10 north from Annan, 16 south from Moffat,  $17\frac{1}{2}$  west from Langholm, 26 from Carlisle, and 72 from Glasgow. Its site is midway between the Annan and the Milk, with a luxuriant plain intervening on the west, and rich soft hill scenery undulating toward the east. The town stretches north and east, and is flanked on the east by a beautiful rising ground called Lockerby-hill, and gives easy access to some scenery on the Milk, perhaps the loveliest in Annandale. Like most towns on the Border, as well as some in other localities, it originated in the protection and influence of a castle, or fortalice. On a ridgy rising ground, nearly surrounded by two lochlets, now drained, and one of them anciently traversed by the great Roman road up Annandale, stands an ancient quadrangular tower, the seat, in old times, of the Johnstones of Lockerby, a branch of the family of Johnstone of Lochwood, the ancestor of the late Marquis of Annandale, and of the present Marquis of Queensberry. Around this tower grew up a hamlet, which gradually swelled into a village, and eventually, by the liberal policy of granting feus and long tacks, increased to the bulk of a small and provincially important town. But though the place is of remote origin, and is the scene of some curious traditional tales, it comes into notice, and maintains a vantage-ground before the view, almost solely as the seat of a vast lamb-fair, and of considerable pastoral traffic. After the union of the Crowns, and the commencement of international friendly intercourse, English dealers annually met at the village of the sheep-farmers of Dumfries shire, and bought their surplus stock for the southern markets. The 'tryst,' as the meeting was called, was held on the skirt of Lockerby-hill; but is increased in extent, with the internal prosperity of the village, and especially with the augmentation of intercourse between the nations, till it could no longer be held within the limits of its original arena. Some person—though no document or tradition gives the name of the public spirited individual—now granted for the holding of the tryst, the whole hill in perpetuity as 'a common' to the town. This common,

—above 100 acres in extent,—was once, in some way or other, dependent on the city of Glasgow; but the right of superiority having been bought up by the ancient and now noble family of Douglas of Lockerby-house, it is let out by auction to a person who exacts a small sum per score for the lambs shown on it, and who, in some good years, pays £30 to the proprietor for one day's collection. The lamh-fair is the largest and last in Scotland, from 30,000 to 40,000 lambs being usually on the ground; (in 1840, the number shown was nearer 50,000;) and the day being the 2d of August, O. S., unless that be a Saturday, a Sunday, or a Monday, and in that case the following Tuesday. The supply of stock to this market, particularly of Cheviots and crosses, is yearly increasing from wider ranges of country. Besides the lamh-fair, and a market for wool on the hill, there is on the same day a fair, or rather a general gathering for frolic and folly in the town, at which the whole country, for 10 or 12 miles round, is generally assembled. The crowd consists of persons of all ranks and ages, from the meanest plebeian to the proudest patrician of the land,—of servants to hire, and of masters to hire them,—of merry-andrews to raise laughter, and of jackanapes and hohnails to make it. Even the sage and aristocratic hurgers of Dumfries themselves flock to the rendezvous in hundreds—as the Grecians did of old to the Olympic games—and seldom fail to meet there as many adventures in a single day as serve them for subjects for rude mirth and small talk during the subsequent twelvemonth. Another fair, but much less notable than the former, is held on the 2d of October, O. S., with the same exception as to date as the other. Hiring-markets for servants, attended by great concourses of people, are held on the 2d Thursday of April, and on the 16th day of October, both O. S. Free markets, chiefly for the sale of pork, and in some instances of cattle and horses, are held on the 2d Thursday of January, February, March, April, and May; on the 3d Thursday of June, called the Midsummer market; on the 16th day of October, if a Thursday, and if not, on the Thursday following; on a Thursday in November, three weeks after that of October, and called the Martinmas market; on a Thursday, a fortnight after this Martinmas one; and, lastly, on the Thursday preceding Yule or Christmas. All are calculated in O. S. During winter also, there are, chiefly for the sale of pork, weekly markets. So great is the traffic in pork, that £1,000 is sometimes paid down for it by hacon-curiers in one day. The town, in fact, is a rival of DUMFRIES [which see], in this curious and enriching traffic raised by the passion of Englishmen for the swine-flesh of the Scottish Border, and derives from it, and from the numerous and crowded markets and fairs, an amount of support which goes far to compensate the want of manufacture. But Lockerby is likewise a retail-depot of every sort of goods for all central and much of northern Annandale, and has an array of grocers, haberdashers, druggists, and miscellaneous venders, as well as handicraftsmen, which far outshines the proportions of its own population. The town has branch-offices of the Southern bank of Scotland, and the Western bank of Scotland; two inns, one of which is a posting-house; various literary and religious institutions; and two places of worship,—the parish one, with 640 sittings; and one of the United Secession, with 570: See DRYFSDALE. Population, in 1831, 325 families, or about 1,600 individuals.—Of the five different railway lines which have been projected to connect England and Scotland, one runs from Carlisle by Lockerby and Beattock, and sends off a branch at Symington to Edinburgh: making an

actual distance of 97 miles 44 chains, between Carlisle and Edinburgh, and 100 miles 74 chains from Carlisle to Glasgow. It has also been proposed to carry a branch from Thankerton,—a point about  $2\frac{1}{4}$  miles nearer than Symington to Glasgow,—to the Edinburgh and Glasgow railway, which it would join at a distance of about 7 miles from Edinburgh. The length of this branch would be 30 miles 41 chains.

LOGAN, or PORT-LOGAN, or PORT-NESSOCK, a village at the head of Port-Nessock hay, in the parish of Kirkmaiden, Wigtonshire. Population 180. It is rather a dreary-looking place, but is a summer resort of sea-bathers. The old mansion-house of Logan is an interesting structure.—The fish-pond at Logan, formed in 1800, and repopled since by many successive generations of cod, is an artificial basin of salt-water, 30 feet deep by 160 in circumference,—reckoning from the top to the bottom of the rock. The area within is hewn from the solid rock, and communicates with the sea by one of those fissures or natural tunnels so common on bold and precipitous coasts. Attached to the pond is a neat Gothic cottage for the accommodation of the fisherman; and, round and round, the rock is surmounted by a substantial stone-wall at least 300 feet in circumference. In every state of the wind or tide,—in winter as well as summer, when not a single boat dare venture to sea,—the proprietor can command a supply of the finest fish, and study at his leisure the instincts and habits of 'the finny nations.'\*

\* From the inner or back door of the lodge, a winding stairway conducts you to the usual halting-place,—a large flat stone projecting into the water, and commanding a view of every part of the aquatic prison. When the tide is out this stone is left completely dry; and here a stranger perceives with surprise a hundred mouths, simultaneously opened, to greet his arrival. Fishes, in fact, hear as well as see; and the moment the fisherman crosses his threshold, the pond is agitated by the action of some hundred fins, and otherwise thrown into a state of perfect anarchy and confusion. Darting from this, that, and the other corner, the whole population moves, as it were, to a common centre,—elevate their snouts,—lash their tails,—and jostle one another with such violence, that on a first view they actually seem to be mediating an attack on the poor fisherman, in place of the crowd full of bonnets he carries. Many of the fishes are so tame, that they will feed greedily from the hand, and bite your fingers into the bargain, if you are foolish enough to allow them. Cod appears to be the prevailing species of fish in this pond; but there are also blochin or glassin, haddock, flounders, and various other kinds. Two other salt-water ponds for similar purposes exist in Scotland;—one in Fife, and the other in Orkney. Our Roman Catholic ancestors—in whose religious system a provision for a supply of fish was almost as indispensable as a house to protect themselves from the weather—have left us numerous testimonials of their diligence and expense in the construction of fish-ponds. Almost every old family-residence, particularly in England, is still furnished with the ancient vivaria for keeping fish, or exhibits the ill-concealed remains of them; but the excavation of new ones is, in these modern days, of very rare occurrence. In France and Germany, the rents paid for carp-ponds are enormous; the carp are there fed and attended to with as much care as the sheep; and why not in this country? For, be it remembered, that although the abundant supplies of fish which our coasts afford might make it less an object with us to increase their quantity than it is on the continent, yet these supplies are, from the state of the weather and other causes, uncertain, and therefore must be variable in price. Now, if our lakes and rivers were well-stocked with fish, of greater variety and of better quality than those always found there, a supply would always be had at market, and the tables of the gastronome would no longer be at the mercy of the fishmonger. We have before us the description of a fish-preserve, which we are surprised has not been imitated by gentlemen who have the means, and who, we should think, would be glad to have the opportunity of furnishing their establishments with fish at times when that luxury may be scarce or unattainable. A small stream is led from a river through a large oblong excavation in the adjoining ground. This excavation is protected all round (the soil being mould that would have been washed down by the water), by walls, in which are left deep recesses below the level of the surface of the water. A small house is built over one end of the excavation, in the floor of which is a large trap-door, which, when open, allows one to see the water. Through this trap-door it is customary to give the fish their food. And when the door of the house is shut, so as to prevent the admission of light, and the trap-door opened, every fish that is in the stew is distinctly visible as they come for their food. This plan gives the proprietor an opportunity of taking out, by means of a

**LOGAN (THE)**, or **LOGAN-HOUSE-WATER**, a pastoral and romantic rivulet, associated with various interesting antiquities and reminiscences, and traversing to the North Esk a sequestered vale which diagonally cleaves the Pentland-hills in the parishes of Pennicuik and Glencross-burn, Edinburghshire. The stream is known as the Logan, only or chiefly in history and song; and is now popularly called Glencross-burn. See **PENNICUIK** and **GLENCROSS**.

**LOGAN (THE)**, a river in Lanarkshire, which takes its rise in the hills which separate the parishes of Lesmahago and Muirkirk, and running eastward for 8 miles, joins the Nethan, which has its source in the same mountains.

**LOGIE**, anciently called **LOGIE-MURDOCH**, a parish in Fifeshire; bounded by the parishes of Dairsie and Leuchars on the south; on the east by Leuehars and Foran; and on the north and west by the parish of Kilmarnock. Its superficial extent is about 3,343 imperial acres, whereof 2,770 are arable. Occupying a portion of the south-eastern extremity of the Ochill-hills, which are here broken up into several parallel ridges or small mountain-ranges, its general surface is irregular and hilly, and considerably elevated above the valley of the Eden. The highest eminence in the parish is Lucklaw-hill, near its eastern extremity, which rises about 600 feet above the level of the sea; and from whence there is an extensive view, particularly towards the north, where it commands the whole of the east coast as far as Arbroath. This hill consists of a yellow coloured felspar porphyry, very hard and susceptible of a fine polish; the summit is compact flesh-red felspar. Tradition says that the Kings of Scotland, when residing at Falkland, or St. Andrews, used to follow the chase on this hill, in consequence of which it is called the King's-park. The only village in the parish is a small one near the parish-church. Population, in 1801, 339; in 1831, 430; in 1838, 410. Houses 92. Assessed property, £4,282. On the south side of the parish, and not far from the church, is the place and lands of Logie, which belonged, in the reign of Robert III., to Sir John Wemyss of Reres and Kincaldrum, ancestor of the Earls of Wemyss. In the reign of James VI., the lands of Logie were possessed by a younger branch of this noble family.\*—About the middle of last

small landing-net, any particular fish, either for the purpose of consumption, or for weighing it, and examining its gradual increase. The rapidity with which the fish grow to a large size in this confinement is truly astonishing,—some of them gaining many pounds in weight in the course of a single season. The water which is admitted at one end of the stew is allowed to escape at the other end,—thus keeping up a constant succession of fresh water for the use and comfort of the scaly inhabitants. The food which is supplied to them consists of minnows and other small fish, or the entrails of calves, fowls, &c., cut into mouthfuls.

\* In the 'Minstrelsy of the Scottish Border,' Sir Walter Scott has published a ballad called 'The Laird of Logie,' founded on an incident which occurred to Wemyss of Logie, who appears to have been a young gallant at the court of the Scottish Solomon. "In the year 1592," says Sir Walter in his introduction to the ballad, "Francis Stuart, Earl of Bothwell, was agitating his frantic and ill-concerted attempts against the person of James VI., whom he endeavoured to surprise in the palace of Falkland. Through the emulation and private rancour of the courtiers, he found adherents even about the King's person, among whom it seems was the hero of the ballad." The adventure which gave rise to the ballad is thus stated in a curious chronicle which has been published under the title of 'The Historie of King James the Sext.' "In this close tyme, it fortunit that a gentleman callit Wemyss of Logye, being also in credence at court, was delatit as a trafficker with Frances erle Bothwell; and he being examinat before king and counsaill, confessit his accusation to be of veritie, that sundry tymes he had spokin with him, expresse aganis the King's inhibition proclimat on the contrare, whilk confession he subscriv'd with his hand; and because the event of this matter had sik a success, it sall also be prayst be my pen, as a worthy truce, proceeding from honest chest love and charitie, whilk sull on aw wayis be obscurit from the posteritie for the guide example; and therefore I have thought gode to insert the same for a perpetual memorie. Queen Anne, our noble princess, was servit with

century the lands of Logie were the property of Walter Bowman, Esq., who long resided at Egham in Surrey. This gentleman executed a very strict entail of the property, and along with it he entailed his library under very minute injunctions for its preservation. He had travelled much on the continent, and appears to have collected a considerable portion of his books there. The library contains many valuable editions of the classics, a valuable collection of engravings, and a great number of maps and charts. By the terms of the entail, the heir is prohibited from lending the books; but he is bound to keep a suitable room for the library in his house, and to allow free access to it to all the neighbouring gentlemen. He is also bound to have a lason, with water and a towel, that the books may not be soiled by unclean hands. Women and children are expressly prohibited from having access to the library! The only ancient house in the parish is the ruins of the castle of Cruivie, on the lands of that name, belonging to Mr. Gillespie. All that remains of this building is the square tower, or keep, which bears marks of considerable antiquity. Anciently these lands belonged to the Ramsays of Colluthie,—a family which ended in an heir female. The lands of Cruivie were purchased by John Anstruther, Esq. of Ardit, who was appointed sheriff of the county in 1811; and after his death were purchased by the father of the present proprietor.—This parish is in the presbytery of Cupar, and synod of Fife. Patron, the Crown. Stipend £205 2s. 5d.; glebe £12. The parish-church anciently belonged to the abbey of Balmerino, the monks of which drew the teinds and supplied the cure. After the Reformation, Balmerino and Logie were under the charge of one minister; but about 1571, Logie was supplied with a reader. Shortly after that date a clergyman was appointed for each of the parishes, which arrangement has continued ever since. The present church was erected in 1826; sittings 280. John West, author of a System of Mathematics—a work of some repute—was son of a minister of the parish, about the middle of last century. He became an Episcopal clergyman in the island of Jamaica; and at his death left some valuable mathematical papers which came into the hands of the late Sir John Leslie, and which it was his intention to have published, with a memoir of the author.—There is no school except the parochial one in the parish. The teacher has the maximum salary, and in addition, 50 merks Scots per annum, the proceeds of an old mortification by an heritor of the parish for the support of the reader,—an office now rendered unnecessary

dyverss gentilwomen of hir awn cuntry, and yamelle with aue callit Mres Margaret Twynstoun,\* to whome this gentilman, Wemyss of Logye, bore great honest affection, tending to the godlie band of marriage, the whilk was honestie requytet for the said gentilwoman, yea even in his greatest misiter; for howsome she understode the said gentilman to be in distress, and apperantlie be his confessioun to be purviset to the death, and she having prevaleget to ly in the queyn's chamer that same verie night of his accusation, where the King was also reposing that same night, she came furth of the dure prevelie, bayth the prencis being then at quyet rest, and past to the chamer, where the said gentilman was put in custodie to certayne of the garde, and commandit thame that immediatlie he should be brought to the King and Queyne, whareunto they geving sure credence obeyit. But howsome she was cum bak to the chamer dur, she desyrit the watches to stay till he should cum forth agayne, and so she closit the dur, and couvoyit the gentilman to a window where she miuistrat a long corde unto him, to convoy himself down upon; and sa he hir gude cheritable help, he happelie escapit be the subtiltie of love." Spottiswoode calls the hero of this tale John Wemyss, younger of Logie; and he adds that the keepers, waiting upon his return, stayed there till morning, and then found themselves deceived. Thus, with the manner of the escape, misinterpreted great occasion of laughter; and not many days after, the King being pacified by the Queen's means, he was pardoned, and took to wife the gentleman who had hazarded her credit for his safety.

\* According to Spottiswoode the name was Twynlase.

from the appointment of a minister. He has also a free school-room, a dwelling-house and garden.

LOGIE, a parish lying in the shires of Stirling, Perth, and Clackmannan. Though compact in itself, it exhibits a notable instance of whimsical intricacy and confusion in the territorial allotments of the counties; for the portion of it which belongs to Stirlingshire is in two sections, one of them quite detached from the county; and the portion of it which belongs to Clackmannanshire, is cut off from the body of that county by the portion which belongs to Perthshire. About one-fifth of it, on the south, is the Clackmannan part; and the other four-fifths are nearly equally divided between Perth and Stirling. The parish is  $4\frac{1}{2}$  miles in length from south to north, and 4 or  $3\frac{1}{2}$  in mean breadth. It is bounded on the north-west and north by Dunblane; on the east by Alloa; on the south by the Forth, which divides it from St. Ninians and Stirling; and on the west by Allan water, which divides it from Lecropt and Dunblane. In the north-east and north it runs up among the Ochil hills; it thence descends in a hanging plain of dryfield to about its middle; and then, over one-half of its whole area, stretches away toward the rivers in strong and beautiful carse-ground, unsurpassed in its opulence by any in the kingdom. The district is smilingly and variedly beautiful, richly cultivated and adorned in its low grounds, and finely picturesque in its pastoral uplands. Its southern boundary has the far-folding sinuosities, and the silvery edging of romantic curvatures, which distinguish the most capricious part of the links of the Forth. One of the peninsulas within the links is graced with the venerable ruins of CAMBUSKENNETH ABBEY: which see. The centre of the parish is ornamented with the mansion, and the wooded pleasure-grounds of Airtbrie castle, a seat of Lord Abercromby. One of the Ochils, a high conical hill called Dumyat, lifts the eye over parts of 12 counties, and feasts it with one of the most magnificent, as well as extensive, prospects in Scotland. Half-a-mile north of its base, a very fine well issues from more than 60 springs, bears the name of the Holy well, and is said to have been anciently an object of superstitious veneration and crowded resort on the part of the Roman Catholics. Toward the west are the mineral wells of AIRTHREY: which see. Silver and copper ores occur among the Ochils. A mine of copper was for some time flattered in its operations by the appearance of a very rich vein; but it became uncomensating, and was abandoned. The village of Logie, or Blair-Logie, stands in the centre of the parish, near the meeting of the counties, at the entrance to Glendevon among the Ochil hills; and, with its neat little church, and its broad zone of warm-coloured and very diversified landscape, has a singularly pleasing appearance. See, for other villages, MENSTRIE and ALLAN (BRIDGE OF). A distillery, a woollen manufactory, and a small paper-mill employ all the labouring class not connected with agriculture. The parish is traversed by the Stirling and Perth turnpike, the Stirling and Callander road, and by other thoroughfares. Population, in 1801, 2,166; in 1831, 1,945. Houses 348. Assessed property, in 1815, £14,481.—Logie is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, the Earl of Dunmore. Stipend £263 10s. 2d.; glebe £19. Unappropriated teinds £680 3s. 2d. The parish-church was built in 1807; sittings 644.—A Relief congregation in Blair-Logie was formed in 1761 or 1762. Sittings in their chapel 400. The minister has a house and garden.—The lands of Cambuskenneth, with a population of 200, are annexed *quoad sacra* to Stirling. The parish, exclusive of these

lands, was stated by the incumbent, in 1826, to have a population of 1,827; of whom 1,086 were churchmen, 706 were dissenters, and 35 were persons not known to belong to any religious denomination. The Clackmannanshire part of the parish includes the sites of the ancient chapels and hermitages of Lupno, north-west of Menstrie, on the western bank of the stream which flows into the Devon. The parish school was attended, in 1834, by 73 children; and three private schools by 164. Parish schoolmaster's salary £30, with £33 fees.

LOGIE-ALMOND, a district on the north bank of the river Almond, opposite the parish of Methven, and immediately west of that of Monedie, Perthshire. About 80 or 100 years ago, it was, by authority of the court of teinds, disjoined from the parish of Monzie, to which it originally belonged, and annexed *quoad sacra* to that of Monedie. The district measures 3 miles by  $2\frac{1}{2}$ . The soil adjacent to the river is partly a light loam and partly gravelly; and, on rising grounds and hills in the interior and on the north, it is a deep till mixed with moss. The uplands are divided into sheep-walks, and abound with all kinds of game. Near the Almond are some ruinous castles; and elsewhere are two Druidical circles. The district anciently formed the meeting point of the three dioceses of St. Andrews, Dunkeld, and Dunblane; and is traditionally said to have been a place of conference on the part of the three bishops.—Logie-Almond, and small portions of the parishes of Redgorton, Auchtergaven, Fowlis-Wester, and Methven, were a few years ago erected into a chaplainry, or formally connected with a chapel, without being made a *quoad sacra* parish. The united district measures 6 miles by  $2\frac{1}{2}$ ; and, in 1838, had 1,114 inhabitants,—681 of whom were in Logie-Almond, 93 in Redgorton, 95 in Auchtergaven, 162 in Fowlis-Wester, and 83 in Methven; while 86 of the whole, according to the Established minister's survey, were churchmen, and 428 were dissenters. The chapel was originally a place of worship in connexion with the parish of Monzie, and was thoroughly repaired, in 1834, at a cost of £150. Sittings 285. Stipend from £50 to £60. In Logie-Almond a United Secession congregation was established about 1751. Their present place of worship was built, in 1811, at an expense of upwards of £400. Sittings 450. Stipend £69, with a glebe worth £12, and a manse and offices built, in 1801, at a cost of between £200 and £300. The sole heritor of the united district is Sir William Drummond Stewart of Grandtully.

LOGIE-BRIDE. See AUCHTERGAVEN.

LOGIE-BUCHAN, a parish in the district of Buchan, Aberdeenshire; bounded on the north by Cruden; on the east by Slains, which divides it from the sea; on the south by Foveran; and on the west by Ellon. The river Ythan, here navigable at full tide for small sloops, crosses it from west to east, dividing it into nearly equal proportions. It extends, from south-west to north-east, in a curved form, about 9 miles, by about 2 miles in mean breadth. Houses 123. Assessed property, in 1815, £2,367. Population, in 1801, 539; in 1831, 684. The surface of this parish is rather flat, with occasional eminences: the soil, in general, is fertile; but it is said to be less so on the banks of the river than elsewhere,—a circumstance rather unusual. The land is arable, and in an excellent state of cultivation; but presents no object of particular interest. The well-known song, 'Logie o' Buchan,' is sometimes, but erroneously, supposed to celebrate this parish.—Logic-Buchan is in the presbytery of Ellon, and synod of Aberdeen. Patron, Buchan of Auchnacoy. Stipend £191 16s. 8d.; glebe £12 10s. Unappropriated teinds £11 11s. 9d. The church is situated

on the right bank of the river Ythan. Schoolmaster's stipend £25 13s. 4d.; fees, &c. £12 7s. 6d. Two dame schools are occasionally kept.

**LOGIE-COLDSTONE**, a parish in the district of Cromar, Aberdeenshire; composed of the parishes of Logie and Coldstone, united in 1618. It is bounded on the north by Strathdon and Towie; on the east by Tarland and Coul; on the south by Glenmuick; and on the west by Strathdon. The length from east to west is about 6 miles: the breadth may be stated at  $3\frac{1}{2}$  miles; but it is narrow in the middle. Houses 204. Assessed property, in 1815, £2,353. Population, in 1801, 861; in 1831, 910. The surface is interspersed, in the interior, with a number of small hills and large moors, abounding with game: on the hill of Morven, ptarmigan and white hares are found. A proportion of the soil is arable and fertile; but the district, in general, is bleak and uninteresting, though considerable improvements have been effected. The parish is watered by three rivulets forming **DAVEN-LOCH** [which see] and tributary to the Dee. There are several large cairns and Druidical circles. This parish is in the presbytery of Kincardine-O'Neil, and synod of Aberdeen. Patrons, the Crown and Farquharson of Invercauld. Stipend £217 9s. 3d.; glebe £16. Unappropriated tithes £91 11s. 7d.—Schoolmaster's salary £26; fees, &c. £24, besides a share of the Dick bequest.

**LOGIE-DURNO**. See **CHAPEL-OF-GARIOCH**.

**LOGIE-EASTER**, a parish in the counties of Ross and Cromarty; bounded on the north by Tain; on the north-east by Fearn; on the east by Nigg; on the south by Kilmuir; and on the west by Kilmuir and Edderton. Its length is 7 miles; and its breadth about 3 miles. The surface is uneven, but by no means rugged. The soil is, in some places, a strong deep clay; in others a rich black mould; in others a light earth on a sandy irretentive subsoil. Sands have been extensively reclaimed, and are in a very improved state of cultivation. Wheat is more plentifully produced than any other grain, and is excellent in quality. The prevailing rock is the old red sandstone. Thriving plantations are somewhat extensive; and some natural wood flourishes on the ground of Ulladale. The largest stream bisects the parish eastward, and popularly bears the comprehensive name of *Abhor*, or 'river.' Of three other rivulets or burns, one, after heavy rains, overflows its banks, and sometimes considerably damages the adjacent fields, washing away the soil, and spoiling the grass. The water of one of several very fine springs was once superstitiously thought to have a predictive power; and, when carried, in any quantity, into the presence of a sick person, was alleged to change colour if he would die, and to retain its limpidness if he would recover. The climate seems to possess less than average salubrity. The mansions are Culrossie and Shandwick, the seats respectively of Rose Ross, and Charles C. Ross, Esq. The estate of Balnagown in the parish gives designation to its proprietor Sir Charles Ross, Bart. Several cairns stand on both sides of one of the burns, and are traditionally said to indicate an ancient battle in which some Scottish forces worsted an army of Danes. A gallops hill in the centre of the parish, and a deep small pond in its vicinity, called *Poll a bhaidh*, or 'the Pool for drowning,' were noted, in the days of hereditary jurisdiction, as places of capital punishment. "About 40 years ago," writes the Old Statistical reporter, "died a man who witnessed the last execution in the pool, that of a woman for child murder." An annual cattle-market is held in May at Blackhill. The manse and church, situated near the middle of the parish, are 2 miles north of Park-

hill post-office, and 5 south-south-west of the burgh of Tain. The Great north mail-road runs along the east, and a turnpike goes into the interior; but no road lays open the district in the west. Depopulation has occurred by the enlarging of farms. Population, in 1801, 1,031; in 1831, 934. Houses 226. Assessed property, in 1815, £5,247.—Logie-Easter is in the presbytery of Tain, and synod of Ross. Patron, M'Kenzie of Cromarty. Stipend £236 19s. 1d.; glebe not known. Unappropriated tithes £55 17s. 10d. The church is a neat and commodious structure; and commands from the summit of a rising ground a charming view, southward, of the bay and town, and environs of Cromarty, and eastward of the parishes of Nigg, Fearn, and Tarbat, and the coast of the German ocean. In 1834, the parish school was attended by 106 scholars, and another school by 58. Parish schoolmaster's salary £30, with £6 fees.

**LOGIE-PERT**, a parish in the extreme north of the maritime district of Forfarshire; bounded on the north and north-east by the North Esk, which divides it from Kincardineshire; on the south-east by Montrose; on the south by Montrose and Dun; on the south-west by Dun and Strickathrow; and on the west by Strickathrow. Its outline is ellipsoidal, but with a tapering toward the east; and its extent is nearly 5 miles from east to west by 3 from north to south. The surface rises from the North Esk, at first gently, and afterwards more rapidly, so as to attain a commanding though not strictly a hilly elevation; and, in a minor section, it slopes to the south. The high ground commands a noble view of the Grampians, of the intervening plain, and of a considerable part of Kincardineshire. The soil, in the northern division, is a deep clay which spontaneously yields rich crops of grass, and yields large returns to cultivation; and in the other districts, it is partly a light loam, and partly blackish moorland, superincumbent on clay. About 300 acres are waste; and all the rest of the area is disposed in arable grounds and plantations, in the proportions to each other of  $3\frac{1}{2}$  to 1. Abundance of wood, wealth of soil, and the achievements of husbandry, impress on the parish a peculiarly snug and cheerful aspect. Of various springs of excellent water which refresh the inhabitants, a copious one near the site of the old manse of Pert is reputed to be antiscorbutic, and one in Martin's den produces so plentifully that its stream would fill a pipe of a foot in interior circumference. The North Esk, while skirting the boundary, is beautiful in its banks, and produces excellent trout and salmon. Freestone, of good quality, abounds; but is not much worked. Limestone was formerly mined and burnt to a great extent; but eventually proved un-compensating. On the North Esk are two seats of considerable manufacture. The Logie works, a mile from the eastern extremity, and  $4\frac{1}{4}$  miles from the town of Montrose, consist of a flax-spinning mill, which employs about 130 persons, and a bleacfield for linen-yarns, which employs nearly 50. These works belong to a company in Montrose. The Craigo works, nearly a mile farther up the river, belong to a company in London, and consist of a flax-spinning mill, machinery for finishing cloth, a bleachfield, and a soda work, which jointly employ about 150 persons. Though the population of the eastern section of the parish is chiefly gathered round the vicinity of the manufactories, they are nowhere congregated into a village. The chief mansions are Craigo, in the south-east corner, and Gallary, on the North Esk, the seats respectively of David Carnegie, Esq., and James Lyall, Esq., the two largest landowners. Nearly a mile west of Craigo-house are three remarkable tumuli, called the Laws of Logie, two of which

have been opened, and found to contain unusually large human skeletons, and some kindred relics. The parish is cut across its north-west nook by the west road between Dundee and Aberdeen, and across its east end by the road from Montrose to Fettercairn. The bridge which carries the former over the North Esk is a solid structure of three arches, said to have been built by the celebrated Erskine of Dun; and that which carries over the latter is an elegant erection of four arches, built in 1814. Population, in 1801, 908; in 1831, 1,359. Houses 233. Assessed property, in 1815, £5,173. — Logie-Pert is in the presbytery of Brechin, and synod of Angus and Mearns. Patrons, the Crown and the New college of St. Andrews. Stipend £219 3s. 2d.; glebe £18. Unappropriated tithes of Logie, £38 3s. 2d.; of Pert, £28 15s. 1d. The church was built in 1775, by voluntary subscription among the parishioners, at a cost, it is supposed, of about £300; and has never been repaired. Sitings 502. The minister stated the population, in 1836, to consist of 1,310 churchmen, 90 dissenters, and 4 nondescripts, —in all, 1,404 persons. The present parish comprehends the ancient parishes of Logie-Montrose, composing its eastern division, and of Pert, composing its western division. The parishes were united by act of parliament between 1610 and 1615. The ruins of the old church of Logie stand in a romantic hollow or low ground on the North Esk, half-a-mile from the eastern extremity; and those of the old church of Pert stand also on the river  $4\frac{1}{4}$  miles further west. The parish school was attended, in 1834, by 33 scholars; and 5 private schools by 117. Parochial schoolmaster's salary £34 4s. 4d., with about £10 7s. 6d. fees, and £10 6s. other emoluments. There are two savings banks and a library.

LOGIERAIT, a large and dispersed parish in the northern division of Perthshire. Part of it is surrounded on all sides, to a depth of many miles, by the parish of Forthingall in Breadalbane. This part has a length from north to south of  $4\frac{1}{2}$  miles, and a mean breadth of  $3\frac{3}{4}$  miles; it lies on the south side of Loch-Rannoch, from  $1\frac{1}{4}$  to 5 miles from the east end of the lake; it has a belt of plantation a mile broad from the lake southward; and it thence toweringly recedes to a water-shedding line of alpine summits along its southern boundary. The nearest other part of the parish to this is a detached section,  $11\frac{1}{2}$  miles to the east, surrounded on all sides by the parish of Dull, and parts of the curiously scattered parish of Weem, and extending in a stripe of irregular but generally narrow breadth,  $4\frac{1}{2}$  miles from north-west to south-east, where it strikes the Tay. This district is cut asunder across its narrow middle by the loch of Glassy; it has a lochlet near its north-west extremity; and it is softened into amenity and beauty toward the Tay; but elsewhere, it is wildly pastoral. The next part of the parish is surrounded on all sides by Dull, runs parallel to the former part at generally a mile's distance, and is a stripe of  $3\frac{1}{2}$  miles in length, and  $\frac{3}{4}$  of a mile in mean breadth stretching south-eastward to the Tay. This part has on its north-eastern boundary the loch of Derculich,  $\frac{3}{4}$  of a mile in length, and possesses over a large proportion of its area, especially toward the Tay, a cultivated and ornamental aspect, foiled by lofty grounds at its centre and in the north-west. The fourth and chief part of the parish, or its main body, lies at the nearest point, half-a-mile east of the part just noticed, and 14 miles in a straight line east of the part in Rannoch. It consists of an irregular triangle, and an attached parallelogram. The triangle lies between the rivers Tay and Tummel, from their point of confluence upward; it measures 6 miles along the Tummel in a straight line on the north-east, and is

there bounded by Moulin, by part of Dowally, and by its own attached parallelogram;  $5\frac{1}{2}$  miles along the Tay on the south, and is there bounded by Little Dunkeld and Dull; and  $4\frac{1}{2}$  miles from the Tummel to the Tay on the west, but sends westward a projection of 4 or  $4\frac{1}{2}$  square miles in area, and is there bounded wholly by Dull. The parallelogram rests one end for 2 miles on the Tummel, and for 1 mile on the Tay, subsequent to the confluence of the rivers; it recedes north-eastward  $5\frac{1}{4}$  miles by 3; and it is bounded on the north-west by part of Dowally; on the north-east by Strathardle in Kirk-michael; on the south-east by Dunkeld; and on the south-west by Little Dunkeld; and by its own attached triangle. Two-thirds of the parallelogram, from the north-east boundary downward, are occupied by the Braes of Tullimet, which give name to a favourite Scottish air. Among the Braes are three lakes,—the largest, Loch-Hoishne, circular in outline, and about  $1\frac{1}{3}$  mile in circumference. A broad belt of the parallelogram upon the Tummel is arable ground. The triangle has an area singularly varied and beautiful. Along the Tummel, or the north-east side of the triangle, stretches Slesheg, or 'the narrow country,' having woodlands which, in several places, go down to the very brink of the river, and, in one place, are very extensive. Slesheg is flanked over its whole length by a hold abrupt ridge of heights which terminates, at the south-east, in precipitous rocks. Parallel to this ridge, and close on the south-west boundary, runs another ridge of similar character, enclosing several lochlets, and sending down mountain-hooks to drain the diversified surface intervening between it and the other ridge. The hills here and elsewhere, are, in their summits and higher acclivities, partly covered with heath, and partly a wild and triumphant exhibition of naked and menacing rock. Along the Tay is a beautiful broad belt of arable ground, forming part of Strath-tay, and finely adorned with wood. The area here, and along the two sides of the Tummel, and up the lower slopes of the hills which acknowledges the dominion of the plough, and displays the attractions of full cultivation, aggregates nearly 3,000 acres. So far back as the date of the Old Statistical Account, the country had advanced singularly far in georgical skill and achievement, and in acquaintance with the best tools and appliances of husbandry. Among the rocks is a variety of talc; in one part of Strath-tay, are several strata of limestone; and in some mosses fossil wood is occasionally found. Fruit-trees and garden-shrubs agree well with the soil, and are plentifully reared. The rivers frequently overflow their banks, convert the low grounds into temporary lakes, break down barriers, and sweep away land to the enlargement of their channels, and fling a dash of wildness and sublimity over the landscape. The country, in its ordinary state, ranks high in scenic attraction. "A rock, not above a mile from the church," says the statist, "commands a prospect of a great part of the parish. The windings of the rivers, the rich vales, the sloping corn-fields and pastures, the hanging woodlands, and the awful mountains which rise at a distance to confine the view, form, all together, one of the noblest landscapes, for extent, variety, beauty, and grandeur, that the eye can behold." Along the Tay, as well in the detached sections as in the main body, are some fine mansions. The village of Logierait lies 8 miles east of Aherfeldy, and  $8\frac{1}{2}$  north of Dunkeld. It is finely situated on the banks of the Tay, here a noble stream, and is noted for the distillation of whisky in its vicinity, and conducts to some extent a manufacture in linen yarn. Here Charles Edward located the prisoners whom he carried off from the field of

Prestonpans; and here Rob Roy made his escape after being apprehended by the Duke of Athole in 1717. Across the Tummel, a mile above its confluence with the Tay, and across the Tay  $\frac{1}{4}$  of a mile below the confluence, are chain ferry-boats for the conveyance of passengers, cattle, carts, and carriages. Good roads run along the Tay, and along both sides of the Tummel. Druidical stones and ruins of ancient Romish chapels occur in various quarters. Cairns formerly existed in several places, but have been removed. A Roman urn and a medal of Trajan were found in the parish. The ruins of a heacon-house stand on a rock 2 miles from the manse. The ruins of a castle, said to have been the residence of Robert III. after he resigned the government to his brother, the Duke of Albany, surmount a high bank near the Tummel ferry. The area of the castle is elliptical, and the fosse is in tolerable preservation. Population, in 1801, 2,890; in 1831, 3,138. Houses 680. Assessed property, in 1815, £7,030.—Logierait is in the presbytery of Weem, and synod of Perth and Stirling. Patron, the Duke of Atholc. Stipend £231 16s.; glebe £10. Unappropriated teinds £303 18s. 3d. The parish-school was attended, in 1834, by 32 scholars; and 9 other schools, by 498. Parish-school-master's salary £34 4s. 4d., with £5 15s. 9d. fees. Of the non-parochial schools, one is a free school, another is endowed by the Society for propagating Christian knowledge, and some are very small.

LOGIE-WESTER, a parish in Ross-shire united to URQUHART: which see.

LONG (THE), a small river of the western division of Ross-shire. It divides Kintail on its left bank from Lochalsb on its right; uniformly pursues a south-westerly course; falls into the head of Loch-Long conjointly with the Elchaig coming from the east-south-east; and, though having an entire run of only about 9 miles, is fed by so many mountain-streams as to be subject to very sudden and great freshets. Salmon once abounded in the rivulet, but is now comparatively scarce.

LOMOND-HILLS (THE), two beautiful conical trap hills, situated in the shires of Fife and Kinross, and visible to a considerable distance. The East Lomond, which is in the parish of Falkland in Fifeshire, and is the most regular and beautiful, is generally stated to be about 1,260 feet above sea-level, and 900 feet above the valley which separates it from the Ochills; but Mr. Cunningham, in his 'Geology of the Lothians,' estimates its altitude at 1,466 feet. This hill contains limestone and coal. The West Lomond, which is in the parish of Portmoak in Kinross-shire, is usually stated to be about 40 feet higher, but Mr. Cunningham estimates it at 1,721 feet. At its base lies the beautiful and placid Loch-Leven. Between the two principal Lomonds there rises another point which is sometimes distinguished as the Mid-Lomond, and composed of sandstone and trap strata, surmounted by a greyish black basalt. In some parts the Lomonds present a face of regular columnar trap. See FALKLAND.

LOMOND\* (LOCH), the Queen of Scottish lakes, distant about 20 miles from Glasgow, and 6 from Dumbarton. It lies principally in Dumbartonshire, but Stirlingshire bounds a portion of its eastern

shore. It is nearly 30 miles long, and at its southern end, from 8 to 10 miles broad; at the middle, however, and towards the northern extremity, its breadth is greatly diminished,—in some places to less than a mile. The depth of the lake varies as much as its breadth: the southern portion seldom exceeding 60 feet, whilst north of Luss, it increases to 200 and 360 feet. Thirty islands, of different sizes, are scattered over its surface, some of which rise to a considerable height, and most of the larger ones are finely wooded. See articles INCH-CALLIACH, INCH-CLAIR, INCH-CONACHAN, INCH-CROIN, INCH-GALBRAITH, &c. The lake lies completely imbedded amidst different ranges of hills. At the south end the Kilpatrick-hills terminate near Kilmaronock; on the western shore are the mountains of Luss and Arrochar; at the upper extremity tower the mountains of Glenfalloch; and on the eastern shore the great chain of the Grampians terminates in Benlomond. These ranges of hills are intersected by deep glens, and by numerous mountain-streams which pour their waters into the lake. The rivulets Fruin, Luss, Finlas, and Duglass, with many smaller streams, drain the highlands of Dumbartonshire; but the largest river which runs into Loch-Lomond is the Endriek, which flows into the south-east corner of the loch.

It is said that the waters of Loch-Lomond have increased considerably during the lapse of ages; and in Camstradden-bay, more than 100 yards from the shore, the ruins of houses are alleged still to be visible beneath the water. These traditionary reports have the sanction of the learned Camden, who, in his 'Atlas Britannica,' speaks of an island existing in his time, called Camstradden, situated between the lands of that name and Inch-Cavanach, on which, he adds, was a house and an orchard. This island has now disappeared: such an accident may have occurred, however, without any increase of the waters of the lake. Indeed, the supposition of such an increase is inconsistent with the appearances presented by the river Leven, which would rather lead to the supposition that the waters of Loch-Lomond had become lower than they once were. Loch-Lomond was at one time famed for three wonders—"waves without wind, fish without fin, and a floating island." The swell in the widest part, particularly after a storm, has no doubt given rise to the belief in the first of these marvels. Vipers are said occasionally to swim from island to island, and this may account for the second. In Bleau's Atlas, 1653, it is said, "Les poissons qu'ils disent n'avoir pas de nageoires, qu'ils appellent vulgairement Paones, sont un espece d'anguilles, c'est pourquoy il ne faut pas s'en estonner." Various accounts have been given of the floating island—one, that it was constructed of large square beams of oak, firmly mortised into one another, by a Keith Macindouill, or Keith the son of Dollius, who is said to have been contemporary with the famous Fingacoll or Fingal, and consequently to have lived in the 5th century. Camden appears to have heard of the floating island, and he adds a fourth wonder. "As for the floating island," says he, "I shall not call the truth of it in question, for what could hinder a body from swimming that is dry and hollow, like a pinnace, and very light? And so Pliny (lib. 8, epis. 20,) tells us that certain green lands, covered with rushes, float up and down on the lake of Vundimon. But I leave it to the neighbours, who know the nature of this place, to be judges whether this old distich of our Neckbam be true:—

"Ditator fluvius Albanis, saxo a ligna  
Dat Lomund multa frigiditate potens.

\* This lake has received its present name from Benlomond, which probably derives its appellation from the British *Llan-mon*, signifying 'a Beacon.' It is only since the 14th century that the lake has received its present name. Anciently it was called Loch-Leven, as appears from the chartularies of Lennox and Paisley, in which the lake and the river are frequently mentioned. In 1225, Maldoven, Earl of Levenachs, grants to the monastery of Paisley the right of fishing "per totum lacum meum de Leven."—Chart. Paisley, No. 316. The river which issues from it retains the name formerly common to it and the lake.

Scotland's enriched with rivers, timber thrown  
Into cold Lomond's waters turns to stone.\*

Loch-Lomond has, with great justice, been styled the Queen of Scottish lakes. The beauty of some portions, and the splendid magnificence of other parts of its scenery, are nowhere else to be equalled. Custom cannot stale its infinite variety. At the south end it is broad and expanded, and its ample bosom agreeably and picturesquely diversified by the numerous islands with which it is gemmed. The hills indeed have not here the true Highland aspect, but they are softly swelling, and have a green and pastoral appearance; and the open valleys smiling in the sunshine, everywhere present scenes of calm and quiet beauty. Numerous splendid mansions, with their richly wooded grounds, are studded around the shores, at the bases of the hills, or the openings of the valleys, adding the beauties of cultivation and art to those of nature. But it is the inconceivable variety afforded by numberless projecting headlands and receding bays, and by all the crowd of fairy islands which lie scattered over the surface of the lake,

"As quietly as spots of sky  
Among the evening clouds,"

which forms the distinguishing charm of the whole, and presents an inexhaustible source of pleasure and delight to the cultivated tourist. Towards the north end of the lake the scene becomes very different, and acquires a really Highland character. Here the lake is narrowed to the appearance of a river, winding amidst bold and rugged mountains, which, in some places, seem as if they were about to close over it. The hills rise to a greater height, and their bare and serrated tops present a bold and broken outline, often enveloped in mist and clouds, and for a great part of the year covered with snow. The valleys are deep and narrow, and their sides are everywhere marked by the rough and rugged beds of mountain-torrents.

A great poet has said, that, "In Scotland, the proportion of diffused water is often too great, as at the lake of Geneva, for instance, and in most of the Scottish lakes. No doubt," he continues, "it sounds magnificent, and flatters the imagination, to hear at a distance of masses of water so many leagues in length and miles in width; and, such ample room may be delightful to the fresh-water sailor, scudding with a lively breeze amid the rapidly shifting scenery. But who ever travelled along the banks of Loch-Lomond, variegated, as the lower part is, by islands, without feeling that a speedier termination of the long vista of blank water would be acceptable, and without wishing for an interposition of green meadows, trees, and cottages, and a sparkling stream to run by his side? In fact, a notion of grandeur as connected with magnitude, has seduced persons of taste into a general mistake upon this subject. It is much more desirable for the purposes of pleasure, that lakes should be numerous and small or middle-sized, than large, not only for communication by walks and rides, but for variety, and for recurrence of similar appearances. To illustrate this by one instance: how pleasing is it to have a ready and frequent opportunity of watching, at the outlet of a lake, the stream, pushing its way among the rocks, in lively contrast with the stillness from which it has escaped; and how amusing to compare its noisy and turbulent motions with the gentle playfulness of the breezes that may be starting up, or wandering here and there, over the faintly-rippled surface of the broad water! I may add, as a general remark, that in lakes of great width, the shores cannot be dis-

tinctly seen at the same time; and therefore contribute little to mutual illustration and ornament; and if the opposite shores are out of sight of each other, like those of the American and Asiatic lakes, then unfortunately the traveller is reminded of a nobler object; he has the blankness of a sea-prospect without the grandeur and accompanying sense of power." Thus far the sentiments of one, whose opinion on such points is not to be lightly gainsayed or controverted. But we think the following remarks on the passage just quoted, by Professor Wilson, will carry along with them the suffrages of most of our readers:—"We shall not be suspected," says the Professor, "of an inclination to dissent, on light grounds, from any sentiments of Wordsworth. But finely felt and expressed as all this is, we do not hesitate to say that it is not applicable to Loch-Lomond. Far be it from us to criticise this passage sentence by sentence; for we have quoted it not in a captious, but a reverent spirit, as we have ever done with the works of this illustrious man. He has studied nature more widely and profoundly than we have; but it is out of our power to look on Loch-Lomond without a feeling of perfection. The 'diffusion of water' is indeed great; but in what a world it floats! At first sight of it, how our soul expands! The sudden revelation of such majestic beauty, wide as it is and extending afar, inspires us with a power of comprehending it all. Sea-like indeed it is,—a Mediterranean sea,—enclosed with lofty hills and as lofty mountains,—and these indeed are the Fortunate Isles! We shall not dwell on the feeling which all must have experienced on the first sight of such a vision—the feeling of a lovely and a mighty calm; it is manifest that the spacious 'diffusion of water' more than conspires with the other components of such a scene to produce the feeling; that to it belongs the spell that makes our spirit serene, still, and bright, as its own. Nor when such feeling ceases so entirely to possess, and so deeply to affect us, does the softened and subdued charm of the scene before us depend less on the expanse of the 'diffusion of water.' The islands, that before had lain we knew not how—or we had only felt that they were all most lovely—begin to show themselves in the order of their relation to one another and to the shores. The eye rests on the largest, and with them the lesser combine; or we look at one or two of the least, away by themselves, or remote from all a tufted rock; and many as they are, they break not the breadth of the liquid plain, for it is ample as the sky. They show its amplitude; as masses and sprinklings of clouds, and single clouds, show the amplitude of the cerulean vault. And then the long promontories—stretching out from opposite mainlands, and enclosing bays that in themselves are lakes—they too magnify the empire of water; for long as they are, they seem so only as our eye attends them with their cliffs and woods from the retiring shores, and far distant are their shadows from the central light. Then what shores! On one side where the lake is widest, low-lying they seem and therefore lovelier—undulating with fields and groves, where many a pleasant dwelling is emowered, into lines of hills that gradually soften away into another land. On the other side, sloping back, or overhauling, mounts beautiful in their bareness, for they are green as emerald; others, scarcely more beautiful, studded with fair trees—some altogether woods. They soon form into mountains—and the mountains become more and more majestic, yet beauty never deserts them, and her spirit continues to tame that of the frowning cliffs. Far off as they are, Benlomond and Benvorlich are seen to be giants; magnificent is their retinue, but they two are supreme, each in his own dominion; and clear as the day is

\* Gibson's Camden, vol. iii. p. 1218.

here, they are diademed with clouds. It cannot be that the 'proportion of diffused water is here too great;' and is it then true that no one 'ever travelled along the banks of Loch-Lomond, variegated as the lower part is by islands, without feeling that a speedier termination to the long vista of blank water would be acceptable, and without wishing for an interposition of green meadows, trees, and eotages, and a sparkling stream to run by his side?' We have travelled along them in all weathers and never felt such a wish. For there they all are—all but the 'sparkling stream to run by our side,' and we see not how that well could be in nature. 'Streams that sparkle as they run,' cross our path on their own; and brighter never issued from the woods. Along the margin of the water, as far as Luss—ay, and much farther—the variations of the foreground are incessant; 'had it no other beauties,' it has been truly said, 'but those of its shores, it would still be an object of prime attraction; whether from the bright green meadows sprinkled with luxuriant ash-trees, that sometimes skirt its margin, or its white pebbled shores on which its gentle billows murmur, like a miniature ocean, or its hold rocky promontories rising from the dark water rich in wild flowers and ferns, and tangled with wild roses and honeysuckles, or its retired bays where the waves dash, reflecting, like a mirror, the trees which hang over them, an inverted landscape.' The islands are for ever arranging themselves into new forms, every one more and more beautiful; at least so they seem to be, perpetually occurring, yet always unexpected, and there is a pleasure even in such a series of slight surprises that enhances the delight of admiration. And alongside, or behind us, all the while, are the sylvan mountains, 'laden with beauty;' and ever and anon open glens widen down upon us from chasms; or forest glades lead our hearts away into the inner gloom—perhaps our feet; and there, in a field that looks not as if it had been cleared by his own hands, but left clear by nature, a woodman's hut. Half-way between Luss and Tarbet the water narrows, but it is still wide; the new road, we believe, winds round the point of Firkin, the old road boldly scaled the height, as all old roads loved to do; ascend it, and hid the many-isled vision, in all its greatest glory, farwell. Thence upwards prevails the spirit of the mountains. The lake is felt to belong to them—to be subjected to their will—and that is capricious; for sometimes they suddenly blacken it when at its brightest, and sometimes when its gloom is like that of the grave, as if at their bidding, all is light. We cannot help attributing the 'skiey influences' which occasion such wonderful effects on the water, to prodigious mountains; for we cannot look on them without feeling that they reign over the solitude they compose; the lights and shadows flung by the sun and the clouds imagination assuredly regards as put forth by the vast objects which they colour; and we are inclined to think some such belief is essential in the profound awe, often amounting to dread, with which we are inspired by the presences of mere material forms. But be this as it may, the upper portion of Loch-Lomond is felt by all to be most sublime. Near the head, all the manifold impressions of the beautiful which for hours our mind had been receiving begin to fade; if some gloomy change has taken place in the air, there is a total obliteration, and the mighty scene before us is felt to possess not the hour merely, but the day. Yet should sunshine come, and abide a while, beauty will glimpse upon us even here, for green pastures will smile vividly, high up among the rocks; the sylvan spirit is serene the moment it is touched with light, and here there is not only many

a fair tree by the water-side, but yon old oak wood will look joyful on the mountain, and the gloom become glimmer in the profound abyss. Wordsworth says, that 'it must be more desirable, for the purposes of pleasure, that lakes should be numerous, and small or middle-sized, than large, not only for communication by walks and rides, but for variety, and for recurrence of similar appearances.' The Highlands have them of all sizes—and that surely is best. But here is one which, it has been truly said, is not only 'incomparable in its beauty as in its dimensions, exceeding all others in variety as it does in extent and splendour, but unites in itself every style of majestic scenery which is found in the other lakes of the Highlands.' He who has studied, and understood, and felt all Loch-Lomond, will be prepared at once to enjoy any other fine lake he looks on; nor will he admire nor love it the less, though its chief character should consist in what forms but one part of that of the Wonder in which all kinds of beauty and sublimity are combined."

Two steam-boats now ply upon the lake, and by leaving Glasgow in the morning, the tourist may survey its majestic scenery, and return to take his ease in his inn, in the city, the same evening. But from such an excursion, only a very faint and limited idea of this splendid scenery can be formed. To obtain anything like an adequate conception of its many beauties, it is necessary to spend days upon its banks, to wander over the hills and amid the silent glens, and to visit its numerous islands, many of which are of themselves sufficient to form a day's excursion. A trip in the steam-boat, to obtain a general survey of the whole, will concentrate the recollections of the tourist, and impress his memory more distinctly.—At the south end of the lake, and not far from where the river Leven issues from its waters, are the ruins of Balloch-castle, a stronghold of the Earls of Lennox in the 12th, 13th, and 14th centuries. Many of their charters are dated from this castle. The Earls of Lennox appear to have erected their castle on Inch-Murrin in the 13th century, probably during the turbulent period of the succession wars; after which the castle at Balloch was seldom visited by them, and was ultimately allowed to go into decay.—A long-entertained project for executing a canal from the lake near Balloch to the Clyde at Bowling-bay has recently been revived.

LONCARTY. See LUNCARTY.

LONG (LOCH), a belt of marine water, a long northward ramification of the frith of Clyde, extending between the district of Cowal in Argyleshire, and the parishes of Roseneath, Row, and Arrochar, in Dumbartonshire. Over the whole of its length, it prevalently looks almost right along all the lower parts of the frith; and if it were but the inlet of a considerable river, would, as to both extent and direction, possess far the highest claim to be regarded as the upper frith. It opens from the Clyde nearly opposite Gourcock, and, with a breadth of from 2 miles to 6 furlongs, stretches away about 22 miles into the interior. At quarter distance from its entrance it opens, on the west side, into the fine small bay of Ardintemy; and, at half-distance, it sends off, on the same side, and in a north-westerly direction, LOCH-GOLL: which see. At two points on the Dumbartonshire side, it is distant respectively from the head of the Gair-loch only  $1\frac{1}{2}$  mile, and from Tarbet on Loch-Lomond only  $1\frac{3}{4}$  mile. Its general depth is from 15 to 20 fathoms, and its tidal current runs at the rate of about 2 miles in the hour. It is occasionally lined by a sandy beach, or pressed by hanging plains and banks of verdure, but in general is hemmed in by declivitous or mural rocks. Seen from the entrance, or from ground on the opposite

shore of the frith which commands a view of it, it preserves, for some distance on the east, a beautiful softness of feature which is almost lowland; but on the west it is skirted by alpine heights, which are rugged, stern, and heathy, over side and summit, and begin to smile in verdure, or wood or cultivation, only in belts along the margin of the water, and it then becomes lost amid a dense crowd of rolled and broken mountain masses,—that wildly tempestuated sea of Alps on which a rollicking and facetious taste has imposed the quizzing name of Argyle's Bowling-green. But seen from a singularly wild glen which wends round its head, or from almost any point in the vicinity of Arrochar inn, the loch possesses much distinctiveness and great grandeur of scenery: See articles ARROCHAR and GLENCROB. During summer two steam-boats ply every lawful day from Glasgow up Loch-Long, the one to Arrochar, and the other to the head of Loch-Goil; and during winter they ply three times a-week.

LONG (Loch), a marine projection from the head of Loch-Alsh in Ross-shire. It has the form of the segment of a circle; and bending from a northerly to an easterly direction, separates the district of Loch-Alsh from that of Kintail. Its extreme length is about 4 miles; and its mean breadth nearly half-a-mile. Loch-Duich and it go off in such a manner in opposite directions from the head of Loch-Alsh, as to present on the map very nearly the outline of a pair of antlers. Loch-Long, though injected among wild mountains, is not without attractions; and, in consequence of the value of its fisheries, has, on its Kintail hank, the two considerable fishing villages of Dornie and Bundaloch.

LONGA, a small island in the Skye group of the Hebrides. It lies  $1\frac{1}{2}$  mile north-east of Scalpa, and 2 miles north-north-west of Pabba, and measures about  $1\frac{1}{2}$  mile in circumference. It is, as to geognostic character, entirely composed of red sandstone; it forms an uneven table-land, everywhere abrupt on the coast, and about 200 feet high; and it is merely the habitat of sheep, and the resort of gulls and cormorants.

LONGANNAT, a small village on the Forth, in the parish of Tulliallan, in the detached part of Perthshire. A freestone quarry, in its vicinity, and bearing its name, has, from time immemorial, been in great reputation. The stone is durable, quite white, and of small grain, and admits a fine smooth polish. The demand for it was long greater than the quarriers could supply. The quarry has not only furnished materials for many houses of the first architecture in the circumjacent territory, but has contributed to public buildings in Edinburgh, in Aberdeen, and even, it is said, in Amsterdam. At the village are some slight vestiges of a pier, reported to have been built by a Dutch company, to facilitate the exportation of the stone.

LONGCASTLE. See KIRKINNER.

LONGFORGAN, a parish stretching in a narrow oblong south-eastward from the Sidlaw hills to the frith of Tay, in the extreme east of Perthshire. It is bounded on its north-west end by Forfarshire; along its north-east side by Fowllis-Wester and by Forfarshire; on its south-east end by the frith of Tay; and along its south-west side by Inchtute, Abernyc, and Cargill. Its greatest length is 7 miles, and its greatest breadth 3; but it contracts so much in some places as to have an aggregate area of only about 8,990 imperial acres. The streams, though tiny, are powerful enough to drive some saw-mills, three corn-mills, and a lint-mill. The chief of them rises in the north-west extremity, runs  $2\frac{1}{2}$  miles in the interior, wends  $3\frac{1}{4}$  miles along the south-western boundary, and then runs 2 miles eastward to the frith at Burn-

side park. The coast-line is  $3\frac{3}{4}$  miles; and  $\frac{3}{4}$  of a mile from its east end it is bold and steep, and terminates in the rocky promontory of Kingoodie. At that point a beautiful and gently inclined bank commences; thence it sweeps away in a receding direction and in the form of a crescent from the Tay; and at the distance of 3 miles it abruptly ends in a bluff point called the Snabs of Drimmie. This elongated rising ground is from 120 to 150 feet high, bears aloft on its crest,  $1\frac{3}{4}$  mile from its south-east end, the village of Longforgan, and commands, from every point, but especially from the Snabs of Drimmie and the site of the village, a noble and uninterrupted view of the Carse of Gowrie, the frith of Tay, and the north coast of Fife. The land of the bank is carpeted, for the most part, with a deep black loam, and, under the skilful and ornamental husbandry with which it is plied, is alike beautiful and fructiferous. Southward and westward of it, to the Tay and the lower part of the south-western boundary, the surface is as level as a howling-green, covered with rich carse clay, crowned with the happiest fruits of cultivation, and forming part of the celebrated Carse of Gowrie. In a parallel, half-a-mile north of the village of Longforgan, a valley runs quite across the parish, flanked on the one side by the bank which has been noticed, and on the other by a slow ascent or hanging plain, which towards the north shoots up hilly elevations, and becomes identified with the far-stretching range of the Sidlaws. Three summits, Dron, Balle, and Lochtown, all at the north-west end of the parish, are conspicuous, and have altitudes respectively of 667, 992, and 1,172 feet above sea-level. Somewhat less than 200 acres of the whole area is disposed in hill-pasture; and all the rest is distributed into arable grounds and woodlands in the proportion to each other of 9 to 2. Such a profusion of wood as 1,600 acres, clustered in groves and drawn out in belts and in hedge-rows, combines with the luscious and varied beauty of the ploughed lands, to give the district a snugly comfortable and very opulent appearance. About one-half of the wood is old, and comprises upwards of 13 species, including all of the most beautiful and majestic. Of five orchards, one at Monorgan is reckoned the best in the Carse of Gowrie, and has been long famous for its fruit. Magnificent gardens, extensive and richly furnished, adorn the estate of Castle-Huntly. The houses of the parish, and those of many a spot far distant from it, owe much to its quarries of peculiarly excellent freestone. Besides the noted one of KINGOODIE [which see], there is one in the upland district whose stone is so white, compact, and smooth as to compete with the best building sandstone in Scotland. Shell-marl, very pure and white, and occasionally embedding uncommonly large red deer's horns, was dug up and sold to a vast amount after the epoch of agricultural improvement. Coal was long believed to exist, but eluded expensive and frequent search.—Castle-Huntly, the most remarkable object in the parish, is borne aloft on the summit of a towering rock, which, on its south-west side, rises sheer up from the dead level of the carse, and on the east subsides gradually into the plain. The castle, though of unascertained date, is believed to have been built by Andrew, the 2d Lord Gray of Fowllis, and named after his lady, a daughter of the Earl of Huntly; and so massive and strong is it in its masonry that, though it has braved the blasts of four centuries, it defies the corrosions of time and the elements more lustily than most piles of the present century. In 1615 it passed by purchase, along with the circumjacent estate, into the possession of the Strathmore family, then Earls of Kingborn; and becoming a favourite residence of Earl Patrick, it received the name of Castle-Lyon, and

the estate, by charter of Charles II., in 1672, was erected into a lordship, called the Lordship of Lyon. In 1777 it was purchased and renovated, both in itself and in its ground, by the son-in-law of John, Lord Gray, whose ancestor had built it, and the father of its present proprietor George Paterson, Esq.; and from him it had a restoration of its original name, and the addition of wings, embattled walls, round tower and corner turrets, which, while it was modernized within, enhanced in the exterior its grandly castellated appearance.—Drimmie-house, the residence of Lord Kinnaird, whose proprietorship, and Mr. Paterson's jointly, extend over nine-tenths of the parish, was, a few years ago, razed to the ground. Rossie Priory, his present seat, stands within the limits of Inchtute, but sends a large part of its fine demesne into Longforgan. Mylnefield-house stands  $\frac{3}{4}$  of a mile north of Kingoodie, on a rising ground amid tastefully arranged grounds. Lochtown-house is situated in the north-east. The village of Balbunnoch, neat, modern, and small, stands in the south-east corner. The village of KINGOODIE is separately noticed. Lochtown, in the north, is a mere hamlet.—The village of Longforgan, covering about 30 acres, and straggling along the turnpike between Perth and Dundee on the crest of the fine bank which overlooks the Carse, stands 6 miles from Dundee, 16 from Perth, and  $1\frac{1}{2}$  from the nearest point of the frith of Tay. It consists of a principal street and several lanes. The place probably originated in the erection of accommodation for the retainers of the Baron of Huntly-castle; but it has long been stationary or retrogressive. In 1672 it was erected into a free burgh-of-barony by charter of Charles II., in favour of Patrick, Earl of Strathmore, and endowed with a pomp and array of privilege which, when viewed in connexion with its present condition, look like the trappings of a court-dress upon a ploughman. Three fairs, on the first Wednesday of June, and the first Wednesday of October, and the last Monday of April, are still held, chiefly for the sale of cattle, and that in June also for the hiring of servants; but they decline in importance and require stimulating aids. The village has a savings' bank and a library, and, jointly with the parish, about 150 looms subordinate to the manufacture of Dundee. Population of the village 450.—Besides the Perth and Dundee turnpike, the parish has abundant roads; and it enjoys facilities from its own port of Kingoodie, and from the vicinity of the rich and varied communications of Dundee. Population, in 1801, 1,569; in 1831, 1,638. Houses 338. Assessed property, in 1815, £26,315. In 1615 an estate in the parish of Longforgan, Perthshire, was purchased by Lord Strathmore for £2,222; in 1777 it was resold at £40,000; and now the present rental is more than the purchase-money in 1615.—Longforgan is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend £268 3s. 4d.; glebe £13. Unappropriated tithes £207 13s. 11d. The church is a handsome, modern, and very spacious structure, erected by Mr. Paterson of Castle-Huntly. The parish school was attended, in 1834, by 62 scholars; and three other schools, by 113. Parish schoolmaster's salary £34 4s. 4d., with about £16 fees, and £14 other emoluments.—In a dell on the high grounds of Dron are the ruins of a chapel which belonged to the monks of Cupar-Angus, and of its attendant cemetery. Only the gables remain, one of them perforated with a large window, whose top is a pointed arch springing from pilasters. On the grounds of Monorgan are vestiges of a cemetery which also had, most probably, its presiding chapel. On the eastern boundary, but now in the parish of Benvie united to Liff, are vestiges of

a Roman camp; and on the summit of the hill of Dron are faint traces of an oval fortification two Scottish acres in area. In the midst of a plantation of firs, on what was anciently the moor of Forgan, is a tumulus 15 or 18 feet high, and 84 feet in diameter, called the Market-knowe, from having been the scene of ancient traffic, but proved to have been originally a barrow, by its yielding up to research coffins and human skeletons. In various parts of the parish many ancient coins, chiefly Scottish and English, have been found.

LONGFORMACUS, a parish consisting of two slender oblongs transversely attached to each other, and of a small isolated section in the Lammermoor district of Berwickshire. The larger oblong stretches from north to south, in extreme length  $8\frac{1}{2}$  miles, and in mean breadth a fraction more than  $2\frac{1}{4}$ ; and is bounded on the north by Haddingtonshire; and on the east by Abbey St. Bathans, Dunse, and Langton; on the south by Greenlaw; and on the west by Westruther, by the two parts of Cranshaws, and by the connecting line between it and the other part of its own parish. The smaller oblong stretches from east to west, goes off from the former oblong about third way from its northern boundary, tapers to a point at its west end, measures  $7\frac{1}{2}$  miles in extreme length, and  $1\frac{1}{2}$  in mean breadth; and is bounded on the north-west and north by Haddingtonshire and the upper section of Cranshaws; on the south by the lower section of Cranshaws and by Lauder; and on the south-west by Lauder. The isolated section lies 2 miles east of the nearest point of the main body, measures  $1\frac{1}{2}$  mile by  $1\frac{1}{2}$ , and is bounded on the south-east by Buncl; on the south by Dunse; and on all other sides by Abbey St. Bathans. The area of the parish is about 33 square miles. The whole district lies among the Lammermoor hills, and partakes, for the most part, of their dreariest properties. Meikle-Cess-law, on the boundary with Haddingtonshire, and near the western extremity, is one of the highest of the Lammermoors. Dorrington-Great-law and Dorrington-Little-law, the former 1,145 feet high, are fine conical hills, visible at a great distance. The statist in the New Account calls attention to the fact that a farm in the parish bears the name of Otterburn, and hints the possibility of this, and not the famous locality in Northumberland, having been the scene of the noted fight between Douglas and Hotspur. The small village of Longformacus, provided with an inn, stands on the Dye, where it runs across the parish,  $6\frac{1}{2}$  miles west of Dunse, and  $7\frac{1}{2}$  north of Greenlaw. A road between Haddington and Coldstream passes through the parish, but is badly kept; and other roads are of meagre extent and in miserable plight. Population, in 1801, 406; in 1831, 425. Houses 72. Assessed property, in 1815, £3,039.—Longformacus is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, Home of Longformacus. Stipend £221 19s. 1d.; glebe £33. Unappropriated tithes £75 6s. 10d. The church is more than a century old, and has about 200 sittings.—The present parish comprehends the ancient parishes of Longformacus and Ellim, which were united before the year 1750. The barony of Longformacus belonged, in old times, successively to the Earls of Moray, the Earls of Dunbar, and the Sinclairs of Roslin, and seems always to have had attached to it the advowson of the church. Ellim also belonged to the Earls of Dunbar; and after their forfeiture was given, by Robert III., to Thomas Erskine. The ruins of the ancient church and hamlet are traceable on the north bank of the Whitadder, near the passage which is still called Ellim-ford. Schoolmaster's salary £34 4s. 4d., with £10 fees, and a house and small piece of ground.

**LONG-ISLAND**, the largest group of the Western Islands, separated from the continent by the broad sound called the Minch, and from the Skye group by the considerable sound called the Little Minch. This group, owing both to its extent and the distinctness of its position, has occasionally monopolized the whole Hebridean name, and, by general consent, is called the Outer Hebrides. Its popular and prevailing name of Long-Island seems to have arisen from observation of the closely continuous contiguity of the numerous islands which compose it; or probably from a consentaneous belief that they were all formerly united, and have undergone dismemberment by the erosion of the weather and the sea. The principal islands, reckoning from the north southward, are Lewis, Harris, North Uist, Benbecula, South Uist, and Barra; and the secondary and minor islands—diminishing from considerable islets to mere rocks—are too numerous to bear separate mention. From the Butt of Lewis, on the north, to Barra-head, on the south, they extend south-south-westward about 120 miles; and they have, probably, a mean breadth of about 8 miles. Many of them are separated only by channels which are dry at low-water, or by very narrow belts of sea which are navigable only by yavls and wherries. Their largest marine bisection is the sound of Harris, between the cognominal island and North Uist, remarkable for the number of its islets, and the great variation of its currents. The Lewis part of the group, about 40 miles in length, belongs to Ross-shire; and all the remainder belongs to Inverness-shire. Excepting a peninsula of conglomerate east of Stornoway, a hard variety of gneiss, frequently traversed by veins of granite and of trap, composes the whole of the Long-Island group; and is so nearly uniform both in its own character and in the surface which it produces, as to admit of little variety in description. A dead level prevails in Benbecula and some islets, and allows access to the rock only from some pool of water or accidental breach; mountainousness pervades the district of Harris, and sends summits aloft to an altitude of between 2,000 and 3,000 feet; and a moderate, generally an inconsiderable hilliness, reigns over most part of the other districts. South of the sound of Harris the tumulated ground occurs principally along the east coast; and gives place, along the centre, to an extensive tract of peat-moss, and, in the west, to broad bands of arable sandy soil, and downs of shell sand. The general aspect of the country, owing to the total absence of wood, and the prevalence of heath and peat-hogs, is cheerless and desolate. Yet the population is so great, so positively redundant, that, in spite of the appliances of fisheries, a remedy against an altogether undue pressure in the means of subsistence can be found only in emigration. A large proportion of the inhabitants, especially in the southern half of the group, are Roman Catholics, who, in the style which prevails in Ireland, very numerously sanction early marriages, and form a surprisingly low estimate of what constitutes the comforts or the necessaries of life.

**LONG-NEWTON.** See **ANCURM.**

**LONGNIDDRY**, a decayed, curious, and antiquated village in the parish of Gladsnuir, Haddingtonshire. It stands a little south of the Edinburgh and North Berwick turnpike, half-a-mile from the nearest part of the firth of Forth;  $2\frac{1}{2}$  miles from Port-Seaton;  $3\frac{1}{2}$  from Tranent; and  $5\frac{1}{2}$  from Haddington. It is straggling and irregular, and but the wreck of a formerly large and important little town. The population is about 200. Several streets have wholly disappeared, the houses having been razed by the score to give place to the operations of the plough. A baronial mansion-house, which once pre-

sided over the village, is now let out to a tenant, and wears a desolate appearance. Longniddry suggests some pleasing reminiscences of John Knox. See **GLADSMUIR.**

**LONGSIDE**, a parish in the district of Buchan, Aberdeenshire; bounded on the north by Old Deer and Lonmay; on the east by St. Fergus and Peterhead; on the south by Cruden; and on the west by Old Deer. The form is an irregular square, about 5 miles in diameter, and containing 19 square miles. Houses 582. Assessed property, in 1815, £3,398. Population, in 1801, 1,825; in 1831, 2,479. The surface is, in general, so level, that, till embankments and other expedients were resorted to, the Ugie—which runs along the northern boundary of the parish, while the principal tributary to that river intersects it from west to east—was wont to overflow its banks, and lay a large portion of the land under water. Amongst the remedial projects suggested, previous to the embankment, was the idea of a canal, along the banks of the river, from the village of Old Deer to its mouth, near Peterhead, a distance of about 10 miles. The soil of this parish is light, easily improved, and in a good state of cultivation. There are considerable plantations, and peat-moss for fuel is abundant. The soil is superincumbent on granite, some of which is very beautiful. At the small village of Kilmundy woollen cloth was at one time manufactured to a considerable extent, and weaving, wool-combing, and flax-spinning, are still carried on in the parish. There are two other villages besides that of Kilmundy, namely, Longside and Mintlaw. The Episcopal chapel in the former was for 65 years the scene of the ministrations of the Rev. John Skinner, author of the celebrated songs 'Tullochgorum,' 'the Ewie wi' the crooked horn,' &c. an 'Ecclesiastical history of Scotland,' and various other learned works. "This excellent and venerable clergyman," says a cotemporary, "one of the best scholars of his time, and a correspondent of Burns, resided at Lins-hart, a small cottage consisting of 'a butt and a ben,' or kitchen and parlour, and his income scarcely exceeded that of Goldsmith's country pastor, who was 'passing rich with forty pounds a-year.'"—This parish is in the presbytery of Deer, and synod of Aberdeen. Patron, the Crown. Stipend £217 9s. 4d.; glebe £17. Unappropriated teinds £213 11s. 5d. A new church has been built, and was opened on 7th August, 1835; sittings 1,000. The Episcopalian congregation above alluded to, has existed here since the Revolution: chapel built in 1800; sittings 551. The income is solely derived from seat-rents: income from 1831 to 1835 inclusive £34 to £38 half-yearly. There are three parochial schools in this parish: salary of principal schoolmaster £31 6s. 7d.; fees, &c. £24. Each of the others has a salary of £10, with about £16 of fees. The two subsidiary schools were established in 1829. There are also 8 private schools.

**LONMAY**, a parish in the district of Buchan, Aberdeenshire; bounded on the north by Rathen and the North sea; on the east also by the sea; on the south, by Crimond, from which it is divided by Stratbeg loch; and on the west, by Strichen and Rathen. It runs north-east and south-west for about 10 miles, by 4 in extreme breadth: area, 24 square miles. Houses 369. Assessed property, in 1815, £3,226. Population, in 1801, 1,607; in 1831, 1,798. The surface is chiefly disposed into two extensive plains, running north and south, divided by two or three small ridges running from west to east, and watered on the south-west and south by a branch of the river Ugie. The land near the shore is flat, and the beach low and sandy. The soil is various, but chiefly light, dry, and sandy, rest-

ing on the red sandstone formation in the north plain. In other parts the soil is clay. The mosses were once extensive, but much land has been reclaimed. There is a line of benty sand-hillocks on the east; and to the north a fine expanse of grassy links or downs, affording excellent pasture for cattle and sheep. The whole district is well-cultivated, and upwards of 200 acres have been planted within the last twenty years. Trench-ploughing is practised. The breeds of cattle, sheep, and horses are in course of great improvement. Limestone is found in the north-eastern part of the parish, but sienite and greenstone are the prevalent rock. The chief mansions are Cairness-house, an elegant residence, designed by Playfair, and tastefully adorned with pleasure-grounds and plantations, and Crimond-mogate mansion, another handsome edifice, recently erected. There are two fishing-villages on the coast, one of which is named St. Colm. The only antiquity is a Druidical circle at Newark, Crimond-mogate. A castle named the Castle of Lonmay once existed on the links near the sea.—The parish is in the presbytery of Deer, and synod of Aberdeen. Patron, Gordon of Beithlaw. Stipend £225 13s. 3d.; glebe £18 15s. Unappropriated tithes £224 7s. 4d. Church built in 1787. Sittings 649. Access to the church being impeded to the inhabitants of the lands of Kinnimonth and Crimond-mogate, by a large tract of mossy bad roads and distance, a new church has been erected by subscription in the district of Kinnimonth: sittings 360. The presbytery have been petitioned to have the district annexed to the new church,—including parts of Strichen, Deer, Longside, and St. Fergus,—erected into a parish, *quoad sacra*. An Episcopalian congregation was established here shortly after the Revolution: sittings 342. Stipend about £50. There are three parochial schools: salary of first master £28; fees £23 8s., besides £25 from the Dick bequest:—salary of second master £21 6s. 3d.; fees £21 6s. 3d.:—salary of the third master £10; fees £15. There is one private school.

**LORN**,\* a district in Argyleshire; bounded on the north-west by Linnhe-Loeh, which divides it from Morvern; on the north by Loch-Leven, the river Leven, and the chain of lochlets drained by the Leven, which divide it from Inverness-shire; on the east by an arbitrary line across the Moor of Rannoch, and by the great central southward ridge of Grampians, which divide it from Breadalbane in Perthshire; on the south by brief arbitrary lines, and chiefly by Lochs Awe, Avich, and Melfort, which divide it from Cowal and Argyle; and on the west by Lower Loch-Linnhe, which divides it from Mull. Its extent from north to south varies between 33 and 22 miles, and from east to west between 32 and 15. The district of it which extends along the coast opposite to Mull and Morvern, and possesses the extreme length of 33 miles by a mean breadth of about 9, bears more emphatically, or by more uniform usage, the name of Lorn; and is divided into Upper Lorn, lying north of Loch-Etive, and including Appin and Airds.—Middle Lorn, lying immediately south of Loch-Etive, and including Muckairn,—and Nether Lorn, lying immediately north of Lochs Melfort and Avich, but separated from Middle Lorn by no natural boundary. The remaining district nearly all lies north of the north end of Loch-Awe, and is chiefly distributed into Glenorchy, Glencoe, and the minor part of the Moor of Rannoch. The coast-district, watered by many

\* This is evidently a modern contraction, if not a corruption, of the ancient name of this interesting district,—a district so frequently alluded to by the Scottish historian and antiquarian. The Gaelic orthography is *Labhrin*, pronounced by the Gael of the district *Lairin*.

lakes and rivulets, and possessing along their banks much arable land, a considerable aggregate of wood, and extensive results of assiduous and skilful cultivation, is the most fertile and pleasant district of Argyleshire. It anciently formed the focus of the Dalriadan Scottish kingdom, and possessed both its capital town and its royal castle, the chief residence of its kings. See BEREGONIUM, DUNSTAFFNAGE, and DALRIADS. Its name seems to have been given it from Labhrin or Loarn, one of the three brothers, sons of Ere, who, in 503, immigrated from the Irish Dalriada, and founded the Scottish monarchy; Loarn having adopted this district as the seat of his nascent tribe, while his brothers Fergus and Angus adopted respectively Kintyre and Islay. The district is rife in remains of religious structures, both Druidical and Christian, and of ancient towers, and fortified places. Lorn gives the title of Marquis to the Duke of Argyle's eldest son. In 1470, one Earl of Argyle was created Baron of Lorn; and, in 1701, another was created Duke of Argyle, and Marquis of Lorn and Kintyre. The presbytery of Lorn, in the synod of Argyle, comprehends 7 *quoad civilia* and 3 *quoad sacra* parishes.

**LORNTY (THE)**. See articles CLUNIE and LETHENDY.

**LOSSENTIR**. See HARRIS.

**LOSSIE (THE)**, a small river in Morayshire, which issues from Loch-Lossie, near the centre of the county, in the parish of Edenkillie, and runs northwards and north-eastwards through Dallas, and by the royal burgh of Elgin, to the Moray frith, at Lossiemouth, in the parish of Drainy,—a course upwards of 26 miles in length. This river is too small for navigation beyond its mouth. Since the great floods of 1829, which swelled the Lossie to inundation, with serious damage to the vicinity, large embankments of earth have been raised at great expense along the margins of the river to prevent a recurrence of similar calamities.

**LOSSIEMOUTH**, a village, the sea-port of Elgin, at the mouth of the Lossie, in the parish of Drainy, county of Moray, 5 miles north-east of Elgin. The harbour here being small and without sufficient depth of water, a new one has been erected by a company incorporated by act of parliament in 1834. The work was finished and opened end of 1829. The depth of water obtained is 12 feet at neap-tides, and 16 feet at spring-tides. There is an inner harbour, completely protected, and provided with many conveniences for shipping. The expense was estimated at £20,000. The undertaking is likely to be successful; the coasting trade has increased; several vessels now belong to the port, and the place is fast rising into importance. The improvement is of vast advantage to the trading and agricultural interests of Elgin, and the surrounding district; a direct and uninterrupted communication with London and other markets by steam, &c., for exports of farm-stock and grain, and for imports of merchandise and coals being thus opened up. The population of Lossiemouth, in 1831, was 535. See also article DRAINY.

**LOTH**, a parish on the east coast of Sutherlandshire. It is bounded on the north-west and north by Kildonan; on the north-east by Caithness; on the east and south-east by the Moray frith; and on the south-west and west by Clyne. It forms a stripe, extending 1½ miles north-eastward, with a breadth of from 2 to nearly 4 miles. The Ork of Caithness, at the north-east boundary, rises, with mountain vastness, sheer up from the ocean, and forms a stupendous barrier along the whole march with Caithness: see ORD. A range of steep hills, whose loftiest summits attain altitudes of about 1,900 above

sea-level, extends along the inner frontier of the parish in a line nearly parallel with the sea-coast; and, excepting at a point about 3 miles from the Ord range, where it is cloven by the fine strath of the Helmsdale, it forms over all its extent a water-shedding boundary. The surface, from the summit-line of this ridge sea-ward, is first a very rapid declivity, and next either a hanging plain, or a level expanse of alluvial land, all fertile, cultivated, and embellished. The ravines cut down by streamlets along the descending surface are very marked and full of character, and contain some striking and highly romantic touches of landscape. One of them, the Alt-Colle, is little else than a winding, mural-faced, remarkably deep gorge. The largest has, in a sense, the capacity of a glen, and is called, par excellence, the glen of Loth; it is flanked by the most mountainous heights of the parish; and it wends its way amongst them with a Highland wildness which occasioned it to be peopled by the superstition of former times with many an imp and terrific worker of wonders. The river Helmsdale, a large and fine stream, has a course of about 2 miles in the parish, and falls into the sea 3 miles from the Ord of Caithness. It was never spanned by a bridge till 1811, and, being subject to sudden and terrific floods, and very often impassable, it had the reputation of being at all times a perilous stream, and frequently an utter obstruction to travelling. Pennant calls it, 'the very dangerous water of Helmsdale, rapid and full of large stones.' The streamlet Loth, which traverses Loth-glen, though without any perennial source, and almost dry in summer, used formerly to be at times more formidable to travellers than even the Helmsdale; and, as seen from the bridge by which it is now rendered always passable, it still exhibits the sudden, and impetuous, and fearful speats which once caused it to be viewed with terror. Not only this streamlet, but some utterly tiny rills in the parish, possess the sanguinary fame of having, in some of their brief but tremendous onsets from the hills, tripped up travellers and careered away with them to the sea; and they ceased to make additions to a fame so lugubrious only at the very modern epoch of piercing the extreme north of Scotland with parliamentary roads. The Loth enters the sea in an artificial channel cut through a rock 20 feet high, by the late Lady Jane Gordon, Countess of Sutherland; and it was, in consequence, diverted from swamping many acres of excellent low land which lay upon the banks of its former channel. The sea-coast is co-extensive with the extreme length of the parish; and, excepting at a few rocky headlands, and the stupendous protrusion of the Ord, it is, for 5 miles from the north, a line of low rock or coarse gravel, and, over the remaining distance, a low and level beach of sand. The tidal currents along the sea-board are so strongly and peculiarly affected by the projection of the Ord, as to bring close to the shore unusually large and enriching shoals of herring. The rocks of the low grounds along the coast are oolitic,—consisting of limestone, conglomerate, various-coloured shales, and white and red sandstone, and they exhibit marks of much derangement, often dipping within a limited area, in very different directions and very different angles. The prevailing rock of the hills is a species of large-grained porphyry, unusually fragible, and yielding with comparative facility to the erosion of running water. The soil is in general good, and quite equal to the best in the county. The arable lands were formerly scourged almost to destruction, and, at the date of the Old Statistical Account, had been alternately cropped with bear and with oats or pease every season within the recollection of the oldest men or even their fathers; but they are now

nursed with seasons of fallow and green crop, which allow only two years in five to grain. The fisheries of the parish are very productive, and, under the name of Helmsdale, are known for their produce 'far and wide.' The villages are HELMSDALE and PORT-GOWER: which see. Helmsdale-Castle, a plain-looking ruin, on a rising ground overlooking the cognominal river, was a hunting-seat of the Sutherland family; and is noted as the scene, in 1567, of the murder, by poison, of the 11th Earl of Sutherland and his Countess. The assassin, Isabella Sinclair, had for her object the succession of her own son to the earldom, and suffered the startling retribution of seeing him drink, to his immediate destruction, a poisoned cup which she had prepared for the only son of Lord Sutherland; and when she was condemned for her crimes to die ignominiously in Edinburgh, she committed suicide on the day appointed for her execution, and attempted to fasten the odium of her wickedness upon her cousin, George, Earl of Caithness, whom she asserted to have been her instigator. Three or four of those circular Scandinavian erections, erroneously called Pictish towers, formerly stood in the parish; and one at Lothbeg was entire at the period of Pennant's Tour; but all have either disappeared or survive only in shapeless masses of disintegrated and moundish walls. Three hunting-houses, in Loth-glen, of the kind called Uags, and interestingly described by Pennant, have likewise vanished. A number of cairns on a field are said to indicate the scene, and to embowel the memorials, of a bloody engagement between the men of Sutherland and those of Caithness. The parish, besides being traversed over its whole length by the Great north parliamentary road, has good roads up the Helmsdale and the Loth, which converge in Kildonan, and pass away to the North sea at Port-Skerry. Population, in 1801, 1,374; in 1831, 2,234. Houses 415. Assessed property, in 1815, £3,450.—Loth is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duchess-countess of Sutherland. Stipend £162 8s. 7d.; glebe not known. The parish-church is a recent erection, and one of the most handsome in the north of Scotland. Schoolmaster's salary £34 1s. 7d. There are three non-parochial schools. Ancient chapels stood respectively at Helmsdale, at Navidale, and at Easter Garty; and, in the first and the second of these localities, are commemorated by their cemeteries, which continue to be used.

LOTHIAN, a district on the south side of the frith of Forth, anciently of larger limits than those assigned to it by modern usage, but still regarded as commensurate with the three shires of Haddington, Edinburgh, and Linlithgow, which are called respectively East, Mid, and West Lothian. Lothian gives the name of Marquis to the noble family of Kerr of Fernihirst. The Kerrs figured much in the Border wars; they were made Earls of Lothian in 1606, and advanced to the dignity of a marquise in 1701.

LOTHRY (THE), a small river in Fifeshire, which rising in the Balla moss, and running south-east for 6 or 7 miles, falls into the Leven, below Leslie-house.

LOUDOUN,\* a parish occupying the south-east corner of Cunningham, Ayrshire; bounded on the north by Fenwick; on the east by Lanarkshire; on the south by Irvine water, which divides it from Galston in Kyle; and on the west and north-west

\* The name seems a pleonasm, *Lav-dun*,—'the Hill, the hill.' The round conical elevation, which enlivens the south-west corner, and forms a remarkable feature in the landscape, is of the class which the Scots-Irish called 'dun'; and the Scots-Saxon 'law'; and by a singular triplicate of honours, it wears as its designation not only both these words, but also the modern 'hill;—*Lav-dun-hill*, or *Loudoun-hill*,—the hill, the hill, the hill.

by Kilmarnock. Its length from east to west is 9 miles; and its breadth at the west end is 3, and toward the east end about 7. The surface is the upper extremity of the fine strath of Irvine water, and, though some height above sea-level, is champaign, and only gently sloping. A large part of it near the centre, and especially along the extreme east, is moss. The soil of the arable grounds—which constitute at least three-fourths of the whole area—is, in a few places, light and gravelly, but, in most, a rich deep loam, greatly improved by lime. John, Earl of Loudoun, who succeeded to the earldom in 1731, was the first agricultural improver in the district. He commenced his operations in 1733, by making roads through the parish; he procured an excellent bridge to be made across Irvine water; and he got made thence, and from his own house to Newmills, a road, which was the first constructed by statute-work in the county. These measures, as commencing ones to his becoming the father of agriculture in the district, he adopted apparently from his recollecting a time when carts or waggons belonging to his father and his father's factor were the only ones in the parish; but he also plied vigorously the work of planting and enclosing; he is said to have planted upwards of a million trees, chiefly elm, ash, and oak; and, in general, he bequeathed to it a pervading character of rich cultivation and of tidy, sylvan beauty.\* Coal and limestone abound, and both are extensively worked. The limestone is, in some places, 9 feet thick, very near the surface, and not interrupted by water. Loudoun-hill, the highest ground in the parish, and situated in its south-east extremity, is famous for two battles. One of these was fought near it in 1679, and took name from the neighbouring farm of Drumelog in Avondale [see AVONDALE]; and the other was fought in 1307 between Bruce and some English troops under the Earl of Pembroke, and is called the battle of Loudoun-hill. Not far distant a skirmish occurred between Wallace and a party of English, whom he surprised carrying provisions to Ayr; and is commemorated by a heap of stones called Wallace's cairn. On the eminence next in elevation to Loudoun-hill, is the foundation of a Druidical temple, composed of large broad whinstones. The sanetum is 10 feet in diameter, and less injured than the rest. Cairns are numerous. In the hamlet of Auldton, and near the village of Derval, are ruins still called castles, and resembling Danish forts. The Knights-Templars had lands in the parish: see DERVAL. In the village of Newmills is a very small and very old castle belonging to the family of Campbells of Loudoun. On the summit of a rising ground, by the side of a brook, about half-a-mile east of the present sumptuous mansion, are the ruins of an ancient castle which belonged to the same family, and was destroyed about 350 years ago by the elan Kennedy, headed by the Earl of Cassilis. The modern magnificent pile stands embowered among wood, in the south-west part of the parish, 5 miles east of Kilmarnock, and less than a mile north of Galston, on the bank of the Irvine. The structure singularly combines the attractions of massive antiquity with

the light gracefulness of modern architecture. One square tower with a battlement was erected probably in the 12th or the 13th century. Another tower larger and higher, battlemented and turreted, was built about the 15th century, and lifts its solemn and imposing form commanding above a surrounding mass of modern building. A large addition, greatly improving the pile, was made, in 1622, by Chancellor Loudoun. But the chief parts, enough in themselves to constitute one of the largest and most stately castles in the west of Scotland, were completed so late as the year 1811. The library, 50 years ago, contained about 10,000 volumes. In the enclosures near the house is a Druidical ruin; and in the garden were found, 60 or 70 years ago, 10 entire brass-swivels, all 6-pounders, marked with the Campbell's arms, but unmentioned by any document or tradition. The noble proprietors of the castle, whose title of Earl is taken from the parish, are a branch of the great family of Campbell, and obtained the dignity of Lord Loudoun in 1601, and that of Earl of Loudoun in 1633. The 1st Earl was a staunch Covenantant, became Chancellor of Scotland in 1641, and acted a conspicuous part in the stirring events of the times. The Earl of Moira married, in 1804, Flora, Countess of Loudoun, only child of James the 5th Earl; and in 1816 was raised to the dignity of Marquis of Hastings. His son George, while second Marquis of Hastings, is 6th Earl of Loudoun. The Countess Flora died only in 1840, and was the mother of the lamented Lady Flora Hastings, the sister of the present Marquis. The principal villages, and the seats of manufacture, are NEWMILLS and DERVAL: which see. The chief roads are a turnpike eastward along the Irvine, and another southward to Galston. 'Loudon's bonny woods and braes' are the subject of one of Tannahill's most hackneyed songs. Population, in 1801, 2,503; in 1831, 3,959. Houses 506. Assessed property, in 1815, £10,850.—Loudoun is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Marquis of Hastings. Stipend £190 11s. 3d.; glebe £35. The parish-church, not an old building nor in bad condition, stands at Newmills. There are two dissenting places of worship; the one belonging to the United Secession, and situated in Newmills; the other belonging to the Reformed Presbyterians, and situated in Derval. Schoolmaster's salary £34 4s. 4½d., with about £40 fees and about £10 other emoluments. The parish school was attended, in 1834, by 118 scholars; and 4 private schools by 170. James, the son of Lambin, obtained from Richard Morville, who died in 1189, the constable and minister of William the Lion, the lands of 'Laudon,' and took from them the name of James de Laudon. His daughter and heiress carried the property to Reginald Crawford, the sheriff of Ayr; and another heiress, in the reign of Robert I., transferred it and that of Stevenston, by marriage, to Duncan Campbell, the progenitor of its subsequent noble owners. The church, previous to the Reformation, was a vicarage under the monks of Kilwinning.

LOUISBURGH, a suburb of the town of Wiek, Caithness-shire. It extends along the north side of the burgh, lies quite contiguous, and is all included in the parliamentary boundaries. It was commenced in the latter part of last century, and is built on the entailed estate of Lord Duffus, on leases of 99 years. Population, in 1840, 380. See WICK.

LOVAT, a hamlet in the parish of Kirkhill, Inverness-shire; half-a-mile south-east from Beaully. Here stood the tower and fort of Lovat, founded in 1230, anciently the seat of the Bissets, near the eastern bank of the Beaully, in a rich and fertile country. It gave the title of Baron, attained in

\* Loudoun-castle was one of the first places in the west of Scotland where foreign trees were planted. "John, Earl of Loudoun," Walker observes, "formed at Loudoun-castle, in Ayrshire, the most extensive collection of willows that has been made in this country, which he interspersed in his extensive plantations. Wherever he went, during his long military services, he sent home every valuable sort of tree that he met with. All the willows he found cultivated in England, Ireland, Holland, Flanders, and Germany, as also in America and Portugal, where he commanded, were procured and sent to Loudoun. In 1806, and again in 1831, we found a number of fine old trees at Loudoun-castle; we recollect, in particular, robinias, gléidtschias, American oaks, hickories, walnuts, taxodiums, acers, poplars, and a variety of others." Some are recorded by Dr. Walker as having been remarkably fine specimens in 1780.

1745, and restored in 1837 in the person of Thomas Alexander Fraser of Lovat.

LOVAT-BRIDGE. See THE BEAULY.

LOWES (LOCH OF THE), a lake in the northern extremity of the parish of Ettrick, Selkirkshire. Its name, rendered into English, assumes the form—either pleonastic, or not a little ambitious—of ‘the Lake of the Lakes.’ It extends from south to north; measures about a mile in length,  $\frac{3}{4}$  of a mile in breadth, and 11 or 12 fathoms in depth; and is traversed by the drain-like stream of the nascent Yarrow. Only a narrow neck of land divides it from the celebrated St. Mary’s-Loch. See MARY’S (St.). The two lakes seem, beyond a doubt, to have been originally one, and to have diffused their waters, and maintained control, a considerable way to the north-east. The Loch of the Lowes has at present a level of only 15 inches above St. Mary’s; and, at its north end, it is entered from opposite sides by the burns of Oxcleugh and Corsecleugh, which seem to have gradually dammed it up by their depositions into a separate lake.

LOWLANDS (THE), the popular name of all the area of Scotland not included in the Celtic district of the HIGHLANDS: which see. As the Lowlands constitute Scotland Proper, and occupy the chief place in our introductory article on the whole kingdom, and are minutely exhibited, part by part, in our articles on their several counties, they need not be the subject of separate description. The use of the Scottish dialect of the English language, or of that language north of the Tweed, in any dialect except the guttural brogue of a Highlander, is the grand characteristic. Large plains, such as those of the Merse, of East Lothian, of the Howe of Anundale, of Lower Nithsdale, of Kyle, of Strathclyde, of the Howe of Fife, and of Strathearn and Strathmore,—and extensive undulating tracts, or gently hilly districts, such as those of the hanging plain of Mid-Lothian, of West-Lothian, of Wigtonshire, of Cunningham, and of large parts of the shires of Renfrew, Kircudbright, Stirling, Fife, Forfar, and Aberdeen,—present physical aspects of velvet softness, and silken beauty, and golden opulence, totally contrasted to the rugged, hardy, and sterile features of the chief and characteristic portions of the Highlands. But, on the other hand, the very broad belt of mountain-heights which runs from the Cheviots in Northumberland quite across Scotland to the western waters on the coast of Galloway, which sends off through all Peebles-shire and Selkirkshire a broad and far extending spur in the Lammermoor range along the frontiers of Berwickshire and East-Lothian to the German ocean, and which itself occupies large portions of the counties of Roxburgh, Dumfries, Kircudbright, Lanark, Ayr, and Wigton, is far excelled in literally ‘low-land’ characteristics by many a district in the Highlands, and, in some instances, vies in bold outline in alpine altitude, and in heathy or rocky wildness, with all the parts of the Highlands except the most savagely or sublimely grand. Manners also,—at least such as relate to dress, amusements, and civil life,—are rapidly ceasing to mark a difference between the Highlanders and the Lowlanders. Yet in religious matters, in political creed, in whatever implies independence of mind and freedom of inquiry, the Lowlander has a manliness, and differs from his neighbour, with a frank boldness, and takes rank to the apparent prejudice of his worldly interest, with a promptitude and a firmness, to which the Highlander, generally speaking, continues to be a stranger. While the Highlands have stepped but a degree or two beyond that outward ‘uniformity’ which—if we read history aright since the days of Constantine the Great—is the badge of enslavement

of conscience, and sits upon a country with a steadiness proportioned to the degree of its enthrallment, the Lowlands are distinguished by the fraternal rivalry of kindred sects, and the kindly emulation of patriotic and enlightening institutions, indicating sturdily and well-directed concern for moral and intellectual improvement, to an extent unsurpassed by any, and equalled or competed with by only two countries in the world. But in the particulars of language and of dress, Lowland-Scotland, while forgetful enough of nationality, to take lessons of the stranger, and occasionally to blush for its own ancient characteristics, has probably, for a generation or two past, been ‘gaining a loss.’ The broad musical Doric of her dialect as exhibited in the rhymes of her bards, and the profuse wealth and singular expressiveness of her verbiage as displayed in Dr. Jamieson’s Dictionary, scarcely vindicate a modern Lowlander’s soliloquy to pass for a Cockney or a Southron; and the simple and tidy dresses of the grandmothers and grandfathers of the present generation,—dresses which were as much in vogue, just as they were as becoming, when a man or a matron was 45 years of age as when he was 30,—may, despite of their coarseness, make fops and pretty maidens look, even in their own eyes, ridiculous when donning and sporting importations from Paris as changeful and numerous as the months of a century, and as freakish and whimsical as the vagaries of an irregular imagination.

LOWS (LOCH OF THE), a beautiful small lake in the parish of Caputh, Perthshire,  $1\frac{1}{2}$  mile east of Dunkeld, on the road from that town to Blairgowrie. It is a principal one of the fine chain of small sylvan lakes which stretches along and beautifies the district of Stormont.

LUBNAIG (LOCH), a fine sheet of water in Perthshire. The greater portion of the Scottish lakes are merely expansions of some stream, the waters of which being intercepted at the gorge or lower opening of a glen, spread themselves out and form a lake, in the depths of which the river is for a time apparently lost. Loch-Katrine, Loch-Achray, and Loch-Vennachoir, are thus formed by the southern or principal branch of the Teith, in the several glens through which it takes its course. The northern branch of this river—more generally, however, called Balvaig—which joins it previous to its reaching Callander, likewise forms during its very devious windings from its source in Dumhartounshire, a series of three lakes: viz., Loch-Doine, Loch-Voel, and Loch-Lubnaig. The last of this chain of lakes is situated at the north-eastern base of Benledi, about 4 miles south-west of Callander. It is nearly  $5\frac{1}{2}$  miles in length, but is scarcely half-a-mile in breadth at any part. Going from Callander, the traveller approaches the lake through the celebrated pass of Leney. A road has now been formed along the banks of the stream which flows from Loch-Lubnaig; but such is the nature of the ground, that even yet a few men might maintain the pass against an army. The splendid scenery, however, arrests the attention of the traveller; and his taste is gratified with all the variety that mountain, rock, wood, river, and waterfall, can combine and present to form the picturesque. After issuing from the pass, Loch-Lubnaig comes into sight, and here the best view of it is obtained. From the great height, and the hold and rugged appearance of the mountains amidst which this narrow winding lake lies imbedded, the scenery which surrounds it is exceedingly striking. Benledi is a most prominent object,—and that portion of it which overhangs and darkens the waters of the lake exhibits a grand but very singular appearance. At some remote period, the mountain

seems to have been broken over at the top, and the enormous fragments scattered down its side, like the debris or ruins of a former world. Armandave, Archchullerie-Beg, and Archchullerie-More, at different distances, raise their giant-forms in frowning majesty above the lake, and throw their broad dark shadows over it. Stern grandeur is the characteristic of the scenery around Loch-Lubnaig,—imposing silence reigns around,—and a sense of utter loneliness enters into the very soul of the beholder. The genius of solitude seems here to have taken up his abode. About half-way up the east side of the lake stands Archchullerie-house, rendered peculiarly interesting, as having been many years the residence of Bruce of Kinnaird, the celebrated traveller. In this retired spot, amid the stern, majestic features of nature which it presents, he wrote the account of his travels; and here he found an asylum from the abuse and persecution which their publication brought upon him. At Loch-Lubnaig the tourist is again among the scenery of the 'Lady of the Lake.' It was up the pass of Leney that the cross of fire was carried by young Angus of Dun-Craggan, who had just been obliged to leave the funeral of his father in order to speed forth the signal.

"Beledi saw the cross of fire;  
It glanced like lightning up Strath-Ire;  
O'er dale and hill the summons flew,  
Nor rest, nor peace, young Angus knew;  
The tear that gathered on his eye,  
He left the mountain-breeze to dry;  
Until where Teith's young waters roll,  
Betwixt him and a wooded knoll,  
That graced the sable strath with green,  
The chapel of Saint Bride was seen."

Here the messenger delivers up the signal to Norman of Armandave, who was about to pledge his troth at the altar to Mary of Tombea; and the bridegroom leaving his unwedded bride, starts off with the cross along the shores of Loch-Lubnaig, and away towards the distant district of Balquhiddier. The chapel of Saint Bride stood on a small and romantic knoll between the opening of the pass of Leney and Loch-Lubnaig; and Strath-Ire, along which the cross is said to have glanced like lightning, is situated at the south end and along the eastern side of Loch-Lubnaig. Armandave is on the west side of the loch, and Tombea, the residence of Norman's bride, is also in the neighbourhood. Loch-Lubnaig has been said to be the only water in Scotland in which char is to be found, but this is a mistake, as that fish is found in Loch-Ave and several other Highland lakes, as well as in the lakes of Sutherlandshire.

LUC (THE), a river partly of Ayrshire, but chiefly of Wigtonshire. Till within 6½ miles of the sea it consists of two streams, called the Main-water of Luce and the Cross-water of Luce. Main-water, the more westerly of these, rises in the parish of Ballantrae, on the south side of Benerard, a hill 1,430 feet high; and it runs southward 3¼ miles to the frontier-line, and 2½ miles south-westward along the boundary of Ballantrae and New Luce, in the counties respectively of Ayr and Wigton, wearing the aspect of a bleak mountain-stream, and augmented by many cold and brawling feeders. The stream now runs 5 miles in a direction east of south, between the Wigtonshire parishes of New Luce and Inch, to its confluence with Cross-water; and, besides smaller brooks, receives in its progress Drum-orawhorn-burn, a streamlet 6 miles long. Cross-water rises between Craignahurrie and Benea hills, in Ballantrae, and flows 3½ miles deviously to Wigtonshire, and 1½ along the boundary; and it then runs south-westward, south-eastward, and westward, 8 miles, through New Luce, to the confluence with

Main-water. The united stream, or the Luce proper, divides, for 1½ mile, New Luce from Inch,—intersects, for ¾ of a mile, a wing of New Luce,—divides, for a mile, New Luce from Old Luce,—and then runs through Old Luce to the head of Luce hay; and, over its whole course, it has a southerly direction, is, on the average, 30 feet wide, and, except in floods, can be passed on foot. The river once abounded in salmon and sea-trout; but it has been ruinously overfished. For 1¼ mile before becoming lost in the bay, it expands into a small estuary, which is dry at low-water; and within this estuary, between the water-marks of ebb and of flood, it makes a confluence with Pooltanton-water.

LUCE-BAY, a gulf or very large bay, broadly and deeply indenting the most southerly land in Scotland, and converting the southern half of Wigtonshire into two peninsulas, a long and narrow one between this bay and the extremity of the frith of Clyde, and a broad one between it and Wigton bay. The entrance of the gulf is between the Mull of Galloway on the west, and Burrowhead on the east. Measured in a straight line, direct from point to point, this entrance is 18¾ miles wide; and the length of the bay, measured in a line at right angles with the former to the commencement of the little estuary of Luce-river, is 16½ miles. Its whole area is probably about 160 square miles. Over a distance of 3¾ miles from the commencement of the estuary at its head, it expands, chiefly on the west side, to a width of 6¾ miles; and thence to the entrance, its coast-line, on the west, runs, in general, due south, or a little east of south, and that on the opposite side trends almost regularly due south-east. At its head the sea-board is low, and, at the efflux of the tide, displays a sandy beach of half-a-mile mean breadth; but elsewhere it is all, with some small exceptions, bluff, bold, rocky, and, occasionally torn with fissures and perforated with caverns. The bay contains various little recesses and tiny embayments, some of which are capable of being converted into convenient harbours; and it also offers to a seaman, who is acquainted with it, some anchoring-grounds, in which he may safely let his vessel ride in almost any wind. In hazy weather vessels sometimes mistake the bay for the Irish channel, and, when steering a north-westerly course, suddenly take the ground on its west coast. The mistake, when it happens, is almost certain destruction; for the tide no sooner leaves a struck ship than she settles so adhesively down upon quicksands that subsequent tides serve only to dash her to pieces. But since the erection of the light-house on the Mull of Galloway, errors have become comparatively infrequent, and navigation proportionally safe. Two rocks, called the Big and the Little Scare, lie respectively 1½ mile and 2¼ miles within the strait between the Mull of Galloway and Burrowhead, the former 5½ north-east by east of the Mull, and the latter at ¾ of a mile's further distance.

LUCE (NEW), a parish in Wigtonshire; bounded on the north by Ayrshire; on the east by Kirkcowan; on the south by Old Luce; and on the west by Old Luce and Inch. A wing, 1¾ mile long and from ¾ to 1¼ broad, projects lengthwise to the west. Excepting this, and some ruggedness of outline, the parish is a parallelogram, stretching north and south, and measuring 8½ miles by 5¼. The surface is irregular, and generally broken and abruptly undulating. Along the banks of the rivers, and in a few hollows, it presents little belts or patches of level ground; but, for the most part, it is upland and moorish. The heights, though not mountainous, are either bare rocks or have thin dresses of heath, or moss, or of a coarse grass called spreth. Only, or barely,

enough of grain is raised for local use; and prime attention is given to the rearing of sheep and of black cattle. Considerable improvements have been made in the working of the soil, and in the structure and arrangement of farm-steads; but not by any means proportionate to those of most parts of Scotland. Plantation, though at once peculiarly suited to the ground, and likely to be richly compensating, and greatly needed for the shelter of the land and the sweetening of the climate, is all but totally unknown. The rocks are of the stratified transition class. Lead-mines were in two instances worked nearly a century ago, but were found to be unremunerating. The principal landowner is the Earl of Stair. The illustrious Alexander Peden—the devout and steady Covenanter, whose character has been so grossly misconceived by the vulgar, in connection with the ‘prophecies’ palmed or fathered upon him after his death—was minister of the parish during three years preceding 1662, the notable period of the inglorious ejections achieved by the ecclesiastical dictator Charles II. The village of New Luce, with fewer than 200 inhabitants, all labourers and artisans, stands at the confluence of Cross-water and Main-water, 5 miles north of Glenluce. A road runs along Main-water, and two others go off eastward and north-eastward from the village. Population, in 1801, 368; in 1831, 628. Houses 114. Assessed property, in 1815, £2,776.—New Luce is in the presbytery of Stranraer, and synod of Galloway. Patron, the Crown. Stipend £158 6s. 8d.; glebe £12. The church is modern, and abundantly spacious for the population. Schoolmaster’s salary £25 13s. 4d., with £5 fees, and £1 13s. other emoluments. New Luce and Old Luce anciently formed one parish, called Glenluce, and were separated and made distinct erections in 1647. For a short time succeeding 1661, under the rule of episcopacy, they were reunited; but, in 1689, at the abolition of episcopacy, they were permanently separated. The monks of Glenluce abbey were anciently proprietors of the original extensive parish, and had over it a regality jurisdiction. Within its limits were two chapels, also claimed by the monks,—the one was dedicated to the Virgin Mary, and called Our Lady’s chapel; and the other was dedicated to the Saviour, and called Christ’s chapel or Kirk-Christ. A small bay or creek on the coast of Old Luce still bears the name of Kirk-Christ bay, from the latter of the chapels having stood in its vicinity. The church of New Luce, for some time after its erection, was popularly called the Moorkirk of Luce.

LUCE (OLD), a parish in Wigtonshire; bounded on the north by New Luce; on the north-east by Kirkcowan; on the east by Mochrum; on the south by Luce bay; and on the west by Stoneykirk and Inch. Its greatest length, in a line due east from the point where it is first touched by Pooltanton-water, is 10½ miles; and its breadth varies from 1½ to 7¼. A lake, ¾ of a mile long, lies 2½ miles south-east of the village; two smaller ones lie 3¾ miles to the east; and a tiny one lies ¾ of a mile to the south. Copious springs of pure water abound. The sea-board of the bay is in some parts sand, in others gravel, and in others clay; and it subsides into a fine sandy beach half-a-mile broad, which is dry at low-water. In the small estuary of the Luce and the Pooltanton, vessels of not more than 60 or 70 tons are accommodated with a harbour; and in that estuary also, and the sea-grounds in its vicinity, there is a considerable salmon and sea-trout fishery. Cod, flounders, and shell-fish are taken in the bay. Along the coast and up the banks of the Luce are some level lands, richly cultivated, well-adorned with plantation, fully enclosed, and of warm appearance. The surface everywhere else is hilly and irregular, but nowhere mountainous,

or, in a strong sense, upland. The spirit of improvement, which was long lulled to slumber by a smart and compensating demand for black-cattle, but which became roused by the provocative of low and diminishing prices, has of late years walked athwart the once bleak and chiefly pastoral area, and effected great and enlivening results. The arable grounds are now, to those which are waste and pastoral, in the proportion of 3 to 1. The prime object of interest in the parish is Glenluce abbey; but that and the village have been noticed in the article GLENLUCE; which see. The chief heritors are the Earl of Stair and Sir James Dalrymple Hay, Bart. The house of Balkail above Glenluce, Park an ancient castle on the right bank of the Luce, and Genoeb on the Pooltanton, are fine mansions surrounded with wood. Carscreuch, 2 miles north-east of Glenluce, is an ancient but ruined seat of the Earls of Stair. The ruins of the castle of Synniness stand on the coast south-east of the mouth of the Luce. Population, in 1801, 1,221; in 1831, 2,180. Houses 371. Assessed property, in 1815, £12,112.—Old Luce is in the presbytery of Stranraer, and synod of Galloway. Patron, the Crown. Stipend £158 6s. 8d.; glebe £30. The parish-school was attended, in 1834, by 100 scholars; and five private schools by 130. Parish schoolmaster’s salary £25 13s. 3d., with between £30 and £40 fees, and about £4 or £5 other emoluments. A United Secession meeting-house is situated in Glenluce. The ancient ecclesiastical condition of the parish is noticed in the preceding article.

LUCE. See HODDAM.

LUCKLAW-HILL. See LOGIE, Fifeshire.

LUDE, an ancient parish in Perthshire, now comprehended in BLAIR-ATHOLE; which see.

LUFFNESS, a small bay on the south coast of the firth of Forth, between the parish of Aberlady and that of Dirleton, Haddingtonshire. The bay now bears the name of Aberlady, but figures in history, under that of Luffness, as the port of Haddington. That ancient burgh having been for ages a sort of commercial metropolis, where the court of “the four burghs” assembled, under the chamberlain, to decide on the disputes of traffic, conceived the notion of becoming a sea-port, though upwards of 5 miles from any harbour, and obtained from James VI. a charter vesting it with full powers over the bay of Luffness. But the town was baffled nearly as much in its marine commerce, as afterwards in its repeated efforts at manufacture; and at the epoch of the Revolution it had connected with its port just one vessel, of 80 tons burthen, and £250 estimated value. In 1739, the estate of Luffness was bought by the Earl of Hopetoun for £8,350. See ABERLADY.

LUGAR (THE), a brief but beautiful rivulet of the district of Kyle, Ayrshire. Its principal head-streams, Glenmore and Bella waters, rise in the east of the parishes of Old Cumnock and Auchinleck, and run each about 5½ or 6 miles, not far distant from each other, to a junction ¾ of a mile above Logan-house. The united stream runs 8 miles westward between Auchinleck on the north, and Old Cumnock on the south, to a confluence with the Ayr near Barskimming. In its progress it passes the villages of Cumnock and Ochiltree, and the superb mansions of Dumfries and Auchinleck. Its banks are sometimes deep ravines, wooded to the top,—sometimes high perpendicular walls of rock, or naked, overhanging and menacing crags,—sometimes gentle slopes, or undulating declivities waving with trees,—and sometimes a series of little green peninsulas, curvingly cut asunder by the sinuosities of its channel. A round hillock, called the Moat, nearly isletted

by the stream, and situated above the village of Cummoek, commands an exquisite view over a considerable extent of the picturesque and romantic banks. The rivulet, at its junction with the Ayr, seems equal to it in volume of water. Hence Burns' epithet of 'stately Lugar.'

**LUGGATE (THE)**, a rivulet of the parish of Stow, Edinburghshire. It rises in two small head-waters on the north and the south sides of the Sole, in the south-west extremity of the parish, close on the boundary with Peebles-shire; and running first  $3\frac{1}{2}$  miles eastward, and next  $3\frac{1}{4}$  miles south-eastward, falls into Gala water at Paugh-head, a mile below the village of Stow. It is throughout a cold mountain-stream, fed by many chilly naked little rills, and subject to sudden and turbulently overflowing.

**LUGGIE (THE)**, a rivulet of Lanarkshire, and the detached part of Dumbartonshire. Issuing from a small lake on the boundary between the counties near the south-east extremity of the parish of Cumhernauld, it runs  $6\frac{1}{2}$  miles westward along the boundary, augmented in its progress by four or five feeders from Lanarkshire. Assuming now a direction a little north of west, it flows  $3\frac{3}{4}$  miles along the interior of the parish of Kirkintilloch; and then debouching, runs a mile northward, beneath an aqueduct of the Forth and Clyde canal, and past the town of Kirkintilloch, to the Kelvin. Excepting for a brief space in the parish of Kirkintilloch, where it flushes into beauty, it is a dull uninteresting stream, sluggish in its motion, and ditch-like in its banks.

**LUGGIE (THE)**, a rivulet of Linlithgowshire, of brief course under its proper name, but formed of two considerable head-waters. Its farthest source is Bog water. This rises in the parish of Bathgate,  $1\frac{1}{2}$  mile north-east of the town; makes a circuit of 6 miles round the south, when, running in a northerly direction, it passes the west side of the town; and now flowing deviously  $1\frac{1}{4}$  mile farther, takes the name of Ballencierff-water; and, under this name, it runs  $1\frac{1}{2}$  mile north-westward on the boundary between Torphichen and Bathgate to the point where it contributes to form the Luggie. Barhauchlaw, the other head-stream, rises in Lanarkshire; and, excepting brief sinuosities, and a mile of due northerly course immediately before joining the Ballencierff, moves uniformly toward the north-east. After flowing  $2\frac{3}{4}$  miles in Lanarkshire, it runs for 3 furlongs into Torphichen, then describes for 2 miles the boundary between that parish and Lanarkshire, and then, over  $3\frac{1}{4}$  miles to its termination, divides Torphichen from Bathgate. The united stream of the two head-waters, now strictly the Luggie, commences half-a-mile north of Bridge-castle, and has a course of less than a mile north-eastward to the Avon not far from Crawhill. Its length, to the head of Bog water, is 10 miles, and to the head of Barhauchlaw-hurn  $10\frac{1}{2}$ .

**LUGTON (THE)**, a rivulet partly of Renfrewshire, but principally of Cunningham in Ayrshire. Excepting very numerous but not large curvatures, and  $\frac{1}{4}$  mile of westerly course immediately above its termination, its uniform direction is south-west. It rises half-a-mile north of Loch-Liho, in the parish of Nielston, Renfrewshire, and, after traversing that lake, and making a distance from it of  $1\frac{1}{2}$  mile, it enters Ayrshire, divides Beith and Kilwinning on its right bank from Dunlop, and Irvine on its left, and falls into the Garnock 2 miles from the town of Irvine, and the same distance, in a straight line, from Irvine harbour. For a mile above its mouth it traverses the richly-wooded pleasure-grounds of Eglington castle, and  $\frac{2}{3}$  of a mile above its mouth has that princely mansion on its brink.

**LUGUT.** See **LUGGATE.**

**LUI (THE)**, a branch of the Dee descending from Beunhuedhu, through Glenlui, and the forest of Mar, and joining the Dee on its northern side, about 3 miles below the linn of Dee.

**LUINA (LOCH)**, a name occasionally given to Loch-Avich in Argyleshire. See **AVICH.**

**LUING**, an island in the parish of Kilhrandon, Argyleshire. It is  $6\frac{1}{2}$  miles in length, and rarely more than one in breadth. It is separated on the north from Seil by a strait scarcely 300 yards wide; and it thence extends due southward at a distance of from  $1\frac{1}{2}$  to  $3\frac{1}{2}$  miles from the coast of Nether Lorn, and the entrance of Loch-Melfort, with the islands of Torsay and Shuna upon its east side. As grouped with these two islands and with Seil, it exhibits an extensive range of picturesque and pleasing scenery. The surface is in general low, though never absolutely flat, along the coasts and in the southern district; but, as it recedes northward, it rises into many rocky eminences and cliffs, shows a slight tendency toward the formation of two distinct ranges, and attains an extreme altitude of between 600 and 700 feet. Clay slate forms at once the great mass of the island, and the source of popular employment and support. A large population is segregated here—as in Seil—for the manufacture of roofing slates. The cultivation of the soil is in an improved state on the low grounds, the hollows, and the gentler declivities, and has been warmly fostered by the pressure of population. Mr. Raspe, who was employed by the proprietors to survey some of the Western Islands, asserts that lead, zinc, and silver, have been found in Luing; but Dr. McCulloch suggests doubts as to the accuracy of his report.

**LUING (SOUND OF)**, a strait along the west side of the southern half of the cognominal island just described. It measures 4 miles in length, and  $1\frac{1}{2}$  in mean breadth; and divides Luing and Ardluing from Scarha, Lunga, Ormsa, and one or two islets.

**LUMPHANAN**, a parish in Aberdeenshire, bounded on the north by Tough; on the east by Kincardine-O'Neil; on the south by Birse, from which it is divided by the Dee; and on the west by Coull. It extends from north to south about 6 miles, and from east to west 6 miles. Houses 183. Assessed property, in 1815, £1,690. Population, in 1801, 614; in 1831, 947. This parish consists of low land surrounded by hills, the most considerable of which are Mealmead and Craiglich, the latter of which rises steeply for about a mile from the arable land. The name of Lumphanan signifies 'the bare little valley;' but the low grounds are by no means bare now; being well-cultivated and highly productive. The soil varies from a deep loam to a thin sand, according to the elevation from the low lands. In the south-eastern part of the parish there is a considerable but shallow lake, susceptible of being drained, and named **AUCHLOSSEN**: see that article. The principal stream is the burn of Lumphanan, besides which several other rivulets intersect the parish. There are a few remains of ancient fortifications, and some cairns, one of which, about a mile north from the church, on the brow of a bill, is alleged to be that of the usurper Macheth, who, according to tradition, was here slain by Macduff, in single combat, as he fled northwards, and was buried under this cairn, though Shakspeare makes Dunsinnan the scene. Indeed several places lay claim to this 'honour;' but Lord Hailes, upon the authority of Andrew Wynton, attributes the event to Lumphanan. This parish is in the presbytery of Kincardine-O'Neil, and synod of Aberdeen. Patron, Sir John Forbes, Bart. Stipend £153 18s. 3d.; glebe £10.

Church built in 1762; sittings 383.—Schoolmaster's salary £27; fees, &c. £15 2s. There is a private school.

**LUMSDEN.** See **AUCHINDOIR.**

**LUMSDEN**, an ancient manor in the parish of Coldingham, Berwickshire, belonging to a family of that name so early as the reign of David I. The ancient peel of Lumsden probably occupied the site of the present farm-house of East Lumsden; but in the early part of the 14th century the Lumssdens removed their family-abode to Blanerne on the banks of the Whitadder, where its picturesque remains still exist.

**LUNAN (THE)**, a river of Forfarshire. Issuing from a spring called Lunan-well, in the parish of Forfar, it runs  $2\frac{1}{2}$  miles north-eastward to Rescobie-loch, half the distance in the interior of Forfar, and the other half on the boundary with Rescobie. While traversing the lake, and for half-a-mile further, it hiccets Rescobie; over the next  $2\frac{1}{2}$  miles, during which it expands into Balgaves-loch, it divides that parish, on its right bank, from Aherlemno and the northern section of Guthrie on its left; and thence to the German ocean, except for 3 miles, where it cuts off a wing of Inverkeilor, it has Kirkden and Inverkeilor on the right, and Guthrie, Kinnell, and Lunan on the left. Its course, for  $3\frac{1}{2}$  miles above its embouchure, is north-easterly; but, from entering Rescobie-loch to that point, it is due eastward. Its length is  $16\frac{3}{4}$  miles; and its terminating point is at Lunan-bay in the vicinity of Redcastle. It flows with a clear current, and abounds with trout and pike.

**LUNAN (THE)**, a rivulet of Perthshire, formed by various picturesque rills emptying themselves into the sylvan and beautiful loch of Lows, in the parish of Caputh. Speedily after its efflux from that lake, it becomes lost for  $\frac{1}{2}$  of a mile in the circular loch of Butterstone. Issuing thence it runs 2 miles eastward, and  $1\frac{1}{2}$  south-eastward—nearly all this distance in the parish of Clunie—and for another  $\frac{1}{2}$  of a mile expands into a lake, the Loch-Clunie. A mile farther east, it is once more a lake, or, for  $1\frac{1}{4}$  mile, is lost in Loch-Drumellie. Running now  $3\frac{1}{2}$  miles south-eastward it divides Kinloch and Blairgowrie on its left bank from Clunie, Lethendy, and Caputh on its right, and falls into the Isla, 2 miles east of Meiklour. See **CLUNIE.**

**LUNAN**, a small parish on the coast of Forfarshire; bounded on the north by a detached part of Maryton; on the east by Lunan-bay; on the south-east and south-west by Inverkeilor; on the west by Kinnell; and on the north-west by Craig. It is an oblong  $2\frac{3}{4}$  miles in extreme length from east to west, and  $1\frac{1}{4}$  in mean breadth. A small rapid rill, leaping along in cataracts sometimes 20 or 30 feet deep, and traversing a beautifully romantic dell, called Buckieiden, occasionally perpendicular on its sides, and generally gemmed with the polyanthus, the cowslip, and other flowers and shrubs of the joyous wilderness, forms its boundary-line on the north. Lunan-water, limpid in its waters and pebbly in its strand, traces the boundary on the south-east. The beach of the marine boundary on the east is fine and refreshing; but will be noticed in the next article. The surface rises rapidly from the sea and the Lunan till it attains a height of nearly 400 feet above sea-level, and then recedes in a scarcely perceptible ascent, almost in a table-land to the further boundary. Seen from the Inverkeilor side of the Lunan near the sea, it has the appearance of a richly-cultivated hill-side, with a fine southern exposure, and blanched and cadaverous in its beauty from the almost total absence of both shrubbery and trees. Its summit-land commands an extensive and enlivening

prospect of the German ocean, and an expanse of country on the coast. The soil, for a brief way on the shore, is sandy; on the lower declivities is deep and rich; on the higher grounds is frequently shallow; and on the average, is good and fertile. The arable and the uncultivated grounds are in the proportion to each other of about 7 to 2. A dark-blue moorstone rock abounds, and is quarried for building. The chief landowner is the Earl of Northesk. Lunan-house on the coast, and Arhiku-house on the south-west, are the mansions of the only other heritors. Various localities have names indicating the ancient vicinity—supposed to be at Redcastle—of a royal residence. See **INVERKEILOR.** Walter Mill, or as some historians call him, Sir Walter Mill, the last Scottish martyr in the cause of the Reformation, was priest of Lunan during 20 years preceding his renunciation of popery. He was burnt at St. Andrews, in the 82d year of his age, by the infamous Cardinal Beaton. Alexander Peddie, nearly the last surviving priest of compelled prelay, and allowed by sufferance to retain his cure after the abolition of Episcopacy, was minister of Lunan till 1713, and bequeathed to the parish some plate for the communion-service, on the singular condition that it should be lent when required to any Episcopalian congregation within a distance of 7 miles. The parish is obliquely bisected by the railroad between Dundee and Aherdeen; and is distant, at the nearest parts, 6 miles from Arbroath, and  $3\frac{1}{4}$  from Montrose. Population, in 1801, 318; in 1831, 298. Houses 72. Assessed property, in 1815, £1,558.—Lunan is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Stipend £158 0s. 10d.; glebe £15. Schoolmaster's salary £28 17s. 3d., with £25 fees, and £5 10s. other emoluments. The church was anciently a vicarage under the monks of Arbroath.

**LUNAN-BAY**, a beautiful semicircular indentation of the German ocean, 5 miles in extent of coast line, in the parishes of Inverkeilor, Lunan, Maryton and Craig, Forfarshire. Its coast for a mile at each extremity is bold and rocky, occasionally exhibiting pyramidal columns upwards of 100 feet in height; and, over the intermediate or central 3 miles, in the middle of which enters Lunan-water, it is a low sandy beach, slightly echequered with small stones, and regularly flanked with hatched knolls, and immediately overlooked by the high grounds of Lunan. Beautiful varieties of seashell, and occasionally some jasper and onyx gems are found along the strand. The hay has a fine sandy bottom, and affords safe anchorage in any storm except from the north-east and east.

**LUNCARTY**, a suppressed parish and a village in the Strathmore district of Perthshire. The parish was anciently a rectory, is now incorporated with Redgorton, and forms the north-east division of its main body. The village stands near the Tay, 4 miles north of Perth, and has about 230 inhabitants. Luncarty bleachfield has long been reputed the most extensive in Britain. Its grounds comprehend upwards of 130 acres. The water-power by which the works are driven includes the whole volume of the streams Ordie and Shochie, carried along an artificial canal, and also a considerable volume led out from the Tay by means of a dam run nearly across the river. Four falls of the water-power are effected, and impel 24 sets of heetles. The works bleach about two millions of yards of linen-cloth in the year, and employ upwards of 120 hands. Luncarty is famous in connection with the decisive overthrow of the Danes, about the year 990, by Kenneth III., romantically aided by the peasant-ancestor of the noble family of Hay. The scene of conflict is

on the Tay, 2 miles above the confluence with it of the Almond. It was marked till the end of last century by many little tumuli, through which the farmers long shrunk to drive the plough; and it has still two monumental stones, one of which, four feet high, bears the name of Denmark. The narrative of the battle, as given by Boethius, Fordun, and Buchanan, has been said by Lord Kaimes to possess 'every mark of fiction;' but it by no means exceeds possibility, and vouched by both historiographers and some monuments, is very probably an instance of the romance of real occurrences excelling that of the novelist's idle fancies. The Danes, strong in numbers and fiery in resolve, landed on the coast of Angus, razed the town and castle of Montrose, and moved across Angus and along Strathmore, strewing their path with desolation, and menacing Scotland with bondage. Kenneth the King heard at Stirling of their descent, and hastened to take post on Moncrieff-hill, or in the peninsula of the Earn and the Tay; but while there organizing the raw troops, whom he had swept together, and waiting the arrival of forces suited to his exigency, he learned that Bertha or ancient Perth was already besieged. Arraying what soldiery he had, and debouching so as to get to northward of the enemy, he marched to Luncarty, and saw the Danes posted on an eminence to the south, and next day taunted and provoked them to a trial of strength on the intervening level ground. The rush of the Danes was dreadful; it shook the plumage from the wings of the Scottish army, and seemed about to transfix the main body; but it was keenly observed by three puissant ploughmen, father and sons, of the name of Hay, or Haia, who were at work in a field on the opposite side of the river, and were bold enough to attempt to infuse their own courage into the faltering troops. Seizing the yoke of the plough, and whatever similar tools were at hand, they crossed the Tay at a ford, and arriving just at a crisis when the wings had given way, and the centre was wavering, they shouted shame and death against the recreant who should flee, and precipitated themselves with such fury on the foremost of the Danes, as to gain the Scots a moment for rallying at a spot, still called Turn-again hillock. Hay, the father, seemed regarded as if he had been superhuman, and had no difficulty in drawing some clans to follow in his wake; and plunging with these down a deep ravine, while the battle was renewed on ground at a little distance from the original scene of action, he rushed upon the Danes in flank and rear, and threw them into confusion. A band of peasants, who seem to have been lurking near or drawn together from curiosity, now raised a loud shout of jubilation, and were supposed by the Danes to be a new army. The invaders instantly ceased to fight; they became a mingled mass, a jostling and bewildered herd, of routed men; and, not excepting their leaders and their king himself, they either were hewn down by the sword, or perished in the river. An assembly of the states, held next day at Seon, decreed to give the peasant-conqueror the choice of the hound's course, or the falcon's flight of land, in reward of his bravery. Hay having chosen the latter, the falcon was let off from a hill overlooking Perth, and flew eastward to a point a mile south of the house of Errol, alighting there on a stone which is still called 'the Hawk's stane.' All the intervening lands were given in property to Hay's family; but they have since been either alienated, or parcelled out among various lines of descendants.

**LUNDIE AND FOWLIS-EASTER**, two parishes united in 1618, but lying contiguously, the former in Forfarshire, and the latter in Perthshire. Each has its church, its kirk-session, its poors'-box,

and its session register and its school, and likewise possesses some distinctive peculiarities. Lundie is 3 miles long, varies in breadth from  $1\frac{1}{2}$  to 3, and has an area of 3,258 acres; and it is bounded on the north by Newtyle; on the east by Auchterhouse; on the south by Fowlis; and on the west by Kettins,—all, except Fowlis, in Forfarshire. Along the north and west the surface is part of the Sidlaw-hills, heathy on the higher grounds, but verdant and rich in pasturage on the southern slopes. The central and southern sections are champaign, and carpeted with productive soil. Four lakes—the largest called Long-Loeh, and measuring  $\frac{3}{4}$  of a mile in length—lie at the foot of the hills, cover jointly an area of about 110 acres, abound in pikes, perches, and eels, and are supposed to be bedded with marl. From the lakes, the head-streams of Dichty-water run eastward through the parish, incipiently laden with the rich alluvial spoils which the river deposits on the low lands in its progress, particularly in the parish of Dundee. Nearly two-thirds of the parish are arable, and upwards of 100 acres are meadow-ground. At a small hill in the vicinity of the lake of Pitlait, and about 60 feet above its level, the surrounding Sidlaws form a kind of amphitheatre, and give back to a loud cry, or to a slow strain of instrumental music, a remarkable distinct threefold, or even fourfold, echo. The greater part of the parish belongs to the Earl of Camperdown. Some manufactures employ a few of the inhabitants.—Fowlis-Easter has a triangular form, and measures  $3\frac{3}{4}$  miles on its north side,  $2\frac{1}{4}$  on its east side, and  $4\frac{1}{4}$  on its south-west side. Its area is 1,944 acres. It is bounded on the north by Lundie and Auchterhouse; on the east by Liff; and on the south-west by Liff and Longforan. Black-law, in the north-west corner, is the only hill. The general surface of the parish slopes gently to the south, and is fully enclosed, and beautifully cultivated. A lake, called the Piper-dam, and covering 55 acres, was drained for sake of its marl and its peat. Two-thirds of the parish are in tillage, and the remaining third is disposed chiefly in forest-ground and pasturage. Fowlis was the first district in an extensive tract of the eonterminous counties in which a regular rotation of crops was attempted. The church of Fowlis, according to an inscription still partly legible on a large oak-beam which supported the organ-loft, was built in the year 1142, in fulfilment of a lady's vow, wrung from her by solicitude for her husband's safe return from the wars of the crusade. Sir Andrew Gray, the ancestor of Earl Gray, made it collegiate with suitable endowments in the reign of James II., and placed in it a provost and several prebends. The edifice is 89 feet long, and  $27\frac{3}{4}$  wide, and is all built of bawn stone. A cross surmounts the east gable; another 8 feet high is in the burying ground; and a third, 14 or 15 feet high, formerly stood  $\frac{1}{4}$  of a mile to the north. Remains of fonts exist at the west end of the church, and on the exterior and in the interior of its door. Beside it is the burying-vault of Earl Gray. The two parishes are traversed by the turnpike between Dundee and Blairgowrie. Population of both, in 1801, 693; in 1831, 778. Houses 87. Assessed property, in 1815, £167.—The united parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Earl of Camperdown. Stipend £201 Os. 11d.; glebe £9. The minister officiates alternately in the two churches. Salary of each of the two schoolmasters £30, with about £20 fees.

**LUNDIN**. See Lango.

**LUNESTING**, a parish in Shetland now annexed to NESTING: which see.

**LUNGA**, a small island on the west flank of the

sound of Luining. It extends about  $2\frac{1}{2}$  miles by  $\frac{3}{4}$  of a mile north and south; and is separated at its ends by very narrow straits, from Ormsa and Scarba. The strait at the south end, between it and Scarba, is obstructed on the east by a rocky islet, and has a tumbling and impetuous tidal current quite as violent and grandly scenic as that of the far more celebrated Corrievrekin. Lunga consists of a long irregular hilly ridge, generally less than 500 feet above sea-level, but occasionally rising to nearly 1,000. This ridge is disposed in uneven, rocky, and often naked eminences, interspersed with patches of boggy ground and heath, as well as with occasional coppices of birch and alder; and it admits neither level ground nor more than tiny pendicles of such declivity as can be cultivated, even with the spade. On the western side, it is almost entirely bare and abrupt; and on the eastern side, it is skirted by shelving rocks, but descends somewhat more gently, and displays a greater extent of verdure. Quartz rock occupies the western side, and clay slate the eastern, both intermingled with other schistose substances, and traversed by numerous trap veins. From the different eminences of the island, the views are extremely interesting; on the east the glassy surface of the sound of Luining smoothly gliding along in circling eddies like a majestic river; and, on the south, the vexed and foaming current of the mimic of Corrievrekin, overhung by the grand form of Scarba, stooping down in one vast yet varied mass, to rocky shores and a wooded amphitheatre, and finely contrasted with the long low lines of the opposite coasts, and with the numberless islets and rocks which adorn and diversify the almost retiform sea.

LUSCAR. See CARNOCK.

LUSS, a parish in Dumbartonshire;  $8\frac{1}{2}$  miles long from north to south, from  $2\frac{1}{2}$  to 5 miles broad, and about 33 square miles in superficial extent; bounded on the north by Arrochar; on the east by Loch-Lomond; on the south by Bonhill and Cardross; and on the west by Row and Loch-Long. Alpine mountains, some of them towering aloft to nearly 3,000 feet above the level of the sea, spread out their bases over much the larger part of the area. But the congeries of mountains, even where most compact, is cloven down into glens of sub-wild beauty and gorgeous picturesqueness, as quite to relieve the rugged aspect of the bold landscape. Along the northern boundary, and for a brief way in the interior, is Glen-Douglas,  $4\frac{1}{2}$  miles in length, traversed all the way by the little stream which gives it name, and opening at Inveruglas, or its mouth, upon the ferry across Loch-Lomond to Rowerdennan at the foot of Benlomond. Two and a quarter, and  $3\frac{1}{2}$  miles southward, are Glenmaachan and Glenmacurn, converging into the sylvan and joyous glen of Luss, and aggregately with the latter curving 6 miles south-eastward, and traversed by the two headwaters, and the united volume of the streamlet Luss to the village. Farther south, Glenfinlas, watered by its cognominal brook, stretches 3 miles south-eastward, and then runs, in a wooded dress,  $1\frac{1}{4}$  mile eastward to Loch-Lomond, opposite Inchmurrin. Near the southern boundary the lower part of Glenfruin, noted as the scene of a sanguinary fight in 1603, between the clans of Macgregor and Colquhoun, goes  $2\frac{1}{2}$  miles eastward and north-eastward to a point  $1\frac{1}{2}$  mile south of the termination of the former glen. The only low-lying surface stretches along Loch-Lomond from the southern boundary to Ross-Dhu, the seat of Sir James Colquhoun, Bart., 2 miles south of the village; and is partly level, partly a waving plain, and partly a regular ascent, which soon rises up in acclivity, and becomes lost in the aspirings of the mountains. Many hundred acres,

on the low grounds, up the sides and hollows of the glens, and along the whole brink of Loch-Lomond, are covered with wood, much of it natural, and very beautifully grouped. From the southern boundary to the village a series of fine little headlands run out into Loch-Lomond; and north of the village the surface rises up from the very margin of the lake, merely admits of a feathered belting of wood, and then soars away into mountain. The varied superficial outlines of the parish, its low grounds and its uplands, its woods and its glens, contribute largely and very gorgeously to the magnificent framework in which the pictured beauties of the most boasted of the Scottish lakes is set. Some of the loveliest baskets of shrubbery, too, which rest on the lake's waters, are contributed by Luss; for INCHTAVANACH, INCHCONACHAN, INCHLONAIG, INCHGALBRAITH, and INCHFRIECHAN, are all within its limits. See these articles. Two of the most admired views of the lake and of the scenery which environs it, are obtained from the highest grounds of Inchtavanach, and from Strone-hill in the vicinity of the village. Loch-Long touches the parish, or rather a protrusion of it, over a distance of only  $\frac{3}{4}$  of a mile. Copious springs of excellent water are numerous. The extent of land in tillage is greatly narrowed—though highly to the advantage of the scenic attractions of the parish—by several hundreds of acres of the best arable grounds being disposed in lawn, pasture, and plantation around Ross-Dhu. The extensive bill pastures maintain numerous herds of Highland black cattle, and large flocks of black-faced sheep. A freestone quarry supplies building material for local use; and quarries of greyish-blue and of dark-blue slate, at Camstraddon and Luss, yielding a large and enriching produce for exportation. On the Fruin are a saw-mill, a grain-mill, and a mill for paring down logwood; and on the Luss above the village are a saw-mill and a grain-mill. About  $1\frac{1}{2}$  mile south of the village are the remains of a large cairn called Carn-na-Cheasoig, 'the cairn of St. Kessog.' This saint is said to have suffered martyrdom near the site of the cairn in the 6th century, and to have been buried on the site of the church; and he was anciently worshipped by the Romanists as the tutelary of the parish. Haco of Norway, during his invasion of 1263, spread bloodshed and devastation through Luss and its islands. Alwyn, the second Earl of Lennox, granted the lands of Luss to the dean of Lennox; and from the dean's descendants the lands passed, in the 14th century, to the Colquhouns of Colquhoun. One of the Colquhouns, called Sir John, was, in 1474, made Lord-high-chamberlain of Scotland, became, in 1477, governor of Dumharton-castle for life; and, in 1478, was killed in defending the fortress from besiegers. The celebrated Rev. John M'Laurin, known generally in connection only with his subsequent ministry in Glasgow, and the recent distinguished scholar and Gaelic translator, Dr. John Stuart, were ministers of Luss. The beautiful and very picturesquely situated village of Luss stands on the margin of Loch-Lomond, distant 9 miles from Helensburgh, and 13 from Dumbarton. The place is a crowded resort of tasteful tourists during the balmy months of the year, and has a good inn. A fair is held in it for sheep and lambs on the 3d Tuesday of August. The population of the village is about 260. The turnpike from Dumbarton to the Highlands passes along the margin of the lake through the village, and two other turnpikes cut the southern division, the one coming northward from Helensburgh, and the other going westward up Glenfruin. Population, in 1801, 953; in 1831, 1,181. Houses 191. Assessed property, in 1815, £4,233.—Luss is in the presbytery of Dumharton, and synod of Glasgow and

Avr. Patron, Sir James Colquhoun, Bart. Stipend £219 13s. 3d.; glebe £17. The amount of unappropriated tithes cannot be ascertained. The church, with about 500 sittings, and excellent in its masonry, was built in 1771. The parish, previous to the Reformation, was a rectory, and between 1429 and that epoch was a prebend of the cathedral of Glasgow, and was served by the prebendary's vicar pensioner. The ancient parish was greatly more extensive than the modern. In 1621, the forty pound lands of Buchanan, on the east side of Loch-Lomond, were detached from it, and incorporated with Inchcaillach, the modern Buchanan: in 1659, the lands of four proprietors, at the south end of the lake, were annexed to Bonhill; and, in 1658, all the extensive territory on the north, which now constitutes Arrochar, was made independent; but, on the contrary, the lands of Caldannach, Presstelloch, and Conglens, which anciently belonged to Inchcaillach, have, in modern times, been united to Luss; and the lands of Bannachrae, within the limits of Row, are attached to it *quoad sacra*. A chapel, subordinate to the parish-church, anciently stood on the lands of Buchanan. Besides the parochial school, there are a private school, a school for females, and supported by Lady Colquhoun, and a school maintained by the society in Scotland for propagating Christian knowledge. Parish schoolmaster's salary £34, with from £9 to £12 fees.—Luss is remarkable for the salubrity of its climate. Mr. Pennant, in 1769, specified six of its inhabitants whose united ages were 540; and the Rev. Dr. Stewart, in his Statistical Report of 1792, specified other six whose joint ages were 502.

**LUTHER, or LEUTHER**, a small river in Kincardineshire, rising in the Grampian hills, north of Drumtoughy, and running east, then southwards, through **FORDON** [which see] and Laurencekirk, to the North Esk.

**LUTHERMOOR**, a small village in the parish of Marykirk, Kincardineshire.

**LUTHRIE**. See **CRECH**.

**LYBSTER**, a village and a *quoad sacra* parish, on the west coast of Caithness-shire. The village stands at the head of Amherst-bay, a little east of the great north mail-road, and 13 miles south-west of the town of Wick. It was commenced, in 1802, by the late Lieutenant-general Sinclair; and, already of considerable size, it promises to become a place of importance. Many of its houses are good; and new ones are annually added. Most of its inhabitants are maintained solely by the herring-fishery; and they have amongst them about 100 boats. The village has a post-office, a friendly society, one or two schools, and two annual fairs. Population about 400.—The *quoad sacra* parish lies, *quoad civilia*, in the parish of Latheron; and is in the presbytery of Caithness, and synod of Sutherland and Caithness. The church is situated in the village, and was built in 1836-7, at the cost of £832. Sittings 805. Stipend £100. The parish comprehends a landward district which, jointly with the village, has a population of upwards of 2,500. Its erection arose from the Church-extension scheme of the General Assembly, and ranks as the first result of that scheme north of Inverness. A preaching-station in connexion with the United Secession was commenced at the village in 1835, but has been abandoned.

**LYDOCH (LOCH)**, a lonely sheet of water in the moor of Rannoch, in the north-western corner of Perthshire. The distance from the inn at King's-house to the western extremity of the lake, is about 6 miles; from the eastern, or lower extremity, to the head of Loch-Rannoch, it is much the same. Loch-Lydoch is about 7 miles in length, and about

a mile in breadth. About 4 miles from its eastern end it separates into two distinct branches of almost equal size and length—the one of which stretches almost due west, while the other takes a south-west direction; thus giving it the appearance of a huge fork, with the handle towards Loch-Rannoch. The moor of Rannoch and Loch-Lydoch are described by Dr. McCulloch in his usual caustic yet graphic manner: “Pray imagine the moor of Rannoch; for who can describe it? A great level, (I hope the word will pardon the abuse of it,) 1,000 feet above the sea, 16 or 20 miles long, and nearly as much wide, bounded by mountains so distant as scarcely to form an apprehensible boundary; open, silent, solitary; an ocean of blackness and bogs, a world before chaos; not so good as chaos, since its elements are only rocks and bogs, with a few pools of water-bogs of the Styx, and waters of Cocytus, with one great, long, sinuous, flat, dreary, black, Acheron-like lake, Loch-Lydog, near which arose three fir-trees, just enough to remind me of the vacuity of all the rest. Not a sheep nor a cow; even the crow shunned it, and wheeled his croaking flight far off to better regions. If there was a blade of grass anywhere, it was concealed by the dark stems of the black, black, muddy sedges, and by the yellow, melancholy rush of the bogs.”

**LYNDALE**. See **SNIZORT**.

**LYNE (THE)**, a river of Peebles-shire, the next in local importance to the Tweed. It rises in various little head-waters close on the boundary with Edinburghshire; one of them on Wcathclaw, a very brief distance from the sources of the North Esk, and the Water of Leith; another of them on West Cairn-law, the largest of the Pentlands, 1,800 feet high; and several of them draining Cauldstane-slap, a grand mountain-pass, or place of egress, from Tweeddale to the north. The Lyne, receiving in its progress Baddingsgill-burn, West-water, and numerous mountain-rills, runs  $5\frac{1}{2}$  south-eastward through Linton, 2 miles southward between Linton on the west and Newlands on the east, and  $3\frac{1}{4}$  in the same direction through Newlands. It is now joined, half-a-mile below Drochil-castle, by Tarth-water on the eastern, and Tweed branch of the Medwin on its right bank, runs 4 miles south-eastward between Stobo and Manner on the right, and Newlands, Lyne, and Peebles on the left, and falls into the Tweed  $2\frac{1}{4}$  miles in a straight line above Peebles. Its entire length of course is  $15\frac{1}{2}$  miles, or, including sinuosities, about 20. The Lyne is a good trouting-stream.

**LYNE AND MEGGET**, two parishes in Peebles-shire, widely apart in position, but strictly identified in their ecclesiastical connexion and statistics. Lyne is nearly circular, with a small square northerly projection; and is bounded on the north by Newlands; on the north-east by Harehope-burn, which divides it from Eddlestone; on the east and south-east by Meldon-burn, which divides it from Peebles; on the south and south-west by Lyne-water, which divides it from Stobo; and on the west by Howe-burn, and Stevenston-hill, which divide it from Newlands. The circle is  $2\frac{1}{2}$  miles in diameter, and the square projection  $\frac{1}{2}$  of a mile deep. A stripe of low ground stretches along the Lyne, sharp and gravelly in its soil, and bleak and naked in its aspect, but plied to a certain extent with the plough. The rest of the area is upland and strictly pastoral, once covered with natural wood, but now adorned with scarcely a tree. In the south-west, overlooking the Lyne, are vestiges of a Roman camp 6 acres in extent, and occupying a singularly advantageous site. The Glasgow and Peebles turnpike runs along the Lyne.—Megget is distant geographically 8 miles, but along the shortest practicable path 14 miles. It lies on

the southern verge of the county, and is bounded on the north by Manner; on the east and south-east by Selkirkshire; on the south-west by Dumfries-shire; on the west by Tweedsmuir; and on the north-west by Drummelzier. It measures nearly 6 miles from east to west, and between 6 and 7 from north to south; St. Mary's Loch, for 1 mile on the south-east, belongs to it in common with Yarrow. Megget-water rises in the extreme west, and, running due east to St. Mary's Loch, cuts the parish into almost equal parts. The ground is very hilly and solitarily pastoral. The summits and higher acclivities are clothed with heath and coarse grass; but the lower slopes afford excellent pasture. Moorfowl abounds. A species of eagle, from the heights on the boundary with Dumfries-shire, sometimes carries off a young lamh, even in view of the shepherd. Two old towers, whose ruins still exist, seem to have accommodated the Scottish kings when hunting in the forest. Though the district has no modern road, traces exist of several roads stretching in various directions, and probably cut out for the accommodation of the royal hunters. On Glengahhern-hurn, a tributary of Megget-water, are some traces of a search for gold, which Boethius, Buchanan, and other writers, say was successful. Population of Lyne and Megget, in 1801, 167; in 1831, 156. Houses 25. Assessed property, in 1815, £2,244. — The united parish is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend £153 9s. Id.; glebe £25. The parishes were united in 1620. Lyne was originally a chaplainry subordinate to Stobo, but afterwards became a rectory. The church is a solid structure, built previous to the Reformation, but re-seated and otherwise repaired in 1831. Sittings 70. The pulpit is a remarkable piece of mechanism, imported from Holland, in 1644, by Lady Yester. Megget place of worship is a chapel built upwards of 33 years ago, and kept in repair by subscription. Sittings 70. What seems to have been the ancient

church, is a ruin, surrounded by a cemetery still in use, at Henderland. The famous freehooter, Cockburn of Henderland, was interred in the cemetery. The minister ascertained the population of the two parishes, in 1835, to be 166,—40 of whom were dissenters. His services are given, two sabbaths to Lyne, and one to Megget. Salary of the Lyne schoolmaster £25 13s. 3½d., with £15 fees and £2 10s. other emoluments; of the Megget schoolmaster £7, with £4 fees and £1 15s. other emoluments.

LYON (THE), a river of Breadalbane, Perthshire. It rises on the south-east side of Benachastle, in a long south-westerly projection of the parish of Fortingal, close on the boundary with Glenorchy in Argyleshire, runs 1½ mile north-eastward across the projection, and then describes the segment of a circle over a distance of 5¾ miles between Fortingal on its left bank, and the most westerly section of Kenmore on its right. At midway of the 5¾ miles it expands into Loch-Lyon. Leaving Kenmore, it runs 23 miles along Fortingal, part of the distance north-eastward, but generally in an easterly direction; and then, over a distance of 1½ mile south-eastward, dividing Dull on its left bank from a part of Weem on its right, it falls into the Tay, 2¼ miles after that magnificent river's efflux from its cognominal lake, and amidst the gorgeous scenery which surrounds Taymouth-castle. Its entire length of course is 32 miles. Of a host of mountain-tributaries, which on both banks come ohstreperously down upon its path, the longest is Glenmore-water, 7½ miles in length, and joining it at the point of its leaving Fortingal. The Lyon has two considerable cascades,—the one called the Sput-baan at the entrance of its glen, and the other the fall of Moar, 4 miles above Glenlyon church. At the latter it leaps over a considerably lofty precipice into a deep narrow pool, and, when swollen, yields a large produce of salmon. The river traverses the districts of GLENLYON and FORTINGAL proper; and, as to the nature and aspect of its basin, is described under these titles.

PASS OF LENEY.

## M

**MABERY (Loch)**, or **MACBEARY**, a small lake in Ayrshire and Wigtonshire, but chiefly in the latter, stretching southward between the parishes of Penningham and Kirkcowan. It is  $1\frac{1}{2}$  mile in length, and half-a-mile in breadth. On one of several islets which stud its bosom are the remains of a large castellated building and garden. The superfluent waters of the lake form the river Bladenoch.

**MACDUFF**, a sea-port town and burgh-of-barony in the parish of Gamrie, county of Banff, distant about  $1\frac{1}{2}$  mile east of Banff, on the opposite side of the river Deveron, and the bay of Banff. The communication between the two towns is opened by a magnificent bridge on which there is no toll. Macduff is a modern town, having risen, since 1732, from little else than a mere collection of fishermen's huts, to be a place of considerable size and importance, containing a number of regularly planned streets and good houses, with one of the best harbours in the Moray frith, and a thriving and rapidly increasing trade. The population, in 1812, was 1,300, but it has since increased to about 2,300; and during the season of the herring fishery it is upwards of 3,000. Previous to 1783 it was called 'Down.' In that year it received a charter of Novodamus from the Crown, at the desire of the proprietor, James, Earl of Fife, erecting it into a 'free and independent burgh-of-barony.' The rate of the harbour-dues being about one-half lower than those of Banff harbour, and the port itself, though subordinate in customs matters to Banff, being preferable to its rival in situation, depth, and accommodation, Macduff has much more import and export traffic than Banff. The harbour is the private property of the Earl of Fife. The amount of the harbour and shore-dues, for 1831-2, was £248 10s.; for 1832-3, £267. The chief exports are grain, cured herrings,—for which this is the most important station between Cromarty and Fraserburgh,—salmon, cod-fish, live cattle, and cured pork, to London, Leith, and some other places in the south. The chief imports are lime and bone-manure, coals, groceries, &c.; and from Sweden, iron and deals; Russia, hemp; and Holland, flax. Herrings are sometimes exported to Prussia and other foreign parts. Mr. Ingram has erected works for the manufacture of sugar from the white beet-root in this neighbourhood. The establishment is on a small scale, but is the first of the kind that has yet been formed in Scotland. For further particulars see **BANFF**.—Macduff is included in the parliamentary boundaries of the burgh of Banff; and contained, at the time of the municipal inquiry, 80 houses worth £10 a-year and upwards. The commissioner observes, that there was a feeling in Banff favourable to a unity of municipal jurisdiction in the two towns; but in Macduff the feeling was unanimously the reverse. The police of Macduff was found to be efficient, and no other solid ground of union could be urged,—on the contrary, the commissioner was of opinion that evil would accrue to the inhabitants of Macduff by an extension of the municipality of Banff over it, while Banff would be nowise injured by a continuance of the actual position; he therefore thought that the present case should form an exception to the general rule that municipalities should extend over territories within the parliamentary boundaries. Macduff has a town-house and a jail. The Earl of Fife's splendid seat, Duff-house, is in the vicinity. The church,

or rather chapel, is prominently situated on an eminence. It is a neat edifice with a handsome spire, and Lord Fife, who gives the clergyman a small income, has adorned the precincts by erecting a cross in a conspicuous and picturesque position. A portion of the parish was annexed, upwards of 60 years since, by authority of the presbytery, to this chapel; but as already noticed under article **GAMRIE** [which see], it has not yet been erected into a parish *quoad sacra*.

**MACDUFF'S CROSS**. See **NEWBURGH**.

**MACHAIG**, a small circular lake nearly a mile in diameter,  $3\frac{1}{2}$  miles north of the village of Doune, in the parish of Kilmadock, Perthshire. Its banks are wooded and beautiful. A streamlet carries off its superfluent waters by a circuitous route to the Teith, a little below Doune.

**MACHAN**. See **DALSERF**.

**MACHAR (NEW)**, a parish in the district of Buchan, Aberdeenshire; bounded on the north by Udney; on the east by Belhelvie; on the south by Old Machar and Dyce, from the latter of which it is divided by the river Don; and on the west by Fintray and Keith-hall. In its northern district is Straloch, which belongs to Banffshire, though, of course, totally disintegrated from that county: see note to article **FERCUS (ST.)**. In length, from north-west to south-east, this parish measures about 9 miles; and in breadth, from east to west, 2 to 3 miles. Houses 243. Assessed property, in 1815, £2,286. Population, in 1801, 925; in 1831, 1,246. The road from Aberdeen to Old Meldrum intersects the parish. Its surface is in general rather level, and the soil various but for the most part arable and well-cultivated. There are extensive plantations, especially in the southern district, in the vicinity of the Don; and in this quarter also is a beautiful little lake called Bishop's-loch, anciently Loch-Goull, on an islet in the midst of which the Bishops of Aberdeen resided before the chantry was erected. The ruins of their castle still exist. The islet is finely adorned with trees. There are some good mansions and farm-houses in this parish. Its vicinity to Aberdeen is very advantageous to the district. There are few or no objects of antiquarian or historical interest; but on a moor within the parish an engagement took place, in 1447, between the Royalists and Covenanters, in which the latter were victorious. The ancient name of the parish was the Upper Parochin of St. Machar,—a saint to whom was dedicated the cathedral of Old Aberdeen, or rather the kirk of Kirk-town, on the site of which the cathedral was afterwards built: the parish itself was part of the deanery of St. Machar: see article **ABERDEEN**.—It is in the presbytery and synod of Aberdeen. Patrou, the Earl of Fife. Stipend £217 9s. 4d.; glebe £16. Schoolmaster's salary £30, with £8 8s. fees, &c. There is a private school in the parish.

**MACHAR (OLD)**, or **OLD ABERDEEN**. See article **ABERDEEN**.

**MACHERS (THE)**, a large and broad peninsula, lying between Luce-hay and Wigton-bay, and constituting the south-eastern one of the three great divisions of Wigtonshire. The name is Celtic, and signifies 'flat or low country.' Though the boundary-line between and the larger district called the Moors, is not well-defined, the Machers may be viewed as including the parishes of Whithorn, Glasserton, Sorbie, Kirkmimer, and most of Mochrum, and as com-

prehending an area of about 64 square miles. Yct, measured in a line, from the estuary of the Luce and the Piltanton at the head of Luce-bay to an expansion of the estuary of the Cree between Carty-port, and at the head of Wigton-bay, it would include all Mochrum, and parts of Old Luce, Kirkeowan, and Penningham, and comprehend at least 104 square miles.

**MACHLINE.** See **MAUCHLINE.**

**MACHONY**, a rivulet of the parishes of Muthil and Blackford, Perthshire. It rises in several headwaters on the heights of Blair-in-roan, flows 7 miles through Muthil, forms, for 1 mile, the boundary-line between that parish and Blackford, and then runs 2½ miles to the Earn, a little above Kinkell. Its general direction is easterly; its tributaries are small but numerous; and its waters abound in excellent small trout. Though itself unattractive in a land rich in the romance and beauty of its streams, its name, along with that of Blair-in-roan, excites a little attention,—the one meaning ‘a battle,’ and the other ‘the spotted Battle-field.’ Some antiquaries point to it, and strive to give it stirring interest, in connexion with the vexed question respecting the field of the battle of the Grampians. See **ARDOCH.**

**MACHRIHANISH-BAY.** See **CAMPBELLTON.**

**MADDERTY**, a parish of triangular form in Strathearn, Perthshire. It is bounded on the north by Crieff and Foulis-Wester, and measures, on that side, 5½ miles; on the south-east by Gask and Trinity Gask, and measures, on that side, 4½ miles; and on the south-west by Trinity Gask and Crieff, and measures, on that side, 3 miles. The surface is level, carpeted with good soil, wholly arable, and well-enclosed and cultivated. Along the greater part of the northern boundary runs the Pow, or Powaffray, a stagnant yet fitful stream, moving sluggishly in an artificial canal 6 feet deep and 24 wide, but subject to inundations which now injure the adjacent low grounds and now enrich them with alluvial or manurial deposits. The south-western boundary runs between 1 and 1½ mile distant from the Earn. The chief object of interest in the parish is the ruined abbey of **INCHAFRAY**: which see. There are two hamlets or rather clachans called Belycloine and Craigs. The mansions are Dubbheads, Woodend, and Dullary. A few of the parishioners are employed in the manufacture of coarse linen; but the great majority are connected with agriculture. The parish is traversed by the ancient Roman road from the camp of Ardoch to the Tay; and is distant, at the nearest point, 2 miles from Crieff. Population, in 1801, 560; in 1831, 713. Houses 137. Assessed property, in 1815, £3,528.—Madderty is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Earl of Kinnoull. Stipend £224 17s. 3d.; glebe £11. Unappropriated teinds £267 6s. 6d.—The parochial school was attended, in 1834, by 90 scholars; and a private school by 64. Parish-schoolmaster's salary £34 4s. 4½d., with £12 fees, and a house and garden.—Madderty gave the title of Baron to James, the second son of the 2d Lord Drummond, and the ancestor of the Viscounts of Strathallan. He was created Lord Madderty in 1609.

**MADDY (Loch)**, a large indentation of the sea on the east side of the island of North Uist. It stretches into a low flat country consisting of a brown, peaty, hoggy land; and cuts it into innumerable islets and peninsulæ, which in summer afford a scanty herbage for a few animals, and, in winter, are abandoned to wild geese, wild ducks, swans, and sea-gulls. So remarkable are its projections and sinuosities, that, while its waters do not cover an area of more than 9 square miles, its coast-line has

been found by measurement to extend to 200 miles! Those fuci which are used in the making of kelp greatly abound along its shores; they are, for the most part, cut every three years; and, about twenty years ago, they annually amounted, in the gross weight of what was cut, to 7,200 tons, and, in the quantity of kelp which was produced, to 300 tons. In the entrance of the loch lies a group of islets, separated from one another by depths of sea of from 7 to 15 fathoms, and distant, at their nearest point, a mile from any shore, yet covered with such a thick bed of alluvial clay and rubbish as indicates their former connexion with some higher tract of land, and records those changes which produced the great sinuosities of the loch. Between these islets and the shore, and about ¼ of a mile from the latter, are two remarkable detached rocks, which serve as marks to mariners, and bear the names of Maddy-More and Maddy-Grisioch. Both are about 100 feet in height, irregularly columnar, and abrupt or precipitous; and, consisting of a compact and dark bluish grey basalt, present the phenomenon of being the only specimens of hasaltic rock which occur in the entire group of Long-Island.

**MADOES**, or **MADOIS (St.)**, a small parish at the east end of the Carse of Gowrie, Perthshire; bounded on the north-west by Kinfauns; on the east by Errol; on the south by the frith of Tay; and on the west by the Inchyra district of Kinnoull. Its greatest length, from north to south, is 1½ mile; its greatest breadth is 1½ mile; and its area is only 1,152 imperial acres. The surface seems, on a hasty survey, to be a perfect level, but really consists of two smaller esplanades and a larger one, respectively about 3, 9, and 14 feet above the level of the Tay, and of a slow swell whose ridgy summit has an altitude above the Tay of about 60 feet. The district lies opposite the mouth of the Earn, at the part of the Carse of Gowrie where that golden and fructiferous plain expands in the full breadth and blush of its beauty, and becomes—with the intervention of the Tay, ¾ of a mile broad—the continuation eastward of the fine valley of Strathearn. The soil, toward the river, is a deep strong clay, and, on the higher grounds, it is a rich brown loam; and, in both species, it is very fertile and in exquisite cultivation. Excepting about 30 acres disposed in plantation, and about 60 laid out in permanent pasture, the whole area is constantly in tillage. A quarry of sandstone similar to that of Clashennie, in the conterminous parish of Errol, is worked at Cottown.\* Near the eastern boundary is a stone of some historical note, called ‘the Hawk’s stane,’ and referred to in our article **LUNCARTY**; and in the churchyard is an elaborately sculptured and very beautiful Runic monument.—Pitfour-castle, the residence of Sir John Stuart Richardson, Bart., the sole heritor of the parish, is a spacious quadrangular edifice, surmounting an artificial terrace, environed by tastefully disposed and ornamented pleasure-grounds, and vieing in wealth of aspect and power of attraction with the noble and splendid mansions of districts in its neighbourhood.—A few of the parishioners are weavers employed by the manufacturers of Dundee. Two hamlets, Cottown and Hawkstone, have each about 50 or 60 inhabitants. The parish is bisected by the

\* The more correct or entire organic remain of an unknown kind of fish referred to in our article **ERROL**, as having recently engaged the attention of Professor Agassiz, was found in this quarry, and sent to him by the minister of the parish, who says respecting it, in the New Statistical Account: “It proves to be a new species of the genus *Holoptychus*, which he [M. Agassiz] has named *Holoptychus nobilissimus*. Other species of the same genus have been found in the limestone of Burdhouse, Edinburgh, [see **BURDHOUSE**], and in the Granite deposit, Banffshire; but this individual, Agassiz writes, will enable me at length to define precisely the character of the genus which I have named *Holoptychus*, from the folds of the scales.”

mail-road between Perth and Dundee; and has a pier, of recent erection and great utility, on the Tay. Population, in 1801, 295; in 1831, 327. Houses 70. Assessed property, in 1815, £4,376.—St. Madoes is in the presbytery of Perth, and synod of Perth and Stirling. Patron, Sir J. S. Richardson, Bart. of Pitfour. Stipend £207 Ss. 8d.; glebe £80. Unappropriated tithes unascertained, owing to the locality in the teind-office respecting the parish being lost. Schoolmaster's salary £34 4s. 4½d., with £9 17s. 10½d. fees, and £4 10s. other emoluments. The parish is supposed to have its name from St. Madoeb, or MODOCH, whom tradition and Keith make a bishop in Scotland in the 3d or 4th century, or several, probably six or seven, centuries before a diocesan bishop existed in the country, and from whom Kilmadock is supposed also to have its designation; but St. Madoes has a popular or vulgar appellation among the inhabitants of the district which defies etymological analysis, and seems to be of some antiquity,—the curious name *Semmediores*.

“The stannin stanes o’ Semmediores,”

are mentioned in an old ballad.

**MAGNUS BAY** (Sr.), a spacious bay on the west coast of the mainland of Shetland. It measures 8½ miles at the entrance, expands to 11 miles, and indents the land to the depth of 7 miles. It enters between the headland of Eshaness, in the parish of Northmaven, on the north, and that of Sandness in the cognominal parish on the south; but has in its mouth, half-a-mile from the latter, the island of Papa-Stour; so that it is reduced at the entrance to an open channel of only 6 miles broad. Around its inner verge are the islets of Vemantrey, Mickle Roe, Little Papa, and Linga, besides various holms and skerries; and projecting from it into the land are various bays or voes, which contain safe and excellent anchorage for any number of vessels, of any burthen,—particularly Hillswick, Olna frith voe, Gron frith voe, and Unzie frith.

**MAGUS-MUIR**, a district on the western skirts of the parish of St. Andrews, and the eastern of Ceres parish, Fifeshire, formerly wild and bleak, but now in great part tamed of its savage and sterile aspect by the culture of the plough. It is celebrated in history as having been the scene of the murder of the tyrannical Archbishop Sharp, on the 3d of May, 1679. The spot where, according to tradition, the ‘rude deed’ was done, is about 4 miles from St. Andrews, on the lands of Stratkinness, the property of Mr. Whyte Melville, where there is a stone erected to the memory of some of the Covenanters who, having been taken at Bothwell-bridge, were brought here and executed, and their bodies hung in chains on the site of the murder, as if to appease the archbishop’s manes, for the greater part of them had never been in Fifeshire till the day preceding their execution.

**MAIDEN-CASTLE.** See **KENNOWAY**.

**MAIDEN-CASTLE.** See **CANPSIE**.

**MAIDEN-CASTLE.** See **FALKLAND**.

**MAIDEN-CAUSEWAY**, an ancient line of road, proceeding from Bennockie into the woods of Pitodrie. It is paved with stones, and about 14 feet wide, and has every appearance of having been a vicinal way of the Romans.

**MAIDENKIRK.** See **KIRKMAIDEN**.

**MAIDEN-PAP**, a bill in Caithness-shire, in the parish of Latheron, elevated nearly 2,000 feet above the level of the sea.

**MAIDEN-SKERRY.** See **NORTHMAVEN**.

**MAIN (THE).** See **INCH, WIGTONSHIRE**.

**MAINLAND OF ORKNEY.** See **ORKNEY**.

**MAINLAND OF SHETLAND**, the largest of

the Shetland islands, comprehending about one-half of their whole area, and much the larger moiety of their population. It extends nearly due north in a long ragged band of territory, from Sumburgh-head in north latitude 59° 52' 18", to Fetbaland point, in latitude 60° 38' 20". Its length is usually computed at 60 miles, and occasionally exaggerated to 90 or even upwards of 100; but does not seem, as measured in a straight line, to exceed 56. Its breadth, over 17 miles from Sumburgh-head, never exceeds 4½ miles, and probably does not quite average 3; over the same distance, from Fetbaland point, it is exceedingly various, but seems to average about 4½ miles; and over the intermediate distance it gradually swells out from the ends, and then bursts suddenly out in the middle to an extreme measurement, from Rainsburghness on the east to Sandness on the west, of 20½ miles. But all the way round, and especially in the central and chief district, the island is so constantly and whimsically indented by projections of the sea, as to have an utterly indescribable outline, and to be, in nearly all practical respects, a numerous eluster of islets. Seen from its loftiest ground, Rona’s hill, a bold beight in the parish of Northmaven, which commands a view of the entire archipelago, it is altogether undistinguishable as a single island, and appears as if cut to pieces, by its very numerous and deeply indenting friths and voes, into community of character with the smaller islands which hang upon its flanks. Only one spot on the whole mainland is more than 2 miles distant from either a limb or the body of the sea, and even it is distant not 2½ miles; and greatly the larger part of the area lies within one mile of some beach. At one point, called Mavis-Grind, between the parishes of Northmaven and Delting, only an isthmus of 100 yards, most of which is overflowed by spring-tides, prevents the island from being quite bisected; and at several other points, isthmuses are not very much broader. Excepting Fair Isle, situated midway to Orkney, Mainland contains, in Sumburgh-head, the most southerly land in Shetland. As to surface, geognostic character, statistics, and nearly all the details of a topographical notice, this island so extensively identifies itself with the whole group that information respecting it claims to be arranged under the article **SHETLAND ISLES**. Its parishes, though in most instances including adjacent minor islands, are Dunrossness, Lerwick, Sandsting, Tingwall, Walls, Delting, Nesting, and Northmaven.

**MAINS AND STRATHMARTINE**, two parishes, lying near the southern extremity of Forfarshire, and united in 1799. The united parish is bounded on the north by Tealing; on the east by Murroes and Dundee; on the south by Dundee and Liff; and on the west by Liff and Auchterhouse. Its extreme length from the points on the west and the east where it is first and last touched by Dighty water, is 5½ miles; its extreme breadth, in a line due north and south falling upon Hilton, is 3½ miles; and its area is about 7,060 imperial acres. The parishes are nearly equal in extent. Mains is of very irregular figure on the east, and Strathmartine of almost square form on the west. The whole surface of the united parish is a beautiful strath, rising gently on both sides from a line along the centre, to waving heights of less than 400 feet above sea-level. All is enclosed with thorn-hedges, or agreeably shaded with trees; all, excepting about 140 acres of moorland and rocky hillocks, and about 440 acres of plantation, is subject to the plough; all has a sweet and delightful appearance, the resort of flocks of singing birds, and the bome of many of those soft beauties of landscape which most soothe and cheer the human inhabitant. The soil has much alluvial or haugh ground, and

elsewhere is, in general, a deep, fertile, black loam, superincumbent on gravel, clay, or rock. The strath is traversed from end to end, right along the middle, by Dighty water, and long took from it the name of Strathdighty. The stream, though not large, is unusually valuable both to agriculture and to manufacture, fertilizing the soil by its alluvial deposits, and driving a large aggregate of machinery by its water-power; and it has some fine burn-trouts, and a few pikes and perches, yet not more than to be disposed of by mere amateur anglers. Fifty-water forms the boundary-line for 3 miles on the north. A very copious and sweet spring, called Sinavey, bursts perennially from a rent in the face of a rock at the castle of Mains. Freestone, and slate or Arbroath stone-quarries, are numerous, and yield an excellent and very abundant produce. Manufactures, akin to those of Dundee or subordinate to them, employ three-fourths of the population, run stragglingly the middle of the strath, and are conducted with the aid both of steam and of the exuberant water-power of the Dighty. Some of these establishments, by the voracious largeness of their dimensions, have occasioned the disappearance of lesser ones which, as they figured 50 years ago, presented, numerically a more imposing array; for there were then no fewer than 33 mills of various sorts in Mains, and 10 in Strathmartine. Sir John Ogilvy, Bart. of Inverquharity, and Mr. Laird of Strathmartine, are the principal landed proprietors; and seats belonging to them are the principal mansions.—Balmuir, near the centre of the united parish, but within the limits of Mains, was formerly the property of the lineal descendant of Graham of Claverhouse, the notorious Viscount Dundee. Claverhouse itself, the residence of that keen-edged tool of persecution, stood about half-a-mile to the east; and a modern erection, built in the form of a ruin, marks its site, and challenges the mingled scorn and pity of the stranger.—On the west side of Clatlo-moor are vestiges of a camp said to have been successively occupied by part of Agricola's army, of Alpin, by Wallace, and by Monk. East of Strathmartine-house is the gallow-hill, the ancient scene of summary feudal justice inflicted by the barons of the soil. On the boundary with Tealing stands Martin's stone, commemorative, according to the legend, of one Martin having slain a dragon which, on a Sunday evening, killed, one after another, nine maiden sisters. The parish is traversed for some distance by the Dundee and Newtyle railway, by the great western road between Dundee and Aberdeen, and by various turnpikes and subordinate roads. Nine bridges besstride Dighty-water. Dundee being only 1 or  $\frac{1}{4}$  mile distant from the nearest part of the parish, an extensive and daily intercourse exists with its markets, its manufactories, and its port. Population, in 1801, 1,442; in 1831, 2,011. Houses 195. Assessed property, in 1815, £6,585.—The united parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patrons, the Crown and Mr. Laird of Strathmartine. Stipend £217 8s. 4d.; glebe £35. In 1834, two parochial schools were attended by 140 scholars; and three private schools by 45. Salary of each of the parochial schoolmasters £34 4s. 4 $\frac{1}{2}$ d., with £60 fees, £15 other emoluments, and a house and garden. The present parish-church was built in 1800. Sittings about 900. The church of Strathmartine, abandoned after the union of the parishes, was built so late as 1779, only 20 years before its abandonment. The church of Mains was very ancient, and before being abandoned had become ruinous, but retained its original font, and had a small press secured by an iron door, the depositary probably of sacred relics. Mains was anciently called Mains of Fintry, from Fintry-castle,

the most conspicuous of its architectural objects. The castle was built in 1311, had several outworks, and seemed to have been a place of great strength. The erection was a square, with a strong tower, perforated by a principal gate facing the west; had a passage over this gate whence missiles could be concealedly showered upon assailants; and surmounted the steep bank of a rivulet, surrounded and almost concealed on all sides by very lofty trees. A font, an altar-piece, and other relics found within it, indicated the concealed existence of a popish chapel. This castle, along with most of the property of the parish, belonged for centuries to the Grahams of Fintry, one of whom was the inglorious Claverhouse. Not a local memorial now remains of the family except a name, some ruins, and their mausoleum. In the same cemetery as the last of these are two iron-clasped stone-cases said to contain the remains of persons who fell victims to a visitation of the plague.

MAISTERTON, an ancient parish in the shire of Edinburgh, now comprehended in the parish of Newbottle. This small parish adjoined Cockpen on the west; and on the north, east, and south it was surrounded by the abbey parish of Newbottle. See NEWBOTTLE.

MAKERSTON, a parish in the Merse district of Roxburghshire; bounded on the north by Smailholm and Kelso; on the east by Kelso; on the south-east and south by the Tweed, which divides it from Roxburgh and Maxton; and on the west by Berwickshire. Its extreme length, in a line drawn from east to west over Luntunlaw, is  $3\frac{1}{2}$  miles; its extreme breadth in a line due north and south over Mannerhill, is  $2\frac{1}{2}$  miles; and its area 2,854 imperial acres. The district is distant, at the nearest point, only  $1\frac{1}{2}$  mile from Kelso, lies in the immediate vicinity of Fleurs and Roxburgh castles, has a southern exposure along one of the finest parts of the magnificent Tweed, looks up the brilliant wending vale of the Teviot, and largely partakes the sumptuous and attractive character of so noble a neighbourhood. The surface is a gently hanging plain, declining slowly from the northern boundary to the Tweed. The soil, in the south, is a rich loam superincumbent on sandstone or gravel; and in the north is a thin clay on a retentive bottom; but in the latter district as well as in the former, it is thoroughly cultivated, and under excellent management. Excepting about 80 acres of wood, the whole area is in tillage. Makerston-house, the seat of Sir Thomas Makdougall Brisbane, Bart., the principal landowner, is an elegant residence, situated on the Tweed, surrounded with fine old woods, and commanding a very beautiful prospect up the Teviot. The parish is touched for 2 miles on the north by the Edinburgh and Kelso turnpike. Population, in 1801, 248; in 1831, 326. Houses 58. Assessed property, in 1815, £3,693.—Makerston is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend £219 14s. 7d.; glebe £25. Unappropriated tithes £358 1s. 10d. Schoolmaster's salary £34 4s. 4 $\frac{1}{2}$ d., with £17 fees, and £4 10s. other emoluments. The manor of Makerston belonged, at the middle of the 12th century, to Walter Corbet, who gave the church and a cartuque of land to the monks of Kelso; and before 1220, it passed, by marriage with Christiana Corbet, into the possession of William, the son of Patrick Earl of Dunbar. The monks of Kelso, trying to be liberal to the grandchild of their benefactor, granted of their free-will to Christiana and her husband permission to hold religious services in the chapel of their own manor; and for this doughty and magnanimous feat of monkcraft they were rewarded by a release of all

claims which the parties whom they so distinguishably benefited might have on their estates.

**MALZIE-WATER**, a rivulet of Wigtonshire. It carries off the superfluous waters of six contiguous lakes, two of them of considerable extent, in the parish of Mochrum [which see], and runs 6 miles southward, but chiefly eastward in that parish and in Kirkcinner to the Bladenoch,  $\frac{3}{4}$  of a mile above Torhouse.

**MANGERTON**, an old strength in Liddesdale, on the eastern banks of the Liddel, about a mile south of the village of Castletown. It was the chief seat of the warlike Border-clan, the Armstrongs. Tradition has handed down the following story, highly illustrative of the fierce spirit of the lairds of Mangerton. We give it in the words of Sir Walter Scott: "There is a large stone in Liddesdale, called the Laird's Jock's stone. It takes the name from a furious Scottish champion, called the Laird's Jock, because he was the eldest son of the Laird of Mangerton, chief of the clan of Armstrong. He succeeded his father in command of the warlike tribe to which he belonged. Frequent defiancees at that time passed between the Scots and English on each side of the frontier, but the Laird's Jock's size and strength rendered him superior to all men in single combat, and he wielded a huge two-handed sword which no one could use but himself. At length he became old, decrepit, and finally hed-ridden, and was obliged to resign the command of the tribe to his son, a gallant young man, but far from being his father's equal. Of that the old man seemed sensible, for he never would resign possession of the sword which had won so many victories. At length a brave young Englishman—one of the Fosters, if I recollect right—sent a challenge to the best Scotsman on the opposite side of the Liddel, to fight him in single combat at what was called the Turney-holm—a flat space of ground used for such encounters. The old champion took great interest in this challenge, which was accepted by his son, and for the first time put him in possession of the favourite sword. He caused himself to be transported in a species of sledge, or litter, to witness the combat, and was placed on the stone, which still bears his name, wrapped up in blankets, and attended by his daughter, a beautiful young woman, who was her father's constant guardian and the nurse of his old age. The combat begun, and (by treachery, say the Scots,) the young Armstrong fell, and the victorious duellist seizing the huge two-handed sword, brandished it aloft as the trophy of the field. At this distracting sight the old giant, who had long been incapable almost of turning himself in bed, started up, the covering falling partly from him, and showing the wreck of his emaciated frame, and uttered a cry so portentously loud, as to be heard for miles around. He was borne back to his own tower of Mangerton, where he died in a few hours, which he spent in lamentations, not for his son, whom he never named, but for the loss of the noble sword which in his hands had won so many victories."

**MANOR**, **MANNOR**, or **MANNER**, a parish in Peebles-shire; bounded on the north by Stobo and Peebles; on the east by Peebles and Selkirkshire; on the south by Megget; and on the west by Drummelzier and Stobo. Its greatest breadth, from the Tweed,  $\frac{3}{4}$  of a mile above the mouth of Lyne-water on the north, to the highest source of Manor-water on the south, is  $8\frac{3}{4}$  miles; its breadth varies between 1 mile and  $5\frac{1}{4}$  miles; and its area is 18,110 acres. The Tweed traces the boundary for  $3\frac{1}{2}$  miles on the north-west and the north. Manor-water, rising close on the southern boundary, and uniformly pursuing a northerly course, traverses the parish for  $6\frac{1}{2}$  miles nearly along the

middle, and then runs wendingly  $2\frac{1}{2}$  miles near or along the eastern boundary to the Tweed,  $1\frac{3}{4}$  mile above Peebles. About 16 streamlets, most of them tiny mountain-rills, and the chief of them Newholm-hope-burn, Glenrath-burn, and Haddleshope-burn, not more each than  $3\frac{1}{4}$  miles in length, come transversely down upon the Manor, ploughing their way along ravines and glens. The streams, especially Manor-water, were long highly celebrated for their fishy produce; but, like a spoiled beauty, have been ruined by their fame. Manor-water still swarms with parr, hut has now few salmon or sea-trout, and contains hardly any of the rich yellow and dark-coloured burn-trout in which it was formerly so prolific. The boundary-line, except over the northern and narrow third of the parish, is formed by water-shedding mountain-ridges; and all the interior, except a narrow vale along the Manor, and some beautiful haugh-ground upon the Tweed, is strictly and wildly upland. Excepting two heights, one in the interior and one on the boundary, all the elevations constitute an elliptical range, narrow on the south, broad along the sides, and shorn down into plain, or cut away, on the north. The acclivities are in general bold and rapid; and toward the source of the Manor, or the head of its vale, they closely approach, and are precipitous and towering. Many of them are scarred, or, in local phrase, sclentered, and reflect the sun's rays with a brilliance which gives warmth to the tillage in the vale. All appear, at least wherever the rock looks out from the surface, to consist of greywacke, the strata running north and south, and dipping to the west; and on their higher acclivities are heathy, but on their sides and their lower acclivities are in general more or less grassy. The loftiest summit is **DOLLAR-LAW**: which see. Scrape, on the boundary with Drummelzier, has an elevation of more than 2,000 feet, and nearly all the summits rise from between 1,600 to 1,900 feet above sea-level. The valley-grounds, the haughs, and the arable heights, amounting in the aggregate to about 1,700 acres, are drained, fully enclosed, and in excellent cultivation; and though carpeted with clay and loam of no great depth, are fertile to a degree surpassing theory in so bleak a region. Wood, in belts and clumps on the lower grounds, and in straggling detachments up the narrow basins of the minor streams, occupies an aggregate area of about 400 acres. In the vale of the Manor, about  $1\frac{1}{4}$  mile north of the church, between two mountainous and boldly ascending heights, and in the midst of a morass, is a British or Danish camp. On an acclivitous conical height called Chesters, a mile distant, are fortifications of loose stones from 26 to 32 feet wide, with an exterior elliptical wall upwards of 650 feet in circumference, usually pronounced Roman on the evidence chiefly of the name of their site, and in utter defiance of that furnished by their form. Coins not long ago found in or near the fortifications were English, and some of them comparatively modern; yet others reported to have been formerly found in it were—hastily perhaps—pronounced Roman. Castles, towers, and peel-houses—or buildings of one or other of these classes according to the power and resources of the proprietors—were anciently so numerous in the parish as to prove it one of the most stirring arenas of the Border feuds and forays. They stood in sight of each other, crowned with means of raising alarm-fires, and formed at once individual fortalices able to resist attacks, and a chain of beacons sending suddenly up at need signals of fire by night and of smoke by day. Connected with these and other memorials of a freebooting age, is the remarkable path called the **THIEF ROAD**: which see. On the summit of Woodhill, an eminence rising in the midst of a plain, there is, says

Armstrong, "some appearance of a building called Macbeth's-castle, but probably a place for the worship of the Druids to the heathen god Woden (!)" "Standing-stone," says the same writer, "is a large rude monument which, from its situation on Bellum or War-rig, may have been erected to commemorate some remarkable event. From the appearance of the impression of several horses' feet having been cut on the stone, it is thought to have been the site of a fair." But the object in the parish which now excites by far the greatest interest is the cottage of 'the Black dwarf,' situated on Woodhouse farm in the vale of the Manor. The deformed and eccentric creature, David Ritchie by name, built the cottage and garden walls exactly as they at present stand, and was buried in Manor churchyard. Sir Walter Scott became acquainted with him, and had opportunities of marking those physical and moral features which are so boldly limned in his tale, while on visits to the late Professor Ferguson at his mansion of Hallyards. Three convergent roads, the longest  $1\frac{1}{2}$  mile, in the north end of the parish, send off a carriage-road  $2\frac{1}{2}$  miles up the vale of the Manor; and thence a bridle road leads southward to the boundary, where it traverses a quaggy marsh called the Foul-bridge, and mounts ruggedly and perilously over Bitch-craig into Megget. Population, in 1801, 308; in 1831, 254. Houses 35. Assessed property, in 1815, £3,403.—Manor is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend £148 16s. 3d.; glebe £30. Schoolmaster's salary £30, with £14 fees and £1 5s. other emoluments.—Manor was anciently a mere chaplainry, under the rectory of Peebles, and formed jointly with it the prebend of the archdeacon of Glasgow. The present parish-church, situated on the Manor  $1\frac{1}{2}$  mile above its confluence with the Tweed, was built about the middle of the 17th century. Its predecessor, the place of worship of the chaplainry, seems to have stood at Manortown,  $1\frac{1}{4}$  mile farther up the river. A chapel dedicated to St. Gordian, who was martyred by Julian the apostate, and whose fame seems to have travelled in some unusual way to the recesses of Tweeddale, anciently stood in the vale of Newhope-burn 4 miles south of Manortown, and is commemorated by some slight vestiges. Not far south-west of the present parish-church is a pedestal called 'the Font stone,' which of old supported the font of Manor chapel.

MANUEL. See EMANUEL.

MANXMAN'S LAKE. See KIRKCUDBRIGHT.

MARCH. See MERSE.

MARCHMONT. See GREENLAW and KELSO.

MAR, or MARR, an ancient district of Aberdeenshire, lying principally betwixt the Don and the Dee, on the south-western quarter of the county, and comprising the sub-divisions of Braemar, or the mountainous division; Mid-Mar, or the middle division between the Don and the Dee; and Cromar, or the lower and better cultivated division. Mar is not now one of the recognised district divisions of the county: see ABERDEENSHIRE. It still gives the title of Earl to the ancient family of Erskine. The origin of this earldom is lost in antiquity. In 1065, Martacus, Earl of Mar, is witness to a charter of Malcolm Canmore in favour of the Culdees of Loch-Leven. The first historical notice of the Erskines is one of the 13th century, when the heads of the family were only Lords Erskine. In 1436, James II. created or confirmed Thomas, the 9th Lord Earl of Mar; but it was forfeited by John, the 11th Earl, who took part as leader in the insurrection of 1715; after which it remained in abeyance till 1824, when it was restored by act of parliament in the person of John Francis Er-

skine, a lineal descendant of the family. No part of this district belongs to the Earls of Mar.

MAREE (Loch), a magnificent lake in Ross-shire, in the parish of Gairloch. It lies in a situation so sequestered, and is so difficult of access, that few or no travellers have ever visited it. Pennant and Macculloch are, we believe, the only two, who, previous to ourselves, have made the attempt; but how rich the reward when attained, and how trifling the labour and the danger when compared with it! Loch-Maree is a noble sheet of water, about 20 miles in length, and varying from 1 to about 3 or 4 miles in breadth. It is fed by innumerable mountain-streams; and its superfluous waters are carried off at the north-western extremity by the Ewæ: which see. The mountains which surround Loch-Maree are of great height, and of a beautifully characterized and irregular outline, so that the shores of the lake present an inexhaustible variety of the most romantic and interesting scenery. The most remarkable are Sleugach, or, the High mountain, the File mountain, Benlair, Benbarchan, and Craegtolly. Sleugach, in the Gruinard, is said to be upwards of 3,000 feet in height, and from it Lewis, with the town and hay of Stornoway, can be distinctly seen. The effect of this superb mountain, seen at once from its base to its summit, is, perhaps, more striking than that of any mountain in the Highlands. The File mountain, which is on the opposite side of the lake from Sleugach, is exceedingly remarkable. It seems to be composed of quartz rock, and entirely destitute of verdure; but nothing can be more striking than the effect of sunshine upon its different pointed, rocky, and nearly inaccessible summits. At the western extremity, Benlair is a principal feature in the landscape—graceful, solid, broad; and where its skirts descend steep into the water, the scenes are peculiarly original and grand. The northern margin of Loch-Maree presents a great variety of close scenery, consisting of rocky and wooded bays, and creeks rising into noble overhanging cliffs and mountains; here also are displayed some of the finest general views of the lake. But there is one portion of the margin of the lake so peculiar as to deserve the most minute description, and that of Dr. McCulloch is so vivid and so true, that we cannot refrain from extracting it: "In one place in particular, the remains of a fir forest, in a situation almost incredible, produce a style of landscape that might be expected in the Alps, but not among the more confined scope and tamer arrangements of Scottish mountains. Immediately from the water's edge, a lofty range of grey cliffs rise to a great height; so steep as almost to seem perpendicular, but varied by fissures and by projections covered with grass and wild plants. Wherever it is possible for a tree to take root, there firs of ancient and noble growth, and of the most wild and beautiful forms, are seen rising above each other, so that the top of one often covers the root of the succeeding, or else is thrown out horizontally in various fantastic and picturesque modes. Now and then some one more wild and strange than the others, or some shivered trunk or fallen tree, serves to vary the aspect of this strange forest, marking also the lapse of ages, and the force of the winter storms which they have so long braved." [Vol. II. p. 300.]—The bosom of Loch-Maree is ornamented by numerous islands of varied size and appearance. They are about twenty-seven in number, and lie chiefly in a cluster on the middle of the lake, at which place it has its greatest breadth. The largest of these are Ealan-Sooin, Ealan-Maree, Ealan-Rory-mhor, and Ealan-Rory-bheg. Ealan-Sooin, or St. Swithin's Isle, contains a surface of about 30 acres of ground, heathy, with a small lake and a

few fir-trees. Ealan-Rory-mhor was planted with firs about twenty-five years ago; and Ealan-Maree is beautifully wooded with every variety of timber. Thousands of the herring-gull breed on Ealan-Rory-mhor; the grey goose breeds annually among the islands of this loch, and, it is believed, only there in Scotland. Roe-deer haunt amidst the islands, and may be seen on their margins, or swimming from one to another. The lake is supposed at one time to have had a much lower level than it has at present, and it is thought that this has been occasioned by the accumulation of sand and gravel at the lower end, by which the water was dammed in. Indeed there is some reason to think, that Loch-Maree and Loch-Ewe, an arm of the sea into which the river Ewe flows, originally formed one lake, under the name of Loch-Ewe, as the village at the head of Loch-Maree is named Cean-Loch-Ewe, or 'the Head of Loch-Ewe.' The heightening of the summit level of this lake is also confirmed, by the existence of huge stepping-stones, between the islands, which can be seen in dry seasons beneath the water. "It was," says Dr. McCulloch, "with some difficulty that we explored our way through the labyrinth of islands in the centre of this lake: as they are little raised above the water, and covered with scattered firs, and thickets of hirsch, alder, and holly, while they are separated by narrow and tortuous channels. The features of the whole are so nearly alike, that no part can be distinguished from another." Loch-Maree affords admirable sport to the lovers of angling, being well-supplied with a great variety of fish, among which are salmon, eels, char, and trout of every species; among the latter, the gizzard-trout, a rare species, is to be found. At the lower end of Loch-Maree are the remains of iron-smelting furnaces, erected and conducted, many centuries ago, by some gentlemen from Fifeshire, who migrated here for the purpose, and whose descendants, as well as those of the workmen they brought hither, are still distinguishable by their names, as Kemp, Cross, Turner, and others. There is no beauty in the grounds immediately at the head of the lake, as they there spread out into a marshy and level plain; but the hurying-ground on the margin of the water, with the rude stones which cover the graves, and the umbrageous trees which overshadow it, are worthy of a visit. Seen however from the head of Glen-Dochart, which has its lower termination at the head of Loch-Maree, the effect was to us as surprising and enchanting as it was unexpected. The lake sparkled bright in the evening sun; the lofty mountains were, at their summits, tinged with his golden rays, while in the hollows, and nearer their base, they were wreathed in mist and light clouds. The effect of this was to increase to a prodigious degree their apparent height,—to make every hollow on their rugged sides seem a deep and inaccessible glen,—and to enlarge to an almost immeasurable extent the lake and the hills which rose at its extreme distance. It was altogether a scene of enchantment never to be forgotten. The white peaked summits of the File mountain sparkled, like the spires and turrets of an emerald palace, the work of some Eastern magician, or of the genii of Arabian romance; forming a splendid contrast to the dark and rugged Sleugach on the opposite side of the lake.

Loch-Maree has derived its present name, since its separation from Loch-Ewe, from Ealan-Maree, which tradition affirms was dedicated to the Virgin Mary. In ancient times it was the residence of a recluse or hermit, the odour of whose sanctity is still preserved among the simple inhabitants of the surrounding districts. It contains a burying-ground: the spot has been chosen on an island—as we so often see in the

Highlands—to prevent depredations from the wolves of ancient days. On this island there is a sacred well, in which, as in the pool of St. Fillans, lunatics were dipped, while the usual oblations were left on its margin, or on the branches of an adjoining holy tree.—There are various traditions with regard to Loch-Maree and its islands, one of which regarding Ealan-Maree may here be mentioned. Here, it is said, is the place of burial of a Norwegian prince, and a daughter of a king of Ireland, whose fates are thus related. They were to be married, and the ceremony was to be performed in Ealan-Maree, by a holy man who resided on it. The prince arrived at the time agreed on, but his bride had not yet reached the island. Learning shortly afterwards that a ship had arrived at Pol-Ewe, he sent messengers to make inquiries, desiring them as they returned up the lake to hoist a white flag if they were the bearers of good news, but a black one if their news should prove the contrary. On reaching Pol-Ewe they found the princess had arrived, and they set out with her to conduct her to their master. In sailing up the lake, however, by way of putting their master's love to the test, the messengers hoisted the black flag at their mast head. The prince, on seeing this, either died of grief or put a period to his existence. On her arrival the princess also died of grief. The lovers were buried close beside each other, and two large stones still mark the site of their graves. The stones have both had figures and characters carved upon them; but these are now quite obliterated and defaced.—Ealan-Rory-mhor was anciently inhabited by John Roy, the grandson of Hector Roy, who was the first of the present family of MacKenzie of Gairloch. He occupied it as a place of security for his family, from the attacks of the M'Leods, who having been driven from the possession of the surrounding lands by Hector Roy, frequently afterwards endeavoured to regain their ancient domains. This island was afterwards inhabited by Alexander, or Allister, the son of John Roy, who is still talked of in tradition as a man of great valour and wisdom.—The M'Leods had anciently a castle on Loch-Tolly, a small lake near Loch-Maree. In this castle, a sister of Hector Roy, who was married to a M'Leod, with two of her sons, were savagely murdered by their younger brother, who took possession of the lands. Hector Roy obtained letters of fire and sword against the murderer, and his adherents; drove them from the lands, took possession of them himself; and the shores of Loch-Maree and Gairloch have ever since been the property of his descendants.

MARK (THE). See THE NORTH ESK.

MARKINCH, a parish in Fifeshire, about 7 miles in length from north to south, and in breadth, from east to west, from 5 to 2 miles. Superficial area about 7,000 acres. Its form is very irregular, being deeply indented in several places by neighbouring parishes. It is bounded by the parish of Wemyss on the south; by Kennoway on the east; by the parishes of Kettle and Falkland on the north; and by those of Leslie, Kinglassie, and Dysart, on the west. A small detached portion of the parish, separated from the rest by the parish of Wemyss, lies at the mouth of the river Leven, on the shore of the frith of Forth. It is separated from the parish of Scoonie by the Leven. The surface is generally undulating, presenting alternately hill and valley, which run from east to west. The rivers Leven and Orr, which flow through it, add much to the beauty of the scenery, besides the benefit which they confer on the manufactures of the district. In 1815, the annual value of real property assessed in the parish, was £14,226 sterling; the valued rent is £10,171 13s. 4d. Scots. Population, in 1801, 3,130; in 1831,

4,967. Houses 750. The village of Markinch is pleasantly situated about half-a-mile to the north of the Leven, and about 2 miles from the northern extremity of the parish. It is populous and thriving, and enjoys a considerable share of the linen manufacture. There are six other villages in the parish: Thornton, Milntown of Balgonie, Coaltown, Kirkforthar-feus, Dubhieside, with a population of 373, and Star, which is partly in the parish of Kennoway.—The manufactures of this parish are very extensive, and, though varied, are chiefly connected with the linen trade. The spinning of linen yarn is also carried on to a considerable extent. The spinning mills at Balgonie, helonging to Messrs. Baxter and Stewart, are the largest, and are impelled by two water-wheels, on the Leven, which together are of 55 horse-power. They contain machinery for spinning flax and tow, both long staple and broken staple. The quantity of flax consumed at the mills in the year 1838 was 475 tons; and besides the tow produced from the flax spun, about 100 tons of imported tow was also used. The total cost of flax and tow used was above £25,000 sterling. There are about 265 persons employed at these mills; and the average quantity of yarn spun per week is 10,000 spyndles. The yarns spun are, with the exception of the heavier tow-yarn, either sold in the district adjoining, or exported to France. The heavier tow-yarns are manufactured by the proprietors into canvass, sacking, &c., chiefly for the London market. There are also large spinning-mills at Haugh-mill, near Cameron-bridge; and a mill at New Inn, for spinning linen-yarn. Near Plasterer's Inn is a mill for spinning wool. It is moved by a water-wheel of 10 horses' power, and makes about 45 stones of woollen-yarn per week. There are five bleachfields in the parish, where the bleaching of linen-yarn is extensively carried on: Rothes bleachfield, Balgonie mill bleachfield, Haugh-mill bleachfield, Lochty field, and New Inn bleachfield. At Balgonie about 400 tons of linen-yarn are bleached annually, at Haugh mill about the same quantity, and at Lochty from 500 to 600 tons of yarn. The paper mill at Auchmuty, was originally erected in 1810, and has since been improved by the introduction of the machine generally used in making paper. Above a ton of fine rags are consumed here daily in making cart-ridge, coloured, printing, and writing papers. Brown and grey papers are manufactured at Rothes mill, and also at Balhirnie. At Thornton, the Messrs. Tennant and Company of Glasgow, have an extensive chemical work for the manufacture of sulphuric acid; and there is a large distillery at Cameron bridge.—Balgonie castle is one of the principal objects of antiquarian notice in the parish. The buildings are obviously of different ages, but the castle is still in repair, and formed one of the residences of the Earl of Leven within the last fifty years. The great tower is the most ancient, and was probably erected about the 14th or 15th centuries. It is situated on the banks of the Leven, about 36 feet above the bed of the stream. It is 80 feet high, with a battlement at the top, and is 45 feet in length, by 36 in breadth, over the walls. The walls of the two lower stories, which are arched with stone, are 8 feet thick. The remaining buildings form an extensive quadrangle, enclosing a court, and a portion of them are said to have been erected by the first Earl of Leven.—The house of Balfour is remarkable, as containing an original portrait of the well-known Cardinal Bethune, and of another Mary Bethune, one of the Queen's four Marys.—At Bruntun an ancient tower at one time existed, said to have been the remains of a residence of the Earls of Fife; and from it, it is alleged, in popular tradition, there was a subterranean

passage to the Maiden-castle in the neighbouring parish of Kennoway.—At Bandon there is also the ruins of an ancient tower, and at Kirkforthar the remains of a chapel which once existed here, but was suppressed previous to the Reformation.—Of antiquities of a more ancient date, in all probability, than any of these, may be mentioned an ancient cross, which stands on a rising ground to the north of the village of Markinch, and near the garden entrance to Balhirnie. It is a broad slab about 7 feet high, but without any carving, so far as can now be discovered. Immediately east of this cross, and on the opposite side of the public highway, is a small hill of an oblong shape, about 200 yards in length, called Markinch hill. It is remarkable from the circumstance of its northern declivity presenting six regular terraces at different heights, about 20 feet broad, and extending the whole length of the hill. Formerly these terraces were to be seen on entering Markinch from the north; but the hill was planted by the late General Balfour, and the terraces, consequently, in a great measure, concealed. They are obviously artificial; but the purpose for which they were intended is not so plain. Colonel Miller thinks this hill has been a Roman station; and that by them the terraces were constructed; others think that games were anciently held in the low ground to the north, and that the terraces were made for the convenience of the spectators. The fact of the low ground, and also of that which surrounds the hill on which the church of Markinch stands, having been anciently a marsh, would seem to be inconsistent with this idea. Stone-coffins, or eistvaens, have been found in the parish, containing calcined bones.—This parish is in the synod of Fife, and presbytery of Kirkcaldy. Patron, the Crown. Stipend £267 17s.; glebe £30. Unappropriated Crown teinds £457 19s. 2d.; eollege teinds £25 17s. 4d.

The church of Markinch is noticed in very ancient records. Hugo, the ancestor of the family of Wemyss, the second son of Gillimichael, fourth Earl of Fife, conferred the church of Markinch with a toft, and the teinds belonging to the same, upon the canons of St. Andrews, which was confirmed by his son Hugo, previous to 1171. The tower of the present church is of great antiquity, though certainly not by any means of that age which has been attributed to it, that of the 9th or 10th century; though we should be inclined to assign it to the 14th or 15th century. The spire, however, which surmounts it, is of comparatively modern erection, and the church was partly rebuilt and enlarged in 1806; sittings 1,360. It is situated in the village of Markinch. The small parsonage of Kirkforthar was annexed to Markinch about the beginning of the 17th century. Two chapels have been erected, which have since had districts assigned them, as *quoad sacra* parishes, at Milntown of Balgonie, and the village of Thornton on the south-west boundary of the parish: which see. The parochial school is in the village of Markinch, and is ably taught, and well attended. The teacher has the maximum salary, with a good house, garden, and school-house. Besides the parish-school, there are eight other schools in the parish. There is a chapel at the village of Markinch in connection with the United Associate Synod; sittings 300; and another in the same connection at Dubhieside; sittings 400. The stipend of the former is £100; of the latter £84.

MARLEE (LOCH), or DRUMMELLIE. See articles LETHENDY and STORMONT.

MARNOCH, a parish in Banffshire; bounded on the north by Boyndie, Banff, and Alvah; on the east by Forglu; on the south by the Deveron, which divides it from Inverkeithnie, and partly from Rothie-

may; and on the west by Rothiemay, Grange, and Ordiquhill. Its form is irregular, extending to about 10 miles in length, by 4 to 5 in breadth: square area about 35 miles. Houses 556. Assessed property, in 1815, £4,407. Population, in 1801, 1,687; in 1831, 2,426.—The surface is in general rather level, with hills surrounding it on the north, east, and west. The soil varies from a rich loam to clay and moorland. On the banks of the river the land is very fine and generally arable. There are extensive and beautiful plantations, and the district is well-cultivated, except the hilly parts on its borders which are well-adapted for pasturing black cattle, some thousands of which are annually reared in the parish. Marnoch is now celebrated in the annals of the Church establishment, from the proceedings connected with the presentee having caused the suspension and ultimate exclusion of the majority of the presbytery of Strathbogie by the General Assembly.\* The parish is in the presbytery of Strathbogie, and synod of Moray. Patron, the Earl of Fife. Stipend £219 15s. 5d.; glebe £15. Unappropriated teinds £373 13s. 7d. Church built in 1792; repaired about the year 1830; sittings 837. It was stated to the ecclesiastical commissioners, in 1836, that it was desirable a preacher should be placed, under the control and superintendence of the parish-minister, in the thriv-

\* The presentee to the parish of Marnoch, Mr. Edwards, whose presentation was dated in April, 1837, was vetoed. The presbytery applied to the superior ecclesiastical courts for advice, and they directed the presentee to be rejected. The presentee applied to the Court of Session in 1839, which directed the presbytery to take him on trial, and admit him to the charge should he be found competent. Thus perplexed by two masters, the presbytery, by a majority, decided on obeying the civil court, and on the 19th February, 1840, found Mr. Edwards duly qualified. Immediately on their doing this, the commission of the General Assembly commenced its sittings. To this body the presbytery were instructed to report their proceedings, and they did so. Several motions were made, and the Commission ultimately suspended seven clergymen, forming the majority of the Strathbogie presbytery, from their functions, which they directed others to perform in their place. Mr. Edwards, meanwhile, brought an action against the presbytery, to the effect, that that body, and the whole individual members thereof, should be decreed and ordained forthwith to admit and receive the pursuer as minister of the church and parish of Marnoch according to law, or otherwise to make payment to him of £10,000 sterling of damages and expenses. Mr. Cruickshank and others, forming the majority of the presbytery, gave in defences, admitting generally the accuracy of the statements in the libel, and adding,—“The present defenders, who are the majority of the presbytery, are willing to yield obedience to the decrees of the court, by which it has been found and declared that they are bound to admit and receive in terms of the statute, the pursuer.” On these defences the pursuer closed the record with the majority. On the other hand, the Rev. Mr. Robertson and three other members, an apparent minority of the presbytery, lodged separate defences, opposing the pursuer's claims, and the jurisdiction of the court to take cognizance of them, and urging a variety of pleas, which rendered it necessary for the pursuer to make up a record with these parties, by condescendence and answers in the usual form. In the meantime, the pursuer moved for decree, in terms of the first conclusion of the libel against the majority of the presbytery, who had closed the record, and did not oppose decree to this effect. But the other defenders opposed this motion, on the ground that Mr. Cruickshank and his brethren had wrongfully assumed the title of “The presbytery of Strathbogie,” and that no decree ought to be issued against them in that character. The motion thus made and opposed was submitted to the consideration of the court upon an interlocutor and elaborate note by Lord Cunningham, as Lord-ordinary; and on the 18th of December, 1840, the court pronounced the following interlocutor:—“The Lords, on the report of Lord Cunningham, ordinary, having heard the counsel for the pursuer, and also the counsel for the defenders, the Rev. John Robertson, William Duff, Harry Leith, and David Dewar, for their interest, against decree going out against the defenders on the closed record betwixt the pursuer and the presbytery of Strathbogie, and majority of the members thereof, Decree against the presbytery of Strathbogie, and the Rev. John Cruickshank, William Allardice, James Walker, William Maxwell, James Thomson, William Cowie, and James A. Cruickshank, being a majority of the said presbytery, in terms of the first conclusion of the libel, and allow the decree to go out and be extracted *ad interm*, dispensing with the minute-book; and the defenders, the said John Robertson, William Duff, Harry Leith, and David Dewar, liable to the pursuer in the expenses occasioned by their opposition, both before the Lord-ordinary and in the inner house; allow an account thereof to be lodged, and remit the same to the auditor to tax and be reported; *quoad ultra* remit the cause to the Lord-ordinary.”

ing village of Aberchirder, which is in this parish. There is here an Episcopalian congregation established about 25 years ago. Sittings in chapel 100; minister's salary about £20 per annum, including £10 from Scottish Episcopal fund: chapel vacant in 1837. A Baptist congregation was established in 1806; and a United Secession congregation was established in 1826. A Roman Catholic congregation has also existed here from time immemorial. Chapel built in 1801; repaired in 1831; minister's salary about £22 10s., but variable. Schoolmaster's salary £30; fees, &c., £20 to £30, besides a share of the Dick bequest. There is a private school in the parish.

MARTIN, a small inhabited island in the parish of Lochroom, and county of Cromarty. It lies in the frith, or elongated bay of Lochbroom, 4 miles north-north-west of the village of Ullapool, and is separated from the coast of the district of Coygach by a channel of little more than half-a-mile in breadth. The island measures about 5 miles in circumference.

MARTINHAM (Loch), a lake in the parishes of Coylston and Dalrymple, chiefly in the former, in the district of Kyle, Ayrshire. It stretches from north-east to south-west, in a stripe  $1\frac{1}{2}$  mile in length, and 1 furlong in mean breadth. From Loch-Fergus, a smaller lake lying half-a-mile to the north-west, it receives one stream, and at its own north-eastern extremity it receives another, and these it sends off at its other end, in a stream  $2\frac{1}{2}$  miles long, to the Doon near Dalrymple church. Its waters abound in pike, perch, and eel, and are frequented by wild geese, wild ducks, the teal, and the widgeon. Some of its pike have weighed nearly 30 pounds. On the bosom of the lake is an islet so completely wooded, as to look like a basket of foliage; amidst its woods are the ruins of an ancient manor-house, 100 feet long, and 30 wide; and both the ruined walls and the trees which surround them are thickly overrun with ivy. On a graceful low promontory on the north-west side of the lake, stands Martinham-lodge; and here and elsewhere the banks are so beautifully sylvan as to render the lake a peculiarly refreshing retreat amid the play of a summer sun's rays.

MARTIN'S (St.), a parish in the Strathmore district of Perthshire; bounded on the north by Cargill; on the east by Collace and a detached part of Forfarshire; on the south-east by Kilspondie and the Balbogie section of Kinnoul; on the south-west by Scone; and on the west by the river Tay, which divides it from Redgorton and Auchtergaven. Its greatest length from the boundary near Bogs on the east to the point where the Tay leaves it on the west, is  $5\frac{1}{2}$  miles; and its breadth varies from  $1\frac{1}{2}$  mile to  $4\frac{1}{2}$  miles. The section of Kinnoul lying contiguous to it is entirely an indentation. Several streamlets are powerful enough to drive corn and lint mills. The Tay, while for  $2\frac{1}{2}$  miles it touches the parish, is beautiful in its aspect, and valuable for its salmon-fishings. The surface, though neither hilly nor the reverse, rises considerably above the level of the Tay, and is much diversified by troughs, rising grounds, and undulations. Plantations are extensive enough to give a warm appearance to the interior; copse-woods fringe and feather the edge of the Tay; and enclosures and culture spread neatness over the whole area. The soil in general is a black mould on till, but very much improved; and toward the river it is naturally good and fertile. Freestone everywhere abounds, and is extensively quarried. The other chief minerals are limestone and rock-marl. Vestiges are very distinct of a Roman road leading from the ancient Bertha eastward, past Berry hills, Ditchmuir, and Byres toward the parish of Cargill. Several Druidical temples are observable. The house of St. Martin's is a fine modern mansion. A

considerable number of the parishioners are employed in the coarse linen manufacture. The turnpike from Perth to Blairgowrie goes northward through the parish; and that from Perth to Cupar-Angus runs north-westward through its southern division. The nearest part of the parish is distant only  $3\frac{3}{4}$  miles from Perth. Population, in 1801, 1,136; in 1831, 1,135. Houses 204. Assessed property, in 1815, £4,437.—St. Martin's is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend £192 7s. 8d.; glebe not ascertained. Unappropriated teinds £58 13s. 1d. Schoolmaster's salary £34 4s. 4½d., with £18 12s. 5d. fees, and £5 10s. other emoluments. There is occasionally a private school attended by about 40 or 50 children.—The present parish comprehends the ancient parishes of St. Martin's and Cambusmichael, united upwards of 150 years ago. The church of St. Martin's became that of the united parish, and anciently lay within the diocese of Dunkeld, and was a mensal church of the abbey of Holyrood. The church of Cambusmichael—still indicated by its ruins beside the Tay on a low plain of the class which the Gaelic language calls 'Cambus'—anciently was included in the diocese of St. Andrews, and belonged to the abbacy of Scone. A small chapel stood beside it within the limits of the cemetery.

**MARTIN'S (St.).** See **KIRKMICHAEL**, Ross-shire.

**MARTIN'S (St.).** See **HADDINGTON**.

**MARTLE**, or, according to local pronunciation, **MARKLE**, a hamlet in the parish of Athelstaneford, and shire of Haddington. It is  $4\frac{1}{2}$  miles north-east of Haddington. According to Buchanan, it was anciently called Miracle, from a miraculous incident which he relates concerning a battle fought here: See **ATHELSTANEFORD**.

**MARY'S (St.). ISLE**, a peninsula,  $1\frac{1}{2}$  mile in length, and 3 furlongs in mean breadth, in the parish of Kirkeudbright, Kirkeudbrightshire, formed by the main channel of the estuary of the Dee on the west, and a bay advancing inland from the broader part of that estuary on the east. The retreat of the sea, so noticeable along the whole coast of Kirkeudbrightshire, is peculiarly observable in this peninsula. The sea, in former times, made the place literally an isle, and also covered at every tide at least one-half of its present cultivated surface. The west side is high ground, defended by a border of rocks; but the east side visibly discloses from end to end, in large shell-hanks, the former line of high water. The whole peninsula is ornately occupied with the wooded and very beautiful pleasure-grounds of the Earl of Selkirk, and presided over by his lordship's principal residence in their centre. The grounds are elegantly laid out in winding sylvan walks, and gardens and lawns of uncommon elegance; and form a gorgeous environ, at only  $\frac{1}{4}$  of a mile distant of the burgh of Kirkeudbright. The family of Selkirk are among the most aristocratically descended in the south of Scotland, and are nearly allied to the chief houses both of Hamilton and of Douglas.—A priory, founded in the reign of David I. by Fergus, Lord of Galloway, occupied the isle till the Reformation; and having been dedicated to the Virgin Mary, occasioned its ancient name—which was the Isle of Trahil or Trayl—to be superseded by that of St. Mary's Isle. The priory was called 'Prioratus Sanctæ Mariæ de Trayl.' It was the seat of canons-regular of the order of St. Augustine; and being given by its founder to the abbey of Holyrood, became a dependent cell of that establishment. The prior was a lord of parliament. The priory was surrounded with high walls, which enclosed an extensive area. The outer gate was distant at least half-a-mile from the priory, and stood

at a place about the same distance from the town, and still called the Great Cross. The inner gate led immediately to a group of cells, the habitations of the monks, and was called the Little Cross. All the buildings were swept away about 150 years ago, to give full scope for beautifying the ground as a noble demesne. While the Earl of Selkirk was extending his garden toward the close of last century, 14 human skeletons were discovered by the workmen, placed regularly along side of one another with their feet to the east, occupying a spot quite different from the burying-ground of the monks, one of them distinguished by some monumental honours from the rest, and all the remains possibly of persons interred previous to the existence of the priory. David Panther, or Panitor, was prior of St. Mary's Isle toward the middle of the 16th century. See article **CAMBUSKENNETH**. He was one of the most eminent literary men of his day, and wrote letters, published by Ruddiman in 1772, which afford a model of classical Latinity; but, according to Buchanan, he was a profane man, and instigated persons at court to all manner of impurities; and, according to John Knox, "eating and drinking was the pastyme of his lyif." He died at Stirling on the 1st of October, 1558. Robert Richardson, descended from a line of respectable citizens of Edinburgh, and previously promoted to the offices of lord-treasurer and general of the mint, was made commander of St. Mary's Isle about the year 1560; and he used such adroitness, in spite of laxity of morals, or rather probably with the aid of it, as to hold all his lucrative situations under both Mary and her son. Large estates were purchased by him; and at his death, in 1571, were left to his two sons, Sir James Richardson of Smeaton, and Sir Robert Richardson of Pencuitland.—The noted Paul Jones, when infesting the coast with his fleet in 1778, made a descent on St. Mary's Isle, with the view of seizing the Earl of Selkirk as a hostage during the war with America. His lordship being from home, all the silver-plate in his mansion was seized and carried away; but it was returned uninjured and without cost, seven years after the depredation.

**MARY'S (St.) LOCH**, a beautiful sheet of water in the shire of Selkirk, about 10 miles from Innerleithen, and 31 from Edinburgh. It is only about 4 miles in length; and, with the lesser lake of the Lowes, lies imbedded amid hills in the bosom of a beautiful and pastoral country. "There are few spots," says an anonymous writer, "where there is so little that is repulsive to man, and yet so few traces of his presence. You may scan the abrupt green hills on either side, from the water's edge to their summits, without seeing any work of human art, save scattered here and there on the declivities those mysterious looking circular sheep-pens, which look like so many gigantic dogs' collars dropped from the clouds, and remaining where they fell. The banks sink abruptly down into the lake, the waters of which are exquisitely transparent. Wordsworth says—he must have seen it in a fine sunny day, as we did—

'Through her depths St. Mary's lake  
Is visibly delighted,  
For not a feature of those hills  
Is in the mirror slighted.'

It is, in fact, a most minute and faithful looking-glass to all the hills, and they look as clean and smooth as if they had shaved themselves by it. The whole scene must have indeed been very different from its present aspect, when these abrupt hills were covered with dusky pines;—

'They saw the derke forest them before,  
They thought it awsome for to see,'

says the ballad of the outlaw Murray, describing the

*C. F. Hooper - Lith. & Engr. - New York*

advance of the King's 'full 5,000 men,' in one of the expeditions of the Jameses to make war on the rieviers." Sir Walter Scott, in his Introduction to the second canto of 'Marmion,' has given a most faithful and graphic description of this loch, which our readers will thank us for transferring to our pages:—

" Oft in my mind such thoughts awake  
By lone St. Mary's silent lake.  
Thou know'st it well,—nor fen, nor sedge,  
Pollute the pure lake's crystal edge;  
Abrupt and sheer, the mountains sink  
At once upon the level brink;  
And just a trace of silver sand  
Marks where the water meets the land.  
Far in the mirror, bright and blue,  
Each hill's huge outline you may view;  
Slaugy with heath, but lonely bare,  
Nor tree, nor bush, nor brake is there,  
Save where, of land, you slender line  
Bears thwart the lake the scattered pine.  
Nor thicket, dell, nor copse you spy  
Where living thing concealed might lie;  
Nor point, retiring, hides a dell,  
Where swain, or woodman lone, might dwell;  
There's nothing left to Fancy's guess,—  
You see that all is loneliness;  
And silence aids,—though the steep hills  
Send to the lake a thousand rills,  
In summer-tide so soft they weep,  
The sound but lulls the ear asleep;  
Your horse's hoof-tread sounds too rude—  
So stilly is the solitude!"

The whole of the scenery from Peebles to Innerleithen—the famed St. Ronan's—is rich in wood and dale, and highly cultivated. On leaving St. Ronan's for St. Mary's loch, and crossing the Tweed, we pass the stately and ancient house of Traquair. After which, and after passing 'the Bush ahoun Traquair,' well-known in Scottish song, and the parish-church on the right, the traveller plunges amongst the mountains, and soon finds himself in a wild pass of about 5 miles in length. On emerging from this, the lonely Yarrow all at once hursts on his view; and here for a time nothing is seen but mountains covered with sheep, and the cottage, long associated with the name and writings of the Ettrick Shepherd, which stands at a short distance east of the lake, and which, more than any other feature in the landscape, will hereafter make St. Mary's loch an object of interest—of enthusiasm to all lovers of poetry. Almost every mountain and stream in 'the Forest' have been hallowed by the genius of the bard, who

" Found in youth a harp among the hills,  
Dropt by the Elfin-people; and whilst the moon  
Entranced hung o'er still St. Mary's loch,  
Harped by that charmed water, so that the swan  
Came floating onwards through the water-blue,—  
A dreamlike creature listening to a dream;  
And the Queen of the Fairies rising silently  
Through the pure mist, stood at the shepherd's feet,  
And half-forgot her own green paradise,  
Far in the bosom of the hill,—so wild!  
So sweet! so sad! flowed forth that shepherd's lay."

At the north end of the loch stands the ruined tower of DRYHOPE,\* which see.

Opposite the farm of Dryhope, on the other side of the lake, is the farm-steading of Bowerhope; and,

\* Dick of Dryhope was a well-known freebooter in the 16th century; and his name was pretty familiar to the Commissioners for settling differences between the Scotch and English marches. At one of these meetings the warden of Bewcastle complained, that in July, 1586, the Laird's Jock—a worthy of whom some further notice will be found in our article MARGERTON—Dick of Dryup and their accomplices, had taken, by open force, 400 kine and oxen from the Drysykes of Bewcastle. And Andrew Routledge of the Nook, complained upon the same individuals for 400 kine and oxen stolen, besides burning his house, corn, and 'insicht.' On both these charges Dick and his friends were 'fouled' for not appearing. The tower of Dryhope, however, of which the ruins remain, was not the residence of Dicky. His residence, now called 'The Auld Wals,' is far up the Hope, in one of the strongest places for the residence of an old border-chieftain that can well be imagined. Unless they had been assisted by a traitor-guide, Dicky might have defied all the troopers of England to have found him out.

behind it, the lofty and precipitate Bowerhope-law, of which the hard of Ettrick, contemplating its mass in-winter, has sung,—

" But winter's deadly hues shall fade  
On moorland bald and mountain shaw,  
And soon the rainbow's lovely shade,  
Sleep on the breast of Bowerhope-law."

At the head of the lake, and directly over the old tower, are the braes or four hills of Chapelhope, the rugged and broken outskirts of which are celebrated as the last retreat of the persecuted Covenanters. More distant, and peeping over these, is the top of Carrifrangans, a dreadful precipice in Moffatdale. Towering above Carrifrangans, though not so distant, is the pointed summit of the WHITE COOMB [which see], the highest mountain in the south of Scotland. On the same side is a hill called the Braken-law. Here the river Meggat joins the lake after flowing through Meggatdale, a wild district, and the principal hunting-scene of the royal Stuarts in this part of the country. At the foot of the Braken-law is seen, though indistinctly, the ruined chapel and burial-place of St. Mary's, from which the lake derives its name. This, also, the poet's pen has rendered a classic spot. In this lonely place the bones of many an outlaw mingle with the dust; and here the shepherd of the present day still finds his last resting-place.

" For though in feudal strife a foe  
Hath laid our Lady's chapel low,  
Yet still beneath the hallowed soil,  
The peasant rests him from his toil;  
And, dying, bids his bones be laid  
Where erst his simple fathers prayed."

This ancient chapel is the subject of many traditions, and of a variety of ballads and poetry of ancient and modern date.

" St. Mary's loch lies shimmering still,  
But St. Mary's kirk-bell's lang dune ringing!  
There's naething now but the grave-stane hill  
To tell o' their loud psalm-singing!"

Among the ballads, that of 'the Douglas tragedy' has been rendered familiar to the reading world by Sir Walter Scott in the 'Border Minstrelsy.' The Lord William and Lady Margaret of that ancient ditty, were buried in the chapel.

" Lord William was buried in St. Mary's kirk,  
Lady Margaret in Mary's quire;  
Out o' the lady's grave grew a bonny red rose,  
And out o' the knight's a brier,

" And they twa met, and they twa plat,  
And fin they twa were near;  
And a' the world might ken right weel,  
They were twa lovers dear.

" But by and rade the Black Douglas,  
And wow but he was rough!  
For he pulled up the bonny brier  
And flang'd in St. Mary's loch."

An ancient and very popular tradition has also given the ground-work of Mr. Hogg's hallad of 'Mess John;' and the chapel is the scene of the principal incident in his hallad of 'Mary Scott.' Here the daughter of stern Tushilaw is supposed, by the poet, to have been brought for interment; here she awaked from that sleep which appeared to all the sleep of death; and here was married to her lover, Pringle, Lord of Torwoodlee.

MARYBURGH, a considerable village in the parish of Kilmalie, Inverness-shire. It stands at the mouth of the rivers Lochy and Nevis, on the east side of Loch-Eil, at a point where that long indentation of the sea suddenly bends toward the west-north-west, and 1½ mile south of where it is entered by the Caledonian canal. It is 17 miles east of Stroutrian, 29½ south-west of Fort-Augustus, and 74 north of Inverary. Owing to its being situated in the immediate vicinity of Fort-William, it very

generally assumes the fort's name, and is known by it in distant parts of the kingdom, almost to the exclusion of its proper name of Maryburgh. The village and the fort originally have the names respectively of Gordonsburgh and Inverloch, — the former from being built on the property of the noble family of Gordon, and the latter from being situated at the embouchure of the Lochy; but, after the accession of the Orange family to the British throne, they assumed the names of Maryburgh and Fort-William, in honour of the consort-sovereigns. Maryburgh consists of one long street running parallel to the water, and close to its edge; and of several short narrow streets at right angles with the chief one. It has a missionary church of the Society for propagating Christian knowledge, an Episcopalian chapel, a Roman Catholic chapel, a parochial school, a religious library, a literary library, a Bible society, two respectable inns, an office of the National bank of Scotland, and an office of the British Linen company's bank. Annual fairs are held in June and November, and occasion the transaction of a considerable amount of business; but a weekly market, though nominally held, is so thinly attended as to render the day of it little discernible from any other business-day of the week. The inhabitants, for the most part, depend so entirely on the herring-fishery for their maintenance, that when it fails they are destitute. A quay has recently been constructed at the place, jointly by private subscription, and by the fishery commissioners. A regular communication is enjoyed north-eastward to Inverness, and southward along the coast and through the Crinan canal to Glasgow, twice a-week in summer and once a-week in winter, by the Glasgow and Inverness steamers. A sheriff-substitute of Inverness-shire, having jurisdiction also over the nearest portion of Argyleshire, resides and holds his courts in Maryburgh. Population between 1,200 and 1,500.

**MARYBURGH**, a small village in the parish of Cleish, Kinross-shire. It stands on the road between Perth and North Queensferry, 4 miles south of Kinross, and  $7\frac{1}{2}$  north-east of Dunfermline.

**MARYCULTER**, a parish in the county of Kincardine; bounded on the north by the river Dee; on the east by Banchory and Davenick; on the south by Fetteresso; and on the west by Durris. It extends from the south bank of the Dee, opposite Peterculter, to the Gramplans, and is of an oblong form, 6 miles in length from east to west along the Dee, by 2 in breadth. Houses 187. Assessed property, in 1815, £1,911. Population, in 1801, 710; in 1831, 960. The whole of this district is rocky, and the surface incumbered with stones, except in some small haughs and dales on the river side, where the soil is sandy and naturally thin; on the rising midland it becomes deeper and blacker; but southwards it turns to moss, turf, and swamp. Vast improvements, however, have been latterly effected, on ground which "thoroughly to improve, enclose, and render tolerably fertile," says the author of the Old Statistical Account, "may he almost termed a new creation." The district is well-wooded. The principal mineral formation is granite, particularly gneiss in large masses; iron-slag and potters'-earth are also found. The only antiquities are some small cairns. The ancient name of the parish is said to have been *Marie Cultura*. The Knights-Templars seem to have anciently frequented part of this district. The mansions are those of Maryculter, Kingcausie, Heathcote, and Auchlunies, several of which are very picturesquely situated. — The parish is in the presbytery and synod of Aberdeen. Patron, Duff of Fetteresso. Stipend £171 12s. 2d.; glebe not returned. Schoolmaster's salary £30; fees, &c. £15. There are four

private schools in the parish. — At Blairs, near the Dee, is St. Mary's college, a Roman Catholic institution, established in 1829, for the education of youths designed for the priesthood. It is under the direction of a president, three professors, and a procurator. From 35 to 45 pupils are usually in course of education.

**MARYKIRK**, or **ABERLUTHNET**, a parish in Kincardineshire; bounded on the north by Fordoun and Laurencekirk; on the east by Garrock and St. Cyrus; on the south by the river North Esk; and on the west by Fettercairn. It occupies the eastern extremity of the Howe or Hollow of the Mearns, and is of an irregular square form, measuring 4 miles in length, by 3 to 4 in breadth. Area 7,591 square acres. Houses 442. Assessed property, in 1815, £6,539. Population, in 1801, 1,530; in 1831, 2,032. The surface is exceedingly level; the soil, in general, fertile and well-cultivated, though various; and the aspect of the country very beautiful. There are some fine residences surrounded with policies and thriving plantations; of these the principal are, Inglismaldie, Balmakewan, Hatton, and New Thornton. The Luther, which intersects the parish, and the North Esk, are here crossed by substantial bridges; and near the banks of the Esk, on the road between Montrose and Laurencekirk, stands the village of Marykirk, in a beautiful situation surrounded with woods and lawns. There is another village named Luthermoor. The parish and the principal village were anciently called *Aberluthnot*, a word of Gaelic etymology, bearing allusion, it is thought, to the situation of the village, in the centre of which the church was built, and to the small rivulet that passes by, and the lands that surround it. — The parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, Crombie of Phesdo. Stipend £231 13s. 2d.; glebe £8. Unappropriated college tithes £119 8s. 7d. Church built in 1806; sittings 638. Being situated near one extremity of the parish, it is recommended, in the report of the Commissioners of Religious instruction, that a new church, with 500 to 600 sittings, should be erected at Luthermuir. There is an United Secession congregation at Muirton, established about 1758; chapel built in 1769, and rebuilt in 1824; sittings 430; minister's stipend £68 10s., with glebe, &c. £15. There is a Congregational church at Sauchieburn, established about 1772. Schoolmaster's salary £30; fees, &c. £21 10s. There are six private schools in the parish.

**MARYPORT**, a creek  $2\frac{1}{2}$  miles north of the Mull of Galloway, on the east coast of the parish of Kirkmaiden, Wigtonshire, one of about sixteen tiny bays which indent the outline of that peninsular parish. Though this creek is currently called a port, the only real harbours in the parish are Drummore,  $1\frac{3}{4}$  mile to the north, and Portnessock on the west coast.

**MARYTON**, a parish consisting of two detached estates in the maritime district of Forfarshire. The larger estate, called Old Montrose, the property anciently of the great family of Montrose, but now of Sir James Carnegie of South Esk, Bart., is bounded on the north by the river South Esk, which divides it from Dun; on the north-east by Montrose-basin, which divides it from Montrose; on the east and south by Craig; and on the west by Farnell. Its length, from north to south, is  $2\frac{1}{2}$  miles; and its breadth expands from  $1\frac{1}{2}$  mile, toward the north, to  $2\frac{1}{2}$  on the extreme south. Pow-water is its boundary for  $\frac{2}{3}$  of a mile with Farnell; and Haugh-hurn bisects it north-eastward to Montrose-basin. The southern extremity rises in a hilly ridge, and sends up from a base of rock 300 or 400 feet above sea-level, a bulky artificial eminence, called Maryton-law, intended pro-

bably as a beacon-post, or as a seat of feudal justice, and commanding a fine view of the German ocean, with the rich carpeting of Craig parish on the foreground;—of the harbour, basin, town, and links of Montrose, foiled by the undulating heights of Kincardineshire, in the distance,—and of the rich green strath of the South Esk, with the town of Brechin in the centre, and the bold ascents and rugged skyline of the Grampian mountains on the back-ground. Excepting this hillocky-screen along the south, the whole area is nearly level, and consists, on the surface, of a very fine loam, or of powerful wheat-bearing carse-land, both in a state of prime cultivation. Part of the rich ground has very recently been won from the tides of Montrose-basin. Navigation is practised at spring-tides, by vessels of 50 or 60 tons to Old Montrose-place, about half-way up the coast-line of the district; and confers the double advantage of bringing up coals and lime, and bearing away grain and esculent roots. Vestiges are visible of the foundations and moat of the old castle of Bonnyton, anciently the residence of the Woods of Bonnyton, whose estate, once separate, is now incorporated with that of Montrose.—The lesser estate and district of the parish is called Dysart, lies from 6 to 11 furlongs south of the larger district, and belongs to David Carnegie, Esq. of Craigs. It measures  $2\frac{1}{2}$  miles in extreme length from east to west; varies in breadth from a furlong to  $1\frac{1}{2}$  mile; and is bounded on the east by the German ocean; on the south by Lunan; and on all other sides by Craig. The romantic dell called Buckyden is its boundary-line for a considerable way with LUNAN: which see. The coast-line, about a mile in length, is bold, and sends off the surface at a considerable elevation above sea-level. The whole area lies higher than that of Old Montrose, excepting the latter's southern bank, and is carpeted with naturally a much poorer soil; yet it is all enclosed and under culture.—The whole parish comprehends about 2,180 acres, of which about 100 are in pasture and under wood, and all the rest in tillage. A coarse stone, a species of trap, is quarried in several places as road-metal and material for stone fences. Old Montrose is traversed by the turnpike between Montrose and Forfar, and Dysart, by the great north mail-road. Both districts have high advantage from the near vicinity of the town and port of Montrose. Population, in 1801, 596; in 1831, 419. Houses 79. Assessed property, in 1815, £5,179.—Maryton is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend £198 6s. 9d.; glebe £18. The church stands in the south-east corner of Old Montrose, and has more than sufficient accommodation for the parishioners. Schoolmaster's salary £30, with £10 fees, £4 other emoluments, and a house and garden. There is an endowed school on the boundary with CRAIG: which see.

**MASTERTON**, a small village in the parish of Dunfermline, Fifeshire. It is situated upon an eminence, and commands fine prospects of the frith of Forth, and the adjacent country. Here is an hospital for four widows, founded and endowed in 1676, by Sir Henry Wardlaw of Pitreavie. Each widow is entitled to receive 6 bolls of oatmeal, and 40s. in money per annum. It is  $1\frac{1}{2}$  mile north-north-west of Inverkeithing. Population 126.

**MAUCLINE**,\* a parish nearly in the centre of the district of Kyle, Ayrshire. It measures about  $7\frac{1}{2}$  miles in length from north to south, from 2 to 4 miles in breadth, and about 24 square miles in

area; and is bounded on the north by Craigie and Galston; on the east by Sorn; on the south by Auchinleck and Ochiltree; and on the west by Stair and Tarbolton. Mauchline-hill, forming part of what is called 'the Long-ridge of Kyle,' and attaining a considerable altitude, rises a little north-eastward of the town, runs in a ridge westward about a mile in the parish, and terminates at Schioch hill in Tarbolton. The ridge commands a magnificent view of nearly all Ayrshire and the frith of Clyde, foiled on the south by Cairnsmuir and other alpine summits of Galloway; on the west by the Paps of Jura towering up behind the bold mountains of Arran; and on the north by Benlomond and adjacent sky-scaling heights looking over the undulating hills of Renfrewshire. Excepting in Mauchline-hill the surface of the parish is, in general, flat, with a gentle prevailing declivity to the south. About 340 acres of marsby ground and declivities are covered with wood; a patch of the medium size of a field is moss; and all the rest of the area is arable, fully enclosed, excellently cultivated, and cheerful in aspect. A large tract of land, formerly called Mauchline-moor, exhibits no traces of its ancient condition, and vies with many a naturally favoured spot in its culture, its enclosures, and its belts of wood. The soil, in the vicinity of the town, is light and sandy; in a few localities, is a rich loam; and, over the greater part of the parish, is of a clayey nature. Coal, limestone, and ironstone abound, but are so thin in the strata that they have ceased to be worked. White sandstone, much esteemed for its colour, for the fineness of its grain, and for its durability, is quarried at Deaconbank; and excellent red sandstone, from strata of great thickness, is worked in the vicinity of the town. The river Ayr runs across the south end of the parish, between steep red sandstone rocks 40 or 50 feet high, overhung by wood, and both beautiful and romantic. Of several caves cut out of the rocks, resembling those at Auchinleck, noticed by Dr. Johnson, one hears the name of Peden's cave, and is said to have been a frequent hiding-place of the celebrated Alexander Peden during the period of the persecution. Lugar-water joins the Ayr, on its left bank, a little above Barskimming. Cessnock-water runs north-westward through the northern part of the parish. Lochbrown,  $2\frac{1}{4}$  miles north-west of the town, is a lake of 60 acres in area, resorted to by wild geese, and wild ducks, and occasionally by swans, and emitting a streamlet which drives two corn-mills and falls into the Cessnock. Respectively 2 miles north-east of the town and  $1\frac{1}{2}$  mile south of it, stand the villages of Auchmillan and Haugh,—the former with about 40, and the latter with nearly 100 inhabitants. At Haugh is a woollen-factory, employing between thirty and forty persons, and engaged chiefly in spinning yarn for the carpet manufacturers of Kilmarnock.—On Mauchline-moor, in 1647, a party of the King's troops were defeated by a party of Covenanters; and their military chest, it is said, was found, many years afterwards, hid on the scene of action. Five Covenanters were martyred in the parish under the reign of James VII., and were commemorated by a tombstone—now substituted by a recently erected monument—at Mauchline town-head, both bearing the inscription:

"Bloody Dumbarton, Douglas, and Dundee,  
Moved by the Devil and the Laird of Lee,  
Dragged these five men to death with gun and sword,  
Not suffering them to pray nor read God's word:  
Owning the word of God was all their crime,  
The eighty-five was a saint-killing time."

The celebrated reformer and martyr, George Wishart, was invited, in 1544, to preach in the church of Mauchline; and, on his arrival, he found the place

\* The name in the Gaelic, *Magh-Ianna*, 'the plain with the pool'; and alludes to the site of the town on a plain traversed by a streamlet, in which are three cascades or linn falling into little pools.

guarded by a party of soldiers, posted there to resist him by the sheriff of Ayr, a heated opponent of the Reformation. Some of the country-people proposing to force an entrance, he dissuaded them, saying: "It is the word of peace I preach unto you; the blood of no man shall be shed for it this day. Christ is as mighty in the fields as in the church; and He himself, when he lived in the flesh, preached oftener in the desert and by the sea-side, than in the temple of Jerusalem;" and he then moved away to Mauchline-moor, followed by a multitudinous assembly, and there preached to them upwards of three hours.—The parish is traversed by the post-road between Glasgow and Dumfries, by three other turnpikes, and by several subordinate roads; and enjoys means of easy intercourse with every part of the circumjacent country. Of several useful bridges over the Ayr, one at Barskimming, built by the late Sir Thomas Miller, and consisting of a single span, 100 feet wide and 90 high, is the most elegant erection of its class, and, at the same time, one of the greatest curiosities in the parish. Population, in 1801, 1,746; in 1831, 2,232. Houses 329. Assessed property, in 1815, £8,216.—Mauchline is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Hastings. Stipend £230 19s. 11d.; glebe £20. Unappropriated tields £33 3s. 5d. The parish-church, situated in the town, was built in 1829. Sittings about 1,100. There is in the town a place of worship belonging to the United Secession. The parish-school was attended, in 1834, by 182 scholars; and four private schools by 134. Parish school-master's salary £34 4s. 4½d., with £40 fees, and £10 other emoluments.—This parish was anciently of great extent, comprehending, besides its present area, the far-spreading territory which now constitutes Sorn and Muirkirk; and, in all its expanse, it belonged to the Stewarts, and formed part of their princely domain of Kyle-Stewart. George Chalmers—whose minute and dry but learned and accurate researches have furnished us with antiquarian notices of many a parish—speaks in so interesting a manner respecting ancient Mauchline, that he must be quoted in full detail. "At the commencement of the reign of William, in 1165," says he, "Walter, the son of Alan, granted to the monks of Melrose the lands of Mauchline, with the right of pasturage, in his wide-spreading forest on the upper branches of the Ayr river; extending to the boundaries of Clydesdale: and the Stewart, also, gave the same monks a carrucate of land, to improve, in the places most convenient; all which was confirmed to them by King William, at the request of the donor. The monks of Melrose planted, at Mauchline, a colony of their own order; and this establishment continued a cell of the monastery of Melrose till the Reformation. In the before-mentioned grant of the lands of Mauchline, or in the confirmations thereof, there is no mention of the church of Mauchline. It is, therefore, more than probable that the parish-church of Mauchline was established by the monks of Melrose, after they had become owners of the territory: and it is quite certain that the church belonged to them. It is apparent that the country which formed the extensive parish of Mauchline, was but very little settled when the monks obtained the grant from the first Walter. This fact shows, that during the reign of David I., and even during the reigns of his grandsons and successors, Malcolm IV. and William, Renfrew and Ayr were inhabited chiefly by Scoto-Irish, who did not supply a full population to the country. The monks afterwards acquired great additional property in the district, and contributed greatly to the settlement and cultivation of it. They obtained ample jurisdictions over their extensive estates of

Mauchline, Kylesmure, and Barmure, which were formed into a regality, the courts whereof were held at Mauchline. This village was afterwards created a free burgh-of-barony, by the charter of James IV., in October, 1510. Before the Reformation there were in this parish two chapels; the one on Greenock-water, in the district which now forms the parish of Muirkirk, and the other on the river Ayr, on the lands that now form the parish of Sorn. This last was dedicated to St. Cuthbert, and stood a little to the eastward of the present village of Catrine, on a field which is still called St. Cuthbertsholm. The church of Mauchline, with its tithes and pertinents, continued, at the Reformation, to belong to the monks of Melrose, who also held the extensive barony of Kylesmure and Barmure, in that parish; and the whole was granted, in 1606, to Hugh, Lord Loudoun. An act of parliament was then passed, dissolving from the abbey of Melrose the lands and barony before-mentioned, and the parish-kirk of Mauchline, with its tithes and other property; and erecting the whole into a temporal lordship to Hugh, Lord Loudoun; and creating the town of Mauchline into a free burgh-of-barony, with a weekly-market and two fairs yearly. The great effect of such grants was only to make one ungrateful, and a dozen discontented. The monks had done fifty times more good to the country than the Loudouns ever essayed. In 1631 the large district which forms the parish of Muirkirk was detached from Mauchline, and formed into a separate parish. In 1636 it was settled that the district which is now included in the parish of Sorn should be detached from Mauchline, and formed into a separate parish; and a church was built at Dalgain in that year; but, from the distractions that followed, the establishment of this new parish was not fully completed till 1692. The parish of Mauchline was thus reduced to less than a fifth of its former magnitude."

MAUCHLINE, a village or small town of Ayrshire, the capital of the parish just described, is situated at the intersection of the Glasgow and Dumfries, and the Edinburgh and Ayr turnpikes; 1½ mile north of the river Ayr; 2 miles from Catrine; 5 from Tarbalton; 6½ from Old Cumnock; 7 from Galston; 10 from Kilmarnock; 12 from Ayr; 30 from Glasgow; and 62 from Edinburgh. Its environs are a delightfully cultivated country, studded with fine mansions. The town is neatly edificed, has a pleasing appearance, and, measured by the bulk of its population, looks prosperous and important. Its charter as a burgh-of-barony having been lost, about 125 years ago, in the conflagration of the Register-office of Edinburgh, it has not re-acquired power to elect its own magistrates. Its peace, however, is well-preserved by a baron-baillie and neighbouring justices of peace. The parish-church, occupying a site in the centre of the town, is highly ornamental to it, and has been pronounced one of the most handsome ecclesiastical edifices in Ayrshire. It is chiefly Gothic, and built of red sandstone; and at the east end it sends up a tower 90 feet in height, and surmounted by turrets. Its predecessor, a lumpish, plain, sombre building, well-known to most Scotchmen, and associated in the minds of many with profane thoughts, as the scene of Burns' 'Holy Fair,' stood for six centuries on the same site, surrounded by the public burying-ground. A lock-up-house, built about 12 years ago, has two cells, but is designed as a place of only brief confinement. The town has a branch-office of the Commercial bank of Scotland; a savings' bank; two good inns; far more than enough of ale-houses; a public library; and four schools. Annual fairs, chiefly for cattle, are held on the last Wednesday of January, the 2d Tuesday of May, the

17th day of June, the 22d day of July, the last Tuesday of August, the 27th day of October, and the 2d Tuesday of December, all old style; and a horse-race occurs in the end of April. The weaving of cotton goods employs a large proportion of the inhabitants. In 1828, the town, jointly with Catrine, had 300 hand-looms; and in 1838, it had 175. Mauchline vies with Cumnock and Laurencekirk in the manufacture of wooden snuff-boxes and cigar-cases. The workmen, about 60 in number, are singularly expert in the arts of hinging, polishing, and painting the boxes, and display a skill which fixes the pleased attention of a stranger. Burns has given great notoriety to Mauchline in his poems, and associated its name, and that of many objects in itself and its vicinity, with some of his most clever, and at the same time most daringly unhallowed pleasantries. The farm of Mossiel, on which he resided nine years, and which he subleased from Mr. Gavin Hamilton, writer in Mauchline, lies about a mile north-west of the town: see article MOSSIEL. An old edifice, the relic of the ancient priory, and the residence in Burns' days of Mr. Hamilton, called Mauchline-castle, and situated near the church, was the scene of some of his amours, and contains a room in which he wrote his very profane parody called 'the Calc.' The cottage or change-house of 'Pooisie Nancy,' or Agnes Gihson, which was one of his chief resorts in quest of the 'clachan yill,' and the scene of his piece called 'the Jolly Beggars,' stands nearly opposite the church-yard-gate. It was "the favourite resort," says Allan Cunningham, "of lame sailors, maimed soldiers, wandering tinkers, travelling hallad-singers, and all such loose companions as hang about the skirts of society." Separated from the gable of this house, only by the commencement of an intervening lane, stands the public-house kept by John Dow, another great resort of Burns, a thatched plain building of two stories. On a pane on one of its hack windows the poet wrote the absurd epitaph on his host, representing Dow's creed to be simply a comparative estimate of the value of his several liquors. The lane which strikes off between these houses is the Cowgate, along which 'Common sense,' or the poet's correspondent Dr. Mackenzie, escaped when a certain minister appeared at the tent. In the churchyard, so painfully associated with the demoralizing images, and in some instances too just satire of our hard's 'Holy Fair,' may be seen the graves of the Rev. Mr. Auld, Nansie Tinnock, and some other persons whom he made the butt of his rhymes. Various scenes of his exquisite lyrics, —pieces in which the effusions of his genius may be enjoyed with less pain and damage to the moral feelings,—occur along the banks of the river Ayr. Population of the town, in 1821, 1,100; in 1831, 1,364.

**MAVISTONE, or CULBIN-SANDS**, an extensive tract of sandy ground on the coast of Morayshire, traditionally said to have once been one of the most fertile and valuable districts in the county: see DYKE and MOR.

**MAUL-EALAN-AN**, two islets at the entrance of Loch-Assynt, on the west coast of Sutherlandshire.

**MAXTON**, a parish in the northern part of Roxburghshire; bounded on the north by Berwickshire and Makerston; on the east and south-east by Roxburgh; on the south-west by Ancrum; and on the west by St. Boswells and Berwickshire. It is a parallelogram of  $3\frac{1}{2}$  by  $2\frac{1}{2}$  miles, stretching south-westward and north-eastward; but wants the north-west corner, and has an area of about 4,510 acres. The Tweed sweeps majestically and in beautiful curves 4 miles along the western and northern boundaries, along a path of red sandstone, and between alternately sloping and steep banks of great beauty.

The southern corner of the parish is occupied by the north-east end of the high ridge called Lilyard's edge, famous as the scene of the battle of Ancrum-muir: see ANCRUM. Half-a-mile north of this rises a hill called Moorhouselaw. All the rest of the surface is a plain gently sloping to the Tweed. Nearly 700 acres are planted, chiefly with ash, larch, elm, and oak. About 10 acres are hog. None of the area is unenclosed. The village of Maxton, on the Melrose and Kelso turnpike near the Tweed, was anciently a place of some importance, and is even said to have had 4,000 or 5,000 inhabitants; but it now consists of a few wretched huts, the shaft of its ancient cross standing before them, and the foundations of its ancient houses occasionally marring the plough in the adjacent fields. Another village, called Rutherford, and situated 2 miles to the east, has totally disappeared.—About  $1\frac{1}{4}$  mile north-east of Maxton, on a high bank overlooking the Tweed, stand the ruins of Littledean tower, built in the form of a crescent, and anciently a place of some strength. The Kerrs of Littledean, a family of considerable Border fame, resided here, and have a hurrying vault adjoining the church.—In the north-east corner of the parish, on a rocky height overhanging the Tweed, is a nearly circular camp about 480 feet in circumference, called Ringly hall, and defended on one side by the river, and on other sides by moats and ramparts. An English army is traditionally reported, though without mention of date or occasion, to have occupied this position for several days, confronted by a Scottish force, who were ensconced on the opposite bank of the river in a ravine which retains, from the occurrence, the name of 'the Scots hole.' The English, being superior in numbers, forded the Tweed, and, after a severe encounter with the Scotch on a rising ground still called the Plea-hrae, suffered complete discomfiture. The spot at which the English passed was called Rue-the-ford, on account of their having had so grievous cause to regret fording the river, and transferred its name, altered into Rutherford, to the lands around it, and the now extinct village in its vicinity. If this traditionary story be correct, it must be so ancient as to refer to a time preceding the epoch of authentic Border history.—A Roman road, which crosses the Tweed near Melrose, and the Teviot near the mouth of the Jed, runs along the whole south-western boundary of Maxton. On the face of Moorhouselaw-hill, overlooking it, are traces of a Roman camp. Population, in 1801, 368; in 1831, 462. Houses 83. Assessed property, in 1815, £4,574.—Maxton is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, Sir W. H. Don of Newton. Stipend £211 15s. 10d.; glebe £10. Unappropriated teinds £283 9s. 11d. Schoolmaster's salary £46, with £22 5s. 6½d. fees, and a house and garden.—The present parish comprehends the ancient parishes of Maccuston or Mackiston and Rutherford. The monks of Melrose received, at the end of the 12th century, a carrucate of land in the parish of Mackiston or Maxton; and in 1227 made an agreement with the parson to pay 4 marks of silver annually, as a composition for the tithes of this land. The church was dedicated to St. Cuthbert. Walter, the Steward of Scotland, received from Robert I. the barony of Maxton, along with other lands forfeited by William Soulis; and he gave the church, with 4 acres of arable land, to the monks of Dryburgh, subjecting it to them as a vicarage till the Reformation. The advowson of the church of Rutherford anciently belonged to the Earls of Douglas, and was afterwards possessed by Rutherford of Rutherford; but it went into abeyance when the church was abandoned. In Rutherford parish there was an hospital dedicated to Mary Magdalene,

used as an hospitium for strangers, and a retreat for the poor and the infirm, and given by Robert I. to the monks of Jedburgh.

MAXWELL. See KELSO.

MAXWELL-HEUGH, a village on the south bank of the Tweed directly opposite the eastern part of the town of Kelso, in Roxburghshire. It stands on a heugh or elevation up which gently ascends the Berwick and Carlisle turnpike from Kelso bridge. Its site is one of the most brilliant which village can occupy. The view of town and country landscape enjoyed in the descent from it to the bridge, is one of the richest in the vicinity of Kelso: see article KELSO. Among a profusion of wood which surrounds the village, one poplar-tree in its immediate neighbourhood is 31 feet in girth at the surface of the ground, and 16 feet high before sending off a branch, and has been computed to contain nearly 900 cubic feet of timber. Maxwell-heugh is a place of high antiquity, and had a seat of the Earl of Morton in the reign of Elizabeth. Its name is taken from its site,—a 'heugh' in the ancient parish of 'Maxwell.' Population about 100.

MAXWELLTON. See EAST KILBRIDE.

MAXWELLTOWN, a *quoad sacra* parish and a burgh-of-harony in the eastern extremity of Kirkcudbrightshire. The parish is about  $4\frac{1}{2}$  miles in extreme length, upwards of 1 mile in extreme breadth, and about 3,200 acres in area; and is bounded on the east by the river Nith, which divides it from the parish of Dumfries. It was detached *quoad sacra* from the parish of Troqueer, in 1834, by authority of the General Assembly. Its population, in 1835, according to an ecclesiastical survey, was 1,945; of whom 370 belonged to the Establishment, 238 were dissenters, and 1,337 had no right to a sitting in any place of worship. All, with but a very trivial exception, reside in the burgh. Five hundred are as poor as paupers, and 500 more are in a condition but one degree better. The parish-church was built as a chapel-of-ease in 1829, and cost £2,500. Sittings 1,225. Stipend £150. Two-thirds of the congregation are ultra-parochial, and scattered at considerable distances over various surrounding parishes. The dissenters are connected with congregations in Dumfries.—The burgh-of-harony extends in a stripe along the Nith, directly opposite the town of Dumfries, and nearly equal to it in length. A street or alley immediately on the Nith north of the New bridge, is a retreat of squalid misery, a nestling-place of low immigrant Irish, an utter satire upon the beautiful and proud royal burgh which confronts it on the other side of the stream. A street parallel to this brings down the Glasgow and Dumfries turnpike, is straight and spacious, has several good houses, and, near the middle, on its west side, exhibits a burgh or public building of neat exterior. A street at right angles with these, and on a line with the New bridge, carries westward the Dumfries and Portpatrick mailroad, is also straight and spacious, and at its west end goes gracefully off into the country in a series of villa-like houses. A wide brief street forking into two between the bridges, a street somewhat parallel to it on the west, and one or two other thoroughfares are in general of poor appearance, and but slightly relieved of their plain, low, and dingy aspect by a sprinkling or an occasional series of tolerable houses. The whole burgh, so far as it presses on the river, or from the northern extremity till below the old bridge, so far imitates London as to have no terrace or street-line looking out upon the stream, but it entirely wants even a mimic resemblance of the picturesqueness of architectural outline exhibited by the vast metropolitan prototype. Yet seen either from Dumfries or from

almost any point of view near or distant on the east side of the river, it gives out features to a glowing and very lovely landscape which add much to its attractions and its warmth. A beautifully curved hill swells up at the south end but a brief distance from the brink of the river, and bears aloft a conspicuous cylindrical pile which figured a landscape-view of the whole lower vale of the Nith, first with four huge arms, and afterwards with two, as a wind-mill, but is now tastefully fitted up, and supplied with suitable instruments as an observatory. Along the face of this fine rising ground, fronting Dumfries, stands a range of elegant houses. On the brink of the stream, with but a narrow belt of plain intervening from the base of the hill, stands a complete suite of large grain-mills, each mill supplied with water-power in one of several parallel dams, extending from a strong high water, huilt diagonally across the whole breadth of the river. Maxwelltown, under its original name of Bridgend, was, till comparatively a very recent date, one of the most disorderly and ill-conditioned villages in the kingdom,—resembling much more a suburb of Limerick or Galway at a period of restlessness and insubordination, than a suburb in the 18th and 19th centuries of the metropolis of the south-west of Scotland. Sir John Fielding, the well-known London magistrate, said, that whenever a delinquent got along the bridge from Dumfries into Maxwelltown, he eluded all further search or pursuit. The village's position in a different county from that of Dumfries, its destitution of all local or special magistracy, and its almost entire abandonment to poor and squalid settlers from a distance, all contributed to impress upon it an unusually bad character. The fine ruins of Lincluden college, and some other antiquarian remains in the environs of Dumfries, suffered much from the Goth and Vandal spirit of the inhabitants; and fences, young trees, corn-fields, and general property, throughout an extensive circumjacent country, were so injured by their destructive and immoral habits, that complaints are lugubriously detailed in Sir John Sinclair's Statistical Account of several of the parishes. Now, however, the town has a remarkably improved character, as to at once its architecture, its police, its trade, and the entire manners and aggregate polish of its population. In 1810, a charter was obtained from the Crown erecting it into a free burgh-of-harony; and in no case has a similar measure been more extensively or decidedly productive of good effects. The burgh is governed by a provost, two bailies, and some councillors. In matters of trade and commerce, it is unique with DUMFRIES: which see.

MAXWELTON. See PAISLEY.

MAY (THE), a small island in the mouth of the frith of Forth, lying 6 miles south from the burgh of Crail, and about the same distance from Anstruther-Wester. It is about 1 mile long, and three quarters of a mile broad. It consists entirely of greenstone, of a dark gray colour tinged with green. The shores are precipitous, but the surface is upon the whole flat: hence perhaps the name *May* or *Magh*, which in Celtic signifies 'a Plain.' The western extremity, which is the broadest, presents cliffs of about 160 feet in elevation, with a tendency towards the columnar structure. The eastern extremity subsides into a long low ridge or reef. Kittiwakes, auks, guillemots, terns, titlarks, cormorants, and gannets are the species of birds commonly seen upon it. The southern coast has the most fertile appearance. In the words of Ferguson,

"Here, the verdant shores  
Teem with new freshness, and regale our sight  
With caves, that ancient Time, in days of yore,  
Sequester'd for the haunt of Druid lone,  
There to remain in solitary cell.

It has a well of fine water and a small lake, and affords excellent sheep-pasture. There are upon it the ruins of a priory, which formerly belonged to the abbey of Pittenweem; and of a chapel, which was dedicated to St. Adrian, who was killed by the Danes in 870, and buried here. The saint's shrine was formerly much resorted to in cases of barrenness. William Lamberton, Bishop of St. Andrews, purchased it from the monks, and bestowed it upon the canons-regular of the priory. After the Reformation, the island came to the Balfours of Montquhandie, and subsequently to Allan Lamond, who sold it to Cunningham of Barns. Alexander Cunningham of Barns obtained a charter from Charles I., of the island, with liberty to build a lighthouse, for which a tax was imposed on all ships passing up the frith. He erected a tower 40 feet high, on the top of which a fire of coals was constantly kept burning. This proved of much service to the navigation of the frith, although vessels would often run within half-a-mile of the island before the light was discernible. The architect of this tower is said to have been drowned on his return from the island, in a storm supposed to have been raised by some old women, who were in consequence burned as witches. With the estate of Barns, the island was purchased by Scott of Scotstarvet, upwards of 120 years ago, and came to the late General Scott of Balcomie, by whose daughter, the Duchess of Portland, it was sold for £60,000 to the Commissioners for Northern lights. In 1815-16, they rebuilt the tower, and fitted it up with oil lamps and reflectors. The heacon was lit up on the new plan on February 1st, 1816. It is situated in N. lat.  $56^{\circ} 12'$ , and W. long.  $2^{\circ} 36'$ . From the lighthouse, Fifeness bears, by compass, N. by E.  $\frac{1}{4}$  E., 5 miles; and the Staple-rocks lying off Dunbar S. by W.  $\frac{1}{2}$  W., 10 miles; the Bass S. W.  $\frac{1}{4}$  W., 7 miles; and the Bell-rock N. E., 15 miles. The light resembles a star of the first magnitude, and may be seen from all points of the compass, at the distance of about 7 leagues. It is elevated 240 feet above the medium level of the sea. The expense of the light, in 1839, was £572 13s. 3d. A rent of £21 is received by Government for the pasture and birds on the island. The Isle of May is occasionally visited by parties of pleasure in the summer months. At one time about 15 fishermen and their families resided on the isle; but now the only inhabitants are the two light-keepers and their families.

MAY (ТНѢ), a small but beautiful river of the south-east division of Perthshire, rising among the Ochil hills, and terminating in Strathearne. Having issued from the side of John-hill close on the point where the four parishes of Auchterarder, Dunning, Glendevon, and Fossaway meet, it runs 6 miles north-eastward;  $2\frac{3}{4}$  miles of this distance through Dunning; 2 between Dunning on the left, and Forgandenny on the right; and  $1\frac{1}{4}$  partly in Forgandenny and partly between it and the most southerly section of Forteviot. It now runs  $2\frac{1}{2}$  miles northward, most of the distance through Forgandenny, and a brief way on the boundary with the main body of Forteviot; and it then finally enters Forteviot, and, after a course through it of  $1\frac{1}{2}$  mile westward and  $1\frac{1}{4}$  northward, falls into the Earn a few yards below Forteviot bridge, and about a mile above Dupplin castle. Its entire length of course is between 11 and 12 miles. Its tributaries are numerous; but, its course being for most of the way among the Ochils, they are all small. After entering Forteviot, its path, its banks, and its motions afford a continued series of thrilling subjects for the pencil and the muse. The thick green woods which surround the house of Invermay come down upon its margin, and

fling their shadows over its rapids and its cataracts; and they still exhibit many specimens of the birches which, more than a century ago, became the topic of Mallet's popular ballad of 'the Birks of Invermay,' set even then to an air which had long before borne the same name. Among several falls of the stream, two are noted for their attractions; the linn of Muckersey, where the river leaps over a perpendicular rock of 30 feet in height; and the Humble-humble, where, among rugged rocks, and weeping trees, and tufts of shrubbery, and many an element of romance, the stream tumultuates in a cataract of such wild and unwonted sounds as to have suggested its uncooth Humble-humble designation. Among the woods of Invermay, particularly on the brink of the frolicking current, grow some rare plants, rendering the locality an inviting one to a botanist. On the banks of the river, near its most romantic scenery, anciently stood the Pictish city of Forteviot, the seat of the court of Pictish kings, and an object of warlike contention at the period immediately preceding the fall of the Pictish power. The river mixes its name also with the private history of one of the Scottish kings.

MAYBOLE, a populous and important parish, occupying the north-west corner of the district of Carrick, Ayrshire. It is bounded on the west and north-west by the frith of Clyde; on the north-east by Ayr; on the east by Dalrymple and Kirkmichael; and on the south and south-west by Kirkoswald. Its greatest length, in a straight line, is 9 miles, but by the nearest practicable road is 12; its greatest breadth, in a straight line, is 5 miles, but by the nearest practicable road is 7; and its area is  $33\frac{1}{2}$  square miles. The eastern and south-eastern districts are an undulating plain, very diversified in surface, never subsiding long into a level, nor ever rising into decided upland. The other districts are a sea of heights, partly arable, and partly pastoral, so pleasingly and rapidly diversified in superficial outline as to want nothing but a free interspersion of wood to the delightful rambling-ground to a lover of fine scenery. Along the middle of the hill district, parallel with the frith, and  $1\frac{1}{2}$  mile distant from it, stretches a range of summits nearly 2 miles long, attaining an extreme altitude of 924 feet above sea-level, and bearing the name of Brown Carrick hill. This range, though heathy in itself, and rising like a screen to intercept a view of the gorgeous frith and its frame-work from the interior, commands one of the most gay, magnificent, and extensive prospects in Scotland. On the south-east and south stretches the rugged and surgy surface of Carrick, expanding away in alternations of green height and brown hold upland till it becomes lost among the blue and hazy peaks of the southern Highlands of Scotland; on the south-west and west are the broad and brilliant waters of the frith of Clyde, with many a sail like a sea-hird skimming the surface, and the rock of Ailsa riding like an ark on the wave, and with the sublime frame-work of the hold and serrated mountains of Arran veiled in misty exhalations, or festooned and curtained with clouds of every form and hue; on the north, immediately under his eye, extends the huge sylvan furrow of the Doon, with the monument of Burns glittering like a gem on its edge; and away thence stretches the luxuriant and vast plain of Kyle and Cunningham pressed inward in a long sweeping segment by the frith, gaily spotted and chequered with towns which look like cities in the distance, with a profusion of mansions and demesnes, and with all the adornings of a rich and well-cultivated country, and gliding dimly away in the perspective into the gentle heights of Renfrewsbire, overlooked in the far horizon by

the blue or clouded summit of Benlomond. The same prospect, in much of its extent and most of its elements, is seen from a thousand vantage-grounds of this arousing and inspiriting land of beauty; but nowhere are its scope so unbroken, its groupings so superb, and its effect upon the mind so exquisitely thrilling. Should any one wonder that Burns grew up on the threshold of this home of romance, and for many years might have daily gazed on its gorgeous visions, and yet has not made an allusion to it in his writings, he must remember that the hard, though possessing a keen and delighted eye for the beauties of nature, was the painter rather of manners than of landscape,—the type in poetry not of *Salvator Rosa*, but of *Hogarth* and the limners of *Holland*. The river *Doon*, over  $4\frac{1}{2}$  miles in a straight line, but over 7 or 8 along its numerous graceful curvatures, forms the boundary-line on the north-east. But over  $\frac{1}{4}$  of a mile above its embouchure it forsakes its ancient bed, and places a small portion of the parish, a piece of haugh-ground, on its left bank. Along nearly all its connexion with *Mayhole*, it has a deeply-furrowed, dell-like path, profusely and beautifully covered with copsewood and trees. *Girvan-water* forms the boundary for a short distance on the south-east; and is there a mirthful fine-clad stream. *Rannoch-hurn*, running  $2\frac{3}{4}$  miles westward along an entwisting glen to the sea, traces part of the southern boundary. The interior running waters, owing to the configuration of the surface, are necessarily mere rills: the largest gathers a considerable volume in five or six sources on *Brown Carrick hill*, and runs in an easterly course of 4 miles to the *Doon* near *Auchendrum*. Of four or five tiny lochlets, all lying in the south-east, the only noticeable one is *Heart-loch*, whose outline is exactly designated by its name, and whose appearance in a wooded hollow, with vegetation coming freely up on the outer surface of its waters, is so fitly beautiful. Perennial springs of excellent water are numerous, especially on the site and in the vicinity of the town; and one of them, called the *Well-trees' Spout*, emits a stream powerful enough to drive a mill wheel, or between 160 and 170 imperial gallons per minute. Of various mineral springs, formerly of medicinal repute, but all now neglected, the most remarkable is *St. Helen's-well*,  $2\frac{1}{4}$  miles north of the town on the high road to *Ayr*,—anciently associated with Popish superstition, and reputed to have the power on *May-day* of healing or invigorating sick or delicate infants. The geological structure of the coast is interesting for its correspondence with the strata of *Arran*. Nearly 1,000 acres in the parish are planted, about 3,000 are moorland and hill and meadow pasture, and between 16,000 and 17,000 are in tillage. Considerable attention, though by no means so much as in any *Cunningham* parish, is paid to the dairy. Towers or castles, the ancient residences of hawling feudal chiefs, were numerous, amounting in all to at least 15.—*Dunure castle* is perched on the brink of a projecting rock, 3 miles south-west of the *Heads of Ayr*, rises high above the waves, bears evident marks of high antiquity, was formerly surrounded by a ditch and a wall, and presents to the mind a sort of rude and gloomy grandeur.—*Grenand*, or *Greenan castle*, half-way between the mouth of the *Doon* and the *Heads of Ayr*, is a tall, gaunt, lantern-looking pile, rising nakedly upon the margin of the sea, on a stripe of level heath, flanked by a hold bank; and, as seen with the *Clyde* for its back-ground, it has a haggard aspect, strikingly suggestive of the misery of feudal times.—The castles of *Newark*, *Dunduff*, and *Kilkenzie*, like the two just named, are quite sperannated, yet not strictly ruinous; but, all the others

—the castles of *Auchendrane*, *Smithstown*, *Beoch*, *Craigskean*, *Garryhorne*, *Doonside*, *Dalduff*, *Glen-ayias*, *Sauchrie*, and *Brochlock*, are much dilapidated, or have left but a few vestiges.—Numerous camps occur, so small and of such rude construction, as evidently to have been thrown up by small invading hordes of those Irish who subdued the Romanized British tribes. Tumuli, the burying-places of a field of carnage, are frequent. The whole parish, as we shall more fully see in our notice of the town, was, in common with districts around it, fiercely tyrannized over in ancient times by the *Kennedies*; and exhibits not a few memorials of having been the constant scene of murders, *melées*, feuds, and crimes of atrocity perpetrated by these despots and their underlings. So vast was the *Kennedies' power*, and so keen their feudal partisanship, that an old ballad says:—

“*Twixt Wigton and the town of Air,  
And laigh doon, by the Cruves o' Cree  
You shall not get a lodging there  
Except ye court a Kennedy.*”

*Culroy*, a clean, rural, little village, stands  $3\frac{1}{2}$  miles north of the town on the low road to *Ayr*. *Dunure*, the only other village, is small and unprosperous; yet has the character of a sea-port. Its harbour, immediately north of *Dunure-castle*, is situated on the west side of a small bay, and on a projecting point of land, 7 miles south of the town of *Ayr*. Round the point of land, the water is from 4 to 20 fathoms deep, with a level, clean, sandy bottom, and good anchorage. From this deep water, a passage is cut 150 feet wide at bottom, through the rock, to a square basin which comprehends from 700 to 1,000 feet of quay. The whole of the basin is completely sheltered by high ground, and screened by lines of buildings forming a square. The access from the sea is easy and safe in almost any wind; and the egress is so facile, that a vessel, as soon as she gets out of the mouth of the harbour, can at any time and at once work to sea. The depth of water in the passage and the basin is 12 feet at ordinary spring tides; but it is capable of being artificially increased to nearly 30 feet. Yet good, and seemingly very valuable as *Dunure harbour* is—especially on a coast so inhospitable to shipping as that of *Ayrshire*—it has hitherto, since its construction in 1811, been of small practical use, and has even been allowed to crumble toward ruin. An occasional sloop freighted with lime or hone-dust, and a few fishing-boats, are the only craft which grace it with their presence, or which the inhabitants of the circumjacent country require for their *Lilliputian* commerce. The parish, besides having some cross-roads, is traversed by three leading lines of road diverging from the town and converging at *Ayr*,—the coast road wending semicircularly down *Rannoch-glen*, and along the coast,—the high road leading nearly in a straight line, but over very uneven ground, to *Ayr*,—and the low road running eastward of the former, and used as the thoroughfare of the *Glasgow* and *Port-Patrick* mail. Population, in 1801, 3,162; in 1831, 6,287. Houses 798. Assessed property, in 1815, £19,716.

*Mayhole* is in the presbytery of *Ayr*, and synod of *Glasgow* and *Ayr*. Patron, the *Crown*. Stipend £314 6s. 7d.; glebe £30. Unappropriated teinds £70 7s. 2d. The parish-church was built in 1808, and altered and improved in 1830. Sittings 1,192. A preaching-station in connexion with the Establishment, and accommodated generally in a barn and occasionally in a school-house, was in 1836, commenced in the district beyond *Brown Carrick hill*, by the parish schoolmaster, a licentiate of the Established church. Another preaching-station was occasionally maintained by the parish-minister in the village of

Culroy. An United Secession congregation was established in the town in 1797; and, in the same year, built a place of worship at the cost of £400. Sittings 555. Stipend £100. A Methodist chapel in the town was, in 1836, occupied one-month as an outpost of the Episcopalian minister of Ayr, hut has since been unused by any congregation. Sittings from 150 to 200. The population, according to a survey by the parish-minister and his elders in 1835, consisted then of 5,033 churchmen and 1,329 dissenters,—in all, 6,362 persons. The parish-school, conducted by a master and an assistant, was attended, in 1834, by 156 scholars; and 12 other schools, conducted by 13 teachers, were attended by 605. Parish schoolmaster's salary £34, with from £90 to £100 fees.—The present parish comprehends the ancient parishes of Mayhole on the south, and Kirkbride on the north. The church of Mayhole, anciently dedicated to St. Cuthbert, was given, in the reign of Alexander II. by Duncan of Carrick, son of Gilbert of Galloway, to the Cistercian nuns of North Berwick, whose convent was founded soon after 1216; and continued to belong to them, and to figure as a vicarage established by the bishop of Glasgow till the Reformation. The entire revenues of the vicarage were estimated in the reign of James V. at only £53 6s. 8d.; and half of even these was annexed, for some time before the Reformation, to the prebend called Sacrista Major in the collegiate church of Glasgow. At the Restoration, the revenues of the parsonage, the glebe excepted, were held on lease by Thomas Kennedy of Bargany, for the yearly payment of £22, twenty oxen, and twelve cows. In 1451, a chaplainry was founded in the church by Sir Gilbert Kennedy of Dunure, dedicated to St. Ninian, and endowed with the lands of Largenlen and Brochlock. A chapel, subordinate to the parish-church, anciently stood on the lands of Auchendrane; and other chapels, according to a manuscript account of Carrick, by Mr. Ahercromby, minister of Mayhole at the period, were traceable at the end of the 17th century.—The church of Kirkbride was given to the same parties as the church of Maybole, and by the same donor, and continued in their possession till the Reformation. The annexation of its parish to Mayhole occurred probably in the days of Popery, and certainly before 1597. In that year, the church of Mayhole figures as the place of worship for both parishes, and, by an act of parliament, was formally separated from the convent of North Berwick, and established as a rectory. The ruins of the church of Kirkbride, on the shore about half-a-mile north of Dunure castle, are still distinctly observable, surrounded by a burying-ground which continues to be used, and in the vicinity of a field which bears the name of the priest's land or glebe.—In 1371, Sir John Kennedy of Dunure founded, near the parish cemetery of Mayhole, a chapel for one clerk and three chaplains; dedicated it to the Virgin Mary, and endowed it with the five mark lands of Barrycloych and Barrelach; the six mark lands of Treuchan, and various other sources of revenue. This collegiate chapel seems to have been the earliest establishment of its class in Scotland; and afterwards, when similar ones arose, it was called a collegiate church, and its officiates were styled provost and prebendaries. During part of the reigns of James III. and James IV., Sir David Robertson was provost; and, in 1525, Mr. Walter Kennedy, rector of Douglas, canon of Glasgow, and rector of the university of Glasgow, was appointed to the office. The ground on which the town stands, belonged to the collegiate church. Two houses, which were the domiciles of two of its priests, and orchards which belonged to the domiciles of the others, still exist. The church

itself is now the burying-place of the Marquis of Ailsa and other parts, whose ancestors arrested the progress of the pile toward ruin; and is surrounded by a planted and neat patch of ground enclosed within a wall.

MAYBOLE, a hurgh-of-harony, an ancient town, and still the reputed capital of Carrick, stands near the southern extremity of its cognominal parish, on the railroad between Glasgow and Port-Patrick; 12 miles from Girvan, 25 from Ballantrac, 9 from Ayr, 22 from Kilmarnock, 44 from Glasgow, and 81 from Edinburgh. It stands chiefly on the declivity and partly along the skirts of a very broad-based and flattened hill, with an exposure to the east, the summit of the hill intervening between it and the frith and coast of the Clyde; and it commands a pleasant and somewhat extensive view over one-half of the points of the compass into the interior of Carrick. An old rhyme, using one of several obsolete variations of the town's ancient name says,—

“Minnibole's a dirty hole,  
It sits aboon a mire.”

This representation, in the sense usually attached to it of the town being situated on miry ground, is now, and probably always was, incorrect. A broad belt of deep green meadow, nearly as level as a howling-green, stretches along the base of the hill, and seems anciently to have been a marsh; but it could not have been a marsh of a miry kind, or otherwise than green and meadowy, nor does it, even at present, form the site of more than a very small and entirely modern part of the town. The whole ancient site is declivitous, abounding with copious springs of pure water; and, not improbably was clothed in its natural state with heath. Two sets of names, both very various in their orthography, but represented by the forms *Maiboil* and *Miannybole*, were anciently given to the town; they have greatly perplexed etymologists, and seem to have bewildered the usually astute George Chalmers; but they may, Professor Gray thinks, be referred to Gaelic roots, which make them mean, ‘the Heath-ground upon the marsh,’ and ‘the Heath-ground upon the meadow.’ A town built upon a heathy declination, and closely skirted by a meadow, or even a grassy marsh, may thus, without ‘sitting aboon a mire,’ be both ‘Minnibole’ and Mayhole. The lower streets of the town, called Kirklands, Newyards, and Ballong, are not within the limits of the burgh, and consist almost wholly of weavers' houses and workshops, tidier and in every respect better than similar buildings in most other towns. The main street runs nearly north and south, and—with the exception of a brief thoroughfare going off westward at right angles from its middle—occupies the highest ground within the hurgh. A considerable space, deeply sloping between it and the low-lying suburbs, is disposed to a small extent in the ancient cemetery and the relics of the collegiate church; to a greater extent in four or five incompact and irregularly arranged streets; and to a yet greater extent in fields and gardens which give all the intersecting thoroughfares a straggling or detached appearance, and impart to the whole town a rural, airy, and healthful aspect. The only parts which draw the attention of a stranger, are the Main street, and what is called the Kirk-wynd. These are narrow, and of varying width, quite destitute of every modern attraction, and sinless of all the ordinary graces of a fine town; yet they possess many features of antique stateliness, decayed and venerable magnificence, and even fading dashes of metropolitan greatness, which strongly image the aristocratical parts of Edinburgh during the feudal age. As the capital of

Carrick, the place anciently wielded more influence over its province than the modern metropolis of the kingdom does over Scotland, and was the site of winter-residences of a large proportion of the Carrick barons. As the seat, also, of the courts of justice of Carrick bailiery,—the place where all cases of importance in a roistering and litigating age were tried,—it derived not a little outward respectability from the numbers and wealth of the legal practitioners who made it their home. In connexion, too, with its collegiate church and its near vicinity to Crossraguel abbey, it borrowed great consequence from the presence of mitred or influential ecclesiastics who, in a dark age, possessed more resources of power and opulence than most of the nobility. No fewer than 28 baronial mansions, stately, turreted, and strong, are said to have stood within its limits. Two of several of these which still remain figure in association with such interesting history that they must be specially noticed.

The chief is the ancient residence of the Ailsa or Cassilis family, the principal branch of the Kennedys. The building stands near the middle of the town, bears the name of the Castle *par excellence*, and is a high, well-built, imposing pile, one of the strongest and finest of its class. It was the place of confinement for life of the Countess of Cassilis, a daughter of the 1st Earl of Haddington, who eloped with the Gipsy leader, Johnnie Faa. [See article CASSILIS CASTLE.] The town's-people assume looks of solemn mystery when turning a stranger's attention to the building, and tell strange traditions respecting the lady and her days of duress. The Earls of Cassilis, directly and through the medium of collateral branches of their family, wielded such power over the province that they were called both popularly and by historiographers, "Kings of Carrick;" and they used the castle of Maybole as the metropolitan palace of their "kingdom." Gilbert, the 4th Earl, who lived in the unsettled period succeeding the commencement of the Reformation, pushed his power into Galloway, and by murder and forgery seized the large possessions of the abbey of Glenluce. He, for some time, saw his uncle abbot of Crossraguel; but, the office passing to Allan Stewart, who enjoyed the protection of the Laird of Bargany, he rapaciously desired to lay hands on all its revenues and temporal rights. His brother, Thomas Kennedy, having at his instigation enticed Stewart to become his guest, the unprincipled Earl conveyed the ensnared abbot to Dunure castle, the original residence of the Cassilis family, and there, by subjecting him to such torments as have rarely occurred but among the American Indians, or in the dungeons of the Spanish Inquisition, forced him to resign by legal instruments the possessions of the abbey. A feud arose from this event, or was aggravated by it, between the Earls of Cassilis and the Lairds of Bargany, and at last issued in very tragical events. In December, 1601, the Earl of Cassilis rode out from Maybole castle at the head of 200 armed followers to waylay the Laird of Bargany on a ride from Ayr to his house from Girvan-water; and on the farm of West Enoch, about half-a-mile north of the town, he forced on the Laird an utterly unequal conflict, and speedily brought him and several faithful adherents gorily to the ground. The Laird, mortally wounded, was carried from the scene of the murderous onset to Maybole, that he might there, if he should evince any symptom of recovery, be despatched by the Earl as 'Judge Ordinar' of the country; and thence he was removed to Ayr, where he died in a few hours. Flagrant though the murder was, it not only—through manœuvring and state influence highly characteristic of the period—passed with impunity,

but was formally noted by an act of council as good service to the King. The Laird of Auchendrane, son-in-law of the murdered baron, was one of the few adherents who bravely but vainly attempted to parry the onslaught, and he received some severe wounds in the encounter. Thirsting for revenge, and learning that Sir Thomas Kennedy of Colzean, intended to make a journey to Edinburgh, he so secretly instigated a party to waylay and murder him, that no witness existed of his connexion with them except a poor student of the name of Dalrymple, who had been the bearer of the intelligence which suggested and guided the crime. Dalrymple now became the object of his fears; and, after having been confined at Auchendrane, and in the isle of Arran, and expatriated for five or six years a soldier, he returned home, and was doomed to destruction. Mure, the Laird, having got a vassal, called James Bannatyne, to entice him to his house, situated at Chapel-Donan, a lonely place on the coast, murdered him there at midnight, and buried his body in the sand. The corpse, speedily unearthed by the tide, was carried out by the assassin to the sea at a time when a strong wind blew from the shore, but was very soon brought back by the waves, and lodged on the very scene of the murder. Mure, and his son who aided him in the horrid transactions, fell under general suspicion, and now endeavoured to destroy Bannatyne, the witness and accomplice of their guilt; but the unhappy peasant making full confession to the civil authorities, they were brought up from an imprisonment into which the King, roused by general indignation, had already thrown them, and were placed at the bar, pronounced guilty, and summarily and ignominiously put to death. These sanguinary and dismal transactions form the groundwork of Sir Walter Scott's dramatic sketch, called 'Auchendrane, or the Ayrshire Tragedy.'

The house now occupied as the Red Lion inn, was anciently the mansion of the provost, and is notable as the scene of a set debate between John Knox, the reformer, and Quentin Kennedy, uncle of the 4th Earl of Cassilis, and abbot of Crossraguel. An account of the transaction, written by Knox himself, was, with all its obsolescence of verbiage and antiqueness of phraseology, republished in 1812 by Sir Alexander Boswell, from a copy—the only one extant—in his library at Auchinleck. The debate was occasioned by a challenge, on the part of the abbot, given in the church of Kirkoswald; it was arranged in the course of an interesting correspondence, during which Knox laboured to obtain for it a large audience and conspicuous publicity; it was conducted in a dingy, pannelled apartment, in the presence of 80 persons equally selected by the antagonists, and included several nobles and influential gentlemen; it lasted for three days, and was eventually broken off through the want of suitable accommodation for the persons and retinues of the select auditors; it consisted partly of idle quibbling and logomachy, partly on Knox's side of powerful and impassioned appeal, chiefly of controversy respecting the priesthood and offering of Melchizedek in connexion with the doctrines of sacrifice and the popish mass, and in no degree of argument on the grand points at issue between Romanists and the Reformed; and it ended in the virtual prostration of the abbot under the weight of Knox's blows, and in healthfully arousing and directing public attention as to the foul doctrinal corruptions of the Romish creed. The members of a 'Knox club,' instituted in the town to commemorate the event, and consisting of all classes of Protestants, hold a triennial festival to demonstrate their warm sense of the religious and civil liberties which have accrued from the overthrow of the Romish domination.

The noticeable civil buildings, additional to the two mentioned, are the ancient town-residence of the Laids of Blairquhan, now used as the tolbooth,—the ancient residence of the Laids of Kilhenzie, now the White Horse inn,—the ancient residence of the Kennedys of Knockdow, now called the Black house,—the house occupied by Sir Thomas Kennedy of Colzean, now the property of Mr. Niven of Kirkbride,—the ancient residence of the Kennedys of Ballimore, situated in the Kirk-wynd,—the ancient residence of the abbots of Crossraguel, called the Garden of Eden,—and the Town-hall, a cumbrous old pile with a low, heavy, spiral tower, situated at the Cross. Though the town has not one modern public civil building, it abounds in commodious and comfortable dwelling-houses, greatly superior, for every domiciliary use, to even the best of its remaining baronial mansions. The parish-church is a plain edifice, and might even claim to be neat were it not disfigured by a small steeple which looks like a burlesque upon architecture. The United Secession chapel arrests attention chiefly for having a deep slice cut away from one of its corners,—occasioned by a very bigotted and discreditable attempt to prevent its erection.

Maybole, in every thing except its buildings, has been singularly denuded of its ancient character; and, after passing through a season of great depopulation and decline consequent on the abolition of hereditary jurisdictions, has risen into considerable importance as a busy outpost of the cotton-manufacturers of Glasgow, and a ready receptacle of the immigrant weavers of Ireland. It has no manufacture whatever of its own, beyond the usual produce of handicraftsmen for local use; and figures simply as a seat of population, where the Irish weavers and the agents of Scottish employers conveniently meet. Incomers from Ireland have been so numerous as almost to counterbalance the aboriginal inhabitants, and give law to the place; and, many of them being Orangemen, they make periodical party-demonstrations, such as give some trouble to the sheriff, and excel in boldness most which occur in even Orangeized Ulster. Excepting a few coarse woollens and blankets, all the fabrics woven are pullicates, imitation thihets, and mull and jaconet muslins. Maybole, jointly with the villages of Crosshill and Kirkmichael, had, in 1828, 1,700 hand-loom, and, in 1838, 1,360. The gross average of wages earned by each weaver is about 6 shillings per week. The Report of Assistant Hand-loom Weavers' commissioners, says that the morals of the Mayhole weavers are "apparently very low," and gives some details respecting them and the agents which we do not choose to repeat. The procurator-fiscal believes the value of weft annually stolen in these parishes [Maybole and Kirkmichael], amounts to £1,300 per year, and that warp is sent by 'small corks' at Glasgow to certain weavers at Maybole, to be wefted there with 'bowl' weft, so called because women who sell howls were employed to buy it.

Maybole appears to have been erected into a burgh-of-barony by a charter of James V., dated at Edinburgh the 24th November, 1516. This charter gave to the inhabitants full power to buy and sell, within the burgh, wine, wax, woollen and linen cloth, and the power and liberty of "having and holding, in the said burgh, bakers, brewers, fleshers, and venders as well of flesh as fish, and all other tradesmen belonging to a free burgh-of-barony." It granted, likewise, "that there be in the said burgh free burgesses, and that they have power, in all time to come, of electing annually bailies, and all other officers necessary for the government of the said burgh." The power of electing their own magistrates does not appear to

have been exercised by them for more than a century. The records of the burgh prior to 1721 have been lost, but they are preserved from that time, and it appears that the burgh was then, and has ever since been, governed by a council, consisting of 17 members elected for life. When a vacancy occurs by the death or resignation of a councillor, or by his leaving the burgh, it is filled up by a person elected by the remaining councillors. The council choose two bailies and a treasurer yearly out of their own number. The property of the burgh consists of the town-house, flesh-market, and slaughter-house; a piece of ground called the Ball green, and another piece of ground, of about four falls in extent; and a pew in the gallery of the church, occupied by the magistrates and council. There is a debt of £30 due to the burgh from the parish conversion money. The debt due by the burgh amounts to £37 1s. 5d. The revenue is derived partly from the property, and partly from street custom, market-dues, fees from entries of burgesses, amounting to about £5 per annum on the average of the last forty years, and from an annual tax imposed upon the inhabitants, called stent, amounting, for the year 1832, to £40 17s. 6d. The total revenue of the burgh, for the year 1832, was £68 5s., and upon the average of the six years previous it was £65 per annum. The expenditure for the year 1832 was £63 2s. 3d. The magistrates have jurisdiction over the whole burgh, and possess the usual powers of the magistrates of burghs-of-harony, which were independent of the superior previous to the passing of the Act 20, Geo. II. They hold a weekly court, in which petty delinquencies, and personal actions to any amount are tried; and they judge in a summary manner in actions called 'Causeway complaints,' when the sum at issue does not exceed 6s. 8d., and in general services of heirs. From 1820 to 1833, the average annual number of criminal cases before the burgh court was 10, of civil cases 7. The magistrates have no assessor but the town-clerk, who has no salary for the judicial part of his duty; and the council patronially elect only the town-clerk, who has £4 4s. a-year and fees,—the procurator-fiscal, who has £2,—the collector of stent, who has 10 per cent. on the amount collected,—and two town-officers, each of whom has £1 1s. and fees. A burgess-right must be obtained by any person who would manufacture or trade within the burgh, and costs to a stranger £1 1s., and to the son of a burgess 10s. 6d. The number of burgesses, in 1833, was 205, of whom 137 were resident. There are not within the burgh any incorporated crafts possessing exclusive privileges. The town is lighted with gas, and supplied with water, from the common good; the police is regulated by the magistrates in virtue of their powers at common law; and the streets are maintained and cleaned at the expense of the turnpike-road trust funds of the county. A weekly market is held on Thursday; and annual fairs are held on the first Tuesday of February, O. S., and on the last Tuesday of April, of July, and of October. The town has branch-offices of the Ayr bank and of the Ayrshire banking company; a savings' bank; nearly 40 inns and ale-houses; a subscription and circulating library; a parochial school; and an agricultural association called the Carrick Farmers' society. In 1833, the population, within burgh, was about 3,000, and in the streets of Kirklands, Newyards, and Ballony, about 1,000; and, in the same year, the number of householders within burgh whose rents amounted to £10 was about 55, and in the adjoining streets 27,—of householders whose rents were £5, but less than £10, was within burgh 184, and in the adjoining streets 40.

Mayhole, till after the commencement of the pre-

sent century, was, in a great measure, isolated from other towns, and from all Scotland except its own immediate precincts. The deadening influence which fell upon it after it lost its metropolitan character and importance, placed defences around it almost as impassable as the moat and the exterior fortifications of a feudal castle. Access to it was neither invited by its inhabitants, nor desired on the part of most strangers; and by the few who sought it, it was not easily obtained. But—through the exertions chiefly of Mr. Niven of Kirkhride—excellent roads have been opened to it from every direction, and various appliances set up to bring it into terms of free communication with other parts of Scotland. An extensive carrying-trade to Glasgow, rendered necessary since the introduction of cotton weaving, has gradually familiarized it with the metropolis of the west, and has led to a numerous transference of the enterprising or adventure-seeking part of its population. The Glasgow and Port-Patrick mail daily passes through it, to both the north and the south; a stage-coach between Girvan and Ayr runs through it twice a-week; a stage-coach of its own runs daily to Ayr; and an impulse, not of trivial value, has been given by the opening of the Glasgow and Ayr railway.—The climate, though very humid, is said to be markedly salubrious. Mayhole escaped the visitation of Asiatic cholera, and is traditionally reported to have escaped the plague. Instances of longevity are numerous. “Within these 5 years,” says the Old Statistical Account, “Mr. David Doig, schoolmaster at Mayhole, died at the age of 104. About three years ago, a woman died here, aged 105. In this town there are at present 10 persons, whose ages put together amount to upwards of 900 years.”—The Rev. Dr. Macknight, the well-known theological writer, was minister of Mayhole for 16 years, and, respectively in 1756 and 1763, while he held the office, published his ‘Harmony of the Gospels’ and his ‘Truth of the Gospel Histories.’ The Rev. Dr. Wright, the author of a volume of Sermons, succeeded Dr. Macknight. A surviving successor is the Rev. George Gray, now Professor of Hebrew and Oriental literature in the University of Glasgow.

**MEADOW-MILL**, a village, with about 160 inhabitants, in the parish of Tranent, very near the boundary with that of Prestonpans, and on the road between Preston and Seaton, Haddingtonshire. It is of modern erection, and stands on the field of the battle of Prestonpans, fought in 1745. Its name occurs in a well-known Jacobite song. A little south of it stands the elegant form of Stiel’s hospital; and immediately north of it is the projected line of the Great North British railway. See articles **PRESTONPANS** and **TRANENT**.

**MEALFOURVOUNIE**, a mountain in the parish of Urquhart, Inverness-shire. It rises on the west side of Loch-Ness, between the terminations of Glen-Urquhart and Glen-Morrison, 19 miles south-west of Inverness. Its name describes it as ‘the lumpish height of the cold moor.’ The mountain is broad-based and round-headed; sends up, from a broad stage at four-fifths of its whole elevation, a dome-shaped peak, which constitutes the remaining fifth of its altitude; and attains altogether an elevation above sea-level of 2,700 feet according to the Ordnance survey; but according to some other authorities, of 3,060 feet; and according to others, even 3,200 feet. The great mass of the mountain, from the summit downward, consists of coarse conglomerate, whose ahraded portions are gneiss, granite, quartz-rock, mica-schist, and sandstone, cohering with extremely little cement; and its lower declivities, including seemingly its whole base, consist of a hard compact splintery rock, which has

usually been described as primary red quartz-rock, but which may be stratified sandstone completely indurated, and in a great measure divested of its stratification by the subjacency of granite, and which is so hard and crystalline as to be quarried and regularly used for causewaying the streets of Inverness. The upper stage or peak of the mountain is proximately perpendicular on the west, and almost mural on the north and south; and it is connected with the rest of the mountain, on the east, by a long tapering ridge. On the western side, at the bottom of the peak, is a lochlet of about 4 acres, which was once believed to be unfathomable, always equally full, without any outlet, and incapable of being frozen; but which has now for a considerable time been known to be fluctuating and comparatively shallow, and whence flows toward Loch-Ness a rill always romantic, and, in rainy weather, powerfully scenic, descending in the brief distance of 2 miles a height equal to that of the entire course of the Tweed, tumbling along a broken channel down the face of a sublime mountain-frontlet of rock, waving around it in its lower course a gay assemblage of trees, and performing two singularly beautiful cascade-leaps amidst overhanging foliage of the richest tints. On the west side of this rill, near its source, and nearly 1,500 feet up the mountain, is a rocking-stone of about 20 feet in circumference, which is moveable by two persons. The view from the summit of Mealfourvounie is grand and extensive, and comprehends the whole of the Glenmore-nan-Alhin, from Fort-George on the north-east to Fort-William on the south-west, a distance of more than 70 miles. On the north the eye wanders over various scenery away to the mountains of Ross and Caithness; and, on the south, it expatiates over the whole of Stratherrick and the country watered by the head-streams of the Spey. Immediately below Loch-Ness stretches slenderly along, like a narrow ditch, deeply sunk within steep banks; and at 6 miles’ distance, the Fall of Foyers glitters in its belt of shining spray between sheets of dark-brown mountain, like the light of the sky struggling through a vertical fissure in the heights. Mealfourvounie is noted for being the first landmark seen by mariners, after they pass the Moray frith round Kinnaird-head, or from the south, and for guiding their navigation over most of that vast gulf.

**MEARLSFORD**. See **FALKLAND**.

**MEARNS**,\* a parish in Renfrewshire; bounded on the north by Eastwood and Cathcart; on the east by Carmunnock in Lanarkshire; on the south-east by Eaglesham; on the south by Fenwick, and south-west by Stewarton, both in Ayrshire; and on the west by Neilston. Its greatest length is about 7 miles; greatest breadth from  $3\frac{1}{2}$  to  $\frac{1}{2}$  miles; extent about 11,000 acres. The surface, which is beautifully diversified with gentle eminences or small green hills, gradually rises from the north-east to the south-west, where there is a moor of considerable extent. In the moor there are three lakes, the largest of which—the Brother-loch—is 3 miles in circuit, and abounds with trout. A few score yards to the south-west is a sheet of water of very small dimensions, called the Little-loch; and about  $\frac{3}{4}$  of a mile farther in the same direction, is the Black-loch, which is about half the size of the first mentioned one, and contains pike. The soil in general is light, lying on a bed of rotten rock, excepting small tracks on a clay bottom, in the lower part of

\* The name may be derived from the British *Maeronas*, a country inhabited by herdsmen or dairy people. This name does not appear to have been applied to any particular place, but was the appellation of a considerable district in the south-east of Renfrewshire. \* Johan Petyt de Mearnes’ swore fealty to Edward I. in 1296. At the present day this parish is popularly called ‘the Mearns.’

the parish. This district has always been distinguished for its fine pasture; and even in the present times of extended cultivation, it is chiefly appropriated to pasturage and the purposes of the dairy. Besides the White Cart on the east, and the Earn on the south-east border, there are within its bounds several small streams, on the banks of which bleachfields and other works have been set down. The great road from Glasgow to Kilmarnock, and another from that city to Stewarton, run through the whole length of the parish; and the road from Paisley to Eaglesham crosses it. The population of the parish, in 1801, was 1,714; in 1831, 2,814. Houses, in 1831, 286. Assessed property, in 1815, £11,964.

About half-a-mile north-west from the parish-church stands the village of Newton-of-Mearns, vulgarly pronounced Niton, and incorrectly called 'Newton-Shaw' by some topographers, who were probably misled by observing a place named Shaw set down immediately underneath Newton in the maps. As a burgh-of-barony, it has the right of holding a weekly market, and two annual fairs. It consists of a single street on the top of an eminence, commanding a pleasant prospect over the country. The population is upwards of 300. If this be the 'Nova villa de Mernis,' (Newtown of Mearns,) mentioned in two donations by Sir Herbert Maxwell to the monastery of Paisley, between the years 1272 and 1316, it boasts a considerable antiquity, and affords an instance of a place continuing to be described by a name centuries after it had ceased to be applicable.—On the banks of the Cart, at the north-east corner of the parish, is the village of Bushy, where the spinning of cotton has been carried on since the year 1780. There is also a printfield. The greater portion of the village, within which is the cotton-mill, is in this parish. The smaller portion, which contains the printfield, belongs, *quoad civilia*, to East Kilbride, but is annexed, *quoad sacra*, to Carmunnock. The population of Bushy is about 1,000. Here there is a church of the Associate Synod, to be afterwards noticed.

The earliest name that appears on record, in connection with this parish, is that of Roland of Mearns, who is mentioned as a witness to the donation which Eschina, wife of Walter the Steward, gave to the monastery of Paisley in the year 1177. Robert of Mearns appears in the same capacity in a grant made to that establishment in 1250. In the 13th century, the barony of Mearns came by marriage to the Maxwells of Caerlaverock, afterwards Lords Maxwell, and Earls of Nithsdale. About the year 1648, it was sold by the Earl of Nithsdale to Sir George Maxwell of Nether Pollock, from whom it was soon afterwards acquired by Sir Archibald Stewart of Blackhall, to which family it has since belonged. The castle of Mearns is a large square tower, situated on a rocky eminence, about a mile south-east of the village of Newton. It is surrounded by a strong wall, and seems to have been secured by a drawbridge. It has long been uninhabited, the proprietors having their residence at Ardgowan. Dismantled though this ancient stronghold now is, it has, on more than one occasion in our day, received within its walls the people of the district, at halls given by the Mearns troop of the lately disemphodied yeomanry cavalry of Renfrewshire, which numbered among its officers several members of the distinguished family to which the castle belongs.—The lands of Upper Pollock in this parish give name to one of the oldest families in Scotland. "Peter of Pollock, son of Fulbert," the first on record, granted the church of Pollock to the monastery of Paisley in the reign of Malcolm IV., about the middle of the 12th century; and towards the end

of that century, Helias, another son of Fulbert, gave to the monastery the church of Mearns. The descent of the family from a third son, Robert, is traced by Crawford and Robertson in their History of Renfrewshire, pp. 37 and 289. The estate now belongs to Sir Robert Crawford Pollock, Baronet, representative of the family. The mansion-house, which was built about the end of the 17th century, stands on a rising ground, embosomed among old timber. This estate is called Upper Pollock, to distinguish it from Nether Pollock, the property of an ancient branch of the Maxwells, situate about 4 miles to the north, in a lower part of the county. On each there was a chapel, which disappeared soon after the Reformation.—There are numerous small proprietors who mostly occupy their lands without the intervention of tenantry, and form a highly respectable class of inhabitants.—We may here mention that Professor Wilson of Edinburgh college, passed part of his boyhood in the manse of Mearns, under the tuition of the late amiable minister, Dr. George M'Lathie. In more than one article in a celebrated periodical publication, have we recognised from the pen of that eloquent writer, descriptions of the pastoral region now under notice.

The parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Sir Michael R. S. Stewart, Bart. The church is very old. The exact period of its erection is not known. It was last altered and enlarged in 1813. Sittings 705. Stipend £262 18s. 4d.; glebe £20. There are in the parish two places of worship belonging to the United Associate Synod. One is in the village of Newton, and was built in 1743. Sittings 490. Stipend £120, besides a manse and glebe, the latter worth £18 or £20. The other is at Bushy, and was built in 1836. Sittings 400. Stipend not known. Salary of parochial schoolmaster £34 4s., £20 of which he pays to an assistant, with £63 school-fees, and £4 annually other emoluments. There are three other schools, with one teacher in each.

MEARNS, an ancient and popular designation of the county of KINCARDINE: which see.

MEDWIN (THE), or METHVEN, a streamlet in Lanarkshire, rising in the high lands of the parish of Dunsyre. Near its source it is divided by a mill-pond at Garlefoot, which produces the anomaly of one portion of its waters flowing into the Tarth, a tributary of the Tweed, and the other portion into the Clyde. "The case is this," says the author of the 'Picture of Scotland': "The greater part of the water of the East Medwin is diverted from its course near the head by a miller, who permits it, when it has done its duty, to run off into the Tarth, one of the tributaries of the Tweed. This matter has been the cause of several lawsuits; for the miller, who has a right to half the water, has been more than once accused of drawing off more than his full share. It is additionally remarkable, that the well out of which the Medwin rises, sends off a distinct rill to the water of Leith; whereby the frith of Forth is also connected with the two seas."

MEGGET, a parish in Peebles-shire, forming the basin of a rivulet of its own name, and often popularly designated from it Meggetdale. The parish is united to LYNE: which see.

MEGGET (THE), a rivulet of the parish of Westerkirk, Eskdale, Dumfries-shire. It rises in the extreme north of the parish, very near the boundary with Roxburghshire, and flows 6½ miles southward to a junction with Stennis-water. The united stream, about half-a-mile farther south, falls into the Esk in the vicinity of Waulkmill. The Megget is strictly a mountain-stream, fed by four or five large and as many small brawling brooks. It

has attractions for the angler, flows in the vicinity of a noted antimony mine, and washes the mining village of JAMESTOWN: which see.

MEIG (THE), a rivulet of Ross-shire. It rises on the Scouvna-Vertach mountains, which form the water-shed between the streams of the eastern and western seas, and the boundary between the parish of Contin on the east, and that of Loch-Carron on the west; it flows  $5\frac{1}{2}$  miles eastward through Glen-Uag to Loch-Benachan; and, after traversing that lake, runs 9 miles east-north-eastward along Strathconan, and falls into the Conan  $1\frac{1}{2}$  mile below Loch-Luichart.

MEIGLE, a parish on the eastern verge of Perthshire; bounded on the north by Alyth and Forfarshire; on the east, south-east, and south by Forfarshire; and on the south-west and west by Forfarshire and Cupar-Angus. Its greatest length, from south-west to north-east, is  $5\frac{1}{2}$  miles; its breadth, for 3 miles from the south-west end, varies between  $2\frac{1}{2}$  and  $1\frac{1}{4}$  miles, and over the remaining part of the length averages about 1 mile. Dean-water, maintaining the sluggish character which pervades it over its whole course, creeps  $3\frac{1}{2}$  miles along the north-west boundary. The river Isla, sweeping away the Dean, and occasionally inundating its banks with the freshets which it brings down from the Grampians, continues the boundary-line for 2 miles. Meigleburn, coming in from Newtyle, waters the south-western and larger district, and augments the Dean a mile above that stream's influx to the Isla. The parish lies in the centre of Strathmore, and has no other variation of surface than a few very gentle rising grounds. The soil, in some places, is sandy; in others, is clayey; but, in most, is a rich dark coloured loam. The whole surface is enclosed, and beautifully cultivated. Belts and groves of trees cover nearly 200 acres. Red sandstone, suitable for building, is worked in two quarries; and shell-marl has been removed in considerable quantities from a small bog near the southern extremity. Drumkilho, a mile east of the village, is a fine mansion, embosomed in wood. Kinloch-house,  $1\frac{1}{2}$  mile west of the village, is pleasantly situated. Meigle-house and Poteito contribute to adorn the district.—Belmont-castle, the seat of Lord Wharnccliffe,  $\frac{3}{4}$  of a mile south of the village, is an elegant modern quadrangular pile, agglomerated with the old tower of a former mansion. Situated on a gentle eminence 204 feet above the level of half-flood mark at Panbride, commanding an extensive view of the plain and hill-screens of Strathmore, and surrounded with gardens and woods and lawns, which conspire to render it one of the most delightful residences in eastern Perthshire. In Belmont-park is a tumulus called Belliduff, which tradition assigns as the spot on which Macbeth fell in combat with Macduff; and at some distance stands, almost erect, a block of granite, 20 tons weight, called Macbeth's stone, and said to be monumental of one of his generals. These objects, and the traditions connected with them, though they fail to prove that Macbeth was not slain at Lumphanan in Aberdeenshire, may probably show that Meigle was the scene of some of his fighting.—The chief antiquities of the parish are some very antique and curious monuments, in the churchyard, associated with the name of the fabulous King Arthur's faithless wife, Vanora, Guinevar, Wanor, or Vanera. According to the doubtful account recorded in Scotland's ancient annals, Vanora was taken prisoner in a battle between the army of King Arthur and the united forces of the Scots and Picts, and was carried away along with other spoils, and kept in miserable captivity for some time on Barryhill in Alyth. "The character of that unfortunate personage," says Dr. Playfair, "has been

drawn in the blackest colours. She has been represented as one who led a lascivious life, and held an unlawful correspondence with Mordred, a Pictish king, which provoked the jealousy of her husband, and excited him to take up arms in revenge of the injury. As a punishment of her enormous crimes, it is added, she was torn in pieces by wild beasts; her body was hurried at Meigle, and a monument erected to perpetuate her infamy. Whether this detail be genuine, or has arisen from the symbolic characters on the stones, it is impossible to determine. That monument seems to have been composed of many stones artfully joined, and decorated with a variety of hieroglyphical or symbolical characters, most of which are of the monstrous kind, and represent acts of violence on the person of a woman. On one stone are three small crosses, with many animals above and below. On another is a cross adorned with various flowers, and the rude representations of fishes, beasts, and men on horseback. On a third is an open chariot drawn by two horses, and some persons in it; behind is a wild beast devouring a human form lying prostrate on the earth. On a fourth is an animal somewhat resembling an elephant. On another, 8 feet long, and 3 feet 3 inches broad, standing upright in a socket, there is a cross. In the middle are several figures with the bodies of horses, or camels, and the heads of serpents; on each side of which are wild beasts and reptiles, considerably impaired. On the reverse is the figure of a woman, attacked on all sides by dogs and other furious animals. Above are several persons on horseback, with hounds, engaged in the chase. Below is a centaur, and a serpent of enormous size fastened on the mouth of a hull. Accurate drawings of those stones are to be found in Pennant's Tour. Many other stones, which originally belonged to this monument, have been carried off, or broken in pieces, by the inhabitants of this place. As several of those which remain have been removed from their proper position; as many of the figures are defaced; and as we are, in a great measure, unacquainted with the art of decyphering hieroglyphics, the history delineated on Vanora's monument is now irrecoverably lost. The antiquary may amuse himself with the fragments which remain; but he can scarcely form one plausible conjecture with respect to their original meaning and design. The fabulous Boece records a tradition prevailing in his time, viz. that, if a young woman shall walk over the grave of Vanora, she shall entail on herself perpetual sterility. But, whatever apprehensions of this nature the fair sex in his time might have entertained, the most credulous are not now afraid of making the experiment."—The village of Meigle is pleasantly situated on its cognominal rivulet, in the centre of the parish, at the intersection of two turn-pikes, 13 miles north-west of Dundee,  $6\frac{1}{2}$  north-east of Cupar-Angus, and  $5\frac{1}{2}$  south-west of Glamis. It seems to have been a village, and was, at least, a burying-place before the introduction of Christianity; but it is an inconsiderable, meanly built place, with only about 300 inhabitants. An ancient weekly-market has fallen into disuse. A modern fortnightly tryst for cattle causes a little stir. Annual fairs are held on the last Wednesday of June and October. An Edinburgh and Aberdeen coach passes through daily; and a coach communicates with the terminus of the Dundee and Newtyle railway, 2 miles distant. Population of the parish, in 1801, 946; in 1831, 873. Houses 179. Assessed property, in 1815, £6,408.—Meigle, anciently the occasional residence of the Bishops of Dunkeld, is the seat of a presbytery, in the synod of Angus and Mearns. Patron, the Crown. Stipend £237 19s. 2d.; glebe £18. Unappropriated tithes £30 3s. 1d. The parish-school was attended,

in 1834, by 47 scholars, and two other schools by 167. Parish schoolmaster's salary £34, with £16 fees, and £5 other emoluments.

MEIGLE. See GALASHIELS.

MEIKLE-FERRY, a strait of the Dornoch frith, about 2 miles in width, 3 miles west-north-west of Tain. The strait is on the direct line of the great north road to Wick and Thurso; but, owing to shoals in the channel, and to sudden gusts of wind from the adjoining mountains, the ferry established on it is one of the most dangerous in Scotland. In 1709 no fewer than 99 persons, proceeding from the Sutherland side to a fair on the Ross-shire coast, were drowned by the upsetting of the ferry-boat in the middle of the passage. At the construction of the Great Northern road, in 1811, an iron bridge was thrown across a narrow part of the frith, at Bonar, 10 miles higher up, and cost £14,000. But the route by this bridge occasioning a waste of travelling equal to its distance up the frith, the mail-coach, after having for years pursued it, adopted the old route, and now crosses at Meikle-ferry. It is proposed to erect low-water piers at this ferry.

MEIKLE (Loch), a lake about a mile long, and half-a-mile broad, near the centre of Glen-Urquhart, in the parish of Urquhart, Inverness-shire. Its banks are adorned with the houses and grounds of Lochletter, Lakefield, and Sheuglie. The glen comes down upon it with the expansion of a strath; but, immediately after passing it, becomes contracted and winding. Luxuriant birches swarm on the gently sloping banks behind the fine fields of Lakefield and Lochletter, and climb the steep acclivities of the narrowing glen below, and combine with the glassy surface of the lake and the bold contour of the mountains, to render the place one of the most captivating of the close scenes of the Highlands.

MEIKLENDOVIE. See ALFORD.

MEIKLEOUR, a village in the parish of Caputh, Perthshire;  $2\frac{1}{2}$  miles south-west of Cupar-Angus.

MEIN-WATER, a rivulet of Annandale, Dumfriesshire. It rises on the north-east side of Risp-hill, in the north of the parish of Middlebie, within a few yards of the source of one of the tributaries of the Milk, and flows  $4\frac{1}{2}$  miles southward, and  $4\frac{1}{2}$  south-westward to the Annan, at a point  $\frac{3}{4}$  of a mile south of Hoddam church. Its course is chiefly in Middlebie; but, for 2 miles above its mouth, is partly in the Hoddam, and partly between these two parishes. It has three tributaries, all from the north, and none exceeding  $3\frac{1}{2}$  miles in length of course. The stream runs, for some distance above its termination, among land of a gravelly soil; and it frequently overflows its banks, alters its channel, and sweeps away embankments.

MELDRUM—anciently called BETHELNIE—a parish in Aberdeenshire; bounded on the north by Fyvie and Tarves; on the east by Tarves and Bourtie; on the south by Bourtie; and on the west by Daviot and Fyvie. Its form is irregular, extending about 6 miles from north to south, by 2 to 4 from east to west,—area 7,474 imperial acres. Houses 391. Assessed property, in 1815, £3,784. Population, in 1801, 1,584; in 1831, 1790. The surface is hilly, a ridge of no great height, however, extending from the northern extremity of the parish north-westwards. On the southern and south-western aspects the soil is rich and fertile; but the summits are in general covered with a poor heath. There are numerous detached clumps of trees scattered throughout the parish, besides several extensive plantations. Nearly 6,000 acres are either cultivated or occasionally in tillage. The land is partly adapted for pasturage. Agriculture is in an advanced state. The inhabitants are supplied with fuel from the mosses,

which exist within the parish. There are several granite quarries. Meldrum-house is a fine residence in the antique style of architecture surrounded with beautiful scenery. The remains of a Roman encampment existed till recently on Bethelnie farm; and other antiquities, chiefly earthen urns, have been found. The parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Urquhart of Meldrum. Stipend £223 19s. 10d.; glebe £28. Unappropriated tithes £40 17s. 5d. Church built in 1684; enlarged in 1767, and new seated in 1810. Sittings 674. An Episcopalian congregation has existed here since the Revolution. Chapel built in 1813; sittings 170. Stipend £50, with a house and ground. An United Secession congregation was established in 1825. Chapel built in 1822; sittings 312. Stipend £85; house and garden £15. Schoolmaster's salary £28 per annum; fees, &c. £14 per annum, besides the interest of £200, bequeathed for education of poor children, and a share of the Dick bequest. There are three private schools in the parish.

MELDRUM (OLD), a market-town and burgh-of-barony in the above parish, distant 18 miles north-west of Aberdeen, and 5 north-north-east of Inverury, on the road from Banff to Aberdeen. There are a number of good houses in the town; but the streets are very irregularly built. The situation is pleasant. The town-hall and town-house are respectable edifices. The church, and the Episcopal and Secession chapels, above noticed, are within the burgh.—Old Meldrum was erected into a burgh-of-barony in 1672. The inhabitants appear to possess a spirit of enterprise,—they are chiefly merchants, professional men, tradesmen, handicraftsmen, and labourers. There is a good weekly-market for provisions; and during the winter and spring months a market is held every fortnight for the sale of cattle and grain. There are also two annual fairs in May and November. A considerable manufacture of cotton goods is carried on. There are also a brewery and a distillery; and in the vicinity are several corn-mills. The population of the town, in 1821, was 950; in 1831, 1,004.

MELGAM, or MELGUN (THE), a rivulet of the parish of Lintrathen, Forfarshire. See LINTRATHEN.

MELLERSTAIN, a village in Berwickshire, in the parish of Earlston; 8 miles north-west of Kelso.

MELLFORT (Loch), a small projection of the sea on the coast of Argyleshire. It enters between points Degnisb and Ashnish, opposite the island of Luing; is  $1\frac{1}{2}$  mile broad at the entrance, and extends 4 miles inland, in an east-north-easterly direction, along the southern boundary of Nether Lorn. Its name means 'the Lake of the high eminences or lumps of land,' and may be regarded as descriptive of its scenery. Several islets lie on its bosom; and Mellfort-house overlooks its north-east extremity.

MELROSE, a large and important parish in the extreme north of Roxburghshire, forming a northern projection of that county between Selkirkshire and Berwickshire, to the southern extremity of Mid-Lothian. It is bounded on the north by Lauder; on the east by Lauder, Legerwood, Earlston, and Mertoun; on the south by St. Boswell's, Bowden, and the Lindean part of Galashiels; and on the west by Galashiels and Stow. Its greatest length from Blinkhonnie on the north-west, to Newton on the south-east, is  $10\frac{3}{4}$  miles; and its greatest breadth from the Leader, at Broadwood-Shiel to Gala-water at Whitelaw, is  $6\frac{1}{2}$  miles. But it is in a general view a slender oblong,  $4\frac{3}{4}$  miles broad, with one expansion and two considerable contractions, and has an area of 45 square miles. The Tweed—nowhere

more brilliant and picturesque than here, or combining richer varieties of attractive feature, though grander in the vicinity of Peebles, and more beautiful in the vicinity of Kelso—forms the boundary-line,  $1\frac{1}{2}$  mile north-eastward with Selkirkshire, receives on its left bank the Gala, runs  $4\frac{1}{2}$  geographical miles in bold sweeps eastward through the interior, receives the Leader nearly at right angles from the north, and finally, before leaving the parish, rolls 1 mile westward, and  $1\frac{1}{2}$  southward, along the boundary with Berwickshire. Bowden-burn, traversing a gentle dell, traces the southern boundary  $1\frac{1}{2}$  mile past the village of Newton-Dryburgh to the Tweed, at the romantic spot which is overlooked by the hold statue of Wallace, and graced with the monument of the poet Thomson, and the suspension pedestrian bridge leading to Dryburgh-abbey. Cauldshiels-loch, and another small lake, form, with a brook which they send off to the Tweed,  $\frac{3}{4}$  of a mile above Abbotsford, the southern boundary, for  $1\frac{1}{2}$  mile with Lindean. Gala-water—gay and trotting in its motion, traversing in succession a narrow vale, a wide semicircular recess, and a fine level haugh, now gently pastoral on its banks, now beautifully wooded, and now broadly and enlivenedly chequered with the factories and bleachfields of Galashiels—traces the boundary for  $4\frac{1}{2}$  miles along the south-east. The Leader, washing the base of the beautiful Cowdenknowes, and flowing between wooded and cultivated slopes, forms the boundary-line for  $4\frac{3}{4}$  miles on the east. Allen-water, traversing the prototype of the Glendearg of Sir Walter Scott's monastery, and almost hid in many places by overhanging woods, runs southward from near the northern extremity at Blinkbonnie to the Tweed, a little above Pavilion. Numerous tiny rills rise in the interior, and flow toward the larger streams, contributing, by their mimic dells and knots of copse-wood and silvery glitter of current, to adorn a district of no common wealth in the number and loveliness and rivalry of its running waters. The whole of the bold five eastern summit, half of the far-seeing central one, and the northern skirt or lower declivity of the western one, of the Eildon hills, are in the parish, and form an imposing screen along its southern boundary. [See EILDON-HILLS.] A person entering by the turnpike from the south crosses the brokenly furrowed bed of Bowden-burn, ascends the north-eastern skirt of the Eildons, with a finely cultivated slope going down from the right to a narrow and almost obstructed part in the path of the Tweed, and  $1\frac{1}{2}$  mile after crossing the boundary, he sees suddenly revealed to him the vale of Melrose, with its villages and orchards and opulent luxuriousness,—its sinuous, shining, gorgeous belt of intersecting river,—and its framework of romantic braes feathered all over in many parts with plantation, and cloven picturesquely down with the receding vales of the Leader, the Allen, and the Gala. The panorama of the vale, either as seen from this point, which places Cowdenknowes and the fine recess of the Leader, and the whole north hill-screen fully on the back-ground,—or from vantage-ground, in the vicinity of the town, which places the elegant and graceful remains of the Abbey on the foreground, and brings the luscious orchard-beauties of the vale and the fine knoll which bears aloft the parish-church fully before the eye,—or from the declivities between the foot of Gala and that of Allen-water, whence Abbotsford is seen as a prime attraction, and the eye is carried over a long sweep of the Tweed, and the Eildon hills show their finest proportions, and lift two beautiful cones against the sky back-ground,—is one of the most unmingledly interesting, one of the landscapes which most combine grandeur with beauty and fertility, in

the south of Scotland.—“The valley of Melrose,” says the New Statistical Account, “must have been a noble lake at some remote period, the Tweed entering it by a narrow inlet, across which Melrose-bridge is thrown, and leaving it by a narrow outlet at Tweedwood, before the formation of which, the whole space, enclosed by the Eildon and Gattonside hills, must have been a continued sheet of water. A substratum of water-sand, dense or penetrable by the spade, pure or gravelly, is always met with in digging a few feet below the surface. At a comparatively recent period, less than two centuries ago, the course of the Tweed seems to have been on the south side of the valley. A fine rich flat, now on the south side of the river, is called Gattonside-haugh, and its feudal tenures show that it once actually formed a part of the Gattonside lands, which are on the north side of the river. In these tenures a right is retained to an ancient church-way, severed by the Tweed, along which the inhabitants used to pass of old to the Catholic service in the abbey. Near the village of Newstead the old channel of the river is beautifully marked; and what was formerly a deep pool and perilous eddy, across which Claverhouse is said to have been ferried, is now a fine meadow, hut still continues to be called ‘the wheel.’ The change in the course of the Tweed seems to have been aided by human industry, as a strong embankment is necessary to prevent it from resuming its old domain.”—Between one-fourth and one-third of the area of the parish lies south of the Tweed, and, excepting on the Eildon-hills and a patch of moorland stretching from their western base, is all in cultivation. The district north of the Tweed is, over an extent of 25 square miles, strictly upland and pastoral, bleak, unsheltered, and scoured in winter by fierce winds; yet it yields so largely to the plough, either regularly or occasionally, on the banks of the rivers, and up the lower acclivities of the hills, as to have arable grounds and natural pasturage in proportion to each other of 5 to 3. The soil in the southern district of the parish is chiefly a strong clay, excellently adapted for wheat; along the Tweed is of a fine, light, dry nature, fit for all kinds of grain; and, in the northern district, is first a light earth mixed with sand, and superincumbent on gravel,—next, a strong clay upon till, full of springs and very wet,—and, next, moss. Georgical operations of every sort have been conducted boldly, extensively, and with skill, and have worked great achievements. At least 1,200 acres, and probably a larger number, which formerly were either waste or of small pastoral value, are under plantation. Greywacke, which abounds over all the north and west, with a north-easterly dip, is worked as building material. A species of conglomerate, which occurs at Quarry-hill, west of the town, is also used for building. Though sandstone occurs in the south-east corner of the parish, that used for masonry is brought from Sprouston or from Belshaes in Ancrum. Large quantities of prime shell-marl is found beneath some of the mosses in the north. The antiquities of the parish belong either to the town of MELROSE, to OLD MELROSE, or to the EILDON-HILLS.—In the vicinity of the Tweed are nearly twenty mansions and villas; but though they contribute to the sparkling beauty of the vale, and aggregately live in the imagination as rich dottings on its landscape, they are flung individually into insignificance by the mighty spell of ABBOTSFORD: see that article. The villages of DERNOCK, GATTONSIDE, and NEWSTEAD, all stand in the vale of Melrose, and are separately described. Buckholmside and Darlingshaugh lie compactly with GALASHIELS, and are described in the article on that town. The locality of Old Melrose,

and the town of Melrose, require distinct sections of the present article.—Newton, or Newton-Dryburgh, is a poor village, with about 160 inhabitants, situated on the southern verge of the parish, 2½ miles south-east of Melrose, and half-a-mile from the Tweed, and is noticeable only as the site of a United Secession chapel, celebrated as the scene of the early ministerial labours of the devout Dr. Waugh, who was translated from it to London, and whose memoirs kindle and glow with reminiscences of the enthusiasm with which, in his advanced years, he remembered the scenery in its neighbourhood.—The parish is traversed for 10 miles, chiefly along the Gala and the Tweed, by the Edinburgh and Newcastle turnpike by way of Jedburgh, for 5½ miles down the Leader and the Tweed by the new road from Edinburgh to Jedburgh,—and for 2 miles westward past Abbotsford, by the turnpike from Dercock to Selkirk. Population, in 1801, 2,654; in 1831, 4,339. Houses 728. Assessed property, in 1815, £16,532.

Melrose is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Buccleuch. Stipend £233 16s. 6d.; glebe £7 13s. 4d. Unappropriated tithes £472 9s. 4d. The parish-church was built in 1810. Sitings 953. *A quoad sacra* parish-church was recently built in the villages which form part of the town of Galashiels.—The United Secession congregation of Newton was established in 1771, and their place of worship was built next year at a trifling expense. Sitings 452. Stipend £100, with £8 for sacramental expenses, and a house and garden.—A United Secession congregation in the town of Melrose was established in 1822; and next year built a place of worship at a cost of £441 5s. Sitings 443. Stipend £95.—A survey by the elders of the parish-session, made in 1836, exhibited the population as then consisting of 3,212 churchmen, 1,238 dissenters, and 78 nondescripts,—in all, 4,528 persons.—Parochial schoolmaster's salary £30, with about £40 fees, and £25 15s. other emoluments. There are 11 private schools of the ordinary character, and 1 boarding school for ladies,—the 12 schools conducted by 14 teachers, and attended by about 400 scholars. Attendance at the parish-school, from 73 to 84.—The ancient church of Melrose, which stood at the present village, appears to have belonged, from the time of the local suppression of the Culdees, till the year 1136, to the monks of Coldingham; in that year, at the founding of the Cistercian abbey, it was obtained from them by David I., in exchange for the church of the Virgin Mary in Berwick; and thence till the Reformation, it became strictly identified with the abbey in its history. The original name of the parish was Fordel; and this, in 1136, was substituted by Melrose, the name of the site of the Culdee establishment, arrogated and assumed in that year by the new-fledged Cistercian abbey. Three chapels anciently stood in the district north of the Tweed. One was situated at the village of Gatonside, was regularly built of freestone, and seems to have been appurtenant to some manor. Another, dedicated to St. Columba, the far-famed founder of the Culdee establishment of Iona, and giving to its site his abbreviated name with the adjunct, signifying a field or pasture, stood at Colmslee, on Allen-water, and had anciently in its neighbourhood the dairy of the Melrose monks, and still survives in some observable vestiges. The third chapel, called Chieldhelles, and consisting of handsome stone architecture, stood in the north-east corner of the parish, on a tiny tributary of the Leader, and still gives its name to the spot which it occupied.

OLD MELROSE, situated 2½ miles east of the present town, now consists, as to architecture, of a

fine and superbly circumstanced private mansion. But the name strictly belongs to a peninsula 5 furlongs long, and between from 2 to 3 broad, formed by a reduplication of the Tweed. The banks, all round, are lofty and wooded, varied with perpendicular rocks jutting like buttresses from top to bottom, and the surface rises from them on all sides in a regular, smooth, grassy ascent, till it terminates in a small table-ground, crowned with the modern mansion, and both constituting and commanding a most beautiful scene. This promontory took the name of Melrose, afterwards transferred to the new town and to the whole parish, either from the Irish, *Maoil-Ross*, signifying 'the Bald projection;' or from the British, *Mell-Rhos*, signifying 'the Projection of the meadow.' Old Melroc was the site of a Culdee establishment, one of the earliest on the continent of Scotland. Eata, one of the twelve disciples who accompanied Aidan, the founder of the bishopric of Lindisfarn, from Iona to Northumbria, seems not to have followed his master in accommodating himself to incipient prelacy, and, at all events, turned early aside from immediate co-operation with him to become the apostle of the upper vale of the Tweed. Eata appears on record, in the year 664, as the abbot or head of the Melrose establishment. His successor was Basil, a person whom Bede describes as "distinguished for his virtues and of a prophetic spirit." Cuthbert, one of the most famous saints of Scotland, probably one of the most zealous and enlightened of her early missionaries, and afterwards the nominal bishop of Lindisfarn, and the real laborious itinerating preacher of Northumbria, entered the establishment under Basil, and succeeded him in its presidency. Basil's fidelity and success are attested in his having given name to the neighbouring parish of St. Boswell's; and those of Cuthbert, mingled with some leaning toward the begun developments of prelacy, lie broadly stamped on the early ecclesiastical history, and reminiscences of the south-east of Scotland and the north-east of England,—the whole of the ancient Northumbria. The Culdee establishment of Melrose, says Milne, "was a famous nursery for learning and religious men, who were filled with zeal for propagating the Christian religion, particularly among their neighbours the pagan Saxons." Nor does it seem to have been less illustrious for resisting the innovations of Romanism; for John of Melrose was one of several Culdees who holdly accused Boniface, a special emissary of the Pope to Scotland, as "the fabricator of falsehoods, the troubler of peace, and of the Christian religion, and the corrupter of it both by word and by writing;" and he is particularly recorded to have made himself obnoxious to the Romanists by impugning the Papal dogmas. But however simple, evangelical, and anti-Romish the establishment may have been, it suffered, in common with the parent-college of Iona, the foul fate of afterwards being hugged and habilitated by the greasy monks of Rome as an early offshoot of their own 'original, semper-ædem, only true Catholic church;' and, as figuring forcedly in their fellowship, it is patched all over with the monstrous romancing legends of their system of 'lying wonders.' Driethelmus, in particular, is, in spite of the regular denunciation of celibacy being a characteristic tenet, called one of its 'monks;' and is made to render the place as notable for his austerities, as ever Finchal was for those of St. Godric. He "was restored to life after being dead an entire night. During that space he passed through purgatory and hell, had the heatific vision, and got very near to the confines of heaven. His angelic guide gave him an useful lesson on the efficacy of prayer, alms, fasting, and particularly masses of holy men;

infallible means to relieve the souls of friends and relations from the place of torment." The establishment flourished and enjoyed peace during two centuries; but before or about the middle of the 9th century, when the Saxon power was broken by the ascendancy of the Scots, and incursions were made from the north to the upper and lower Tweed, it was overthrown either by Kenneth II. or by Kenneth III. At a future period, after it had remained for a season in utter desolation, Aldwin, Turgot, and some other Culdees, came from "Girwy to what was formerly the monastery of Mailros, but then a solitude; and being delighted with the retirement of that place, began to serve Christ there." But they were subjected to great injuries and persecutions on account of their peculiar doctrines, by King Malcolm; and menaced by him with death, and by the superior of Girwy with excommunication if they remained, they speedily withdrew from it the fading glories of Culdeism. The place was never again the site of a college; but became a mere chaplainry, dedicated to St. Cuthbert, and endowed with the privileges of a sanctuary. The foundations of a stone wall were not long ago traceable, which defended the establishment on the accessible side, and stretched from bank to bank of the Tweed across a narrow part of the isthmus. At the entrance, about the middle of the wall, stood a house, built probably for the porters, and still giving the name Red-house to its site. The place where the chapel stood continues to be called the Chapel-knowe; and adjacent places on the Tweed yet bear the names of Monk-ford, and Haly-wheel,—the holy whirlpool or eddy. The original buildings, like those of Iona, were almost certainly such as could not have left any traces. Bede, speaking generally of the ecclesiastical erections of the early Culdees, says they were all of oak, and thatched with reeds. The remarkable causeway called the Gerthgate, leads off from Old Melrose, past the site of the Culdee chapel of Colmslee, to Soutra-hill: See FALA. Another 'abbey,' of which no records exist, but which seems to have been intermediate between the establishments of Old and New Melrose, stood in the vicinity of NEWSTEAD: which see.

MELROSE, a burgh-of-harony, and the capital of the north-west of Roxburghshire, is delightfully situated at the north base of the Eildon hills, 3 furlongs south of the Tweed, on the coalescent roads between Edinburgh and Jedburgh by way of Galashiels, and between Selkirk and the towns of Berwickshire; 7 miles from Selkirk, 4 from Galashiels, 11 from Jedburgh, and 35 from Edinburgh. Though graced with some modern and neat houses, it is an antique and dingy place, strongly contrasting in the bald, blackened, coarse forms of its time-worn houses, with the surpassing architectural magnificence of its Abbey, and the gorgeous beauty of its circumjacent landscape. The body of the town consists of three lines of houses, arranged along the sides of a triangular open area. A modern and pleasant little street leads out at the west corner toward Galashiels; and narrow, crazily edificed, brief thoroughfares lead off at the other corners toward Gattonside and Jedburgh. Some of the houses display on their lintels, and amid the general plainness of their walls, sculptured stones traced with the I.H.S. and other popish devices, and affording obvious indication of the Abbey having—in the unceremonious Goth style, so general, till a recent date—been used as a mere vulgar quarry. In the centre of the triangular area stands the Cross, bearing marks of being coeval with the Abbey. A literal cross anciently surmounted the structure, and, according to the usage of popish times and things, received homage

from pilgrims preliminarily to their entering the precincts of the monastic pile; but this was destroyed in 1604, and substituted by the crest of the Haddington arms. About a rood of land, called the Corse-rig, in a field near the town, is held by the proprietor on the condition of his keeping the Cross in repair. Another cross anciently stood at a place, half-a-mile westward on the road to Dernock, still called the High Cross. The jail, a plain, small, modern structure, occupies the site of a curious ancient one, and is disposed in one vaulted cell for the confinement of prisoners, and a small granary for the reception of the Duke of Buccleuch's feudal grain. On a stone still preserved of the old jail, the arms of Melrose are sculptured,—a 'mell,' or mallet, and a 'rose,—a punning hieroglyphic version of the town's name. The parish-church is a modern, plain, but neat and pleasing edifice, surmounted by a spire, and situated on a rising ground a few miles west of the town. A modern wire-bridge for foot-passengers maintains a communication near the town, across the Tweed, with the north side of the vale. The stone-bridge which carries across the Edinburgh turnpike is  $1\frac{1}{2}$  mile to the west, near the village of Dryburgh.

Melrose was long famed for the manufacture of a fabric called Melrose land-linen, commissions for which were received from London and foreign countries. So early as 1668, the weavers were incorporated under a seal-of-cause from John, Earl of Haddington, the superior of the burgh; and for a considerable period preceding 1766, the quantity of linen stamped averaged annually between 33,000 and 34,000 yards, valued at upwards of £2,500. But toward the end of last century, the manufacture rapidly declined; and, long ago, it utterly and hopelessly disappeared. Cotton-weaving, subordinated to Glasgow, was introduced as a succedaneum, and had a short period of success; but it, too, has become extinct. A bleachfield commenced with the view of arresting the decline of the linen manufacture, and for a time steadily and largely prosperous, is now grazing-ground for cattle. A woollen trade, so singularly propitious in Roxburghshire, was tried, and temporarily gave fair promises; but it likewise was scared off from the vicinity of the old Abbey, and became domiciled at Galashiels. An ancient fair in spring, called Kier (or Holy) Thursday fair, and afterwards corruptedly, Scarce Thursday fair, was of old a famous carnival season, and, on becoming an occasion of mere husiness, dwindled away to extinction. Annual existing fairs, all for cattle, are held on the first Wednesday of June, the 12th day of August, and the 22d of November. That held in August has recently become of great note as a sheep-market. The fair of ST. BOSWELL'S [which see] is annually held within the barony, although beyond the burgh, of Melrose. The town has branch-offices of the Commercial bank of Scotland, and the British linen company's bank; a savings' bank; three friendly societies; a subscription-library; an excellent inn and posting-house; an unflushingly large proportion of ale-houses; and two missionary societies.

On the 28th August, 1609, a charter was granted in favour of John, Earl of Haddington, erecting Melrose into a burgh-of-harony; and, on the 14th February, 1621, a charter of *novodamus* was granted in favour of Thomas, Earl of Melrose. The baronial jurisdiction originally extended over lands in eight counties south of the Forth and Clyde, but does not now extend practically beyond the parishes of Melrose and St. Boswell's. The regality or barony was afterwards acquired by the family of Buccleuch; but the powers of creating a magistracy conferred by the charter have always lain in abeyance. No trea-

surer, councillors, deacons, or burghesses have ever been created. The rights of the burgh are even said—though without distinct historical evidence—to have been abolished. But whatever be the precise legal character of the territory, a baron-bailie, or a depute, is nominated by the lord-of-erection, and has never been authorized to exercise, and never has exercised, powers beyond those of an ordinary baron-bailie. No courts are now held within the burgh; and since 1819, the only civil cases tried have related to bargains at Melrose and St. Boswell's fairs, and have been decided summarily on the spot. There is neither property, revenue, expenditure, nor debt; and the only taxes levied are the customs of the fairs, which belong to the superior. In 1833, the population within the burgh, including Danielton, was 740; and in Melrose itself, there were 22 houses of £15 of yearly rent and upwards; 20 of from £10 to £15; and 34 of from £5 to £10.

Melrose Abbey—as an establishment for Cistercian monks—was founded by David I. in 1136. Its site is a piece of level meadow, immediately north-east of the town, and about  $\frac{1}{4}$  of a mile south of the Tweed. The original edifice is said to have been completed in ten years, but was either wholly or partially destroyed by fire in 1322, and must have been greatly inferior in magnificence to its successor. What now remains of the re-edified structure exhibits a style of architecture ascertained to belong to a later age than that of David, and gives distinct indications of having been in an unfinished state at the Reformation,—appearances of rough temporary closings-up of design, with a view to subsequent resumption and completion. While the nucleus of the building was constructed at one effort, under the reign and patronage of Robert Bruce, and aided, perhaps, by some preserved and renovated portion of the original erection of David I., the entire edifice, in the extension of its parts, and in the immense profusion of its architectural decorations, seems to have been the progressive work of upwards of two centuries, extending from 1326 till the Reformation. The Cistercians were noted for their industrious habits, and their patronage and practice of such departments of the fine arts and practical science as were known in the Middle Ages; and, in common with all the monastic tribes, they regarded the embellishing of ecclesiastical edifices up to a degree as high as their scientific and financial resources could produce, as pre-eminently and even meritoriously a work of piety. The vast magnificence of the Abbey, with its innumerable architectural adjuncts and sculptured adornings, seems thus to have been the result of a constant, untiring, and ambitious effort of the resident monks, powerful in their skill, their numbers, their leisure, and their enthusiasm, and both instigated and aided by the munificent benefactions which made continual additions to their originally princely revenues, and testified the applause of a dark but pompous age for the sumptuousness of the dress thrown around the fane of religious pageants. The architecture is the richest Gothic, combining the best features of its gracefulness and elaboration, and everywhere showing a delicacy of touch, and a boldness of execution, which evince the perfection of the style. The material, while soft enough to admit great nicety of chiselling, possesses such power of resistance to the weather that even the most minute ornaments retain nearly as much sharpness of edge or integrity of feature as when they were fresh from the chisel. The Abbey, though inferior in proportions to many works of its class, and only about half the dimensions of York minster, is the most beautiful of all the ecclesiastical structures which seem ever to have been reared in Scotland; and has seldom, in aggregate

architectural excellence, been surpassed, or even equalled, by the edifices of any land. What remains is only the principal part of the church, with some trivial fragments of connexion with the cloister. From observable indications on the north side of the standing ruin, the cloister appears to have been a square 150 feet deep, surrounded with a spacious arcade or piazza, and lined along the east, west, and north walls with the habitations of the monks.

Though the Abbey was regularly noticed in topographical works, and figured boldly in history, and lifted up its alluringly attractive form before the eye of every traveller along the Tweed, it excited so little attention, previous to the present century, as to be coolly abandoned to the rough dilapidations of persons who estimated its sculptured stones at the vulgar quarry-price of building material! Much care has, in recent times, been used, at the expense of the proprietor, to strengthen its walls, slate the remaining part of the roof, and furnish various other means of conservation; and it has its reward in a promise that the pile will yet long stand to give practical lessons in majestic architectural beauty. The place incidentally owes nearly all its modern fame to 'the mighty Minstrel,' whose princely earthly domicile at Abbotsford on the west, and his low last resting-place in Dryburgh on the east, compete with it in challenging the notice of the tourist. Sir Walter's adoption of it and the town, as the St. Mary's and the Kennaquhair of his tales of 'The Monastery' and 'The Abbot,' brought it boldly before the gaze of the myriad admirers of the national novels of Scotland; and his well-known personal enthusiasm in making it his chief and favourite retreat from study, and in passing successive hours in scanning over, for the five hundredth time, its labyrinth of graces, drew towards it the wondering eye of the judiciously imitative crowds who looked to him as a master of taste. But what first roused attention to it, and kept up the vibration in every subsequent thrill of interest in its attractions, was the masterly description of it which coruscated upon the world in the publication of 'The Lay of the Last Minstrel.' Two extracts, though already familiar to many a reader, may be acceptable as vivid pictures of the most remarkable parts of the pile, and fine specimens of the enchanting power of the painter. The one describes the beautifully fretted and sculptured stone-roof of the east end of the chancel:

"The darkened roof rose high aloof  
On pillars lofty and light and small;  
The keystone that locked each ribbed aisle  
Was a fleur-de-lis or a quatre-feuille;  
The corbels were carved grotesque and grim;  
And the pillars, with cluster'd shafts so trim,  
With base and with capital flourish'd around,  
Seem'd bundles of lances which garlands had bound."

The other passage describes the surpassingly elegant and beautiful eastern window:

"The moon, on the east oriel shone,  
Through slender shafts of shapely stone  
By foliated tracery combined:  
Thou wouldest have thought some fairy's hand  
'Twixt poplars straight the osier wand  
In many a freakish knot had twin'd;  
Then framed a spell, when the work was done,  
And changed the willow-wreaths to stoue."

As to a prose description, one by Mr. Hutchinson, copied by Grose, and mangled by some other writers, is so rich that, though inapplicable in some small details to the present condition of the pile, especially in what relates to nuisances and the fitting-up of a modern church, we prefer the adoption of it to any attempt of our own.

"The view from the entrance into the churchyard is noble. This church is in the form of a cross; the south end of the transept presented itself in front; the arching of the doorway is composed of a semicircle, with various members of the most

of Scotland," made them the chief of their class, or the mother-establishment of the kingdom, and bestowed on them the church of the parish, extensive lands, and numerous privileges. Their original gift from him consisted of the lands of Melrose, Eildon, and Dernock, the lands and wood of Gattonside, the fishings of the Tweed along the whole extent of these lands, and the rights of pasturage, of pannage, and of cutting wood for fuel and building, in the forests of Selkirk and Traquair, and in that lying between the Gala and the Leader. Other possessions in the form of lands, churches, and privileges, were afterwards so rapidly heaped on them by David, and by his successors and subjects, that, against the close of the 13th century, they had vast property and various immunities in the counties of Roxburgh, Berwick, Selkirk, Peebles, Dumfries, Ayr, Haddington, and Edinburgh. In 1192, Hassendean, in its church, tithes, lands, and other emoluments, was given by Jocelin, bishop of Glasgow, to the monks, on condition of their establishing at it a house of hospitality, "ad susceptionem pauperum et peregrinorum ad domum de Melros venientium;" and it now became the seat of a cell, where several of their number resided, to execute the trust of relieving the poor, and entertaining the pilgrim: see HASSENDEAN. In some year between 1181 and 1185, a bull of Pope Lucius exempted the monks from paying tithes for any of their possessions. The monks were now large proprietors, with numerous tenants; great husbandmen, with many granges and numerous herds; lordly churchmen, with uncommon privileges, high powers, and extensive influence. But a pertinacious controversy had long existed between them and the men of Stow, or the vale of Gala-water—then called Wedale—respecting two objects of great importance in that age,—pannage and pasturage, under the several proprietors; and, in 1184, a formal settlement of the controversy, emphatically known in history as 'the peace of Wedale,' was made by William the Lion, assisted by his bishops and barons. Yet, during such times, disputes among cattle-drivers and swine-herds could hardly be prevented, and, when adopted by their superiors, were sometimes carried up to tumult and homicide. In 1269, John of Edenharn, the abbot, and many of his conventual brethren, for the crimes of violating the peace of Wedale, attacking some houses of the bishop of St. Andrews, and slaying one ecclesiastic, and wounding many others, were excommunicated by a provincial council which sat in Perth. As Melrose stood near the hostile border, it was usually involved in the rancorous events of Border feud and international war. In 1285, the Yorkshire barons, who had confederated against King John, swore fealty to Alexander II. in Melrose chapter-house. In 1295, Edward I. granted the monks a protection; and on August of next year, while he rested at Berwick after the general submission of Scotland to his usurping and dominating interference, he issued a writ commanding a restitution to the monks of all the property which they had lost in the preceding *melée*. In 1322, at the burning and despoiling of the Abbey by Edward II., William de Peebles the abbot, and several of the monks were slain. In 1326, Robert Bruce made a most magnificent grant for the re-edification of the Abbey, amounting to £2,000 sterling—a vast sum at that period—from his revenue of wards, reliefs, marriages, escheats and fines within Roxburghshire; and he seems to have afterwards made other grants, and to have been followed in his money-giving patronage by David II. In 1328, writs were issued to the abbot by Edward III. for the restitution of pensions and lands which they had held in England, and which had been taken from them, during the war, by the king's father.

In 1334, the same monarch granted a protection to Melrose, in common with the other abbays of the Scottish border; in 1341, he came from Newcastle to keep his Christmas festival in Melrose abbey; and in 1348, he issued a writ "de terris liberandis ablati de Meaurosc," to deliver to the abbot his lands. Richard II., in 1378, followed the example of Edward in giving a protection of the monks; yet in 1385, when he made his expedition into Scotland, he set fire to the Abbey, in common with other religious houses on the Border. But, four years afterwards, the monks were indemnified for the damage he did them, by the grant of two shillings on each of 2,000 sacks of Scottish wool, and of a portion of the king's custom on hides and woollens, exported at Berwick; and, in 1390, they received from Richard a formal renewal of protection. During the period of rude, waste, and rancorous warfare which intervened between the rebuilding of the edifice under Robert Bruce, and the commencement, or precurrent events of the Reformation, the Abbey must have sustained many more shocks than are recorded; yet it seems to have rebounded from each blow with undiminished or even increased vigour, and, in spite of temporary demolitions, made steady progress in financial greatness and architectural grandeur. But during the reigns of Henry VIII., Edward VI., and Elizabeth, it suffered collisions and dilapidations, chiefly from the English and partly from the Scotch, too severe, and in too troublous times to issue otherwise than in its ruin. In 1544, the English penetrated to Melrose, and destroyed great part of the abbey; in 1545, led by Lords Evers and Latoun, they again pillaged it, and were pursued and beaten on Ancrum-moor [see ANCRUM]; and, in the same year, they recrossed the Border under the Earl of Hertford, and a third time laid the Abbey waste. "The English commanders," says George Chalmers, whom, with a collateral reference to other authorities, we are chiefly following, "were studious to leave details of the destruction that they committed, which only perpetuates their own disgrace." At length, in 1569, the nobility of Scotland and their military retainers, under the sacred name of the Reformation, and with an unjust reflection of the odium they incurred on John Knox and his fellow-reformers, completed by pillage, defacement, and delapidation, what the English had left to be done in order to the conversion of the pile into an unroofed, gutted, partially overthrown, and altogether yawning ruin.

Though the monks of Melrose were exempted by charters and custom from rendering military service to the Crown; yet they fought under James the Steward of Scotland, during the war of the succession; and again they fought under Walter the Steward, in strenuous support of the infant-prince, David Bruce. Declarations were afterwards made by both stewards, and subsequently confirmed by the Duke of Albany, on the day of the feast of James the Apostle, in 1403, that the military service of the monks having been rendered by the special grace of the abbot and convent, and not in terms of any duty they owed to the Crown, should not be regarded as any precedent for their future conduct. Owing to mutual benefits, a very intimate connection seems to have existed, from the days of Bruce, or from the foundation of the monastery, between the abbots of Melrose and the Stewards of Scotland. In 1541, James V., by a sacrifice of his public policy to his private feelings, solicited and obtained from the Pope, the abbey of Melrose, in addition to that of Kelso, to be held, in commendam, by his natural son James. At the Reformation, when the lands, rights, and privileges of religious houses were an-

nexed to the Crown, those belonging to Melrose abbey were granted by Queen Mary to James, Earl of Bothwell. Becoming lost to him by forfeiture in 1568, they were next, through the influence of the well-known Earl of Morton, bestowed on James Douglas, the second son of William Douglas of Lochleven. Some years later, they again sought an owner, and, with some exceptions, were erected into a temporal lordship in favour of Sir John Ramsay, who had protected James VI. from the rapier of Gowry, who was created Viscount of Haddington, and Earl of Holderness in 1606, and who, in 1625, died without issue, leaving the estates to fall back to the Crown. Sir Thomas Hamilton, who, from his eminence as a lawyer, rose to high rank and great opulence, who was created Earl of Melrose in 1619, and who afterwards exchanged this title for the vacant one of Earl of Haddington, eventually obtained the Abbey and the greater part of its domains; and, in more recent times, he has been succeeded in the splendid heritage, by the family of Buccleuch. At the epoch of the Reformation, when the monks were obliged to give up an account of their rentals, the revenues of Melrose abbey were variously stated; but on one authority, they are recorded to have consisted of £1,758 Scottish,—19 chalders, 9 bolls of wheat,—77 chalders, 3 bolls of bear,—44 chalders, 1 boll, 2 firlots of oats,—14 chalders of meal,—8 chalders of salt,—105 stones of butter,—10 dozen of capons,—26 dozen of poultry,—376 moor-fowls,—340 loads of peats,—and 500 carriages. Out of this large revenue, were assigned 20 marks to each of 11 monks and 3 portioners, and 4 bolls of wheat; 1 chaldar of bear, and 2 chalders of meal, Teviotdale measure, to the monks.

MELSETTER. See WALLS.

MELVICH, a township, the seat of an inn, a post-office, an assembly's school, and a small hamlet, in Glen Halladale, in the parish of Reay, Sutherlandshire. Its position is on the left bank of the river Halladale, immediately above the debouch of that stream into Melvich bay; and on the road between Thurso and Tongue, 24 miles west by south of Thurso, and 8 miles east of Strathly. On the opposite bank of the river, and at the head of the bay, stands conspicuously the mansion of Bighouse, long the seat of the ancient branch of the chiefs of the clan Mackay, and now the property of the Countess of Sutherland.

MELVILLE, an ancient parish on the North Esk, now united chiefly to Lasswade, and partly to Dalkeith, Edinburghshire. An English baron called Male settled in the locality under the reign of Malcolm IV., and called his manor Male-ville. He was Vicecomes of Edinburgh castle under Malcolm IV., and Justiciary under William the Lion. The family acquired other lands in Mid-Lothian during the 13th century, and remained in possession of their ancient manor till the reign of Robert II. The original stock now ending in a female heir, Agnes, her possessions passed by marriage to Sir John Ross of Halkhead, whose descendants were, by James IV., created Lords Ross. The barony of Melville remained with them till 1705; and in the course of last century, it was purchased by David Rennie, and passed, by marriage with his daughter, to Henry Dundas, created Viscount Melville in 1802. Melville castle, the residence of the present noble owner, is noticed in our article on LASSWADE. Melville church was given by its founder to the monks of Dunfermline, and continued with them till the Reformation; yet, contrary to the usual practice, it was maintained as a rectory, the monks simply holding the right of presenting to the benefice. In 1633, the barony of Melville, which formed the greater part of the par-

ish, was united to Lasswade, and the barony of Lugton to Dalkeith.

MENGALAY. See MINGALA.

MENMUIR, a parish in the northern part of Forfarshire; bounded on the north-west by Lethnot; on the north-east by Strickathrow; on the east by Strickathrow and Brechin; on the south by Brechin and Caraladston; and on the west by Fearn. Its greatest length, in a line due east and west over Tigertown, is  $6\frac{1}{2}$  miles; its greatest breadth, in a line due north and south over Brown Caterthun, is 4 miles; and its superficial extent is about  $15\frac{1}{2}$  square miles. The southern half of the parish forms part of Strathmore, is flat, retains some marshy grounds, and seems anciently to have been what the name Memmure or Memmore is said to signify, 'a great moss.' Most of this flat is now reclaimed and arable, of fair quality in its soil, enclosed and sheltered with fences and with belts of wood, and under advanced and skilful cultivation. The whole of this district is traversed lengthways, at an average distance of 5 furlongs from the boundary, by Cruick-water, meandering in constant, freakish, but brief sinuosities. The soil, while towards the stream sharp and gravelly, becomes loamy as it recedes; and on the slopes which skirt the plain, it improves into a deep sandy clay, very fertile, and showing an expanse of luxuriant land. The northern part of the parish consists of the first gradient in the stupendous shelving ascent of the Binchinnin Grampians. At the east end are the heights of White and Brown Caterthun, remarkable for their antiquities: see CATERTHUN. Westward of them runs Menmuir-hill, a ridgy height,  $2\frac{3}{4}$  miles to the western boundary. North of this, in a nook of the parish which projects between Fearn and Lethnot, rises Peat-hill, the first of a water-shedding series or ridge of heights which runs 15 miles transversely up the Binchinnin region to its highest summit line. West-water, one of the two great head-branches of the North Esk, flows a mile along the north, receiving, at the point of impingement, Pelphrie burn, after the latter's course of  $2\frac{3}{4}$  miles on the same boundary. A chalybeate spring, on the farm of Bathall, was formerly in much repute, but became long ago neglected. A portion of the inhabitants, as in most parishes of Forfarshire, work in a small way in the linen manufacture. Two lines of road stretch respectively west and north; and subordinate roads abound in the southern district. The nearest point is only  $1\frac{3}{4}$  mile distant from the town of Brechin. Population, in 1801, 949; in 1831, 871. Houses 188. Assessed property, in 1815, £4,031.—Menmuir is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, Erskine of Bathall. Stipend £158 2s. 5d.; glebe £10. Schoolmaster's salary £34 4s. 4½d., with £15 fees.

MENSTRIE, a village at the southern base of the Ochil hills, on the road from Stirling to Dollar, and on the boundary between the parish of Alloa in Clackmannanshire, and the Perthshire part of the parish of Logie. It is distant 2 miles from Alva, 4 from Alloa, and 5 from Stirling. A streamlet flowing past it, from the Ochils to the Devon, renders it an advantageous site for woollen manufacture. A considerable and growing trade has long been carried on in the fabrication of serges, Scotch blankets, and various other woollen goods. Population 500.

MENTEITH. See MONTEITH.

MERCHISTON, a fortalice near the summit of the Borough-muir, within  $1\frac{1}{2}$  mile of Edinburgh. It consists of a square tower of the 15th century, with a projection on one side, and considerable modern additions. It was from a very ancient period the patrimony of the family of Napier; and

here the celebrated inventor of the logarithms was born.

**MERKLAND.** See **KIRKPATRICK-FLEMING**.

**MERSE**, or **MARCH (THE)**, an extensive champion, and very fertile district, occupying the eastern part of the Scottish border. In modern political distribution of territory, it is the largest and most southerly of the three districts of Berwickshire, and, according to Timothy Pont's survey of that county in the reign of Charles I., contains  $202\frac{1}{2}$  square miles, or 129,600 statute acres; in loose popular phraseology, it is the whole of Berwickshire, and strictly identical with the county; and in topographical nomenclature, based on strict reference to uniqueness of geographical feature, it is the whole low country lying immediately north of the Tweed; semicircularly screened by the Lammermoor-hills and the heights of Teviotdale, and including all the political Merse of Berwickshire, and all the district of Roxburghshire which lies on the left bank of the Tweed. Ancient political usage not only sanctioned the last of these senses, but carried the Merse into the lowlands of Teviotdale, and viewed Roxburgh-castle, situated on the right bank of the Tweed, as the capital of the whole district. The name is combined with that of Teviotdale as the designation of a synod, the second in the General Assembly's list. For other particulars, see article **BERWICKSHIRE**.

**MERTON**,\* a parish in the extreme south-west of Berwickshire, forming the most southerly land, and a projection beyond the prevailing boundary-line of the county. It is bounded on the north by Earlston; and on all other sides by Roxburghshire. It sends out a rectangle  $1\frac{1}{2}$  by 1 mile on the north, and two peninsulas, respectively about 1 mile and  $\frac{2}{3}$  of a mile long on the south, and consists, in addition to these, of an oblong stretching east and west  $4\frac{1}{2}$  miles by 2. Its superficial extent is about 5,550 acres. The Tweed, wearing its richest dress of sumptuous beauty, flows along the whole western and southern boundary, and in its progress makes three large and unusually fine reduplications, one of which sweeps round Dryburgh abbey, another the church of Merton, and the third, on the opposite bank, the beautiful peninsula of Old Melrose. The ground rises, in a great variety of gradient and outline, eastward and northward, from the river,—is agreeably diversified with fine hedge-rows and thriving plantations,—and exhibits, in its diversity of haugh and bold bank, cliffy, steep, and gentle ascent, rolling surface, and level table-land, a scene of great picturesqueness within narrow limits. The view which meets the eye in passing from the village of Newton on the opposite bank, to visit Dryburgh abbey and the modern monumental erections in its vicinity, is, for its smallness of scope, one of the most delightfully impressive in Scotland: see **DRYBURGH**. But from the summit of Bemersyde-hill in the west, where the ground in general is high, the parish, while picturesque in itself, commands a prospect of the vale of Melrose, and of a long eastward stripe of the basin of the Tweed, a near view of the Eildon hills, and a distant one of the blue Cheviots, unitedly a landscape of exquisite loveliness and many a romantic feature. "Wood, water, hills, ruins, and fertile fields," are words which do not even give a fair list of its elements, and afford no hint whatever of the warm colours, the fine groupings, and the bold contrasts and blending beauties of the scene. The soil, toward the Tweed, particularly in the haughs, is sharp with a gravelly bottom; and elsewhere it is, with few exceptions, a stiff clay super-

incumbent on till. About 500 acres are planted. Reddish coloured sandstone, very durable, and admitting a fine polish, abounds along the Tweed, and formerly was quarried.—Merton-house, the seat of Lord Polwarth, situated on the Tweed near the church, is a fine mansion.—Dryburgh-house, the seat of Sir David Erskine, in the immediate vicinity of the abbey, is a plain old house amid a halmy scene of woods and orchards.—Bemersyde-house, the seat of James Haig, Esq., is an ancient but pleasant mansion  $\frac{3}{4}$  of a mile south-east of Old Melrose. The family of Haig, says Sir Robert Douglas, "is of great antiquity in the south of Scotland; and in our ancient writings, the name is written De Haga. Some authors are of opinion that they are of Pictish extraction; others think they are descended from the ancient Britons; but as we cannot pretend, by good authority, to trace them to their origin, we shall insist no farther upon traditional history, and deduce their descent by indisputable documents from Petrus de Haga, who was undoubtedly proprietor of the lands and barony of Bemersyde in Berwickshire, and lived in the reign of King Malcolm IV. and William the Lion." Captain Clutterbuck is made to say, in 'the Monastery,' that his friend the sage Benedictine could tell to a day when the De Hagas settled in the country. A remote tradition, towering up in admiration of the antiquity of the family, affirms that it will never become extinct; and having been, thrown into a doggerel rhyme, it has, like some other things of the sort, been fathered upon Thomas of Erceuldou, and called a prophecy. Should 'Haigs in Bemersyde' fail in the direct male-line, either collateral descendants or female heirs may probably keep such a possession of the property as will be quite sufficient to save the credit of Thomas with his credulous admirers.—There are in the parish three hamlets. Easy communication is everywhere open in the interior, and across the northern and eastern boundary; but on the two sides washed by the Tweed, no egress exists for wheeled vehicles,—the nearest carriage-bridge being that of Drygrange, a mile above Old Melrose. Population, in 1801, 535; in 1831, 664. Houses 128. Assessed property, in 1815, £5,974.—Merton is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, Scott of Harden. Stipend £251 19s. 8d.; glebe £14. Unappropriated tithes £66 3s. 4d. Schoolmaster's salary £30, with fees, and £4 4s. other emoluments. The ancient church was given by David I. to the canons of Dryburgh, and remained a vicarage under them till the Reformation.

**METHILL**, a small sea-port town, and now a *quoad sacra* parish, in the parish of Wemyss in Fife; on the shore of the frith of Forth, 1 mile west of Leven, about half that distance west of Dubbieside, and 1 mile east of Buckhaven. In 1662 it was erected into a free burgh-of-barony by the Bishop of St. Andrews. It has the reputation of having a better harbour than that of any town in the neighbourhood; but the entrance was long well-nigh choked up by a mass of stones which were swept away by a storm, in 1803, from the termination of the east pier. This is now being remedied, and extensive repairs and improvements on the harbour are contemplated. In 1811 the population was 388; in 1831, 509.—An extension church has been erected in this village; cost £1,050; sittings 800; and a district attached to it with a population of about 1,700.

**METHLICK**, a parish in Aberdeenshire; bounded on the north by New Deer; on the east by New Deer and Tarves; on the south by Tarves; and on the west by Fyvie. It extends 6 miles in length from north to south, by 5 in breadth from east to west. Houses 324. Assessed property, in 1815,

\* The name is simply the Saxon *Mere-tun*, 'the Habitation of the marsh,' and refers to a spot long ago drained, and improved into a glebe in the vicinity of the manse.

£2,471. Population, in 1801, 1,215; in 1831, 1,439. The surface is hilly, and the soil indifferently fertile. The hills are partly covered with heath, but the arable land is in excellent cultivation. The district is watered from north-west to south-east by the Ythan, on the banks of which there are thriving and highly ornamental plantations. Limestone is found in the parish.—It is in the presbytery of Ellon, and synod of Aberdeen. Patron, the Earl of Aberdeen. Stipend £159 13s. 7d.; glebe 5 acres. Unappropriated college tithes £266 4s. 6d. Schoolmaster's salary £28; fees, &c., £31 10s., besides a share of the Dick bequest. There are two private schools in the parish.

**METHVEN**, a parish in the Strathmore district of Perthshire, bounded on the north by Monedie; on the north-east and east by Redgorton; on the south by Tippermuir and Gask; and on the west by Fowls-Wester. Its outline is nearly that of a quadrant,—the point or apex turned toward the south-east. Its extreme length along the chord of the arc, or between the points where the river Almond approaches and departs, is 6 miles; its extreme breadth from the middle of the arc to the apex, or in a straight line south-west from Lynedoch-house, is  $4\frac{1}{2}$  miles; and its area is about 17 square miles, or 10,700 acres. The surface is agreeably diversified with hollows and rising grounds, but is nowhere hilly, and in general slopes to the south, and terminates in a narrow plain. In few districts has georgical operation wrought higher achievements in reclaiming waste and stubborn ground, and covering it with the beauties of husbandry and the forest. Though so late as fifty years ago a large proportion was moorish common, all the area, with very trivial exceptions, has now a warm, sheltered, rich, and highly cultivated appearance. The soil in the north is thin, sharp loam; and, in the other districts, is principally clay, but gives place to tracts of loam and gravel. The wood of Methven is a natural forest, upwards of 200 acres in extent, chiefly oak, hirsch, and hazel, and has long been periodically cut as coppice. Plantations spread away to the aggregate extent of not less than 1,500 acres, and are so disposed in rows and belts among the arable grounds, and in clumps, crowning the rising grounds, as to give a cheerful aspect to the landscape. The New Statistical Account mentions three remarkable trees;—the Pepper-well oak at Methven-castle,  $17\frac{1}{2}$  feet in girth a yard from the ground, 284 feet in the circumference of its branches, and 700 cubic feet in its solid contents,—the Bell-tree, an ash in the churchyard, supposed to be coeval with the earliest religious establishment in the parish, and measuring 20 feet in girth  $3\frac{1}{2}$  feet from the ground,—and a black Italian poplar at Tippermallo, planted in 1776, and measuring, in 1836,  $11\frac{1}{2}$  feet in girth a yard from the ground, and 300 cubic feet in solid contents. Almond-water describes the segment of a circle over a distance of  $6\frac{1}{2}$  miles, cutting off from the main body of the parish part of the lands of Lynedoch, but elsewhere running along the boundary. It flows in a large and rapid current between hold and rocky banks, which are alternately bare and wooded; and in passing the estate of Lynedoch, and the woods of Methven-castle, it furnishes some very picturesque and romantic views. A stream called the Pow, or Powaffray, rises in two headwaters in the west, one of which runs  $2\frac{1}{2}$  miles along the boundary, and the other convergently to it in the interior; and the two uniting at the apex of the parish, the joint stream goes away to become tributary to the Earn. Another stream, likewise called the Pow, rises near the sources of the former, and runs in a zigzag course,  $4\frac{1}{2}$  miles through the interior, past the village of Methven, and 3 miles along the

southern boundary to the Almond. Light-grey sandstone and greenstone abound, and are quarried—the former for building, and the latter for causewaying and Macadamizing.—Methven-castle, the seat of Robert Smythe, Esq. of Methven, and a fine haronial edifice of the 17th century, stands on a hold acclivitous rising ground,  $\frac{3}{4}$  of a mile east of Methven village. Its park is celebrated as the scene of Robert Bruce's defeat in 1306 by the English troops, under the Earl of Pemroke.—Lynedoch-house—properly Lednoch—the property and occasional residence of Lord Lynedoch, occupies a very beautiful site on the left bank of the Almond,  $1\frac{3}{4}$  mile north-east of Methven village. About half-a-mile north-west of Lynedoch-house, in a secluded spot, called Dronach-haugh, at the foot of a beautiful bank or brae of the same name on the Almond, is the grave of 'Bessie Bell and Mary Gray,' celebrated in pathetic song. Bessie Bell, according to the common tradition, was daughter of the laird of Kinvaid, and Mary Gray of the laird of Lynedoch. Mutually attached in strong and tender friendship, they lived together at Lynedoch, when the plague broke out in 1645; and to avoid it, they retired to a romantic spot, called Burn-hraes, on the estate of Lynedoch, and there, in a hower or temporary dwelling, lived in complete seclusion. A young gentleman of Perth, an admirer of both, visited them in their solitude, for the purpose, it is said, of supplying them with food; but unhappily he communicated to them the very pestilence from which they had fled. Falling victims to the disease, they were, according to the usage of the period, refused sepulture in the ordinary burying-grounds, and slept together, as they had latterly lived, amid a scene of solitude and romance. Major Berry, a former proprietor of Lynedoch, enclosed with tasteful care the spot in which they were buried, and consecrated it to the memory of their famed and pathetic friendship.—The parish is traversed westward by the turnpike between Perth and Glasgow by way of Crieff. Two good roads run northward; and various subordinate ones connect the main lines. Population, in 1801, 2,073; in 1831, 2,714. Houses 460. Assessed property, in 1815, £13,614. The increase in the population has taken place chiefly upon the estate of Mr. Smythe of Methven, who has feued out a great many building leases.

The village of Methven stands a little south of the centre of the parish, on the road between Perth and Glasgow; 6 miles from Perth, 11 from Crieff, and 58 from Glasgow. It is very neatly edified, and is the site of the parish-church, and of a United Secession meeting-house. The inhabitants are chiefly employed in handloom cotton-weaving, and have most of their work, through resident agents, from manufacturers in Glasgow. Annual fairs are held in May and October. The village has a savings' bank, a spacious masonic lodge, a friendly society, and an agricultural association. Its population is about 1,000.—The village of Almond-hank stands on the river Almond,  $2\frac{1}{2}$  miles east of Methven. At Woodend, in its vicinity, is a quadam paper-mill, now fitted up as a power-loom weaving-factory. In this establishment, and in other neighbouring public works which stand beyond the limits of the parish, the inhabitants of Almond-hank, about 300 in number, are chiefly employed.—A manufacture of "broad and narrow brown linens, broad and narrow barns, and a few white broad linens," which, in 1787, produced 44,996 yards, and in 1792 rose to 140,448, is now extinct. Manufactures of paper conducted at two mills, and of household cloth, formerly somewhat extensive, have also disappeared.

Methven is in the presbytery of Perth, and synod of Perth and Stirling. Patron, Smythe of Methven.

Stipend £273 16s. 11d.; glebe £30. Unappropriated teinds £424 18s. 5d. Church built in 1783; sittings 628. The parish-school was attended, in 1834, by 140 scholars; and two private schools—one of them situated at Almond-hank—were attended by 130. Parochial schoolmaster's salary £34 4s. 4½d., with £25 fees, and from £5 to £10 other emoluments.—The earliest religious establishment of the parish was a collegiate church, founded and endowed with lands and tithes, in 1433, for a provost and several prebendaries, by Walter Stuart, Earl of Athole. An aisle, now the burying-place of the family of Methven, and anciently connected with the original church, has a stone sculptured with the royal lion of Scotland, surmounted by a crown, and inscribed beneath with some defaced and illegible Saxon characters, and would seem, from this evidence, to have been erected by some of the royal family,—probably by Margaret, the mother of James V., when residing at Methven-castle. Colenus, idly reputed the 79th king of Scotland, is said to have been killed in the neighbourhood of Methven, by Richard, Thane of Methven, for injuring his daughter. Before 1323, the lands of Methven belonged to the Mowbrays, whose ancestor, Roger Mowbray, a Norman, accompanied William the Conqueror to England. "A branch of this family," says the Old Statistical Account, "afterwards established itself in Scotland, and became very flourishing. To Sir Roger Mowbray belonged the baronies of Kelly, Eckford, Dalmeny, and Methven, lying in the shires of Forfar, Roxburgh, Linlithgow, and Perth; but, for adhering to the Baliol and English interest, his lands were confiscated by Robert I., who bestowed Eckford, Kelly, and Methven, on his son-in-law, Walter, the 8th hereditary lord-high-steward of Scotland, whose son, Robert, was afterwards king, and the second of the name, in right of his mother, Marjory Bruce, daughter of Robert I. The lordship of Methven was granted by him to Walter Stewart, Earl of Athole, his second son, by Euphame Ross, his second wife; and, after his forfeiture, remained in the Crown a considerable time. It became part of the dowry lands usually appropriated for the maintenance of the queen-dowager of Scotland, together with the lordship and castle of Stirling, and the lands of Balquhider, &c., all of which were settled on Margaret, queen-dowager of James IV., who, in the year 1524, having divorced her second husband, Archibald, Earl of Angus, married Henry Stewart, second son of Andrew Lord Evandale, afterwards Ochiltree, a descendant of Robert, Duke of Albany, son of King Robert II. Margaret was the eldest daughter of Henry VII. of England, in whose right James VI. of Scotland, her great-grandson, succeeded to that crown on the death of Queen Elizabeth. She procured for her third husband a peerage from her son, James V., under the title of Lord Methven, anno 1528; and, on this occasion, the barony of Methven was dissolved from the Crown, and erected into a lordship, in favour of Henry Stewart and his heirs male, on the Queen's resigning her jointure of the lordship of Stirling. By Lord Methven she had a daughter, who died in infancy, before herself. The Queen died at the castle of Methven in 1540, and was buried at Perth, beside the body of King James I. Lord Methven afterwards married Janet Stewart, daughter of the Earl of Athole, by whom he had a son, Henry II., Lord Methven, who married Jean, daughter of Patrick, Lord Ruthven, and was killed at Broughton by a cannon-hall from the castle of Edinburgh, in 1572, leaving a son, Henry III., Lord Methven, who died without issue. This third Lord Methven is mentioned on the authority of Stewart's Genealogical Account of the House of Stewart. In

the year 1584, the lordship of Methven and Balquhider was conferred on Lodowick, Duke of Lennox, in whose illustrious family it continued till it was purchased, in 1664, by Patrick Smith of Bracon, a great-grandfather of the present Lord Methven, from Charles the last Duke; who, dying without issue, anno 1672, his honours, (of which Lord Methven was one,) with his estate and hereditary offices, fell to Charles II. as his nearest male-heir; the King's great-grandfather's father, and the Duke's being brothers."

MEY, an ancient barony and chapelry, now incorporated with the estate of the Earl of Caithness, and still imparting its name to various localities in the parish of Camishay, Caithness-shire. Mey-head, or St. John's-head, is situated 2 miles south-west of the island of Stroma, in the Pentland frith, and was the site of the ancient chapel of Mey, dedicated to St. John. Immediately off this headland is a dangerous piece of sea, jagged with some rocky islets which look up from the surface only during ebb-tide, and bear the designation of the Men of Mey. A locality on the coast, 3 miles west of the headland, is called the Mill of Mey, and is the site of a Scottish Baptist place of worship. Loch-Mey lies half-a-mile south of this; is of no great depth, and measures about 1½ mile in circumference. The bamlet Mey stands  $\frac{3}{4}$  of a-mile south of the lake, on the coast road from Thurso, and 13 miles east of that town; and it possesses a post-office, and commands an extensive field of limestone deposit: see CANNISBAY.

MICHAELS (St.). See CUPAR.

MIDDLEBIE, a parish partly in Annandale and partly in the tract lying between that district and Eskdale, Dumfries-shire. Its form is oblong, 6¼ miles by 3, stretching in a direction north-east by east; and it has, at the south-west corner, a lateral projection, measuring 3¼ miles by 1½. The whole area is 24½ square miles, or 12,600 Scottish acres. The parish is bounded on the north and north-west by Tundergarth; on the east by Langholm; on the south-east and south by Half-Morton, Kirkpatrick-Fleming, and Annan; and on the west by Hoddam. The surface along the south and south-west is low and undulating, along the centre shoots up considerable rising grounds, along the north and north-east becomes wild and mountainous, and altogether forms a transition-tract between the agricultural valley of lower Annandale and the pastoral heights of upper Eskdale. About 300 acres, chiefly on a hill in the south-west corner, are planted; between a fifth and a fourth of the whole area is in tillage; and all the remainder is pastoral or waste. The soil is very various, hut, for the most part, is either a stiff or a loamy clay. Limestone is rich and plentiful, and, in its worked state, is a staple produce and enriching to husbandry. Freestone of a reddish colour abounds. Expensive hut hitherto vain searches have been made for coal. Kirtle-water rises in the north-east corner of the parish, runs 7½ miles partly in the interior and partly along the southern boundary, and, for some time before taking its leave, assumes the sweetly picturesque dress on which the pen of taste has loved to dilate. Mein-water rises close on the northern boundary, and has much the greater part of its course in the interior and along the margin before falling into the Annan: see KIRTLE and MEIN. Of various peel-houses which anciently existed here, the only extant one is the ruinous tower of Blackett-house. At Birrens, a little south of the parish-church, are perfectly distinct remains of the fosse, aggeres, and prætorium of a Roman camp, one of the least damaged, and, in some other respects, most remarkable in Britain. It lies 2½ miles south-

east of the kindred one on Brunswark-hill in Hoddam.—The 'Bells of Middlebie,' was formerly a phrase noted and current in Dumfries-shire, owing to the great preponderance of the name among the parishioners. One of the Bells of Blackett-house figured in the tragical story of 'Fair Helen of Kirkconnel Lee;' see **KIRKCONNEL**.—Dr. Currie of Liverpool, the author of 'The Life of Burns' and of other works, was a native. Three villages, Waterbeck, Eaglesfield, and Kirtlebridge, have jointly a population of about 600. Cotton and linen weaving employs nearly fifty persons. The Glasgow and London mail-road passes through the parish. Ecclefechan is distant from the nearest point only half-a-mile, and Annan  $3\frac{1}{2}$  miles. Population, in 1801, 1,507; in 1831, 2,107. Houses 398. Assessed property, in 1815, £8,083.—Middlebie is in the presbytery of Annan, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £218 11s.; glebe £27 10s. The church was built in 1821; sittings 534. A monthly service connected with the Establishment was commenced at Eaglesfield. A Relief congregation was established at Waterbeck in 1790, and two years afterwards built a place of worship at the cost of £400; sittings 490; stipend from £70 to £85, with a manse and garden. According to an ecclesiastical survey made in 1836, the population then consisted of 1,288 churchmen, and 906 dissenters,—in all, 2,194 persons.—The present parish comprehends the ancient parishes of Middlebie, Penersax, and Carruthers, which were united in 1609. Middlebie, means in Anglo-Saxon 'the Middle dwelling or middle station,' and distinguishes the Roman work near the church from those of Netherbie in Cumberland and Overbie in Eskdale-muir, in opposite directions, and each about 10 miles distant. The lands of Middlebie belonged, before the Reformation, to the noble family of Carlyle, and, for the most part, passed, in the reign of James VI., into the possession of Sir James Douglas of Drumlanrig, the ancestor of the Dukes of Queensberry.—Penersax, written also Penesax and Pennisax, vulgarized into Penersaugh, and perhaps originally Pen-y-sax, 'the summit of the Saxons,' lay along the Mein, and forms the western part of the united parish. Its church stood on the south side of the Mein, but has long ago disappeared. The lands of Penersax belonged, in the 15th century, to Kilpatrick of Dalgarnoek, passed, in 1499, to Carruthers of Mousewald, and, in the reign of James VI., were acquired by the Drumlanrig family.—On a height above the site of the ancient hamlet of Carruthers stood a British fortlet, whence came the name Caer-rhythyr, 'the fort of the assault.' Carruthers forms the eastern part of the united parish. Its lands anciently belonged to the Earls of Bothwell; they fell to the Crown by the forfeiture of Earl James in 1567; they were given by James VI., along with the earldom, to his worthless nephew Francis Stewart, and were forfeited by that traitor in 1592; and they subsequently followed the lands in their vicinity into the possession of the Douglasses of Drumlanrig. All the three parishes were anciently rectories. Middlebie, for some time after the Reformation, was the seat of a presbytery. But, in 1743, it was shorn of the honour, in favour of Annan and Langholm.

**MIDDLETON**, a village in the parish of **BORTHWICK**: which see.

**MIDLEM**, a village in the parish of Bowden, Roxburghshire,  $3\frac{1}{2}$  miles east of Selkirk, and  $5\frac{1}{2}$  south of Melrose. It is the site of a place of worship belonging to the Associate Synod of Original Seceders, and of an endowed school. Its feuars, jointly with those of the village of Bowden, have an undivided common of 30 acres of grass-land. Population about 300.

**MID-MAR**, a parish in Aberdeenshire; bounded on the north by Cluny; on the east by Echt; on the south by Kincardineshire; and on the west by Kincardine-O'Neil. It thus lies in that part of the county between the Dee and the Don. The form is that of an irregular square measuring 4 miles by  $4\frac{1}{2}$ ; superficial contents 9,780 square acres. Houses 224. Assessed property, in 1815, £1,800. Population, in 1801, 803; in 1831, 1,056. The surface of this parish is in general level, the only eminence meriting notice being the hill of FARE: which see. On the moor of Daharick, a battle is said to have been fought between Wallace and Cumyn. A rivulet that runs through that tract is called Douglas-burn, from the name of a hero who fell in this engagement.—The parish of Mid-Mar is in the presbytery of Kincardine-O'Neil, and synod of Aberdeen. Patron, the Crown and Sir J. Forbes, Bart. Stipend £233 14s. 7d.; glebe £14. Schoolmaster's salary £27; fees £19 5s. 6d., besides a share in the Dick bequest. There are three private schools in the parish.

**MIDSTRATH**. See **BIRSE**.

**MIGDALL**, a small lake about 2 miles long and 1 broad, in the parish of Criech, Sutherlandshire. It lies about  $1\frac{1}{2}$  mile north of the Dornoch frith; and abounds with small trout.

**MIGVIE**, a parish in Aberdeenshire, united to that of **TARLAND**: which see.

**MILBUY**. See **MULLBUY**.

**MILDUBH (THE)**. See **ARCHAIG**.

**MILK (THE)**, a rivulet of Annandale, Dumfriesshire. Rising in the north-east extremity of Tundergarth, it arrives,  $1\frac{1}{2}$  mile from its source, at the northern boundary of that parish; and thence, over a distance of  $9\frac{1}{2}$  miles, it divides Tundergarth, on its left bank, from Hutton and Corrie, Dryfesdale and St. Mungo on its right. Its prevailing direction over this part of its course, except for  $1\frac{1}{2}$  mile of southerly run at the end, is south-west; and it receives in its progress Corrie-water from the north, and about twenty independent and chiefly very short and tiny brooks. Leaving Tundergarth it flows southward  $2\frac{1}{2}$  miles through St. Mungo, and 1 mile between that parish and Hoddam to the Annan, half-a-mile above Hoddam-castle. In the upper half of its course it is a chilly mountain stream; but over most of the lower half it has fringes of wood and of pleasing landscape. About midway in its progress through St. Mungo it is overlooked by the mansion of Castlemilk. Its waters abound in trout.

**MILLGUY**. See **MILNGAVIE**.

**MILLHEUGH**, a small village in Lanarkshire, in the parish of Dalsert, upon the road leading from Glasgow to Carlisle.

**MILLHOUSE**, a manufacturing village in Forfarshire, in the parish of Liff and Benvie, 3 miles north from Dundee.

**MILLPORT**, a neat modern village and much frequented bathing-place on the island of Greater Cumbray, Buteshire. It stretches round a pleasantly sheltered small bay at the south end of the island; partly overlooks the Lesser Cumbray, and partly confronts the opening through Fairley road to the vast bay of Ayr or eastern side of the frith of Clyde; and is situated  $2\frac{1}{2}$  miles west of the nearest part of the Ayrshire coast, 5 miles south-west of Largs, 11 miles south-east of Rothsay, and 24 miles south of Greenock. Its form is that of the segment of a circle; its houses are almost all neat, two storey, whitewashed structures; its handsome parish-church, surmounted by a low square tower, and apparelled in sober sandstone brown, looks out from an area in the middle of the curve; and the entire appearance of the place is airy, clean, and not a little pleasant.

But for a total absence of wood in the environs, the village and its vicinity would be one of the most beautiful places on the Clyde. Yet either the spot itself, or any one of several vantage-grounds in its immediate neighbourhood, commands magnificent views of nearly the whole frith of Clyde, the highly cultivated and richly wooded slopes of the Ayrshire sea-board, thickly embellished with villas and with the body and wings of Fairley and Largs, the spiry and bold mountains of Arran, the gentle and charming coasts of the Isle of Bute, the rugged outlines of the Argyleshire alps,—a tout ensemble of grand and beautiful and picturesquely varied sea and land scenery, always refreshing, and, in certain tintings of the off-rich drapery above, absolutely thrilling. The harbour of the village, though of small capacity, can contain vessels of considerable burthen; and has a fine pier, erected chiefly at the expense of the Marquis of Bute. The depth, at low-water, is 6 feet, and, at high-water, 14 feet. Immediately adjacent to the harbour is a good anchoring-ground capable of accommodating several ships, fully protected by two islets called the Allans, and affording safety to vessels during the prevalence of the most violent storms. Fifteen or sixteen sloops belong to the place, some carrying so few as 14, and none more than 40 tons each; two steam-boats maintain daily communication with Glasgow and places intermediate; and, since the opening of the Glasgow and Greenock railway, passengers for Glasgow have the option of landing at Greenock, and proceeding thence by railway. Millport depends, to a large extent, for its support on the influx during summer of temporary residents from Glasgow; it wears almost wholly and even characteristically the aspect of a sea-bathing quarter; and it has steadily risen and maintained its footing in popular favour. The operative part of the population are employed either in the fisheries, or in weaving for the manufacturers of Glasgow. The number of looms is about sixty. The village has two day-schools, one of them parochial; two Sabbath-schools, each provided with a small library; a Provident-bank; a Friendly society; a parochial library of considerable variety and extent; and a Bible and Missionary society. Population, in 1840, 932.

**MILLS-OF-FORTH.** See **MILNATHORT.**

**MILLTOWN,** a small village on the banks of the Ruthven, in the parish of Auchterarder, Perthshire.

**MILNATHORT,** a large village in the parish of Orwell, Kinross-shire. It stands at the intersection of the railroad between Edinburgh and Perth, and the post-road between Stirling and Cupar-Fife;  $1\frac{1}{2}$  mile north-north-east of Kinross; and 14 miles south of Perth. North Queich-water, one of the feeders of Loch-Leven, and a breeding-stream of that lake's celebrated trouts, flows past the village  $\frac{2}{3}$  of a mile before terminating its course; and was, till very recently, spanned here by a crazy, shabby old bridge which did little credit to the excellent line of road to which it belonged. A new structure, however, is now in process of erection. Milnathort is a neatly edified village, and one of the most industrious and thriving seats of population between the Tay and the Forth. The inhabitants, for a long series of years, were employed chiefly in cotton-weaving; but, owing to the decline of wages which has involved the whole cotton-weaving tribe in penury, they, almost at one bound, leaped, about three years ago, into the new and much more remunerating occupation of weaving tartan shawls and plaiding; and, though their old workshops were, in general, too small to admit the larger looms which became necessary, they broke alertly through the difficulty, and, when other resources did not offer, obtained accommodation in

large airy buildings constructed on speculation for their use, and let to them in "stances" for hire. The villagers, viewed as a community, are characterized by enterprise, enlightenment, and an advanced state of social progress. A large portion of them also count ancestry from some of the earliest and staunchest Seceders, and maintain with firmness the principles of the Secession. Their village, being the nearest large one to the seat of the Rev. Ebenezer Erskine's long-continued ministry in the adjacent parish of Portmoak, became an early stronghold of dissent; and has, to a great extent, witnessed in miniature the scenes of the general Secession history. Annual fairs are held, for the sale of fat cattle, on the second Thursday of February, and the Thursday preceding the 25th of December; and, for the sale of cattle, sheep, and horses, on the last Wednesday of April, old style, the 9th day of July, the 29th of August, and the 5th of November. A weekly market—the only one of its class in the county—is also held for the sale of corn by sample. Communication is maintained with the towns respectively of the south and the north, by coaches in daily transit between Edinburgh and Perth. The village is the site of the parish-church, a United Secession meeting-house, an Original Burgher meeting-house, the parochial school, and two or three private schools; and it has a large public library, known as the Milnathort library,—three libraries connected severally with its three places of worship,—and a branch savings' bank. It is lighted with gas from the same works which supply the town of Kinross. Population, in 1801, 959; in 1831, 1,772. The name of the village popularly in use is Mills-of-Forth; a name most probably suggested by the designation Forthrif, which anciently belonged to the circumjacent district.

**MILNGAVIE,** popularly Millguy, a prosperous manufacturing village on Allander-water, in the Stirlingshire part of the parish of East or New Kilpatrick; 4 miles south of Strathblane,  $4\frac{1}{2}$  east of Duntocher, and 7 north-west of Glasgow. At the village there are extensive works for calico-printing and cotton-spinning; and in its vicinity are bleachfields, a distillery, and other public works. The place has good shops, maintains daily communication by a stage-coach with Glasgow, and makes stout demonstrations of speedily becoming a seat of extensive population and traffic. Its inhabitants amounted, at the beginning of the century, to about 200; and, in 1831, to 1,162. The present population is about 1,500. Here are a Relief meeting-house, a library, an infant-school, and some kindred institutions; also a neat extension church.

**MILNPORT.** See **MILLPORT.**

**MILNTOUN.** See **KILMUIR-EASTER.**

**MILTON,** a fishing village on the coast of the parish of St. Cyrus or Ecclescraig, Kincardineshire.

**MILTON** of Balgonie. See **BALGONIE.**

**MILTON.** See **CYRUS (ST.).**

**MINCHMOOR,** a broad-based, wide-spreading, but short mountain-ridge, running north and south between the parishes of Traquair and Yarrow, in the counties respectively of Peebles and Selkirk. The highest summit rises 2,285 feet above sea-level. A little north of this, an old road crosses the ridge communicating between Peebles and Selkirk. This road, from the great altitude to which it rises, and the wildness of the scene which it traverses,\* is a

\* Sir Walter Scott, in a letter to Miss Joanna Baillie, in which he speaks of a volume of tragedies about to be published by her, has this very striking and romantic passage:—"Were it possible for me to hasten the treat I expect by such a composition with you, I would promise to read the volume at the silence of noonday, upon the top of Minchmoor, or Windiestraw-law. The hour is allowed, by those skilful in demonology, to

remarkable specimen of the ancient straightforward thoroughfares, which scorned a detour, and bristled boldly up in the face of formidable obstructions. The road was the path of Montrose's retreat from Philiphaugh; and it is still used by foot-passengers who scorn the luxury of a level but circuitous thoroughfare. By the wayside in a wild part of the hill, there is a spring called Cheese-well, which was anciently believed to be under fairy government, and is said to have received its name from the practice of passengers dropping into it bits of cheese as offerings to the fairies.

**MINGALA**, or **MENGALAY**, an island nearly at the southern extremity of the Outer Hebrides, or archipelago of Long-Island. It lies 9 miles south-west of Barra; and is separated from Pabba on the north-east by the sound of Mingala, which is  $1\frac{3}{4}$  mile wide, and from Bernera on the south-west by the sound of Bernera, which is 5 or 6 furlongs wide. Its extreme length is  $2\frac{1}{2}$  miles from north-east to south-west; and its extreme breadth is  $1\frac{3}{4}$  mile. Its south-west coast is remarkably bold and precipitous; and rises almost sheer up from the sea in towering cliffs of gneiss. Innumerable flocks of puffins, razorbills, penguins, and kittiwakes frequent these cliffs in summer; and they disappear early in autumn with their young. The highest ground on the island appears to be short of 1,000 feet above sea-level; and the general surface is pastoral, yet such as to maintain a human population of about 50. See **BARRA**.

**MINGARRY CASTLE**, an ancient fortalice on the south coast of Ardnamureban, Argyleshire. It overhangs Loch-Sunart, and looks across it southward along the Sound of Mull; and, it confronts south-westward the body of Mull island, and

“————— sternly placed,  
O'erawes the woodland and the waste.”

Its distance due north from Tobermory is 7 miles. The fortalice, though strictly a ruin, is in a state of proximate integrity; and must be regarded as one of the most interesting architectural antiquities of its class. It skirts the edges of a projecting and precipitous rock, about 24 feet high; and is defended on the land side by a dry ditch. The entire structure is a hexagon of three larger and three smaller sides, which regularly alternate. Two of the sides toward the land are occupied with the castle, which has three stories, divided into six apartments, and approached by a central staircase; and the other sides are formed by a dead wall, and interiorly disposed partly into outhouses, and partly into a small triangular court. Battlements surmount all the sides; but are so narrow that they could have afforded small scope for the working of artillery. A few loopholes constitute the only external openings. The whole hexagon is upwards of 200 feet in circumference; and the enclosed castle is 50 feet in length. The fortalice was anciently the seat of the MacIans, a clan of Macdonalds, descended from Ian, or John, a grandson of Angus Og, Lord of the Isles. During the Marquis of Montrose's enterprise

he as full of witching as midnight itself; and, I assure you, I have felt really oppressed with a sort of fearful loneliness when looking around the naked and towering ridges of desolate barrenness, which is all the eye takes in from the top of such a mountain,—the patches of cultivation being all hidden in the little glens and valleys, or only appearing to make one sensible how feeble and inefficient the efforts of art have been to contend with the genius of the soil. It is in such a scene that the unknown author of a fine but unequal poem, called ‘Albania,’ places the remarkable superstition which consists in hearing the noise of a chase, with the baying of the hounds, the throttling sobs of the deer, the howls of a numerous band of huntsmen, and the ‘hoofs thick-beating on the hollow hill.’ I have often repeated his verses with some sensations of awe in such a place, and I am sure yours would effect their purpose as completely.”

of 1644, Allaster Macdonald of Colkitio, a partisan of the Marquis, and commander of the Irish auxiliaries, besieged and captured it. John of Moidart, captain of Clanranald, was commissioned by the Marquis of Argyle to recapture it; but he seized the opportunity of being in arms, to send relief to the place, and to lay waste Argyle's district of Sunart. The name Mingarry means the destroyed den, or the reduced fort.

**MINNICK (THE)**, a rivulet of the parish of Sanquhar, in upper Nithsdale, Dumfries-shire. It rises on the west side of Lowther-hill, 1 mile from the source of Elvan-water, a tributary of the Clyde, and  $1\frac{1}{2}$  mile south from the village of Leadbills in Lanarkshire, and flows 6 miles westward to the Nith, 2 miles below the burgh of Sanquhar. Three brooks, each nearly equal to itself in hulk, give it the tribute of their waters. Some wildly romantic spots occur on its banks, interesting both in themselves, and in association with traditions of the Covenanters.

**MINNICK (THE)**. See **MINNIGAFF**.

**MINNIEHIVE**, or **MINNYHIVE**, a village in the parish of Glencairn, Dumfries-shire;  $16\frac{1}{2}$  miles north-west of Dumfries,  $35\frac{1}{2}$  north of Kirkcubright, and 7 south-west of Thornhill. It stands on Dalwat-water, a few hundred yards above its confluence with the Cairn, and communicates by a bridge with Dunreggan, a smaller village on the opposite bank. Here are a United Secession meeting-house, and two subscription libraries. Annual fairs, chiefly for the hiring of servants, are held in March, July, and October. A fair or market for lambs was commenced in 1835. The town has, of late years, had considerable increase in the number and neatness of its houses. In the early half of the 17th century, a charter was given it, erecting it into a burgh-of-barony, and conferring on it the privilege of a weekly-market. A pillar 9 feet high, on a circular pedestal 5 feet high, stands in the centre of the village, bears the date 1638, and seems to have been erected as a market-cross. Near the village is a monument, to the memory of the Rev. James Renwick: see **GLENCAIRN**. The population of Minniehive, Dunreggan, and another small village, is jointly about 1,000.

**MINNIGAFF**, a large parish in the extreme west of Kirkcudbrightshire; bounded on the north by Ayrshire; on the north-east by Kells; on the east by Girtbon; on the south-east and south by Kirkmabreck; and on the south-west and west by the counties of Wigton and Ayr. Its form is oblong, with a waving and serrated outline. Its greatest length, from the confluence of Ence-water and the Cree on the north-west, to the boundary at the base of Knocklinn on the south-east, is 17 miles; its greatest breadth, from the mouth of Pulgowan-burn on the north-east to a bend in the Cree,  $1\frac{1}{4}$  mile above Newton-Stewart, in the south-west, is  $11\frac{3}{4}$  miles; and its superficial contents are about 150 square miles. On the boundaries and in the interior are about 20 lakes and lochlets, most of them imbosomed among wild hills, in districts either abandoned to desolation or trodden only by the shepherd and his flock, and cold, naked, and cheerless in their scenic properties. The chief are Loch-Moan, on the north-west boundary,  $1\frac{1}{4}$  mile long, deeply indented in outline, and studded with several islets; Loch-Enoch, 5 miles eastward on the same boundary,  $2\frac{1}{2}$  miles in circumference, variously isleted within, and jagged all round with peninsulas without; Loch-Neldricken,  $1\frac{1}{2}$  mile south of Loch-Enoch,  $\frac{3}{4}$  of a mile long, and half-a-mile broad; Loch-Valley, half-a-mile farther south, nearly a mile long, and of slender breadth; Long-loch and Round-loch, the former a stripe  $\frac{3}{4}$  of a mile in length, the latter a cir-

cular sheet, half-a-mile in diameter, and both within a mile south of Loch-Valley; Loch-Dee, a mile south-east of Round-loch,  $1\frac{1}{2}$  mile long, and  $\frac{2}{3}$  of a mile broad, the reputed source of the Galloway Dee; Loch-Trool, 2 miles east of Loch-Dee, stretches south-westward in a narrow stripe of  $1\frac{1}{2}$  mile long, and wearing at its lower end a gently picturesque dress; Loch-Grannoeh, on the eastern houndary,  $6\frac{1}{2}$  miles south-east of Loch-Dee,  $2\frac{1}{4}$  miles in length, but touching the parish for only 1 mile, and belonging chiefly to Girthon; and the Loch of Cree, a slender expansion of the river Cree,  $2\frac{3}{4}$  miles in length, terminating  $3\frac{1}{2}$  miles above Newton-Stewart, beautifully wooded, and lovely in its banks. The river Cree, from its source in Loch-Moan, till  $1\frac{1}{2}$  or 2 miles below the point of its beginning slowly to open into an estuary, has its whole course, at first shiveringly bleak, and afterwards genially pleasant, along the north-western, western, and south-western boundaries. The distance over which it drains the parish is between 22 and 23 miles. Not fewer than about 24 independent rills, besides 3 considerable streams, flow into it from Minnigaff, many of them of short course, nearly all gurgling or brawling among hills, most of them akin in character to the major part of the lakes, but a few finely wooded, and cleaving down delightful vistas among the hills. Minnick-water, coming down from Ayrshire, runs 7 miles southward, and  $1\frac{1}{2}$  mile south-westward to the Cree, a little above the Loch of Cree, traversing, except near its termination, a dreary country, and receiving numerous rills, and in particular the superfluous waters of Lochs Trool, Round, Long, Valley, and Neldricken, in one accumulated stream. Polkill-water rises a mile south of Loch-Trool, and flows  $4\frac{1}{2}$  miles southward, and the same distance south-westward to the Cree, immediately above Newton-Stewart. Pilmour-water rises  $1\frac{1}{2}$  mile west of the New-bridge of Dee, and runs 10 miles south-westward and southward, all in the interior except a mile above its mouth on the boundary with Kirkmabreck to the Cree, at the point where that river leaves the parish. The river Dee, first under the name of Cooran-lane, and next under its proper name, runs, from its sources in Dry-loch, Loch-Dungeon, and Long-loch, to a little below the New-bridge of Dee, 10 miles along the eastern and south-eastern boundary. These streams and streamlets, with their very numerous tributaries, cleave the whole district into a labyrinth of broken surface,—prevailing upland, everywhere, and in all directions, ploughed, with glens and ravines. The district, though not strictly alpine, is one of the most rudely highland in the south of Scotland. Excepting in a warm nook of about 6 square miles in the extreme south, and in some beautiful but narrow stripes along the principal streams in the west, it is everywhere rugged, very extensively heath-clad, and, for the most part, altogether and irreclaimably pastoral. Of several summits which attain an altitude above sea-level of about 1,600, or 1,700 feet, the chief is Cairnsmuir on the south-eastern boundary. The heights which crowd the interior have aggregately a grand effect, and form many stern yet imposing prospects. A few goats, some Galloway cattle, and at least 30,000 sheep, browse on their sides and in the intervening hollows. Some tumuli, and other rude and simple monuments of remote antiquity, are scattered on their surface. Though seemingly inhospitable, the hills are comparatively little snow-clad, and enjoy a mildness of climate denied to many Scottish districts of much lower ground. From the southern and finely cultivated corner of the parish upward along the vale of the Cree, several pleasing prospects open among the heights, extending up the courses of the streams.

The higher declivities are, in many instances, clothed all over with plantation; the lower slopes form fine green pasture; and the valley-grounds are richly cultivated, and occasionally are ornamented with mansions and embellishing woods. The vale of Pilmour-water, in particular, presents some charming wild scenes. The stream is sometimes obstructed with rocks, and impetuously breaks away from them cbaft with detention; its banks are plentifully wooded; its gambols are overlooked by the mansions of Bardrocheid and Bargaly; and its hill-screens rise and open, and close in many diversified forms. In the vale of the Cree, within a mile of Newton-Stewart, stand the mansions of Mochramore and Kerrochtree, the former on the river, the latter direct inland, both forming fine objects in a beautiful landscape. In the vale of Polkill-water, or rather in that of a brook tributary to it,  $2\frac{1}{2}$  miles north of Newton-Stewart, stands Garlies-castle, the original seat of the Earls of Galloway, and that which gives them the title of Baron. The lead-mines of Mochramore were once a source of considerable wealth; they gave rise to a populous village, occupied solely by miners; they were wrought with great earnestness; but at length the veins became greatly exhausted, and new ones ceased to be discovered. A plain, below Kerrochtree-house, is said to have been the scene of some ancient battle, and has a standing-stone and some cairns as monuments of the event. Partly in the parish, though chiefly in Penningham, Wigtonshire, stands the town of NEWTON-STEWART. See that article. Nearly 2 miles east of it stands the village of Craigtown. Almost suburban to Newton-Stewart, and a little north of it at the mouth of Polkill-water stands the ancient village or clachan of Minnigaff, the parish-church surmounting an eminence in its vicinity. The view down the Cree, from vantage-ground near the church, composed of the course of the river, straggling houses along its banks, the village, a green hill feathered with trees, and in general a rich and variegated narrow valley, is eminently pleasing for the altitude of its objects and the warmth of its colours. The parish is traversed across its south-east end by the great road between Dumfries and Portpatrick,—south-eastward from this road, by a branch communication toward Creetown,—and northward along the Cree and the Minnick by a road into Ayrshire; but over by far the greater part of its area it remains quite inaccessible to any wheeled vehicle. Population, in 1801, 1,609; in 1831, 1,855. Houses 310. Assessed property, in 1815, £10,914.—Minnigaff is in the presbytery of Wigton, and synod of Galloway. Patron, the Crown. Stipend £254 4s. 10d.; glebe £20. Unappropriated teinds £72 5s. 11d. Schoolmaster's salary £34 4s. 4½d., with £31 6s. fees, and £1 6s. other emoluments. A non-parochial school was attended, in 1834, by 160 scholars, and the parochial school by 65.—The name Minnigaff was written, in several monuments of the 13th and 14th centuries, Monygove; and alludes, in its Erse or Gaelic origin, to the stony moorland which prevails among the hills. The church was a free parsonage at the commencement of the 13th century, as 'the parson of Monygove' then witnessed a charter of John, bishop of Galloway; but it was afterwards given to the monks of Tongueland, and it followed the fates of their property both before and after the Reformation. There were anciently in the parish two chapels subordinate to the mother-church. Some measures adopted about the year 1684, to provide it with a second modern church at 'the house of the hill,' seem not to have succeeded, and possibly have never since been renewed. But dissent has provided some church-accommodation at NEWTON-STEWART.

**MINSH (THE)**, the broad sound which separates the northern part of the Long Island group of the Hebrides from the continent of Scotland, and, at its south end, becomes split into two straits by the Isle of Skye. Its mean breadth is about 35 miles. Though the passage of this sound is annually performed by a large portion of the vessels engaged in the Baltic trade, the commissioners of the Northern Lights have not yet provided it with a single beacon. One lighthouse stands on Scalpa, at the point of transition from the Minsh to the Little Minsh, and another stands on Cape Wrath, to guide the navigation out of the north end of the Minsh; but, neither along the coast of Lewis, nor on any opposite point of the continent, is there any similar appliance. A packet sails once a-week across the Minsh, from Pol-Ewe to Stornoway, and is partially maintained by a contribution of £130 a-year from government; but, as it existed in 1836, is described as "an ill-found vessel, its tackling ill-suited to bad weather, and its crew insufficient" in number. Generally throughout the year, and invariably during the four winter months, the wind in the Minsh veers round to the west and south-west at noon. The meaning of the name is 'the stormy sea.'

**MINSH (THE LITTLE)**, that sound which separates the central part of Long Island from the isle of Skye. Its breadth is tolerably uniform, and probably averages 16 or 17 miles. See preceding article.

**MINTO**, a parish in Roxburghshire; bounded on the north by Lilliesleaf; on the north-east by Anrum; on the east by Bedrule; on the south-east and south by Cavers; on the south-west by Wilton; and on the west by a detached part of Selkirkshire. Its form is oblong, but suffers contraction toward the west, and slowly tapers to nearly a point on the east. Its greatest length in a straight line, east and west, over the northern summit of its two hills, is  $5\frac{3}{4}$  miles; its greatest breadth, in a line nearly due north from Teviotbank, is 3 miles; and its area is about  $8\frac{1}{2}$  square miles. The river Teviot, flowing over numerous fords, along a pebbly bed, and between banks singularly varied and highly picturesque, runs, for  $3\frac{1}{2}$  miles, generally along the southern and south-eastern boundary, but over this distance intersects on the side of Minto some small portions of Cavers. Except for  $\frac{1}{4}$  of a mile on the extreme west, where the land rises abruptly up in a bold, sylvan, and beautiful bank, a belt of haugh-ground about 1 or  $1\frac{1}{2}$  furlong broad, lies along the margin of the stream. Flanking all the haugh except its east end, there is either a steep bank, or a rapid swell; behind both of which the surface, excepting at two places where it is ploughed into dells, and at two others where it towers aloft into hills, rises with a slow and almost regular gradient away to the northern boundary. The westerly dell, traversed by a clear rivulet trotting along beneath projecting ledges, and overshadowing copsewood and trees, is the romantic HASENDEAN; which see. The easterly dell combines the soft beauties of a noble demesne, the picturesque varieties of the lake, the cascade and the purling stream, the fine attraction of the densely wooded glen, and the stern features of the dark and wild ravine, and is altogether a home of romance. Near its head a high weir thrown across it produces both a fine little sheet of water above, and a bold and freakish waterfall below. A smooth green bank rises slowly up from the edge of the artificial lake, and hears aloft the elegant and noble pile of Minto-house,—a mansion more luxuriously situated than 19 in 20 of its class, commanding through vistas among a profusion of wood, rich and glowing views athwart the vale of the Teviot, and itself ensconced from the gaze of all who do not penetrate the fairy-land

of its demesne. A stranger in approaching the dell by one of the serpentine walks which wind along its sides, and among the highly embellished grounds in its vicinity, is suddenly surprised with the noise of the waterfall below the lake, the view being intercepted by a thicket; and on advancing, he gets an instant revelation of the fall, a spanning bridge, the lake, the wooded sides of the ravine, and the imposing form of the mansion; and he feels a degree of enchantment more engrossing than what, in even the choicest spots of luxuriating beauty, accrues from the view of so limited a landscape. Below the fall the dell becomes less ornate, and subsides into its natural wildness, but continues till near the Teviot to be delightfully fascinating. A furrowed tracery in the ground, but nowhere deep enough to be even a mimic glen, brings down a pretty trotting streamlet at mid-distance between the dells, and discharges its watery freight across the haugh, directly opposite the hold and beautiful bank which screens the village of Denholm from the Teviot. A mile west, and north-west by west of, Minto-house, rise the two hills of the parish, based on a considerably elevated table-land, and shooting up to an altitude of about 870 feet above sea-level. They are regularly ascending, green, broad-shouldered, elevations, and figure conspicuously from almost every point of view in one of the richest landscapes of Teviotdale, and are seen at a great distance, and imagined to possess far more than their real altitude, from the Newcastle road to Edinburgh by way of Kelso, dividing with the Eildon-hills the attention of the traveller from England, who peers into the opening view of Scotland. Somewhat continuous with the hills, but after an intervening depression, runs eastward behind Minto-house, a broad hilly ridge, becoming hold and towering as it advances the Teviot, and when near that stream it breaks almost sheer down in the romantic assemblage of cliffs called Minto crags. The cliffs are a vast mass of trap-rock; and they soar into different points, form various platforms in their ascent, and attain an elevation above sea-level of 721 feet. Along their base are strewn huge rocky blocks, detached from the heebling precipices; over their rugged face, studded with projecting and menacing ledgy fragments, are lichens, ivy, fern, and various wild floral plants; and clothing their sides, and partially crowning their summits, are picturesque clumps and sheets of plantation. "The view from the summit,"—we quote the words, though we have repeatedly on the spot shared the ideas, in this particular, of the New Statistical Account—"is highly diversified and beautiful. The windings of 'the silver Teviot,' through a pleasing vale, sometimes contracted, and again expanding, can be traced above and below for many a mile, the prospect on the one hand being terminated by the fine outline of the Liddesdale hills, along with those on the confines of Dumfries-shire, and in the opposite direction by the smoother and more rounded forms of the Cheviots. Ruberslaw, the highest hill in this vicinity, rises immediately in front, with Denholm-dean, celebrated by Leyden, on the right, and the narrow bed of the Rule on the left; while behind, to the north, are distinctly seen the Eildon hills, the Black-hill, Cowdenknowes, and more remotely Smalholm-tower, Hume-castle, and the low, dark skyline of the Lammermoors."—"A small platform on a projecting crag," says Sir Walter Scott, "is termed Barnhill's bed. This Barnhill is said to have been a robber or outlaw. There are remains of a strong tower beneath the rocks, where he is supposed to have dwelt, and from which he derived his name. On the summit of the crags are the fragments of another ancient tower, in a picturesque situation."

“ On Minto-crags the moonbeams glint,  
Where Barnhill hewed his bed of flint;  
Who dung his outlaid limbs to rest,  
Where falcons hung their giddy nest,  
Mid cliffs from whence his eagle eye  
For many a league his prey could spy,  
Cliffs doubling on their echoes borne,  
The terrors of the robber's horn,—  
Cliffs which for many a later year,  
The warbling Doric reed shall hear,  
When some sad swain shall teach the grove,  
Ambition is no cure for love.”

Teviot-hank, situated on the hank behind the burgh-ground, three furlongs east of Hassendean, is a modern mansion in the old English style, from an elegant design by William Burn, Esq., and forms a marked and pleasing feature in the general landscape. The village of Minto, situated midway on the swell toward the base of the hills, nearly three furlongs west of Minto-house, and commanding much of the Teviotdale part of the prospect seen from Minto-crags, is a singularly pleasant little cluster of neat cottages traced with parasitical and flowering shrubs. Its population, in 1831, was 108. Grouped with it is the parish-school, a large neat building, and a place of some local note; and a few yards west of it stands the parish-church, a Gothic edifice with a square and pinnacled tower, a conspicuous object which, seen from a little distance, forms a delicate tracery against the back-ground, and, in itself, is one of the most handsome country rural churches in Scotland. The manse, half-a-mile to the south, on lower ground, washed by the central brook of the parish, is in the style of a Tuscan villa, and exhibits kindred taste to that which gently and joyously luxuriates over most of the objects and surface of this interesting district. About 800 acres of the parochial area are under plantation,—chiefly oak, elm, ash, larch, and spruce, and including many very large and beautiful trees; about 1,500 acres are in pasture; and little more than 800 own the dominion of the plough. The soil toward the Teviot is a light loam; farther north it is a strong clay lying upon till; and, wherever tilled, it has been profusely and with fine results subjected to the most approved georgical operations. The sheep fed on the pastures are of the Cheviot and Leicester breeds. The parish is traversed by no greater a road than that between Hawick and Lilliesleaf, and has no other artificial communication across the Teviot than a pedestrian suspension-bridge opposite Denholm; yet it has sufficient outlets and interior roads, and is distant, at the nearest points, only 3½ miles from Hawick and 4 from Jedburgh. Population, in 1801, 477; in 1831, 481. Houses 85. Assessed property, in 1815, £4,515.—Minto, anciently an independent parsonage, is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Earl of Minto. Stipend £205 12s. 9d.; glebe £40. Unappropriated teinds £287 1s. 8d. Schoolmaster's salary £34 4s. 4½d., with £25 fees, and £10 10s. other emoluments. The present parish comprehends the ancient parish of Minto, and part of that of Hassendean. The original barony appears to have been much more extensive than even the present, and much more the anti-Reformation parish; for Robert Bruce granted to William Barhithonsoris two parts of the lands of 'Kirkhorthwic,' and three parts of 'the mila thereof,' 'infra haroniam de Minthou;' and Kirkborthwic is about 9 miles west-south-west from Minto.—The noble family of Elliot, whose title of Earl is taken from the parish, and whose distinguished history has deeply entwined its name in the chaplets of modern renown, and made it figure in the annals of literature and diplomacy, and in the topographical nomenclature of the proud metropolis of Scotland, came into possession of the ascendant portion of its lands only at the recent period of the Union. “ On

the 30th of April, 1706, Sir Gilbert Elliot obtained a grant of the barony of Minto, in Roxburghshire, with the patronage of the church, the tithes, and with the manse and glebe of Minto, and also a grant of the barony of Headshaw, with the patronage of the church of Ashkirk, and the tithes thereof.” [Warrant Book.]—Sir Gilbert—a son of Gawin Elliot of Midlem mill, and a grandson of Gilbert Elliot of Stohhs, called 'Gibbie wi' the gowden garters,' and of Margaret Scott of Harden, commonly called 'Maggy Fendy'—acted a stirring part in the wars of the Covenanters, under the last of the reigning Stuarts, and narrowly escaped destruction for his enthusiastic attachment to the cause of Presbyterianism and religious liberty; he was one of the Scottish deputation to the Prince of Orange to adjust measures for giving him the British crown; he was appointed clerk to the privy-council at the Revolution, was made a baronet in 1700, got a seat in the College-of-justice under the title of Lord Minto in 1705, and died in 1718, at the age of 67. Dr. Mc'Crrie, in his 'Life of Veitch,' says, “ When Lord Minto visited Dumfries, of which Mr. Veitch was minister after the Revolution, he always spent some time with his old friend, when the conversation often turned on the perils of their former life. On these occasions his Lordship was accustomed facetiously to say, 'Ah! Willie, Willie, had it no been for me, the pyets had been pyking your pate on the Nether-Bow-port!' to which Veitch replied, 'Ah! Gibbie, Gibbie, had it no been for me, ye would hae been yet writing papers for a plack the page!'” Sir Gilbert Elliot, the second of the name, and the son of the first, was also a member of the College-of-justice, and became successively a Lord-of-session, a Lord-of-justiciary, and Lord-justice-clerk; and, with the aid of one of his sisters, made a singular escape from an enraged party of Jacobites, during the last rebellion, by hiding himself among Minto-crags. The sister who, on this occasion, played the heroine, was Miss Jane Elliot, the authoress of one of the three exquisite lyrics known in Scottish song under the common name of 'The Flowers of the Forest.' The 3d Sir Gilbert Elliot sat in parliament, first for Selkirkshire, and next for Roxburghshire, and became Treasurer of the navy; and he wrote the fine pastoral,

“ My sheep I've forsaken, and left my sheep-hook,  
And all the gay lannets of my youth I've lorsook.”

inserted in the note on Minto-crags in the 'Lay of the Last Minstrel.' The 4th Sir Gilbert, figuring from the commencement till nearly the close of the wars with France, filled the offices successively of Governor of Toulon, Viceroy of Corsica, Minister plenipotentiary at Vienna, President of the Board of control, and Governor-general of India; and was raised, in 1797, to the peerage under the title of Baron Minto, and, in 1812, received the additional dignities of Viscount Melgund and Earl Minto. His son, the present Earl, succeeded to the family estates in 1814, married, in 1806, the daughter of Patrick Brydone, Esq., author of the well-known 'Tour in Sicily,' sat early in parliament, and rose to the offices successively of Minister-plenipotentiary to the court of Berlin, and First Lord of the Admiralty.

MISTY-LAW. See LOCKWINNOCH.

MIULIE (LOCH), a small lake near the head of Glenstrathfarrar, in the north-west extremity of Inverness-shire. An islet on its hosom was the retreat of Lord Lovat after the ruinous defeat at Culloden; and the summit of an adjacent mountain was his post when helplessly surveying the conflagration of his mansion, and of the houses of his clansmen.

MOCHRAMORE. See MINNIGAFF.

MOCHRUM. See KIRKOSWALD.

MOCHRUM, a parish on the south coast of Wigtonshire; bounded on the north and north-east by Kirkcowan; on the east by Kirkinner and Glasserton; on the south and south-west by Luce-hay; and on the west by Old Luce. Its form is irregularly oblong, stretching from the north-west to the south-east, and first contracting and next tapering to a point at the south-east end. Its greatest length, from an angle a little north of Drumden to the extreme south-east corner, is 12 miles; its breadth varies between a few yards and  $5\frac{1}{2}$  miles, but averages between  $4\frac{1}{4}$  and  $4\frac{1}{2}$  miles; and its area is about  $52\frac{1}{2}$  square miles. The sea-coast,  $9\frac{1}{2}$  miles in length, forms, for a mile from the north-west extremity, a steep rocky hill overhanging the sea, altogether inaccessible from without, but traversed along the brink by a road which was constructed by the filling up of deep caves and the removing of vast rocky blocks; and hence, to the south-east extremity, it is a stripe of flat smooth gravel beach 50 yards in mean breadth, flanked by a bold and precipitous bank, which, for the most part, forbids access from the sea, but, in several places, is cleft by creeks and tiny bays. Though there are several landing-places for small boats, the only harbour or accessible point for sailing-craft is at PORT-WILLIAM: which see. Mackerel, cod, whittings, and other fish are caught in great quantities, and salmon and herring to a small amount, off the coast. No fewer than eighteen independent brooks, all of local origin, trickle along to the shore. Port-William-hurn, the largest of the eighteen, issues from Clalcarroch-loch, a small circular lake, and has a course of only  $4\frac{1}{2}$  miles to Port-William-hay. A brook, circling round from Glasserton, traces the eastern boundary over a distance of 2 miles to the sea. White-loch,  $\frac{3}{4}$  of a mile long and 3 or 4 furlongs broad, lies in the south-east corner, encinctured with wood and overlooked by Merton-house, the elegant and commodious seat of Sir William Maxwell of Monreith, Bart. On its banks, near the modern mansion, stands the old family castle of the Maxwells, rearing its head amidst a clump of lofty trees; and in the vicinity are vantage-grounds which command an extensive and delightful view, embracing Luce-hay, dotted with the huge rocks of Bigscar, and zoned with the far-sweeping coast-line which holdly terminates at the Mull of Galloway,—and a wide expanse of the Irish sea, now melting away into the horizon, now broadly studded with the Isle of Man, and now screened in the far perspective with the blue mountains of Mourne in Ireland, or the towering Skiddaw, and its compatriot heights in Cumberland. Near the north-west end of the parish, amidst a wide tract of moorland, lies a cluster of six lakes. Two of them, Mochrum-loch and Castle-loch, have each several islets, and measure upwards of  $1\frac{1}{4}$  mile by half-a-mile; and these, with the other four, which are much smaller, send off their superfluous waters in one stream, forming MALZIE-WATER: which see. At the north end of Mochrum-loch, and south of the smaller lakes, stands an ancient tower or castle, called the Old Place of Mochrum, which, seen from a little distance, has a curious and picturesque appearance, and looks, amidst the lakes, almost like a large ship at sea. A lake,  $1\frac{3}{4}$  mile east of Mochrum-loch, nearly circular, and about half-a-mile in diameter, sends off an independent tributary  $1\frac{1}{2}$  mile north-eastward through the parish toward the river Bladenoch. Endrick-loch, six furlongs long and three broad, emits one of the rills which run to the coast. Three or four other lochlets send off streamlets either to Luce-bay or to the Bladenoch. Numerous springs afford a copious supply of the purest water. The general surface of the parish is of the broken character which prevails in Wigtonshire, neither level

nor mountainous, its flat grounds very limited, and its hills of no great elevation. Large tracts, at both ends of the parish, spreading round the numerous lakes, consist chiefly of rocky eminences and mossy swamps, bleak and barren in their general aspect, and thinly interspersed with small patches of good dry arable land. The soil, for several miles along Luce-hay, is, for the most part, either a fine light or a strong deep loam, exceedingly fertile; and, towards the centre of the parish, it gradually becomes thin and stony. Only about 200 acres are under plantation. The villages, besides Port-William, which shall be separately noticed, are Edrick, with a population of 200, and Mochrum, with a population of 60. The parish lies midway between the village of Glenluce on the west, and both the towns of Whithorn and Wigton on the east, and is traversed by the roads from both the towns through Glenluce to Stranraer. Population, in 1801, 1,113; in 1831, 2,105. Houses 587. Assessed property, in 1815, £8,316.—Mochrum is in the presbytery of Wigton, and synod of Galloway. Patron, the Crown. Stipend £153 3s. 5d.; glebe £20. The church, situated in the village of Mochrum, 2 miles north of Port-William, was built in 1794, and enlarged in 1822 and 1832. Sittings 700. There is a Relief meeting-house at Port-William. The parish minister estimated the population, in 1836, to consist of about 1,600 churchmen and about 500 dissenters. The parish-school was attended, in 1834, by 44 scholars; and seven private schools by 281. The teachers of two of the private schools receive respectively £15 and £10 from Sir William Maxwell of Monreith. Parochial schoolmaster's salary £31, with £16 fees, and £4 other emoluments.—Mochrum was anciently a vicarage of the canons of Whithorn. In 1606 the church was granted, along with other property which had belonged to the canons, to the Bishop of Galloway; in 1641 it was transferred to the University of Glasgow; in 1661 it was restored to the Bishop of Galloway; and, at the final abolition of Episcopacy, it reverted to the Crown. A chapel anciently stood near the old castle of Merton. Another chapel, dedicated to St. Finnan, and called Chapel-Finnan, or Chapel-Fingan, stood on the coast under the cliff. Its ruins figure in an account of Galloway, written in 1684, yet are still extant.—The lands of Mochrum were given, in 1368, to Thomas Dunbar, second son of Patrick, Earl of March. The Dunbars, who descended from him, took title from Mochrum, had their seat at the Old Place of Mochrum, and figured somewhat distinguishedly as a family. Cadets of the house founded the families of Dunbar of Clugston and Dunbar of Baldoon, the latter now represented by the Earl of Selkirk. Gavin Dunbar, son of Sir John Dunbar of Mochrum, became prior of Whithorn about the year 1504, was afterwards made preceptor to James V., and became, in 1522, Archbishop of Glasgow,—in 1526, Lord-chancellor of Scotland; and, in 1536, one of the Lords of Regency during the King's visit to France. The family was raised to the baronetage in 1694, and is now represented by Sir William Rowe Dunbar, Bart.—The Maxwells of Monreith settled in the parish in the early part of the 17th century. John Maxwell, younger of Monreith, acted a distinguished and military part among the Covenanters, stood high in fame among their leaders, and made narrow escapes from martyrdom in their cause. Another celebrated and recently deceased offshoot of the family was Sir Murray Maxwell, commander of the Alceste in the Amherst embassy to China, aide-camp to William IV., and, at his death, under appointment to the governorship of Prince Edward's Island.

MOFFAT, a parish, chiefly in Dumfries-shire, and partly in Lanarkshire. The Dumfries-shire part projects northward from the adjacent regions of the county, and forms the northern extremity of the district of Annandale. It is bounded on the north by Lanarkshire and Peebles-shire; on the east by Selkirkshire, Eskdalemuir, and Hutton and Corrie; on the south by Wamphray and Kirkpatrick-Juxta; and on the west by Lanarkshire. Its greatest length from east to west is 14 miles; and its greatest breadth is  $8\frac{1}{2}$ ; but it is very deeply indented by Kirkpatrick-Juxta, and has an area of only  $56\frac{3}{4}$  miles. The Lanarkshire part is quite contiguous, lies on both sides of Evan-water, touches the Dumfries-shire part along the east and the south, is bounded on the other two sides by the parish of Crawford, and contains two farms, having an area of  $3\frac{1}{2}$  square miles. For 24 miles along the west, north, and east, the boundary-line is formed by the highest summits or water-shedding line of the southern Alps of Scotland, which attain here their highest altitude, and send off hence their long broad spur across the counties of Peebles and Selkirk toward the Lammermoors. Evan-water cuts a gorge in the north-west through this mountain-barrier; and coming down from Crawford, flows  $\frac{2}{3}$  of a mile on the boundary between that parish and Moffat, and then gallops impetuously over a rocky and declivitous bed,  $3\frac{3}{4}$  miles southward to Kirkpatrick-Juxta, at Middlegill. Cloffin-hurn rises in three head-streams in the extreme west, and runs 3 miles south-eastward and eastward to the Evan, at the point of its entering Kirkpatrick-Juxta. Garpel-water rises in the south-west extremity, runs nearly 2 miles along the southern boundary, and then passes away to become afterwards tributary to the Evan. The river Annan rises in the extreme north, and runs  $8\frac{1}{2}$  miles almost due south, but over the last 5 miles is the boundary-line with Kirkpatrick-Juxta lying on its right bank; and while on this boundary,  $1\frac{1}{2}$  mile before ceasing to touch Moffat, it receives at one point Evan-water on its right bank, and Moffat-water on its left. Eleven local independent streams join it in Moffat, all, except one, on its left bank; the most considerable being Granton, Well, and Frenchland hurns, respectively  $3\frac{1}{2}$ , 4, and 3 miles long. Moffat-water rises in the extreme north-east, and runs  $10\frac{1}{2}$  miles almost direct south-west to the Annan; augmented in its progress by 15 mountain rills. LOCH-SKENE [which see] supplies the earliest of these rills on the right bank,—that in the course of which occurs the celebrated waterfall called the GREY MARE'S TAIL: which see. The courses of even the three chief streams, the Evan, the Annan, and the Moffat, are, for a long way, sheer gorges, overhung by steep and often almost inaccessible hills, admitting little more than space for excellent though hanging roads, and possessing at their upper end, even on the beds of the streams, an altitude of about 1,000 feet above sea-level. That of the Evan nowhere in the parish expands into a vale, but continues throughout a wild, heathy, naked mountain-pass; that of the Moffat slowly opens into a belt of meadow and arable land; and that of the Annan,  $3\frac{1}{2}$  miles before the river leaves the parish, and just before it reaches the village, suddenly expands into a beautiful valley of considerable breadth, the commencement of the rich strath or 'The Howe' of Annandale, magnificently screened on three sides by towering uplands, and blooming and cheerful athwart the surface with luxuriant vegetation. A singularly fine scene in the gorge or glen of one of the brooks is called the Bell-craig, supposed to be a corruption of Belled-craig, the provincial pronunciation of Bald-craig. About 3,800 acres of the whole area of the parish are in tillage;

about 450 are under wood; and upwards of 34,000 are wildly and ir reclaimably waste, or pastoral. The soil in the valley ground is alluvium; on the lower declivities of the hills, it is a light dry gravel, in most places tolerably deep and fertile; and on the higher grounds, it produces grass and heath, and rarely yields to the predominance of moss. The mountains on the boundary include HARTFELL, which we have separately noticed, and about one-half of those mentioned in the article DUMFRIES-SHIRE, as forming the northern screen of the county. The heights along Moffat-water vie in elevation with those along the boundary; so that one-half, or upwards, of the parish is occupied with the loftiest Scottish mountains south of the Forth and Clyde. Nearly all the heights are curved and regular in outline, broad in their summits, and clothed with vegetation on their surface. Saddlehack,  $1\frac{3}{4}$  mile south-east of Hartfell, is a curious exception, being so narrow at the top that a person may hestride it, and sit as on a saddle, and see two beautiful streamlets trickling away from its opposite sides. The eagle, anciently, and even at a comparatively modern date, a multitudinous inhabitant of the Moffat Alps, now rarely meets the eye of an observer of the cloud-capped landscape. Vestiges still exist in this parish of the Roman road which passed up Annandale, and is noticed in our article on Dumfries-shire. In its vicinity are traces of some large Roman encampments. Three miles south-east of the village are vestiges of a British encampment. Near the road from the village to the well, is a high conical mount, anciently surrounded with a deep ditch, and now enclosed and planted, and appearing a beautiful object from the road; and a few hundred yards west of it is another and smaller mount. A mile east of the Roman road, in a deep sequestered glen, are two artificial excavations in freestone rock, capacious enough to accommodate a number of cattle. In various localities are ruins of peel-houses and old towers, built with sea-shell mortar.—The wild and terrific wilderness along the upper part of Moffat-water is the scene of many a stirring tradition respecting the gatherings and hidings of the persecuted Covenanters, and their narrow and romantic escapes from the bloodhound pursuit of Claverhouse and his dragons. The gorge of the stream seems to have been regarded as a defensible pass; while deep seclusions among the towering and impracticable mountains behind were treated as places of ensconcement and elusion from pertinacious pursuit. On an eminence, which commands the convergent ravines of Moffat water and Loch-Skene hurn, there are vestiges of a rude battery thrown up to defend the country toward the north-east; and another eminence on which parties were stationed to note to the congregations assembled in the ravines the approach of danger, is still called the Watch-hill.—The parish is traversed by turnpikes leading northward respectively toward Glasgow, Edinburgh, and Selkirk, along the vales and gorges of the three principal streams. Population, in 1801, 1,610; in 1831, 2,221. Houses 361. Assessed property, in 1815, £9,976.—Moffat is in the presbytery of Lochmahen, and synod of Dumfries. Patron, Johnstone of Annandale. Stipend £260 5s.; glebe £25. Unappropriated teinds £122 16s. 6d. The church was built about the year 1790. Sittings 1,000. There is in the village a United Secession meeting-house. The parochial school, and another school which had been endowed for nearly 200 years, were, in 1834, united under the direction of a headmaster and an usher. The parochial schoolmaster's salary, previous to this measure, was £25 13s. 3d., with fees, and £5 other emoluments. Six private schools—one of them an excellent hoarding-school—were, in 1834, attended

by 160 scholars.—The church of Moffat was one of the churches of Annandale transferred, in 1174, by Robert de Bruce to the bishop of Glasgow; and it was afterwards constituted one of the prebends of the see. A chapel anciently stood between the Annan and the Evan at a place still called Chapel.

Moffat has been called the Cheltenham of Scotland, and is more distinguished for its medicinal waters than any place north of the Sark and the Tweed. The wells are three. One of them, called the Hartfell-spa, is noticed in the article HARTFELL. Another, called distinctively and emphatically Moffatwell, is a strong sulphureous water, about  $1\frac{1}{2}$  mile north of the village, made easily accessible by an excellent carriage-road. Adjacent to it are a long-room, stables, and other requisite accommodations. It oozes out of a rock of compact greywacke, containing interspersed pyrites. A bog in the vicinity probably co-operates with the pyrites in the greywacke to afford the sulphureous impregnation. The water has an odour resembling that of Harrowgate, but is not quite so strongly sulphureous. It has a somewhat saline taste; it sparkles in the glass like champagne; and it is so remarkably volatile that it can be drank in perfection only at the fountain. No closeness of cork can prevent some of its best qualities—those of its sulphuretted hydrogen gas—from forsaking it in bottles. Being used as a wash, and for warm bathing, it is now conveyed to the village in pipes; but, to serve its purposes, as an internal medicine, it needs still to be taken at the spa. The well is coated on the sides with a yellowish grey crust of sulphur; and, when allowed to remain some days quiescent or unpumped, it becomes covered with a yellowish white film of sulphur. A chemical analysis of the water was first made in 1759, by Mr. McKaule, and afterwards successively by Mr. Milligan, Dr. Plummer, and Dr. Garnet. According to the last—Andersonian Professor of Glasgow, and afterwards lecturer to the Surrey Institution—a wine gallon of it contains 36 grains of muriate of soda, or common salt, 10 cubic inches of sulphuretted hydrogen gas, 4 cubic inches of nitrogen gas, and 5 cubic inches of carbonic acid gas. The well was discovered, or came into notice as a spa, upwards of two centuries ago, and has ever since attracted invalids from all parts of the kingdom. Its water is pronounced a powerful remedy in all scrophulous and scorbutic cases, in affections of the lungs, in gravel, in rheumatism, and in dyspepsy, biliousness, and other complaints of the stomach and bowels; it is very light, and powerfully diuretic; and it figures in common fame as the means of achieving “most wonderful cures.”—The third well is near Evan bridge, about  $1\frac{1}{2}$  mile south of the village, within the parish of Kirkpatrick-Juxta, and was discovered by Dr. Garnet. This does not issue from the earth as a spring, but is formed in pools by solution in warm weather, when the rain water dissolves and imbibes iron and alum from the clay. It is a weaker chalybeate than the water of Hartfell spa, strongly resembling the Harrowgate chalybeate; and though now much neglected, might, it is thought, prove useful in cases where that of Hartfell would be too astringent. According to Dr. Garnet’s analysis, a wine gallon of it contains 2 grains of oxide of iron, 13 cubic inches of carbonic acid gas, and 2 cubic inches of nitrogen gas.

The village of Moffat stands on a beautiful rising ground on the left bank of the Annan,  $1\frac{1}{2}$  mile above the influx of the Moffat and the Evan; 16 miles north of Lockerby; 21 north-east of Dumfries; 14 south-east of Elvanfoot; 50 south of Edinburgh; and 54 south-east of Glasgow. The declivity of its site

commands a fascinating prospect of the upper vale of the Annan, richly luxuriant in its fields and hedgerows, finely chequered and spotted with wood, gaily embellished with water, villa, mansion, and demesne, and picturesquely screened with gentle green acclivities, overlooked on the back-ground by sublime alpine summits. Sheltering plantations rise all around its vicinity, climb the finely curved outlines of the Gallow-hill, immediately on the north, stretch away in a little sheet of forest on the west and the south, and give the environs of the village both a warm and an adorned appearance. The spire of the church appears, when viewed in some directions, to rise elegantly from the midst of an extensive grove. Moffat, standing 300 feet above the level of the sea, at the head of the luscious valley which stretches away in an expanding stripe from its site 20 miles to the Solway frith, at the entrance of three grand inlets to the deepest wildernesses and most tremendous chasms of the southern Highlands, and only  $4\frac{1}{2}$  miles south of Erickstane-brae-head, whence issue streams that run from the highest ground in the south of Scotland, east, west, and south to the Atlantic, the German, and the Irish seas, it commands from its own site, and from vantage-grounds in its immediate neighbourhood, many singularly picturesque blendings and groupings of Highland and Lowland scenery, and probably yields to no watering-place in the world for mingled grandeur and beauty of position. In itself, too, it is a pretty, tidy, smiling village, with modest and yet dressy attractions to the gay loungeur and the fashionable invalid. The principal street of which it consists stretches north and south down the slow declination of the rising ground; it is spacious, handsomely edified, exceedingly smooth and clean, dry within an hour after the heaviest rains, and altogether so disposed as to form a most agreeable promenade for both inhabitants and strangers. Its centre has of late years been widened into recesses so as to form a moderately-sized square. In the middle of the square is a cistern for public use, and affording a copious supply of the purest spring-water, fetched in leaden pipes beneath the hed of the Annan, from the parish of Kirkpatrick-Juxta. An elegant set of baths were erected a few years ago on a superior plan, with a large apartment to serve as both a public reading-room and an assembly-room. Connected with the edifice is a fine bowling-green. The meal-bouse and market-house are commodious. Among the other buildings are two good inns, various minor places of entertainment, and many good and recently built houses fitted up as private lodgings for the use of visitors. Abundance of good provisions may always be had, brought from the balmy districts to the south; and supplies of an hundred luxuries exist which are unknown in the ordinary village or sequestered town. A regular market is held once a-week; and annual fairs are held on the 24th of June, or the Tuesday following,—on the 29th of July, or the Tuesday following,—and on the 20th of October and the 1st Tuesday of November, O. S. There is a branch-office of the Glasgow Union bank in the village. It is also the seat of a monthly justice-of-peace court; and, though formerly not well-attended to in its police, is now kept quiet by special constables and peace-officers.

The climate of Moffat is so mild and healthy as to attract invalids and occasional residents whose cases do not require any use of the spas. Showers approaching it from any point over three-fourths of the compass, and threatening to discharge themselves on the vale, are very frequently drawn down to exhaustion by the vast mountain-screen in the vicinity. The lands which environ the village are so gravely and irretentive that moisture, when it falls, very

speedily disappears, and gives no aid, either to morassy stagnation in the fields, or to a bemiring of the public roads. "Typhus," says the reverend statist in the New Account, "has often prevailed in Glasgow, Edinburgh, Carlisle, and other cities, when there was no such distemper in Moffat. Providence averted even the cholera, though severe in Glasgow, and especially in Dumfries, with which there was daily intercourse, only two or three doubtful cases having occurred, and among strangers affected before they reached Moffat. If the climate be the cause of any local distempers, the writer has never heard of it, nor the medical friends he has consulted on the point." A few goats, for supplying strangers with milk, have long been kept in the neighbourhood of Moffat-well. The milk, owing to the peculiar excellence of the pasture, is thought to be of the best kind; it has long and steadily been in request; and, from the first of June till the end of August, it is sent every morning and evening to the village, or may be had at the place where it is milked.—The environs of the village are sprinkled with villas which combine neatness or elegance with comfort. On the north bank of Moffat-water, 1½ mile south-east of the village, stands Dumcrieff, once the seat of the late Dr. Currie of Liverpool, the editor of Burns' works, and now the property of Dr. Rogerson. Several other mansions, and among them a subsidiary seat of the Earl of Hopetoun, contribute, in themselves and their grounds, fine scenic features to the environs. All the public thoroughfares leading to the village are safe, easy, and pleasant; bridges on the roads are good; public promenades and strolling-grounds have a trimmed and inviting aspect; nuisances of every description are prevented; posting facilities to every desirable extent are furnished at the principal inn; and mail-coaches are daily in transit on the roads through the parish from the south toward both Edinburgh and Glasgow.—All the antiquities, curiosities, and remarkable scenes noticed in our account of the parish, and in the articles **HARTFELL**, **GREY MARE'S TAIL**, and **LOCH-SKENE**, are accessible to parties in quest of recreation, and form a pleasing and rather rich variety of resource for the ramhler and the man of taste. A thousand localities easily reached will richly gratify the botanist, the mineralogist, and the general student of natural history. Craigieburnwood, and the moat on Coatshill opposite Earl Randolph's tower, offer fine retreats for pic-nic parties. Queensherry-hill, whose summit commands a clear view of a vast and very gorgeous panorama, is accessible to the lover of landscape who begins to get strength at the wells. Even the glowing lakes, and 'dowy dens,' and verdant braes of Yarrow, with the tower of Dryhope, the birth-place of Mary Scott, are not altogether beyond reach.—Moffat is historically associated with only one event of note: in the year 1333, while Scotland lay bleeding and ignominiously enthralled at the feet of usurpation, Sir Archibald Douglas, at the head of 1,000 horsemen, marched down by night upon the village, surprised and defeated the forces of Edward Baliol, slew or captured various distinguished English officers and near relatives of the vassal-king of Scotland, and obliged the mocker and usurper of royalty to run a race of dispersion and flight to the Solway.—Among eminent persons connected in any way with Moffat, are Bishop Whiteford of Brechin, who was a landed proprietor in the parish in the reign of Charles I., and whose daughter, the wife of James Johnstone of Gorehead, is said to have been the discoverer of the medicinal properties of Moffat-well.—Dr. Moffat, an eccentric but talented native, an object of some personal notice by Cromwell, and the author of a

Treatise on Dietetics,—the good James Earl of Hopetoun, whose family inherited the Johnstone property in the parish, and who himself occasionally resided at Moffat-house,—the Rev. Dr. Walker, translated from the pastorate of the parish to the Natural History chair of Edinburgh,—and Mr. Macadam, the famous road-maker, who died at the village in 1836 in the 81st year of his age. The population of the village, irrespective of strangers, is about 1,600.

**MOIDART.** See **MOYDART**.

**MOIN (THE)**, an extensive mountainously moorish tract of country, on the north coast of Sutherlandshire. It lies partly in the parish of Durness, and partly in that of Tongue; extends due southward from the coast at Whitenhead; and measures about 12 miles by 4½. Its elevation, a very brief way from the shore, is upwards of 1,300 feet; and, though variegated by several ranges of bold and rugged heights, it continues somewhat uniform, and bears aloft a broad and dreary expanse of bog, till, at the southern extremity, it shoots grandly up in the alpine height of **BEN-HORR**: which see. The passage of this wild tract, lying directly in the way between Tongue and Eriboll, or between east and west of the extreme north of the continent, was formerly the laborious work of an entire day; but, in consequence of the construction of the new line of road, at the late Duke of Sutherland's expense, along the coast, it is now the easy and comfortable task of a single hour.

**MOLL**, an ancient parish in the shire of Roxburgh. The district of Moll comprehended the country on the upper branches of Bowmont-water, which lies under the eastern range of the Border-mountains. The church and village of Moll stood upon the Bowmont; and there is even now, on the banks of that mountain-stream, a hamlet, commonly known by the corrupted name of Mow-haugh; and a little lower may be seen the ruins of Mow-kirk. This ancient parish is now comprehended in the parish of Morebottle. It is 12 miles south-east by east of Kelso.

**MOLLINBURN**, a populous and thriving village in the parish of Cadder, Lanarkshire; situated at the south-east extremity of the parish, on the road from Glasgow to Perth. There is a good subscription school-house here.

**MOLMONT.** See **GALSTON**.

**MONAD-LEADH MOUNTAINS**, an elongated group of lofty and rugged heights, extending from south-west to north-east, in a line parallel to the Glenmore-nan-Alhin, and occupying the central districts of the southern division of Inverness-shire. They rest on a high base or table-land of dreary heathy moor; and are comparatively flowing in their outlines, unbroken in their declivities, and free from abruptness or jaggedness of aspect. They encompass extensive glens where great herds of black cattle feed, and send down slopes where large flocks of sheep are pastured; yet they contain irksome solitudes, vast and dreary wastes, which are abandoned to the grouse and the ptarmigan, the roe and the red deer. In their upper or south-west district they contain the sources of the chief head-streams of the Spey, the Dulnain, the Findhorn, and the Nairn; and, in their lower district, they chiefly divide Strathdearn, or the vale of the Findhorn, on the north-west, from the upper vale of the Spey on the south-east. The mountains consist principally of granite and quartz rock.

**MONAEBURGH.** See **KILSYTH**.

**MONANCE (Str.).** See **ABERCROMBIE**.

**MONCRIEFF, or MORDUN**, a hill immediately north of the Bridge-of-Earn, and 2½ miles south of Perth, celebrated for the surpassingly rich view

which it commands. Strathearn, the Carse of Gowrie, the river and the estuary of the Tay, the hill of Kinnoul, the city of Perth, castles, mansions, woods, and far-away mountains, lying like clouds on the further verge of a sea of heauty, are the main elements of a landscape which none but a chief artist—and even he only in his happiest moods—may tolerably depict. Compact trap or greenstone almost entirely composes the hill, and on the south side displays a columnar formation. Patches of conglomerate appear near its western extremity, but cannot easily be traced as to either their thickness or their extent. The railroad between Edinburgh and Perth is carried over the hill. The height of the hill above sea-level is 756 feet.

**MONEDIE**, a parish a little east of the centre of Perthshire; bounded on the north by Auchtergaven; on the east by Auchtergaven and Redgorton; on the south by Redgorton and Methven; and on the west by Fowlis-Wester. It has the form of the segment of a circle, the concavity resting on the south; and measures 9 miles in extreme length, from  $1\frac{1}{2}$  to 3 miles in breadth, and about 18 square miles in superficial area. The principal streams are the Almond, the Ordie, the Shochie, and Milton-hurn. The western division of the parish, comprising two-thirds of the whole area, forms part of the southern declination of the first tier or range of the Grampians, sends up on the north some summits to the height of about 1,800 feet above sea-level, but subsides and at length admits of arable grounds as it approaches the Almond. The eastern district is champaign, and but slightly diversified in surface, beautifully cultivated, well-sheltered with woods and fences, and warm and rich in aspect. The soil near the three principal streams is a light alluvium; in the interior level grounds is alternately a black loam and a strong red earth; and on the higher grounds is principally a cold wet till. About 1-13th of the whole area is under plantation; and the remaining part is arable and pastoral in the mutual proportion of 9 to 11. Slate of an inferior quality, and grey sandstone of fine grain, and well-adapted to architecture, are worked each in one quarry. A flax spinning-mill, of recent erection, and driven by water-power from the Almond, employs fifty or sixty persons. The old castle of Kinvaid, the home of 'Bessy Bell,' the companion of 'Mary Gray,' [see METHVEN,] seemed, according to the Old Statistical Account, to have been built before lime was known as a cement; but it has now quite disappeared. Close in the western boundary stands poised on a tapering end a block of stone, about 12 feet high and 18 feet in girth, called the Kor-stone: this and some smaller stones, circularly arranged, are supposed to be Druidical. An excellent road traverses the parish along the course of the Shochie. Population, in 1801, 1,157; in 1831, 1,028. Houses 198. Assessed property, in 1815, £11,512.—Monedie is in the presbytery of Perth, and synod of Perth and Stirling. Patron, Lord Lynedoch. Stipend £215 19s. 11d.; glebe £14. The parish-church is a substantial building, erected about 27 years ago. Sittings 460. The western district of the parish originally belonged to the parish of Monzie, and is now a distinct chapelry. [See article LOGIE-ALMOND.] In that district there is a United Secession chapel, built in 1811, at a cost of upwards of £400, and belonging to a congregation formed in 1751. Sittings 450. Stipend £96, with a glebe worth £12. Connected with the chapel is a schoolhouse, which, independently of wood and slates given by the proprietor, cost £50. According to a survey made by the parish-minister some years before 1838, the population then consisted of 721 churchmen, 327 dis-

senters, and 3 nondescripts,—in all 1,051 persons; of whom 716 belonged to the western or Logie-Almond district, and 335 to the eastern district, or that of Monedie proper. The original parish was, previous to the Reformation, a free parsonage and a prebend of Dunkeld. Alexander Myln, the prebendary of it, toward the close of the 15th century, wrote a work, entitled 'Lives of the Bishops of Dunkeld,' which has recently been reprinted in the Transactions of the Literary and Antiquarian Society of Perth. The parish, after the Reformation, belonged to the presbytery of Dunkeld till about the period of the annexation to it of Logie-Almond. The parish-school was attended, in 1834, by 54 scholars,—and two private schools by 124. Parochial schoolmaster's salary £34 4s. 4½d., with about £10 fees, and about £5 16s. other emoluments.

**MONESS**. See ABERFELDIE.

**MONIFIETH**, a parish on the southern verge of Forfarshire; bounded on the north and north-east by Monikie; on the east by Barry; on the south by the frith of Tay; and on the west by Dundee and Murroes. Its greatest length from the boundary opposite West Denside on the north, to Broughty-ferry on the south, is 5 miles; its breadth along the coast is 4 miles,— $2\frac{1}{2}$  miles into the interior is 2 miles,—and thence to the northern extremity tapers like the outline of a cone; and its superficial area is supposed to be 3,710 Scottish acres. Dighty-water, coming in from Dundee, runs  $2\frac{1}{2}$  miles westward, and half-a-mile southward to the frith at Milltown, enriching the land near its course with alluvial deposits, and making several fine descents for yielding water-power to machinery. Murroes-hurn traces the western boundary for a mile, and joins the Dighty at the place where that stream enters the parish. Buddon-hurn comes down upon the extreme north, traces for  $1\frac{1}{4}$  mile the western boundary, runs  $1\frac{3}{4}$  mile south-eastward across the interior, and afterwards, just before falling into the frith, runs 3 furlongs along the eastern boundary. About 400 acres of low sandy beach along the frith appear to have been once under water, and possess but a partially improved and not rich soil. It has been supposed that nearly 1,600 acres of land might yet be reclaimed from the sea in Monifieth hay. Behind these 'links,' east of the Dighty, extends for a mile an almost level plain, the soil of which is at first light and sandy, but extremely fertile, and afterwards becomes a rich black loam. Behind the links, west of the mouth of the Dighty, the ground forms an elongated swell or low ridge, hold on the south, and gently sloping on the north, running westward between that stream and the frith. The rest of the parish has in general a southern exposure, and is diversified with gentle swells, and with the species of hills called laws. The soil is in general an excellent black loam, but deteriorates in quality toward the north, and eventually becomes, over a small tract, tilly and moorish. The highest ground is Drumsturdy-muir-law,  $2\frac{1}{2}$  miles from the shore, and supposed to rise 530 feet above sea-level. The hill is of a beautiful oval form, green over all its sides and summit, a very fine feature in the landscape, and measuring 133 yards by 66 on the superficies of its top. A charming view is obtained from it of Forfarshire to Arbroath,—the German ocean till lost in the horizon,—the frith of Tay, the hay of St. Andrews, the rich expanse of Fife, and the hills of Lothian,—the level and pleasant tract westward along the Tay, the tower, and crowded harbour, and picturesque landscape of 'Bonny Dundee,' part of the Carse of Gowrie, and the fine long hill-screen of the far-ranging Sidlaws. Around the summit of the hill are the broad foundations of an ancient fortress, with several large vitrified masses

of sandstone and whinstone firmly compacted by fusion. A little south-west of this hill is the Gallo-hill of Ethieheaton, said to have been the scene of summary feudal justice under the harons, who owned the grounds of Ethieheaton, Lavs, and Ornochie. Plantations climb the sides of various rising grounds, and expand around the seats of Fintry or Linathen and Grange,—situated, the former, an elegant modern mansion, at the point where the Dighty enters the parish, and the latter, displaying marks of ancient magnificence,  $\frac{3}{4}$  of a mile north of where that stream falls into the estuary. Mills of various sorts are ranged along the Dighty; and a number of looms are worked in the employment of Dundee manufacturers. The villages are BROUGHTY-FERRY, DRUMSTURDY-MUIR [which see], and Monifieth. The last stands in the south-east corner of the parish, east 3 miles from Broughty-ferry, and 7 from Dundee. It stands on the face of a rising ground, half-a-mile from the frith, and consists chiefly of thatched cottages, but has a somewhat extensive iron-foundry. In the burying-ground surrounding the church—itsself a plain but conspicuous building—are some beautifully carved antique tomb-stones, more tasteful and ornate than usually occur in a rural cemetery. The parish is traversed eastward by the railroad to Aberdeen, and the road from Dundee to East and West Haven, and by the Dundee and Arbroath railway. Population, in 1801, 1,407; in 1831, 2,635. Houses 547. Assessed property, in 1815, £6,481.—Monifieth is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, Lord Panmure. Stipend £255 8s. 1d.; glebe £12 10s. Unappropriated teinds £136 13s. 7d. A district in the east is included in the *quoad sacra* parish of BROUGHTY-FERRY: which see. The ancient parish was a free parsonage, in the diocese of St. Andrews; and it had before the Reformation four chapels; one at Broughty-ferry, where there is still a burying-ground,—one on the banks of the Dighty at Balmossie-mill, the foundation-stones of which were dug up near the end of last century,—one on that spot in the land of Ethieheaton, which is still called Chapel-Dokie,—and one at the village of Monifieth. Parochial schoolmaster's salary £25 13s. 3½d., with £8 10s. fees, and £3 6s. 8d. other emoluments. There are in the Broughty-ferry district six schools, and in the rest of the parish three private schools. One of the Broughty-ferry schools belongs to the kirk-session of Dundee, and yields the master a salary of £9 18s. 6d., with fees.

MONIKIE, a parish in the maritime district of Forfarshire; bounded on the north-west by Murroes and Inverarity; on the north-east by the southern section of Guthrie, and by Carmylie; on the east and south-east by Panbride and Barry; and on the south-west and west by Monifieth and Murroes. Its greatest length in a straight line between two angles which terminate it on the north and south, is 7 miles; its greatest breadth in a line due east and west over the parish-church, is 5 miles. The surface is diversified by several hills. A small tract in the extreme south corner consists of sandy downs. The land for 2½ miles, thence northward, is distinguished for fertility, has a southern exposure, and presents a warm and wealthy appearance. A large elongated hill or hilly ridge, called Dunie or Camustown, now interposes from east to west, and sections-off a colder climate and an inferior soil lying to the north. The district behind it, comprising about two-thirds of the whole area, is at first comparatively cold and moist, yet not unproductive, and eventually becomes an extensive tract of moorland,—now partially reclaimed, and under tillage, but chiefly covered with plantation, and appended to the pleasure-grounds of

Panmure-house, in the contiguous parish of Panmure. A deep and winding ravine, traversed by one of the streamlets, and called Denfiend, or the Fiend's den, bisects the central hilly ridge, and, at a place where its sides are precipitous, is spanned by a single arch of a strong massive bridge. Near a place called the Cur-hills, in the southern district, are a number of cairns, called the Hier-cairns, the monuments of some ancient hattle, and the depositaries of stone-coffins, urns, and human bones. South of this place, in a bed of marl, there were found, nine feet below the surface, several hugely horned heads of deer. At the village of Camustown stands a large upright stone, said to mark the place where Camus, the Danish general, was slain and buried after the battle of Barra, in 1010. On Camustown or Dunie hill, surmounting a summit which commands a view of large portions of seven counties, stands the 'Live and let Live Testimonial,' an elegant erection raised, in 1839, by the tenantry of Lord Panmure, "to perpetuate the memory of a nobleman who, through a long life, has made the interests and comforts of his tenantry his sole and unwearied object." The Testimonial is situated 1 mile north of the Dundee and Aberdeen railroad, 2 miles south-west of Panmure-house, and 5½ miles north-west of Buddonness, and is now one of the most conspicuous landmarks over a great expanse of ocean and estuary, on the east coast of Scotland. It was constructed from a design by John Henderson, Esq. of Edinburgh, and consists of a broad lower basement of rustic-work, capacious enough to contain an apartment for visitors, and accommodation for the keeper,—a quadrangular upper basement, the angles of which are flanked with heavy open buttresses,—and a colossal cylindrical column rising up into a balustrade, and surmounted by an ornamental vase. A stone-pillar stands in the centre of the cylinder, and carries up to the top a lightning-conductor in its interior, and a spiral stair on its exterior. A marble bust of Lord Panmure by Chantrey, stands in a niche in the visitor's room. The height of the Testimonial from the ground to the summit is 105 feet. The villages of the parish are Gouldie, Camustown, Craigton, Monikie, and one or two hamlets; but they are all small. The parish is traversed by the Dundee and Aberdeen railroad, and the Dundee and Arbroath railway. Population, in 1801, 1,236; in 1831, 1,322. Houses 268. Assessed property, in 1815, £3,089.—Monikie is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend £239 16s. 9d.; glebe £12. Unappropriated teinds £182 14s. 1d. Besides the parish-school, there are two subscription schools. Parish-schoolmaster's salary £34 4s. 4½d., with about £22 fees, and £5 other emoluments.

MONIMAIL,\* a parish in Fifeshire, occupying a portion of the central valley of the county. It forms an irregular ellipse, the extreme length of which from east to west is 4½ miles; the extreme breadth from north to south scarcely 4 miles. It is bounded on the south by the parishes of Collesie and Cults; on the east by Cupar; on the north by Cupar, Moonzie, Creich, and Dumhogg; and on the west by Ahdie and Collesie. The surface is naturally beautiful in its outline, presenting towards the north a fine range of hills, of which the Mount-hill is the highest, while the southern portion is generally more level, and diversified by soft and gentle undulations. There are three villages in the parish,

\* The name of the parish is in all probability derived from *Monadh*, 'a Muir,' and *Meal*, 'a round-shaped hill': *Monadh-Meal*, 'the Muir of the round-shaped hill.' It is no doubt characteristic of what the locality once was, although the nuir would now be rather difficult to find.

the largest of which is LETHAM: which see. The other two villages are Monimail situated near the church, containing a population of 80, and Easter Fernie containing 60 inhabitants. The population has been gradually though slowly increasing for many years. In 1755 the return was 884; in 1801, 1,066; in 1831, 1,230. Houses 260. During this period the amount of the agricultural population has considerably decreased; and the cause of the general addition to the population is the increase of weavers in the parish. There are about 3,000 acres under cultivation, in the parish; in pasture, including the grounds around gentlemen's seats, 2,000 acres; and 500 acres in wood. The annual amount of raw produce has been estimated by the Rev. Mr. Brodie at £20,100, the total rental at about £8,000. In 1774 it was £2,500. Value of assessed property, in 1815, £10,229.—Balgarvie, at the eastern extremity of the parish, is a plain commodious modern house, with a southern exposure, and grounds well-laid out. In old times it belonged to a branch of the family of Balfour, from whom were descended the Lords Balfour of Burleigh. "It is said," says Sir Robert Sibbald, "that there was here a strong castle, which was taken and levelled, by Sir John Pcttsworth as he was marching with the English forces to the siege of the castle of Cupar in the reign of King Robert I." Of this castle, if there ever was one here, not a vestige now remains.—Over or Upper Rankeilour, one of the seats of George W. Hope, Esq., is a very elegant house, built by the late General John, 4th Earl of Hopetoun; the grounds are magnificently wooded, many of the trees being of great size and beauty. Upper Rankeilour originally formed a portion of the property of the family of Rankeilour of that ilk; but at an early period it became the property of a branch of the Sibbalds of Balgony,\* with whom it remained

\* David Sibbald, the third brother of Sir James Sibbald, Bart., of Rankeilour, was keeper of the Great Seal of Scotland, under the Earl of Kinnoull, who was appointed Lord-high-chancellor in 1622. He was father of the celebrated Sir Robert Sibbald, Knight, M.D., author of the 'History of Fife,' and of various other valuable works. Sir Robert was born in 1641, and became a student in Edinburgh college, where he remained for five years; after which, in March 1660, he went to Holland, and remained for a year and a half at Leyden, studying anatomy and surgery. On leaving Leyden, he went to Paris, where he remained nine months pursuing his studies with great assiduity; and after visiting various places in France, he came over to London, whence he returned to Edinburgh in October, 1662, and commenced the practice of medicine. Some years after, he and a Dr. Balfour, who had been long in France, formed the design of instituting a Botanic garden in Edinburgh; and for this purpose procured an enclosure in the Abbey-yards, which they were very soon enabled to stock with a collection of 800 or 900 plants. Other physicians in Edinburgh joined them, and subscriptions were raised for the support of the garden. About 1679 Sir Robert—who had already been making collections for an accurate Topographical account of the kingdom—received from Charles II. his patent to be his Geographer for Scotland, and another to be his Physician there, with his Majesty's commands to publish "the natural history of the country, and the geographical description of the kingdom." "This," says Sir Robert, in his autobiography, "was the cause of great pains, and very much to me, in buying all the books and MSS. I could get for that use, and procuring information from all parts of the country, even the most remote isles. I employed John Adair for surveying, and did bestow much upon him, and paid a guinea for each double of the maps he made. He got much money from the gentry, and an allowance from the public for it; but notwithstanding the matter was recommended by a committee of the council, and my pains and progress in the work represented, yet I obtained nothing, except a patent for one hundred pounds sterling of salary, from King James VII., as his physician. I got only one year's payment." Notwithstanding this discouragement, however, Sir Robert proceeded in his exertions; and in 1682, he published an advertisement with queries which was distributed over the whole kingdom. In 1683, he published in Latin and in English, an account of the projected work, what had been effected, and what required yet to be done, with proposals for printing it. Shortly before this time he had projected, and was the principal instrument in the institution of the College of Physicians, for incorporating which a royal patent was procured. In 1682, he was knighted by the Duke of York. In 1684, his 'Scotia Illustrata' was published, seventy copies of which he says he gave away in presents. In 1685, Sir

till the reign of Charles II., when it became the property of Sir Archibald Hope, grandson of the famed Sir Thomas Hope of Craighall.† A monumental pillar has been erected to the memory of the late Earl of Hopetoun on the summit of the Mount-hill, the highest point in this parish. It is a plain Doric column, 92 feet in height, surmounted by a square capital of 15 feet. It is hollow within, and there is a narrow spiral staircase by which there is an ascent to the top, from whence a fine view of the vale of Stratheden, and the friths of Forth and Tay, is obtained.—South-west of Rankeilour is Wester Fernie, the seat of Francis Balfour, Esq. This house is obviously of great antiquity, and has at one time been a place of considerable strength, surrounded by marshy ground which defended its approach. Fernie appears to have been part of the original estate of the earls of Fife; and the vulgar tradition is, though there is no authority for the supposition, that it was one of Macduff's castles.—North of Fernie and Rankeilour, is the Mount, now the property of Mr. Hope, but once the residence of Sir David Lindsay, Lord Lyon-King-at-Arms, during the reign of James V.; a circumstance which will ever make it interesting to Scotsmen, who value the early literature of their country.‡

Robert embraced the Roman Catholic religion, and was in consequence nearly assassinated by a mob, who surrounded the house in which he resided, and broke into it, while he with difficulty escaped by the yard behind. They forced their way into his room, searched his bed, and at length went away after having sworn that they would 'Rathellet him.' After this he went for a time in London, where the conduct of the Jesuits with whom he came in contact, and the evil influence they exercised over the mind of the king, so struck him, that as he says, "I repented of my rashness, and resolved to come home, and return to the church I was born in." He accordingly immediately put his prudent resolution into effect, and in 1685, was appointed by the magistrates of Edinburgh professor of medicine in that university. From this time till 1712, scarce a year passed without some work proceeding from his pen, in many of which he exhibited deep antiquarian research, extensive observation, and judicious inquiry into the actual state of Scotland. His work on Roman Antiquities in Scotland, appeared in 1707; his history of the Shires of Stirling and Linlithgow in 1710; and four separate works on Roman Antiquities, and a description of the Orkney islands, in 1711. Two editions of his history of Fife appeared during his lifetime, the most correct of which is that of 1710. The period of Sir Robert's death is not known, but in 1722, a catalogue was printed at Edinburgh, of "the library of the late learned and ingenious Sir Robert Sibbald of Kippis, Doctor of medicine," which were to be sold by auction. It seems probable he had died not long previously. Many of his MSS. and printed books were bought by the Faculty of advocates for their library.

† Mr. Thomas Hope of Rankeilour, the eldest son of Sir Archibald, was admitted a member of the Faculty of Advocates in 1701. He appears to have paid great attention to the theory and practice of agriculture. It was chiefly through his exertions that an Agricultural society was formed at Edinburgh in 1723. This society, which was styled 'The Society for Improving in the Knowledge of Agriculture,' held its first meeting on the 13th day of July, 1723, and had the merit certainly of being the first Agricultural society instituted in the United Kingdom. It consisted of upwards of 300 members, but it only existed for about 20 years. Mr. Maxwell of Arkland, an eminent Scottish improver, published a selection from their transactions in 1743, shortly after the dissolution of the society.

‡ Sir David Lindsay was descended from Sir William Lindsay of the Byres, ancestor of the Lords Lindsay of the Byes. Sir William Lindsay's second son obtained the lands of Garmynton, in the county of Haddington, as his portion. He had a son David, who acquired the Mount from Pitblado of that ilk, the previous proprietor, and died about the year 1507, leaving five sons, of whom David the poet, was the eldest, and as such succeeded to his father's estate. He appears to have been born at the Mount, about the year 1490, and received his earliest education at the burgh-school of Cupar, after which he was sent to the university of St. Andrews in 1505, the year of Knox's birth, and only two years before his father's death. He left the university in 1509, when he was about nineteen years of age, and, as appears from statements by himself in his poems, entered shortly afterwards into the service of James IV. and his Queen. On the birth of James V. in 1513, he entered into attendance on him as a page of honour. During the boyhood of the king, the young poet appears to have been entrusted only with his amusements, while his education was directed by Gawyn Dunbar, an ecclesiastic of great merit and learning. Sir David's account in his 'Complaynt' of his playful occupations is exceedingly graphic and pleasing. After telling that "he lay nichtlie by the king's cheik," he goes on to relate

West of Fernie is Melville-house, the seat of the Earl of Leven and Melville. The house was erected, in 1692, by George, 1st Earl of Melville, in the fashion then prevalent in Scotland. It is a large square

"How as ane chapman beris his pack,  
I bare thy Grace upon my back;  
And sumtymes strididgis on my neck  
Downward with mowy bend and bowk.  
The first syllabie, that thou didt mate  
Was pa—de—lyra, upon the lute;  
Then playit I twenty springs perqueir,  
Ouhlik was great plesour for to heir.  
Fay play, thou leit me never rest,  
But eykerthout, thou laillit ay best;  
And ay quher thou come frae the scule,  
Then I behaift to play the lute."

Lindsay continued in his attendance on the King till 1524. During his retirement from court, the poet seems to have sought the muse at his residence on the Mount, and to have looked with grief on the domination of the Douglasses over both prince and people, as appears from several of his earlier pieces, which take their colour from the miseries of the time. In 1523 the King effected his escape from the thralldom he had been kept in. This change in the government is soon observable in the writings of the patriotic poet, as we see in his 'Dreme,' which he produced towards the end of 1523. Lindsay did not allow the King to forget his old companion; he knew that "in the court meit gat nathing without opportune asking," and his 'Complaynt,' which was written in 1529, appears to have produced the desired effect, as next year he was inaugurated Lyon-King-at-Arms, and made a Knight. As his ordinary fee of office, the King assigned to Sir David four chalders and nine bolls of victual, out of the lands of Lathrie; and, in 1522, gave to him for life "two chalders of aittis to his hors court, to be taken up yearly of his lieues knie aittis of his lands of Over Dymore." This appointment seems to have brightened up his 'engyne,' as he had hinted it would, and he now began his attacks on the churchmen, in his 'Complaynt of the Papingo,' which appeared in December, 1530. In April, 1531, Lindsay was sent with Campbell and Painter to Antwerp, for the purpose of renewing the ancient treaty of commerce with the Netherlands. They were well-received by the Emperor Charles V., and succeeded in the object of their mission. Shortly after his return Lindsay married Janet Douglas, of what family is not known; but his marriage does not appear to have been productive of much happiness, and he died without issue. He now occupied himself upon his drama, 'A Satyre of the Three Estates,' which was exhibited in 1535; and in 1536 he produced his 'Answer to the King's Flyting,' and his 'Complaynt of Basche.' In 1535 he, with Sir J. Campbell of Lauder, again paid a visit to the Emperor to demand in marriage for his sovereign one of the princesses of his house. They were well-received, were shown the Emperor's nieces, and brought their pictures to the King; but James does not appear to have been satisfied, or perhaps he conceived that a connection with France would be more politic, for next year an embassy was sent to that Kingdom, which was accompanied by Lindsay as Lion-herald to demand in marriage a daughter of the house of Vendome. The poet was detained a year at the court of France, when the King himself arrived to make his own choice. Neglecting the daughters of Vendome, James fixed his choice on Magdalene of France, who survived but forty days after her arrival in Scotland. Upon her death Lindsay published his 'Deploiration of the Death of Queen Magdalene,' in which he introduces by a striking prosopopoeia an expostulation with Death. In 1533 Lindsay was employed in designing and conducting the devices with which the second marriage of the king was celebrated, of which Pitsoctie has given an account; and on this occasion he produced his 'Jesting betwix James Watson and Jhone Barbour.' At Epiphany, 1539, his drama was performed at Lintlithgow to the great amusement of the court and the mortification of the clergy; and it was probably about this time that his 'Supplication against Syde l'ais' appeared. In 1539-40, on the arrival of Sir Ralph Sadler as ambassador from Henry VIII., Lindsay was sent to receive him, was the means of communication between him and the King and Queen, and acted a conspicuous part in the intriguing scene which ensued. In 1541, the poet, now in his fiftieth year, entailed his estates of Garmynton Alexander, the Mount, and his other lands on himself and Janet Douglas his wife, in conjunct fee and life-rent, with remainder to his heirs male what-soever. In December, 1542, Lindsay was doomed to witness the death of the monarch who had so long honoured and rewarded him, and, as Lyon-king, must have directed the ceremony of his funeral. His connection with James V. was now at an end, but Lindsay appears still to have interested himself in public affairs. He sat for the burgh of Cupar in the parliament which met in March, 1542-3; declared the Earl of Arran heir to the crown in the event of the death of Queen Mary; and, with Kirkcaldy of Grange and others, he "travelled to promote the governor and to give him faithful counsel." The arrival of the Abbot of Paisley, the natural brother of Arran, led to a union of the hitherto conflicting interests of the Queen-mother, Cardinal Beaton, and the Regent, and the result was, according to Knox, that Lindsay and other honest and godly men were banished the court. His office, however, still led to his being occasionally employed in state affairs. In March, 1543-4, he was sent by the Regent to Charles V. to redeliver the order of the Golden fleece, which had been conferred by that sovereign on the Scottish king. He did not return to Scotland till the autumn of the year; and he shortly afterwards published 'Kittes Confession,' for the obvious purpose of bringing auricular confession into disrepute.

building consisting of two principal stories, and a basement and attic. Two deep projecting wings enclosed a court at the original front, the entrance to which is ornamented by winged Mercuries. The front has since been changed, and a new entrance has been made at what was formerly the back elevation; the court is now laid out as a parterre, and decorated with shrubs and flowers. The park which surrounds Melville-house is enriched with a great quantity of noble trees, most of which were probably planted when the house was built, though some of them may be even more ancient. The old approach is very grand, having on each side a double row of beech-trees of great height and beauty; this approach, however, although the trees still remain, has now been superseded, and a winding approach through a richly wooded park has been adopted. The name of Melville as applied to the grounds around the house is comparatively modern, the park and enclosures including portions of the lands of Monimail, of Letham, and of Halhill.—The lands of Monimail anciently belonged to the Archbishop of St. Andrews, who had a castle here, a portion of which still remains to the north of Melville-house. It was originally built by Bishop William Lamberton who died in June 1328, and appears to have been enlarged and improved by Cardinal Beaton, as a head with a cardinal's cap is carved on different parts of the walls. Archbishop Hamilton resided at the castle of Monimail during a severe illness, when he was attended and cured by the famous Italian physician, Cardan. About a mile from the site of the old church is a strong spring of pure water, which is known by the name of Cardan's well; so called, says tradition, because it was by the use of this water that the physi-

In the parliaments which sat at Edinburgh in November, 1544, at Lintlithgow in October, 1545, and at Edinburgh in August, 1546, he again sat as representative for the burgh of Cupar. Cardinal Beaton having been assassinated in May, 1546, the conspirators retained possession of the castle of St. Andrews, till July, 1547, when it was surrendered to the French. At Easter of that year the conspirators were joined by John Knox, and there he was met by the Lyon-king, who appears to have visited the castle of St. Andrews for the purpose of lending his influence in persuading Knox to preach. Shortly after this he published his 'Tragedie of the late Cardinal,' in which Keith says, he "has raked together all the worst things that could be suggested against the prelate." In 1548 Sir David was despatched to Christian, King of Denmark, to solicit ships for protecting the Scottish coasts against the English; and to negotiate a free trade for the Scottish merchants, particularly in grain. He was successful in his endeavours to obtain a free trade; but the ships were not granted by the Danish king. When at Copenhagen, Lindsay became acquainted with his countryman Dr. Macabeus, who was an early reformer, and had fled from St. Andrews to avoid persecution. After his return from Copenhagen he published 'The Historie and Testament of Squire Meldrum,' the most pleasing of all his poems; and, in 1553, he finished the last and greatest of his works, 'The Monarchie,' which must have been the result of the labour of years. In 1554-5 he is found still acting in his office of Lord-herald, having in January that year held 'a chaptour' of heralds, in the abbey of Holyrood-house, for the trial and punishment of William Crawler, a messenger, for abuse of his office. Sir David lived to see the Reformation established, for which he had so long laboured; but it is worthy of notice, that although he saw the return of Knox, and observed the number of persons "who were ready to jeopard lives and goods for the setting forward of the work of Reformation," he never appeared personally at any of the meetings of the Reformers, after they began to act openly against the established government; nor does his name appear at the bond of association entered into by the Congregation, in 1557. He died a short time previous to April 1558, and is supposed to have been interred in the burial-place of the Lards Lindsay of the Byres, in the church of Ceres. Tradition affirms that Sir David composed most of his poems on the top of the Mount-hill; and a spot of ground now covered with wood is said, about seventy years ago, to have still been called 'Sir David's Walk.' A large portion of the south front of the old castle in which he lived, stood in a ruinous state about ninety years ago; the admirer of Sir David, however, will now search in vain for any relic of the Lyon-poet at the Mount. A modern farm-house occupies the site of his castle; and although a carved stone is preserved in the wall of the offices, which had been in the ancient castle, it represents the arms and initials of one of his successors, not those of the poet. The Mount remained with the family, at the time Sibbald published his History of Fife, in 1710; and afterwards passed to the ancestor of the present proprietor.

cian cured the Archbishop. A belief long prevailed as to its medicinal properties, and within the last fifty years many persons used to frequent it. Its reputation, however, is now gone, and its situation almost forgotten.

This parish is in the synod of Fife, and presbytery of Cupar. Patron, the Earl of Leven. Stipend £257 10s. 3d.; glebe £12. Unappropriated teinds £857. 2s. 3d. The church of Monimail, originally a mensal church belonging to the archbishopric of St. Andrews, was built in 1796;\* sittings 600.—There are five schools in the parish. The parochial school is situated at the village of Letham. The master has an excellent dwelling-house and garden, the maximum salary, and a small sum yearly mortified to the school-master and reader of the parish. From these sources, with the school-fees, his income may be about £70 per annum. The average number of scholars attending the different schools during the winter season is about 150. There are two parish-libraries, one of which contains a good selection of books in general literature, the other consists exclusively of religious publications.

MONIVAIRD AND STROWAN, two parishes, united both civilly and ecclesiastically, and lying chiefly in the upper end of Strathearn, Perthshire. Each consists of a main body and a detached section; the main bodies mutually contiguous, and the detached sections entirely isolated. Monivaird, as to its main body, is bounded on the west, north-west, and north, by Comrie; on the north-east by Comrie and Monzie; on the east by Monzie and Crieff; and on the south by the river Earn, which divides it from the main body of Strowan, and from Comrie; and it measures in extreme length from north to south  $6\frac{1}{2}$  miles; in extreme breadth along the Earn  $5\frac{1}{2}$  miles; and, in area, about  $30\frac{1}{2}$  square miles. The detached part of Monivaird lies 2 miles south of the south-west extremity of the main body; is nearly an equilateral triangle measuring  $1\frac{3}{4}$  mile along each side; is bounded on the south-east by Muthill, and on the north and the south-west by Comrie; and occupies part of the vale and the right mountain-screen of Glenartney, drained by Druchill-water. The main body of Strowan stretches along the south side of the Earn all its length opposite to the main body of Monivaird; is bounded on the east and south by Muthill, and on the west by Comrie; and measures in extreme length from east to west  $3\frac{3}{4}$  miles; in extreme breadth  $1\frac{3}{4}$  mile; and in area about  $5\frac{1}{2}$  square miles. Its detached section lies 4 miles south-west of the nearest part of the main body; and  $1\frac{1}{2}$  mile south of the detached section of Monivaird; is bounded on the west and north by Comrie; on the east by Muthill; and on the south by Kilmadock; measures 3 miles both in extreme length and in extreme breadth, and about  $6\frac{1}{4}$  square miles in area; and occupies the south-east side of the head of Glenartney, or of the congeries of hills, traversed by ravines and glens, and drained by the head-streams of Druchill water. See article GLENARTNEY. A large part of the united parish is hilly or mountainous. The heights which stretch along the south-east boundary of the Glenartney districts, and the southern boundary of the main body of Strowan, divide the waters which are tributary to the Forth from those which are tributary to the Tay; and the heights along the northern extremity of Monivaird divide the basins of the Earn and the Almond. Most of the loftier heights are very rocky and heath-

clad; yet they have many patches and expanses of verdure, and furnish sustenance to numerous flocks of sheep. Those in the north of Monivaird are among the highest Grampians which flank Strathearn. Benchonzie, which is the highest, and stands on the boundary, has an altitude above sea-level of 2,923 feet. About 40 acres on its summit are covered with a species of moss, and have given rise to its name, which, in Gaelic, means the mossy mountain. Near its eastern base is a cluster of small conical hills, which strike the eye of every stranger as a curious *lusus naturee*. Torlum, a hill on the southern extremity of Strowan, rises 1,400 feet above sea-level. The lesser bills, and the broken slopes gliding down toward the Earn, are picturesque in their forms, richly clothed with copsewood, and gaily crowned with forest. In nearly all its objects and features, the parish, especially in its large and compact part, is wealthy in the pleasing varieties and the thrilling romance of landscape. Glenturret, extending south-eastward through all the upland district of Monivaird, has some grandly savage yet softened scenery. Near its middle stretches Loch-Turret, about a mile long and  $\frac{1}{4}$  of a mile broad, surrounded by very bold craggy mountains. At the head of the glen, daily covered with the early shadow of Benchonzie, towering up acclivitously on its west side, lies Loch-an-muan, a small lake, remarkable for the great number of trouts which are collected in a small opening in its middle, the only part where it is free from weeds. A mile north of the Earn, and at the base of the shelving series of heights, lies the loch of Monivaird, covering about 30 acres, containing pike, perch, and eels, and once rich in stores of shell marl which have diffused fertility and vegetative beauty far beyond its immediate banks. The lake is embosomed among hanging woods, green and cultivated fields, and sylvan hills; and reciprocates embellishments with the pleasure-grounds and the elegant mansion of Ochtertyre overlooking it on the north-west. On its banks is a fine echo, produced, it is supposed, from the walls of an old ruinous castle, situated on a gently rising ground running into the middle of the lake. The castle stands on the same side as Ochtertyre, and was anciently a place of strength, surrounded with water, and accessible only in one place, and by a drawbridge. GLENLENOCK [which see] belongs on its east side to the parish for  $2\frac{3}{4}$  miles above the point of opening upon the village of Comrie, and becoming identified with Strathearn, shares between Monivaird and Comrie the most romantic parts of the course and banks of its stream. The oak seems to be a particular favourite of the soil of the united parish; it is alluded to in song:—

“By Auchtertyre there grows the aik;”

and, along with the hirsch and some other species, it forms a large aggregate amount of natural forest. But the district thrivingly rears all kinds of wood produced in Scotland; and is very richly adorned, especially on the estates of Lawers and Ochtertyre, with a profuse amount and a very great variety of planted trees. Among several mansions of much taste and beauty, that of Lawers, the residence of Lord Balgray, is pre-eminent, not only for its own elegance, but for the delightfulness of its situation, sheltered on all sides by a forest of tall trees, and yet commanding a brilliant prospect of the far-stretching luxuriance of Strathearn. This strath, so far as it belongs to the parish, has beautiful curvatures in the placid and smiling course of the lovely stream whence it derives its name. The haughs on the banks of the Earn are frequently overflowed, and produces rich crops. The banks or skirts of the

\* The bell of the old church—which was removed about ninety years ago, when the one still in use was put up in its stead—had been used, as appeared from an inscription upon it, from the time of Robert Bruce.

hills flanking the haughs have very long been enclosed, plentifully manured, and judiciously cultivated; and vie with the alluvial land in opulence of soil and volume of produce. Beyond these banks cultivation, cheered by good improvable soil, has walked far up the ascents; and at the line where it ceases, begins a strife between deep verdure, and the heath, and the naked rock, for ascendancy; the luscious beauties of the valley melting gradually away into the robustness and the majesty of the upland scene.—The parish has many attractions to the zoologist, and especially to the sportsman. The eagle, the kite, the raven, and the falcon, build their nests in the craggy precipices of Glenturret. A few ptarmigans are met with on the summit of Benchonzie. Grouse, dotterell, plover, and “several migratory birds,” says our authority, “whose names are not very well known here,” are found generally on the hills. A species of hare, which is of a bluish colour in summer, and white as snow in winter, is occasionally met with in the uplands. The wild duck, the teal, the widgeon, and other water-fowl frequent the lakes; and all the birds which usually breed in a woody country, pour their melody upon the low grounds. Partridges, hares, and rabbits abound; and foxes, badgers, wild-cats, martins, and otters, are not infrequent.—On the state of Ochertyre are vestiges of two Roman posts of observation, commanding views of the camps respectively at Dalginross and on the muir of Orchil. On a hill, the Gaelic name of which means Castlehill, and whose position is about 3 miles east of Dalginross, are traces of a fortification of uncertain origin. Many sepulchral cairns existed near the Earn, but have been removed as material for stone fences. A very large one, called Carn Chainichin, ‘the monumental heap of Kenneth,’ still exists some miles north of the church of Monivaird, and is supposed to have been raised to the memory of Kenneth IV., surnamed the Grim, who, according to the register of St. Andrews, was slain “at Moieghvard in 1001.” Near the western extremity of Monivaird are two Druidical temples. The compact and large part of the united parish is traversed by two roads along Strathearn; and the detached sections are cut by the road between Comrie and Callander. Population of Monivaird, in 1801, 641; in 1831, 531. Houses 98. Assessed property, in 1815, £10,691. Population of Strowan, in 1801, 392; in 1831, 395. Houses 73.—Monivaird and Strowan are in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown and the Earl of Kinross. Stipend £261 7s. 10d.; glebe £30. Schoolmaster’s salary £34 4s. 4d., with £15 fees, and £7 other emoluments.—Colonel Dow, author of ‘The History of Hindostan,’ was a native of Monivaird, “The modern name Monivaird,” says the Old Statistical Account, “is a corruption of the ancient, which was Moivard, as appears by a grant made by the Earl of Strathern, in the beginning of the 13th century, of the church of St. Servanus, or Serpb of Moivard, to the monastery of Inchaffery. The ancient name is still retained, in the speech of a few inhabitants of the parish, who use a corrupted dialect, of the original language of Scotland. The origin of the name cannot easily be traced. Its etymology is Gaelic; being made up of two words, *Moi Vard*, signifying ‘the plain of Bards.’ Strowan is probably a corruption of St. Roman, the tutelar saint of Strowan parish.”

MONKLAND (NEW), a parish in the Middle ward of Lanarkshire, forming its northern boundary from the counties of Dunbarton and Stirling. It is nearly 10 miles in length, by about 7 in breadth at the broadest part; and is bounded by the following

parishes, viz., on the north by Cumbernauld and Kirkinilloch; on the south by Bothwell and Shotts; on the east by Torphichen and Slamannan; and on the west by Cadder and Old Monkland. Much of the parish is situated at an elevation of from 600 to 700 feet above the level of the sea, but the rise is so gentle and continuous that there is nothing in the district which deserves the name of a hill or mountain. These elevated lands are situated in the centre of the parish, and run from east to west over its whole length, declining on each side to the waters of Calder and Loggie, which are respectively its boundaries on the south and north. It is thus a beautiful open country, agreeably diversified by vale and gentle rising, with a soil exhibiting many features of variety. The district was, for a long period, particularly during the war, famous for its culture of flax. In some years, so much as 800 acres were under this species of crop; but the welcome advent of peace, and still more, the cheapness and universal introduction of cotton-cloth, has rendered flax-cultivation here, as in every other part of the country, so unprofitable that it has been almost entirely abandoned, with the exception of a few patches here and there still grown for private family use. Exclusive of minerals, and the town of Airdrie, the landward rental of the parish is believed to be about £13,000 per annum. The most important feature connected with New Monkland, however, is the mineral wealth with which it is abundantly blessed—a blessing which has enriched the proprietors, increased the population, and raised Airdrie within a few years from the condition of an inconsiderable village to that of a bustling and important town, with a share in the election of a member of parliament. So far back as the writing of the Old Statistical Account, it is stated that “coal and ironstone are, or may be, found almost on every farm.” And since then these minerals have been worked most extensively, and are still in the course of rapid increase. The quality of the coal is only equalled by its abundance, which in many places is found in seams from 9 to 10 feet in thickness. The ironstone is found both in balls and seams, and much of it is of the valuable kind called Black-band, which is so abundantly mixed with coal as to require little addition of fuel in the burning. Almost all the extensive iron-works in this district of country are to a certain extent supplied with ironstone from this parish, including those of Clyde, Cadder, Chapel-hall, Gartsherrie, and Carron. Limestone is worked in the parish, particularly in the northern division of it, but not to great extent. Several mineral springs, too, exist, chiefly of the chalybeate kind; but the Monkland-well, near Airdrie, is the most famous, and at one time long enjoyed an extensive reputation for its efficacy in the cure of scorbutic, serofulous, and other cutaneous diseases, as well as for complaints in the stomach and eyes. At one period this well formed a favourite resort even for the wealthy and fashionable citizens of Glasgow and its neighbourhood; but its character as a watering-place has long departed from it, both from a falling off—undeserved it may be—in the reputation of the springs and from the lack of features of rural beauty which have been borne down by the onward march of a bustling and industrious mining and manufacturing population.—The turnpike-road between Edinburgh and Glasgow, by Bathgate and Airdrie, runs through the southern end of the parish; and the recently formed road from Carlisle to Stirling intersects the parish from north to south. The Ballochney railway connects itself with the Kirkinilloch, and the Garnkirk railway, and thus brings New Monkland and its produce into easy and rapid communication with both Edinburgh and Glasgow; and the same

service is performed by the Monkland and the Forth and Clyde canals. The extensive reservoir for the supply of these splendid water-ways is situated partly in this parish and partly in the parish of Shotts. It extends over nearly 300 acres of land. In addition to the town of ARDRIE [which see], there are several thriving villages in the parish, of which Colston, Clerkston, Greengairs, and Riggend may be named. In point of population, few districts in Scotland have advanced with greater rapidity than that within the bounds of New Monkland, and there are few in which that advance has a fairer prospect of being steadily continued. The following table exhibits its progressive increase during a period of 40 years:

	In Airdrie.	In the Country.	Total.
1801, . . .	2,745	1,868	4,613
1811, . . .	3,474	2,055	5,529
1821, . . .	4,860	2,502	7,362
1831, . . .	6,594	3,273	9,867
1841, . . .	12,396	8,119	20,515

The increase of population in this parish, including the burgh of Airdrie, since 1831, has thus been 107.91 per cent. Assessed property, in 1815, £13,903. Houses, in 1831, 1,262; in 1841, 3,635.—New Monkland is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patrons, the heritors and elders. Stipend £265, with a glebe of 10 acres, worth from 21s. to 25s. per acre. Unappropriated college tithes £398 3s. 9d. The parish-church was built in 1777, and repaired in 1817, and is capable of accommodating 1,200 sitters. One-fourth of these sittings belong to the inhabitants of Airdrie, which is about two miles distant, but the larger portion are held by the heritors and their tenants. In addition to the new *quoad sacra* parishes which have been formed in Airdrie, there are congregations belonging to the Established church at Clerkston, and Broomknoll, to which *quoad sacra* parochial territories have been allocated. There are several churches in the town and parish, in connection with the United Secession, the Reformed Presbyterian congregation, and the Independent congregation, almost all of which are well attended, and in a thriving state: see article AIRDRIE.—The salary of the parish schoolmaster is £30 per annum, with house and garden, about £30 of school-fees, and about £20 annually of other emoluments. In addition to this there are a number of private schools in Airdrie, and schools exist at Mosside, Riggend, Greengairs, Clerkston, and Plains. In 1834, the number of schools not parochial was returned at 15, attended by 817 children.

The parishes of Old and New Monkland were formerly united in one district, or parish, under the name of the barony of Monkland; but a disjunction took place in 1640, when this extensive district was erected into two parishes under the names of Old or West Monkland, and New or East Monkland. The name of Monkland was obtained from the district having been the property in early times of the monks of Newhottle. In the early part of the reign of Malcolm IV., that monarch granted to the monastery a large tract of territory, which extended from the boundaries of Lothian on the east, to the Clyde on the west, and which constituted a hundred pounds lands of the ancient extent, the monks having ample jurisdiction over all of it. Excepting the lands and manor-place of Lochwood, which belonged to the bishops of Glasgow, the monks of Newhottle possessed every acre of territory in what are now Old and New Monkland, a considerable part of which they held in their own hands for cultivation, and let out the remainder in lease. From documents still extant, it appears that they obtained permission from the landed proprietors of the west of Scotland as

well as those in the Lothians, for free passages for themselves, their servants, cattle, and goods, from their monastery of Newhottle to their domains in Clydesdale; and from King Alexander II. they obtained similar grants of free passage by the usual ways, with permission to depasture their cattle for one night, on every part of their route, excepting upon the meadows and growing corn. The rectorial revenues of Monkland were joined to those of Cadder, in forming a rich prebend, which was held as the appropriate benefice of the subdean of Glasgow; and although the period of this arrangement is not known, it continued till the Reformation. Previous to this era, a chapel was erected at Kipps, on the borders of the present district of New Monkland, which was the property of the Newhottle monks, and the abbots are said to have held annual courts at it, when they levied their rents and feu-duties, and transacted the other business pertaining to their barony of Monkland. This chapel was destroyed at the stormy period of the Reformation, and its site can scarcely now be pointed out. About the same time, the monastery of Newhottle was overthrown, and all the fair domains which had so long remained in the possession of the monks was wrested from them. In 1587, the barony of Monkland was granted in fee to Mark Ker, the commendator of the monastery, and at the same time he was created Lord Newbottle; but afterwards the barony was divided, and parcelled out into various hands. A portion called Medrocs fell to the share of Lord Boyd, but a still larger share of the barony was acquired by the wily and hoarding Sir Thomas Hamilton of Binning, the King's advocate of the times of James VI. He obtained a charter for it from that monarch in 1602, and at the same time a grant of the patronage of the churches of Cadder and Monkland. Sir Thomas subsequently sold the barony to Sir James Cleland, whose son and heir, Ludovick, disposed of it to James, Marquis of Hamilton. In 1639, the Marquis secured his purchase by a charter from the king, granting him the lands and barony of Monkland, with the right of patronage of the churches of Cadder and Monkland, to be held of the king, in fee, for the yearly payment of a trifling sum in the name of bleach-ferm. In the reign of Charles II., the College of Glasgow purchased from the Duchess of Hamilton the patronage and tithes of the subdeanery of Glasgow, as well as of the churches of Cadder and Monkland; and for this a charter was also obtained from the king, which was ratified by act of parliament in 1672. Subsequently to this period, the heritors of the parishes of New and Old Monkland purchased the right of presentation to both these parishes from the College, under authority of the act 1690, respecting the purchase of church-patronage, and it has since been exercised by the heritors and elders. The tithes of both parishes, however, still belong to the College of Glasgow, out of which the stipends of the parochial ministers are paid.

MONKLAND (OLD), a parish in the Middle ward of Lanarkshire, extending for several miles along the eastern bank of the Clyde, and forming part of the old barony of Monkland, alluded to in the above article. It is bounded on the north by the parishes of New Monkland, Cadder, and the barony of Glasgow; on the south by Bothwell; on the east by New Monkland and Bothwell; and on the west by Cambuslang and Rutherglen, from which it is separated by the Clyde. The form of the parish is irregular, extending to 10 miles at its greatest length, and varying from 2 to 4½ in breadth. The appearance of the land is generally flat, or gently undulating; and whether the fertility of its superficies, or the abundance of its mineral treasures are considered,

Old Monkland is one of the most important and wealthy parishes in the county of Lanark. The writer of the Old Statistical Account says,—“A stranger is struck with the view of this parish. It has the appearance of an immense garden. The soil is of three kinds. Along the banks of the Clyde and Calder, which wash this parish for 9 or 10 miles, there is a strong clay. Here are produced luxuriant crops of every grain, especially of wheat; sometimes from 12 to 16 holls are taken off an acre. The middle of the parish is a light sand, affording excellent crops of oats and potatoes. Towards the north are considerable tracts of moss.” This account, penned half-a-century ago, is still generally true, if we except the fact that improved culture has vastly increased the production of the soil, and that the rapid advance of population, and the majestic progress of the mineral trade, have sadly marred those features of rural loveliness for which the district was formerly celebrated. Withal, there are few districts which combine so much of the attributes of country-life with the hustle and stir of manufactures; for the soil of Old Monkland is dotted at every little distance with the ornate villas of the aristocracy of the western capital,—with the blazing furnaces and tall chimneys of the iron and coal works,—with stripes of thriving plantation, and clumps of old wood,—with orchards, grassy holms, or waving grain,—and with the homely farm-steading, or lowly home of the cottar. From the facilities of obtaining lime and manure both by canal and railway, a soil—which is naturally fertile—has been improved to the highest degree, and it has been estimated that the gross agricultural produce, including the rental of the houses, now amounts to more than £40,000 per annum. In respect of fertility of soil and salubrity of climate, the district of Old Monkland is much superior to New Monkland; and has been regarded as the most productive soil which anywhere covers the great mineral fields. Here, as in the sister-parish, flax used to be extensively cultivated many years ago, and some of the farmers might have so much as from 20 to 30 acres annually under crop; hut, from causes noticed in the former article, its cultivation has either entirely ceased, or become very partial. It is to its almost exhaustless stores of coal and iron, that Old Monkland owes its principal celebrity,—a celebrity which, as regards the former, is of very long standing. In an account of the parish published before the beginning of the present century, it is said: “This parish abounds with coal; and what a benefit it is for Glasgow and its environs to be so amply provided with this necessary article! There are computed to be a greater number of colliers here than in any other parish in Scotland.” The progress in the coal-trade, since the period alluded to, has been almost magical; and as no year passes without an additional number of pits being sunk, while the old ones continue in vigorous operation, it would seem that scarcely any limits can be set to the vast aggregate mineral production of which the district is capable. The more that the applications of industry and capital are brought to bear upon it,—the more that the facilities of transit are increased,—the more are the abundance and capabilities of this parish and the adjoining one developed. The coal—which is here always found above the lime—is worked in pits of from 30 to 100 fathoms in depth. The following account of the position of the principal working-seams, which we take the liberty of transcribing from the ‘New Statistical Account,’ drawn up by the Rev. William Patrick, cannot fail to be interesting to all mineralogists:—“1. The upper coal; coarse, and seldom workable; its average distance above the Ell-coal is from 14 to 16 fathoms. 2. The Ell or Mossdale coal;

three to four feet thick, of inferior estimation in this parish, and generally too thin to work; but in some places a thick coal, and of excellent quality. 3. The Pyotshaw, or rough ell; from three to five feet thick, and from seven to ten fathoms below the Ell-coal. 4. The main coal. It often unites with the above, and forms one seam, as at Drumpellier in this parish. These two seams are thus sometimes in actual contact, and in other instances separated by a wide interval of six or seven fathoms. 5. Humph coal; seldom thick enough to be workable in this parish, and generally interlaid with fragments of freestone, about ten fathoms below the main coal. 6. Splint-coal; about four fathoms below the Humph, and of very superior quality. It varies from two to five feet in thickness, and is mostly used for smelting iron. This seam, when of any considerable thickness, is justly esteemed, when got by the proprietors here, a great prize. 7. Little coal; always below splint, the distance varying from three fathoms to six feet. It is from three to three-and-a-half feet in thickness, and is a free, sulphury coal of inferior quality. 8. The Virtue-well, or Sour-milk coal, from two to four feet thick, occurs from 26 to 28 fathoms below the splint. 9. The Kiltongue coal lies 22 fathoms below the Virtue-well, and like it, is from two to four feet in thickness. 10. The Drumgray coal lies six fathoms below the Kiltongue, and perhaps from 60 to 100 fathoms above the first or upper hand of limestone. It is seldom more than 18 or 20 inches thick. There are, besides these 10 seams, about 23 smaller seams between them, none of which are of a workable thickness. The total thickness of the coal-measures above the lime may be about 775 feet.” The same account adds: “This large and important coal-field is much intersected with dikes, and a knowledge of these is a knowledge of the strata, and of the manner in which they are affected by them.” Still more than to its coal, however, is the parish of Old Monkland in recent times, indebted to its ironstone and iron-works: although it is proper to mention that the ore for the supply of the latter is, to a great extent, drawn from the adjoining parish of New Monkland. The introduction of the hot air blast, the increasing demand for iron for railway and other purposes, hut, above all, the abundant possession of the most valuable of all the iron metals,—viz., the Black-band,—which contains so much coal as nearly to burn itself,—are the main causes which have contributed to the almost unparalleled advance of Old Monkland in population and prosperity. To the burning of ironstone has been added within the last two or three years, works and machinery for the manufacture of bar or malleable iron; and this branch of this great business is now in the course of rapid extension, and promises, at no distant period, to enable the proprietors to export largely to England an article which was at one time exclusively imported from that division of the kingdom. Everywhere is heard the rattling of machinery,—the sonorous stroke of mighty hammers,—and the hissing and clanking of the steam-engine; and the flames which perpetually helch from the craters of its numerous furnaces, and for miles around illumine the country on the darkest nights, have not inappropriately earned for Old Monkland the title of the ‘Land of Fire.’ Fortunes have been realized here in the iron-trade, with a rapidity only equalled by the sudden and princely gains of some of the adventurers who accompanied Pizarro to Peru. It is understood that the profits of a single establishment in this line during the year 1840, were nearly £60,000; while little more than 20 years previously the co-partners of this company were earning their bread by the sweat of their brow, in following the agricultural vocation of their fathers. Another

instance is that on the property of Rochsilloch the annual rent for raw minerals now amounts to about £13,000 per annum, while for farming-purposes alone it would not let for more than a few hundreds; and a few years ago, before its mineral-wealth was so well developed, the fee-simple, or entire proprietary of the whole, would not have amounted to what is produced from it in a single year! The principal iron-works in this parish, or in the immediate borders of it, are—Gartsherrie, Cadder, Dundyan, Monkland, Summerlee, Clyde, and Carnbroe, producing amongst them by far the larger portion of the iron manufactured in Scotland, and giving employment to thousands of persons in the large village of Coathridge, and other communities rising in the parish. The first of these, though not now the most extensive, was the Clyde iron-works, erected in 1786, upon ground feued from James Dunlop, Esq. of Garnkirk. At the outset there were only two small furnaces, consuming about 20,000 tons of coal per annum, though the amount of pig-iron produced is not stated. Even in 1806, the produce of pig-iron in the whole of Lanarkshire did not amount to 10,000 tons yearly; now the furnaces of Old Monkland alone are computed to produce 200,000 tons, with an expenditure of 600,000 tons of coal, and an incredible quantity of lime. But as has been already stated, this gigantic item in our national resources is still only in its infancy. It is computed by many who have looked closely into the trade, that the mineral productions of the Monkland districts, great as they are, bid fair to be doubled in a few years; and it is scarcely possible to estimate the auxiliary or adjunctive branches of industry which their extension may call into being.\* The following

\* We shall here introduce a few important particulars from a paper 'On the State and Prospects of the Iron-trade in Scotland and South Wales, in May, 1839,' read before the Liverpool Polytechnic Society on the 13th June, by Joseph Johnston, Esq., iron-merchant, Liverpool. In 1802 Great Britain possessed 168 blast-furnaces, yielding a product of 170,000 tons; and this product amounted, in 1806, to 250,000 tons, derived from 227 coke-furnaces, of which only 159 were in activity at once. In 1820, the make of iron had risen to 400,000 tons; and in 1826 to about 600,000 tons. From 1823 to 1839, the iron-trade saw many fluctuations; the price of forge pig-iron varying from £2 10s. to £10 per ton at the works; but the make of this country was still increasing, and in 1838, I believe it reached to upwards of 1,000,000 tons. The introduction of the hot-blast formed quite a new era in the iron-trade; and consequent increase of produce of iron—particularly in Scotland, where this invention was first applied—has been incredibly great, and is still progressing.—There are in Scotland 52 furnaces in blast, 5 out, 7 building, and 24 contemplated. Supposing the whole of these furnaces to be in full activity by the end of the year 1842, and giving the average produce of 100 tons per week to each furnace, we shall have Scotland alone producing 437,600 tons of foundry cast-iron per year, equalling the make of the United Kingdom 20 years ago. Sixty-five out of the eighty-eight furnaces I have enumerated are situated in or about the Monklands, to the south and south-east of Glasgow, and distant from that city 7 to 10 miles. The works in that district have the command of the Black-hand ironstone, which my informant states to be so great an advantage that without it the trade would not be worth following. Three of the largest makers of iron in Scotland are directing their attention to the manufacture of bar-iron, and with every prospect of most complete success. The Monkland Iron-company are erecting mills and forges capable of making 230 tons malleable iron per week. Dunlop, Wilson, & Co., of Dundyan, are making preparations to enable them, when in full operation, to produce 300 tons of bars, &c. weekly. William Dixon, Esq. of Govan iron-works, has now ready for immediate working, capabilities for producing 200 tons of malleable iron per week; his mills and forges are on the outskirts of Glasgow, and are known as the Glasgow Iron-works, Town-head. The Muirkirk Iron-company have 4 blast-furnaces, 3 of which are in blast, with an average produce of about 40 tons of bars weekly, and the capability of extending to 100 tons, without increase of power. This statement comprises the present, and, so far as is known, the prospective operations in the malleable iron-trade in Scotland, with the exception of two small forges, the Lancheild and the Gartness where they puddle a little from white iron. In an interesting work published by Mr. Scrivenor in 1841, upon the history of the Iron-trade, we learn that the recent introduction of the hot blast has led to a vast saving in the expenditure of coal in the Scotch iron-works. In 1829, 8 tons,  $\frac{1}{4}$  cwt. of coals were required to produce a ton of iron; but when the hot-blast was introduced in the following year, a ton of iron

account of the position of the ironstone strata is borrowed from the account to which we have already been indebted,—viz., that of Mr. Patrick, in the New Statistical Account—and in addition to Old Monkland, has a partial application to the ironstone strata of New Monkland. He says:—"1. The Upper Black-hand. It lies about 24 fathoms above the Ell-coal, as indicated in the succession of strata given above. It is of very local occurrence, like all the ironstones, and has only been found worth working at Palace-craig. It is of inferior quality, and only about 18 inches thick. 2. The Black-hand, also called Mushet's Black-band, from the name of the person who first worked it to any extent. This is the great staple commodity for the supply of the iron-market, and when found to any extent is a certain source of wealth to the proprietor. Its average depth below the splint is about 15 or 16 fathoms, and it varies in thickness from 14 to 18 inches, and occupies an area of from 8 to 10 square miles. 3. Airdrie-hill Black-hand. In this property, which is in New Monkland, there is a band of ironstone, varying from 2 to 4 feet in thickness, lying about 3 feet below the Black-hand, or Mushet's-hand. It is found only in part of the lands of Airdrie-hill, and is by far the most local of all the ironstones."—There are a number of quarries in full and active operation in the parish, and from the vast quantity of building in progress, the trade is a very profitable one. The quarries produce abundance of red freestone, white freestone, white pavement-stone, whinstone, and greenstone. There is no lime worked in Old Monkland.—A good deal of weaving is done for the Glasgow market in the parish, and there are also other manufactures in progress.

The Clyde forms the western boundary of the parish, entering it at Daldowie, and near the same point the North Calder, which runs through the parish for a short distance, falls into the Clyde. There are various streamlets in the district which all find their way to the Clyde. Bishop-loch in the parish covers an area of about 80 acres; Woodend-loch, 50 acres, and Lochend, 40 acres. The means of communication in this important parish are now of the most

was obtained with only 2 tons,  $1\frac{3}{4}$  cwt. of coals. The hot blast has been tried in England, but with inferior success, owing to the difference in the quality of the coals. Mr. Scrivenor more than hints his fears, that the Scotch iron may in consequence drive the English out of the market. In the text a prediction has been hazarded, regarding the vast extension of the iron-trade, which may be reasonably looked for, and that this prediction is not altogether visionary may be gathered from the following passage from Mr. Scrivenor's book:—"It is truly astonishing, when we look back and consider in how few years the iron-manufacture has arrived at its present vast extent, and that this rapid increase has occasioned no heavy accumulations of stock. The iron-trade, in common with all other trades, feels the effect of any general stagnation, but not from over-production, as with its growth new channels of consumption have kept pace. The endless detail into which the foundry-trade branches itself, the almost universal fabrication which it embraces, consumes a very large proportion of the make; in buildings, iron is becoming a very general substitute for wood; railroads may also be particularly mentioned as consuming a very considerable quantity of manufactured as well as cast-iron, but principally the former. It would be endless to show where it has been, within a few years, introduced; but we cannot omit noticing its recent application to the building of ships. The success attending these first trials cannot but lead to the conclusion, that, for the future, ships will very generally be made of iron instead of wood; and if so, what a field it opens to the ironmaster, and how greatly it will add to the consumption! The plates of which the ships will be built, must necessarily be of a very superior description of iron, involving a greater waste, and consequently increasing the consumption of pig-iron; and those works must be benefited, the quality and character of whose iron stands high; as where the safety of hundreds or thousands of individuals is at stake, the very best iron alone should be used. With increased facilities of procuring iron at a reasonable price, America, and also France—provided that in this latter country the duties are reduced—will become large purchasers; and our iron-trade, unlike many of the other manufactures, being altogether the production of our own soil, will continue to give employment to hundreds of thousands of our population, to the great advantage of the country at large, as well, we trust, as the individual benefit of the iron-master."

ample kind. In addition to parish and turnpike roads, no fewer than four great railways enter or are connected with the district,—viz., the GARNKIRK AND GLASGOW RAILWAY, the MONKLAND and KIRKINTILLOCH, the BALLOCHNIE, and the WISHAW and COLTNESS: [see these articles.] The MONKLAND and GLASGOW CANAL [which also see] extends through almost the entire length of the parish. By all of these means there is cheap and constant communication with Glasgow, both for passengers and mineral and agricultural produce. There is nothing in this populous parish which properly deserves the name of a town; but there is a succession of villages which are rapidly rising in wealth and population, and some of the principal far outstrip, in architecture and business activity, several of the royal burghs of Scotland which boast an antiquity of centuries. The names of these are Coatbridge, Langlone, Dundyvan, Bailieston, and Crosshill. There is also an extensive and rising village-population at the following localities: viz., Tolcross, Carmyle, Broomhouse, and Toxley, Merriston, Bargeddie, Barrachine, Dykehead, and Coatlyke. The population of this parish has, like that of New Monkland, increased with railroad speed, especially between the years 1831 and 1841, as will be seen by the following statement of its progressive rise:—

Years.	Population.
In 1755, . . . . .	1,813
1791, . . . . .	4,000
1801 . . . . .	4,005
1811, . . . . .	5,469
1821, . . . . .	6,983
1831, . . . . .	9,580
1841, . . . . .	19,675

The last total, viz. of 1841, is made up of 10,950 males, and 8,725 females, the unusual disparity of the sexes being easily accounted for by the vast immigration of workmen into the parish of late years, in consequence of the great increase of the iron-trade. The rate of increase in the population, between the years 1831 and 1841, has been 105.37 per cent. The number of houses, in 1831, was 1,499. At the census of 1841 there were in the parish 3,362 inhabited houses, 123 uninhabited, and 75 building. The number of distinct families was 2,486.

The assessed property in the parish in 1815, amounted to £19,806.—Old Monkland is situated in the presbytery of Lanark, and synod of Glasgow and Ayr. Patron of the parish-church, the heritors and kirk-session. Stipend £263 14s. 7d. The glebe extends to 3½ acres, valued at £2 10s. per acre, with £8 paid in lieu of grass glebe. Unappropriated tithes, (belonging to the college of Glasgow,) £439 11s. The parish-church was built in 1790, and the interior accommodation has been increased since 1822, until it is now capable of accommodating 902 sitters. There are also *quoad sacra* parishes at Crosshill and Gartsherrie,—the former church being built to accommodate 600 sitters; and the latter—which is a very elegant structure, principally erected by the munificence of the Messrs. Baird of Gartsherrie—calculated to accommodate 1,500. The cost of the erection was £3,300, and the bell alone is valued at £180. The minister has a manse and a bond for £150 per annum, which may be increased with the rise of the seat-rents. There are also some thriving dissenting congregations within the district.—There are one parochial school, and three branch-schools in the parish,—the salary of the principal master being £31, and that of each of the others £6 15s. 11d. The parish is otherwise abundantly supplied with the means of education by the private schools, or those not parochial, at which the fees are extremely moderate. For particulars regarding the ancient history of Old Monkland, see NEW MONKLAND.

MONKLAND, or MONKLAND AND GLASGOW, CANAL. This artificial water-way forms an excellent means of communication between the city of Glasgow, and the rich coal and iron districts in the parishes of New and Old Monkland, distant from it about 12 miles. From a statement by Mr. Dugald Bannatyne, when manager of the canal in 1815, it appears that the undertaking was suggested to the magistrates of Glasgow in 1769, as a means of securing to the inhabitants of that city, at all times, a plentiful supply of coals; and they, after having employed the celebrated James Watt, who was then resident in Glasgow, to survey the ground, obtained an act of parliament for carrying out the measure, the Corporation of the city subscribing a number of shares to the stock. Under this first act, the canal was begun in 1771, and about 10 miles of it were executed. The first 2 miles of the canal, extending from the basin to the bottom of Blackhill, are upon the level of the upper reach of the Forth and Clyde canal; the other 8 miles, beginning at the top of the Blackhill, are upon a level 96 feet higher. The communication between these levels was at that early time carried on by means of an inclined plane, upon which the coals were lowered down in hoxes, and re-shipped on the lower level. The capital necessary to complete the undertaking was by this original act declared to be £10,000, divided into 100 shares; but this sum was found to be altogether insufficient; for, in addition to expending it, a debt of some amount was contracted in executing the above part only of the operations. The concern, in this unfinished state, produced no revenue; and the creditors naturally became pressing. A number of the stockholders, too, refused to make advances either for the liquidation of the debt, or for the completion of the plan. The whole stock of the company was consequently brought to sale, and purchased, in 1789, by Messrs. William Stirling and Sons of Glasgow, at £25 a share; the original shares having cost the subscribers £203 each. These gentlemen, immediately after acquiring the property, proceeded to complete the canal; and in 1790, having, in conjunction with the proprietors of the Forth and Clyde canal, procured a second act of parliament, empowering the latter to make a junction between these navigations, by a cut from their basin at Port-Dundas in Glasgow, to the Monkland canal basin, built locks at Blackhill, and extended the Monkland canal to the river Calder, which was introduced into it; and that navigation was made the aqueduct for passing the supplies of water from this stream, and a reservoir formed upon it, to the Forth and Clyde canal. On these operations the Messrs. Stirling are understood to have expended £100,000. The Monkland canal is 35 feet broad at the top, and 24 feet at the bottom. The depth of water upon the lock-sills is 5½ feet. To connect the upper and lower levels, at Blackhill, there are two sets of four double locks of two chambers; each chamber is 71 feet long from the gates to the sill, and 14 feet broad; the ascent in each being 12 feet. The level at the top of the Blackhill is continued to Sheepford, 8 miles, where there are two single locks of 11½ feet each, after which the canal goes on upon the level it has then gained to the river Calder. The supplies of water for the Monkland canal are derived from the contiguous streams, from the river Calder, as before mentioned, and from the reservoir at Hill-end, beyond Airdrie, covering 300 acres of ground near the source of that river, and which was formed at the expense of the proprietors of the Forth and Clyde navigation. The boats which navigate the canal are about 70 feet in length, by 12 feet in breadth, and are from 4 to 4½ feet in depth. They are dragged

by one horse; and carry from 50 to 60 tons of coal or iron of 12 cwt. each. The rate of tonnage allowed by these early acts to be levied on coals and other articles carried upon the canal, was 2d. per ton per mile; but the whole of this sum has not at any time been exacted. The price of coals delivered in Glasgow, in 1775—the period at which this mineral was at first brought along the canal—was 2s. 6d. per cart or waggon of 12 cwt.; but it is scarcely necessary to say that this very moderate figure has since been very much advanced. From the advantage which the canal offers of easy communication with both the East and Western seas, and from its unlimited command of coal, the vicinity has always been considered favourable for the establishment of manufactures, especially of a bulky nature. For a long series of years at the outset, the revenue of the canal was wholly absorbed by the expenses incidental to the extension and improvement of the undertaking. In 1807, when a dividend first began to be made, the gross revenue amounted to £4,725; and, in 1814, it was £5,087: although the navigation during this year was stopped during eleven weeks, principally by the severe frost, but partly on account of some necessary repairs. From 1814 or 1815, up to the year 1825, the traffic continued without much variation; but about the last-mentioned date a great impulse was given to the coal and iron trade by the establishment of railroads in the mineral districts, along the line of which an enormous amount of capital has been profitably invested in the formation of foundries and coal-works. The Canal company were not slow in availing themselves of these iron pathways as feeders to their own trade; and accordingly, wherever it has been practicable, they have formed loading basins and wharfs on the canal, connecting them by offsets with the railways in the vicinity. The additional traffic resulting from this source has been very great; advancing in fact in a ratio commensurate with the facilities of communication or transit which capital, judiciously applied, has called into existence. So much has this increase been developed, that it has had the effect of trebling the annual revenue within the last ten years, and it is still progressively on the advance. In 1840 the revenue amounted to £20,000, and the market-price of the original £100 shares was £2,000, upon which a dividend of £5 per cent. was paid. At this date (October 1841) the shares sell readily at £2,800; and by act of parliament, obtained last session, each original share was subdivided into 80, the price of which is £35. When the railways were first projected, much alarm seems to have been excited among the Canal proprietors lest the trade should be entirely diverted from their navigation to the new channels; and acting under this apprehension, the company reduced their dues to about one-third of the rate which had been charged up till that time, and while the concern has nevertheless continued to pay admirably, these have not been again raised. It is a fact worthy of notice, that although previously to the opening of the GARNKIRE and GLASGOW RAILWAY [which see], which, from running parallel with the canal, comes more immediately into competition with it, the passage-boats rarely carried so many as 20,000 passengers in a year, yet, in the face of that competition, the number of passengers has been gradually increasing, and during the year preceding the period at which this is written, no fewer than 70,000 persons have been carried by the company's boats. For the purpose of rendering the canal as complete as possible, and of facilitating the transit of its traffic, a very large sum has been recently expended by the company in the formation of new works, and of these the principal are:—1. Additional reservoirs in

the parish of Shotts, all uniting in the river Calder, which flows into the canal at Woodhall, near Holytown, thereby insuring an abundant supply of water at all times. 2. Extensive loading-basins and wharfs, connected with the Monkland and Kirkintilloch railway, near Dundyvan iron-works, and others adjoining the same railway, in the neighbourhood of Messrs. Baird's works at Gartsherrie. 3. New locks at Blackhill, near Glasgow, which, when completed, will form probably the most splendid work of the kind in the United Kingdom. These locks will then consist of two entire sets of four double locks each, (either set being worked independently of the other,) which have been constructed at an outlay of upwards of £30,000. The parishes through which the canal passes are those of Old and New Monkland, and the Barony of Glasgow. There are three branch-canal from the main water-line, viz. one to Cadder iron-works near Airdrie, about a mile in length; another to Dundyvan iron-works, extending to about a quarter of a mile; and a third to Gartsherrie works, about a mile long. It is scarcely necessary to say that coal and iron form the staple traffic and principal support of the Monkland canal. Of these articles the immense aggregate of nearly 500,000 tons was carried along this canal in the course of the year 1840; and it is expected that a fifth more will be carried during the current year, 1841. Besides the above, there is a large quantity of timber, manure, &c., transported along the canal at a very moderate rate, the beneficial effects of which are plainly visible in fertilizing and beautifying the face of the country along both sides of the banks.

**MONKLAND AND KIRKINTILLOCH RAILWAY.** This railway forms an important connecting link between the rich mineral fields, and coal district, in the parishes of Old and New Monkland, and the city of Glasgow, and also the extensive and increasing iron-works in the vicinity of Coatbridge. The act authorizing the operations was obtained in 1824, being 5 Geo. IV. cap. 49. The original capital of £32,000 was subsequently increased by £20,000, in terms of an act of 1833, being 3 and 4 of William IV. cap. 114; and the stock was further increased, in 1840, by £34,000, making a total of £86,000. The railway was opened in 1826. It had originally only a single line of rails, with convenient passing places, being adapted solely for horse-haulage; and the trade upon it for the first three or four years was comparatively small. As the mineral resources of the district became developed, however, its traffic increased with amazing rapidity, and during the last few years it has been of the most extensive description. In 1839 the amount of coal, iron, and other goods passing along the line amounted to 878,597 tons; and in 1840, to 1,081,863 tons. At the outset, the railway was laid with fish-bellied rails of the weight of 28 lbs. per yard; but these have all been replaced by parallel rails at the rate of 56 lbs. per yard, and at the same time it has been formed a double line throughout, while in various parts there have been three, four, and five lines of rails laid, to give every facility to the increasing traffic, which is now almost entirely moved by locomotive power. The company have at present 10 locomotive engines, 8 of which are daily in use; and they have also erected large and commodious workshops for building and repairing their engines at Moss-side, the eastern terminus or junction with the BALLOCHNEY RAILWAY: which see. The length of the line, from the southern terminus at Palace Craig, to the northern terminus at Kirkintilloch, is 10½ miles; and including its branch to the eastern terminus, at its junction with the Ballochney railway at Kipp's byre, it is

12½ miles in length, traversing in its course the parishes of Old and New Monkland, Cadder, and Kirkintilloch. The latter, as has been stated, is its northern terminus, and here a commodious basin has been formed for the loading of vessels of every size, from the smallest scow to the largest vessel which navigates the Forth and Clyde canal, and by this canal it is brought into communication alike with the East and Western seas. The western terminus of the line is at Gargill, where it forms a junction with the GARNKIRK AND GLASGOW RAILWAY [which see], and by means of this line, as well as by the Monkland canal, it communicates with the great manufacturing and commercial city of Glasgow. The Monkland and Kirkintilloch railway also connects itself with the rich mineral districts traversed by the recently opened Wishaw and Coltness railway; and, from what has been stated, it will be seen that this line is connected with the Garnkirk and Glasgow railway to the west; the Ballochney railway to the east; the Wishaw and Coltness railway, and Monkland canal, to the south-west; and the Forth and Clyde canal to the north-west. The difference of level between the eastern terminus at Kipp's byre, and the northern terminus at Kirkintilloch, is 134 feet, giving 1 in 111 as the average gradient; but the gradients vary in different parts of the line from 1 in 60 to 1 in 5,200. The width of the gauge of rails is 4 feet 6 inches, and the cutting throughout the line is moderate, the largest cut being at Bedlay, where its depth is about 30 feet, for the length of about one furlong. The Monkland and Kirkintilloch is not properly of itself a passenger-line, although passengers are carried along a portion of it, in connection with the Garnkirk and Glasgow and the Slamannan railways. It has, on the whole, however, been a most successful line of railway, as will be seen from the following note of its increasing revenue:

STATE OF THE REVENUE OF MONKLAND AND KIRKINTILLOCH RAILWAY.

1828,	£2,877	13	11
1829,	3,480	5	0
1830,	3,538	4	1
1831,	3,602	1	6
1832,	3,278	1	4½
1833,	4,578	15	8
1834,	5,081	17	3
1835,	6,260	3	9
1836,	6,792	11	11
1837,	7,203	1	9
1838,	11,172	18	0
1839,	13,985	10	0
1840,	16,991	3	7

It is scarcely possible to point out a railway which has had more the effect of benefitting the line of country through which it runs, than the Monkland and Kirkintilloch. Previous to its formation, the lands in the neighbourhood were comparatively shut up; their mineral fields were comparatively unproductive; and only a thatched cottage was here and there seen to dot the surface. But the railway once in operation, a change, as if effected by magic, came over the face and feelings of the district. Public works were erected,—population gathered in masses by thousands,—splendid edifices were called into existence,—and property, once considered almost valueless, excepting for the scanty returns of its tillage or herbage, became a mine of wealth which may enrich many succeeding generations. As a proof of this, it may only be stated that the once humble and unpretending village of Coatbridge has, within these two or three years, started into lusty life as a thriving and populous town, with buildings which will bear comparison with those in the capital of the

west, in addition to its established and dissenting churches, and its handsome branch of the Western bank of Scotland. But it would seem indeed that there is scarcely any limit to the prosperity which may await these mineral districts, in connection with the easy and rapid mode of transit which this railway affords.

MONKTON-HALL, a small village on the left bank of the river Esk, a mile north of Musselburgh, in the parish of Inveresk, Edinburghshire. While the Scottish army lay around it previous to the battle of Pinkie, a hurried and imperfect parliament was evoked in the village, and enacted that the nearest heir of any person who should fall in the battle should, if the slain were an ecclesiastic, receive a gift of his benefice, and, if a layman, have his ward, non-entresse, relief and marriage free.

MONKTON AND PRESTWICK, an united parish on the coast of Kyle, Ayrshire; bounded on the north and north-east by Dundonald, Symington, and Craigie; on the east by Tarbolton and St. Quivox; on the south-east and south by St. Quivox and Newton-upon-Ayr; and on the west by the frith of Clyde. Its greatest length from north to south is 3¼ miles; its breadth is from 1½ to 3½ miles; and its area is between 9 and 10 square miles. Two brooks—one of which, called Powburn, is powerful enough to drive two corn-mills—run across the parish to the sea. The coast-line is about 2¼ miles long, low, flat, and sandy, looking tamely up from a very slow dip of submerged beach, and variegated with bluffs and sandy knolls covered with bent. The surface of the interior rises slightly from the frith, but looks to the eye almost a dead level. The soil along the coast, and over a considerable part of the southern district, is light sand incapable of tillage; in the central district, is a deep, rich loam; and in the north and north-east, is a strong earthy clay. The grounds subject to the plough, and those which are waste or in pasture, are nearly in the proportion to each other of 24 to 7. The arable grounds are enclosed, for the most part, with a fence and hedge, and finely sheltered with belts of wood; and exhibit results of the most assiduous and skilful cultivation. The unreclaimed lands serve for the pasturing of young cattle, and owing to the warmth of the climate, saline depositions, from the proximity of the sea, are judged conducive to the recovery of weak sheep. About 50 acres are under wood, nearly all plantation. Coal was till very recently worked for 30 years from a seam now nearly exhausted, lying within 6 or 7 fathoms of the surface; and it has been worked for about 25 years from a seam nearly 40 fathoms from the surface, and 4½ feet thick. A quarry of excellent sandstone, both red and white, is open near the shore. Of various mansions and villas, the chief are Fairfield, Adamton, and Orangefield. The village of Monkton is situated a mile from the sea, and 4 miles north of Ayr, and has a population of about 380. It is touched by the Glasgow and Ayr railway, and by the turnpike between Glasgow and Portpatrick, by that between Ayr and Irvine, and by that between Mauchline and Irvine. Other villages are PRESTWICK and PRESTWICK-TOLL: which see. Population, in 1801, 986; in 1831, 1,818. Houses 281. Assessed property in 1815, £6,377.—This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, Reid of Adamton. Stipend £203 16s. 10d.; glebe £35. Unappropriated tithes £598. The parish-church, situated half-way between the villages of Monkton and Prestwick, and built in 1837, after a design by David Bryce, Esq., of Edinburgh, is at once a conspicuous landmark, a commanding feature in the landscape, and one of the most handsome ecclesiastical edifices in Ayrshire. Sittings 825. The

\* The falling off in the revenue, this year, is accounted for by an extensive strike of the colliers; and by the breaking out and subsequent ravages of the cholera at Kirkintilloch.

old parish-churches are still standing, and were both in use till 1837. That of Monkton is from  $3\frac{1}{2}$  to nearly 4 feet thick in the walls, has long been bent off the perpendicular on one side, is roofed chiefly with oak, and has the traditional fame of being the very building near which Sir William Wallace had the remarkable dream recorded in the 7th hook of the poem of Blind Harry. The church of Prestwick is probably of equal antiquity, has stone buttresses at the east end, serves as a landmark, and commands a beautiful prospect of the frith of Clyde.—The parishes were united in the 17th century, and consisted of the old parish of Monkton, which was anciently called Prestwick, the old parish of Prestwick, which was anciently called Prestwick-burgh, and the chapel district of Crosshy, which, previous to the Reformation, belonged to Dundonald. Prestwick lies on the south, Monkton in the middle, and Crosshy on the north. The first had its name from being the 'habitation of a priest;' the second from becoming the property of monks; and the third from having 'a dwelling at a cross.' The church of Monkton was anciently dedicated to St. Cuthbert, and that of Prestwick to St. Nicholas; and both were given by Walter, the son of Allan, the first Steward of Scotland, to the monks of Paisley, and continued to be, the former a vicarage, and the latter a chaplainry, under them till the Reformation. In 1779, the southern part of Prestwick was detached from the district, and erected into the parish of Newton-upon-Ayr.—Between Prestwick and Prestwick Toll, stand some ruins of an ancient hospital for lepers, dedicated to St. Ninian. The establishment is traditionally said to have been founded by King Robert Bruce, who was himself afflicted with leprosy, the result of hard fare, hard living, and hard work. It was endowed with the lands of Robert-loan, now called Loans, in Dundonald parish, with the lands of Sheles and Spital Sbeles, and some other lands in Kyle Stewart, and it was governed by a prior or guardian, and had a chaplain. How many persons were originally maintained by it cannot now be known. Wallace of Newton acquired, in the reign of James II, its lands of Spital-Sheles, the hereditary governorship of its other lands, and the hereditary possession of its office of keeper; and in 1515, Hugh Wallace of Newton resigned the whole in favour of his brother Adam. All that now remained of its revenue, were the feu-duties payable from its lands granted in fee-farm; and this was thenceforth distributed in equal shares among eight objects of the greatest charity,—the leprosy having long disappeared. The right of appointing the recipients belonged for a long time to Wallace of Craigie, but was purchased in 1787 by the burgh of Ayr. Robert Gordon, in his description of Kyle, written in the reign of Charles I., mentions the chapel of the hospital, and says that the persons admitted to the charity were then lodged in huts or cottages in the vicinity.—Parochial schoolmaster's salary £34 4s. 4½d., with fees, and about £5 other emoluments. The parish-school was attended in 1834 by 116 scholars; and a private school by 52.

MONREITH. See GLASSERTON.

MONRIPHMONT, or MONTEITHMONT MOOR, a moorish tract of about 2,000 acres, stretching northward from the most northerly part of the Sidlaw hill range in Forfarshire. It was once a waste common, unowned by any parochial district; but is now almost all a densely planted forest, and is understood to be distributed among the parishes of Farnell, Kennell, Kirkden, Guthrie, and Brechin,—about three-fourths being included in the first.

MONS-HILL. See DALMENY.

MONTEITH, MONTEATH, or MENTEITH, a district occupying the south-west part of Perthshire.

Excepting the parish of Balquidder, which anciently belonged to the stewardry of Strathern, the district comprehends all the lands west of the Ochil hills in Perthshire, whose waters discharge themselves into the Forth. The vale of the Teith, whence the name is derived, occupies the central and larger part, but is flanked on the one side by the Perthshire section of the upper vale of the Forth, and on the other side by the lower part of the vale of the Allan. The entire district is about 28 miles in extreme length from east to west, and 15 in extreme breadth; and includes the whole of the parishes of Callander, Aberfoyle, Port-of-Monteith, Kilmadock, Kincardine, and Lecropt, and part of the parishes of Kippen, Dunblane, and Logie. Large tracts of it are eminently rich in the finest elements of landscape. Previous to the abolition of hereditary jurisdictions, Monteith was a separate or independent stewardry. The district anciently gave the title of earl to a branch of the noble family of Graham. The earldom was created in 1428, became conjoined with the earldom of Airth, and since 1694 has been dormant.

MONTEITH (LOCH OF), a fine sheet of water in the parish of Port-of-Monteith, Perthshire; of a circular form, and about 7 miles in circumference. Its shores display none of that rude magnificence and grandeur which is the usual characteristic of Highland scenery; but, on the other hand, they present an aspect of soft and pastoral beauty which soothes and gratifies the soul, filling the contemplative mind with thoughts calm and quiet as its own transparent waters. The northern shore is beautifully adorned with oak, Spanish chestnut, and plane trees of ancient growth,—the remains of those which adorned the park of the Earls of Monteith. Some of the chestnut-trees are 17 feet in circumference, at 6 feet above the ground; and, from counting the rings at the last thinnings of the wood—which was about 60 years ago—it is certain that they must be above three centuries old. On the same side, the manse and church of Port-of-Monteith, with the elegant mausoleum of the family of Gartmore situated close on the margin of the water, increase the interest of the scene. The lake contains three islands, two of which, from the noble wood that adorns them, add greatly to the beauty of its expanse; a long, narrow, wooded promontory, which runs far into the water, diversifies the southern shore. The larger island is called Inchmahome, or Inchmahome, or 'the Isle of Rest;' and well is it named so, for a more calm and quiet abode could not easily be selected than might here be found for a contemplative and pious mind: see INCHMAHOME. The island immediately to the east, which is less in size, is called the Island of Tulla, or the Earl's Isle. *Tulla* signifies, in Gaelic, 'a hall;' and on this island the Earls of Monteith, the ancient lords of the district of Monteith, had their residence. The smallest island is called the Dog Isle, where the Earls had their dog-kennel; while the stables were situated on the western shore of the lake. Of the chapels attached to the priory of Inchmahome, one was situated at the east end of the lake, about a furlong north from its outlet, and close to the shore, on what is now the property of General Graham Stirling; another was at Arnechly, 'the Field of the Sword,' about a mile from the west end of the lake; a third at Cappellerroch, in the Barony of Drummond; and a fourth at Balquahapple, formerly the property of the family of Drummond.

In our article on Inchmahome, we have stated that the Princess Mary found an asylum in the priory when a child, after the disastrous battle of Pinkie, fought in September, 1547; on a gentle eminence, close to the margin of the lake, there still remains a boxwood summer-house, with a beautiful hawthorn

tree in the centre, in which, it is said, the youthful princess often amused herself.—The ruins of the residence of the Earls of Menteith still exist on the island of Tulla. The buildings occupy almost the whole island, and enclose a small court-yard. The most spacious of the houses was at one time divided into three apartments. In the lower story was the hall, furnished, as appears from an inventory of the furniture, dated 1694, with “a pair of virginalls,” with “my lord and lady’s portraits, and hangings before them;” “ane house knock, and case thereof;” “ane large table,” and “ane folding table.” This room was also hung “with green drogit hingings, with gilt rods.” Above the hall were bed-rooms, each containing “a standing bed;” and in a tower behind were three other bed-rooms. On the east side of the island was a building called the hrev-house; here was a bed-chamber, which appears to have been “bung with green,” and furnished with two beds, “one of green stuffe, with rods and pands conforme,” the other of “red scarlet cloath.” This “brev-house chamber” was besides decorated with a red table-cloth, and “a red scarlet resting-chair.” The beat of the hrev-house seems to have had attractions for sleepers, for not only had it above it the gorgeous chamber we have described, but on each side were what is termed “to-falls,” in which there were three beds, one brown and the others red. The kitchen and the servants’ apartments were on the west side of the island; and on the south is the ancient tower of Tulla, frowning loftily over its more modern neighbours. Nothing is known of the erection of this tower; but as there is no mention of any furniture belonging to it in the inventory already quoted, it appears that even then it had ceased to be occupied by the Earls of Menteith as a residence. A portion of the island of Inehmahome was occupied by these nobles as a garden; and their pleasure-grounds were situated on the northern shore of the lake, around the romantic hill called Choilledun, and on the farm now called Portend.—In a tour to the Trosachs, published many years ago by Mr. Macnair of Glasgow, an account of this lake is given. He there mentions a singular mode of fishing, said to have been at one time practised here, but which has now grown entirely into disuse. This was fishing by geese. A line, with a baited hook, was tied to the leg of a goose, which, thus accoutered, was allowed to take its position in the lake. In a short time it usually happened that a voracious pike would swallow the bait, whereupon a violent struggle would ensue between the two. Much noise and a great deal of flapping of wings is made by the astonished goose, as the pike after remaining stationary for a time, now and then darts away like lightning, dragging him along. The goose at length prevails, and the pike is secured.

**MONTEITH (PORT OF)**, a parish in the district of Monteith, Perthshire; bounded on the north by Loch-Vennachoir, which divides it from Callander; on the north-east by Callander and Kilmadock; on the east by the detached part of Kincardine; on the south by the Forth, which divides it from the Perthshire part of Kippen, and from Stirlingshire; and on the west by Aherfoyle. Its greatest length in a line east and west over Lochend is 7 miles; its greatest breadth from the east end of Loch-Vennachoir to the Forth opposite Puddle-holes, is  $6\frac{1}{4}$  miles; and its area is about 32 square miles. The lochs of **MONTEITH** and **VENNACHOIR** [see these articles] give great brilliancy to the landscape. The Forth, including the ceaseless and beautifully bold curvings of its course, touches the parish over a distance of at least 12 miles; and just when entering, it debouches from among the grand hill scenery of its origin and

early course, and begins to move with the slow proud pace of conscious queenly beauty along the magnificent valley which thenceforth forms its broad smooth path. Goody-water, issuing from Loch-Monteith, flows  $3\frac{1}{2}$  miles eastward through the interior. Loch-Drunkie, a mile long, zoned with wood, and enclosed among towering heights, lies on the western boundary, and sends off a streamlet  $1\frac{1}{2}$  mile long to Loch-Vennachoir. Loch of Letter, Loch of Roskie, and Dow-loch, are a chain of lochlets in the north-east, whence issues a tributary of the Goody,  $2\frac{3}{4}$  miles in length of course, chiefly along the eastern boundary. Lochan-Ballach, a mile from Loch-Vennachoir, forms a beautiful round basin, about half a mile in circumference on the highest summit of a lofty ridge of heights. The northern district, comprising about one-third of the whole area, is wildly upland, consisting of a congeries of rocky and mountainous elevations, chiefly covered with heath, and admitting cultivation only in some confined hollows, and along some narrow skirts. The south-east corner comprises a part of Flanders moss, in all respects similar in character to the famous one of Kincardine, but still in a great measure useful for nothing but its supply of fuel. The rest of the area—including a district  $2\frac{1}{2}$  miles by  $1\frac{1}{2}$ , lying on the south side of the Forth, not comprehended in the measurements we have given of the parish, and constituting the *quoad sacra* parish of **GARTMORE**: which see—is nearly all level, consisting along the Forth of rich carse land, and toward the hills of dry field, and presenting an aspect of high culture and great agricultural wealth and beauty.—Gartmore-house, situated in the centre of the Gartmore district, crowns a rising ground, and commands a view of the whole valley of the Forth, till it becomes lost in the horizon. The fields to the south and east are well dressed; and those on the west and north are somewhat rocky, but much improved, and extensively planted with thriving trees. Near the house is Stuir, noted as the spot where Roh Roy is said to have taken from the factor of the Duke of Montrose his collection of rents. Cardross, situated on the north bank of the Forth, where the river glides slowly, smoothly, and in silence, appears to have anciently been the best house in Monteith, and retains many marks of former magnificence. The land around it is of the richest mould, dressed down to the river’s edge, and carries the finest and the closest grass; and the trees are stately and vigorous, suited to the approach of a great place,—many of them planted before the Reformation, especially the planes, which never turn a shoulder to the blast. The parish is traversed along the middle westward by the road between Doune and the south bank of the head of Loch-Katrine, and northward by two roads from Stirlingshire, which converge, and run toward Callander. Population, in 1801, 1,569; in 1831, 1,664. Houses 284. Assessed property, in 1815, £8,553.—This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, Erskine of Cardross. Stipend £269 16s. 9d.; glebe £8. Unappropriated tithes £518 18s. 1d. In 1834, the parish-school was attended by 59 scholars, and three private schools by 137. Parochial schoolmaster’s salary £34 4s. 4½d., with £15 fees, and £9 19s. other emoluments.—Additional to the parish-church, situated on the north bank of Loch-Monteith, and the *quoad sacra* parish-church of Gartmore, there is a place of worship belonging to the Establishment at Ruskie, in the north-east district.

**MONTQUHITTER**, a parish in Aberdeenshire, bounded on the north by King Edward; on the east by New Deer; on the south by Fyvie; and on the west by Turriff. It extends about 9 miles from north to south, by 6 from east to west. Houses 422.

Assessed property, in 1815, £2,248. Population, in 1801, 1,710; in 1831, 2,004. The surface is uneven, and the whole district was formerly very moorish and barren; but it has been considerably improved. The land is watered by two streams, contributory to the Deveron, and the other to the Ythan, and themselves receiving the waters of numberless and copious springs. On the banks of the streams the soil is deep and fertile, producing excellent crops. Some extensive tracts of poor land elsewhere throughout the district have been rendered arable. Joseph Cumine, Esq., of Auchry, who founded the village of Cumineston, was a great benefactor to the district, enclosing and subdividing it into farms and fields, and changing its whole aspect. He also introduced the linen-manufacture, and the spinning of linen-yarn. Garmond is another village of modern date. At Lendrum in this parish, tradition relates that a great battle, which continued three days, was fought between Donald of the Isles and the Thane of Buchan, in which the former received a final overthrow. A prophecy was long current that corn growing on 'The Bloody Butts of Lendrum' would never be reaped without strife and bloodshed amongst those engaged in the work, and it is said to have been surprising how often this prediction was literally fulfilled; "a circumstance which may be easily accounted for," says the author of the Statistical Account, "by the trepidation, or the furor which, according to the respective constitutions of the reapers, is inspired by the recollection of this awful scene." The locality here known as Finlay's mire, indicates the spot where some Covenanters were cut off by the Ogilvies: heads of spears, &c., have been found in an exhausted moss in this vicinity.—The parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, the Earl of Fife. Stipend £191 6s. 5d.; glebe £18. Unappropriated tithes £295 2s. 2d. Church built in 1764; enlarged in 1792. Sittings 1,050. An Episcopalian congregation was established at Cumineston in 1791. Chapel built in 1792. Sittings 98. Minister's salary £53 10s.—Schoolmaster's salary £29 18s. 10d.; fees, &c., £23 10s., besides a share in the Dick bequest. There are five private schools in the parish.

MONTROSE, a parish in the north-east extremity of the maritime district of Forfarshire; bounded on the north by Logie-Pert and Kincardineshire; on the east by the German ocean; on the south by the South Esk, which divides it from Craig; and on the west by Montrose hasin, and by Dun. Its greatest length from the mouth of the North Esk to a slight bend in the South Esk at the harbour, is 4 miles; its greatest breadth, in a line east and west over Kinnohar, is 3 miles and 5 furlongs; its breadth, for a mile south of the mouth of the North Esk, does not average more than a furlong, and for 1½ mile north of South Esk, averages between 6 and 7 furlongs; and its superficial area is about 3,080 Scottish acres. The North Esk runs 3 miles along the northern boundary, chiefly between high and wooded banks; and forms various islets, and is, altogether, charmingly picturesque. The South Esk touches the parish only while running between Montrose basin and the sea: See SOUTH ESK. Tayock-burn, coming in from Dun, runs 1½ mile south-eastward, partly in the interior and partly along the boundary, to the north-east corner of Montrose basin. This basin is an expanse of nearly ellipsoidal outline, and about 7 miles in circumference, alternately sheeted with pent-up water, and exposed in the naked repulsiveness of sand and sludge at the influx and the recess of the tide. At high water, it has a charming aspect, looks like a fresh water and brilliantly zoned lake, washes the walls of the gardens which suhtend the whole

west side of the town, and, by the regular and rapid rush of waters which it occasions in the action of the tide, both promotes the cleanliness of the hurgh and prevents the formation of a bar injurious to navigation across the mouth of the river. An attempt was at one time made, by running a dike from near the Forthill, along the hank of the South Esk toward the estate of Dun, to cut off a considerable part of the hasin, and convert the strong carse clay which forms its bed into arable land. But the dike, in consequence of misunderstandings among the parties interested, was very slowly constructed; and, just when nearly completed, it was laid prostrate by a storm. The work was, not long ago, traceable, and bore the name of the Drainer's dike. Wild geese arrive in great flocks at the hasin about the end of October, and remain till March, frequenting the wheat stubble, or the green wheat fields on the low grounds during the day, and spending the night on the lagoon. Flocks of wild ducks alternate or reverse the possession of the two localities with the geese. Swans visit the hasin in severe storms, but speedily depart. A list of the other aquatic birds which frequent the locality, as well as of the varieties of the duck and the goose, as drawn up by Mr. Thomas Molison of Montrose, and published in the New Statistical Account of Craig, is so curious that we append it in a note.\* The beach along the sea-coast is pure sand, dipping at so fine a gradient beneath the wave, and affording so velvety and uniform a carpeting for the feet, as strongly to allure even the most timid to the luxury of sea-bathing. A low hank of bluffs, and sandy knolls, thinly clad with belt, flanks the line of floodmark from Esk to Esk. Behind this hank, and parallel to its whole length, stretches a belt of undivided common, a sandy or very light-soiled verdant tract, narrow in the north and centre, but widening toward the south, and eventually occupying the whole peninsula between the hasin and the sea, except the site of the hurgh and its outskirts. Land of naturally the same description—sandy to a great depth, and capable of bearing hut slender vegetation—lies for 6 or 7 furlongs from flood-mark all the way along to the North Esk; and, behind the belt of common, it is, on the north, covered with a plantation of firs, and, toward the town, subjected to a scantily productive tillage. A mound or low hank of round water-worn stones, only a few yards in breadth, and used as the line of the Great North railroad, runs for a mile parallel with the sea, and flanks the sandy grounds. West of this mound, the lands are all powerfully fertile, and under prime cultivation. The surface slowly rises toward the north-west, and attains its highest elevation on the boundaries with Dun and Logie-Pert; and though even here of very inconsiderable height, a fine view is obtained hence of the whole parish, the basin and the town, the winding

\* "The oyster-catcher and sea-pyot; water-rail, water-ouzel; a stork was lately seen in the basin, and afterwards shot at Ethie-house; the common heron and bittern, the curlew and whimbrel; the common snipe and jack-snipe; the common godwit, Cambridge greenshank and redshank; the shore sand-piper, common sand-piper, black sand-piper, spotted sand-piper, dunlin, porre, little stint, and turn-stone; the common gallinule; the common coot; the tippit, dusky, little and black-elin grebes; the razor-bill, penguin, puffin, and little auk; the common, black, and spotted gull-mot; the great northern diver, imber, lesser, first-speckled, second-speckled, redthroat, and blackthroat divers; the common, lesser, Sandwich and brown terns or sea-swallows; the black-backed, herring, wagel, common, winter, black-headed, kittiwake, and Arctic gulls; the stormy petrel; the goosander, dun-diver, red-breasted merganser, and smew merganser; the grey lag-goose, white-fronted, bean, bernacle, brent, eider-duck, velvet, souter, mallard, hook-bill, scaup, gadwale, wigeon, and shieldrake, puchard, pintail, long-tailed, golden-eye, and tufted ducks; the teal-duck also has been found on its eggs on Monmouth wood; the cormorant, crested shag or skart, crested-shag, gannet or solan-goose."

of the South Esk among rich fields and embellished lawns, much of the upper end of Strathmore studded with mansions and feathered with wood, the round tower and antique steeples of Brechin, the vast and galleried amphitheatre of the Forfarshire and Kincardineshire Grampians, and a far-stretching expanse of the German ocean, specked with the white sails of merchant-craft, and occasionally with the dark form of a steam-ship. The gentle general swell, the summit of which gives this landscape to the eye, is called Montrose-hill. No earths useful in manufactures have as yet been discovered, except clay for bricks; limestone is worked on the estate of Hedderwick; and stone for building needs to be fetched from Brechin. The parish is traversed for 3 miles by the Great North railroad; 2 miles by a road going off from it to Marykirk bridge; and nearly 1 mile by the road also going off from it toward Brechin. Population, in 1801, 7,974; in 1831, 12,055. Houses 1,190. Assessed property, in 1815, £22,017.

Montrose is in the presbytery of Brechin, and synod of Angus and Mearns. The charge is collegiate. Patron of the first charge, the Crown; of the second charge, the Town-council. Stipend of the first minister £292 5s. 1d.; glebe £20. Unappropriated teinds £90 6s. 8d. Stipend of the second minister—derived from an assessment upon house-rents within the burgh, at the rate of 5d. per pound, in virtue of an act of the Scottish parliament in 1690, authorizing a maximum assessment of 1s. per pound—£340. The parish-church was built in 1791, and is double-galleried. Sittings 2,500. A missionary labours throughout the whole parish, and is supported by a society whose committee and contributors belong to all the religious denominations in the town. In 1834, a portion of the town district of the parish was erected into the *quoad sacra* parish of St. John's. After deducting this territory, the population of the parish of Montrose, according to an ecclesiastical survey in 1836, consisted of 6,040 churchmen, 1,924 dissenters, and 984 nondescripts,—in all 8,948 persons; and according to an ecclesiastical survey of the same year, the population of the *quoad sacra* parish of St. John's consisted of 2,509 churchmen, 1,083 dissenters, and 168 nondescripts,—in all, 3,751 persons. The church of St. John's was built as a chapel-of-ease in 1829, and cost £3,969. Sittings 1,430. Stipend £150, with about £20 for providing communion elements.—There are eight dissenting congregations, all whose places of worship are in the burgh. The first United Secession congregation was established about the year 1750. The church was built in 1750, and repaired and lofted in 1788; and, including a churchyard which surrounds it, was supposed, in 1836, to be worth from £500 to £600. Sittings 550. Stipend £90.—The second United Secession congregation was established in 1787; and their present place of worship was built in 1824, at a cost of £1,100. Sittings 750. Stipend £115.—The Wesleyan Methodist congregation was established in 1793. Their chapel was built in 1814, and cost upwards of £900. Sittings 300. Stipend £60.—The Scottish Episcopalian congregation have no record of the date of their establishment. Their place of worship is a hall belonging to a society of masons, and rented at £16. Sittings 170. Stipend various.—St. Peter's Episcopalian congregation is in connexion with the Established church of England, and dates from the period when Episcopacy ceased to be the Established religion of Scotland. Their place of worship was founded in 1722, and opened in 1724. Sittings about 800. Stipend £186, with the interest of £600 bequeathed, to build a house for the minister.—The Independent congregation was established in 1800. Their chapel,

not originally designed to be a place of worship, was bought, floored, seated, and galleried at the cost of £625. Sittings 550. Stipend £80.—The Scottish Baptist congregation was established about the year 1830, and in 1836 assembled in a school-house gratuitously given for their use by the magistrates of the town.—The Baptist congregation was established about the year 1812; and their chapel was built about 14 years later at the cost of £400. Sittings 200. Stipend, the surplus of the ordinary collections over the expenses of the congregation.—In 1834, there were 27 schools, conducted by 34 teachers, and attended by 1,632 scholars. At the Montrose academy, the instruction consists of English, writing, arithmetic, Greek, Latin, mathematics, geography, and French. Salary of the rector £50, with £100 fees; of the first Latin teacher £40, with £90 fees; of the second Latin teacher £50; of each of two teachers of writing and arithmetic £25, with £100 fees; of the first English teacher £40, with £120 fees; and of the second English teacher £25, with £80 fees. In 1834 the academy was attended by 200 males and 147 females. Of the other schools one is situated landward, and brings the teacher £2 from the kirk-session, a house, a garden, and a free school-room; another is a charity school, supported by a mortification, and bringing the teacher a salary of £36, with a house, garden, and school-room; a third is also a charity school, supported by a mortification, and brings a male and a female teacher, the latter of whom teaches needle-work, the interest of £900 in equal shares; a fourth is an infant school, supported by subscription, and yielding a salary of £50; and a fifth and a sixth are schools belonging to the trades, differing from private schools only in the school-rooms being rent-free.

MONTROSE, a royal burgh, a sea-port, and an important town, stands in 56° 34' north latitude, and 2° 10' longitude west from Greenwich; 8 miles east of Brechin, 12 north of Arbroath, 18 north-east of Forfar, 22 south of Stonehaven, 30 from Dundee, 38 from Aberdeen, and 70 from Edinburgh. Its site is in the peninsula which forms the south end of its eognominal parish. The town stretches one side of its whole length north and south along Montrose basin; it expands a large wing south-eastward along the South Esk; and it claims as burgh-lands, partly dotted over with buildings, and partly disposed in public promenade, or unenclosed common, the whole "links" lying between it and the ocean on the east. The ground beneath and around it, excepting three hillocks or knolls on the basin, and the low sand-bank along the margin of the links, is nearly all a dead level. Its flat and nearly insulated position might, at first thought, be supposed repulsive to both the valetudinarian and the lover of landscape; but, on the contrary, it is at once salubrious and eminently picturesque. The dryness of the soil, the absence of all marsh and stagnant water, and the sweeping action of the current between the basin and the sea, act favourably on the climate; and to a person approaching from the south, and coming in view of the town from the high ground traversed by the public road in the parish of Craig, the fine sweep of the broad South Esk fringed with shipping, docks, and variform edifices, and stretching out to the sea on the right,—the large circular basin set round with richly-cultivated fields, and forming the foreground to a far-spreading expanse of luxuriant landscape on the left,—the town lifting up several imposing structures, and retiring in a large broad field of architecture in front,—the receding prospect behind it exhibiting a fine variety of swell and hill and plain, and of mansions, fields, and

woods, till the eye ceases to discern distinctive features,—and the dark, vast amphitheatre of the Garmians, piled shelvingly against the sky, and forming a stupendous mountain-bulwark at 20 miles distance,—altogether present one of the most diversified and magnificent views in the United Kingdom.

The town, as entered by the suspension-bridge over the South Esk, commences in two streets, forking-off from the end of the bridge, running somewhat parallel, each about  $\frac{1}{2}$  of a mile long, and both leading north-eastward to the head of the principal street. That next the basin bears the name of Bridge-street, and is straight, spacious, modern, and neatly though not entirely edified. The other bears the names of Upper-Fishergate and Castle-street, and is narrow, of unequal width, winding, antique, and disagreeable. Murray-street, the principal thoroughfare, runs due north, and is nearly half-a-mile long. Commencing continuously with Castle-street, and 100 yards east of the end of Bridge-street, it is at first a spacious area, split into two thoroughfares by a suite of old grim buildings; it next has a moderate width, and is subtended on the east by the town-house and kindred edifices; it now, over a distance of 300 yards, becomes a street of uncommon spaciousness, or rather a slender, elongated rectangle; and it finally goes off in a straight line, of fair breadth and reputable appearance. In its expansive part, it has lofty houses, excellent shops, and decidedly a city-aspect; yet, several of the houses being of the gable-end construction, and most of them seeming to economize space, it strangely but pleasingly blends ancient and oriental with modern and airy features. A spacious road, called the Mall, continues the line of Murray-street about 5 furlongs northward; and is thickly sprinkled with edifices,—the mansion, the villa, but chiefly the humble cottage. Two hundred yards east of the end of the bridge commences a thoroughfare, which makes nearly the segment of a circle over two-thirds the length of the town, forming a kind of parallel to both Castle-street and Murray-street, and then bends slightly sea-ward till it debouches into the links. This street is called for a short way Apple-wynd, and afterwards Back-street; it is of very unequal width, now a mere alley, and now a spacious roadway; and, with some pleasant exceptions, is mean and dingy in its houses. Of some seven or eight communications which run westward from it, the only noticeable ones are the New-wynd and John-street, both opening into the very wide part of Murray-street, each about 220 yards long, and the latter entirely modern and neatly edified. Running out into the links, in continuation of John-street, is Union-street, erected since 1838, and terminating at some extensive factories of earlier erection. From the middle of New-wynd, a narrow but closely-huilt street, called West Back-street, wends upwards of  $\frac{1}{4}$  of a mile to the head of the Mall. Along the east side of the town facing the links, and communicating with the South Esk at the flag-staff east of the end of Apple-wynd, runs what is called the Walk, chiefly a terrace, or one-sided street line, containing many comfortable and elegant houses. A triangular space lying east of its south end, and measuring nearly  $\frac{1}{4}$  of a mile along the South Esk, is occupied with various clusters and streetlines of houses, the chief of which are River-street, parallel with the river, and Commerce-street and Dock-street, running up into the links.

The town house presents its west side to the narrow commencing part of Murray-street, and its front to the elongated parallelogram; it has an arcade below, and makes a fine termination to the long spacious area in the centre of the town; and it con-

tains a council-room, a guild-hall, a court-room, a coffee-room, and a large apartment occupied as a public library. The jail, built about 9 years ago, is a neat and substantial structure; and has wiped away the disgrace of the old prison, consisting of two or three miserable cells, in the lumpish and crazy town buildings at the south end of Murray-street. The parish-church, situated immediately east of the new town-house, is a huge plain building, measuring 98 feet long by 65 over walls, and possessing no other noticeable property but its size. A rickety and deformed steeple which formerly marred the whole burghal landscape, was taken down in 1832, and substituted by an elegant and massive Gothic tower, erected at a cost of £3,000, from a design by Gillespie Graham, Esq. of Edinburgh,—the tower rising to a height of upwards of 100 feet, and surmounted by a spire of nearly the same height. St. John's church, situated in John-street, is a handsome Grecian edifice. St. Peter's church, situated in the links, due east from the parish-church, is a neat structure, handsomely fitted up in the interior; and provided with an organ. The second United Secession congregation's place of worship, and the Methodist chapel, both situated in West Back-street, are unadorned but pleasing erections, free from the gowstiness of the old meeting-house style. The Montrose academy, standing on the links, 150 yards south of St. Peter's church, is an elegant and commodious structure, surmounted by a neat dome. Near the academy stands the school of the seven incorporated trades, built in 1832. At the north end of the walk stands another of the public schools. Dorward's house of refuge, built in 1839, and affording accommodation for 200 inmates, is a neat building in the Old English style of architecture. William Dorward, Esq., merchant in Montrose—a gentleman of eminent excellencies, and large and enlightened benevolence—gave for the erection and endowment of this institution £10,000, expended about £600 on furniture and additional building, and placed the whole under the management of 24 trustees. The Lunatic asylum, situated on the links,  $\frac{1}{4}$  of a mile south-east of the academy, and 250 yards from the river, is an extensive and commodious edifice, originally built in 1780, and afterwards repeatedly enlarged. The establishment is managed by the provost, the first hallie, and the two parish-ministers of Montrose, five ministers of neighbouring parishes, eleven landed proprietors in the country, and thirty inhabitants of the burgh; it has a keeper, a matron, and a resident medical superintendent; it affords accommodation for a large number of sufferers, and has sometimes about 70 within its walls; and it has proved an eminent advantage to a large portion of the northern section of the county. A royal charter was obtained for it in 1811. An infirmary and a dispensary were formerly connected with it,—giving relief annually to some hundreds of out-of-door patients, besides a few received within the walls; but a new and separate infirmary was erected in 1839, after a design by Mr. Collie of Glasgow, at the cost of £2,500, is situated near the bridge, and promises to be much more beneficial as an independent than formerly as a subordinate establishment.

Till near the end of last century, communication was maintained across the South Esk with the burgh and the great road to Aberdeen, only by means of a ferry at Ferryden. In 1793, a colossal timber-bridge was built across the gullet between Inchbrayock and the burgh, and was esteemed a wonderful erection; but in consequence of an ill-advised narrowing of the channel at its site, the rapid current soon carried away its original bottom, and threatened to sweep it off from the foundation; and, after various expedients

were adopted with only temporary success to prevent its destruction, it eventually became a piece of mere shaking, fragile patchwork, and was condemned. A magnificent suspension-bridge destined to succeed it, and designed by Captain Samuel Brown of the royal navy, was founded in September, 1828, and finished in December, 1829, at a cost of about £20,000. The distance between the points of suspension is 432 feet. Each of the two towers, the tops of which form these points, is 23½ feet high from the foundation to the roadway, 44 feet from the roadway to the top of the cornice, and 3½ feet in the entablature,—in all 71 feet; is 40½ feet broad at the cutwater, and 39½ at the roadway; and is perforated by an archway 18 feet high, and 16 feet wide. Of four counter-ahntments for securing the chains, and which are 115 feet distant from the towers, each consists of an arched chamber, a strong counterfort, a tunnel, and lying spandrel arch. In these the backstay-chains are strongly imbedded and fastened by great plates; and thence they rise to channels on the tops of the towers. “The bars of which the main [suspending] chains consist measure 8 feet 10 inches from centre to centre of the bolt-holes, 5 inches broad between the shoulders, and 1 inch thick throughout. All the main links or bars are of the same thickness, except those in the towers, which are ¼th of an inch thicker, and of length to suit the curve of the cast-iron saddles. Each main suspending chain—of which there are two on each side of the bridge one over the other, placed one foot apart—consists of four lines of chain-bars. The joints of the upper main chains are over the middle long bar in the lower chains; and the suspending rods which support the heams on which the roadway is laid, are 5 feet distant from each other. The chains are of wrought cable-iron; the heams are of cast-iron, formed with open spaces 26 feet 8 inches long, 10 inches deep at the neck of the tenons, and 1 inch thick in every part between the flanges.” [New Statistical Account.] The roadway is 26 feet broad between the suspending rails; the planking or platform is bolted to the iron-beams, and overlaid with a composition of coal, tar, pitch, and broken metal, impervious to water, and deadening the hollow noise caused by the tread of horses and the motion of vehicles; along the sides of the platform runs an ornamental cornice, contrived so as to lessen the vibration of the bridge; and a stripe of the roadway at each side is disposed for foot-passengers, and railed off from the carriage-way by a handsome guard-chain. Such was, and such, with some differences of detail as to the roadway, still is, the suspension-bridge of Montrose. But the splendid and seemingly powerful erection has, on two occasions, suffered appalling accidents. “A crowd having assembled on it,” say the Messrs. Nicol, “to witness a hoat-race, and a rush taking place to the east end as the hoats passed through, the upper chain gave way, owing to an imperfection about one of the saddles on the top of the north tower, and fell, resting on the lower chain. Several persons were caught between the chains, and killed on the spot; but fortunately the under chain proved sufficient to support the additional weight, otherwise the whole party would have been precipitated into the water. The bridge was speedily repaired during 1838; but in October that year a fearful gale tore up and destroyed about two-thirds of it, which were thrown into the river; but the main chains were uninjured, and the roadway has been re-constructed on an entirely new and substantial plan by Mr. J. M. Rendal, civil engineer, at an expense of upwards of £3,000. Including all repairs, the whole cost of the erection has been nearly £27,000. The duties levied at the bridge yield an annual revenue of £1,500.” At

the time when the bridge was erected, the central arch of the stone one across the southern channel of the South Esk, was taken down, and substituted by a revolving drawbridge which allows vessels to trade upward to Old Montrose. See articles LUCHBRAYOCK and MARYTON. Porthill, a small eminence standing close upon the river at the site of the suspension-bridge, and anciently crowned with a fortification, was cut through during the preliminary operations for the erection of the bridge, and disclosed a stratum of human bones nearly 14 feet thick.

The harbour of Montrose extends from the bridge 650 yards down the South Esk, opposite Luchbrayock, and is very commodious, and furnished with excellent quays. A good wet dock was constructed during last century; a patent slip for the repairing of vessels was provided at a later period; and a dry dock was a few years ago constructed on the opposite bank. Two lighthouses stand on a line, 400 yards apart, between the harbour and the sea, to guide vessels into the river during the night. Connected with them is a house, occupied by the keeper of the lights, and provided with appliances for the recovery of persons who have suffered shipwreck. Vessels of all sizes navigating the coast have, at all times of the tide, sufficient water to enter the harbour; but, the entrance being narrowed by a rock called the Stone, which projects from the south side, they have, in certain states of the wind, some difficulty in taking the river. As a port of the custom-house, with a complete establishment, Montrose comprehends within its bounds the whole coast, from the lights of Tay on the south, to Berwie-brow or the Tod-head on the north, and of course includes Arbroath, East and West Havens, Gordon and Johnshaven. The shipping belonging strictly to its own harbour, or exclusive of that belonging to these subordinate ports, was—

In 1789,	53 vessels of aggregate	3 543 tons.
In 1820,	83 . . . . .	7,916 .
In 1831,	106 . . . . .	10,700
In 1835,	108 . . . . .	11,000
In 1838,	115 . . . . .	15,000

Four large vessels were long employed in the Greenland whale-fishery, and fully shared the fates of that precarious trade; four regular traders sail to London, two to Leith, and two to Glasgow; one steam-vessel has, for some time, plied to London every ten days, and another to Leith daily; and the rest of the shipping is employed in the Baltic and the coasting trades. The principal foreign import is flax, annually brought from the Baltic to the amount of about 2,500 tons. Timber, chiefly fir, is brought from the same quarter to the annual amount of between 1,500 and 1,600 loads. Hemp and tallow are the only other imports from abroad, and are very small in quantity. The imports coastwise are principally coal, lime, slate, and iron; but, besides some other articles, they include also almost all the wines and foreign spirits which are consumed in the circumjacent country, and which are landed at the port till taken out for consumption. Foreign exports scarcely if at all exist; manufactured goods and other articles designed for foreign markets being sent coastwise for exportation from Dundee, London, Leith, and Glasgow. Exports for home-markets consist, with the exception of some pavement or ‘Arbroath stones,’ of agricultural produce, fish, and pork. The grain sent from the port is said to be greater in quantity, and to be not lower in quality, than that sent from any other in Scotland. In 1835, there were shipped 23,695 quarters of barley, 3,452 of pulse, 3,343 of oats, 1,425 of wheat, 65 of rye, and 114,560 stones of potatoes. A great part of the produce of excellent salmon-fishings in the river, and along the coast

is sent in a fresh state to the London market [see FERRYDEN]; and to the same market and other parts of England are sent vast quantities of dried and salted cod. In 1835, the quantity of salmon shipped was 1,882 boxes, and of cod 902 barrels. In the same year cured pork was shipped for London to the extent of 202 tons; but it has since greatly increased in quantity, and become an article of staple trade.

The manufactures of the town are very considerable both in importance and in variety. Four flax spinning-mills are driven by steam-power aggregately equal to 129 horse-power, and produce nearly 900,000 spindles a-year. Three other mills connected with the town, but situated on the North Esk, one in the parish of Montrose, two in that of LOGIE-PERT, [which see,] and all driven by water-power, produce about half the quantity of the town-mills. Between 500 and 600 looms, five-sixths of which are in factories, are all employed on the beaver and finer linen fabrics,—dowlas, sheetings, sailcloth, and bagging. The largest article is bleached dowlas, and the next largest bleached ducks. The aggregate annual quantity of all the fabrics woven is about 25,000 pieces, exclusive of a very considerable produce at agencies in the neighbourhood. "The average nett weekly earnings of all classes of weavers," say the commissioners on Hand-loom Weavers' Report, published in 1839, "was stated by them to be 6s. 8d.; but, as stated by the manufacturers, and corroborated by the examination of their books, was from 7s. 6d. to 8s. 6d. Saturday afternoon and Monday are generally idle days: the average of working hours per week may be about 70. Embezzlement has been only lately suspected. Intemperance always increases with any advance of wages. The weavers here were on remarkably good terms with their employers, to whose liberality they consider themselves much indebted. They find little difficulty in getting an advance of wages without dispute, whenever the state and prospects of the trade are good." The minor manufactures are two large tan-works, a foundery, two extensive rope-works and sail-making establishments, five breweries, a starch-work, two soap and candle works, and two large establishments for making machinery. Ship-building, both for the port of Montrose and for other ports, has long been carried on to a considerable extent, and with a ratio of increase nearly proportioned to the slow but steady prosperity of the town. Bricks and tiles are made in the vicinity. The species of snuff-box generally known as the Cumnock box was made in Montrose before being known in Ayrshire, and still continues to be produced, but not in such quantity as to compete with Cumnock and Mauchline.

Montrose had for some time a parent-bank, which disappeared in 1828; and it has at present branch-offices of the British Linen company's bank, the Bank of Scotland, the Dundee Union bank, and the National bank of Scotland. There are in the town a natural and antiquarian society, established in 1837, and a museum of mineralogy, zoology, and antiquities; a commercial news-room, and an exchange coffee-room; two weekly newspapers—the Montrose Review, of long standing, and the Montrose Standard, of recent origin; a public subscription-library, founded in 1785, and containing between 7,000 and 8,000 volumes, a library belonging to the Montrose Reading society, and two parochial libraries consisting chiefly of religious books; an ancient hospital fund, under the management of the town-council, yielding between £160 and £190 a-year in monthly pensions to the poor, consisting of the proceeds of church-lands and teinds granted to the town in 1587 by James VI., and amounting in stock, at 30th Sep-

tember, 1833, to £4,431 1s. 10d.; various educational and charitable institutions, connected with public buildings, at which we have already glanced; Bailie James Auchterlony's ebarity, founded in 1752, and consisting of the interest of £560 for the general poor,—Miss Mill's, instituted in 1803, the interest of £467,—Mr. Mill's fund, the interest of £1,000,—John Erskine, Esq. of Jamaica's charity, a bequest, dated October 1786, of £2,000 for the benefit of 10 poor families with each three children, and of £3,000 for educating and maintaining 8 fatherless or motherless poor boys, and which having been advantageously vested in the lands of Harvieston, Kincardineshire, annually yields each of the 10 families about £13, and each of the 8 boys about £18, besides aggregately £50 a-year to an additional teacher in the grammar-school,—David White's free-school, founded in 1816, for 100 poor children, and his fund of £800 for the benefit of 20 householders,—Miss Jane Stratton's charity, established in 1822, and consisting of a mortified fund of £1,800, employed in equal shares for the education of 42 boys and 35 girls, and for the support or aid of 10 poor gentlewomen,—Andrew Frazer's charity, instituted in 1826, a fund of £500, the interest of which is annually expended on the 26th of February, in the distribution of coals and meal to the poorest inhabitants,—Mrs. Innes' fund, the interest of £1,000 for 10 poor widows,—Miss Graham's fund, the interest of £100,—Mr. Cooper's fund, the interest of £50,—a society, founded in 1799, for the relief of the destitute sick,—a society, founded in 1806, for the relief of indigent women,—and Miss Jane Thomson's fund, instituted in 1838, and consisting of the interest of £3,500, and £30 of annual rent from property in John-street, for half-yearly distribution among 5 poor men and 5 poor women, inhabitants of the town, and of good character. Notwithstanding the great length of this list, and the very important pendicles of it anticipated in our notice of public buildings, we believe it is not complete, and must refer the curious for fuller information to 'the Angus and Mearns Remembrancer,' published annually, and to the local sketches of the Messrs. Nicol. The inhabitants of Montrose will appear to any man, from a glance at the institutions, and especially at the charitable ones, compared with the amount of the population, to be aggregately a very different class from that of many a manufacturing town of the same bulk. They singularly combine intelligence with industry, largely benevolent and liberal feeling with the arts of acquiring wealth, concern for intellectual and moral culture with care for the appliances of outward respectability, and appreciation of the best features of social life with indifference, or even contempt, for the fopperies and the monkisms of rabble-aristocracy. Though they probably include a larger proportion of families in opulent or easy circumstances than, with at most four or five exceptions, are to be found in any town of Scotland, no one needs be surprised that they have fixed a cold and withering look upon the amusements of the theatre and the turf. A race-course was at one time tracked out on the links, on as fine ground for the purpose as anywhere exists; but it has not once, for a long series of years, been the scene of so much as one race. A theatre, too, was built in Bridge-street; and, after being the occasional resort chiefly of apprentices and strangers, and then standing several years, assuming an appearance of premature desolation, was converted into dwelling-houses. Players, some five or six years ago, occasionally visited the town, and perhaps still do so, performing in places of temporary accommodation, but receiving no countenance from the respectable inhabitants, and obtaining, as is thought,

very slender remuneration for their trouble. The fine healthful game of golf seems the chief amusement away from their own hearths which the Montrosians care for; it is much practised by persons of every rank and age, on one of the best grounds for the purpose in Scotland. Cricket likewise is a good deal practised on the same grounds,—the links.

The burgh of Montrose is of high antiquity; its first charter is from David I. The burgh place is to be held with all privileges and freedoms, "adeo libere sicut bona villa mea de Perth de me teneretur." David II., by a charter dated 1st May, in the fortieth year of his reign, of new grants the burgh of Montrose to the burghesses and community thereof "eum territorii et communi pastura dieti burgi sibi adjacentibus, eum piscariis infra aquas de North Esk et South Esk, in crovis, yaris, et retibus antiquis, et consuetis et pertinentibus ad dietum burghum, eum molandinis, sive ad ventum, sive ad aquam, et eorum multuris, cum tolloneo, parva eustuma, curiis et earum exitibus habendis et tenendis in locis dieti burgi dehitis et consuetis, eum moris, maresis, semitis atque viis, necnon cum omnibus aliis et singulis libertatibus, commoditatibus, asiamentis, et iustis pertinentiis quibuscumque, tam infra dictum burghum quam extra, tam sub terra quam super terram, ad predictum burghum spectantibus, sen quoquo modo juste spectare valentibus, in futurum adeo libere et quiete, plenarie, integre et honorifice, hene et in pace, sicut aliquis burgorum nostrorum Scocie " \* \* \* conceditur."—In virtue of this charter, the petty customs, multures, weigh-house, flesh-market dues, &c., have been levied. About 58 years ago the meal and malt mills were disused, and since then no multures have been exacted. By a charter of King James IV., dated 20th September, 1493, that monarch gave and granted to "our lovittes, the aldirmen, balzies, eonsale, and communitie of our burgh of Montross, and their successoris perpetuallic, siklike privilegis, freedom, charges and ankerages, to be raist and taken at the pere, port and havin of our said burgh, of all schippis, crearis, and hotis pertening to our leigis and strangaris, as is grantit and given be our maist nobill progenitors to the ports of Leyth and Dundee, or any otheris within our realme." In virtue of this charter the magistrates levy shore-dues, anchorage, and plankage at the barbour, by which they uphold piers, buoys, and moorings within the harbour. The property of the burgh consists of lands, houses, feu-duties, the harbour, shares in Marykirk-bridge, seats in the churches, money lent to the trustees of the Forfar road, and money in the bank; it amounted, in 1832, in gross value, to £54,986 12s. 3d.; and after the deducting of debts, and all liabilities, it showed a free balance of £27,442 16s. 7½d. In 1833, the revenue was £3,184 3s. 8½d.; the expenditure £4,700 17s. 10d.,—extraordinary expenses having been incurred by important local improvements. The corporation revenue in 1839-40 was £3,007. The assessments by authority of parliament are that for the second minister's stipend, the cess or land-tax, and twopenne on the pint of ale and beer for supplying the town with water; by authority of charter the shore and harbour dues, the petty customs, the weigh-house dues, and the fleshmarket dues; and by authority of the head court, an assessment for lighting the town, amounting, in 1833, to 6d. per pound of rent,—an assessment for a night patrol or police, amounting, in 1833, to 3d. per pound of rent; three farthings per ton on all vessels clearing out from the harbour for the maintenance of the light-houses, and of a bonded wood-yard; and an assessment of 4d. per pound of rent on all houses above £3 within burgh, in aid of the kirk-

session's funds for the poor. The head-court, or municipal assembly of the citizens, has been regularly held at least once a-year for about 150 years back. The burgh is governed by a provost, 3 bailies, a dean-of-guild, a treasurer, and 14 councillors. In the charter of erection by King David I., the burgh lands are said to contain "quatuor carueatas terre eum dimidia;" but the privileges of the burghesses are thereby declared to extend "de aqua de Thawhoke usque Findon, et de Findon per partes boreales usque ad aquam de Carndy, et sie descendendo per partes australes usque ad aquam de Deychty, sicut eurrit in Dromlay." The magistrates and council, however, exercise no jurisdiction over this extensive territory; and the royalty of the burgh, over which the jurisdiction of the magistrates extends, though not exactly defined, is understood to be circumscribed by the German ocean on the east, by the river South Esk on the south, by the Constable-hill on the south-west, by the burn of Tayock (or Thawhoke as it is called in the old charter) on the west, by the lands of Newmanswalls on the north-west, and by the lands of Wardhouse and Churleton on the north.—The Constable-hill, which the town acquired by purchase, and which is included in the parliamentary boundaries, is consequently beyond their jurisdiction. A weekly court is held by one of the bailies.—There are no pecuniary limits to the magistrates' jurisdiction in civil causes.—One of the town clerks acts as assessor to the magistrates.—The civil offices in the patronage of the magistrates and council are those of—two town clerks, whose salaries and emoluments average about £51;—the procurator-fiscal, who is elected annually after the appointment of the magistrates, and has no salary;—the chamberlain, who is also elected annually, is a member of the council, and receives £50, or 50 guineas, per annum;—the master of the hospital, and the treasurer, also members of the council, who receive no salaries, and the greatest part of whose duties is done by the chamberlain, who keeps all the accounts belonging to the offices;—three town serjeants, including the gaoler, who receives 15s., the others 10s. 6d. per week;—the constable, whose business is to keep the town free of vagrants, and who receives 9s. per week;—the coal-meter and his servants, whose business is to weigh coals delivered from the ships to the inhabitants of the town;—and the other offices are those of the second minister of the *quoad civilia* parish, and the rector, and all the teachers of Montrose grammar-school.—There are 7 incorporated trades; and a guildry. The trades, with the respective number of their members in 1833, and the entrance-fees severally exacted by them from strangers, are blacksmiths, 43, £5; wrights, 45, £5; shoemakers, 33, £5; weavers, 53, £2 10s.; masons and slaters, 39, £10; bakers, 27, £5; and tailors, 41, £5. They possess funds, which they apply to the relief of sick and poor aged members; but, in no instance, have any right of presenting, or of being presented to schools, hospitals, or similar institutions. The incorporation of the guildry enjoys the exclusive privilege of carrying on merchandise within the burgh. The number of guild-brethren alive at Michaelmas 1831 was 269. In 1709 they were reported to be about 200.—The fees exacted on entry are,—for strangers, £16 16s.;—for apprentices, £10 10s.;—sons and sons-in-law of guild-freemen, £8 8s.—No sums are paid annually by members.—Previously to 1816 the magistrates and council took the exclusive management of the funds of the guildry; but that year the guildry obtained the control of their own funds, and received from the magistrates the sum of £150, said to belong to them. At Michael-

mas 1831 the funds amounted to £170 Os. 8d. : the annual rent of these funds is paid quarterly to the decayed members of the incorporation, and to the widows and children of decayed members left in indigent circumstances. The fees of entry for burghesses are, for strangers, £4 4s; for apprentice to a freeman, £3 3s. : for a freeman's son or son-in-law £2 2s. ; besides 5s. to town-clerk, and 3s. to the town-officers.—The town is lighted at night with gas by a company formed in 1827; and supplied with water brought in pipes from a place about 3 miles distant in the parish of Dun. Private water-pipes are allowed to houses on payment of 2½ per cent. on the rent. The streets have of late years been well-paved and superintended; and are kept clear of every sort of nuisance. A weekly-market is held on Friday, when the chief part of the grain shipped at the port is sold by sample, and all descriptions of farm and garden produce are exposed; and annual fairs are held at Whitsunday and Martinmas, chiefly for the hiring of servants. Montrose unites with Arbroath, Brechin, Forfar, and Bervie in sending a member to parliament. Constituency, in 1839, 387. Population, estimated in 1709, at 6,000; in 1801, at 7,000; and, in 1821, at 9,000; stated in the New Statistical Account, written in 1835, to be 11,500; and amounting, in 1841, to 15,094.

Montrose, according to Boethius, was anciently called Celurea. Very conflicting and uncertain opinions have been advanced as to the etymology of its modern name, and are thus succinctly disposed of by a contemporary :—“In Latin, it is called *Manturum* by Ravenna; and by Camhden, *Mons Rosarum*, ‘the Mount of Roses;’ in French, *Mons-trois*, ‘the three hills or mounts;’ in the ancient British, *Mant-er-rose*, ‘the mouth of the stream;’ in the Gaelic, *Mon-ross*, ‘the promontory hill,’ or *Moinross*, ‘the promontory of the moss;’ or *meadh* (pronounced *mu*) *ain-ross*, ‘the field or plain of the peninsula.’ The second of these derivations, though the most unlikely of all, is countenanced by the seal of the town, which bears the ornament of roses, with the following motto :—‘Mare ditat, Rosa decorat,’—the sea enriches and the rose adorns; but the two last, besides being the most probable, correspond best with the pronunciation of the name by the common people in the neighbourhood, and by all who speak the Gaelic language, to wit, *Munross*.” [Chambers’ Gazetteer.]—Montrose is named in Dalrymple’s Annals of Scotland, under the year 1244, as one of the principal towns of the kingdom which, in that year, were destroyed by fire. A castle of very ancient origin, formerly crowned the summit of Fort-hill; and, on the authority of Sir James Balfour and of Wynton, contests the notoriety of having been the scene of King John Balliol’s humiliation to Edward of England, and divestment of his royal robes and crown :—

“This John the Baliol, on purpos  
He tuk and browcht hym til Munros,  
And in the castell of that town,  
That then was famous in renown,  
This John the Baliol dyspoyled he  
Of all his robes of ryaltie.  
The pelure tuk off his tabart,  
Tune tabart he was callyt aftyward.”  
WYNTON.

Montrose, according to Froissart, was the port whence Lord James Douglas, at the head of a numerous knightly retinue, embarked in the spring of 1330 to fulfil the last charge of King Robert Bruce, to carry his heart to Jerusalem and deposit it in the holy sepulchre. In the rolls of the parliament held in Edinburgh in 1357 for ransoming David II. from his English captivity, Montrose figures in the very

centre of the royal burghs, eight preceding and eight following it; and would therefore appear to have at that period attained very considerable consequence. The inhabitants of Montrose suffered severe and arbitrary oppressions from John Erskine, Laird of Dun, the grandfather to the celebrated reforming companion of John Knox, and from members of his family; and eventually driven beyond patience by their tyranny, obtained, in 1493, a royal warrant calling them to account for their conduct. In 1534, the tyrant’s grandson, the illustrious Erskine of Dun, afterwards superintendent of Angus, introduced Greek literature into Montrose, and established there a seminary in which the Greek language was taught by persons brought by him from France. This seminary was the earliest appliance in Scotland for conveying a knowledge of Greek. Andrew Melville, born in the contiguous parish of Craig, often styled the father of presbytery in Scotland, and justly regarded as the reviver of Scottish learning, and the founder of Scotland’s literary greatness, was educated in this seminary; and when he removed in his 14th year to the university of St. Andrews, he astonished his teachers, none of whom understood Greek, by displaying acquaintanceship with the learned language. James Melville, the nephew of Andrew, also attended this seminary, and, in his diary, gives some interesting details of the management of the school, and of kindness shown to him by the parish minister. In 1612, Montrose witnessed the birth within its precincts of James Graham, Marquis of Montrose, the distinguished figurant in the civil wars of Scotland, first as the champion of the Covenant, and next and chiefly as the enthusiastic partisan of the infatuated Stuarts. From May 1648 till February 1649, the plague desolated the town, driving crowds to the country in panic, and making such fearful havoc among those who remained, that a large tumulus is pointed out to the present day, on the links immediately north-east of the town, as the place where many victims to it were interred. At the commencement of the 18th century, John Young, a citizen of Montrose, who had been sent by the magistrates to Holland to learn the best known methods of constructing and working windmills, was the only person found in Scotland to understand the management of pumps in coal-works. In December 1715, the Chevalier, missing the Frith of Forth, whither he designed to steer with his French fleet, sailed into Montrose, and commenced there his posterous expedition; and in February 1716, he spent a night in the town, went by a back-door from his lodgings to those of the Earl of Mar, walked thence by a private footpath with two attendants to the sea-side, and there was taken on board a vessel prepared to carry him off, and made his escape to France. The house in which he lodged was that in which the Marquis of Montrose was born, and long commanded attention as the most noted ancient tenement of the town, hut, a considerable number of years ago, was removed. The noble family of Graham, who have had from Montrose the titles successively of Earl, Marquis, and Duke in the peerage of Scotland, have long ceased to possess any connexion of interest with either the town or its vicinity.

MONYMUSK, a parish in Aherdeenshire, bounded on the north by Oyne; on the east by Chapel-of-Garioch and Kenmay; on the south by Cluny; and on the west by Tough and Keig. It measures from 4 to 5 miles in each direction. Houses 188. Assessed property, in 1815, £2,301. Population, in 1801, 901; in 1831, 1,011. The river Don intersects the parish in a south-easterly direction, first dividing it from Oyne on the north. The soil is chiefly a light loam, interspersed with fields of a

clayey nature, both of which are extremely productive. The arable land, lying chiefly on the banks of the Don, is enclosed, well-cultivated, and highly embellished with plantations, of which there are upwards of 4,000 acres in the parish. The hills are partly covered with wood, partly in heath, and partly in pasture: the waste and pasture lands are estimated at about 3,000 acres. The parish abounds with excellent granite, much of which has been shipped to London and elsewhere. Iron ore has been discovered, containing, it is said, 13-20th parts of iron; but it has not been worked, on account of the scarcity of fuel; felspar has been worked for the Staffordshire potteries, but the land-carriage was felt to be too expensive. The only building of note in the parish is Monymusk-house, on the southern bank of the Don. There is a distillery; and two saw-mills are well employed. The chief antiquities are Pitfichie-castle, said once to have belonged to the family of General Hurry or Urric, of note in the time of the Covenanters; two Druidical circles, an ancient chapel, &c. King Robert Bruce is said to have halted with his army, immediately before the battle of Invercruy, at Campfield, near Monymusk-house.—The parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, the Crown. Stipend £202 15s. 6d.; glebe £12 6s. The church, situated in the village of Monymusk, is very ancient, supposed to have formed part of the priory of Monymusk, founded in the 11th century by Malcolm Canmore. Sittings 580.—There is also an Episcopal chapel in the village. Sittings 150.—Schoolmaster's salary £26; fees, &c., £17 10s. Lord Cullen's school is endowed from a mortification by Sir Francis Grant of Cullen, Bart., late of Monymusk, and one of the senators of the College-of-justice. Schoolmaster's salary about £50. Ten or twelve poor scholars are taught gratis at this school, and an equal number at the parochial school, part of the master's salary being derived from this mortification. There are three or four private schools in the parish.

MONZIE, a parish in the centre of Perthshire; bounded on the north by a detached part of Kenmore and by Dull; on the east by Fowlis-Wester; on the south by Crieff; and on the west by Monivaird and Comrie. Its form, which is very irregular, may, in a general view, be regarded as a square or broad rectangle, deeply indented at each of the four angles. Its greatest length from east to west is 9 miles; its greatest breadth is 8 miles; and its area is about 48 square miles. Its southern boundary is the skirt or lowest declivity of the Grampians; and its area all runs up among the first or frontier gallery of the broad and broken Grampian range. Two-thirds of it are a congeries of very high hills, partly green, but mostly covered with heath, heak and naked, rarely trodden by human foot, cut down by narrow, swampy, bent-clad flats, and abandoned as irreclaimable wilderness to the pasturing of Highland or black-faced sheep. The other third, however, is singularly rich in the beauty, variety, and holdness of scenic romance.—The rivulet Barvie, which runs 4 miles along the western boundary to the southern extremity, has nearly its whole course along a broken, rapidly descending, and very deep dell; and leaps from ledge to ledge in an almost constant succession of small cascades, sometimes 100 feet below the brow of its banks, and all the way overhung by steep rocks, partly naked and frowning, and partly dressed out in a profusion of natural wood.—The rivulet Keltie, which runs parallel to the Barvie, about a mile east of it, over a distance of 3 $\frac{3}{4}$  miles in the interior, comes coldly and shiveringly down for half its length among the mountains, enters the seclusion of a dark ravine, and, becoming pent up by

a pressure of rocks to a breadth of five feet, tumbles tumultuously down a smooth rocky precipice, 90 feet in height, into a pool 43 feet broad, called, along with the cascade, Spout-hay. The stream now contracts within a very narrow bed,—runs along a thickly wooded dell, 150 feet deep,—performs several leaps of 10 feet among inaccessible steeps,—steers its way in a channel through solid rock, at one place 12 feet wide and 9 deep, at another 6 feet wide at top, 12 feet wide at bottom, and 10 feet in depth,—and finally debouches into a plain through a rocky gorge, only about 4 feet wide. All the way along the dell, there is an artificial footpath, for the accommodation of the tourist; and in full view of Spout-hay stands a hermitage, where a stranger may survey and admire the cascade.—The river Shaggie rises, as do also the two former streamlets, in the loftiest hill-range of the parish, runs 4 $\frac{1}{2}$  miles south-eastward, southward, and south-westward, in the interior, receives the waters of the Keltie, traces for a mile westward the southern boundary, and, drinking up the Barvie, passes away to become tributary to the Earn. Its upper course is between high banks luxuriantly clad in copsewood, and is picturesquely varied by three waterfalls,—one of them, a mile above the village of Monzie, over very rugged rocks, 55 feet high, from a platform 18 feet broad, into a pool or basin 43 feet wide; and, from a point a little below this fall, where its banks suddenly widen and break down into a plain, its lower course is along a rich and blooming valley, the seat of two-thirds of the whole population.—Near the head of the valley stand the village of Monzie and the parish-church; and  $\frac{3}{4}$  of a mile to the south-west, appears the fine form of Monzie-house, peering out from amongst a grove of stately and aged trees, several of which vie in their hulk and efflorescence with the monarch-trees of almost any forest in the kingdom. Seen from vantage-ground east of the church, the general landscape is one of no common interest; in the foreground lies the luxuriant and warmly tinted valley, with the house and woods of Monzie in the centre, presiding over a bill-encinctured expanse of rich fields and lawns, and with the picturesque Knock at the side, lifting up masses of pine into communion with the clouds; and in the perspective stretches the dark, frowning rampart of the Comrie hills, overlooked in the far-distance by the misty summits of Benvoirlich, Benmore, and Benledi, faintly cutting a sky-line against the blue back-ground of the heavens.—North of the mountain-range, whence spring the streams already noticed, runs the Almond,—traversing the extreme length of the parish, from west to east,—maintaining all the way, with the exception of 2 miles south-eastward, a direction due east,—and tracing, for 2 miles before it takes its leave, the boundary-line between Monzie on the north, and Fowlis-Wester on the south. Over its whole course within the parish, but especially toward the east, where it traverses the singular gorge called the Small glen of the Almond, or emphatically Glenalmond, the stream, both in itself, and especially on its banks, is a continuous chequered belt of thrilling romance: see articles ALMOND and GLENALMOND. Near the large cave, midway up the face of a stupendous rock, and capable of accommodating 60 men under arms, mentioned in the former of these articles, grows a solitary and very ancient pine, far away from any kindred tree, and preserved from the touch of the credulous by a tradition which says, that if any person cut a branch from it, he dies and it lives; and beside it is a natural adjustment of stones into arches and corridors, called 'the Kirk of the wood;' so curiously constructed, as almost to seem a work of art. In a particular part of the glen, among the

hills, there is a distinctly repeating verbal echo; and, in the Small glen, owing to its sinuosities offering obstructions to a free current of the air, and to the absence of all lateral communication, whirlwinds are formed, which have occasionally lifted horsemen from their saddle, and obliged travellers to seek shelter for hours behind the rocks, and a sound is produced so loud, hollow, and reverberating, that strangers almost invariably mistake it for thunder. Tempests and whirlwinds occasionally sweep the whole hill country, unroofing houses, overturning stacks, tearing up heath and broom, and even rolling along large stones; slight shocks of earthquakes are sometimes felt coming east from Comrie; and waterspouts and sudden inundations from rain sometimes spread desolation along the valleys. In 1756, a waterspout, breaking out in the heights above the village of Monzie, took its course down the Shaggie, raised it 20 feet perpendicular at the bridge, and swept entirely away a bank near the village, which cost £500; and left behind in its sudden subsidence, such quantities of fish, that the inhabitants carried them home in basketsful. Two years later, the water, during a heavy rain in the hills, collected on the top of the brae near Monzie, and carried down such a quantity of earth into the Shaggie, as left a den 200 feet long, upwards of 100 feet wide, and 70 feet deep. Slate of excellent quality is worked in Glenalmond; red sandstone, compact and durable, is quarried on the estate of Cultequey. Plantation, chiefly of larch, oak, ash, Scotch fir, elm, and willow, covers several hundred acres; and natural wood forms considerable stripes and patches on the banks of the streams. Cultequey-house is pleasantly situated in the south-east corner of the parish, on a peninsula formed by the two head-streams of the Pow, or Powaffray. —About 2 miles east of the church, on high ground at the lower end of the deep narrow defile of Glenalmond, —the only pass through the frontier Graupians over a distance of 40 miles, —are vestiges of a large camp, defended on two sides by water, and on the other sides by morass and precipice. It is about 180 paces long, and 80 broad. It is traditionally called the Roman camp, and has been alleged to have accommodation for 12,000 men. —On a moor immediately east of it, several acres were till lately thickly dotted with cairns, some of which measured from 10 to 14 paces in diameter; and from their sepulchral contents, as well as other evidence, it appears to have been the scene on which some ancient armies sustained the shock of conflict and carnage. —Two miles to the north, enclosing the summit of the high hill of Dunmore, overlooking Glenalmond, and completely commanding that romantic pass, is a strong fort, inaccessible on all sides but one, defended by a deep trench 30 paces beyond the walls, and consisting of strong stone bulwarks, in some places double, partly vitrified on the west side, and enclosing an area of about half-a-rood. The erection is believed to be Celtic, and has by some, who credulously follow the legends of tradition, been regarded as the habitation of Fingal after his house was burnt by Gara. Even that house itself is said to have stood near the camp at the lower end of the glen, at a locality called in Gaelic *Fianteach*, 'Fingal's-house.' The statist in the Old Account, who is one of the believers, adds, "And we know both his [Fingal's] father and his son are buried here;" and elsewhere he tells us that a particular cairn "is called Cairn-Comhal, in memory of Fingal's father;" that "there is a small camp on the south side of the parish, near to Cultequey, called in Gaelic *Comhal Cults*, i. e. Comhal's battle;" and that "tradition says Comhal fought here, but lost the battle." The locality of the 'Cairn-Comhal' is a moor 2 miles east of 'Fianteach,' on which there

are, or lately were, many cairns and tumuli. In its vicinity is a fort called Lené, twice as large as that on the hill of Dunmore, exceedingly strong, surrounded by two ramparts 20 feet apart, and each 20 feet thick, the inner wall measuring 240 paces in circumference. Other antiquities, Druidical, Roman, and Celtic, occur, or have been dug up; but excepting the reputed grave of Ossian [see ALMOND], about which there has been much rencontre of wit, and respecting which the old statist stoutly says, "We are certain that the famous Caledonian bard, Ossian, lies here;" they are too numerous and minute to bear separate notice. —The village of GILMERTON [see that article] stands on the boundary with Fowls-Wester, and has about 240 inhabitants within Monzie. The village of Monzie has very long been stationary, and possesses a population of about 120. A fair called St. Lawrence's used to be held at the village on the 22d and 23d of August; and it is still, as to the former of these days, held here for lambs, sheep, and black cattle; but as to the latter of them, it has been transferred to Crieff, 3 miles distant, and ranks as one of that town's eight annual fairs. The parish is traversed by the Highland road up Glenalmond, and by roads leading to the entrance of the glen from Crieff and Monivaird. —Population, in 1801, 1,157; in 1831, 1,198. Houses 253. Assessed property, in 1815, £4,243. —Monzie is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend £158 16s. 11d.; glebe £27. The church was built in 1831. Sittings about 500. Affixed to the wall of the church is an ancient instrument of punishment, which belonged to the old church, and seems to have been used in the rough period of superstition and semi-barbarism, and is called the joughs. The modern parish was greatly altered in boundaries from the ancient one by the Court-of-session in 1702. Two large and contiguous tracts, which occupy its present centre, and which belonged respectively to Crieff and to Fowls-Wester, were annexed to it; and two detached districts—those of Logiealmond and of Innerpefferay—which lay at a considerable distance respectively to the east and to the south, were separated from it, and united, the former to Moniedie, and the latter to Muthil. —Near Buchandy bridge, at the lower end of Glenalmond, are the ruins of St. M'Bean's chapel, surrounded by a cemetery still partially in use. Near the north-east corner of the parish, in a most romantic situation, stood another chapel, now quite erased, but commemorated by its cemetery. Tradition says, that on the evening before the battle of Luncarty, 60 men took the sacrament here, all of whom went to the field, and only 6 returned. In 1834, the parish-school was attended by 71 scholars; and a private school in Gilmerton by 75. Parochial schoolmaster's salary £34 4s. 4½d., with £27 16s. 6d. fees, and £5 7s. 6d. other emoluments.

MOONZIE, a parish in Fifeshire, probably the smallest rural parish in Scotland. Its greatest length from north to south is scarcely 2 miles; and its greatest breadth from east to west is about the same. In some places, however, it is scarcely half-a-mile in breadth. The surface is finely diversified by various round shaped hills of no great eminence, presenting in other places, particularly where it marches with Kilmany, level flats of considerable extent. It is bounded on the south by the parish of Monimail; on the east by Cupar and Kilmany; on the north by Kilmany and Creich; and on the west by Creich. It contains about 1,100 Scotch, or 1,375 Imperial acres. The valued rent of the parish is £1,789 Scots. The real rent was, in 1793, £1,000 sterling; in 1815, it was assessed for the property-tax on a

rental of £2,763 sterling. Population, in 1801, 201; in 1831, 188. Houses 45. There are only two objects possessing any antiquarian interest in the parish,—Cairnie castle, commonly called the Lord's Cairnie, an ancient seat of the Earls of Crawford; and the old house of Colluthie, the remains of the residence of the Ramsays of Colluthie. The castle of Cairnie is said to have been built by Alexander, 3d Earl of Crawford, commonly called Earl Beardy from his great beard, or the Tiger Earl from the fierceness of his disposition. All that remains of this ancient stronghold of the once powerful family of Crawford is the keep or donjon, and a round tower which had formed a defence for the wall with which the court-yard was surrounded. This ruin is four stories high, and appears to have lost nothing of its original height, with the exception of the bartizans which surrounded its roof. It is 53 feet in length, and 42 in breadth, without the walls. The walls are strongly built, and between five and six feet thick. The ground-floor—as is common in such structures—appears to have been entirely occupied by cellars, having arched stone-roofs. The second floor was occupied entirely with the great hall, which is about 40 feet in length, and above 20 feet in breadth. The defence of the castle and its outworks was anciently strengthened by a broad morass which appears to have entirely surrounded the slight rising ground on which they were situated.—The house of Colluthie is said to have been erected by Sir William Ramsay\* of Colluthie, who, about 1356, married Isabel, Countess of Fife, daughter of Duncan the last Earl of Fife of the ancient race of Macduff. There seems, however, little reason to believe that the house—which is still habitable—was erected by this Sir William, as that would make it about 100 years older than the castle of Cairnie. The house, the walls of which are very thick and of great strength, has been repaired as far as possible to preserve it, by the present proprietor, Mr. Inglis. From the thickness of the walls, indeed, one would be inclined to think that this building had at one time been loftier than it now is; but of this there is no certainty, as its whole appearance has been much modernized and altered in many ways.—This parish is in the synod of Fife, and presbytery of Cupar. Patron, the Earl of Glasgow. Stipend £187 17s. 10d.; glebe £30.

\* Sir William Ramsay of Colluthie appears to have visited France in 1356,—probably previous to his marriage with the Countess of Fife. He went in the suite of the Earl of Douglas, who was also accompanied by Archibald de Douglas his kinsman, brother to the knight of Liddesdale. The Earl offered his services, and that of the knights and squires who accompanied him, to John of France, then opposing the English invasion under Edward the Black prince. They were present at the battle of Poitiers, on the 19th of September, 1356, when Archibald de Douglas was made prisoner by the English, but effected his escape through the presence of mind of Sir William Ramsay. The story is thus told by Fordun: "Archibald Douglas having been made prisoner along with the rest, appeared in more sumptuous armour than the other Scottish prisoners, and, therefore, he was supposed by the English to be some great lord. Late in the evening after the battle, when the English were about to strip off his armour, Sir William Ramsay of Colluthie happening to be present, fixed his eyes on Douglas, and affecting to be in a violent passion, cried out, 'You cursed, damnable murderer, how comes it, in the name of mischief, (*ex parte Diaboli*), that you are thus proudly decked out in your master's armour! Come hither, and pull off my boots!" Douglas approached trembling, knelt down, and pulled off one of the boots: whereupon Ramsay, taking up the boot, began to beat Douglas with it. The English bystanders imagining him out of his senses, interposed, and rescued Douglas. They said, that the person whom he had beaten was certainly of great rank and a lord. 'What, he a lord,' cried Ramsay, 'he is a scullion, and a base knave! and, as I suppose, has killed his master. Go, you villain, to the field, search for the body of my cousin, your master, and when you have found it, come back, that at least I may give him a decent burial!' Then he ransomed the feigned serving-man for forty shillings; and having again buffeted him smartly, cried, 'Get you gone! fly!' Douglas bore all this patiently, carried on the deceit, and was soon beyond the reach of his enemies."

The church stands on a rising ground at the western extremity of the parish, and forms a conspicuous object from the Newburgh road. It is a plain building with a belfry at the one end. It was gifted by William Malvoisin, Bishop of St. Andrews, to the ministry of Scotland's Well,—an institution founded by him previous to 1238, and in which he planted a colony of the 'Fratres Sanctæ Trinitatis de redemptione captivorum.'† It appears from the charter, that the church of Moonzie was dedicated to the Holy Trinity; it also appears, that the parish was at this time called Urbithumenesyn. The name was afterwards spelled Uchtermonsey, as in 1513, Alexander Crawford of Uchtermonsey succeeded his nephew in the earldom of Crawford. In consequence of the gift of the Bishop, the brethren of the ministry drew the tithes of the parish for their support, and supplied the cure; and this arrangement continued till the Reformation. After that event, it was conjoined with the parish of Cupar, about 1564; and in 1576 a reader appears to have been appointed. In 1625, seven years after the parishes of Cupar and Tarvet were conjoined, Mr. James Wedderburn was appointed minister, since which time it has continued a separate charge. The parish-schoolmaster has the maximum salary, and a good house and garden.

MOORFOOTHILLS, a range of moorish hills on the southern boundary of EDINBURGSHIRE: which see.

MORAR, a territorial district and a lake on the west coast of Inverness-shire. The district is bounded on the north by Loch-Nevis, which divides it from Knoydart; on the east by the district of Lochiel; on the south by Arisaig; and on the west by the Sound of Slate. Its extreme length, from east to west, is 19 miles; and its breadth varies between 4 and 9. Loch-Morar bisects a great part of it lengthwise, and divides it into two nearly equal sections, which are called respectively North and South Morar. The lake is 10½ miles long, and from 5 furlongs to 1¾ mile broad; it is overhung nearly all round, and, at a very brief distance, by water-shedding Highland heights, but has a fringing of wood upon its immediate banks; it is fed on the east by streamlets coming from the lochlets Beoraich and Anamack; and it discharges its perfluent waters on the west by a stream of only a few furlongs in length into a small bay. North Morar belongs to the parish of Glenelg, and South Morar to that of Arduamurchan; and both are included, in a large sense, in the comprehensive district of Lochaber. Morar is, with few exceptions, peopled by Roman Catholics; and, in 1836, was provided, by voluntary subscription, with a new Roman Catholic chapel.

MORAY FRITH, a gulf in the extreme north-east of Scotland; a sea rather than a bay or an estuary; the largest projection, and at the same time one of the most regular, which the ocean makes into the Scottish coasts. Loosely defined, but with reference chiefly to its interior waters, it is the *Æstuarium Vararis* of ancient geographers. Its limits, as assigned by the modern hydrography of the country, are somewhat various, and not very distinctly understood; but, on the whole, they distribute into two easily ascertained parts, an exterior and an interior.—The exterior frith comprehends all the open sea south-west of a line between Duncansby-head in Caithness-shire and Kinnaird's-head in Aberdeenshire, onward to the entrance of the inner frith between Tarbetness in Ross-shire, and Burgh-head in Morayshire. It blends with the German ocean on the

† The purpose of this institution was to form a receptacle for religious pilgrims; and the resident friars collected charities which were applied to the redeeming of Christians, who had become slaves in the Turkish dominions.

north-east, and, along the artificial line of connexion with it, measures nearly 80 miles; it has the counties of Caithness, Ross, and Cromarty on the west, and measures on that side about 70 miles; and it has Morayshire, Banffshire, and Aberdeenshire on the south, and measures along that coast about 57 miles. Except at an opening on its west side, immediately north of Tarbetness, where it sends off the Dornoch frith, and at a smaller opening on the same side, 8 miles south of Duncansby-head, where it expands into Keiss or Sinclair bay, it has a singularly uniform coast-line, sufficiently diversified with gentle curvatures to be freed from monotony, but uncut by deep incisions, and everywhere marked with only tiny bays and small headlands. The principal rivers which enter it on the west are the Wick, the Berriedale, the Helmsdale, and the Brora; and on the south are the Findhorn, the Lossie, the Spey, and the Doveran. All the coasts of the frith, from Wick round to Kinnaird's-head, are rich, and have become industriously plied in their fisheries; and, in particular, they yield immense quantities of herrings, though aggregately of inferior quality to those of the fisheries on the west coasts of Scotland.—The interior Moray-frith, where it opens from the exterior between Tarbetness and Burgh-head, is about 16 miles wide. It thence projects south-westward, to Ardersier or Fort-George, 2½ miles along the coast of Ross and Cromarty, and 22 along that of Moray, Nairn, and Inverness. Fifteen miles south-west of Tarbetness, between the north and the south Sutors of Cromarty, which rise like the sides of a huge gateway to admit its ingress, it projects the Cromarty frith between Ross and Cromarty. From its entrance to Ardersier, it gradually contracts, till, over a distance of 2 miles, it is only from 1 to 1½ mile broad. After passing Ardersier, it suddenly expands, and thence to Kessock-ferry, at the mouth of the river Ness, a distance of 9 miles, it has a mean breadth of about 3 miles; but there it suffers rapid though brief contraction to about half-a-mile, and, by a caprice in topographical nomenclature, loses its name, and is declared to terminate. A continuation of it 7 miles westward, by an extreme breadth of 2 miles, is called the frith or loch of Beaully: see **BEAULY LOCH**. The interior Moray frith, except in its outer skirts, presents quite a contrast to the exterior frith as to at once the wealth, the abundance, and the variety of its fisheries; and though possessing along its coasts some regular communities of fishermen, affords them such small employment, that they generally resort to the fishing-grounds north of Tarbetness. For a notice of some geognostic phenomena connected with the frith, and of the general appearance of its coasts, see following article.

**MORAY (PROVINCE OF)**, a large district in the north-east of Scotland, now without any political assignment of territory, yet quite distinct in the popular application of its name, the extent of its geographical limits, and the individuality of its physical features and historical associations. Though its boundaries are very variously stated by topographers, they may easily be ascertained by reference jointly to ecclesiastical jurisdiction and to physical configuration; the extent of the modern synod having been little altered from that of the ancient diocese, and the surface of the country forming, with slight exceptions, a convergence of upland troughs, from a stupendous line of water-shed, to a great common plain or laterally prolonged lowland basin. The Moray frith, inner and outer, naturally constitutes the boundary on the north-east and the north. The boundary-line for the other sides commences between the embouchure of the Doveran and that of the Spey; it penetrates the country south-west-

ward up the water-shed between these rivers and their tributaries, till it scales the Cairngorm mountains, and touches the great central mountain-range of Scotland; it then turns westward, and moves along the summit ridge of that range till it passes the head of Loch-Laggan, and arrives at the sources of the Spey; it now proceeds north-westward to the head of Loch-Lochy, and thence northward till it falls upon the river Beaully at the cascade of Kilmorack; and it finally passes down that river and Loch-Beaully north-eastward to the Moray frith. The province thus comprehends all Elginshire, all Nairnshire, a considerable part of Banffshire, and nearly a moiety of continental Inverness-shire.

The eastern half of the province is aggregately much more lowland than the western; the mountains which everywhere occupy the south, coming down with increasing approach to the north, till, for some distance on the west, they render the whole country characteristically highland. The northern district as a whole is champagne, and may be described as a band of country prolonged for 60 miles from east to west, with a breadth of from 2 to 12 miles, and a superficial area of about 240 square miles. This long belt of lowlands is greatly diversified with ridgy swells, and terraced or low hilly ranges disposed parallel to the frith; and is intersected by the rivers Ness, Nairn, Findhorn, Lossie, and Spey, running across it to the sea. The grounds behind the lowlands appear, as seen from the coast, to be only a narrow ridge of hold or alpine heights, rising like a rampart to guard the orchards and the woods, and the rich expanse of waving fields below from all invasion; but, when approached, they disclose themselves in file behind file of long and broad mountain masses receding, in all the wildness and intricacy of Highland arrangement, to a distant summit-line. Much the larger portion may be viewed as simply the screens of the vast glen,—the long and grand mountain-strath of the Spey, and of the numerous tributaries which cut their way to it along lateral glens; another and considerable portion, partly identical with the former, are the vastly fissured masses of the Monadleagh mountains, flanking the Findhorn and its head-waters; and a third, though much smaller section, consists of the heights which tower up from the sides of the east end of the great glen of Scotland, admitting, amidst a little wilderness of alps, broad clefts and long narrow vales of picture and romance. Yet, so much opened are the Highland districts of the province, and so practicable many of the declivities to the plough or to other instruments of cultivation, that the bottoms and the reclaimed or reclaimable sides of the valleys are estimated to comprehend about one-third of the entire area.

Nearly all the interest of Moray as a province, and often all the associations of its name, are connected with its lowlands. The coast of the country is almost everywhere low; and the sea-board is remarkable for a great terrace bank which extends from the mouth of the Spey to Inverness, and thence up the great glen to Loch-Ness. This terrace rests upon a base about 14 feet above ordinary high water-mark, and possesses in itself an elevation above that base of about 76 feet; it sometimes juts out into the sea in the form of headlands, but generally overlooks a belt of low plain lying between it and the beach, and occasionally recedes several miles into the interior; and it varies in breadth from a few hundred yards to two miles, and is nearly horizontal in its surface. Other terraces or terraced banks occur behind along the skirts of the hills, but are uncontinuous and of comparatively small extent. Except along its skirt, where the vertebrae of whales

and the saltwater shells of existing species have been found, the great terrace, so far as has been ascertained, does not contain any marine deposit, or discover any decided mark whatever of marine formation. It seems even free from either fossils or fragments of any organized bodies, except a few stumps of oak and fir trees, and consists throughout of the sandy particles, the rolled pebbles, and the massive boulders of all the rocks common to the circumjacent country. White sandstones and con-stones, which occur in sites in the west, have been carried away in loose fragments, and deposited on hills about Portsoy and Banff, at and beyond the eastern frontier of the province; and a beautiful red porphyritic granite, which occurs at Calder and Ard-clach between the Nairn and the Findhorn, appears sprinkled in rolled boulders over the country as far east as the mouth of the Spey. Harmoniously with these appearances in the diluvial formation of the lowlands, the rocky escarpments on the sides of the interior mountains face generally to the south and the west, and neighbouring accumulations of their debris dip, in their slopes or inclined planes, toward the north-west. Hillocks of drifted sand, free above tide mark from all shells and other organic remains, and seemingly brought down from the diluvial terraces by the action of the prevailing south-west wind of the climate, extend for many miles along the margin of the frith, from Burgh-head to the vicinity of Nairn, and are continually changing their forms and their relative positions.\* A curious and singular formation, locally designated 'the Moray Pan or Coast,' occurs in various low grounds in the east, and occasions the worker of the soil no little perplexity and labour. It is a thin stratum of sand and gravel, brought chemically into contact with black oxide of iron, seemingly by infiltration from above, and glued by it into a hard compact mass; it is so hard as to break any plough which forcibly touches it, and, at the same time occurs at the inconvenient shallowness of scarcely a foot from the surface; it offers unconquerable resistance to the attempts of any trees or shrubs to penetrate it with their roots, and even kills every plant whose fibres come in contact with it; and it so haffles all ordinary methods of georgical operation, that the farmer has no certain way of counteracting its malign effects upon the soil, but patiently to demolish it with the

\* The following notice of these waste and dreary hillocks occurs in the 'Sketches' of Lord Teignmouth:—"A sand bank extends along the coast, from the western shore of the Findhorn river, nine miles in length, and two in breadth. It consists of finely pulverized sand, unmingled with shells or pebbles, cast up into innumerable hills, some of which rise to 120 feet, and are so steep that they cannot be ascended without difficulty, as at each step the leg sinks knee-deep in the yielding material. Not a blade of vegetation appears to vary the dreary surface, excepting reeds, which appear at a distance of about half-a-mile from the shore; and nothing is visible, except from the top of some of the highest hills, but a boundless wilderness of sand, reminding eastern travellers of the deserts of Arabia. A compass is almost necessary to direct one's course across it; and, during a gale of wind, it would be difficult to escape being overwhelmed by the drift. Houses and various vestiges of great antiquity—of which Sir William Cumming possesses one apparently of Roman origin—have occasionally been disclosed. The accumulation of this vast aggregate of moving sands has been gradual. The barony of Culbin, which it covers, was one fertile in natural productions, and adorned with villages." An account of the province of Moray, written by Boethius, dates the commencement of the sand-drift in 1097, the same year in which the well-known 'Goodwin Sands' were formed on the coast of Kent; and it adds,—"The desolation was completed prior to the year 1195. The narrative of the act of parliament then made to prevent the pulling up of bent—a reedy grass which establishes itself in this wild region—relates that the barony of Culbin, and house and yards thereof is quite ruined and overspread with sand. Tradition, conjoined with the narrative of the act of parliament, relates that the desolating visitation began in the harvest of the year 1097, and before the end of the spring thereof, had whelmed more than 1,200 acres of fertile land."

pickaxe, and expose it in fragments to the attrition of the weather.

The lowlands of Moray have long been known to fame for mildness and luxuriousness of climate. A certain dryness of atmosphere, in particular, has been repeatedly celebrated by historians and poets. But this property, so delightful in itself, seems to have intimate connexion with the equally though lugubriously celebrated phenomenon of "the Moray floods." The high broad range of mountains on the south-west shelter the lowlands from the prevailing winds of the country, and exhaust many light vapours and thinly charged clouds which might otherwise produce such drizzlings and frequent gentle rains as distinguish the climate of most other lowland districts of Scotland; but, for just the same reason, they powerfully attract whatever long broad streams of heavy clouds are sailing in any direction athwart the sky, and, among the gullies and the upland gleus, amass their discharged contents with amazing rapidity and in singular largeness of volume. The rivers of the country are, in consequence, peculiarly liable to sudden freshets and disastrous floods. One general and tremendous outbreak, in 1829, in which they desolated glen and plain, tore up woods and bridges and houses, and powdered and carpeted scores of square miles with the wreck of regions above them, afforded an awful exhibition of the peculiarities of the climate, and will long be remembered, in connexion with the boasted luxuriousness of Moray, as an illustration of how chastisement and comfort are blended in a state of things which is benignly adjusted for the moral discipline of man, and the correction of moral evil. So full an account of the floods, and so generally accessible to the reading population, has been given by the graphic pen of Sir Thomas Dick Lauder, Bart., that we need not attempt to give any details. A single example which may, on a small scale, serve as an illustration of the whole, will be found quoted from the baronet's work in our article on KNOCKANDO. The average annual fall of rain at Elgin, considerably east of the middle of the lowlands, was, for three years ending in 1829, 25.355 inches; and the average temperature for the same period was 48° 33'.

Probably no part of Scotland, not even East Lothian, that exulting retreat of masterly agriculture, can compete with Moray in the number and brilliance of the spontaneous testimonies which have been borne to its capabilities and wealth as orchard and tillage ground. We must, in ordinary duty as topographers, repeat some of these which have become irksomely hackneyed, and add one or two which have been less frequently noticed. A very old and common saying asserts, according to some versions, that Moray has 15, and according to others that it has 40 days more of summer than most other parts of Scotland. George Buchanan extols the province as superior to any other district in the kingdom in the mildness of its climate, the richness of its pastures, and the profit arising from its fruit trees. Whitelock, referring to the time of Oliver Cromwell, says, "Asfield's regiment was marched into Murray-land, which is the most fruitful country in Scotland." William Lithgow, after glancing at Clydesdale and the Carse of Gowrie, says, "The third most beautiful soil is the delectable plain of Moray, whose comely gardens, enriched with cornes, plantings, pasturage, stately dwellings, overfaced with a generous Octavian gentry, and topped with a noble Earl, its chief patron, may he called a second Lomhardy, or pleasant meadow of the north." Bishop Leslie, with the warm and partial feelings of a son of the soil, says, "Regio est una præ

cæteris omnibus apud nos oh amœnitatem celebrata. Est enim plana, minime palustris, quæ crebro saltu, odoriferis herbis, pratis tritico, omni frumenti genere, pomiferis hortis ac littore finitimo plurimum delectat. Illic aura sala berrima, variores multo nebulae atque pluvia quam usquam alibi, atque adeo magna propterea nobilium virorum seges." Sir Robert Gordon of Straloch, describing the province in 1640, says, "In salubrity of climate, Moray is not inferior to any, and in richness and fertility of soil it much exceeds our other northern provinces. The air is so temperate, that when all around is bound up in the rigour of winter, there are neither lasting snows nor such frosts as damage fruits or trees. There is no product of this kingdom which does not thrive there perfectly; or, if any fail, it is to be attributed to the sloth of the inhabitants, not to the fault of the soil or climate. Corn, the earth pours forth in wonderful and never-failing abundance. Fruits of all sorts, herbs, flowers, pulse, are in the greatest plenty, and all early. While harvest has scarcely begun in surrounding districts, there all is ripe and cut down, and carried into open barnyards, as is the custom of the country; and, in comparison with other districts, winter is hardly felt. The earth is almost always open, the sea navigable, and the roads never stopped. So much of the soil is occupied by crops of corn, however, that pasture is scarce; for this whole district is devoted to corn and tillage. But pasture is found at no great distance, and is abundant in the upland country, and a few miles inland; and thither the oxen are sent to graze in summer, when the labour of the season is over. Nowhere is there better meat, nor cheaper corn, not from scarcity of money, but from the abundance of the soil." These testimonies all precede the era of modern agricultural improvement; and, so far as we are aware, they have no counterpart in the times since that era began. Moray, when other districts became aware of their poverty, and made a sudden and strenuous movement towards wealth, was, in a great measure, contented to live on the fame of its opulence; and, while congratulating itself on the "ease combined with elegance" of its natural position, eventually was excelled in the luxuries of the farm and the orchard by many a district which had been comparatively a desert. About the beginning of the present century, it had entirely lost its famed pre-eminence; and, while still distinguished by the superior earliness, fertility, and warmth of its soil, it exhibited a condition of agriculture, as to at once tenure, croppings, manuring, and nearly every other detail, which rendered any aggregate number of its naturally rich acres less valuable than many an equal area in the south-east of Scotland which, but 30 years before, had been mere wild pasture, or almost moorland waste. Such a laggard had Moray become, even at an earlier period, in following the footsteps of its reputation, that Principal Robertson, when he came to see it, exclaimed in surprise, "Is this the fine province of which I have heard so much?"

Some details which afford a view of both the successive stages and the present condition of the agriculture of the province, have already been given in our article on BANFFSHIRE and INVERNESS-SHIRE [which see], and such others as are of any value, we reserve for the articles on MORAYSHIRE and NAIRNSHIRE, particularly the former. We shall here do no more than bring together a few facts, common to the lowlands of the whole province, which exhibit the condition of things a century ago, and present them in edifying contrast both to the ancient fame of the country, and to its present fine state of improvement. Leases were in general unknown; and when given,

were too short to be of any practical value. Land was minutely subdivided into mailens, crofts, and small farms; and, at the same time, knew little or nothing of the luxury of enclosures. Tenants were segregated into villages or townships, somewhat in the style which still prevails in Orkney and Shetland; and they had their arable grounds in run-rig, and their pasture-lands in common. Green crops, artificial, and provisions of every sort for the hybernal sustenance of cattle, had not been heard of, or if heard of, were despised. Some of the animals of the flock were slaughtered at the end of autumn, and converted into salted meat; and the others were, with no small difficulty, kept alive during a severe winter, and very frequently were, as the phrase went, "at the lifting" in the spring,—so lean and attenuated, that they had to be lifted from the ground, and assisted to the pastures. A rude and primitive plough, drawn by four or six oxen, and attended or worked by two drivers and a ploughman, moved lumberingly across every arable field, and shallowly scratched the weed-woven surface. The slide or sledge, and the kelloch, were beginning to supersede the simple horse-borne pannier; the former a wooden frame without wheels, the latter a similar frame with wheels formed of semicircles of solid board, and fastened to an axle which revolved in wooden hoops, and both surmounted by a conical wicker basket of no great capacity, and drawn by means of horse-hair, hemp, or twisted straw ropes, knotted together and fastened to wooden pins. The labourers in the field allowed most of the spring to pass away before commencing their appropriate toils; and, during a summer day, they worked a few hours in the morning, abandoned themselves to a long sleep toward noon, and, if nothing occurred to interest them in the house, or set them a-gadding from home, resumed their labour for a short period in the evening. Famines, or years of comparative scarcity, even in spite of the natural fertility of the soil, were, in consequence, far from being infrequent. During the summer of 1743, 'the dear year,' so memorable over all Scotland, thousands of the people of Moray wandered among the fields devouring sorrel, the leaves and stems of unfilled pulse, and whatever could mitigate the famishing corrosions of hunger; and multitudes died of diseases contracted by partial inanition, and not a few of literal, absolute starvation. Even so late as 1782, the noted year of the 'frosty har'st,' the province severely writhed under the scourge of scarcity.

The food, dress, and manners of the inhabitants at the same epoch, or a century ago, were in keeping with their modes of husbandry. Oats, rye, barley, and pease-bread were the staff of life. Various weeds and wild herbs, particularly the nettle and the mugwort, were gathered to give substance and relish to their thin oatmeal brose. Unskinned pease, holed into a soup, were a rare and coveted dish. 'Sovens,' now so well-known among the peasantry in some of the rich agricultural districts on the Scottish border, and still a favourite dish and a regular article of food throughout the north-east of Scotland, were universally in use. Cakes, formed of oatmeal-bran fermented to a slight degree of acidity, and therefore only a hardened 'sovens,' but containing some aromatic seeds, were the bread of luxury on occasions of festivity. The potatoe did not begin to be generally cultivated till about the year 1750. A 'kail-yard' was a rare object among the peasantry so late as about 1790; and a garden, even at a considerably later date, was never or rarely seen as an appendage of a farm-stead. Milk, except during part of the summer half year, was a rarity; and homemade beer, with hops, or more commonly without them, was used among such persons as could afford

it, as a succedaneum. Fish were occasionally in use; and, in their dried state, they were eaten with a home-grown and coarsely prepared mustard; but the fisheries were very partially and inefficiently plied; and the shoals of herrings which now everywhere enrich the coast were allowed undisturbed occupancy of every bay and creek.—Corn-mills, though known, were too few or costly or unappreciated to have yet superseded the use of the ancient hand-mill or quern. Barley was decorticated by being first softened in water and next beaten with a peculiarly shaped wooden mallet in a hollow stone; but in this prepared state it was only a hebdomadal luxury,—the distinguishing delicacy of the Sabbath-day dinner. Poultry and eggs seem to have been all disposed of as ecclesiastical contributions and the payment of rents.—The dress of all the common people was simple, unvaried, and chiefly of home-grown and home-made material. ‘Hodden-grey,’ or a light blue cloth formed of wool from their own flocks, spun and woven in their own homes, and dyed with the indigenous herbs of their own fields, was the universal clothing material of the men. The work-day costume consisted of a short coat of this fabric, short knee-breeches, long stockings, and a broad flat blue bonnet; and even the full dress for Sabbath and for festal occasions, only substituted a long coat, of great size, of uniform cut, and with huge ornate brass buttons,—a coat so carefully preserved that one specimen often equipped grandsire, father, and son, and may even yet be occasionally seen on some patriarchal figure at church or market. Flax, grown in their own fields and manufactured in their own homes, furnished much of the material for the dresses of the females; and the high muslin ‘mutch’ or the flat ‘toy,’ such as are still used by the Norman and Flemish women, universally formed the female head-gear.—Sir Robert Gordon, from whom we have already quoted, and who writes respecting the state of things in Moray two centuries ago, says: “In the lowlands along the coast the natives suffer inconvenience from the want of turf or fuel, which is the only hardship experienced by that happy region; and that is only felt in a few places. It must be owned that they generally counteract the cold by hard drinking; but those who exert themselves industriously in the labours of agriculture little feel or care for it. There is plenty of foreign wine, and cheap enough, in all the towns. I remember when I was a hoy, on my way home from Paris, finding wine at Rouen much dearer than it sold, a few months afterwards, on the Moray coast. Both had been brought from Bourdeaux, but the difference was caused by the lowness of our duty. But besides wine they have their native liquor, called aqua vitæ; and when that is to be had, which is seldom wanting, they reject even the most generous wines. This liquor is distilled from beer mixed with aromatic plants. It is made almost everywhere, and in such abundance that there is plenty for all. They swallow it in great draughts, to the astonishment of strangers; for it is excessively strong. Even the better classes are intemperate, and the women are not free from this disgrace. Travelling in the depth of winter, in the severest cold, fortified with a jug of this liquor, and a few small cheeses, (for they care little about meat and bread,) they perform immense journeys on foot without inconvenience.” Illicit distillation became, at a later period, the means of demoralizing thousands, and shaking the whole frame-work of society; but, in consequence principally of a change in the excise laws, it has almost wholly ceased to disgrace and damage the district.\*

\* A work to which we have been indebted for a number of our details, contains much matter which is interesting to na-

Moray, at the epoch of record, or about the close of the 1st century, was possessed by the British tribe of Vacomagi; one of those communities who, after and even sometime before the period of the Roman abdication, figured predominantly in the history of North Britain under the name of Picts. Their towns, while a separate tribe, were Tarnea, in Braemar, immediately beyond the south-eastern limits of Moray; Banatia, on the east side of the Ness, about 600 yards below its efflux from Loch Ness; Ptoroton, on the promontory of Burgh Head; and Tuëssis, on the east bank of the Spey, a little below the parish-church of Bellic. In the early Pictish periods the Vacomagi seem to have held a predominant or at least a distinguished place among the confederated tribes; and, at all events, appear to have had within their territory the earliest seat of the Pictarian monarchy: see INVERNES. When the Scots, bursting beyond the limits of Dalriada, and pushing their stealthy but sure conquests northward among the western Highlands, arrived at the uplands which form the mountain-rampart of Moray, they drove the Picts into the plains, and maintained entire possession of the alpine fastnesses and intervening glens: see DALRIADS, and historical section of INTRODUCTION. The distinction between the boundaries of the Picts and those of the Scots was long preserved in Moray, and can be traced in the topographical nomenclature throughout the province. Among the charters of Dunbar of Grange, one granted in 1221 by Alexander II. to the abbacy of Kinloss, and referring to the lands of Burgy, names as a boundary *Rune Pictorum*, ‘the Picts’ cairn;’ another charter from Richard, Bishop of Moray, granted after the year 1187 to the same abbacy, mentions *Scoticum molendinum*; and a road among the hills to the east of Dollas from the highland to the lowland districts of the province, is to this day, or, at least, was forty years ago, called the Scots road. After the Pictish and the Scottish dominions became consolidated into one monarchy, the Scandinavian vikings made frequent descents on the plain of Moray, and even enthralled it for long consecutive periods: see ORKNEY. Thorstein the Red, Sigurd, and Thorfin ruled over it, either independently or with slender acknowledgment of the superiority of the Scottish kings, from the commencement of the 10th till the middle of the 11th century. The Scandinavian settlers intermarrying with the Scottish and the Pictish Celts, a mixed race arose who seem to have been a necessitous, unsettled, turbulent people. Their chiefs or maormors soon began to assume the name of Earls; and, having some connexion with the reigning family, they advanced pretensions to the throne, and convulsed the country by rebellions against the sovereign, and by deeds of regicide. They killed Malcolm I., in 959, at Ullern, supposed by Shaw to be Aldern; they killed King Duffus at Forres, in 966, when he came to punish them for their crimes; and, about the year 1160, they raised a grand rebellion against Malcolm IV., and so provoked him by the daring and unweariedness of their strife, that, after overwhelming them with his army, he transported all who had assumed hostile arms, including the greater part of the population, to the southern districts of the kingdom, as far as Galloway, and gave their homes and their lands into the possession of strangers. The name Moray, originally Murref, and in modern times Murray, was, up to this time, a common cognomen in the province; but, in consequence, as is supposed, of this dispersion, it is now a rare name among the natives, and at the same time occurs often in the counties south of the Grampians.

tives of Morayshire.—‘Sketches of Moray.’ Edited by William Rhind, Esq. Edinburgh, 1839.

Both Malcolm IV., after expatriating the rebels, and his successor William the Lion, appear to have frequently resided in the province; for, from Inverness, Elgin, and various others of its localities, they dated several of their charters. Among the new families who were brought in to replace the expatriated, the chief are supposed to have been the powerful Earls of Fife and Strathern, and the once potent Comyns and Bysset Ostiarii; among the original families who remained were the Inneses, the Calders, and others; and among those who speedily appeared in the possession of extensive property and great local influence, the chief was the family of De Moravia, whose founder, or at least whose earliest figurant, was Freskinus, Lord of Duffus. The mixed and altered race who henceforth were sons of the soil, lived for many centuries apart from their Celtic neighbours; and—as still appears by the resemblance of the vocalic sounds of the provincial idiom to those of the languages spoken north of France\*—they retained in speech, and probably in customs, many of the characteristics of their semi-Scandinavian predecessors. They appear also to have become, if not effeminate, at least greatly more peaceable, less hardy, and less acquainted with the use of arms than the stern mountaineers of the upland districts of Badenoch and Lochnaber. Either from the superior richness of the country, or from the comparatively easy and peaceful character of the inhabitants, the Highland caterans regarded the plain of Moray as open and ever-available spoilage-ground, where every marauder might, at his convenience, seek his prey. So late, in fact, as the time of Charles I., the Highlanders continually made forays on the country, and seem to have encountered marvellously little resistance. The Moray men, it has been remarked, appear to have resembled the quiet saturnine Dutch settlers of North America, who, when plundered by the red Indians, were too fat either to resist or to pursue, and considered only how they might repair their losses; and Pennant supposes that, in consequence of their being so mixed a race, Picts, Danes, and Saxons, and altogether aliens to the pure Celtic communities of the mountains, the Highlanders thought them quite 'fair game,' and never exactly comprehended how there could be any crime in robbing 'the Moray men.' So late as 1565, as appears from the rental of the church-lands in that year, the inhabitants of the province remained entirely a distinct people from the Highlanders, and all bore such names of purely Lowland origin as are still common around Elgin; and not till a comparatively recent period did declining feuds and the prejudices of clanship permit social intercourse and intermarriages with the neighbouring Gordons, Grants, and Macphersons. Moray, in consequence of the attachment of its people to the cause of the Solemn League and Covenant, and the Marquis of Montrose and his ally, Lord Lewis Gordon, having adopted it as one of their principal scenes of action, suffered more disasters than perhaps any other district of Scotland from the civil war under the last of the Stuarts. So severe and memorable were the inflictions upon it by Lord Lewis Gordon, that an old rhymist classes his name with the Scottish designations of two of the worst plagues of an agricultural country:

"The gule, the Gordon, and the hoodie-craw,  
Are the three worst things that Moray ever saw."

Montrose, after his victory of Inverlochy, in 1645, made a desolating descent upon the province, destroying the houses of all persons who would not join his standard, and inflicting upon the towns of Elgin, Cullen, and Banff the disasters of an indiscriminate pillage. Yet much as their country suffered in consequence of their opposition to the prelatic schemes of the Stuarts, "the men of Moray, in general, or at least in the upper parts of the country, became Presbyterians more from accident than from temper. During the alternations of Presbytery and Episcopacy which took place at the Reformation, they did not at all discover that decided preference to presbytery which marked the western and southern counties. Had no greater zeal existed elsewhere, the island would probably at present have had but one national church. At the Revolution few of the clergy of this province conformed to presbytery, but availed themselves of the indulgence which the government gave of allowing them to remain in their benefices for life upon qualifying to the civil government: and, in order to cherish presbytery, it was necessary, from time to time, to send clergy from the south country to serve the cure." [Beauties of Scotland, vol. iv. p. 508.]—The Moray men never, except in a small minority of instances, experienced that aversion to holidays which distinguished both the staunch Presbyterians of Scotland and the noble-minded Puritans of England; and—probably without adverting to the origin of the practice—they still very generally, and in methods of glee and festivity, celebrate St. John's day, St. Stephen's day, Christmas day, and, in a less degree, some other holidays.

The original earldom of Moray existed before the era of modern authentic history; and, as to its nature, its extent, and the line or succession of individuals who held it, is an object of little more than vague conjecture. About 1131, Angus, Earl of Moray, was slain by the Scots at Strickathrow; in 1171, William the Lion promised to grant the earldom to Morgund, son of Gillocherus, Earl of Mar; and, during the reign of that King, Malcolm, Earl of Fife, and William Comyn, Earl of Fife and Justiciary of Scotland, were successively Custodes of Moray. Any accounts additional to these meagre particulars, are too ill-vouched to be trusted. But about 1314, the earldom breaks full upon the view, in joint distinctness and magnificence, as the princely gift of Robert Bruce to his tried and trusty companion in arms and patriotism, Thomas Randolph. Its boundaries, as then established, considerably differed from those of the ecclesiastical province; yet comprehended to a large extent, the same territory, and were almost equally extensive: they commenced at the mouth of the Spey, and, except for including the lands of Fochahers and Boharn on the east bank, they went up the bed of that river all the way to the marches of Badenoch; they then included the lands of Kincardine, Glencairn, Badenoch, Maymeze, Locharkedh, Glengarry, and Glenelg, along the north-west limits of Argyshire, and the shores of the western sea; and they next ran along the marches of the earldom of Ross, till they fell upon the river Farrar, and thence went down that stream and the Beauly to the Moray frith. The estate and the title of the earldom, according to the original principle of peerages, were inseparable, the title becoming defunct upon the alienation of the estate. Thomas, the 2d Earl of the Randolph line, and the son of the first, succeeded to the possessions in 1331, and was killed in the battle of Dupplin in 1332. John, his bro-

\* The natives, except among the well-educated classes, display a singular fondness for the slender *ee*, as in *meen* for *moon*, *speen* for *spoon*, and *freet* for *fruit*; and uniformly substitute the short *or* for the broad *o* and *oo*, as in *al* for *all*, *la* for *law*, *agust* for *August*, *clous* for *close*, *rod* for *road*, and *not* for *note*. They also pronounce such words as *filthy*, *will*, and *which*, as it written *ulthy*, *wull*, and *futch*; suppress *r* in many words, as in *list* for *first*, and *hoss* for *horse*; and use the gutturals *gh* and *ch* much more freely than the inhabitants of the other Lowland districts of Scotland.

ther, succeeded him, and was killed in the battle of Durham in 1346. Patrick Dunbar, Earl of March, and son-in-law of the 1st Earl, Thomas Randolph, was next heir according to the law and usage of Scotland, but was excluded by a limitation in the original charter to heirs-male; yet he was called Comes Marchiæ et Moraviæ, Earl of March and Moray. His second son, John, was made Earl of Moray in 1372; but received his earldom shorn of the large districts of Badenoch, Lochaber, and Urquhart. The next Earls were Thomas, the son of John; and James, the nephew of this Thomas. The nearest akin were now two daughters; and Archibald Douglas, who was married to the younger, and was brother to the Earl of Douglas, and enjoyed in his favour all the powerful influence of his semi-regal family, was made Earl of Moray in 1446; but he joined his brother's rebellion in 1452, was killed in 1455, and left his title and possessions a forfeit to the Crown. The earldom was, in 1501, obtained by James Stuart, the bastard son of James IV.; but, at his death, in 1544, it was again without an heir. In 1548, it was given to George, Earl of Huntly; and, in 1554, it was resumed by the Crown. It was next, after a lapse of eight years, bestowed on James, bastard son of James V., prior of St. Andrews, and afterwards the well-known Regent of the kingdom. This Earl—the founder of the Moray family, or ancestor of all the subsequent Earls—held his possessions by a variety and an intricacy of grants, which occasioned perplexity respecting their inheritance. In February 1561–2, he obtained the charter of the earldom; in January 1563–4, he obtained another charter, limiting the succession to heirs male; in June 1566, he obtained a third charter, throwing open the succession to his heirs general; and, in 1567, he obtained from parliament a ratification of the charter of 1563, limiting the succession to his heirs male. He was slain in 1570–71; and left no male heir. In 1580, James Stuart, the son and heir of James Stuart of Doune, received from James VI. the ward and marriage of Elizabeth and Margaret, the daughters of the deceased Earl; and a few days afterwards he married Lady Elizabeth, and assumed the title of Earl of Moray. As his claim to the earldom was doubtful, a charter was given him in 1592 by James VI. and the Scottish parliament, ratifying to his son all the charters granted to the Regent and the Lady Elizabeth. This, as it confirmed both what declared the succession general, and what limited it to heirs male, rendered the entire principle of the family succession inexplicable. Earl James, therefore, lost no time in obtaining an entirely new charter, whose provisions accorded with the earliest given to the Regent. This Earl was murdered in 1592. A series of three Earls, each the eldest son, now followed, and died respectively in 1633, 1653, and 1700. Two brothers of the last of these next followed, and died respectively in 1735 and 1739. A series of three eldest sons next succeeded; the last of them the present Earl, born in 1771, and Earl since 1810. The other titles of the family are Baron Doune, of the year 1581, Baron St. Colme, of the year 1611, both in the peerage of Scotland, and Baron Stuart of Castle-Stuart, of the year 1796, in the peerage of Great Britain. The family seats are Darnaway-castle in Morayshire, Donibristle-castle in Fifeshire, Castle-Stuart in Inverness-shire, and Doune-lodge in Perthshire.

“The Lowland situation of Moray, joined to the amenity of its soil and climate, must have pointed it out as a desirable locality for our first religious establishments. It was early visited by the Culdees, the first messengers who brought the pure spirit of Christianity from the primitive churches of the east.

Subsequently, about the beginning of the 11th century, numerous religious establishments from Italy planted the Romish religion in the province, and, from that period till the Reformation, the church engrossed the chief sway, and held extensive possessions in the district. A bishopric was established about the year 1100. The abbey of Kinloss, and the priories of Urquhart, Plusearden, and Kingussie, besides several other religious houses and hospitals, quickly followed; and the province was regularly subdivided into parishes, and churches or chapels were erected in each.” [Sketches of Moray.]—A notice of the bishopric, and of its history, revenues, bishops, and cathedral, is given in the article ELGIN: which see.—The synod of Moray, in the presbyterian Established church of Scotland, comprehended, in 1839, the presbyteries of Strathgogie, with 12 parishes; Abernethy, with 6 *quoad civilia* and 3 parliamentary parishes; Aherlour, with 5 parishes; Forris, with 6; Elgin, with 9; Naim, with 6; and Inverness, with 7 *quoad civilia*, and 2 *quoad sacra*.—The Scottish Episcopalian united diocese of Ross, Argyle, and Moray, possesses in Moray 5 congregations; respectively at Elgin, Duffus, Foehahers, Inverness, and Beaully.—The Roman Catholic northern district of Scotland, whose seat of influence is Aberdeen, counts in Moray 11 congregations.—The United Secession have, in the province, 9 congregations; the Independents, 8; and the Original Seceders, 1.

MORAYSHIRE—often called ELGINSHIRE, from the name of its capital—is the central division of the province of Moray. It is bounded on the north by the Moray frith; on the east and south-east by Banffshire; on the south by Inverness-shire; and on the west by Inverness-shire and Banffshire. Over 25 miles on the east its boundary is traced by the river Spey; and over 24 miles on the west it is formed by a ridgy water-shed, the north-eastern prolongation of the Monadleigh mountains; but everywhere else, except along the Moray frith, the boundaries are altogether artificial. Even the Spey is a boundary-line only at intervals, or with interruptions; and has on its left bank, one farm belonging to Banffshire, and, on its right bank, no fewer than six penicles of Morayshire,—each of which are from 5 to 9 miles in length. The county itself, however, is not compact; but consists of two separate, though not widely detached, parts. The larger part lies on the north; and is not very far from having the outline of an equilateral triangle. A straight line, from angle to angle, along its north side, measures 24½ miles, but everywhere cuts off a belt of sea-board which, in general, is narrow, but a little west of the Lossie has a breadth of 4½ miles; a straight line along the south-east side, measures 25½ miles, and, except for cutting off a projection beyond the Spey of 6 miles by 5, everywhere falls on or near the boundary; and a straight line along the south-west side, measures 24½ miles, but, over 7 miles, falls slightly beyond the boundary, and, over 11, falls slenderly within it. The smaller division of the county is separated from the larger by the intervention of a detached district of Inverness-shire, and by two very small detached districts of Nairnshire; and lies to the south-west at the distance of from 3½ to 5 miles. Except for a connecting neck of less than a mile, upon the Spey, a little below the church of Abernethy, this division would consist of two detached parts. Its western part lies on the left bank of the Spey, is bounded by that stream for 7 miles, and measures 12 miles from north to south, and 9 in the opposite direction; and its eastern part forms the largest of the county's sections on the right bank of the Spey, and extends 9 miles north-west and

south-east, with a breadth of from 4 to 6½ miles. The superficial contents of the county are, in all authorities, so very variously and loosely stated, that they seem never to have been even proximately ascertained. Leslie's 'View of the Agriculture of Nairn and Moray,' assigns as the area of these counties conjoined, about 800 square miles, or 512,000 English acres: the author of 'The Beauties of Scotland' assigns 800 square miles to Morayshire alone; and Oliver and Boyd's Almanac for 1839, says that the area of Morayshire is 840 square miles, or 537,600 acres, of which 120,000 are cultivated, 200,000 uncultivated, and 217,600 unprofitable. "No good plan of this shire," says the 'Introduction to the Atlas of Scotland,' "is known to exist better than Timothy Ponts. There have been several plans of detached portions, but none of great extent."

The sea-board part of the greater of the two detached districts of the county is, in a general view, a champaign country, and contains more amenities of climate, and wealth of cultivation, and beauty of landscape than any other territory of equal extent in the northern Lowlands. Its breadth ranges between 5 and 12 miles, and probably averages about 7. A pendicle of it in the north-east consists of the greater portion of the Culbin sands, noticed in the preceding article; and, of course, is all deduction from both worth and beauty. All the other portions are an expanse of low country diversified by many gentle rising grounds, and by the large terrace and the pleasant ridges noticed in the description of Moray; and, being everywhere laden with crops, or arrayed in wood, or adorned with pleasure-grounds, or gemmed with towns and mansions, they present occasionally a luscious, and often an attractive picture. The district behind the plain ascends rapidly from hill to mountain, and becomes nearly throughout a wilderness of upland pasture, intersected with glens and vales along the course of streams enclosing numerous though small plains of great fertility and beauty, and containing along the skirts of the heights much land which luxuriates in verdure, or yields returns to the labours of tillage. The district in the extreme south is called Brae-Moray, and differs from the central mountain-ground chiefly in being extensively occupied with thriving forests of natural pine.

Though the champaign district has a northern exposure, and lies within the 58th degree of north latitude, it possesses singular mildness of climate. The hardier kinds of fruit, all the varieties of the apple, and most of the varieties of the pear and the plum, might, by a little attention, be abundantly produced on every farm; and fruits of greater delicacy, the apricot, the nectarine, and the peach, ripen sufficiently on a wall in the open air. The wind blows from some point near the west during about 260 days in the year; and, in the summer, it is for the most part a gentle breeze, and comes oftener from the south than from the north side of the west. Winds from the north-west or north generally bring the heaviest and longest rains; and winds from the south or south-east usually bring only slight or drizzling showers, occasionally accompanied with thunder. The district presents no object so elevated as to attract the clouds while they sail from the mass of mountains on the south toward the alps of Sutherland. Winter is singularly mild, and, for a very brief aggregate period, sheets the ground with snow; summer rarely commences its characteristic warmth till July; and autumn, in some years, is uniformly the driest and most pleasant season, and, in others, is rainy from about the equinox till after the middle of October. In the upland districts,

rain falls to the amount of 5 or 6 inches more than the medium depth upon the coast; the seasons are often boisterous and severe; and an unpropitious and stormy climate often forbids or thwarts the operations of husbandry.

The Spey, with the aid of its tributaries, drains rather more than a moiety of the whole area of the county. Dulnain-water, coming in from Inverness-shire, and running to the Spey, cuts the western and larger section of Brae-Moray into nearly equal parts. Nethy-water drains most of the eastern section of Brae-Moray. Other tributaries of the Spey in the county are very numerous; but in no instance have more than about 6 miles length to run. The Lossie rises and has its whole course in the county; and makes a long curving sweep through nearly the centre of the lowlands, washing in its progress the site of Elgin. The Findhorn, the most scenic stream of all Moray, and rich in the number and variety of its landscapes, runs 11 miles in the extreme west of the county, but, over part of this distance, a little before debouching to the sea, expands into Findhorn-loch. Dorhar-water issues from Loch-andurh, flows parallel with the western boundary at about a mile's distance from it, and after a run of 8 miles, falls into the Findhorn below Relugas. The other streams of the county are all inconsiderable brooks.—The loch of Spynie, situated in the cognominal parish, was formerly a conspicuous lake of 3 miles in length, but is now much reduced by draining. Loch Cots, in the same neighbourhood, was originally marine, and, in the 13th century, is described as a hay, in the cartulary of Moray. Loch-na-hoe, at no great distance from these other lakes, covers about 60 acres, and is surrounded by a forest of firs, planted about the year 1773 upon a barren heathy moor. Loch-andurh, nearly 4 miles in length, and upwards of 1 mile in breadth, is situated amid a mountainous waste very nearly at the meeting-point of the three counties of Moray, Nairn, and Inverness. The other lakes of Morayshire are too inconsiderable to require separate notice.—Chalybeate springs occur in every corner of the district, but are in no instance much distinguished for their medicinal properties. Such wells as in Romish times were reputed holy, are generally of pure water, free from any mineral tinge.

The general geognostic features of the county are glanced at in the article on the province. Sandstone occurs in sufficient plenty and excellence to construct vast cities; and, in various localities, is quarried for every purpose of architecture, and for pillars, rollers, and paving-flags.—Limestone occurs in several places near the coast; it began to be quarried upon the estate of Glass-green about the year 1740; and it is now worked in various quarries.—Coal is stored up by conjecture under the unexplored depths of the sandstone beds and the harder layers of the limestone strata; but has often baffled search, and almost extinguished hope.—Lead was mined for in the Coulard-hill, west of Lossie-mouth, about the year 1773; but it occurred only in small nodules, and was abandoned.—Iron ore is believed to exist in abundance in the high country; and about the year 1730, an iron foundery, once of high consideration, but long ago almost forgotten, was established by the York building-company at Coulnaccoil in Strathspey.—Shell marl occurs in the marshy vale of Litie, in a lochlet of 20 acres at Kinstorie, in the loch of Spynie, in the hill of Bencagen, and in a small hill on the estate of Clankum.—A thin bluish slate, of a blue or grey colour, is quarried at Chnie in Rafford. Several schistose rocks, so laminated that they form slabs or slates, occur among the primitive formations of the uplands. A stone, of a purple

colour, highly indurated by a ferruginous matter, admitting the smoothest polish, but in a slight degree diaphanous, occurs about Rothes on the Spey, and has, under the name of porphyry, been formed upon the lapidary's wheel into toys and trinkets.—The cultivated soil of the county may be classified under the general names of sand, clay, loam, and reclaimed moss. Sand, or a light soil in which sand predominates, extends, with inconsiderable exceptions, over the eastern half of the lowlands, or all Speymouth, Urquhart, St. Andrews, Lhanbryd, and Drainy, the eastern part of Spynie, the greater part of Elgin, and the lower lands of Barnie and Dollas. A clay soil prevails throughout Duffus and Alves, part of Spynie, and small pendicles of the sandy district. A loamy soil covers extensive tracts in Duffus, Alves, and Spynie, and nearly the whole of Kinloss, Forbes, Dyke, the lower lands of Rafford and Edinkille, and the plains or alluvial grounds of the highland straths. A clay-loam covers a considerable part of Knockando.—Moss, worked into a condition for tillage, occurs in rather large extent in Knockando, and in pendicles in the other champaign districts, almost always in the lowest situations, superincumbent upon sand, and so peculiar in quality as to emit on a hot day a sulphureous smell, and strongly affect the colour and formation of rising grain; and it occurs also on the flats and slopes of the lower hills of the uplands, quite peaty in quality, but corrected in its sponginess by an intermixture of sand. If all the arable grounds were distributed into 63 parts, the sandy soils would be found to cover 24 of these, the clay soils 11, the loam soils 27, and the reclaimed moss soils 1.—The lowlands of Alves and Kinloss resemble the landscape between Cambridge and Ware, except that they are more diversified by the dwellings of the farmers, and lines of trees around their gardens, and they are, therefore, not only luscious in beauty, but altogether free from patches of inferior or uncultivated soil. But the other champaign districts have all considerable or noticeable interminglements of waste,—fields or tracts thickly covered with whin-bushes, brooms, the most stunted and useless kind of heath, or an almost irreclaimable species of peat-earth; and the far-extending upland regions are prevaillingly moor and mountain wilderness,—a country clothed in russet, freckled with naked rock, and largely abandoned to beasts of chase and the alpine-nested fowl. Leslie's 'Agricultural View of the Counties of Nairn and Moray,' published in 1811, estimates the amount of waste grounds in the two counties at 301,680 Scottish acres, in a supposed total of 407,200.

Forests of natural wood, as is proved by the existence of large trunks of oaks and pines in the mosses and in the heds of streams, anciently covered the greater part of the champaign country, and formed part of the *Sylvæ Caledoniæ* of early historians. Cultivation, for ages, did not venture to contest the possession of the valleys with wolves and other wild animals; and, compelled to find a retreat in the most secure positions, commenced its operations on the upper slopes of the hills, still obscurely traced with ridges and other marks of tillage. But emboldened by usage, and becoming skilful by practice, it gradually came down from such unprofitable altitudes, invaded the thickets with fire, waged a warfare of extermination against the four-legged foes of improvement, and won the mastery successively of the lower slopes and the hanging or level plains. Though tillage must long have been much less practised than pasturage, and could make but sorry efforts compared to what it achieves in modern times, wheat is mentioned by early historians as a large article of produce, and, in common with other

grains, was raised in sufficient quantity for the supply of all local demands. At the era of the Reformation, however, agriculture seems to have suffered a serious decline,—for then the amount of wheat in the Bishop of Moray's rental was only 10 holls, while that of harley was 1,232; and, in the times which immediately succeeded, all classes became so engrossed with the ecclesiastical and political movements which tumultuously agitated all Scotland, that they had neither leisure nor inclination to improve the soil. The enactment of some beneficial laws to regulate the valuation and purchase of tithes, the establishing of parish schools, the dividing of commons, and eventually the conservation of woods, and the forming of enclosures, were the only circumstances which, during the long period of a century and a half, prevented the history of agricultural progress from being a total blank. So disastrous in the county were the seven years of scarcity which visited the province, [see preceding article,] that the magistrates of Elgin established a police for burying, at every dawn, the bodies of such miserable wanderers in quest of food as during the preceding night had fallen a prey to hunger in the highways and the streets.—At the close of the first decade of the present century, improvement had asserted much mastery over most of the arts of both georgy and husbandry. The ploughmen were then skilful in trimming the plough and forming the furrow; the plough itself was as fine in structure, and simple in management, as that of any of the advancing counties of the aroused kingdom; the grounds about the dwellings of the proprietors—though not those of the distant or exterior farms of estates—were enclosed; a portion of every large and of every well-managed farm was disposed in summer fallow; a regular system of rotations, with a due place to green crops and their virtual fallowing, was generally in practice; draining, manuring, irrigating, and embanking, had received a considerable amount of attention; and, in general, indications were afforded, which have since been progressively verified, that both proprietors and tenants were aware how rapidly other regions of Scotland had risen from poverty to wealth in agriculture, and were resolved to be no laggards in the stir and efforts of national improvement.—A forest of natural pine, on the Strathspey frontier toward Inverness-shire, and partly within that county, covers an area of nearly 20,000 acres; and has long supplied, by the floating down of its thinnings to Garmouth, an article of large and advantageous traffic. Other natural woods, consisting of birch, hazel, alder, and a few oaks, occur in little groves and stripes along the banks of the rivers, and several of the smaller streams; and, in some instances, have been enlarged by plantation; but, in the champaign country, they are all of very limited extent. Plantations began generally to be formed about the year 1770; and they now cover many hills of moderate height, and a great proportion of the grounds in all parts of the county which are unfit for cultivation. Those of the smaller proprietors bear, in general, a larger proportion to the extent of their estate than those of the greater proprietors; the latter, however, being still considerable. The trees first planted were exclusively Scottish firs; but from about the year 1800 these began to be gradually cut out, and substituted by larch, and the harder kinds of timber.—Few farms comprehend 300 acres; a considerable number range between 300 and 140; another considerable number range between 120 and 60; a number larger than that of both these classes range between 50 and 20; and some upon the skirts of the larger farms, or upon the sides and bottoms of the glens, range between 18 or 12 to 6 or 5.—In 1811, the

landed proprietors of the county were 41 in number; and, according to the valuation in the land-tax books, 5 had estates of from £4,328 to £15,000; 7 from £1,549 to £2,615; 8 from £400 to £764; and 14 from £7 to £372.

Blankets and wearing apparel of wool and of flax, for local use, are, to a large extent, of home manufacture. Much flax is spun for the manufacturers of Aberdeen. Coarse woollen cloths, called plaiding, are made in private families for the market. A manufactory of woollen cloth, which employs about fifty workmen, has long been established in St. Andrews Lhanhryd. Tan-works have long existed in Elgin and Forres; and a small iron-foundry exists at Newmill. But the chief manufacture—one so extensive as even a dozen years ago to have annually paid £50,000 to government within the Elgin excise—is that of whisky.—Though black cattle and agricultural produce are the principal articles of export, there are some years in which no demand for cattle exists, and some in which little corn can be spared. Most of the grain exported is shipped at Findhorn, Lossiemouth, and Garmouth, and disposed of at Leith, Dundee, and London. Sheep and swine are generally purchased by butchers about Aberdeen. Pork and salted beef are shipped at the new harbour and village of Burgh-head. Timber, chiefly from the Strathspey forest, is annually exported to the value of nearly £2,000; and salmon, from the various fisheries, to the value of about £3,000. The principal imports are flax, ropes, hard and soft soap, and some foreign bar-iron from Aberdeen.—One grand line of road runs along the champaign country through Laughride, Elgin, and Forres; and carries subordinate lines, aggregately amounting to about 70 miles, running in different directions athwart the same district. A great line passes up the Spey, hut, over several miles, is on the Banffshire side of the river. Another line passes up the Findhorn and the Dorhar, to the former at Grantown in Invernessshire. One line connects Elgin and Rothes; and another diverges from Strathspey up the Dulnain. The fairs of the county are, in no instance, considerable markets for sheep; and are much less valued by the farmers than those of Banffshire. They amount altogether to only about seventeen in the year, and are held at Elgin, Forres, Findhorn, Lhanhryd, and Garmouth.

Morayshire contains two royal burghs, Elgin and Forres; the small town of Fochahers, and the villages of Garmouth, Urquhart, Lossiemouth, Bishopmill, Findhorn, Rothes, Balnaton, and Burgh-head. The principal mansions are Gordon-castle, the Marquis of Huntly; Tarnaway-castle, the Earl of Moray; Innes-house and Blevic, the Earl of Fife; Auchmadie's - house, Grant; Ballindalloch - castle, Sir George Macpherson Grant, Bart.; Duffus-house, Dunhar; Grant-lodge, Grant; Inverugy, Young; Logie, Cumming; Muirtown, Munro; Orton-house, Duff; Springfield, Macdonald; Tannochy, Urquhart; Castle-Grant, Newton-house, and Sanquhar-house.—The principal antiquities are Kinloss abbey, the priory of Pluscarden, the ancient porch of the church of Duffus, the Cathedral, and other ancient structures of Elgin; an ancient well at Burgh-head, Duffus-castle, Rothes-castle, Spynie-palace, Michael Kirk, at Gordonstown; Mortlach pillar, Bervie-tower, and Sweno's stone, and other antiquities at Forres.—Morayshire contains the fifteen entire parishes of Alves, St. Andrews Lhanhryd, Birnie, Drainy, Duffus, Elgin, Speymouth, Spynie, and Urquhart, constituting the presbytery of Elgin; Dallas, Edinkillie, Forres, Kinloss, and Rafford, constituting, with the addition of Dyke, the presbytery of Forres; and Knockando, in the presbytery of Aberlour. It

also shares with Banffshire the five parishes of Bellie and Keith in the presbytery of Strathbogie, and Boharm, Inveraven, and Rothes, in the presbytery of Aberlour; with Nairnshire, the parish of Dyke in the presbytery of Forres; and with Inverness-shire, the three parishes of Abernethy, Cromdale, and Dulhill, in the presbytery of Abernethy. In 1834 there were twenty-one parochial schools, conducted by twenty-seven teachers, and attended by from 817 to 1,259 scholars; and seventy non-parochial schools, conducted by eighty-eight teachers, and attended by from 2,609 to 3,159 scholars. An Edinburgh Morayshire society was instituted, in 1824, for charitable purposes, and the encouragement of education in the county of Moray. The county unites with Nairnshire in sending a member to parliament. Constituency, in 1840, 630. The Sheriff-county-court and the Commissary-court are held at Elgin every Friday during session; the Sheriff-small-debt-court is held every alternate Thursday; and the Justice-of-peace small-debt-courts are held monthly on Monday. The seats of courts, under the new small-debt-act, are Fochahers, on the 3d Saturday of November, March, and July; Forres, on the 3d Monday of each alternate month, beginning with January; and Grantown, on the 3d Wednesday of November, March, and July. The valued rent of the county, in 1674, was £65,603 Scottish; and the real property, as assessed in 1815, was £73,288. Population, in 1801, 26,705; in 1811, 28,108; in 1821, 31,162; in 1831, 34,231. Inhabited houses, in 1831, 6,919; families 7,768.

MORBATTLE. See MOREBATTLE.

MORDINGTON, a parish in the extreme east of Berwickshire; bounded on the north-west by Ayton; on the north and north-east by the German ocean; on the east and south-east by the liberties of Berwick; on the south and south-west by Whitadder-water, which divides it from Hutton; and on the west by Foulden. Its extreme length, from the sea at Ross on the north to the Whitadder,  $\frac{2}{3}$  of a mile east of Paxton on the south, is  $4\frac{2}{3}$  miles; its breadth, for  $2\frac{1}{2}$  miles from the south end, is nowhere more than  $\frac{3}{4}$  of a mile, and at the widest part, farther north, is less than 2 miles; and its area is 3,523 acres. The Whitadder touches the parish for 2 miles, moving in hold serpentine folds between steep banks of wood-bearing sward and moss-covered rocks, possessing many features of high natural embellishment, and abounding in trout, salmon, and eels. A brook which rises and runs a mile in the interior, traces for  $1\frac{1}{2}$  mile the western boundary to the Whitadder. The coast—measuring  $2\frac{1}{2}$  miles between the parochial limits, and, with the exception of an indentation in the extreme north, trending in the direction of south-east by south—is throughout a hold precipitous breast-work of rock, perforated with caverns, shutted with projections, and occasionally screened with vast masses of detached rock rising grandly or sublimely from the bosom of the sea. In the extreme north a sufficient recess of the rocky breast-work occurs to admit between its base and the sea a site for the romantic and secluded fishing hamlet of Ross; and there a tiny brook has sliced down the cliffs with a vertical fissure, and, in a season of rain, leaps along in a series of picturesque cascades, finely harmonizing in scenic effect with the surgy sea-foam feathering the beach, and the smoke from the cottages on the margin of the ocean eddying in the breeze. Cod, ling, haddock, and other varieties of white fish, have long been caught in great quantities, and also salmon to a smaller extent, and sent principally to the Edinburgh market; and lobsters and crabs are taken in abundance, the latter for consumpt in the vicinity, and the former for smacks which visit the coast at stated

intervals, and carry them to London. The surface of the parish, over the south half of the length, is flat, with a slight declination to the Whitadder; and over the northern and broader half rises to a considerable elevation, undulated on the west side with many rival eminences, and falling off in a slope on the east. Heights on the west side command a magnificent prospect of the Merse, and a large part of Durham and Northumberland, with the wooded banks of the Tweed, the Whitadder, and the Blackadder on the foreground and in the centre, and the dark rampart of the Cheviots, the picturesque forms of Rubberslaw and the Eildon hills, and the half tame outline of the Lammermoors in the distance; and the heights on the east side command a gorgeous sea-view, variegated with Holy Island, Bambrough-castle, and other striking objects on the bosom and the skirt of the liquid picture. The soil, for some distance from the Whitadder, is a stiff clay well-adapted for wheat and beans; thence to the coast it is, in general, a light loam, excellent for raising turnips, and sound for grazing sheep; but on the loftiest parts of the high grounds it is thin and poor, and includes considerable pendicles of heath-land and of bog and morass. The arable and the uncultivated grounds bear to each other the proportion of 26 to 9. Between 25 and 30 acres, all in the southern district, are under plantation. Freestone abounds; ironstone occurs in small veins; limestone is plentiful but of inferior quality; and coal exists in accessible seams of little more than respectively one foot and two feet thick. Mordington-house, situated near the base of the uplands of the parish,  $3\frac{1}{2}$  miles from Berwick, was that in which Cromwell established his quarters, when he, for the first time, passed the Tweed. Edrington-castle, existing in ruin on a steep rock, overhanging the Whitadder, and totally inaccessible from the west, seems to have been a solid and substantial strength, well-fitted, in feudal times, to check incursions and depredations from the south side of the Tweed. It was frequently the scene of strife during the Border wars, and was more than once an item among the objects of treaty between the Scottish and the English kings. In 1534 Henry VIII. in demonstration of his friendship for Scotland, restored it to James V., from whom it had been taken during an international war. On the boundary with Aytoun, occupying a singularly commanding site on a crowning summit of the uplands, called Hah or Habchester, are broad and distinct vestiges of a Danish camp, consisting of two trenches whose mounds, 18 or 20 feet high, appear to have been faced with large stones toilsomely procured from the bed of the Whitadder. About a mile south-east of it is an abrupt hillock, still called 'the Witch's knowe,' on which a person was burnt for the imputed crime of sorcery, so late as the beginning of last century. Not far hence is a sequestered glen, said to be the locality of 'Tibby Fowler o' the Glen.' The parish is bisected by the road between Berwick and Edinburgh, and crossed, at its narrowest part, by that between Berwick and Chirnside. Population, in 1801, 330; in 1831, 301. Houses 55. Assessed property, in 1815, £3,203.—Mordington is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, Renton of Lamberton. Stipend £157 11s. 8d.; glebe £37 10s. Schoolmaster's salary £34 4s.  $4\frac{1}{2}$ d., with fees, and £1 1s. other emoluments. The present parish comprehends the ancient parishes of Mordington and Lamberton: see LAMBERTON. The ancient Mordington was very small, comprising less than the half of the united parish. The barony of Mordington, with the patronage of the church, belonged at the epoch of record to Agnes de Morthington and her husband, Henry Halyburton; it was

given by Robert I. to Thomas Randolph, Earl of Moray; it passed at the death of John, the 3d Earl, on the disastrous field of Durham, to his sister, Black Agnes, Countess of Dunbar; it seems to have been given as a dowry to her daughter Agnes, on the latter's marrying James Douglas of Dalkeith; and it continued with the descendants of this Douglas till the Reformation, and eventually gave them the title of Baron in the Scottish peerage,—a title which became dormant in 1796.

MORE (ЛОСН), a lake  $1\frac{1}{2}$  mile long and  $\frac{3}{4}$  of a mile broad, in the Highland part of the parish of Halkirk, Caithness-shire. Streamlets which it gathers in several directions above, and sends off in one current to the north, are the head-waters of the river Thurso. The lake, jointly with the united stream, give the glen which they occupy the amhitious name of Strathmore.

MOREBATTLE, a parish in the extreme east of Roxburghshire; bounded on the north-west and north by Linton; on the north-east by Yetholm; on the east, south-east, and south by Northumberland; and on the west by Hownam and Eckford. It consists of a slender oblong, stretching north-north-westward, and becoming contracted toward the northern extremity; and of a westerly projection, commencing 2 miles from that extremity, and measuring  $2\frac{1}{4}$  miles by  $2\frac{3}{4}$ . The greatest length of the oblong is  $9\frac{1}{2}$  miles; its greatest breadth is  $4\frac{1}{2}$  miles; and the joint area of it and the projection is about 39 square miles. The surface, excepting over two small tracts respectively in the extreme west and in the extreme north, consists entirely of hills and narrow valleys, and runs up along the whole boundary with England to the highest summits of the Cheviots. Its heights vary in altitude between 500 and 2,000 feet above sea-level, command, in many instances, very grand, extensive, and map-like views of Teviotdale, Merse, and Northumberland, fringed on the east by the German ocean; and generally have a gracefully curvilinear outline, and a deep verdure, or even embellished cultivation of dress, which form a charming contrast to the usually stern features of a mountainous district. On the eastern and southern boundary rise Blackhag, Chillhill or the Schell, Arkhope-cairn, Cocklaw, and Windygate-hill; a little way into the interior are the heights of Sourhope, Blackdean, Plainlaw-green, Cove, Woodside, and Clifton,—the last rising beautifully aloft like a vast dome; west of Beaumont-water are the hills of Swindon, Bedford, and Grubit; and west of the Kale are those of Gateshaw and Morebattle. Only a fair proportion of wood is wanted to complete the blending of grandeur into beauty, effected by the district's natural form and clothing. Beaumont-water rises in five or six head-streams at the southern extremity, and runs 7 miles north-westward and northward, trotting along a fine pebbly path, between deeply verdant banks, sometimes careering in a rapid and then sleeping or eddying in a pool, watering for nearly 6 miles a narrow but delightful valley, and possessing powerful allurements to the angler. Kale-water comes down from the south at a point  $2\frac{1}{2}$  miles west of the Beaumont, runs  $2\frac{1}{4}$  miles northward, nearly half of this distance being along the boundary with an indentation on its right bank of Hownam, makes a sudden turn, and runs 2 miles westward, chiefly along the boundary with Linton and Eckford, to its exit from the parish; and, over its whole course, rivals the Beaumont in all its pleasing attractions. On the boundary with LINTON [which see] is the curious little sheet of water called Linton-loch; and on the boundary with YETHOLM [which also see] is Yetholm or Primsidloch. Carbet-house, on the Kale,  $\frac{3}{4}$  of a mile south of the village of Morebattle, was

burnt, in 1522, by the English in revenge of a foray partly headed by its proprietor, Launcelet Ker of Gateslaw, into Northumberland; and, about thirty years ago, it was renovated by Sir Charles Ker. Whitton-house,  $1\frac{3}{4}$  of a mile south-west of the village, was dilapidated by the Earl of Surrey during his extensively destructive inroad in the reign of Henry VIII., and is now in a ruinous condition. Various towers and peel-houses of the parish which figure in the Border records have disappeared. On some of the heights are vestiges of British encampments, and circular rows of perpendicular stones called 'Trysting stanes,' of unascertained design or origin. Several villages, in former ages not considerable in size, have disappeared. The village of Morehattle stands on the Kale, in the western projection of the parish, at the point where the river becomes the boundary-line with Linton, 4 miles south-west of Yetholm,  $5\frac{1}{4}$  miles west of the nearest point of the English border, 7 miles south-east of Kelso, and 9 miles north-east by east of Jedburgh. It contains about 300 inhabitants, consists chiefly of two story slated houses, and would be a pleasant place hut for the vile nuisance of every house regaling itself with a stench-hole in front. Carriers travel thrice a-week between it and Kelso. Roads traverse the vales of the Belmont and the Kale, and are connected by a road on the north. Population, in 1801, 785; in 1831, 1,055. Houses 180. Assessed property, in 1815, £13,613.—Morehattle is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend £234 11s. 8d.; glebe, value not stated. Unappropriated teinds £676 9s. 7d. The parish-church, situated in the village, was built in 1757. Sittings between 400 and 500. An United Secession congregation, whose place of worship also stands in the village, is the oldest in the south of Scotland. Their first minister, Mr. Hunter, was ordained in 1739, and was the earliest Secession licentiate; and he officiated summer and winter for some years after ordination in a tent on Gateshaw-hrae. The original meeting-house stood at Gateshaw, and the present one was built about the year 1760. A great religious meeting, conducted by a body of Secession ministers from a distance, was held in 1839 on Gateshaw-brae, to celebrate the centenary of Mr. Hunter's ordination. Two parish-schools,—the one in Morehattle and the other at Mowhaugh, in the vale of the Beaumont—were, in 1834, attended by 147 scholars, and a private one in Morehattle by 35. Salary of the first parish schoolmaster £34 4s. 4d., with £36 8s. 5d. fees, and £8 other emoluments; of the second £17 2s. 2d., with £10 fees. The interest of a mortification of £1,500 is expended in maintaining poor and destitute orphans, and paying fees for their education. The present parish comprehends the ancient parishes of Morehattle and Moll or Mow. Merehotle, which is the old orthography of the name, means, in Anglo-Saxon, 'the dwelling place at the marsh,' and alludes to the ancient circumjacency of marshy ground at the site of the village. The church of Merehotle belonged in some manner to the cathedral of Glasgow so early as the 12th century, hut was the subject of pertinacious controversy as to the right to its temporalities; and eventually was, in 1228, declared to be a benefid of Glasgow, while the archdeacon of that see should receive thirty merks a-year for a mansion, hut should claim nothing of the rectory. There were anciently two chapels in the parish,—the one at Clifton on Beaumont-water, and the other at Whitton, now called Nether-Whitton. The Moll—meaning in the British 'a hare, bald or naked hill'—included the highest grounds, or southern and south-eastern parts of the united parish. Its village,

called Moll, or corruptedly Mow, stood on Beaumont-water at Mowhaugh, the present site of the second or subordinate parochial school, and its church stood a little lower on the river. Both the monks of Kelso and those of Melrose received grants of the church, and had their disputes respecting it settled in 1269,—the Kelsoites acquiring the ascendancy.

MORHAM, a small parish in the centre of Haddingtonshire; bounded on the north by Haddington and Preston; on the east by Whittingham; on the south-east by Garvald; and on the south and west by Haddington. It is an oval stretching north-north-eastward, nearly pointed at the extremities, measuring respectively  $2\frac{3}{4}$  miles, and 1 mile  $5$  furlongs at the axes, and sending off an easterly projection  $1\frac{1}{2}$  mile long and 3 furlongs broad from near its north end. Its area is 1,458 Scottish acres. Its surface is a waving gently inclined plain, dipping to the north; but, excepting a pleasant tiny glen on the minister's glebe, wants the rich and fascinating aspect which generally distinguishes the lowlands of East Lothian. Its highest ground is about 300 feet above sea-level. Its only stream, Morham burn, collects its head-waters on the southern boundary, and in Garvald runs  $2\frac{1}{2}$  miles northward and westward through the interior, traces the western boundary for a mile, and then passes away to fall  $1\frac{1}{4}$  mile farther on into the Tyne. Its climate is remarkably clear and healthful, a bright sunshine being often enjoyed, while the vale of the Tyne is enshrouded in fog, and diseases and epidemics which have wasted adjacent districts having never entered its precincts. The soil is in general a clayey loam,—in most places rich, and in all productive; and it is everywhere in excellent cultivation. A coarse, soft sandstone is quarried; and coal was formerly worked, hut has been abandoned. Roads, though good, are inconvenient; and communication with any quarter cannot be maintained except by the facilities of Haddington, distant from the nearest part  $1\frac{3}{4}$  mile. Population, in 1801, 254; in 1831, 262. Houses 50. Assessed property, in 1815, £2,765.—Morham is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Miss Dalrymple of Hailes. Stipend £156 1s. 5d.; glebe £10. Schoolmaster's salary £34 4s.  $4\frac{1}{2}$ d., with £36 15s. fees, and £2 other emoluments.

MORISON'S-HAVEN, a harbour 5 furlongs west of the village of Prestonpans, in the parish of Prestonpans, Haddingtonshire. Though small, and possessing only ten feet of water at spring-tides, it is, for craft which can enter it, one of the safest harbours on the Forth. By right of charter, granted by James V. in 1526, and afterwards ratified by parliament, the monks of Newbotle—in modern orthography Newbottle—constructed it as a port whence they might export the coal which they had discovered on their lands of Prestongrange. Its original was Newhaven, hut—following the fashion of courtiers, and doing homage to new possessors—it was afterwards changed successively to Achieson's-haven and Morison's-haven. The harbour serves as a port to Prestonpans, and has in its vicinity a manufactory of brown earthen-ware.

MORISTON (ТНЕ), a river partly of Ross-shire but chiefly of Inverness-shire. It rises at the head of Glen-Clunie, in the former county, runs 5 miles eastward to Loch-Clunie, and, while traversing that lake, passes into Inverness-shire, and thence it has a course of 17 miles prevailing eastward to Loch-Ness, at Invermoriston. It gives the name of Glenmoriston to all the vale below Loch-Clunie, and to the parish, which consists principally of that vale, and is now united to Urquhart. Its chief tributary is the Luing, which, 2 miles below Loch-Clunie, comes down upon its right bank from Loch-Luing.

The Moriston is an impetuous hut romantic stream ; it, for the most part, wildly riots, now from side to side, and now along ledges of a deep rocky channel ; it once, not far from its emhouchure, forms a very fine cascade ; and it occasionally breaks loose from the restraints of a narrow and ravine-like channel, and steals abroad into tiny lacustrine expansions, embracing wooded islets or picturesque rocks. It has repeatedly, in its moods of repletion and wrath, swept quite away such hridges as intruded on its path ; but it is now, 8 or 9 miles from its emhouchure, spanned by a handsome new hridge which appears strong enough to withstand its brawling. The lower part of its vale is uncommonly beautiful ; of varying width ; profusely wooded with oak, hiech, ash, aspin, and lareh ; and occasionally sheeted with trees up to the very summits of the hills. See GLEN-MORISTON.

MORMOND-HILL, a small hut conspicuous hill in the district of Buchan, Aberdeenshire. It is situated at a point where the parishes of Fraserburgh, Rathen, and Strichen meet, 6½ miles south-west of Kinnaird-head. Though possessing an altitude of only 810 feet above sea-level, it is a good land-mark to mariners. Its form is conical.

MORNINGSIDE, a village and *quoad sacra* parish in the *quoad civilia* parish of St. Cuthbert's, Edinburghshire. The village is pleasantly situated on a southward slope, on the road leading from Edinburgh to Biggar, Peebles, and Dumfries ; 1½ mile south of Port-Hopetoun, and 2½ miles distant from the Tron-church, Edinburgh. Between it and the metropolis lie Borongbmuirhead and Burntsfield-Links. The village is an agreeable and worthy environment of Edinburgh, and forms a summer-resort of the citizens ; and it so competes with Inveresk the fame of being the Montpellier of the east of Scotland, as to allure invalids to its precincts for the benefit of its dry and salubrious air. Here stands the City and County Lunatic asylum of Edinburgh, originally a capacious edifice, and subsequently enlarged from designs by Mr. Burn, so as to receive 230 inmates. It is finely situated in the midst of a poiley of about 50 acres in extent. The *quoad sacra* parish-church, erected in 1837 from a design by Mr. Henderson, is a small hut neat edifice. An interesting object is a large school, which was one of the earliest to win the fame of reform from the dry and mechanical methods of a hygone period. All around the village, mansions and villas so thickly occur as almost to jostle one another in strife for sufficient pleasure-ground,—Greenhill, Merchiston-castle, New Merchiston, Burntsfield-house, Craig-house, Hermitage of Braid, St. Margaret's convent, Falcon-hall, Canaan-bank, Canaan-grove, Canaan-lodge, Woodburn, Woodville, East Morningside, Whitehouse, and several others.

MORTLACH, a parish in the Moray district of Banffshire. It is bounded on the north by Boharn ; on the north-east by Botriphnie ; on the east by Glass and Cahrach ; on the south by Inveraven ; and on the west by Inveraven and Aherlour. It is of an ohlong form, hut sends the lands of Glenmarky and Edinglassie, in the form of a wedge 3 miles deep, into the parish of Glass ; and it extends from north-north-east to south-south-west. Its greatest length is 12 miles ; its greatest breadth, exclusive of the cuneiform projection, is 5½ miles ; and its superficial extent is about 35,000 acres. From a mountainous line of water-shed across the south end of the parish, two glens extend 7½ miles north-eastward at the distance from each other of from 2 to 2½ miles. The eastern glen then suddenly dehouches to the west, runs direct across to a junction with the other glen, and thence, with the expansion of a valley, goes 3

miles north-north-westward to the boundary with Boharn. The stream of the western glen is the Dullan ; and that of the eastern and of the united glen is the Fiddich,—giving the name of Glenfiddich to all the district which forms its basin. The chief summits on the mountain-boundary of the south, are Coryhabhie-hill and Cook's-eairn, which look down into Glenlivet ; the screen of much of the west side of the western glen is the huge and broad-based Benrinnnes, whose vast mass fills a large part of the neighbouring parish, and whose summit, wooing the clouds at an altitude of 2,747 feet above sea-level, looks away to the far-distant coast of Caithness ; and the grounds which form the other screens of the glens, though less elevated than Benrinnnes, are lofty enough to be fit attendants on it as a monarch-mountain. A small stream called Markey, rising on the east side of the eastern screen of Glenfiddich, cuts the projecting district of the parish into the dolly vale called Glenmarky, and trots rapidly down the descent to meet the Deveron near the house of Edinglassie, where that river just touches the boundary, and makes a fine sweep away toward Huntly. Glenfiddich is one of the loveliest straths in Scotland ; and contains many mixations of the sweet and the wild, the hold and the beautiful,—many blendings of those features of landscape which invite the pencil and play upon the imagination. The whole parish, in fact, exhibits such variety of hill and dale, wood and water, arable grounds and flock-clad pastures, as render it rich in landscape. Even in winter, the trees skirting the rivers with their snowy foliage, and the mountains soaring aloft in dresses of virgin white, furnish views abundantly pleasing and grotesque. One of the finest scenes is the Craig of Balveny, with its old castle, and its enincuturing objects ; and another is the Giant's chair on the river Dullan, with the pretty little cascade, called the Linen Apron, and the folds and wavings of the surrounding drapery. The arable grounds amount to only about one-seventh of the whole area, and, for the most part, lie pretty high along the two principal streams. Some haughs occur ; hut they are not extensive. The uplands are clothed to the extent of about 600 acres with wood ; and elsewhere they are variously moorland and coarse pasture, hut are in general duskily dressed out in heath. The sheep are of the black-faced breed, and the black cattle are a cross between the Aberdeenshire and the Highland breeds. Granite, of a kind well-suited for building, is abundant. A dark clay-coloured slate, of pretty fair quality, is worked in several quarries. Limestone is very plentiful, and, in spite of a dearth of fuel, is extensively worked. A variety of limestone, both on the Dullan and the Fiddich, amounts in quality to an inferior marble. Appearances of alum and lead are observed on the hum of Tullich, belonging to Kininvie. A laminated rock occurs in one or two places of a nature suitable for whetstones or hones. The soil of the arable grounds is almost all loamy, deep, and fertile. The air, though somewhat moist, is pure and salubrious. Several cally-beate springs occur ; and they are pretty powerful in their medicinal virtues, and have been found useful in cases of gravel and dyspepsy. A petrifying spring exists near the house of Kininvie. A small hut deep lake, called Lochpark, in a den confined by two almost perpendicular hills, near the road to Botriphnie, produces the new-horn Isla, a tributary of the Deveron, and is the home of pikes and the retreat of wild ducks.—Mortlach is famous as the scene of a signal victory achieved by Malcolm II., in 1010, over the Danes. He had been beaten by these foemen the preceding year, and compelled to leave them in possession of Moray. Returning from the south

with a reinforced and powerful army, he hurned to expel the intruders, and found them in readiness to give him hattle. The armies came in sight of each other near the church of Mortlach, and engaged a little to the north. Three of the Scottish generals fell in the first shock of collision; and panic and confusion followed among the Scottish troops. The King was reluctantly horne along with the retreating crowd till he was opposite the church of Mortlach, then a chapel dedicated to St. Molach; and here, while his army were partially pent up in their flight by the contraction of the vale and the narrowness of the pass, he performed some of the showy rites of saint-worship, and rallied and roused his troops with an animated appeal to their patriotism, and, placing himself at their head wheeled round upon the foe, threw Enotus, one of the Danish generals, from his horse, and killed him with his own hand. The Scots, now flung hack from fear to enthusiasm, made an impetuous onset, carried victory in their van, and thickly strewed the ground with the corpses of their foes. The scene of the second and finishing conflict seems to have been a few hundred yards south-west of the castle of Balveny, the more ancient part of which was probably then in existence; and may have been the fort noticed by historians as near the field of battle. Two old castles, Auchindune and Balveny, both inhabited less than 150 years ago, are worthy of notice. Auchindune-castle occupies a commanding site, on a green conical mount, overlooking the Fiddich. It is supposed to have been huil by Cochrane, the favourite of James III.; it formed, with all its harony, a part of the lordship of Deskford; and, till 1535, it belonged to the Ogilvies, but then passed to the Gordons. A piece of admirahle workmanship, in the Gothic style, appears in the central apartment of the huiliding. Balveny-castle surmounts a heautiful eminence on the Fiddich, a little helow the influx of the Dullan, and commands a rich though limited range of charming scenery. The structure is of various dates, and very magnificent. Tradition calls the oldest part of it a Pictish tower. In the front, and high over its iron and massive gate, is inscriehd a motto of the Stuarts, Earls of Athole, descriptive of the savage valour and unhappy circumstances of the times:—**FVRTH. FORTVIN. AND. FIL. THI. FATRIS.** The castle helonged successively to the Cummings, the Douglasses, and the Stuarts; it passed, in the 16th and 17th centuries, into the successive possession of several other families; and it is now the property of the Earl of Fife. In 1446, there was a Lord Balveny of the name of Douglas. Both Auchindune and Balveny castles, were strongly fortified by art, and had their walls, their ditches, and their ramparts. Another old huiliding of inferior note at Edinglassie, is remarkahle chiefly in connexion with an appalling instance of the miseries of civil war, and of the tyrannical and detestahle power which was often wielded by the chieftains and harous of the feudal age. Some of the Highland clans, on their march from Strathspey through Mortlach to Strathbogie, in 1690, the year of the engagement on the haughs of Cromdale, having hurnt the house in prosecution of the public dissensions of the period, the laird, whose name was Gordon, seized 18 of them at random, when they were returning a few weeks after, and hanged them all on the trees of his garden. Mortlach claims to be the scene of the Scottish song of 'Roy's Wife of Aldivalloch.' The Glacks of Ballach mentioned in the lyric is a remarkahle pass near the castle of Auchindune. A claim, though a contested one, is made also upon the song of 'Tihhy Fowler in the Glen.' The old statist says, Tihhy "lived in the braes of Auchendune,

and was a plain-looking lass, with a swinging tocher."—The old village of Mortlach stands on the Dullan, half-a-mile above its confluence with the Fiddich; hut has dwindled away to insignificance. The modern thriving village of Dufftown stands half-a-mile north of Mortlach, and is distant 9 miles from Keith, 29 from Banff, and 118 from Edinburgh. It was commenced in 1817 on the property, and under the patronage of the Earl of Fife; and has at present a population of nearly 800. It is the seat of a post-office and the site of a jail,—the latter huil in 1826; and it enjoys the surveillance of a justice-of-peace. Annual fairs are held here on the first Wednesday of April, old style; the Monday before the first Tuesday of June; the second Thursday of July; the third Thursday of August; and the Saturday before the second Tuesday of October, old style. Balveny-house, a seat of the Earl of Fife, is a large modern mansion on a low site, and of cheerless appearance, about  $\frac{1}{4}$  of a mile helow the old cognominal castle. Turnpike roads diverge north-eastward, northward, and north-westward from the parish to Keith, Fochabers, and Elgin; hut, at the date of the New Statistical Account, in 1836, they remained, as to both road and hridge, unprepared from the disasters of the great flood of 1829. Population, in 1801, 1,876, in 1831, 2,633. Houses 478. Assessed property, in 1815, £5,574.

Mortlach is in the preshytery of Strathbogie, and synod of Moray. Patron, the Crown. Stipend £191 17s. 7d.; glehe £8. Unappropriated teinds £407 3s. 7d. Sittings in the parish-church 886.—A mission on the Royal Bounty, measuring 5 miles by 3, and containing, in 1837, a population of 579, embraces the district of Glenrinnis, and, as to the number of its people, helongs to Mortlach and Aherdour in the proportion to each other of 436 to 143. Its church was huil a good many years ago at the expense jointly of the heritors and the inhabitants. Sittings 258. Stipend £60.—A Roman Catholic congregation was established in the parish in 1794. Their chapel, a neat structure, is situated in Dufftown, and was huil in 1834, at a cost, jointly with a house and offices, of upwards of £1,000. Sittings 160. Stipend, the proceeds of the seat-rents.—In 1834, the parish-school was attended by 111 scholars; and 6 other schools by 276. Parochial school-master's salary £34 4s. 3d., with about £25 fees, an allowance from Dick's fund, and £8 other emoluments.—Malcolm II., immediately after the victory of Mortlach, got the parish-church converted into a cathedral, and the village into the seat of a diocese. Beyn or Bean, the first hishop of Mortlach, welded the crozier about 30 years, and was interred in the village. Donortius and Cormac, the second and the third hishops, jointly filled the see upwards of 80 years. Nectan, the fourth and last bishop, was, in the 14th year of his preferment, removed by David I. to Aherdeen, and became, by his translation, the first hishop of that city. The hishopric of Mortlach, thus transmuted into that of Aberdeen, lasted from 1010 to 1139. In the order of precedence, it was next to St. Andrews, or ranked as the second diocese in Scotland; yet, as to both jurisdiction and endowments, it comprehended only the churches and church lands of Mortlach, Cloveth, and Dulmeth.—The ancient cathedral survives, and is the present parish-church. Its walls are helieved to stand very nearly as they were raised in the 11th century; and are so strong that they might, it is thought, withstand the erosion of hundreds of years to come. The structure is venerable only for its age, and possesses none of the magnificence or the nice architectural decorations which usually distinguish cathedrals. An addition made to it about 12

years ago, and some repairs upon itself, have somewhat modernized its appearance.—Dr. Lorimer, the author of a treatise on Magnetism, was a native of Mortlach.

**MORTON**, a parish in upper Nithsdale, Dumfriesshire; bounded on the north by Durrisdeer; on the north-east by Lanarkshire; on the east and south by Closeburn; and on the west by Penpont and Durrisdeer. It is an ohlong of  $5\frac{1}{2}$  miles by  $2\frac{1}{4}$ , extending north and south; with an eastward projection  $1\frac{1}{2}$  mile by  $1\frac{1}{4}$  attached to its north end. Its area is  $12\frac{3}{4}$  square miles, or 6,496 Scottish acres. The river Nith comes down from the north at an acute angle upon the western boundary a little below its middle,—traces that boundary for  $1\frac{3}{4}$  mile, making a beautiful bend in its progress,—cuts off for 5 furlongs a small wing,—runs all the way in a limpid stream upon a pebbly bed,—and, as to its fishy produce, is noticeable only as a notorious scene of rahi and demoralizing practices of poaching. Carron-water, a garrulous and pleasant stream, and attractive to the angler, runs 3 miles along the western boundary to the point where that boundary is first touched by the Nith, and there yields up its treasures to the queen-river of the district. Cample-water, a pellucid stream, trotting along upon pebbles between varied and pleasing banks, rises in the extreme north-east, runs  $1\frac{1}{2}$  mile southward through the eastward projection, traces the eastern and southern boundaries over a distance of  $5\frac{1}{2}$  miles, and then departs into Closeburn to fall into the Nith only 3 furlongs farther on near Kirkhog. Along the Nith, and a short way up the Cample, are beautiful belts of very rich holm or haugh, liable to be overflowed, but well-protected by embankments. Screening the holm-lands, a considerable ridge of rising ground swells up from their margin, somewhat hold near the middle, but gentle in gradient at the ends. Crowning the summit of this ridge stands the large, clean, and very pretty village of THORNHILL, [which see,] commanding one of the most softly and sweetly picturesque views in the south of Scotland. North-eastward from the village rise two other hilly banks, parallel and of different height, running across the parish like huge natural galleries. Beyond the more northerly, the surface descends at a gently gradient, and forms a valley; and then it shoots up in hold pastoral heights, which occupy about one-third of the whole area, form part of the southern Alps of Scotland, attain altitudes of 2,500 and under, and climb up to the water-shedding-line between the two grand basins of the Lowlands. The soil of the first or most southerly low ridge of the parish is a light hut fertile loam upon a gravelly bottom; of the ridges immediately north of Thornhill, of the interior valley, is partly alluvial, and all excellent; and is deeper, but was a colder subsoil; of the mountainous district, gives frequent way to the naked rock, and is elsewhere so thin and poor as to bear only a mottled sward of heath and coarse grass. About 1,200 imperial acres still unreclaimed, and lying principally between Thornhill and the valley of the base of the mountains, are abundantly capable of cultivation. Nearly 600 imperial acres are under wood; three-fourths of which is thriving and matured plantation, and the other fourth partly young plantation and partly oak and birch copsewood. The whole parish, except one farm, belongs to the Duke of Buccleuch. Nearly in the centre of the parish,  $2\frac{1}{2}$  miles north of Thornhill, on the brink of a glen, traversed by a little tributary of Cample, stands Morton-castle, one of the least dilapidated ruins of its class in Nithsdale. What remains, though but a fractional part of the original structure, measures 100 feet by 30 in area. The south front is nearly

entire, rises to the height of 40 feet, has at each corner a circular tower about 12 feet in diameter, and is from 8 to 10 feet thick in the wall. The glen on one side with its water dammed up, and deep intrenchments on the other sides, must have rendered the place a seat of great strength. Of several very conflicting accounts which are given of the proprietorship of this castle, we prefer that of the Macfarlan-manuscripts in the Advocates' library as quoted by Grose. According to this account, the castle is of unascertained origin; was kept in the minority of David Bruce, by Thomas Randolph, Earl of Moray; and afterwards passed into the possession of that branch of the Douglasses who became Earls of Morton, gave them their title, and was allowed by them, in their solicitude about other strengths, to go to ruin. Yet the castle has smart competition for the honour thus assigned it. At New Cample, near Thornhill, Mrs. Buchan and her followers took post after their expulsion from IRVINE: which see. The village of Carronridge stands on Carron-water 3 furlongs above its influx to the Nith; and is partly in Durrisdeer, but chiefly in Morton, with a population in the latter of about 200. Three-fourths of the parish, from the northern boundary downward, are sinless of a road. The lower district is traversed through Thornhill by the convergent roads from Dumfries and from Galloway by way of Minniehive and Penpont, which become divergent at Carronridge toward Glasgow and Edinburgh. Population, in 1801, 1,255; in 1831, 2,140. Houses 350. Assessed property, in 1815, £3,030.—Morton is in the preshytery of Penpont, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £236 2s. 7d.; glebe £25. Unappropriated teinds £366 8s. 3d. An United Secession meeting-house is situated in Thornhill. The parochial school was attended, in 1834, by 81 scholars; and 4 private schools, by 221. The ancient or original church was probably huilt either by Dunegal, the great proprietor of Strathnith, in the reign of David I., or possibly by some earlier individual; and, before the end of the 12th century, it was given by Dunegal's grandson, Edgar, to the monks of Kelso, and thence became a vicarage till the Reformation.

**MORTON**. See HALF-MORTON.

**MORTOUNE**. See EAST CALDER.

**MORVEN**, or **MORVERN**, a mountainous parish on the coast of the mainland of Argyleshire. It forms a large peninsula, extending south-westward between Lochs Suinart and Linnhe, to the Sound of Mull, and connected with the district of Ardgour by a peninsula of 6 miles. Its outline is proximately triangular. It is bounded on the north by Loch-Suinart and Glen-Tarhert, which divide it from the parish of Ardnamurchan; on the south-east by Linnhe-loch, which divides it from the district of Lorn; and on the south-west and west by the Sound of Mull, which divides it from the cognominal island. Its greatest length from east to west is 20 miles; its greatest breadth is 15 miles; and its superficial extent is 65,000 acres. But three farms having been annexed to the parliamentary parish of Strontian, the extent *quoad sacra* is reduced to 60,000 acres. The present parish comprehends the ancient parishes of Kilcolumkill and Kiltuintaik, the date of whose annexation is unknown; and it has its modern name from the ancient Gaelic appellation Mor-Earran, 'the great division or lot.' Whether this district either exclusively or par excellence is the Morven of Ossian, seems more than doubtful. "The word Mor Ven, as used in the poems of Ossian," says the Rev. Norman M'Leod, in the Old Statistical Account, "is derived from the Gaelic words 'Mor Bheann,' i. e. 'of the great mountains,' and seems to have

been a general term for the Highlands or hilly country. The common notion is, that the whole Highlands were the country of Fingal and his heroes, for in every part thereof, as well as in this parish, there are names derived from them and their achievements. The whole Highlands might justly be called '*Duthaich nam mor-Bheann,*' or 'country of high hills.' But a Highlander never gives that name to this parish, but calls it '*A mhor-earran.*' Morven is not excelled by any parish in the Highlands by the number and greatness of its physical obstructions to interior intercommunication, and the practical working of the parochial economy. Nearly throughout, it is rugged in the extreme, and intersected by deep and pathless glens, and cut into isolated divisions by lakes, swamps, and rapid and dangerous torrents; and it has experienced hardly any of the valuable improvement which elsewhere has so generally ameliorated the Highlands by the construction of roads. A chain of lakes, partly marine and partly freshwater, commencing with Loch-Teagus on the north, and terminating with Loch-Aline in the south-west, nearly isolates most of the district lying along the Sound of Mull, and containing the parochial places of worship from the upper and much the larger district of the parish, called the Braes of Morven. Though the population is partly segregated in a few small hamlets, and in an entirely modern little village in the neighbourhood of Kilcolumkill, it is, for the most part, quite dispersed athwart the country, and, in the case of 14 or 15 families, is located on two islands in Loch-Suinart. All the interior is hilly, heathy, and interesting. Few, if any, of the heights possess what writers on landscape call character; and none attract notice even by their special largeness or altitude. Yet they very extensively yield good pasture; and, at the date of the Old Statistical Account, they maintained upwards of 14,000 sheep, and 2,500 black cattle. All the waste parts abound with deer and other game. Such arable ground as exists lies at the bottom of the hills, and principally along the Sound of Mull; and, in the latter locality, it is nearly all declivitous, often steep, and to a great extent much elevated above the level of the sea. The soil in general is a poor, light, open earth, and in some places is intermixed with gravel and small stones. Some valuable expanses of wood, consisting chiefly of birch, with interspersions of oak and ash, relieve the prevailing dreariness of several districts, and bring much profit to the proprietors, and they exist along the whole side of Loch-Suinart, the south and south-east district which overlooks the junction of Linne-loch and the Sound of Mull, and the whole encircling coast of Loch-Aline. Morven, as to its geognosy, consists principally of gneiss, which has been originally covered by a deposit of secondary rocks, consisting of limestone and sandstone, with coal occasionally interspersed; a deposit so overwhelmed by trap, which in its turn has been much abraded and worn away, as to present to an observer a confused and obscure object of geognostic study. The situation of the coal is, on certain occasions, very remarkable; and occurring as it does on the summits of primary mountains exceeding 2,000 feet in elevation, it is quite fitted to startle a geologist nearly as much as a coal-surveyor. On elevated spots, in various parts of the parish, but especially along the coast of the Sound of Mull, are Druidical circles of various diameters, but in no instance exceeding 24 feet. Dunien, Fingal's fort or hill, situated on the farm of Fiumarg, and now part of the glebe, is a curious round rock of considerable height, very steep, yet partly covered on the sides with a green sward, and washed at the base with a frolicsome stream which moves between high banks,

and leaps along in little cataracts. The area on the top of the hill measures about half-a-rood, bears evident marks of having been encircled by a wall, and commands an extensive prospect. Ardtornish-castle, once a place of great strength and historical importance, survives in only a few ruinous vestiges on a promontory projecting into the Sound of Mull. This fortalice was one of the numerous seats of the Macdonalds, lords of the isles; and in 1441 it became the scene of the formation of the celebrated treaty with Edward IV. But Loch-Aline both presents to the view the most interesting antiquity of Morven, and concentrates an amount of exquisite landscape, which goes far to compensate the prevailing dreariness of the rest of the district. See *ALINE (LOCH)*. The main feature at the head of this loch is a castle, which possesses the reputation of having been besieged by Colkittle for the Marquis of Montrose, and which is holdly perched on a high rock overhanging the water, as if the architect had chosen the situation where the effect would be the finest. The castle is very strong as a piece of masonry, and occupies, on the ancient system, a very strong military position; and though only a square tower with turrets and a corbel table, it exhibits such uncommonly fine proportions as render it markedly beautiful, and stands on so commanding and highly scenic a site as to make it one of the most picturesque of the Highland castles. "The part of Loch-Aline which is adjacent to the castle," says Dr. McCulloch, from whom we have borrowed our notices of the fortalice, "is rocky, intricate, and various with ornament, and receives two very romantic streams, which, forcing their tortuous way in deep and irregular, rocky and wooded channels, fall into it at opposite angles. Here, indeed, the lake deserves the name of beautiful, as far at least as beauty can result from that species of close mountain-scenery, and from the accumulation in a small space of woods and rocks, and brawling streams and cascades and wild bridges, intermingled also with farms and fields, and gradually blending with the more placid scenery of the loch itself." Population, in 1801, 2,083; in 1831, 2,137. Houses 393. Assessed property, in 1815, £2,289.—Morven is in the presbytery of Mull, and synod of Argyle. Patron, the Duke of Argyle. Stipend £155 2s. 3d.; glebe £27 10s. Unappropriated tithes £6 13s. 5d. There are two parish-churches belonging respectively to the two ancient parishes, and both surrounded with burying-grounds, which anciently were enclosed, and had the privilege of sanctuary. The church of Kiltuintak, 'the cell of Winifred,' was built in 1780; and that of Kilcolumkill, 'the church of the cell of Columba,' was built in 1799. Sittings 300 and 500. Both stand on the shore of the Sound of Mull. The minister officiates four times a-year at a station in the interior, and occasionally at other remote parts of the parish. There are two catechists. A Roman Catholic priest resides in the parish, and officiates in two private houses. Stipend £37. The population, excepting about 50 or 60 Romanists, and 15 Episcopalian, are all Church-of-Scotlandmen. There are 3 parochial schools, attended by about 200 scholars. Salary £34 4s. 4d., divided among the three teachers, with each about £8 fees.

MORVEN, a very high hill in the southern district of the parish of Latheron, Caithness-shire, and not far from the boundary with Sutherlandshire. One account says, it is "elevated about a mile above the level of the sea;" another says, it is "supposed to be more than a mile above the level of the sea;" but both, we suspect, over-estimate its altitude. The mountain is an unfailing barometer, an invariably correct indicator of approaching rain or drought, to

the whole county, and is seen very far out at sea, and serves as an important landmark in storms. Its summit commands a view of nearly all the vast Moray frith, and much of the numerous counties which recede inland from its beach.

**MORVEN**, a mountain in Aberdeenshire, on the borders of the parish of Logie-Coldstone, rising 2,700 feet above the level of the sea.

**MOSSBURN-FORD**, a hamlet in the shire of Roxburgh, and parish of Oxnam, on the river Jed, which is fordable here; 3 miles south-east of Jedburgh. There is a tower here nearly entire, and built and divided in the same manner as that at Dolphiston, but far inferior in strength.

**MOSS-FLANDERS**, an extensive district on the north side of the river Forth, in the shire of Perth.

**MOSSGIEL**, a small farm-hamlet, about half-a-mile to the north of the town of Mauchline in Ayrshire, on the left side of the road to Kilmarnock, celebrated as having been for several years the residence of the poet Burns. It is utterly destitute of landscape beauty; but the poet's fame has clothed it with a beauty and interest of a higher order.

Higher romantic pilgrims shall betake  
Themselves from distant lauds. When we are till  
In centuries of sleep, his fame will wake,  
And his great memory with deep feelings fill  
These scenes that he has trod, and hallow every hill.

Our readers would scarcely excuse our omitting Wordsworth's fine sonnet on this bleak but consecrated spot:—

“ ‘There!’ said a stripling, pointing with much pride  
Towards a low roof with green trees half-concealed,  
‘Is Mossiel Farn, and that’s the very field  
Where Burns ploughed up the Daisy?’ Far and wide  
A plain below stretched seaward, while, descried  
Above sea-clouds, the Peaks of Arran rose;  
And, by that simple notice, the repose  
Of earth, sky, sea, and air, was vivified.  
Beneath ‘the random bield of clod or stone,’  
Myriads of daisies have shone forth in flower  
Near the lark’s nest, and in their natural hour  
Have passed away: less happy than the one  
That, by the unwilling ploughshare, died to prove  
The tender charm of poetry and love.”

The farm-steading, a very plain low house, with one small room and a kitchen, may still be seen, shaded by a few trees, on the west side of the Glasgow and Dumfries turnpike. The house continues nearly in the same state as when Burns occupied it, and was tenanted by his brother Gilbert till the year 1800. While residing here, he published, by the advice of his superior and patron, Mr. Hamilton, the first edition of his poems.

**MOSSPAUL**, a stage-inn on the railroad between Edinburgh and Carlisle, situated at the east base of Wisp-hill, between the sources of the Teviot and those of the Ewes, on the boundary between the parish of Ewes in Dumfries-shire, and that of Cavers in Roxburghshire; 9½ miles north of Langholm, and 12½ south of Hawick.

**MOSS-TOWER**, a hamlet in the shire of Roxburgh, and parish of Eckford; 5 miles north-east of Jedburgh. Part of the walls of a strong building were to be seen several years ago in this village, which is so denominated from its situation in a marsh. From a passage in Ridpath's ‘Border History,’ it appears that the Earl of Sussex, in 1570, with an English army, burnt and razed Moss-Tower, then belonging to Buccleuch.

**MOTHERWELL**, the principal village in Dalziel, a parish in the Middle ward of Lanarkshire. In old charters it is called Moderville, and lies near a celebrated spring called the ‘Well of our Lady,’ from which the inhabitants are partly supplied with water. By the census of 1841, the parish of Dalziel contained a population of 1,457,—about one-third of whom resided in the village of Motherwell.

**MOTRAY (THE)**, a small river in Fifeshire, which takes its rise in Norman's law, in the parish of Abdie, and, after a short and gentle course, falls into the Eden, about half-a-mile below the Guard-bridge: see **KILMANY**.

**MOULIN**, a Highland parish, nearly at the north-east extremity of Perthshire; bounded on the north by Blair-Athole; on the north-east and east by Kirkmichael; on the south-east and south by Kirkmichael and part of Dovally; on the south-west by Logierait; and on the west by Dull and Blair-Athole. Its outline is irregular; but may be viewed as an oblong extending north-eastward, and sending off from its ends two considerable north-westward projections. Its greatest length is between 16 and 17 miles; its greatest breadth between 8 and 9; and its area between 60,000 and 70,000 acres. The river Garry, coming down from the north-west, cuts off a small wing 1½ mile by ¾, and traces the western boundary a mile southward to the Tummel; and the latter stream thence runs 3¼ miles along the south-western boundary. Both streams abound in common river trout, and in salmon, sea-trout, and grilse; and are gorgeously, at times terrifically, grand in their scenery. The Garry, while running in the interior, traverses the celebrated pass of **KILLIECRANKIE**, [which see,] and over all its connection with the parish is wildly and sublimely impetuous. The Tummel, though all the way to its junction with the Garry tumultuous and rapid, here becomes tranquilly majestic, and sweeps proudly amid scenery softened down from grandeur into exquisite beauty. The Girnag, approaching from the south-east, runs 2½ miles south-westward to the Garry at the upper end of Killiecrankie. Six or seven independent streamlets, the largest 4 miles long, rise in the interior, and run to the Garry and the Tummel. Parallel to these rivers, and at 4¼ miles' distance, a water-shedding line of summits runs across the parish; separating the south-west division of it which belongs to the district of Athole, from the north-east division which belongs to the district of Strathardle. The river Briarachan, coming down from the north immediately behind this line of heights, runs ¾ mile southward on the boundary, and 1½ mile south-eastward, and 3½ eastward through the interior to the point where it contributes to form the Arde. The Arnate approaching from the north not far from its source, and 5½ miles north-east of the Briarachan's point of approach, runs 6¼ miles southward to a confluence with the Briarachan. The Arde being formed by the union of these streams, runs a mile south-eastward to its exit from the parish. In nearly all the running waters, rills and rivulets as well as rivers, cascades, occur, and, in several instances, are unusually beautiful. Those at Edradour and Urard are particularly admired, and have been celebrated in song. The parish consists of a congeries of hills cloven down by vales or glens along the course of the streams. The highest ground is the pyramidal and very conspicuous **BENVRACKIE**: which see. The other hills, considered as Highland heights, are not of mountainous hulk or altitude. Yet they exhibit several high and abrupt precipices, and are, for the most part, clad in heath. Those of **GLENFERNATE** [which see, and see also **STRATHARDE**] are exceptions, being beautifully verdant. The arable land is level in the How of Moulin, but, in general, gently declines toward the rivers; and it aggregately amounts to about 2,700 acres. The soil in the Athole district is tolerably deep and fertile; but, in the Strathardle district, is shallower, and yields lighter crops. The fields around the village of Moulin, constituting the How, a space of 1½ mile long and half-a-mile broad, are among the most fer-

tile in the Highlands of Perthshire, and have been called the garden of Athole. About 2,000 acres are under wood, part of it natural, and upwards of a half planted within the last 60 years. The principal rocks are mica-slate, interveined by quartz. Limestone occurs in houlders of a fine marhle texture, and in a hed considerably to the east of them, which forms part of a continuous field extending from the south-west of Perthshire to the north-east of Aberdeenshire; hut, owing to the dearth of fuel, very little of it is worked. Millstones are formed from a rock at a considerable elevation, and rolled down the hill on an axis. A marl-pit exists half-a-mile from the Moulin; and has yielded up three skulls of an animal helieved to be of the species which Cæsar calls Uri, and which were found in the Hercynian forest in Germany. The first found and largest of them measures  $26\frac{1}{2}$  inches to the extremity of the upper jaw, 13 inches in the greatest circumference of the pith,  $3\frac{3}{4}$  inches in the diameter of the eye-socket, and  $10\frac{1}{2}$  inches between the eyes.—A curious ruin, variously conjectured to have been a religious house and a castle of the Earls of Athole and Badenoch, and seemingly erected in the 11th or 12th century, stands in the neighbourhood of the village of Moulin. It appears to have measured in area 80 feet by 76, to have had a round turret at each corner, and to have stood in a loclet which has been drained and planted. More or less of the walls on three sides, and most of one of the turrets remain. The stones are unhevn, pinned with small flat stones, and cemented with lime and sand, so adjusted that they must have been poured in as a thin jelly. Tradition says that it was successively the retreat and the sepulchre of a number of persons infected with plague; and deters the country people from removing any of the stones lest they should be smitten with the pestilence.—Small circular works, supposed to have been Pictish forts, and circles or ellipses of stones reputed to have been Druidical temples, are frequent. Seven or eight mansions, chiefly situated on the Garry and the Tummel, contribute greatly to the natural beauty of the landscape, both by the elegance of their own forms, and by the embellishments of their demesnes. There are two villages, PITLOCHRY [which see] and Moulin. The latter is situated in the southern corner of the parish,  $1\frac{1}{4}$  mile from the Tummel, 12 miles north of Dunkeld, and has about 300 inhabitants. An annual fair is held here on the first Thursday of March. Manufactures and large machinery, excepting some thrashing-mills, are all located at Pitlochry. The parish is traversed by a road up the Tummel and the Garry, by another up the Ardle and the Briarachan, and by a third which connects them. Population, in 1801, 1,908; in 1831, 2,022. Houses 422. Assessed property, in 1815, £6,050.—Moulin is in the preshytery of Dunkeld, and synd of Perth and Stirling. Patron, the Duke of Athole. Stipend £150 14s. 3d.; glehe £26 13s. 4d. The church was built in 1831. Sittings 650. An ecclesiastical survey, made in 1836, exhibited the population as then consisting of 2,043 churchmen and 38 dissenters,—in all, 2,081 persons.—The district on the right side of the Garry, containing a population of 208, was, in 1836, annexed *quoad sacra* to the new church at Tennandry.—In 1834, the parish school was attended by 56 scholars, and five private schools by 301. Parish schoolmaster's salary £34 4s., with £10 fees, and £9 and a house additional emoluments. The distinguished Dr. Stewart, who did minister of Canongate, Edinburgh, was translated to that charge from Moulin. During his ministry in this parish, a remarkable and permanently beneficial revival occurred, which caused a great sensation at the

period, and is detailed in the Rev. J. Sievwright's interesting memoir of the Doctor. Dr. Duff, the church of Scotland's first missionary to India,—Professor Forbes of the Oriental literature chair in King's college, London,—Donald Macintosh, the compiler of the Gaelic 'Proverbs,'—and Captain Campbell of Fannah, well known for his gallant defence of the unfortunate Scottish colony of Darien, were all horn in Moulin.

MOUNT-BATTOCH. See LOCHLEE.

MOUNT-BLAIR. See ALYTH.

MOUNT-KEEN. See LOCHLEE.

MOUNT-STEWART, the seat of the Marquis of Bute, in the island and county of Bute. It occupies a fine site on the east coast of the island, 4 miles south-south-east of Rothesay; and commands a rich view of the frith of Clyde, the Cumrays, and the coast of Ayrshire. The mansion was built in 1718, by James, second Earl of Bute. Its exterior is plain, unimposing, and so devoid of even proximate ornament that it might be improved by a few ordinary touches of the trowel. Yet the leaden water-pipes at its angles are each decorated with eight coronets, "reminding us of the gouty old peer in 'Marriage à la Mode,' who put a coronet on his crutch." The door is converted into a glass window; and bears an inscription in doggerel verse, written by Prince Charles, when in concealment on the island. The picture-gallery is a large and pleasant room, completely pannelled over with portraits of celebrated persons; and, in particular, contains a portrait of Ruhens by himself, interesting portraits of the great Lord Bute, the Duchess of Lauderdale, and Henrietta, Duchess of Orleans and daughter of Charles I., Lady Mary Wortley Montagu, and Lady Mary Menzies. The plantations around the house are extensive, and contain many noble and gigantic trees. The kitchen-garden exhibits the apricot, the fig-tree, and other exotic plants in company with the more usual fruit-trees and vegetables; and the flower-garden displays a profusion of exotics, and is singularly rich in horticultural attractions. "The flower-garden at Mount-Stewart, nearly a mile distant from the house," says Miss Sinclair, "is situated in a very picturesque, irregular piece of ground, inclining toward the sea; and you will think I am copying a page out of some fairy tale, when you read a description of it. No shop for artificial flowers looks more brilliantly gay; and the richly adorned heds of roses and other blooming plants, were each like one of Madame Devis's hoxes from Paris. A gigantic family of native silver firs are arranged in tall majestic solemnity around the gay foreigners, which form a curious contrast. Exotics scarcely to be reared, who have a green-house elsewhere, flourish in this garden, as if they mistook Bute for the tropics, and seem to find no difficulty in accommodating themselves to the climate. Cape heaths flower luxuriantly in the open air, remaining out all winter, as well as standard plants of the magnolia grandiflora, which have risen to the height of 18 or 20 feet. Myrtles blossom here like hawthorn trees; sweet almonds ripen; geraniums are on fire with scarlet flowers; fuschias and camellias have been enlisted among the hardy plants; and we observed two cork-trees very thriving, so that the noble proprietor might not only have an yearly vintage, but also grow his own corks. In short, it seems as if that which flowers once a-year elsewhere, blossoms twice here, and what grows 6 feet high in other places of the empire, grows 12 feet high in this more favoured spot."

MOUSE (THE), a romantic streamlet arising in the parish of Carnwath, in the Upper ward of Lanarkshire. It has a brief hut tortuous course,

and after many a "jouk and turn," falls into the Clyde, a little below the town of Lanark. Towards the termination of its course, the scenery on both banks of this streamlet are strikingly beautiful, especially as it forces its way through the gorge of the Cartland crags. See articles LANARK, and CARTLAND CRAGS.

MOUSWALD, a parish midway between the rivers Nith and Annan, and from 2 to 7 miles north of the Solway frith, Dumfries-shire. It is bounded on the north by Lochmaben and Dalton; on the east by Dalton; on the south by Ruthwell; and on the west by Torthewald. Its form is an ohlong, extending north and south, and measuring  $4\frac{1}{2}$  miles by about  $1\frac{3}{4}$ , with an indentation 5 furlongs deep at the middle of the west side, a smaller indentation at the south-east extremity, and a south-eastward projection 2 miles long and 5 furlongs in mean breadth from the middle of its east side. Its area is  $8\frac{1}{2}$  square miles, or 4,725 Scottish acres. The surface is diversified by some rising grounds, which are ploughed to the summit, and the highest of which has an altitude of about 680 feet above sea-level; but, in general, it is champaign, or even quite flat. Nearly 900 acres at the south end are part of LOCHAR MOSS: which see. The arable and the uncultivated grounds aggregately bear the proportion to each other of about 33 to 10. Lochar-water touches, for a few yards, the south-west extremity. Wath-burn, coming in near its source from the north, moves along the whole western boundary to the Lochar, wearing the aspect, for most of the way, of a mossy, grass-grown ditch. Four independent rills, the largest 3 miles long, rise in the interior, and run or sluggishly creep to Wath-burn. Springs of pure water are both copious and numerous. St. Peter's well, in the vicinity of the church, is a continuous spring for about 100 feet; and falling into the largest tributary of Wath-burn, prevents it from ever freezing for a considerable way below their point of confluence. The higher grounds command, under different groupings, and with the addition of a map-like view of lower Nithsdale, and probably with a greater brilliancy of effect, the thrilling yet soothing, and the extensive prospect seen from White Woon-hill in DRYFESDALE: which see. Vestiges or ruins exist of five old Border strenghts. The least dilapidated is at Raffles; and the largest and strongest is at Mouswald-Mains or the Place. A statue of Sir Simon Carruthers, the owner of the latter, the laird of Mouswald, and the son-in-law of one of the Queensberry family, lies in the aisle of the church, its head pillowed, its feet on a lion, and its hands in the elevated posture of supplication; but it has neither date nor inscription. Several camps occur, probably British; and one at Burronhill has a strong double foss. Of several cairns, one about  $1\frac{1}{4}$  mile east of the church, measures 288 feet in circumference, bears the name of Tryal-Cairn, and is near a place called Deadmangill, where, tradition says, malefactors were executed, after being tried at the Cairn. Rockhall, situated near the northern extremity, and the seat of Sir Robert Grierson of Lag, Bart., the principal landowner, is the only mansion. The village of Mouswald stands considerably south of the centre of the parish, 7 miles south-east of Dumfries, on the low road between that town and Annan, and has about 150 inhabitants. Three hamlets, Woodside, Cleughbrae, and Banks, have jointly a population also of about 150. Both roads between Dumfries and Annan run through the parish south-eastward, and other roads are both plentiful enough and good. Population, in 1801, 705; in 1831, 786. Houses 152. Assessed property, in 1815, £4,216. —Mouswald is in the presbytery of Lochmaben, and

synod of Dumfries. Patron, the Marquis of Queensberry. Stipend £220 15s.; glebe £20. Unappropriated teinds £56 1s. 9d. Parochial schoolmaster's salary £25 13s. 4d., with £9 10s. fees. There is one private school. The present church is a fine recently-built edifice on a conspicuous site beside the village; and supplanted one which was of high but unknown antiquity. The original church was dedicated to St. Peter. The name, Mouswald, was anciently spelt Muswald and Moswald, and, bearing the meaning of 'the Wood near the moss,' is very descriptive of the position as well as of what seems to have been the original appearance of the site of the church.

MOY and DALAROSSIE, an united parish, forming the district of Strathdearn, partly in Nairnshire, but, as to far the greater part of its extent, in Inverness-shire. It is bounded on the north by Calder and Ardlach; on the east by Duthil; on the south by Alvie; and on the west by Dunlichty and Daviot. Its length from north-east to south-west is about 30 miles; and its mean breadth is about 5 miles. It entirely consists of two glens,—that of the upper part of the river Findhorn, extending from end to end of the parish, and constituting its main body,—and that of Loch-Moy, and the rivulet Fun-tack, opening into the southern part of the former, and coming down upon it from the north-north-west. The glen of the Findhorn, or Strathdearn proper, so called from Earn, the Gaelic name of the river, is strictly a close mountain-vale, broadly screened with ranges of the Monadleadh mountains, and possessing an average breadth, across its low grounds, of only about  $\frac{3}{4}$  of a mile. Numerous recesses or tiny lateral glens bring down to its river the tribute of their mountain-brooks; they are, for the most part, cultivated over half-a-mile or more from their mouth; and, owing to their having been made the retreats of herds of cattle during the heat of summer, they bear the name of shielings. The main glen is first closed up, and next narrow at its head; it afterwards possesses a long stretch of alluvial banks and terraces, dotted at every turn with farm-houses, and extensively plied with cultivation; and, toward the north-east, it collapses into a dark ravine called the Streens, whose sides are formed by precipitous mountains of granite. The Findhorn bursts at the head of the glen from several springs, and chiefly from a fissure in a large rock, called the Cloven-stone, and courses along the whole vale with such rapidity as never for a moment to loiter, and often to tear away soil and heavier obstructions in the way of any whimsical deviation from its path, and occasionally comes down in such powerful and almost instantaneous freshets, as seize and sweep away headlong whatever has ventured upon its shallow and seemingly most tranquil fords. High winds often invade the strath, and career onward in tempestuous eddies, tearing up trees, unroofing houses, and contesting with the river's floods the fame of power.—The lesser chief vale of the parish, or the glen of Moy, is only about  $4\frac{1}{2}$  miles in length. Near its head lies Loch-Moy, about  $1\frac{1}{2}$  mile long, and half-a-mile broad; a beautiful sheet of water, whose immediate scenery, compared to the general irksomeness of the glen, has occasioned it to be described as resembling a gleam of sunshine on a cloudy day, yet one that renders the adjoining waste darker and more dreary. A hanging forest of birch surrounds it; and, in summer, has a beautiful appearance. At its north end stands Moyball, the family-residence of Macintosh of Macintosh; a commodious modern mansion, consisting of a middle square and two wings. On its west side are the church of Moy and the manse of the united parish. Of two islets in the lake, the larger contains ruins

of an ancient castle, the former seat of the Macintoshes, chiefs of the powerful clan Chattan,—some vestiges of a street, which seem to indicate that part of the clan probably lived as an immediate body-guard round their chief; and a handsome granite obelisk, 70 feet high, on a base of about 20 feet square, erected, in 1824, to the memory of the late Sir Æneas Macintosh, Bart. The smaller islet consists simply of a collection of loose stones, said to be artificial; it was anciently used by the chiefs as a prison; and, within the recollection of persons still living, it contained a gallows, the fearful instrument of capital punishment at the hiding of a haron. Legendary story is rife with incident respecting the islets, the castle, and the loch of Moy; and—combined with a recital of old clan fights, as detailed by Sir Robert Gordon, of 'the curse of Moy,' as told in song, and of the heroism of Lady Ann Duff, the wife of Lachlan Macintosh of Macintosh, who acted so conspicuous a part in rescuing Prince Charles Edward in 1746—it makes ample offerings to the curiosity and the excited feelings of a stranger visitor.—The mountain-ranges of the parish are not remarkable for either form or altitude: they have easy and tame outlines, and nowhere rise more than 2,500 feet above sea-level; and they consist almost wholly of gneiss and granite. Upwards of 90,000 imperial acres on these heights are either waste-ground or sheep-pasture; and about one-fourth of that area is held in common by the tenants of different farms. In spite of the vicinity of the district to Inverness, the great focus of ameliorating influence over the Highlands, agriculture, sheep-husbandry, and every department of industry and social well-being have made such trivial advance amid the general movements of the last half-century, that the writer, in the New Statistical Account, commences his notice of the parish with the ominous statement: "There is, perhaps, not a parish in Scotland which has undergone less change than this, since the time of the former Account. The face of the country, the state of agriculture, and the manners of the people, are still the same; the latter, perhaps, a little modified by the influence of education." All the land subject to the plough measures considerably less than 3,000 imperial acres, and probably not more than one-third of this area is under constant or regular tillage. The soil of the thoroughly arable pendicles is in general good, and, in favourable seasons, produces plentiful crops.—Birch, aspen, and mountain-ash, are indigenous over the whole parish, and at one time covered its hills and glens with a continuous sheet of forest. Coppices to the aggregate extent of between 1,100 and 1,200 acres still exist, and are periodically, though not very systematically, thinned. Plantations, principally of larch and Scottish fir, exist to the extent of nearly 500 acres. Mr. Machean of Tomatin, a principal and resident heritor, has of late years planted about 1½ million of trees, and will probably find imitators of his example as a planter.—The parish is traversed for 10 miles by the great Highland road between Perth and Inverness, and is intersected in its various districts by statute labour roads. A handsome bridge over the Findhorn, with arches of wood resting on pillars of stone, and erected at a cost of £2,600, replaces a stone-bridge which was swept away in the memorable flood of 1829. The other bridges are constructed of timber, and too slender to resist the wild freshets which assail them. Moy-church is distant about 12 miles from Inverness. A monthly cattle tryst, during each of the months of summer and autumn, and an annual lamb-fair on the 3d Friday of August, are held at Frechurn-inn, near the middle of the parish, and are in general well-attended by cattle-dealers.—

Population, in 1801, 1,355; in 1831, 1,098. Houses 244. Assessed property, in 1815, £4,079.—This parish is in the presbytery of Inverness, and synod of Moray. Patron, Macintosh of Geddes. Stipend £234 3s. 4d.; glebe £12. Unappropriated tithes £188 17s. At what date Moy and Dalarossie were united is not known. Churches still belong to both, and are in use on alternate Sabbaths. That of Moy was built in 1765, and repaired in 1829; and that of Dalarossie, centrally situated in the vale of the Findhorn, was built in 1790. Sittings of each about 450. Excepting two or three Episcopalians, the whole population are claimed by the Established church. There are 7 schools, one of them parochial, one for girls, and five by private enterprise for ordinary education. Parochial-schoolmaster's salary £30, with £10 fees, and about £1 10s. other emoluments. The name Moy, which is the Gaelic *Magh*, and means a 'meadow,' seems to have been imposed after the destruction of the ancient forest. The original name was Starsach-na-Gael, 'the gate of the Gael or Highlanders,' and alluded to an important pass about a mile below the site of the church of Moy, so narrow between high mountains that a few men could defend it against numbers, and intercept the inhabitants of the alpine regions from passing down to the low country toward Inverness. The ancient proprietor or chieftain found this pass so commanding that he exacted and readily received from the neighbouring clans a tax called 'the steak or callop of the hooty,' for permitting them transit with their cattle plunder. A large cavern in the vicinity of the pass was made the retreat of women and children while the tribe were absent in predatory excursions in the low country. Aided by the natural strength of the pass, and by the facilities of the ground so to post a few men, that they might seem a powerful force, Donald Fraser Smith, with a handful of Highlanders, drove back the Earl of Loudoun during the rebellion of 1746, from an attempt to surprise Prince Charles Edward at Moy-hall. Dalarossie is a corruption of *Dalfergussie*, 'the valley of Fergus.'

MOYDART, a territorial district and a marine loch in the south-west extremity of Inverness-shire. The district is bounded on the north and north-east by Morar; on the south-east and south by Loch-Shiel, which divides it from Ardgour and Sunart; and on the west by the Deu-Caledonian sea. Its greatest length from east to west is 18 miles; and its mean breadth is 7 miles. Its coast-line, everywhere irregular, is very deeply indented by pieces of the sea, particularly by Lochs Ailort, Na-Nua, and Moydart. Its interior is thoroughly Highland, and possesses little interest. Some wood along Long-Shiel and portions of the sea-coast, soften the prevailing wildness. It is traversed across the north by the road from Fort-William to Arisaig, and contains the latter village, the old ferry-station to Skye. The district forms part of the enormous parish of Ardnamurchan. Loch-Moydart is situated on the southern boundary, and continues the narrow communication from Loch-Shiel outward to the sea. It penetrates 5 miles into the land, but over two-thirds of its length it is split into two channels by the island of Shona. The south or main channel has, at its entrance, two islets mantled with plantations of birch and larch; at its head it is adorned with Kinloch-Moydart, the mansion of Colonel Robertson Macdonald; on its south shore it is overhung by the bold form of CASTLE-TIRIM [which see]; but everywhere else it has a dull, hald skirting of cold, unrelieved heathy hills.

MUCHALS. See FETTERESSO.

MUCK, a small verdant island of the Hebrides, in the parish of Small Isles, Argyleshire. It lies ½

miles north-west of Sanna, in Ardnamurchan, and  $3\frac{1}{4}$  miles south-south-west of the island of Eig; and it measures about 2 miles in length, and less than 1 mile in breadth. Its surface is everywhere undulated, and presents in every part the rocky faces of the basaltic terraces which occasion its undulations. Only one decided hill shoots up from the general level of the low inequalities; and this is situated near the western extremity, and attains an altitude of about 600 feet. The shores are, in general, low and rocky; but, near the west end, they rise into cliffs of about 50 or 60 feet in height. The soil of all the interior is fertile when in tillage, and naturally bears a perennial sward of rich fine grass. A sufficient number of swarms exist to furnish an ample supply of pure water. Trap of the predominant varieties of basalt and fine greenstone, occasionally inclining to the amygdaloidal, forms the body of the island; but is proved by the protrusion of different beds of sandstone and limestone at the bay of Camusmore, to lie upon the upper members of the secondary strata. Peat, owing to the peculiar structure of the island, does not occur; and requires to be procured at great toil and expense, and with some uncertainty, from Ardnamurchan, or from Eig and Rùm. The fishing of cod and ling is a chief occupation, and very productive. Shelter for fishing-boats is afforded in numerous recesses of the coast; and two small piers for their accommodation exist in two creeks. Population about 200, all connected with the established church. The parish minister, when officiating in the island, preaches either in a tent or in one of the farm-houses.—The name of Muck in Gaelic is *Eilan-nan-muchd*, 'the Island of swine;' and has been unceremoniously translated by Buchanan into *Insula Porcorum*.—On the north side of the island lies *Eilan-nan-cach*, 'the Island of horses;' an islet of inconsiderable extent, but swathed in excellent pasture. Between Muck and it is a foul, rocky, narrow channel, which ebbs dry at spring-tides.

**MUCK (THE).** See BARR.

**MUCKAIRN**, a parish in the northern part of Mid-Lorn, Argyshire. It lies along the south shore of Loch-Etive, immediately east of the united parish of Kilmore and Kilbride. It stands annexed *quoad civilia* to the parish of ARDCHATTAN, [which see,] but, in 1829, it was erected *quoad sacra* into a separate and parliamentary parish. A large proportion of the population is segregated in the village of BUN-AWE: which see. During upwards of two years succeeding August 1837, the parish remained unoccupied by a minister, and lay in complete disorder, as to its ecclesiastical affairs, in consequence of the presentee by the Crown being vetoed by the parishioners. The church and manse, both excellent structures, in the vicinity of Bunawe, were placed in deplorable neglect, the shutters all closed, the garden a picture of desolation, and everything apparently testifying the pressure of some great calamity; and the parish itself was so far abandoned that its only supply of religious ministrations was miscellaneous preaching furnished every third Sabbath by the presbytery of Lorn. Muckairn has a parochial school; and, as to ecclesiastical patronage and endowments, occupies a common footing with other parliamentary parishes.

**MUCKART**, a parish in the south-east division of Perthshire; bounded on the north-west and north by Glendevon; on the north-east and east by Fossaway; on the south-east and south by Fossaway and Dollar; and on the west by Dollar. The DEVON [which see] flows along all sides except the west and the north-west,—everywhere traces the boundary in its progress except cutting off two farms in the extreme south,—touches the parish for  $7\frac{1}{4}$  miles,—and, while in contact with, displays the chief deep

romance of its scenery. Two burns, both tributary to the Devon, but running in contrary directions, trace, for some distance, the western and north-western boundaries. The parish is  $4\frac{3}{4}$  miles long in a straight line south-westward from the Crook of Devon; from a few yards to  $1\frac{1}{2}$  mile broad over  $1\frac{1}{2}$  mile of the north-east end, and from  $1\frac{3}{8}$  to  $2\frac{3}{8}$  over the rest of the area; and 4,500 acres in superficial extent. A spur of the Ochil hills runs  $1\frac{3}{8}$  mile eastward in the northern extremity, and terminates in a conical summit called Seamab, and rising 1,350 feet above sea-level. There are two other heights called Blairbill and Lawhill. All the hills are of fine outline, verdant on the sides, covered on the top with bent or heath, and excellent pasture-ground for sheep. The middle and east parts of the parish lie between 500 and 600 feet above sea-level, and the lowest ground on the west upwards of 60 feet. The soil, in a small part, is clay, but, in general, is light and gravelly, and, in the lower grounds, is sandy, but produces very good oats and barley. The arable grounds and the grounds uncultivated are mutually proportioned as 27 to 13. About 300 acres of the uncultivated grounds are undivided common; and nearly the same aggregate area—not included in either class—is under wood. Coal is extensively mined for transmission to Strathearn; limestone is worked, but only for local use; and ironstone occurs, but is not worked on the Muckart side of the Devon. Two little villages, called the Pool and the Yetts of Muckart, have jointly, with a hamlet or two, about 220 inhabitants. One turnpike bisects the parish eastward, running between Dollar and the Crook of Devon, and another bisects it northward from the Rumbling bridge. Population, in 1801, 538; in 1831, 617. Houses 113. Assessed property, in 1815, £2,977.—Muckart is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend £158 6s. 8d.; glebe £20. The parish-church is an ancient, superannuated, and incommodious building. A meeting-house of the United Secession in the parish has nearly 400 sittings. In 1834 the parish-school was attended by 73 scholars, and a private school by 55. Parish schoolmaster's salary £25 6s. 8d., with about £17 fees, and £7 10s. other emoluments.

**MUCROSS.** See ST. ANDREWS.

**MUGDRUM**, a small island in the river Tay, nearly opposite Newburgh. It is about a mile long and 200 yards broad, containing about 32 acres, of which the greater portion is under cultivation. The navigable channel of the river is here about 1,000 feet wide, the remainder being a shoal fast filling up with mud. The projectors of the Western Fife railway propose to cross the river here by a bridge 2,000 feet long, 95 feet high from high-water level on the south side of the river, and 83 feet on the north to the line of the rails; to be composed of eight stone piers and two stone abutments, with nine laminated timber arches of from 180 to 200 feet span each. The estimated cost of the proposed structure is £77,000. See NEWBURGH.

**MUICK.** See GLENMUCK.

**MUIR-OF-ORD.** See ORD.

**MUIRAVONDSIDE**—popularly MORANSIDE—a parish in the extreme east of Stirlingshire, forming in upwards of one-half of its area an eastward projection beyond the extreme line of the contiguous parishes of the county. It is bounded on the north, east, and south-east by Linlithgowshire; on the south by Linlithgowshire and Slamannan; on the west by Falkirk; and on the north-west by Polmont. Its form is nearly a slender oval, stretching from south-west to north-east. Its greatest length, from the point where it is first touched by the Avon

to a sudden bend of that river half-a-mile east of Kinneil-mill, is 6 miles and 5 furlongs; its greatest breadth, in a line north-westward by west over Candie, is  $3\frac{3}{4}$  miles; and its area is about  $14\frac{3}{4}$  square miles. The river Avon so circles round the parish as not only to give it its name, but to form on all sides, except the west and north-west, its boundary-line; it traverses, while in contact with it, a distance, measured in straight lines and regular segments, of  $10\frac{1}{4}$  miles, but measured along its beautifully sinuous bed, of probably 15 or 16 miles; and over most of the way it is richly curtained with wood, or traverses a romantic and lusciously featured vale or dell, or otherwise possesses features of high scenic interest. A considerable tract of land in the south is unreclaimed moss; another tract parallel to it, though reclaimed, retains a strong dash of its former mossy character; and all the other lands, constituting by far the larger part of the area, are of warm aspect and in prime cultivation, embellished with lines and occasional clumps of plantation, and carpeted partly with a light and gravelly soil toward the Avon, but chiefly with a clayey soil in the interior. Ironstone occurs; and coal, though once comparatively neglected, has of late been so much worked as to have occasioned the recent erection of a colliers' village. Numerous mills of various kinds stand on the Avon, and are propelled by its water-power. Various mansions and villas dot the parish and enrich its landscape. Muiravonside-house, on the Avon, is an elegant mansion. Half-a-mile north of the church stands the old castle of Almond, surmounted by a fosse, and formerly a seat of the Earls of Callender. Three quarters of a mile above Lintilthgow-bridge, on the Avon, stands EMANUEL PRIORY: which see. The parish shares the interest of the magnificent aqueduct of the UNION CANAL, and the superb viaduct of the EDINBURGH AND GLASGOW RAILWAY, across the Avon; and is traversed by the works which these bridges carry over, and also by the SLAMANNAN RAILWAY: see these articles. Within half-a-mile of its north end it is bisected by the Edinburgh and Falkirk mail-road; and over all its area it is profusely chequered with subordinate roads. Population, in 1801, 1,070; in 1831, 1,540; in 1841, 2,238. Houses, in 1831, 295; in 1841, 395. Assessed property, in 1815, £6,001.—Muiravonside is in the presbytery of Lintilthgow, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend £225 3s. 4d.; glebe £9. Unappropriated tithes £90 19s. 9d. The parish-church was built about 33 years ago, and is in good repair. Sittings 500.—An United Secession congregation was established, and built a place of worship at Avonhridge in 1803. Sittings 308. Stipend £60, with £7 for sacramental expenses, and a house and garden.—An ecclesiastical survey, made in 1834, exhibited the population as then consisting of 1,229 churchmen, and 173 dissenters,—in all, 1,402 persons. But since that time there has, as appears above, been a great increase, in part permanent, by the erection of the colliers' village, and, in part temporary, by the constructing of the railways. The parish-school was attended, in 1834, by 126 scholars, and a private school by 90. Parish-schoolmaster's salary £34 4s. 2½d., with £24 fees, and a glebe worth £6.

MUIRDRUM, a small village on the Great North mail-road to Aberdeen and Inverness, 6 miles from Arbroath and 12 from Dundee, in the parish of Panbride, Forfarshire. It is noticeable chiefly as the seat of a post-office.

MUIRHOUSE. See MURROES.

MUIRKIRK, a parish in the extreme north-east of Kyle, Ayrshire, containing the most easterly land in the county. It is bounded on the north and east

by Lanarkshire; on the south and south-west by Auchinleck; and on the west and north-west by Sorn and Galstone. Its greatest length, from east to west, is 9 miles; its greatest breadth, from Forrest-cairn to Stoney-hill, is  $8\frac{1}{2}$  miles; and its area is about 58 square miles. On all sides except the west and the north-west, or over a sweeping segment of 25 miles, its boundary is a water-shedding line of summits. The surface of the interior is a rough, broken, dreary expanse of moorish hills, averaging from 800 to 1,000 feet in altitude, tame in outline, darkly heathy in general dress, now rising in solitary heights, and now forming ridges which run toward almost every point of the compass, slenderly intersected with uninteresting valley-grounds, and nearly altogether destitute of either grandeur or any other attraction of landscape. Cairntable, on the boundary with Lanarkshire, near the south-east extremity, is the highest ground, attains an altitude of 1,650 feet above sea-level, and commands, on a clear day, an extensive and diversified prospect. About the middle of the eastern boundary, and half-a-mile inland from it, are two artificial lakes, jointly covering 121 acres, cut out at the beginning of the century by Messrs. Finlay & Co. of Glasgow, as reservoirs to supply their cotton-works at Catrine. Issuing from the first of these, and traversing the second, the river Ayr runs 8 miles westward through the parish, cutting it into very nearly equal parts. Of numerous independent streams, all of local origin, which join it in its progress, the chief on its right bank are Powness, Greenock, and Whitehaugh-waters, respectively 3,  $9\frac{1}{2}$ , and 5 miles long, and on its left are Garpel-water and Procriheburn, respectively 4 and 2 miles long. The Ayr and the Greenock have a few eels, and abound with haddock coloured trouts. Only about one-thirtieth of the area of the parish is in tillage; about two-fifteenths have been ploughed, but cannot fairly be reckoned arable or cultivated ground; and all the remainder, excepting about 200 acres of plantation, amounting to five-sixths, are either totally waste or wildly pastoral. A natural forest waved its shadow, in the 12th century, over a large part, perhaps nearly the whole, of the surface; and has left dreary memorials both in such names as Netherwood and Harwood, worn by utterly treeless farms, and in long trunks and branches deeply buried in moss. The mountain-ash is the chief tree which appears to grow spontaneously; it adorns the wildest scenes; and unexpectedly meets the eye by the side of a barren rock or sequestered stream, seldom seen except by the inhabitants of the air or the solitary shepherd and his flock. Coal lies on both sides of the Ayr, at no greater a depth than 60 fathoms, in six seams aggregately  $30\frac{1}{2}$  feet thick, and severally  $3\frac{1}{2}$ , 3, 7, 9,  $2\frac{1}{2}$ , and  $5\frac{1}{2}$ ; and is mined on the most approved plans and in very large quantities both for exportation and for local consumption and manufacture. Ironstone occurs in the coal-field in five workable seams, so thick that three tons of stone are obtained under every square yard of surface. Limestone likewise plentifully occurs, and is worked jointly with the ironstone and the coal. Lead and manganese have been found, but not in such quantity as to be remuneratingly worked.—The parish is deeply and pathetically associated with the martyry history of the Covenanters. Of various monuments the most remarkable is the tomb-stone of the eminent and devout Scottish worthy, John Brown: see article PRIESTHILL. On the top of Cairntable there was anciently, according to tradition, a place of worship, and there are still two large cairns. The villages are GLENBUCK [which see] and Muirkirk, noticed below. The parish is traversed eastward by the turnpike between Ayr and Edin-

burgh, and southward by the road between Glasgow and Dumfries by way of Strathaven. Population, in 1801, 2,560; in 1831, 2,816. Houses 442. Assessed property, in 1815, £3,820.—Muirkirk is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Hastings. Stipend £157 17s. 3d.; glebe £20. The parish-church was built in 1813. Sittings 913.—An United Secession congregation was established in the village of Muirkirk in 1822; and next year built a place of worship at the cost of £900. Sittings 380. Stipend £71.—An Independent congregation was established in 1799 or 1800. Their place of worship, also situated in Muirkirk, was originally two dwelling-houses, is let as a school-room during the week, and, along with adjacent ground, was valued, in 1836, at probably £50. Sittings 130.—According to an ecclesiastical survey made in 1836, the population then consisted of 2,596 churchmen, 320 dissenters, and 33 nondescripts,—in all, 2,949 persons. Parish-school-master's salary £28, with £30 fees, and £5 other emoluments. There are four non-parochial schools,—one of them supported by the Iron-works company. Till 1631 the parish was included in MAUCHLINE: which see. The church erected in it, at its being made independent, was appropriately called 'the Kirk of the Muir,'—abbreviatedly Muirkirk,—and more formally the Muirkirk of Kyle.

MUIRKIRK, a village near the centre of the cognominal parish on the river Ayr, at the intersection of the Ayr and Edinburgh, and the Glasgow and Dumfries roads, 13 miles south of Strathaven, 14 miles east of Mauchline, 25½ north-east by east of Ayr, 43 miles north-north-west of Dumfries, 30 miles south-east by south of Glasgow, and 51 miles south-west of Edinburgh. The village is of modern date, was brought into existence and nursed by the discovery and smelting of iron-ores, originally bore the name of Garan, from a height on which its earliest houses stood, and is thus noticed in the Old Statistical Account: "The only village, or rather *clachan*, as they are commonly called, that deserves the name, lies at a small distance from the church, by the side of the high-road, on a rising ground called Garan-hill, which therefore give name to the range of houses that occupy it. They have increased greatly in number since the commencement of the works, and new houses and new streets have risen around them. Many new houses, besides some of them of a very neat structure, have been built at the works themselves, and others are daily appearing that will, in a short time, greatly exceed, in number and elegance, those of the old village, formerly, indeed, the only one that the parish could boast." The place has not had uniform prosperity, and continues to be subject to fluctuations and retrogressions; but, on the whole, it flourishes as the seat of a great and very gloomy manufacture of iron, and at present numbers about 2,000 inhabitants, all dependent on the iron-works. These works comprise three large blast furnaces for making pig-iron, an extensive forge for making bar-iron, a foundery, some works for the manufacture of British or coal-tar, and some extensive works for tiles and lime. The pig-iron made here is reckoned by founders soft, easily melted, and of the best quality; and the bar-iron, owing partly to the peculiar mode of working it, and partly to the suitable quality of the coals, is superior to any produced in Britain, and little if at all inferior to the best produced in Sweden. The New Statistical Account says, that the materials consumed in making one ton of pig-iron are 2 tons 12 cwt. of ironstone, 8 tons 12 cwt. of coals, and 19 cwt. 3 quarters of lime; and that, in 1837, 400 workmen were employed, and worked eight hours a-day during six days in the week. Connected with the

iron-works are some canals and railways of limited extent. The village, as a place of residence, can be tolerable only by the hardy and prosaic class who actually inhabit it; its dense envelopment in murky smoke,—its deeply dingy or sepulchral tints from coalspits and furnaces,—its unmusical and deafening clang of rude vulcan operations,—and its environment with a landscape of treeless, heathy, moorland hill, render it to persons of taste and sensitiveness almost the heau ideal of what is disagreeable and dreary. Coals are obtained for private consumption at about 3s. 6d. or 3s. 9d. per ton. The village has three friendly societies, two large circulating libraries, two inns, and more than the usual proportion of ale-houses, and annual fairs, ill-attended and of inconsiderable importance, in July, August, and December.

MUIRTON. See MARYKIRK.

MULDONICH, one of the Barra islands at the south end of the outer Hebridean archipelago. It lies 1½ mile south of the mainland of Barra, and 2 miles west of Vatersa. It measures only about 2½ miles in circumference, is composed wholly of gneiss, and consists of a single hill, which rises 600 or 700 feet above sea-level. Its name means 'the hill of Duncan.' Though little or nothing is known of the legendary hagiology of the Higblands, St. Duncan, whoever he was, must have been a person of importance, as the Sabbath is frequently called *Di Donich*, 'Duncan's day.'

MULIGRACH, the most northerly of the Summer islands, lying between the promontory of Rumone and the entrance of Loch-Broom, on the west coast of Cromartyshire. Sandstone strata, of which it wholly consists, can be traced gradually undulating from a horizontal position till they become nearly vertical, and then they lose their marks of stratification. The change of position is accompanied by fissures and caverns, indicating subsidence, or the operation of some analogous cause, after the formation of the last deposits of rock. The island has a circumference of probably not more than 2½ miles, and is not inhabited.

MULL, a large island in Argyleshire, the third in magnitude of all the Hebrides. It is separated from Ardnamurchan on the north, by the lower part of Loch-Suinart,—from Morven on the north-east by the Sound of Mull,—and from Lorn on the west by the lower part of Loch-Linnbe, and is washed on all other sides either by the main body of the Deucalionian sea, or by brief sounds of it flanked on the outer side by islands of inconsiderable size. So much is Mull indented by bays and marine lochs, that, though measuring, in extreme diameter, not more than 35 miles, it possesses a circumference along sinuosities of its coast of upwards of 300 miles. Its greatest length west-south-westward from the point of Dowart, opposite the southern extremity of Lismore to the small headlands on the Sound of Icolmkill, is about 30 miles; its greatest breadth, in a line from the northern extremity over the summit of Benmore, to a point below the farm of Scour, in the Ross of Mull, is about 25 miles; and its superficial extent, as estimated by Mr. McDonald in his 'General View of the Agriculture of the Hebrides,' is 420 square miles, or 210,000 Scottish acres. Were a line drawn from Treshnish point, opposite the island of Treshnish on the north-west, to the headland on the west side of the entrance of Loch-Buy, the main body of the island lying between that line and the continent would be nearly a parallelogram of 25 miles by 14, extending north-north-west and south-south-east; but, besides suffering other and very considerable intrusions from the sea, would be indented on the south-west to the extent of nearly 8 miles by Loch-na-Keal, and the parts of the island lying he-

tween the line and the main ocean, would be only  $6\frac{1}{2}$  miles in length of the peninsula of Gribon between Loch-na-Keal and Loch-Scridon, and nearly all or about 16 miles of the long peninsula called the Ross of Mull, which runs out to the Sound of Icolmkill, and, notwithstanding its great length, possesses a mean breadth of little more than 4 miles.

Mull may be summarily characterized as having a hoisterous coast, a wet and stormy climate, and a rough, unpromising, and trackless surface, redeemed only by fine spots 'few and far between' in sheltered valleys, or more frequently at the head of bays and the bolder inlets of the sea. "We passed the head of Loch-Frisa," says Lord Teignmouth, "and viewed from its shore the lofty summit of Benmore. Mull is, with the exception of some patches of arable land, a vast moor." Yet, as if willing to say something which might mitigate the effects of so unmeasured an anathema, his lordship adds: "Near Tobermory is a sequestered scene of much beauty, recalling to the Italian traveller in miniature the recollection of Terni. Sacheverel, 150 years ago, was struck with its resemblance to Italian scenery. A lake is enclosed by an amphitheatre of hills covered with oak, interspersed with torrents, forming picturesque cascades." "The rapidity," say the Messrs. Anderson, "with which its rocks decompose, prevents the island from having much picturesque beauty; and the tourist will be but ill rewarded in searching for fine scenery at any distance from the coast. Of an altitude exceeding 3,000 feet, the central group of mountains—among which Benmore rises supreme—vie in height with the Cuchullins of Skye, and, like that chain, bring down immense volumes of rain and vapour on the island." A miniature or reduced copy of Dr. McCulloch's picture of the island, which he sections off into five divisions, will give a sufficiently minute view of its contour and physical character.—The district lying north of the isthmus between the head of Loch-na-Keal and the mouth of Aross-water, is all hilly and irregular, yet, though high, cannot be called mountainous. Geognostically a trap district, it everywhere presents that terraced aspect whence the trap formation has its name, and rises in numerous stages from the shores to a maximum elevation in the interior of from 1,200 to 1,500 feet. Its coasts are now grassy slopes—now cliffs—and now rocky terraces, the first of the successive stages which recede into the interior; and they occasionally give place, in deep bays, to small sandy beaches, formed of broken shells. Picturesqueness occurs charily and at long intervals along the shores, and is quite unknown in the interior. A few of the promontories and columnar ranges on Loch-na-Keal and the Sound of Alva, are either clothed with ivy or decorated by the scattered remains of oak and ash coppices, and present solitary studies which are not deficient in interest to an artist; and some basaltic veins, in the same localities, have been left alone amidst the erosion and decomposition of the softer rocks which once enclosed them, and now rise high above the surface with such resemblance to the ruined walls of castles, that, at a little distance, only the experienced eye of a mineralogist can detect their true character. The district thus noticed contains the topographical subdivisions of Mornish, Mishnish, and Quinish.—A second district includes all Gribon and a small part of Torosay, or the whole of the peninsular territory lying west of a line drawn from the head of Loch-Scridon, past the west base of Benmore to Loch-na-Keal. This consists of just such trapezian terraces as occupy the area of the former, but acquires an altitude of not much less than 2,000 feet, maintains this altitude over an extensive table-land, and, while descending by inter-

rupted slopes on the south to level shores on Loch-Scridon, breaks down on the west first in steep declivities, and next in high cliffs, which jointly have an elevation of at least 1,000 feet above sea-level. Of various caves in this part of the island which form objects of attraction to a numerous class of visitors, one known by the name of Mackinnon's, is dark, lofty, profound, and imposing on the imagination, yet presents nothing but an abyss of vacancy in which the eye vainly seeks for any distinctive object on which it may momentarily repose. Near this an open and arched but shallow excavation of great size penetrates some secondary strata; and in consequence of filtrations of small rills charged with calcareous matter, is adorned along the room with huge though rude stalactites. Ash-trees and ivy mantle over the walls and top of the exterior, and, in combination with the sublime background of towering cliffs, produce a scene of great effect and admirable colouring. The rocky strata of the coast in the vicinity of the caves resemble an irregular and huge inclined staircase, the surface looking to the land, and the outer edges turned upwards at a considerable angle. A pedestrian, in traversing them from the beach, laboriously surmounts one step only perhaps to be conducted to a lower point than that from which he ascended; and not till he has crossed a vast number of the alternate elevations and descents does he find himself on land even but a small degree higher than the level of the beach.—A third district, which may be designated the mountainous, extends due eastward from the second to the Sound of Mull, and flanks the coast of that Sound from the kirk of Torosay, or the castle of Aros to a point between Macalister's bay and the head of Loch-Don. Irrespective of the vast and towering form of BENMORE [which see], it attains, over the greater part of its extent, an average elevation of nearly 2,300 feet above sea-level; yet, on the north and east it gradually subsides in altitude, and eventually gives place to a belt of flat shore along the Sound.—A fourth district occupies all the area south of the former, and westward to a line irregularly drawn between Shiha and Bunesan in the Ross of Mull. This territory, in common with all the others yet named, is trapezian; it possesses, over far the greater part of its area, uniformly high land; and in its coast-line it is strongly marked by lofty cliffs from Inimore to Loch-Buy, but eastward of that bay declines into the flat shores and indented outline of Loch-Spelis and Loch-Don.—The last district is the western part of the Ross of Mull, and extends inland from the extremity of that long peninsula only between 5 and 8 miles. It geognostically consists of primitive or of granitic and metamorphic rocks, yet blends with the trap along the line of contact; and it is either disposed in small and numerous rugged eminences through which the naked rock very frequently projects, or presents the more undulating features which attend the schistose varieties of gneiss.—The various modifications of trap rocks which prevail over the four principal districts, give place, in the Benmore region, to syenite and a blue claystone; and they elsewhere have interspersed among them, in positions of much distortedness, beds of limestone and sandstone belonging to the lias and oolitic series. Agates, zeolites, and the other enclosed minerals of basaltic and amygdaloidal rocks, occur in considerable numbers; carbonized wood has been discovered; and hypersthene, though not yet met with, probably exists. A fine red granite is found at the promontory of Ross.

Excepting on the small rocky district at the point of the Ross, and on a few of the summits in the mountainous tract, the soil of Mull is both deep and

fertile, and bears a considerably larger crop of pasture in a given space than that of Skye. Yet Mull, of all the Hebrides, is least adapted for the cultivation of grain, and is compelled to exchange part of its abounding flocks of cattle for imported corn. Both proprietors and tenants have, for a considerable series of years, occupied themselves principally as graziers, and have experienced both an augmentation in the quantity and an amelioration in the quality of their stock. The Tweedale breed of sheep has been universally substituted for the ancient Highland; and a few Cheviots may be found on the low lying farms. The horses of the island have long been noted for hardness; but, in consequence of improvements in husbandry, and alterations in the value of land, they have, of late years, decreased much in number. Woods at one time were so rife in Mull as to be celebrated for their extent and beauty; but, except in a few neglected coppices, chiefly of oak intermixed with hirsch and hazel, they have long since vanished. Larch, fir, and other trees have, to a noticeable extent, been planted in the north; and the ash grows with great vigour and beauty in sheltered situations in the east; but planes, so noted for their indifference to the power of winds, seem unhappily to be almost entirely unknown.—Of several fresh-water lakes, the largest are Loch-Erison in the north, Loch-Uisk in the south, and Loch-Ba near the head of Loch-na-Keal. In a bay on the north-east called Bloody bay, a little north of Tobermory, a sea-battle was fought in the 15th century, between Angus of the isles and the Earls of Crawford and Huntley. The island, though singularly poor in antiquities, and possessing few and tame specimens of those dullest of all objects of antiquarian curiosity, barrows, cairns, and grave-stones, contains three interesting examples of the semi-ancient fortalice,—the castle of Aros, overhanging the Sound of Mull in the vicinity of the cognominal hamlet,—Duart-castle, looking up Loch-Linnhe, and garrisoned till lately by a detachment from Fort-William,—and the castle of Moy standing in the vicinity of the modern mansion at the head of Loch-Buy. [See articles AROS and DUART.] The only town is TOBERMORY: which see. Mull, together with the adjacent small islands of Gometra, Ulva, Iona, Staffa, and some others, is divided into the three *quoad civilia* parishes of Kilfinichen, Kilninian, and Torosay, two of which have each two parish-churches,—and the five parliamentary parishes of Tobermory, Kinlochspelve, Salen, Ulva, and Iona, the last including not only all the island which gives it name but part of the Ross of Mull. The presbytery of Mull includes all these parishes, another *quoad civilia* one among the islands, and two *quoad civilia* and two parliamentary parishes on the continent; and it meets on the first Tuesdays of March, May, and November. Population of Mull, including all the territory within its parishes, in 1801, 8,367; in 1831, 10,538. Houses 1,817. Assessed property, in 1815, £13,191.

MULL (SOUND OF), a long hand of sea between the island of Mull and the continent of Scotland. It is identified at its north end with the lower part of Loch-Suinart, and on the south with the lower part of Loch-Linnhe, and is uniform and undisputed in designation only between the headlands at Bloody-bay and Duart-castle,—a distance of about 19 miles. As thus limited, it is planted on the continent side only by Morven, measures from 11 furlongs to 3¼ miles in breadth, and possesses only five or six islets, all of them quite inconsiderable. But regarded as including the whole hand of sea which divides Mull from the continent, it may be viewed as commencing on the south between the headland at Loch-Buy and

Macmarquesas point in Seill island, and cannot measure less than 36 miles in length, while it has occasionally a breadth of from 8 to 10 miles, is flanked by Mid and Nether Lorn and part of Arrdamurchan, and possesses the large island of Kerrera, besides various minor islands. The Sound, even limitedly understood, has depth enough to bear vessels of the largest burthen; it sweeps in beautiful curvatures between comparatively mountainous and moorish shores, which are occasionally relieved by pendicles of deep verdure, and patches of hirsch and hazel coppice; and in all directions it is closed up in the distance by chains of wild and alpine heights, the chief of which are the prodigious masses agglomerated round Ben-Cruachan. “On each cape and promontory, as we wind along finely,” say the Messrs. Anderson, “the fragments of the dark grey walls of the ancient Scandinavian hurghs, and the shattered and picturesque battlements of more recent castles, rise up before us, recalling the thoughts of the stern olden time, when the whole of these shores were exposed to continual warfare and invasion. In fine weather a grander and more impressive scene, both from its natural beauties and historical associations, can hardly be imagined. When the weather is rough, the passage is both difficult and dangerous, more particularly from the ‘conflicting tides that meet from strait and lake,’ and from the sudden gusts of wind that issue from the mountain gleens. In clear moonlight, also, the sail is most delightful; and then,—

‘Awaked before the rousing prow  
The mimic fires of ocean glow,  
Those lightnings of the wave;  
Wild sparkles crest the broken tides,  
And flashing round the vessel’s sides,  
With elvish lustre lave!’”

MULL OF GALLOWAY. See GALLOWAY.

MULL OF KINTYRE. See KINTYRE.

MULLBUY, or MILBUY, a very broad based and extensive ridgy hill in that district on the east coast of Ross and Cromarty, which is called Ardmeanach, or ‘the Black isle.’ The hill—though only about 500 feet high—extends from the moor of Ord to the town of Cromarty,—a distance of about 16 miles, and forms the spine of the peninsula between Beaulie frith and all the upper part of the frith of Cromarty. Though half waste, and existing for the most part in commonage, this huge but gently featured hill was long ago pronounced by the best judges to have soil as good and as capable of improvement as any part of the peninsula, and to be, over every foot of its ground, quite accessible to the plough.

MUNGO (ST.), a hill in Aberdeenshire, noted for its volcanic appearances. See HUNTLEY.

MUNGO (ST.), a parish in Annandale, Dumfriesshire; bounded on the west, north-west, north, and north-east by Dryfesdale; on the east by Tundergarth and Hoddam; on the south by Cummer-trees; and on the south-west by Dalton. Its greatest length, from the south-east base of Lockerhy-hill on the north to the confluence of the Annan and the Milk on the south is 5 miles and 1 furlong; its breadth over 1¼ mile at the north end slowly expands from a few yards to 1¼ mile, and over 1½ mile at the south end rapidly expands from a few yards to 1½ mile; its greatest breadth in a line east and west over Righead and Brecken-hill, is 3 miles and 1 furlong; and its area is about 5,000 imperial acres. Milk-water, maintaining a southerly direction, runs 1½ mile along the boundary with Tundergarth, 2½ miles through the interior, and 1 mile along the boundary with Hoddam, to a junction with the Annan at the south-east extremity of the parish; and over all this part of its course, its banks are clothed with natural wood, and slope beautifully toward the

stream. The river Annan traces the boundary for 3 miles over the whole south-west and south, making some large and graceful curves in its progress; and it flows for a mile along a vale screened by richly wooded heights, and over the other 2 miles, between softly featured but still pleasing banks. Both it and the Milk formerly abounded in salmon, herlings, and fresh water and sea-trout; but, since the general use of lime manure, they have been less plentifully stored. In the Annan,  $1\frac{1}{2}$  mile after it first touches the parish, there is a pool called the Rockhole—or vulgarly Rotchel—of an astonishing depth, formed in the middle of a rock, and at one time furnishing, by a singular mode of fishing called grappling, incredible quantities of salmon. Springs of the purest water, welling up from the rocks, and maintaining in some cases an equable temperature over the whole year, abound and are copious. A heavy shower of sea water, raised by a whirlwind off the highly-crested and careering tide of the Solway, at the distance of 8 miles on the south-west, fell some years ago on this parish and Tundergarth, and, under the evaporating powers of a clear sun, speedily left filmy incrustations of salt on foliage and grass. The surface of the parish, seen from heights which command a map-like view of it in the distance, appears to be level; but, though not strictly hilly, it has such swells and heights as, with the aid of Brunswark-hill in the contiguous parish of Hod-dam, and the wooded rising grounds of Kirkwood in Dalton to constitute, on a nearer inspection, a very gracefully, varied, and pleasing landscape. Nutholm-hill, flanking the course of the Annan, but subsiding slowly into level ground toward the south, has an elevation of about 200 feet above sea-level; and Barrhill and Breckonhill form a ridge parallel to it on the north, and possessing an altitude of about 250 feet. About 300 acres are under wood, chiefly plantation; and the same number, or upwards, are uncultivated; and partly irreclaimable.—Castlemilk, situated on a rising ground, on the left bank of the Milk north of Breckonhill, is at once the most attractive object in the parish, the seat of its principal landowner, Thomas Hart, Esq., and the scene of nearly all its antiquarian associations. Originally built and possessed by the Bruces, the ancient lords of Annandale, it passed as the marriage-dowry of the daughter of King Robert Bruce to Walter, High Steward of Scotland, and descended to their son Robert, the first of the Stewarts who came to the Crown. It afterwards went by marriage to the Maxwells, and was sold by them to the Douglasses, and has been subsequently fated with a repeated change of proprietors; but it still gives name to a branch of the most ancient family who owned, except the Bruces,—the Stewarts of Castlemilk, in the parish of Carmunnock, Lanarkshire. See CARMUNNOCK. It was besieged, during the minority of Edward VI., by Protector Somerset, whose station during the siege was not long ago traceable, and is called Cannon-holes; it was afterwards invested by Oliver Cromwell, resisted for a considerable time his attacks, and had not many years ago, in its vicinity, distinct traces of its intrenchments; in 1707, it was dismantled and modernized into a dwelling-house; and in 1796, it was entirely rebuilt. The mansion is embosomed in natural wood and plantation, and environed with a lusciously beautiful country.—The London and Glasgow railroad, and a road from Annan which joins it immediately after entering Dryfesdale, traverse the parish northward, and a road diverging from the latter traverses it up the river Annan. The southern extremity of the parish is distant  $5\frac{1}{2}$  miles from Annan, and the northern extremity only half-a-mile

from Lockerby. Population, in 1801, 644; in 1837, 791. Houses 132. Assessed property, in 1815, £3,502.—St. Mungo is in the presbytery of Lochmaben, and synod of Dumfries. Patron, the Crown. Stipend £173 12s. 10d.; glebe £40. In 1834, the parish school was attended by 86 scholars; and a side school by 20. Parochial schoolmaster's salary £34 4s. 4d., with £40 fees.—The ancient parish was called Abemele, from the confluence of the Mele or Milk with the Annan; and the name was changed into Castlemele or Castlemilk so early as before the year 1170, the date of the erection of the Bruces' fortified residence. The church was confirmed by Robert de Bruce in 1174, to the episcopate of Glasgow, and became a mensal church of that see till the Reformation. The bishops of Glasgow are conjectured—chiefly from some remains visible at the end of last century of an ancient village, and of an extensive garden with a fish-pond—to have had a residence in the parish. Owing to the church having been dedicated to St. Kentigern, it has, since the Reformation, borne that saint's vulgar name of Mungo. The parish was, for a short period succeeding 1609, annexed to Tundergarth.

MUNLOCHY, a village in the parish of Knockbain, or Kilmuir-Wester, in Ross-shire. It stands on the road from Inverness to Fortrose, at the head of Munloch-bay, an indentation of the Moray fieth, 2 miles in length, and opposite Culloden-head. The village is 6 miles south-west of Fortrose, and 7 north of Inverness. It is an excellent fishing-station.

MUNNOCK (THE). See ARDROSSAN.

MURROES—properly but obsolete MUIR-HOUSE—a parish near the southern extremity of Forfarshire; bounded on the north by Inverarity; on the east by Monikie and Monifieth; on the south by Monifieth, by the main body of Dundee, and by Mains; and on the west by Mains, by the detached parts of Dundee, and by Tealing. Its form is exceedingly irregular, a projection going off westward from its south end, and all the detached part of Dundee being an indentation on its west side. Its greatest length from north to south, measured over the middle of the Dundee indentation, is  $4\frac{1}{2}$  miles; its greatest breadth from east to west, in a line over the parish church, and falling upon the southern part of the indentation, is  $3\frac{1}{2}$  miles; its mean breadth, measured at intervals on the sort of segment which it forms round the indentation, is about  $1\frac{1}{4}$  mile; and its area is about 7 square miles. Fithie-water, pursuing a south-easterly direction, runs 2 miles between it on the right bank and Tealing, and the detached part of Dundee on the left; and afterwards flows  $\frac{3}{4}$  of a mile through the interior, leaving the parish just after having split its waters to form an islet. Murroes-burn, coming in near the north-west extremity  $1\frac{1}{2}$  mile below its source in Tealing, runs 4 miles south-eastward and southward, sweeps closely past the parish-church, and a mile after leaving the parish falls into the united stream of the Dighty and the Fithie. Several mills are driven by the streams. A large part of the parish was formerly marsh and moss, but has to a considerable extent been reclaimed and made subject to the plough, and has all been so far drained as no longer to send up pestiferous miasmata to the atmosphere. Some of the land, not mossy, is moorish. The southern district is nearly all carpeted with a good and even rich soil; and is, to some extent, sheltered and embellished with wood. A valuable marl pit on the estate of Powrie, contributed largely to the enriching of the land.—Near the right bank of the Fithie, a little before it leaves the parish, stand the remains of the castle of Ballumbie, anciently a fortified residence, and now the property of Lord Panmure. It an-

ciently belonged to the family of Lovell, and was the home of the celebrated Catherine Douglas, the wife of one of that family, and the heroine whose arm was fractured in an attempt to protect King James I. from the assassins who murdered him in Perth.—At Easter Powrie, now called Wedderburn, also on the right bank of the Fithie, are the remains of another castle, anciently the residence of Gilchrist, Thane of Angus, from whom all the Ogilvies in Scotland are said to be descended; and afterwards the property of Wedderburn of Wedderburn, the representative of the noble family of Scrymgeour of Dudhope and Dundee. A considerable part of the population are weavers, employed by the Dundee manufacturers. The parish is traversed across its south-west projection by the Dundee and Aberdeen turnpike by way of Forfar, and enjoys great advantages from being distant, at the nearest part, only  $2\frac{1}{2}$  miles from Dundee. Population, in 1801, 591; in 1831, 757. Houses 109. Assessed property, in 1815, £6,930.—Murroes is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend £172 4s. 8d.; glebe £15. Schoolmaster's salary £34 4s. 4d., with £24 fees, and a house and garden.

MURTHLY-CASTLE, the seat of the Stewarts of Grandtully, in the parish of Little Dundeld. The new mansion is one of the most magnificent in Perthshire, whether we regard its architectural elegance, or the surpassing beauty of its situation. The present proprietor, Sir William Drummond Stewart of Grandtully and Logiealmond, has restored an old chapel upon his grounds at Murthly to nearly its primitive appearance, and fitted it up with an altar as a Roman Catholic place of worship.

MUSAY, or QUEEN'S ISLAND, a small island in Shetland, probably not more than  $2\frac{1}{2}$  miles in circumference. It lies about half-a-mile from the east coast of the Sandwick part of Mainland, and about 7 miles south by west of Bressay.

MUSSELBURGH, a considerably important town, an ancient burgh of regality, and now a parliamentary burgh, in the parish of Inveresk, Edinburghshire. Viewed apart from contiguous and neighbouring places which are comprehended within its parliamentary and jurisdictional boundaries, it stands on the right bank of the river Esk, 3 furlongs south of the frith of Forth; 3 miles west of Prestonpans; 4 miles north of Dalkeith;  $2\frac{1}{2}$  miles east of Portohello; and  $5\frac{1}{2}$  miles east of Edinburgh. Its site is a flat expanse only a few feet above sea-level, fringed on the north by fine sandy downs called Musselburgh links, lying between it and the frith, and flanked on the south by a beautiful ridge of rising grounds, which is picturesquely crowned with the church and village of Inveresk. But its boundaries as a burgh are, Ravenshaugh-burn on the east, the lands of Inveresk on the south, the burn at Magdalene-bridge on the west, and the sea-beach on the north. They extend  $2\frac{1}{2}$  miles in extreme length from east to west,  $\frac{3}{4}$  of a mile in extreme breadth southward from the mouth of the Esk, and about 400 yards in mean breadth over about half-a-mile at each of the ends; and they comprehend the considerable town of Fisherrow lying compactly with Musselburgh along the opposite bank of the river, the large village of Newbigging stretching in one street with some appendages about  $\frac{1}{4}$  of a mile southward from near the middle of Musselburgh to the extreme southern boundary, Magdalene salt-works near Magdalene bridge, and the villages of West-pans and Levenhall, near the mouth of Ravenshaugh-burn. Such a long broad field of partly compact and partly interrupted town,—skirted with the links of Musselburgh

and Fisherrow, and with the luxuriant and gemmed slopes of Inveresk,—washed with the gay and brilliant waters of the frith of Forth,—bisected with the broad, shallow, limpid, pebbly stream of the Esk,—feathered all over with the trees and hushes of blooming gardens, and embellished all around with mansions, villas, pendicles of lawn and plots of flowers and shrubbery,—render Musselburgh, as to the first impression it makes upon a stranger, and even to the eye of a person who is familiar with its defects but feels them tenfold compensated by abounding advantages, one of the most calmly delightful towns, small or great, in Scotland.

Musselburgh proper consists of a High-street, running 650 yards eastward from the end of the New-bridge; a street called Mill-hill, running 450 yards north-eastward from the end of the timber-bridge to the links; a spacious hut short thoroughfare running southward from the ends of the timber-bridge to the High-street; another spacious thoroughfare communicating between the High-street and Newbigging; and various lanes and alleys, running parallel with these last thoroughfares. The High-street is not quite straight, and varies much in breadth; at the centre, and in the east end, it is very spacious; and, in spite of defects, it altogether pleases the eye more than the main street of probably any other Scottish town of equal hulk. The town has a large proportion of self-contained houses, many of them in the style of villas; it presents a fair array of good shops, and of municipal and marketing appliances; it is well and somewhat regularly built; and it has such freedom from the intermixture prevalent in second-rate Scottish towns of low, thatched, or otherwise mean houses, as to possess, in comparison with other places of its size, a city-like character. The High-street is the thoroughfare of the Edinburgh and London railroad. On its north side stands the Musselburgh Arms, a very commodious and an old-established and well-conducted inn. On the same side, west of the inn, and quite in the centre of the town, stands the tolbooth, a place curious both in appearance and in history. It was built in 1590, of materials taken from the chapel of Loretto, afterwards to be noticed; and is said to have been the earliest marked instance in Scotland of a secular erection raised from the dilapidation of an ecclesiastical edifice. During two centuries the *brutum fulmen* of the Vatican, the hitter but idle cursing of the papal conclave, was annually hurled at the good people of Musselburgh for "the sacrilege," roughly reminding them that no want of will was felt on the Pope's part to ruin and jail them as completely as their fathers had done the chapel. The tolbooth, originally uncouth and gaunt, was a few years ago partially renovated and handsomely ornamented. Its accommodations for prisoners are a debtor's-room, a lock-up-room, and a cell. A large number of captured rebels were imprisoned in it between February and September 1746, and appear to have been unceremoniously littered upon straw. Attached to the tolbooth is the town-hall, a more modern erection, containing the council-room and an assembly-room. Humble hut venerably surmounting these buildings, is a spiral steeple much more ancient than the tolbooth, and endurable only for its antiquity. Its primitive clock hears the date 1496 upon the dial, and is said to have been a present to Musselburgh from the Dutch States to encourage the continuance of an extensive commerce with their towns.

Eighty yards above an islet which the Esk forms at its mouth, a timber-bridge carries across a railway. Above this are three bridges for maintaining the ordinary communication with Fisherrow, and places to which its thoroughfares lead. The lowest,

situated 330 yards above that of the railway, and opening into the High-street of Fisherrow, is a substantial timber-bridge resting on cast-iron pillars, and renovated in 1838. Near this bridge stands a mansion built in 1840 by a leather-merchant, Mr. Legate, greatly the most elegant house in the town, and out of keeping in its finery with the prevailing character of the surrounding architecture. About 250 yards above the timber-bridge stands the main communication across the river, and that which carries over the Edinburgh and London mail-road, an elegant stone-bridge of 5 elliptical arches, erected in 1807 from a design by Sir John Rennie, very nearly level in its roadway, and a great ornament to the town. About 220 yards higher up stands a venerable stone-bridge, supposed, from its being on the direct line between the Pretorium at Inveresk and the barbour of Fisherrow, from its connexion at the ends with remains not long ago extant of an ancient causeway, and from various architectural features in its structure, to have been built by the Romans. It is narrow in the roadway, and high in the centre; it was formerly defended in the middle by a gate, some traces of which exist in the side-wall; and it has three arches, each 50 feet wide, with a spring of only 10 feet, and the segment of the circle so much depressed in several parts towards a straight line as apparently to indicate that the frame or cover must have sunk during the process of erection. This bridge is now used only by foot-passengers, and, with a continuance of the care which is practised toward it, may still occupy its place and be useful for centuries; but it is remarkable as the grand thoroughfare for ages between the south-east of Scotland and the metropolis, as an important pass during English incursions and invasions undertaken in the international wars, and as the bridge by which armies poured along to neighbouring fields of fatal and memorable conflict. It is, says Chambers in his History of the Rebellion of 1745-6, "a structure over which all of noble or kingly birth, that had approached Edinburgh for at least a thousand years, must certainly have passed; which has borne processions of monks, and marches of armies, and trains of kings; which has rattled under the feet of Mary's frolic steed, and thundered beneath the war-horse of Cromwell." While the Scottish army were passing along this bridge to the field of Pinkie, the master of Montrose and several other persons were killed upon it by shot from the English vessels lying off the mouth of the river. A mound was thrown up at Inveresk churchyard by Protector Somerset of England to defend the bridge as a pass, and was afterwards used for the same purpose by Cromwell. The Chevalier's Highland army traversed the bridge in 1745, on their way to the field of Prestonpans. "Departing from Duddingston," says Chambers, "the insurgents soon after fell into the post-road, and continued their march till they entered the Market-gate of Fisherrow, an old narrow street leading to the bridge, in passing along which Charles bowed to the ladies who surveyed him from the windows, bending to those who were young or beautiful even till his hair mingled with the mane of his charger. The army now passed along the ancient bridge which there crosses the Esk. Proceeding directly onward, the column traversed not the town of Musselburgh, but the old kirk-road, as it is called, to Inveresk, and entered the street of Newbigging about the centre. It then marched along the precincts of Pinkie-cleuch, and sought the high grounds near Carberry."—According to Mr. Stephenson's plan for the Great North British, or East coast line of railroad, that line would be carried across the Esk, on the north of the town, at a distance of  $5\frac{1}{4}$  miles from

the Edinburgh terminus, by a viaduct 200 yards in length, and 34 feet in height.

On the margin of the links, immediately beyond the ancient eastern gate of the town, stood a celebrated chapel and hermitage dedicated to our Lady of Loretto. The place had similar fame in Scotland to its romancelike storied prototype in Italy; and, though not professing to enclose the very cottage of the Nativity, or any other ancient edifice of Palestine, fetched to it by miraculous flight through the air or navigation across the ocean, was believed to share the physical sanctity and the powers of supernatural cure which the fables of superstition ascribed to the Italian Loretto. The Musselburgh chapel was of high but unascertained antiquity, and probably owed much of its importance to the haze which rested on its early history, and which possibly provoked the imagination of beated votaries to assign it an origin quite as extraordinary as that which was claimed by its prototype. Keith says that it was connected with the nunnery of Sciennes in Edinburgh; but he perhaps means no more than that the ladies of that establishment were retained to patronize it, or, for reasons of superstition or interest, used their influence to extol it to their dupes. Pregnant women sent their child-bed linen to it to be consecrated in order to their safe and easy recovery, and accompanied their commission with large presents of money; and pilgrimages of young men and maidens, of invalids and rouds of the great laden with care and the small harassed by disaster, were made to it from all parts of the country, in quest of blessings supposed to be purchasable with money, and enjoyable in companionship with sin. A solitary ascetic who inhabited the attached cell of the hermitage, added greatly to the celebrity of the place. The importance of the hermit was afterwards singularly evinced by the incident told by Knox in his History of the Reformation, of his having written in his name, by request of the Earl of Glencairn, a satire on the hypocrisy of the Romish priests, entitled "Ane Epistill direct fra the halie Hermeit of Alareit to his bretbren the Gray Friars," and beginning,

"I Thomas Hermeit in Lareit,  
Sanct Francis Ordour do hairtilie greit."

Even James V. himself performed a pilgrimage to it on foot from Stirling, in August 1530, before setting sail to seek among the daughters of France a partner for his throne. Yet the chapel became, if not a Pappos, at least a place of somewhat kindred character,—a noxious meeting-place of young men and women,—a scene of barter between the tricks and gains of priestcraft and the indulgence and chartering of vice. "Sir David Lyndsay of the Mount, Lord Lion King-at-arms," whose satires are well known to lacerate priestcraft to the bones, and to salve its bleeding flesh with spices, found no fitter, no less pitied, subject for his cat-o'-nine tails and his rude salving than the chapel of Our Lady of Loretto. "Parts of Musselborove towne, w<sup>i</sup> the chapel of Our Lady of Lauret," were destroyed in 1544 by the English army under the Earl of Hertford; and the chapel, though afterwards thoroughly re-edified or repaired, was soon frowned away from its stenchy site by the Reformation, and, in just penance for its crimes of chicanery and pollution, made acquainted, stone by stone, as we have seen, with convicted and acknowledged malefactors. "Of this building, which must have been of considerable dimensions," says the New Statistical Account of Inveresk, written in 1839, "no vestige now remains, save a cell measuring 12 feet by 10, covered by a circular wooded mount. In the roof is inserted a strong iron bar, with an oaken pulley attached, but for what purpose seems doubtful. In 1831, the present proprietor of the villa of

Loretto, the Rev. Thomas Langhorne, caused part of the earthen floor to be dug up, when a number of human skulls were discovered, some of which were in complete preservation, and remain so. Over the entrance is an antique carved stone, but from the date on it, 1634, it must have been placed there at a period subsequent to the destruction of 'the chapelle of Lauret.' The present villa of Loretto, which is extensive and commodious, appears to have been built during the last century, and is surrounded by delightful gardens and orchards."—In the town of Musselburgh, there were anciently two other chapels, similar in character to that of Loretto, but of much less note.—Four hundred yards south of the villa of Loretto, gracing the south-east outskirts of the town, and presenting in itself, in its grounds, and in their historical associations, singularly engrossing attractions, stands Pinkie-house: see article PINKIE.—At the east end and on the south side of High-street, stood till about the year 1809, the house in which died, in July 1332, the great Randolph Earl of Murray, the friend and compatriot of "the good Lord James" Douglas, and the second in command under Robert Bruce in the field of Bannockburn. It was a two-storied house, buttressed in front, with conical Flemish windows, each surmounted by a sculptured rose. The ground-floor was disposed in a vaulted passage or corridor 6 feet wide, and in two apartments with arched roofs, each 14 feet square, and, from the floor to the centre of the arch, 8 feet high. The house might well have been the best in the town at the remote date of its erection. The inhabitants are said by tradition to have formed a guard round the house during the celebrated inmate's illness, and to have received some notable reward in the form of privilege conferred on the town from the Earl of Mar, the succeeding regent. On the site of the house now stands Morison's-haven Operative Masonic lodge,—an institution which originated at the place whose name it bears [see MORISON'S-HAVEN], and whose localization in Musselburgh seems quite as curious as the proud character of the lodge's site.—In the back street called the Dam-brae, stands the Musselburgh Kilwinning lodge, built in 1612. Near it in the same thoroughfare, is a spring of great repute for culinary uses, called the Vicar's well, and anciently belonging to the parsonage of the vicar of Inveresk.—At the west end of High-street stands a house which figures in the letters of Humphry Clinker as that in which Dr. Smollett was received by Commissioner Cardonell.—In Fisherrow, near the end of the timber-bridge, stands the plain villa of Eskside, the residence of Professor Stuart; and within the precincts of its garden is a detached, tasteful, two-storied, circular building, beautifully mantled in ivy, the study of the Professor's son Gilhert, in which several of his works were written, and one of the most arresting objects in the landscape seen down the Esk from the new bridge. The manse of Inveresk, built in 1806, and situated in the south-west of Musselburgh near the Vicar's well, is noticeable as probably occupying the site of the ancient or popish parsonage-house, and especially as having supplanted a predecessor of great note, in association with literature. During the incumbency of the late Dr. Carlyle, the former manse, built in 1681, was a favourite resort of Robertson, Hume, Campbell, Logan, Mackenzie, Smollett, Home, Beattie, and other distinguished literati of the last age; here a large part of the tragedy of Douglas was written; here, among the papers of Dr. Carlyle, was found a complete copy of Collins' long-lost "Ode on the Superstitions of the Highlands;" and here, at an earlier period, were composed the sermons of Williamson. Ecclesiastical buildings in the

town, and antiquities and interesting mansions in its vicinity, are noticed in the article INVERESK: which see.

The links of Musselburgh, long noted for promenading, golfing, and archery-ground [see INVERESK], were, in 1816, adopted as the scene of horse-racing for the district environing Edinburgh [see LEITH], and were trimmed and furnished with appliances suited to the sport of testing and witnessing the comparative locomotive powers of the fleetest horses. A curvilinear or irregularly oval race-course, measuring about 1,000 yards in its greater axis, less than 400 in its lesser axis, and about 2,400 in its circumference, stretches eastward from a point 100 yards west of the Esk, and impinges for a considerable way close upon the sea. At the part of it which is nearest the town, and about 100 yards from Loretto, there is a well-constructed stand. Races, understood to be those of Edinburgh, but claiming intermixedly the prefix names of it and of Musselburgh, have, since 1817, been run here every autumn; and the races of the Caledonian hunt also are run here every third year. The moral scenes at these races are free from the roistering and the coarseness which so greatly characterized those at their Leith predecessors, yet they exhibit many broad features of fashionable dissipation.—Close on the race-course, at its west end, is the powder-magazine; and between it and the frith stands the gas-work, erected in 1832, which supplies both Musselburgh and Portohello with gas. On the links of Musselburgh, in 1638, the Marquis of Hamilton, acting as the representative of Charles I., and bearing a commission to destroy the power of the Covenanters, was met by so many thousands of that noble and undaunted people, and saw such demonstrations of their might and resolution, as utterly blenched the warm hue of the ruthless hopes he cherished. Moving from these links along the coast to Leith, he found the line of his whole route flanked with the triumphant partisans of the Covenant; and on approaching the rising ground near the Leith academy, was petrified to see so many as about 600 Presbyterian ministers arrayed in the caps, and bands, and gowns of Geneva, and calmly but sternly glancing defiance at his master's purpose to make Prelacy the religion of Scotland. In 1650 the chief part of the infantry of Oliver Cromwell encamped on the links, while his cavalry were quartered in the town; and they remained here during nearly two months. The spot on which Cromwell's own tent was pitched is still pointed out opposite Linkfield-house.

Musselburgh possesses a singular combination of advantages as a seat of manufacture; but was long fluctuating, disastrous, and unimportant, and eventually has become peculiar and spirited in its manufacturing history. A broad-cloth manufactory, begun in the end of the 17th century, was long carried on in great perfection, though not to great extent. A kind of checks called Musselburgh stuffs were, in the early part of the 18th century, fabricated in large quantities from coarse wool, at the price of from 2½d. to 5d. per yard, and chiefly exported to America for female servants' gowns; but soon after they were entirely jostled out of the market by cheaper and more showy fabrics of cotton. Woollen cloth, both coarse and fine, continued to be made in small quantities toward the end of last century, but has since altogether ceased to be a Musselburgh article of produce. About the year 1750 a cotton manufactory was commenced, and employed in the town and its environs about 200 looms, but it was speedily swamped by successful competition in other parts of Scotland. A manufacture of thicksets, waistcoats, handkerchiefs, and some kindred fabrics set flourishingly

off, though on a small scale, toward the end of last century, and it too has disappeared. A china manufacture was begun about the same time, or earlier, at Westpans, and received some encouragement from the nobility and gentry on account of the neat embellishments of its ornamental china; but as it could not produce table-china cheap enough for common sale, so it was abandoned. Its place is now occupied by a pottery for the coarser sorts of earthen ware. Dyeing is another occupation which once formed a prominent part of the town's trade, and has declined nearly to extinction. A starch-work at Monkton, south of Musselburgh, paid, in 1792, no less than £4,064 13s. 4d. of excise duty, but was given up on the following year. A salt-work, of long standing, exists at Magdaleney Pans. The brewing of ale and beer occupies now only one brewery, very recently occupied two, and in the latter part of last century was a very extensive trade. The tanning and currying of leather is carried on in three large establishments, employs about eighty workmen, annually consumes 900 or 1,000 tons of bark, and supplies principally the markets of Edinburgh and Glasgow.—A sail-cloth manufactory, established in 1811, was at first small, but has gradually increased to a great extent, and now occupies large premises, and employs a steam-engine of 55 horse-power. This factory produces sail-cloth of flax, both warp and weft, highly or moderately bleached,—of flax warp and tow weft, various in quality and bleachedness,—and of tow, both warp and weft; but the superior are the kinds chiefly woven. The wages of the workmen fluctuate between 5s. and 22s., but average perhaps 9s. 6d. clear. Three factories, one of them very large and begun about the year 1820, the others small and begun since 1838, are employed in the weaving of hair-cloth, and are the only Scottish establishments of their class. The principal fabric is a cloth for chair and sofa-covers, made of hair weft and dyed tow warp, woven entirely by women, assisted by 'servers,' whose work is a succedaneum for the shuttle, and yielding 8s. 8d. of weekly wages to the weaver, and 4s. 4d. to the server. Another fabric is a beautiful white one, with coloured stripes and figured work, made of cotton warp and hair weft, for covers to drawing-room furniture and boys' caps, and yielding, on the average, 6s. of weekly clear wages. House of Commons horse-hair carpeting, introduced to the use of the house on the recommendation of Dr. D. B. Reid, is a fabric woven only here, made of yellow hair warp and black hair weft, with a border of chestnut hair on each side, is a yard wide and very thick, and pays wages of from 10s. to 12s. a-week.—A manufactory of fishing nets, established in 1820 by Mr. Paterson, the ingenious inventor of a method of weaving them, which long baffled his skill but became educated from persevering and laborious experiment, now employs about twenty looms, and produces about 2,500 yards of net per week. Another manufactory of the same kind,—the result of an invention quite independent of Mr. Paterson's, and entirely different from it in the manner in which it knots the net—was established six years ago by Mr. Robinson, the perspicacious inventor, and has already risen to considerable importance.—The gardens of Musselburgh, besides an unusually large proportion of such as are strictly private, and wholly or partially devoted to embellishment and luxury, include many large ones called mail-gardens, whose produce, chiefly in leek seed and in esculent plants, is a large article of export to the markets of Edinburgh and Glasgow. Leek-seed matured here has long been esteemed the best in Scotland, and continues to enjoy its reputation.

The harbour of Musselburgh, or more properly

that of Fisherrow—slightly noticed in our article on that town—is situated more than half-a-mile west of the mouth of the Esk, and dates so high as the period of the Roman province of Valentia. From a Roman military station, around which also was a municipium or colony of citizens, at INVERESK [see that article], a causeway led down along the old bridge to the harbour; and from two other Romanized localities, at a much greater distance, other causeways led down to the same point. From ruins which have been discovered in digging the foundations of many houses in Fisherrow, the immediate vicinity of the harbour would seem also to have been very anciently a seat of population, and very probably the site of a colonia Romana. In the middle ages, also, a commerce appears to have been carried on between it and Holland, so large as to draw the special attention of the Dutch States, and excite their wishes for its continuance. Yet the harbour is at present so shallow as to have only 4½ feet of water at neap tides. This fact, jointly with one formerly gleaned at, that the English vessels, in 1547, got so close into the mouth of the Esk as to fire destructively upon the troops passing along the old bridge to the field of Pinkie, appears to intimate that the sea has somewhat receded. The circumstance that the approaches of the old bridge are completely beyond the reach of the tide, proves, at all events, that the sea has not encroached. The harbour stands on the edge of an expanse of loose sand at a point where there is no outward current either to form a bar or to wash away sleet. At the commencement of the present century it was in a rude condition, fit for little else than the accommodation of fishing-boats, and even yet it has greatly too short and ill-contrived though substantial a quay. The pier so breaks the action of the tide that a lodgment of sand is made on the inner side, such as renders the depth 2 or 3 feet less than on the outer side; it has been pierced with an archway, carrying through a pipe for attempting—but quite vainly—to wash out the sand by water poured in from a reservoir; and it is improvable only in the way in which improvement upon it is likely soon to be attempted, by running it considerably out to sea; but even then will not render the place a good harbour. Yet the trade, in spite of all disadvantages, has of late years rapidly and greatly increased. Though no vessel belongs to the port, many coasting-vessels of this country, and vessels of Norway, Prussia, and Holland, resort to it in preference to Leith. The number annually clearing from it is between 200 and 250, averaging each between 60 and 70 tons. A very rich coal-field around Musselburgh, perforated with numerous shafts, and plied by swarms of minors, furnishes a chief article of export, as well as of local enrichment. The other exports are principally bricks and tiles. The imports coastwise are very miscellaneous, and from abroad are chiefly timber, bark, skins, bones, rape, and oil-cake. An attempt to run a steamer between Musselburgh and Berwick was defeated by the inconvenience of the harbour.

Musselburgh has branch-offices of the Commercial bank of Scotland and the Western bank of Scotland; a savings' bank; a public reading-room; a subscription library; a circulating library; five or six friendly societies; a clothing society; and two mortifications called Hastie's fund and Bruce's fund, the latter for lending out money to industrious tradesmen, and the former for clothing and educating destitute orphans, and affording aid to the aged and the infirm. Ecclesiastical and school notices are given in the article INVERESK. Musselburgh schools have long been so famous that a club of distinguished men, who were educated in them, holds periodical meetings in Edinburgh to keep alive the reminiscences of their school-

boy days. As the climate is singularly healthy, and the situation advantageous for out-of-door exercise, and the best masters for modern languages, drawing, music, and other ornamental departments, can always be obtained from Edinburgh, hoarding-schools are very successful and of more than average reputation.—Musselburgh, from 1792 till near the close of the continental war, figured conspicuously as the site of military wooden barracks, so extensive that they often accommodated upwards of 2,000 men, of the militia and volunteer cavalry. In 1797, and at subsequent dates, Sir Walter Scott, as quartermaster of the Edinburgh light-horse, flung all the romance of his society over the place, aided by a novelist of totally different character, whose principal work is as disgustingly notorious as Sir Walter's writings are celebrated, the well-known 'Monk Lewis,' then a resident in Fisherrow. So important to the town were the barracks, that when the last regiment marched out of them, a wag rather graphically laconized the result, by writing on the walls 'A town to let.' Yet half-pay-officers and retired capitalists, in considerable numbers, compensated the loss; and, in spite of the powerful competition of Portobello, they, in many instances, make the town their home, and benefit it by their presence.—An annual fair is held once a-year; it was formerly a scene of great business, and continued several days; but it is now without traffic, and lasting two days affords mischievous occasion for the lessening of salutary moral restraint. Communication is maintained with Edinburgh by coaches along the road, and by railway from Fisherrow, during almost every hour of the day.

Musselburgh is governed by a council of 12. The magistrates exercise jurisdiction in the baillie court, and in the justice-of-peace court. They also hold a small-debt-court for sums not exceeding £5; and on the same days they hold a civil court, in which they are competent to judge to any extent in point of value. In criminal cases of an aggravated nature, they merely examine the offenders, and send them to the sheriff; and in those of a trivial nature, they punish arbitrarily by imprisonment or fine. The civil cases between 1820 and 1833 varied in number annually from 209 to 430, two-thirds of them being small-debt cases, and not above 30 on the average annually being of a nature which required to be sent to the assessor. The criminal cases, during the same period, averaged 18 a-year; they were principally cases of petty theft and riot, but included 4 charges of manslaughter, and 3 others of aggravated character. An assessor who assists in deciding civil processes, does not attend in court, but is consulted in cases in which the proceedings are conducted in writing. In other cases, the magistrates take the advice sometimes of the town-clerk, and sometimes of the procurator-fiscal. The office-bearers appointed by the town-council are the procurator-fiscal, salaried at £15, with the same fees as are paid in the sheriff courts,—an assistant treasurer and master of works, salaried at £40,—a clerk, an agent, a surgeon, a shore-master, a hillet-master, keepers of the steel-yard, fire-engine, and town-clock, together with an additional town-officer, severally salaried at from £1 to upwards of £16 16s.—several burgh officers, who receive no salaries,—and the rector of the grammar-school of Musselburgh, and of 2 salaried teachers of English, one in Musselburgh proper, and the other in Fisherrow.—Very extensive property formerly belonged to the burgh; but, many years ago, it was to a large amount sold or feued. The existing property, consisting of very numerous items, was valued, in 1833, at £35,000; and the debt was stated, at the same time, to be £12,123 8s.—The

revenue for the year ending September 1833, was £2,011 4s.; and the expenditure for the same year, £2,197 3s. 8½d. The taxes or customs, shore and harbour duties, levied by the magistrates, amounted to £517 11s. 4d. of the revenue. Of this sum £230 accrued from what are called Gentie's customs,—a tax levied in terms of the town's charter upon carts, waggons, and cattle, which was imposed at a time when wheeled carriages for purposes of luxury were unknown, and which falls with undue weight on the poorer part of the population. The corporation-revenue in 1839–40 was £2,022 14s. 1d.—The rights of a Burgess cost, for a Burgess' eldest son 11s. 1¼d., for a soldier £1, and for a stranger £1 6s. 8d., with 3s. 6d. or 5s. to the town-clerk; and persons not burghesses must pay 3s. 4d. a-year for leave to carry on business. There are 7 incorporated trades.—Police affairs are managed, not by any separate establishment, but by the town-council, or a superintendent whom they appoint. Though of late years greatly improved, they still require amendment. Musselburgh is far from being as clean or tidy a place as many a town which has not a tithe of its wealth, aristocracy, intelligence, and topographical advantages.—The town unites with Leith and Portobello in sending a member to parliament. In 1833, the number of householders whose rents were £10 and upwards, was 315, of whom 110 were burghesses; and of householders whose rents were less than £10 but not less than £5, was 165, of whom 37 were burghesses. The parliamentary and municipal constituency amounted, in 1840, to 297. Population, in 1831, including Fisherrow and Newbigging, 7,024. Population of the parliamentary burgh, in 1841, 6,328. Inhabited houses, in 1841, in that part of the burgh bounded on the north by the Esk, 406; in the *quoad sacra* parish of North Esk, hounded on the south by the Esk, 520. Number of families in 1841, 1,394.

Musselburgh is believed to have derived its name from a mussel-hank near the mouth of the Esk. But its earliest name was Eskmouther or Eske-muthe; and its next, including the manor over which it presided, was Musselburghshire. As Eske-muthe it is mentioned by Simeon of Durham so early as the 7th century, and seems to have been a seat of population throughout the whole Northumbria-Saxon period. In 1201, the barons of Scotland assembled at 'Muschelburgh' to swear fealty to the infant son of William the Lion, afterwards Alexander II. In the reign of David I., a grant was made by that "sair saunt to the Croon," of the manor of Great Inveresk, or 'Musselburghshire,' comprehending Musselburgh, Fisherrow, the church of Inveresk, with its tithes and other pertinents, and the mills and fishings of the manor, to the monks of Dunfermline; and this grant was confirmed in 1236 by a bull of Gregory IX., and at other dates by deeds of David I.'s successors. From the original grants the monks enjoyed a baronial jurisdiction over the manor; and from its confirmations, they acquired the increased jurisdiction of a regality. Alexander II., in 1239, granted to the monks a right of free forestry over all the lands of the district; and Robert III. gave them all the new customs leviable within the burgh. The vicars whom the monks sent or appointed to officiate in the church of Inveresk were sometimes called "vicars of Muscilburg," and appear, among distinguished or influential men, as witnesses to many charters. A dispute in the 13th century respecting temporalities between the vicars and the monks, which seems to have been keen, and which was terminated by a decision of the diocesan bishop that the vicars were entitled to the small tithes and the offerings at the altars of 'Muscilburg,' excepting the fish of every

kind, and the tithes of the mills for which they were to pay the monks annually ten merks, seems evidence that, even at that early date, the altar of Our Lady of Loretto, and possibly the altars of the other chapels of the town, had become the resort of devotees. The regality of Musselburgh and the property connected with it passed after the Reformation to Lord Thirlestane, and descended with some dilapidations, to his posterity the Earls and Dukes of Lauderdale till 1710. See *INVERESK*. The town is still in possession of a charter granted by John, Earl of Lauderdale, to the bailies, treasurer, council, and community of the hurgh, confirming various ancient charters and rights granted to them by the abbots of Dunfermline, the oldest of which is there stated to have been given and granted by King David (I.) in the 34th year of his reign. There is also mention made in the charter by Lord Lauderdale of a charter and infestment by Robert, Commendator of Dunfermline, with consent of the conventicle brethren, in favour of the bailies, councillors, and community of the hurgh for the time being, dated 11th December, 1502, granting and confirming to them all and whole the burgh of Musselburgh, and ground and lands of the same, with liberties, and advantages, as freely and honourably as any other hurghs of barony or of regality within the kingdom of Scotland, or which of law, or the practice of the realm, belong to them; with power of entering hurgesses, privileges of harbour and trades, of holding three weekly markets, and a fair during eight days at the Festival of the Apostle James. The last mentioned charter also empowers the bailies and community to elect annually, at Michaelmas, two bailies, a treasurer, and officers to a sufficient number for the administration of justice, with power to hold courts and punish malefactors; and to levy small customs and harbour dues.—Lord Lauderdale's charter also confirms two other charters of different lands, mills, multure, knaveships, &c., given to be held in feu, which are described at great length; and it contains a clause of *novodamus* of all liberties and privileges, harbours, stations, and receptacles for ships, anchorage and shore-dues, bridge customs, creating and appointing free hurgesses, with power of sale, &c., another fair for the space of two days on the 16th and 17th October, electing magistrates, holding courts, punishing malefactors, and, if needful, of putting them to trial and torture. It further gives the power of granting infestments, and also a clause in virtue of which it has been the practice of the magistrates to grant titles according to the manner used in hurgage tenure, viz., "also of cognoscing, entering, and seizing the heirs of the foresaid free tenants, in the foresaid lands, tenements, and others, respectively above specified, when their certain right is clearly manifest, according to the old usage and custom of the said hurgh." This charter was confirmed by Charles II., on 21st July, 1671: and under this last confirmation the property of the hurgh is now held. In 1632, a charter under the great seal erected Musselburgh into a royal burgh; but, in the same year, in consequence of a compromise between its own magistrates and those of Edinburgh, a decreet of reduction of the charter was obtained by the latter from the privy council. But it still wanted none of the rights of a royal hurgh except that of representation in parliament; and this it obtained by the great national measure of 1832. It now, therefore, differs from a royal hurgh in nothing but the name.—Though it reaped consequence from the Reform bill, and contributed in its celebrated schools his early education to Mr. Thomas Drummond, Lord Althorpe's secretary, by whom the hill is said to

have been drawn up, it was, with the exception of Queensferry, the only town in Scotland which, immediately after the great change, returned a majority of conservative councillors.

MUTHILL, a large parish, a little south of the centre of the southern half of Perthshire; bounded on the north by the main body of Strowan, and by Crieff and Madderty; on the east by Trinity-Gask and Blackford; on the south by Dunhlaue; and on the west by detached parts of Strowan and Monivaird, and by Comrie. It is so irregular in outline as not to be even proximately reducible to any known mathematical figure, but is nevertheless compact. Its greatest length from the boundary at Longsholls on the east, to the east base of Benourhill on the west, is 10½ miles; greatest breadth from the point where the river Earn first touches it on the north, to Nethermill on Allan-water in the south, is 8¾ miles; and its area is probably about 76 square miles. The river Earn, running in the direction of south-east by east, washes the northern district for 4½ miles, measured in a straight line, and about 7 measured along its sinuosities; over three-fourths of the distance it is the boundary with Crieff, and over the other fourth it cuts off on its left hand the lands of Innerpefferay, which once formed a detached part of Monzie: see *MONZIE*. Allan-water, coming down from the east, runs for 2 miles along the boundary on the south. The *MACHONY* and the *KNAIK* [see these articles], rise very near each other close on the western boundary, and traverse the parish lengthwise, the former eastward to the Earn, and the latter eastward and south-eastward to the Allan. Loch-Balloch is a tame small lake in the north-west, whence runs a brook to the Earn. The pond of Drummond is a splendid artificial sheet of water, nearly a mile long and about half-a-mile broad, on the lands of Drummond in the north, curtained round with wood, overhung on one side by a high rocky bank, and enlivened on its bosom with numerous swans and geese. The western half of the parish is bleak, harren, and wildly pastoral, and lies within the Highlands; and the eastern and north-eastern half luxuriates in the picturesqueness and fertility of strath and glen, of pleasant slopes and diversified surface. The north-east corner, consisting of a large tract, is one of the most delightful parts of the luscious Strathearn. Along the margin of the level and hanging grounds of this district, sweeps circuitously a hilly ridge, green and cultivated, terminating at the west end in the most conspicuous object in the parish, the hill of Torlum. This elevation alone fixes the eye which is turned toward the district from a distance on the east, and seen thence, seems to preside over lands partly level, and partly rising, which have nothing to dispute or lessen its supremacy: it is an exquisitely outlined cone, towering high above the circumjacent grounds, and lifting a forest of pine into communion with the clouds. Along the south side of the ridge which ends in this fine hill, lies a narrow vale, the basin of the Machony; and screening the vale along the other side, runs a naked and chilly upland range, akin in character to the Highland heights of the west, and abruptly losing itself among their huddled mass. This range commences on the east in what is called the Muir of Orceil, bears the name of Corryaur, runs along the parish in a line not far from its middle, forms the water-shed between the tributaries of the Forth and those of the Earn, and naturally divides the parish into two great districts, which may be designated Ardoch on the south, and Muthill proper on the north, and which belong respectively to Strathallan and Strathearn. The Strathallan district, except in its western or Highland part,

may be viewed as generally declining to the Allan; and as to all the properties of naturally geographical boundary, engrossingly interesting antiquities, beauty of landscape, separate village, and ecclesiastical and school establishments, is essentially a distinct parish: see article ARDOCH. Muthill proper, or the Strath-earn district, forms a laudscape of many and very pleasing attractions. A spectator looking down upon it from Corryaur, "sees the parish-church, a stately Gothic edifice, with its adjacent cleanly village, looking through the rows of shrubs and trees, —roads in several directions, half shaded over with limes and chestnuts,—large fields in the highest state of cultivation, and the winding Earn moving slowly through them. But this is not all. On his left is Drummond-castle, full in view, whose shattered walls remind him of other days; and behind it is Torlum-hill, 1,400 feet above the level of the sea, unsurpassed for beauty in its conical shape and its evergreen trees; and then before him is lofty Benchoan and Turret-glen, and the Knock with Crieff on its sloping side; and on his right the far-extending prospect to the hills of Sidlaw." [New Statistical Account.]—About 2,500 acres in the parish are planted; and the rest of the area is in nearly equal proportions arable and uncultivated.—The principal antiquities of the parish, Ardoch-camp and Drummond-castle, are hotb separately described. Commanding a view eastward to the distance of 40 or 50 miles, is a small rock close by Drummond-castle, called Eagle's Craig, and, by the country people. Beacon-hill, the top of which is flat, and covered to a considerable depth with ashes. Several Roman roads intersect this parish, and vestiges of Roman camps are numerous. Large single standing-stones, from 10 to 14 feet high, are numerous; and remains of Druidical temples are not unfrequent.—The village of Muthill stands on the mailroad from Glasgow to Perth, 4 miles south of Crieff, 17 from Stirling, and nearly the same distance from Perth. In tidiness of aspect, neat rusticity of architecture, and scenic

beauty of position, it has few equals in Scotland. Markets, which now gave it importance, have been swamped by its vicinity to Crieff. A few of its inhabitants are cotton-weavers in the employ of Glasgow manufacturers, and the rest are principally agricultural labourers. Its population is about 1,300. An excellent library, left by the late Lord Madderty, provided with a librarian, and rich enough to be an acquisition to a city, exists for the use of literary persons at Innerpeffray. Three distilleries in different parts of the parish produce annually about 100,000 gallons. Population, in 1801, 2,880; in 1831, 3,297. Houses 453. Assessed property, in 1815, £14,937.—Muthill is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend £243 17s. 5d.; glebe £30. Unappropriated teinds £180 13s. 1d. The parish-church was built in 1828, and is one of the most elegant in the country.—An Episcopalian chapel has long existed in the village of Muthill.—An United Secession chapel stands at Greenloaning in the *quoad sacra* parish of Ardoch. A chapel—dedicated to St. Patrick—anciently stood in the sequestered Highland district of Blair-in-roan, and is commemorated in a well called St. Patrick's, which is absurdly reputed to be efficacious in the cure of hooping-cough. A Culdee establishment is contended by some writers to have stood in the parish. Muthill—in the days of popery and prelacy—was the residence of the dean of Dunblane; and, for some time after the Reformation, the seat of the presbytery, which afterwards took name from Auchterarder. Its presbyterian ministers—commencing with Hally, who served it for half-a-century, and figured in the revival scenes of Cambuslang—have been men remarkable for pastoral worth and personal piety. Barclay, the founder of the sect of Bereans, was a native of the parish. In 1834, the parochial school was attended by 99 scholars, and eight private schools by 350. Parochial-schoolmaster's salary £34 4s. 4½d., with £16 10s. fees, and £12 10s. other emoluments.

PORT OF MONTEITH.

## N

NABEE (LOCH), or LOCH-NABEAU, a small lake in Morayshire, in the parish of St. Andrew's Lhanbryd. It is about 3 miles in circumference, is frequented by flocks of wild geese and ducks, and is sometimes visited by swans.

NAIRN, a parish on the coast of Nairnshire, and in the province of Moray. It is bounded on the north by the Moray frith; on the east by Auldearn; on the south by Calder; and on the west by Ardersier. It expands at the ends, and greatly contracts in the middle, so as to have proximately the outline of an hour-glass. Its greatest length from north to south is upwards of 8 miles; its greatest breadth, from east to west, is 6 miles; and its superficial extent is between 25 and 30 square miles. It all lies within the champaign country, or great plain of Moray. The hill of Urchany, at one of the south corners, is the highest ground, and only noticeable eminence. For some distance from the skirt of this height the surface descends in a gentle slope; and along the sea-board it becomes low and flat. The river Nairn bisects the parish north-eastward and northward to the frith. The soil on the banks of the river is sand mixed with clay; in the southern district, is a rich and heavy mould; and about Kildrummie, around the town, and along the coast by Delnies, is light and sandy. A peudicle of about 400 acres around the town is probably the most pleasant low ground in the north of Scotland. Salmon are somewhat extensively taken in the river, shell-fish at its mouth, and haddocks, skate, cod, ling, flounders, and herring, in the frith. On the north side of the hill of Geddes are vestiges of an old edifice, called *Caistel Fionlah*,—'Finlay's castle,'—about 78 feet long, and nearly half as broad. It was surrounded with a ditch, still visible, round the middle of the eminence. A little east of the same hill are the remains of the castle of Rait, built at a remote but unascertained period, and the residence for some time of a branch of the powerful family of Comyn. At a place called Knock-ma-gillan, a little below this castle, 18 of the Macintoshes were slain by the Comyns in a feudal brawl. At Easter-Geddes are the remains of an old chapel, the burying-place of the family of Kilravock, surrounded with a public cemetery. Lady Kilravock, and her husband, Hugh Rose of Geddes, obtained, in 1293, a charter from King John Baliol, confirming to them and their heirs the lands of Kilravock and Geddes. The chapel was founded in 1473, dedicated to the Virgin Mary, and endowed with £5 Scots and a small glebe. Its chaplain was to perform daily offices, not only for the soul of the founder, but also for the souls of his predecessors, and of his heirs and successors for ever,—a pretty plain intimation that the masses would ever be useless. The parish carries two roads up the river, and two parallel to the coast. Population, in 1801, 2,215; in 1831, 3,266. Houses 721. Assessed property, in 1815, £1,762.—Nairn is the seat of a presbytery, in the synod of Moray. Patron, Brodie of Brodie. Stipend £284 2s. 10d.; glebe £18. Unappropriated tithes £347 2s. 1d. The parish-church was built in 1810–11. Sittings 902. A catechist, paid by voluntary subscription, divides his labours between Nairn and Auldearn.—An United Secession congregation was established in the parish about 65 years ago. Their meeting-house was built in 1815, at a cost of about £820. Sittings 512. Stipend £110.—An Inde-

pendent congregation was formed in May, 1801. Their chapel was built in 1804, at the cost of £575. Sittings 416. Stipend about £46 from the congregation, and £20 from the Congregational Union.—The parish-school, at the date of the Education Report in 1834, was in a most inefficient state. Salary about £30 with £10 fees, and £7 other emoluments. There are a prosperous academy, established, a few years ago, by the inhabitants of the burgh; two flourishing schools in the landward district, supported by the society for propagating Christian knowledge; and four other schools;—in all, seven non-parochial schools, conducted by eight teachers, and attended by about 300 scholars.

NAIRN, a small town, a royal burgh, and the capital of Nairnshire, is situated on the left bank of the river Nairn, immediately above its embouchure; 11 miles east by south of Forres; 23 east-south-east of Elgin; 31½ east of Fochahers; 18 north-east of Inverness; 86 north-west by west of Aberdeen; and 194 north-north-west of Edinburgh. Nearly the whole town has a dingy and very antiquated appearance. Its principal street, called Main-street, commences close on the river ¼ of a-mile from the frith, and runs away south-westward to the distance of 3½ furlongs. This thoroughfare is nearly straight, and tolerably spacious; and has the irksomeness of its old-fashioned aspect relieved by one or two fine modern public buildings. All the other old thoroughfares are narrow confined lines, either huddled in a mass round the foot of Main-street, or sneaking crowdedly from its sides. Charles-street is a new, solitary, and partially edified line along the river and harbour, from the foot of Main-street to the frith. Cawdor-street and Cumming-street are newly planned, and spacious lines, the former parallel with the frith at a furlong's distance, the latter crossing it at right angles, and both situated north-west of the old town, along the margin of the town-links. Several good new houses have been erected also on the south-west wing of the old town. The streets, not long ago noted for having the most uneasy pavement of any in the kingdom, are now well-paved; and, in 1839, they began to enjoy the luxury of gas. The river, just before coming abreast of the town, forms an island of 1½ furlong in length, and opposite the lower end of the island is overlooked by the parish-church; and after passing the bridge two-thirds down the town, it continues to run direct along to the frith, leaving to the right its old channel which diverged among sandy grounds to the north-east, and formed a little island. The bridge was originally an excellent and substantial structure, built in 1631 or 1632; but it sustained much damage,—first from a flood in 1782, and next from the great flood of 1829. An inscription upon a stone of it, which long ago fell into the river, is 'Gulielmus Rose de Clava, with the motto, 'Non est Salus, nisi in Christo: Soli Deo Gloria.' At the south-west end of the town stand the academy, a handsome structure, and a neat monument to the memory of Mr. John Straith, who was 40 years schoolmaster of the parish. Near the middle of High-street, and on its north-west side, stand the town and county buildings, erected in 1818. The structure is the principal public edifice and architectural ornament of Nairn; and it has a fine appearance, and is surmounted by a handsome spire. Its interior contains the town and county

jail, and a court and county hall; the latter very elegant and spacious, and occasionally used as a ball-room. In a recess opposite this structure stands the United Secession meeting-house. On the same side as the town-house, and less than 100 yards to the north-east, stands Richardson's hotel. This is noted both as a good inn and as the scene of an annual autumnal festivity, called the Nairnshire Harvest Home, and possessing strong attractions for persons who cannot find happiness enough in the retirements of quiet society, and of home and the closet. The original town occupying, perhaps, not quite the same site as the present, and one more seawards, was defended by a castle. Buchanan informs us that, as far back as the time of Malcolm I., the Danes captured this castle, and cruelly used its custodes or keepers. But every vestige of the structure, and even its site, were long ago overwhelmed by encroachment of the sea.

Nairn is distinguished for the dryness and healthiness of its situation, for its cheapness of provisions, and for the excellence of its beach and its artificial appliances for sea-bathing. It is, in consequence, a favourite summer resort of sea-bathers, and is provided with cold and hot salt-water baths. Several reminiscences and objects both in the town and its vicinity, possess interest for strangers, or make pleasing appeals to the imagination. The town was long noted for standing so exactly on the boundary-line between the Highlands and the Lowlands, and being so completely bisected by the mutual repulsion of the Moray men on the east, and the kilted Gael on the west, that the Lowland Scottish dialect was spoken at the one end of the street, and the Gaelic language at the other. According to a tradition of the place, James VI., when one day after his accession to the English throne, twitted about the smallness and unimportance of the towns of his native kingdom, wittily declared that he had "ae toon in Scotland, the toon o' Nairn, sae hig that the inhabitants spake two different languages, and the folks at the ae end o' could not understand the folks at the ither." West of the town is the field on which the Duke of Cumberland encamped his army on the day before the battle of Culloden. The insurgents, aware of his position, came down the banks of the Nairn from Culloden with the design of attacking him by surprise; but they were too late in their movements, and, being overtaken by the dawn, were obliged to halt and return. Their fatigue and want of sleep occasioned by the long and useless night-march are sometimes assigned as a chief reason of their having suffered so signal and total a discomfiture in the action of next day. The field of battle lies 9½ miles south-west of Nairn. Kilravock (popularly Kilrawk) castle, a seat of Colonel Rose, the descendant of one of the oldest and most respectable families in Moray, stands on the left bank of the Nairn, 6 miles on the way to Culloden; and lifts over the stream a range of castellated buildings, and a very ancient tower. A museum of paintings, armour, and writings in this mansion excels every other collection in the north. The mother of Henry Mackenzie, the author of the 'Man of Feeling,' and the lady admired by Lord President Forbes, and made the heroine of his song, 'Ah! Chloris, could I now but sit,' were daughters of the House of Rose, and residents at Kilravock. Less than 4 miles south of Nairn stands Caydor or Calder-castle, teeming with curious associations: See CALDER. Within a range of 5 miles round the town—and, in about half the instances, within a range of 1½ mile—are about 17 or 18 mansions, various in their attractions, and jointly contributing much richness to the landscape.

A harbour was constructed at Nairn, in 1820, chiefly according to a plan by Mr. Telford; and, including a sum paid for the deterioration of a fishery by changing the course of the river, cost not less than £5,500. Most of the work having been swept away, or otherwise demolished, by the flood of 1829, the inhabitants have made laudable exertions for its restoration. The trade of the town, though understood to be thriving, must always be very limited; as the Highlands commence at a short distance to the south, and Inverness and Findhorn supply the adjoining coast districts. The chief articles of import are coal, lime, groceries, soft goods, and other merchandise; and of export are fish and fir-timber. The fishing and the curing of herrings are conducted with much enterprise and success; and the former employs many boats, while the latter has appropriated to it a kind of factorial building. Salmon-fishing likewise gives some employment. A weekly market is held on Friday; and annual fairs for horses and cattle are held on the third Friday of April,—on the 19th of June, if a Tuesday, or, if not, on the first Tuesday after,—on the 13th of August, or first lawful day after. Campbeltown fairs,—on the fourth Tuesday of September,—on the Friday after the third Tuesday of October,—and on the first Friday of November. The April and October fairs are appropriated also to the hiring of servants, and the August fair to the hiring of reapers. The town has branch-offices of the Caledonian bank, the National bank of Scotland, and the British Linen company's bank. Communication is enjoyed with Inverness and the north on the one hand, and Aberdeen and the south on the other, by the daily transit of the royal mail. A stage-coach runs every lawful day to Nairn from Elgin: and, on its arrival, a passage-boat, wind and weather permitting, starts for Cromarty.

"Nairn," says the Report of the Commissioners on the Municipal Corporations, "appears to have been founded by William the Lion. Alexander II. made a grant to the Bishop of Moray 'in excahmium illius terre apud Invernaren, quam dominus Rex Willelmus, pater meus, cepit de episcopo Moraviensi, ad firmandum in ea castellum et burgum de Invernaren.' The lands and town were granted by Robert I. to his brother-in-law, Hugh, Earl of Ross; and they probably continued in the possession of that family till the forfeiture of John, Earl of Ross and Lord of the Isles, in 1475. At that period the tenure of the lands in Nairnshire, which had been formerly held under the Earls of Ross, was changed to a Crown-holding; and a similar change very probably took place with regard to the town of Nairn, which then begins to be styled in records the King's hurgh, and the royal hurgh of Nairn; unless it may be thought that the terms of Robert I.'s grant of the Earldom of Moray to Thomas Raulph (which cannot be easily reconciled with the Earl of Ross's charter) are sufficient to prove that Nairn, as well as Elgin and Forres, was then of the rank of a royal burgh." Any charters erecting the town into a royal burgh, or granting or ratifying its privileges, appear to be lost. But a charter of confirmation, though not copied, was confirmed by an act of parliament in 1597; and that act specially prohibits all who are not freemen and burgesses "from presuming to use or exercise the liberties and privileges pertaining to the said hurgh and hurgesses thereof within the bounds and limits set down in the foresaid infetment." A considerable extent of landed property formerly belonged to the burgh; but it has almost all been alienated. The proceeds of lands which yielded a price of £3,478, and produce annual feu-duties of £10 10s., were all, with the exception

of £210 in price, and £3 10s. 6d. in feu-duties, expended since 1820 upon the construction of the harbour and the building of the jail. The revenue in 1833 amounted from all sources to £141 12s. 8d.; and the expenditure, consisting of salaries to officers and a schoolmistress, public burdens, subscription to the academy, repairs of jail and harbour, and some incidental items, amounted to £151 14s. 3d. The burgh-debts amounted in the same year to £240. The corporation-revenue in 1839-40 amounted to £294 8s. 4d. The only local tax is a stent, which has become merely nominal. Any person, in order to trade within the burgh, must be an ordinary hurgess. The number of burgesses, in 1833, was about 71, of whom about 35 were merely honorary. The fees of admission exacted from handicraftsmen are £1 1s., and from merchants £8, besides small sums to officers. Temporary licences are occasionally granted to un-freemen. There are no minor corporations or crafts. The town-council consists of a provost, 3 bailies, a dean-of-guild, a treasurer, and 11 councillors. Municipal and parliamentary constituency, in 1840, 72. The jurisdiction of the magistrates in criminal matters has gradually narrowed to cases of petty thefts and assaults; and, as regards even these, it is in-cumbered with such oppressive modes of procedure as almost entirely put it in aheyance. Such civil cases as come before the baillie court are few and trifling, and seldom litigated; any civil cases of importance being generally carried to the sheriff-court. The only patronage of the town-council is the appointment of the burgh-officers and a schoolmistress. The burgh unites with Inverness, Forres, and Fortrose, in sending a member to parliament. The population within the burgh-boundaries is but an unimportant fraction less than that of the parish. In 1841, it amounted to 2,687; and in that year the burgh contained 663 inhabited, and 47 uninhabited houses.—Nairn gave the title of Baron in the Scottish peerage to the ancient family of Nairn; and the title afterwards diverged to a younger branch of the ducal family of Athole. The peerage was created in 1681, attained in 1746, and restored in 1824, and it has been dormant since the death of William, 6th lord, in 1837. It is said to be represented by the Baroness Keith of Banheath and Stonehaven-Marischal.

NAIRN (THE), a river of Inverness-shire and Nairnshire, in Moray. Its source is near the central water-sheds of the boldly-mountainous district of Badenoch, at a point 9 miles, in a straight line, east of the middle of Loch-Ness. Its course, from end to end, is, with few and slight deviations, toward the north-east; and, measured in a straight line, extends to about 30 miles. Over 16 miles from its source, it is wholly an Inverness-shire stream; over the next 6 miles it runs across a district in which that county and Nairnshire are irregularly dovetailed into each other; and over the remaining 8 miles, it flows wholly in Nairnshire. Till about the point of its ceasing to touch Inverness-shire, it is a Highland river, and gives the name of Strathnairn to the glen or widening vale which it traverses. Its immediate banks are green meadows and pasture-fields, with a few patches of corn land; and its flanking heights are, for the most part, barren heathy mountains. Some clumps and little belts of alder and birch occasionally make a pleasant fringe-work on its margin; and arrays of plantation and ornamental grounds overlook its progress past the house of Aherarder and on the property of Farr. But, in general, its valley exhibits only the repose of pastoral life, and possesses neither the power of landscape, nor the activity of life which shakes up the quietude of a tourist, and stirringly appeals to his imagination. Yet "its long green meadows, on which clusters of

cottages are seen at wide intervals from one another, the very absence of striking objects in the landscape, the stillness that hangs over the face of nature, interrupted only by the gurgling of the little rills that fall into the sombre and slow-moving waters of the Nairn, impress upon the solitary traveller, as he passes along, subdued and tranquil feelings." [Guide to the Highlands.] After leaving Inverness-shire, it traverses a low country, and is overlooked and enlivened by Kilravock-castle, various mansions, and the town of Nairn. Its influx to the Moray frith occurs 8 miles east of the great contraction of the frith at Ardersier, and 9 miles west-south-west of the embouchure of the Findhorn. It is called, in Gaelic, *Uisge Nearn*, or 'Water of Alders,' from the great number of trees and shrubs of that species of wood which anciently grew upon its banks; and it has communicated its name to the parish and county in which it terminates its course. During the great floods of 1829, the Nairn was swollen into terrific proportions with the other Moray streams; but it worked havoc chiefly toward the end of its path on the estates of Kilravock and Cawdor, and at the burgh and harbour of Nairn.

NAIRNSHIRE, a small county, consisting of a main body and several small detached districts in the province of Moray, and of a detached district in the ancient earldom of Ross. The main body is bounded on the north by the Moray frith; on the east by Morayshire; on the south-east by the detached part of Inverness-shire; on the south by Morayshire; and on the south-west and west by the main body of Inverness-shire. Its greatest length, from north to south, is 19 miles; its breadth at the coast and mean breadth over 9 miles into the interior, is 8 miles; its maximum breadth at a point where, after having suddenly expanded, it sends off to the west a long slender projection, is 16½ miles; and its minimum breadth, at the end of a gradual contraction toward the southern extremity, is 3¼ miles. One detached part lies among wild mountains 2½ miles east of the main body; measures about 4½ miles by 1; and is bounded on the south by the detached part of Inverness-shire, and on all other sides by Morayshire. One pendicle, about a mile long, lies in the vicinity of Grantown, 5 miles south-east of the main body; and another pendicle of not larger extent, lies on the right bank of the Spey, at the distance in a direct line of about 19 miles. Another detached part lies immediately south-west of the sources of Nairn river; is surrounded on all sides by Inverness-shire; measures 5 miles by 3½; and is 4 miles east of Loch-Ness, 13½ south of Inverness, and 28 south-west of Nairn. The detached part in Ross lies along the river Conan and the east side of the head of the Cromarty frith; consists of the harony of FERRINTOSH, and contains the parish-church of URQUHART [see these articles]; measures 4¼ miles by 3; and is ¼ of a mile east of Dingwall, and 6½ miles north-west of Inverness. The area of the whole county is said to contain 200 square miles, or 128,000 acres; and its acres are stated to be in the proportion of about 70,000 cultivated, 30,000 uncultivated, and 28,000 unprofitable.

The first and the second detached portions which we named are patches of wild upland; the pendicle on the Spey is a tiny contribution to the vale of that river; and the detached part near Loch-Ness is the upper part of the mountain-glen of Farigag-water. The sequel of our description must refer wholly to the main body of the county.—Between two-thirds and three-fourths of the area, from the southern boundary downward, are covered with Highland beights, amassed in broad and in frequently cloven moun-

tains, but ploughed throughout by the romantic and picturesque vale of the Findhorn: see FINDHORN and ARDCLACH. The sea-board district is part of the fine large plain of MORAY [see that article]; and, over a breadth of from 1 mile to nearly 6 miles from the coast, is low and flat. The climate strictly resembles that of MORAYSHIRE: which see. The river Nairn runs north-eastward across the western wings of the uplands, and nearly the centre of the lowlands; and the Findhorn, at 7 or 8 miles' distance, runs in a parallel direction through the uplands, achieving within the county a run of 11½ miles. A small stream in the lowlands, north-west of the Nairn, expands into the isletted Loch of the Clans, 1½ mile long, and forms likewise a second but smaller lake. The soil of the lowlands, east of the Nairn, is a rich free loam; superincumbent on sand or gravel; and, west of that river, is a stiff rich clay, or a sharp mould inclining to gravel. The arable land in the billy district, crossed by the Findhorn, bears a small proportion to the waste; and, except on the banks of the brooks, has a sandy soil full of gravel and small stones. The greater part of the county is unenclosed. Natural woods cover 8,000 acres, and plantations at least 4,000. Shell marl occurs in large quantity in a small loch called Conan, and in a moss called Lily. Coal has been thought to exist, and has been searched for in the same neighbourhood. A dark blue stone, which burns in the fire but does not lose bulk, and which after encineration remains solid, is worked in one quarry. The principal antiquities are those noticed in the articles on the parish and burgh of Nairn. The only manufacture is that of woollen-cloth. The low country is well-provided with roads; and the high district has one road up the Findhorn, and another at right angles with it which crosses the river at the bridge of Dulsie. In 1839 the county of Inverness applied to the Commissioners of Highland roads and bridges, to construct a new road into Nairnshire near the coast. Nairnshire, as to segregation of dwellings, contains the royal burgh of Nairn, the burgh-of-barony of Auldearn, and several small villages. Its principal mansions are Cawdor-castle and Delmies-house, the Earl of Cawdor; Kiravock-castle, Rose; Kildrummy, Rose; Beath, Dunbar; Kinsteary-lodge, Gordon; Lethen-house, Brodie; Millbank, Macintosh; Nairn-grove, Macfarlane; Nairnside, Falconer; and Viewfield, Grant.—The county contains the entire parishes of Nairn, Calder, Ardclach, and Auldearn, in the presbytery of Nairn; and parts of Croy in the same presbytery; Dyke in that of Forres; Moy and Petty in that of Inverness; and Urquhart in that of Dingwall. The last of these is in the synod of Ross, and all the others are in that of Moray; Dyke is shared with Morayshire; Urquhart with Ross-shire; and Croy, Moy, and Petty with Inverness-shire. The education returns of 1834 report under the head of Nairnshire only the four entire parishes; and exhibit four parochial schools, conducted by four teachers, and attended by at most 384 scholars,—and fourteen non-parochial schools, conducted by fifteen teachers, and attended by at most 532 scholars.—Nairnshire unites with Morayshire in sending a member to parliament. Constituency, in 1838, 107. The county sheriff-court is held every Friday during session; and the Sheriff small-debt-court every alternate Friday of that period, and occasionally during vacation. The Justice-of-peace small-debt-court is held on every alternate Monday. The valued rent, in 1674, was £15,162 10s. 11½d. Scottish; and the annual value of real property, as assessed in 1815, was £14,902. Population, in 1801, 8,257; in 1811, 8,251; in 1821, 9,006; in 1831, 9,354; in 1841, 9,923. Inhabited houses, in 1801, 1,940; in 1841, 2,396.

NA-NUA (ЛОЧ), a projection of the sea on the coast of Moidart, Inverness-shire. It and Loch-Ailort are identical for 5 miles, and have a mean breadth of about 4 miles; and, after they fork into distinct bays, Loch-Na-Nua penetrates 3½ miles into the interior, and has a mean breadth of about 1½ mile.

NANTHORN. See EDNAM.

NAORSAL, a small island lying immediately off the extremity of the peninsula of Rinns in Islay, and containing the headland called the point of Rinns.

NATHANSTIRN. See NENTHORN.

NAVE, a small island lying off the entrance of Loch-Grunart, on the west coast of Islay.

NAVER (ЛОЧ), a lake in Sutherlandshire, in the parish of Farr; about 11 miles in length, and from 1 to 2 in breadth. Its shores are rude and solitary, but by no means picturesque in general, although there are here and there some spots which seem entitled to that appellation. The hills which surround it are not very lofty, with the exception of Benchlibrigg, which rises far above the others, neither are they very varied or interesting in their outline. Immediately below Benchlibrigg, on a little island near the opposite shore, is one of those interesting remains of antiquity called Pictish towers or forts. It is, like all the others, of a circular form, and built of large stones laid upon each other without cement. The head of Loch-Naver is distant 21 miles from Lairg; and solitary as many of the Highland roads are, few of them can be said to be more so than this. Indeed, throughout, the whole way from Lairg to Ault-na-harrow, near the head of Loch-Naver, not a house or a human habitation is to be met with. Nay, we do not think there is a single tree to be seen on that long extent of 21 miles; at any rate, if there is one, we have no recollection of it. Nor is there a mountain of any height to relieve the scene, with the exception of Benchlibrigg, which comes into view shortly after leaving Loch-Shin. A wide extended, undulating, moorland surface, solely devoted to the pasture of sheep, is all that meets the eye in this part of Sutherland.

NAVER (THE), a river of Sutherlandshire, usually reckoned the largest in the county, but probably maintaining that status only when in flood. Its principal head-waters are Bagasty-water, rising within 4½ miles of Loch-Shin,—Mondale-water, rising close on the boundary of Farr with Edderachyllis,—and a tributary of the latter, issuing from Loch-Maddy at the meeting-point of Farr, Edderachyllis, and Tongue. The first and second of these flow respectively from the south and the west to the head of Loch-Naver; give their names, with the prefix of 'strath,' to the vales which they traverse; and have each a run of about 8 miles. The Naver, after issuing from its cognominal lake, flows 18 miles north-north-eastward and northward to the bay of Torrisdale on the North sea. Just when debouching from Loch-Naver it receives a large stream which comes from Loch-Coir-na-fearn; and, at various parts of its course, it is augmented by considerable tributaries. The river, for a Highland one, is not rapid, and displays much tranquillity and many amenities. It is bordered by broad bands of luxuriant meadow, and naturally arable land, occasionally ornate in blooming copses; and is flanked, behind these, with verdant hills, overlooked in the distance by lofty mountains. In ancient times, towers extended in a chain of mutual communication along the whole of its strath; and, not many years ago, comfortable houses of tacksmen, and the dwellings of about 1,200 dotted its banks; but now, shepherds' abodes, cowering in solitude at long and measured intervals, are the only indications of man's acquaintance with

its pleasures. "Wormwood and a little raised turf alone mark the places" where small hamlets, similar to what are seen in most Highland glens, once stood; "the down of the thistle comes blowing from the sod over the roof-tree, the fires are quenched, and the owners are far from the land of their fathers." In gazing on so fine a tract as the banks of the Naver, and marking its abandonment to the sheep and the oxen, the most liberal economist questions whether the enlarging of farms, and the extension of sheep-husbandry, and the expatriation of the old clansmen from their glens, have not been carried too far. The Naver is the best stream for salmon in the northern Highlands.

NEARTAY, a small Hebridean island in the sound of Harris. It lies  $2\frac{1}{2}$  miles north of North Uist, and 3 miles east of Bernera.

NEIDPATH-CASTLE. See PEEBLES.

NEILSTON,\* a parish in Renfrewshire; bounded on the north by the Abbey parish of Paisley; on the north-east by Eastwood; on the south-east by Mearns; on the south by Ayrshire; and on the west by Lochwinnoch. The statements of its extent greatly differ. By measurement its length has been found to be  $8\frac{1}{2}$  miles, and its breadth fully  $4\frac{1}{2}$  miles, containing 36 square miles. This is exclusive of the baronies of Knockmade and Shutterflat, which have been disjoined from Neilston, and annexed, the former to the parish of Dunlop, and the latter to that of Beith, both in Ayrshire. This disjunction was *quoad sacra tantum*, and these baronies are still in Renfrewshire, and contribute to it all their public burdens. Including them, the length of the parish is  $10\frac{1}{2}$  miles, and its breadth 5 miles. In the eastern division, which is flat land, most kinds of grain are cultivated to advantage; but westward the ground rises considerably, and though much of it be tilled it is best calculated for pasturage. The Fereneze and Loch-Libo-side hills, forming one ridge, from 400 to 900 feet high, for several miles from north-east to south-west, are cultivated, except some tracts covered with heath-bent and moss. Since about the year 1796 much moss-land has been reclaimed on the estates of Loch-Libo-side and Hartfield. The total yearly value of raw produce raised from lands, sheep, and cows is nearly £130,000. The climate is as diversified as the soil. This, as the inhabitants remark, is indicated by the coming out of the leaf of the poplar. In the low or eastern district around Barrhead the leaf appears ten days earlier than in the middle, and three weeks earlier than in the high district. The highest hills are Neilston-pad (so called from its resemblance to a pillow) and Corkindale-law, which rise from 820 to 900 feet above the sea. From these hills the prospects are grand and extensive, especially from Corkindale-law, which commands the half of the counties of Scotland. The principal stream is the Levern, which pursues a north-easterly direction, and divides the parish for nearly 4 miles into two parts: see LEVERN. There are several other rivulets, the principal of which are the Brock and Kirkton-burn. There are three small lakes. The Long-loch, on the south-east of the parish, is about a mile in length and half-a-mile in breadth, with a depth of from 16 to 18 feet,—it abounds with trout. Loch-Libo is a minute lochlet covering 16 acres. Its pretty scenery drew from William Semple the following description, which will remind the reader of

'The Groves of Blarney':—"The small lake or hasin at the east end, which is formed by the gentle current, is surrounded by a number of young planting and shrubs of various kinds, which separate it from the other parts of nature, and shade in this retreat a kind of silence by solitary paths, which are now and will be long frequented by sentimental visitors, and a safe asylum for the tuneful bird." With better taste Dr. Fleming, in the New Statistical Account, says: "Loch-Libo presents a scene of unparalleled beauty. Its lofty hills, on both sides, are wooded with fine old trees to the water's edge. Its oblong or oval figure pleases the eye, while its smooth and glassy surface, disturbed only by the heron, wild and teal-duck, swimming and fishing upon it, give it animation. Standing at the turn of the road, as you ascend northward, above the Shilford toll-bar, and looking west when the sun, in a fine summer evening, is pouring his rays upon it, its effect is enchanting." The third lake, Cawpla-loch, is also of small dimensions. There are several large artificial collections of water for the use of the works to be afterwards mentioned. The streams and other collections of water contain not only trout of the common species, but also trout similar to the char of the lakes of Cumberland and Westmoreland. Springs of the purest water abound. The largest at 'Aboon the Brae,' issues from the solid rock, discharging 42 imperial gallons every minute. Coal, limestone, and sandstone are wrought. Lime and ironstone are found in great abundance both in the east and west extremity of the parish. As respects mineralogy, specimens of the zeolite family are found in great plenty and variety.—This parish is distinguished for its manufactures. The spinning of cotton was begun here in 1780, when a mill was built at Dovecothall, being the second of that description in Scotland. The printing of calicoes and the bleaching of cloth was commenced about 1773. In 1837 the parish contained six large cotton-mills, eight printfields, and eight bleachfields, besides a variety of other works.

The lands of Neilston, Crookston, Darnley, and others in this county, belonged, in the 12th century, to a family named Croc, from whom they passed, in the succeeding century, to a branch of the illustrious House of Stewart by marriage with the heiress, Marion Croc. This branch became Earls and Dukes of Lennox, and to it belonged Henry Lord Darnley, husband of Queen Mary and father of James VI. of Scotland. In progress of time the estate of Neilston passed from them, and was divided amongst a number of proprietors. In the New Statistical Account, p. 323, Crawford is represented as saying in his History of Renfrewshire, that "passing from the House of Stewart, the lordship of Neilston came by marriage into that of Cunningham of Craigeuds;" whereas Crawford, p. 39, merely makes that statement with regard to a portion called Arthurlie, which had belonged to a branch of the Darnley family. Arthurlie now belongs to various proprietors. Portions of it, with handsome mansions on each, belong to William Lowndes, Esq., and James Dunlop, Esq. The transmission of the various estates since Crawford's time are given by his continuator, Robertson, pp. 299 and 300. The most ancient family in the parish is that of Mure of Caldwell, on whose estate there is a commodious mansion-house, planned by the architect Adam, and commenced in 1773.

The village of Neilston is situated on a cheerful and healthy spot on the brow of an eminence overlooking a great expanse of country. Lower down are Barrhead, Newton, Ralston, and Dovecothall, which lie contiguous with the Levern, and may be considered as one village. Neilston is  $5\frac{1}{2}$  miles from

\* This name is probably compounded of the words *Neil's town*, 'the Town of Neil,' from a person so called having settled here in early times. It first occurs in a grant of the patronage of the church by Robert Croc to the monastery of Paisley soon after the year 1160. Respecting the etymology, the New Statistical reporter makes some judicious observations, bating the anachronism of representing that date as having been "251 years before the days of Malcolm 111."

the cross of Paisley. GRAHAMSTON, another village, has been separately described.

The population of the parish, in 1801, was 3,796. According to a census taken by the elders in the end of 1835 and beginning of 1836, the population then amounted to 9,187, of whom 1,879 were in Neilston village, and 2,738 in Barrhead, Newton, Raiston, and Dovecotthall. Houses, in 1831, 712. Assessed property, in 1815, £13,072. The parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Alexander Spicers, Esq. of Elderslie. The church is said to have been built about 1763, but the style of a Gothic window shows that a portion must be referred to a much more remote date. It was repaired and enlarged in 1798, and again repaired in 1827. Sittings 830. Stipend £262 18s. 5d.; glebe £24. Unappropriated teinds £904 11s. 6d. It is proposed to erect a *quoad sacra* parish-church at Barrhead, and to annex a district to it. At that place there is a church of the United Secession congregation, built about 1796, at the supposed cost of £600. It was a few years afterwards furnished with galleries, and was greatly enlarged in 1822, at a cost of about £800. Sittings 838. Stipend £150, besides a small sum annually to assist in paying house-rent. At Barrhead there is a finely situated Roman Catholic chapel, which was opened by the Bishop on 17th October, 1841. By the above census of 1835-36, there were 1,091 Roman Catholics in the parish, being upwards of one-ninth of the whole inhabitants; whereas, in 1791, there was only one person of that persuasion. This is mainly attributable to the numbers who resort hither from Ireland to find employment at the mills and other works. In 1834, there were one parochial school, and 12 other schools, with one instructor to each. The salary of the parochial schoolmaster was £34 4s. 4d., with fees regulated according to the various branches taught.\*

NEISH. See EARN (LOCH).

NELL (LOCH), a small lake in the parish of Kilmore and Kilbride, Argyleshire. It is about 2 miles long and half-a-mile broad, extends south-south-westward, and sends a brief stream to the head of the marine bay Loch-Feachan. The two churches and the manse of the united parish are all within 1½ mile of its south end.

NENTHORN, a parish in the extreme south of Berwickshire, forming—over four-fifths of its length—a projection into Roxburghshire, and bounded on all sides by that county, except on the west, where it marches with Earlstoun, and about a mile on the north, where it marches with Hume. It is a slender oblong, indented on both sides, and at one point, near the middle; and extends in the direction of south-east by east. Its greatest length, from the Eden, opposite Mellerstain on the west, to the point where that stream ceases to be connected with it on the east, is 4½ miles; its breadth at the broadest part 1½ mile, and at the narrowest ¼ of a mile;

\* The Statistical Account of this parish, published in 1792, was one of the *three* which Sir John Sinclair had translated into French, and transmitted to the French Chamber of Commerce, in order to show the progress which manufactures had made in some of the rural parishes of Scotland. The Rev. John Monteath, D.D., now the venerable minister of Hous-toun, was minister of Naiskoe at that time, and, we presume, was the author of the account in question, which well deserved the distinction it obtained. The present incumbent in Neilston, the Rev. Alexander Fleming, D.D., has worthily followed in the footsteps of his predecessor, by contributing in the New Account a mass of valuable information respecting this important district. We observe he testifies to the peaceable and orderly demeanour of the inhabitants during the disturbances of April 1820 (not 1819 as he prints it): see p. 323. There are also given (p. 342) some details of the celebrated litigation respecting church-accommodation, maintained by him and the parishioners with the heritors, for seven years preceding April 1833.

and its area is between 5¼ and 5½ square miles. The river Eden, approaching from the north, runs 1¼ mile along the western boundary, suddenly bends and runs 2¼ miles along the southern boundary, crosses the parish at its narrowest part, runs 1½ mile along the northern boundary, and then makes a bend, runs for half-a-mile in the interior, and passes away into Ednam. It has its course for a considerable way between a scour 100 feet high, and an easily sloping bank; and at one place, near Newton Don, it falls over a perpendicular face of rock between 30 and 40 feet in height. The lands commence at the western extremity in a hilly rocky ridge, proceed thence in regular, wide, and soft undulations, and subside toward the east into the beautiful plain of the Tweed 1½ mile above Kelso, and in the immediate vicinity of the gorgeous Ducal demesne of Fleurs. The soil at the west end is poor and moorish, and lies in cold till; but everywhere else it is a rich and fertile clayey loam. About 30 acres are a marshy lake; upwards of 300 acres are under wood; and all the rest of the area is enclosed and cultivated. Marl, both shell and clay, has been found in considerable quantity; sandstone and trap, both suitable for building, abound; and basalt occurs in beautiful five-sided and six-sided pillars. Newton Don, the seat of Sir William Don, Bart., the representative of the Earls of Glencairn, and the principal landowner of the parish, stands amidst finely embellished pleasure-grounds, ¾ of a mile from the extreme eastern boundary, overlooking one of the most lusciously beautiful landscapes in the south of Scotland. Nenthorn-house, the quondam seat of the Kerrs of Littledean, and now the property of James Roy, Esq., is the only other mansion. Two villages which formerly existed in the parish, Nenthorn and Newton, are extinct. The turnpike between Edinburgh and Kelso cuts the parish lengthwise into almost equal parts. Population, in 1801, 395; in 1831, 380. Houses 69. Assessed property, in 1831, £3,838.—Nenthorn is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £172 8s. 11d.; glebe £20. The church was built in 1802. Sittings 135. The minister supposed the population in 1836 to be the same as in 1831, and distributed them into 280 churchmen and 100 dissenters.—The parish appears to have been established during the 13th century, and was formed of the manors of Nathansthirn and Newton, lying respectively west and east of the line where the Eden passes from the southern to the northern boundary. The chapel of Nathansthirn became the parish-church, that of Newton continued to be a chapel; both, previous to the parochial erection, were subordinate to the church of Ednam; and both were given in 1316-7, by the bishop of St. Andrews to the abbot of Kelso, in exchange for the church of Cranston in Mid-Lothian. The manors belonged in the 12th century to the Morvilles, the hereditary constables of Scotland, and followed the fortunes of their other possessions till the downfall and forfeiture of John Baliol. Schoolmaster's salary £25 13s., with £7 10s. fees, and a house and garden worth £5.

NESS (LOCH), a beautiful and well-known lake, distinguished by some striking peculiarities, in the north-east division of Inverness-shire. It is the longest, the largest, and, with the slender exception of Loch-Dochfour, the most northerly of the chain of fresh-water lakes which occupy the Glenmorenan-Albin, and carry along the navigation of the Caledonian canal. It extends, with singular straightness, from south-west to north-east; and, at its extremities, is distant respectively 28 miles from Fort-William, and 6 from Inverness. Its length is 23 miles and 56 chains; and its breadth, from 2 miles

at the north-east end, averages about 5 furlongs, then suddenly expands to upwards of  $1\frac{1}{2}$  mile, and thence to the south-west extremity averages about a mile, and is remarkably uniform. The rivers Oicb and Tarff enter it within very brief space of each other, at its upper end; the streams Foyers and Farikaig, besides some rills, enter it upon its right bank; and the Morriston and the Coiltie enter it upon its left. Two considerable bays expand at Invermorriston and Urquhart, and receive the Morriston and the Coiltie. Loch-Dochfour, somewhat less than half-a-mile in breadth, and  $1\frac{1}{2}$  mile in length, is in a sense a continuation north-eastward of Loch-Ness, and communicates with it, or at least receives its superfluous waters, by a narrow channel of about  $\frac{1}{2}$  of a mile in length. The depth of Loch-Ness in the middle is from 106 to 130 fathoms; and, within 250 or 300 feet of the shore, is often from 40 to 50 fathoms. Its waters, in consequence, never freeze; and, even after escaping from it, they reach the sea, in the short run of the river Ness, before they can be cooled to the congealing point.

Except on the narrow part at the north-east end, where a fine belt of low ground stretches along the right bank, and is decorated all over with the wooded parks of Aldourie, the mountain-ranges which flank the great glen come direct down upon the lake, and even plunge their bases within the margin of its waters. They form two long lines of stupendous rampart, straight, lofty, and acclivitous; and render the prolonged and very narrow range along the lake like the restricted view seen through a fixed telescope. They sweep down now with a rapid slope, and now with an almost precipitous fall, and are rugged, rocky, and heath-clad, with ruts and escarpments worn by the rush of torrents and the erosion of the elements; yet, abtward their skirts and lower declivities they are luxuriantly sheeted with forest,—the birch, the oak, the elm, the ash, the hawthorn, the aspen, and a thick underwood of holly, sloe, and hazel. So dense is the richly tinted mass of foliage, that a stranger surveying it from the bosom of the lake feels as if there were not space for another leaf. The two mountain-ranges are, generally, nearly equal to each other in elevation, and have an average altitude above sea-level of between 1,200 and 1,500 feet. But about the middle of the left-hand range rises the stupendous huge-based Mealfourvounie, sending up a dome-shaped summit to the height of upwards of 3,000 feet, and shaking down far-flaunting skirts of picturesqueness to the lake: see MEALFOURVOUNIE. Two ravines bring down the chief streams on the right, and two highly scenic vales, Glens Morriston and Urquhart, bring down those on the left; but no other opening cleaves the continuous piles of mountain, or variegates their character of sublime mural enclosure and impassable rampart. A few pendicles of arable land, tiny hut pleasant patches of green and brown and yellow, occasionally and at wide intervals, open like a kind of glades among the woods; successive terraces also, in the ancient style of cultivation among the mountains of Palestine, are here and there carried along the face of the acclivities, and laden with the fruits of tillage; the two glens of Morriston and Urquhart, on the north-west, come exultingly out upon the lake, and make a charming display of large cultivated fields, and good and pleasant dwellings; and a limited number of mansions and objects of interest, as we shall afterwards see, hang upon the skirts of the hills, or sit snugly ensconced in some beautiful weather-worn recess. But all else is one continuous sublime natural tunnel; the long narrow belt of water its path, the mountains and their wooded skirts its sides, and the cerulean or cloud-laden ether its arch.

Loch-Ness, as to the groupings, the lights and shades, and the minute and characteristic objects of its scenery, may be advantageously viewed both in a trip along its waters, and in a tour along its banks. Owing to the great length of the range of vision, the mountains, as seen from the surface of the lake, lose much of their grandeur, and seem at times to be clothed, in their most ornate parts, rather with luxuriant grass than with wood. Yet seen invertedly in their images in the water, they form, with the over-arching sky and the richly-tinted cloud, a series of pictures absolutely gorgeous. "The whole magnificent scene," says Miss Sinclair in narrating an excursion in a skiff upon the lake, "was reflected upside down in the water so distinctly, that we could scarcely tell the substance from the shadow. This effect was most amusing, as the high road skirted along the water side for many miles, while far down in the crystal tide we saw a repetition of every traveller, wood-cutter, cart, or carriage—no!—there were no carriages,—but abundance of cattle and horses. For the first time in my life, I now saw in the water exactly what we used as children to suppose the antipodes would appear, with a sky far beneath, while men, trees, and animals were perfectly at ease, with their heads downwards, and their feet supernaturally adhering to the earth. The appearance of amazing depth, occasioned by seeing the clouds reflected so far below us, had a sublime effect." But for some distance, round the influx of the water of Foyers, the tumultuousness with which that grandly picturesque stream tumbles upon the lake, and runs riot among its waters, destroys the pervading mirrory smoothness of the surface, and raises a tumulted and broken little sea. The lively writer whom we have just quoted says that, at this place, she encountered more sea than at all the other Highland ferries united, and that the little boat hopped along the waves with such unequal and terrifying motion as threatened every instant to end in its being "whummelled."—The road along the north-west side of the lake brings out its beauties to most advantage; and has such numerous windings and various elevations as lead, at almost every step, to new groupings, or to pleasing diversification of shade and of apparent magnitude. At one time the tourist looks from the naked shoulder of a hill, or the summit of some precipitous skirt of the mountain athwart all the bright far-stretching expanse of the lake; and at another, and but a pace or two onward, he dives low into a dense forest, and sees the lake only at intervals, and in small tessellated patches, glittering between the vistas of the wood, and intricately cut with the tracery of branches and foliage. Approached from Inverness, the whole basin of the lake bursts upon the view at a point 3 miles from the town, and is seen receding away between its parallel screens of mountain, till it becomes lost to the eye in the hazy distance. At the head of the lake, on the flat gravelly peninsula which divides it from Loch-Dochfour, stand the ruins of the old church of Bona; the ruins of an old baronial strength called Castle Spiritual; and the traces of a Roman encampment, on the site of the aboriginal British town of Banatia. The hills, for a few miles, are precipitous, granitic, reddish in colour, and slenderly relieved with either wood or verdure, and are somewhat descriptively called Craigderg, or the Red Rocks. In a hollowy recess high on the face of the heights farther on, lies ensconced the hamlet of Aberiachan, famous as the wild and almost inaccessible retreat in former times of hards of whiskey-smugglers. Wood, particularly the birch, looks out in clumps and mimic groves from all the district beyond the Red rocks, but, north-east of Glen-Urquhart, does not luxuriate in the

profusion which everywhere else characterizes the banks of the lake. At the opening of Glen-Urquhart—one of the loveliest and most sumptuous vales in the Highlands—stands the large good inn of Drumindrochet, about 15 miles from Inverness; and on a commanding site, on the more westerly of two little promontories which run out into the bay of Urquhart, rises, 2 miles south-west of Drumindrochet, the picturesque form of Urquhart-castle,—a stronghold grey with age, and not a little famous in the annals of the 14th and two following centuries: see URQUHART. The road, all the way from this fortalice to Invermorriston, a distance of 11 miles, commands scenes of very high beauty, and passes through richly disposed and abundant woods, and, for the most part, at a considerable elevation above the level of the lake. “The profuse intermixture of oak with birch and alder,” say the Messrs. Anderson, in reference to this tract, “adds much to the richness and tone of colouring. Dark and dense masses of pine are frequently seen crowning the craggy heights above, while beneath, the rowan and hawthorn trees mingle their snowy blossoms, or coral berries, with the foliage of the more gigantic natives of the forest. The road is overhung by the fantastic branches of the yet youthful oak, while the stately ash, rooted in the steep declivities below, shoots up its tall, straight, and perpendicular stem, and with its scattered terminal foliage slightly screens the glassy lake, or purple-ground colour of the opposite hills; and the airy birch droops its pensile twigs round its silvery trunk, ‘like the dishevelled tresses of some regal fair.’ Fringing rows of hazel bushes line the road; and in autumn their clustering bunches of nuts invite the reaching arm.” At the opening of Glen-Morrison, the antiquated yet modernized mansion of the proprietor of the glen, forms, amidst some fine parks, a pleasing foreground to a superb grouping of rocky and sylvan landscape. In the same vicinity stands the small but comfortable inn of Invermorriston; and a little beyond it is a cascade of large volume of water, amid a ravine and broken rocks, so distinctively featured and arranged as to woo the efforts of the draftsman. From this point to Fort-Augustus, at the head of the lake, a distance of 7 miles, the road for the most part proceeds along a low terrace or very narrow belt of plain, close to the lake’s margin, and overhung withavenued ranks of birch and hazel; and about a mile from Fort-Augustus, it so rises as to command a good view—though not a first-class one—of the fort, the neighbouring village, a large part of Loch-Ness, and the continuation of the great glen up the course of the river Oich. Hitherto the tourist has kept near the lake, and been able always to command views of its scenery; but, on leaving Fort-Augustus to return to Inverness down its south-east side, he is, for 12 miles to the mouth of the Foyers, conducted through Stratherrick, between screens of granitic hills, the left-hand range of which flanks and excludes the lake. See STRATHERICK. But he is richly compensated by finding on his way the surpassingly fine cascade scenery of the fall of FOYERS [which see]; nor in the part of the lake’s banks from which he is excluded, does he lose more than a repetition of the wooded skirts of hills, altogether unvariegated by the presence of a house or any remarkable conformation of the ground. At the mouth of the Foyers, where the road resumes its progress on the margin of the lake, the house of Foyers peeps out from amidst an opulent expanse of luxuriant birch. From this place to Inverfarikaig—a distance of nearly 3 miles—the road climbs along the face of the hill, and passes the white-washed mansion of Boleskine, figuring conspicuously in the elevation, and marking

the near vicinity of the spot where Prince Charles Edward was received by Lord Lovat after the battle of Culloden. Inverfarikaig presents only the repulsive objects of a few smoky hovels and a small public-house; but it points the way to a strikingly grand and romantic pass a little way up the ravine of the river, and it is conspicuously overhung by a small house called the General’s Hut, which commands a magnificent extent and variety of the lacustrine scenery, and is said to have been the head-quarters of General Wade while superintending the formation of the military road along Loch-Ness. From Inverfarikaig to Dores—a distance of 8 miles—the road passes close by the water’s edge; and though not overshadowed with much wood over the first half of the distance, it afterwards traverses such a closely compacted wilderness of wood and coppice, amid extended vistas, a stilly repose, and a charming freshness, which drew upon it from Dr. Macculloch the eulogium of being unequalled in the Highlands for adding novelty to beauty. “It is,” says he, “a green road of shaven turf holding its bovery course for miles through close groves of birch and alder, with occasional glimpses of Loch-Ness and of the open country. I passed it at early dawn, when the branches were still spangled with drops of dew; while the sun, shooting its beams through the leaves, exhaled the sweet perfume of the birch, and filled the whole air with fragrance.” At Dores, a small village with a neat church and manse, 8 miles from Inverness, the lake makes its sudden terminal contraction, and nearly completes the circuit of its scenery; yet, in exulting farewell to the tourist, it spreads out before him probably the richest one of all its views, just as he surmounts a rising ground beyond the village, and is about to take leave of its banks.

In spring, and occasionally in the other seasons, large volumes of vapour arise from Loch-Ness, and sailing along the south-westerly winds to the low sea-board, discharge themselves in fertilizing showers. After a snow-storm, or about the beginning of a thaw, they often assume the most fantastic shapes; and, by expending part of their warmth and moisture upon the snow-clad mountains, they occasion such parallel and party-formed black streaks among the snow as indicate the course and relative temperatures of the winds, and make the mountains seem as if shirtd in a hugely striped fabric.—Loch-Ness has the remarkable and mysterious property of being violently agitated during the occurrence, at even a distant part of the world, of an earthquake. On the 1st of November, 1755, at the time of the great earthquake at Lisbon, it was suddenly upheaved, and rolled itself with amazing impetuosity in a billowy volume toward its head, and there discharged a wave 200 yards up the river Oich, at a level five feet above the margin of the stream; and after experiencing a continued ebb and flow for about an hour, it amassed a huge ridge of billow, tossed it 30 feet up its north-west bank, and then subsided into its ordinary repose.

NESS (THE), a river conveying the superfluous waters of Loch-Ness to the Moray frith, in Invernesshire. Its direction is north-eastward, and its length of course about 8 miles. Its channel is gravelly, slowly and regularly inclined, and, on the average, about 180 feet wide. The river has a gentle and equable current, combining the ornamental properties of majestic movement with the useful ones of water-power over machinery. Its mean depth is, in summer, about 3 feet, and in winter 6 or 7. A brief way before entering the frith, it is sheeted on both banks, but particularly on the right, by the town of Inverness; and immediately below the town it expands into a harbour, and offers accommodation to

the steamers and sailing craft which ply from the capital of the Highlands. Two islets, enclosed within its waters a little above the town, are naturally ornamental, and have been brought by horticulture and bridge-building into a very high state of artificial embellishment: see **INVERNESS**. The water of the river has a purgative power over persons not accustomed to drink it, and is supposed to owe this power to its holding in solution the decomposed matter of certain confervæ and mosses, which its high temperature keeps constantly vegetating in its channel.

**NESTING**, a parish nearly in the middle of the eastern district of Shetland. It comprehends the ancient parishes of Nesting, Lunnesting, and Whalsay, and a district of detached islands, formerly under the care of a missionary on the royal bounty. Nesting and Lunnesting extend along the east coast of Mainland from Gletness to Lunnansness; and measure, in extreme length, 18 miles, and in extreme breadth 4 miles. Whalsay consists principally of the island of that name, lying nearly 3 miles east of the nearest part of Lunnesting: see **WHALSAY**. The detached district of islands consists chiefly of Fair-Isle, Toulva, and the Out-Skerries; hut, with the exception of the last, have again been placed under the care of a missionary: see **SKERRIES**. The principal marine indentations on the mainland are Catfirth, Doure, and Vidlauvoes; and the principal headlands are Rallsburgh, Eswick, Stavaness, and Lunnansness. The physical and agricultural features of the district have a common character with most of Shetland. Shipwrecks often happen on the coast, and excite the prompt sympathies and services of the inhabitants. A letter of thanks was on one occasion sent, in name of the Empress Catherine of Russia, by her ambassador at London, for services rendered at Whalsay during the wreck of a Russian frigate. Population, in 1801, 1,941; in 1831, 2,103. Houses 342. Assessed property, in 1815, £1,318.—This parish is in the presbytery of Burravoc, and synod of Shetland. Patron, the Earl of Zetland. Stipend £150 8s. 6d., besides vicarage teinds; glebe £12. There are three churches respectively situated in the three conjoined parishes, and built respectively in 1792, 1768, and 1733; and a thatched house is used as a church in the Skerries. All, excepting that of Nesting, and even it only at the season of communions, have sufficient accommodation for the parishioners. But the extensiveness of the parish, the total want of roads, the perilousness of the friths, rapid tidesways, mosses, mountains, and uncertainty and tempestuousness of climate, prevent the minister from regularly rotating his services in the churches, or exercising a due amount of week-day superintendence. Nesting has a Sabbath-school. Lunnesting has a Methodist chapel, with from 150 to 200 sittings, hut with public worship only once a-month. According to ecclesiastical census in 1836, the population, excepting 266, were all Church-of-Scotlandmen, and amounted to 2,181; of whom 785 were in Nesting, 779 in Lunnesting, 560 in Whalsay; and 57 in the Skerries. The population are widely dispersed, seldom more than 70 or 100 persons being assembled in one group of farms, or one 'town.' They are almost all both farmers and fishermen, and often exercise other mechanical professions. The average rent of farms is £5, and the highest £13. Lunnesting has a parochial-school, and a school belonging to the society for propagating Christian knowledge. Nesting has a stated adventure school; and Whalsay and Skerries have had occasional adventure schools. Parochial-schoolmaster's salary, £25 13s., with £1 17s. fees.

**NETHAN (THE)**, a river in Lanarkshire, which rises in the hills which separate the parishes of Les-

mahagow in Lanarkshire, and Muirkirk in Ayrshire, and, running north-east through Lesmahagow parish, is joined by the Logan and other streams, and falls into the Clyde a little below Craigmethan-castle. It is a beautiful stream, and its banks are finely diversified with hanging woods, green holms, and corn-fields. See **CRAIGMETHAN**. The projected Clydesdale line of railway communication between England and Scotland is proposed to be carried across the Nethan by a viaduct 232 feet in extreme height! This structure would be more than three times the height of the North bridge of Edinburgh. The Dean bridge in Edinburgh, the Cartland-Craigs bridge in Lanarkshire, the Pont-y'-cysylte aqueduct in North Wales, the Corby bridge on the Newcasttle and Carlisle railway, and the bridge across the Wear at Sunderland, were all looked upon as very lofty structures, most of them exceeding 100 feet in height; hut the Nethan viaduct overtops them all by at least 100 feet—in other words, it is nearly double the height of the highest of them all.

**NETHY (THE)**, a rivulet of Inverness-shire and Morayshire. Its source is on the west side of Benna-Bynack, one of the heights of the Cairngorm mountain-range, and scarcely a mile west of the boundary with the southern extremity of Banffshire. It runs about 8 miles northward through Badenoch, and 4 miles northward and north-westward through the south-east district of Morayshire; and falls into the Spey within a mile of the church of Abernethy. It gives the name of Abernethy to the parochial district, and of the Braes of Abernethy to the amassment of hills within the drainage of its head-streams and feeders. In dry weather, it is a mere brook; hut, after rains or thaws, it swells high, and serves to float timber from an expanse of pine-forests on its banks to be conveyed down the Spey in rafts to Garmouth.

**NEVAY**. See **ESSIE**.

**NEVIS (THE)**, a small river in the south-west of Lochaber, Inverness-shire. It rises amidst a mass of mountains geographically 6 miles east of the summit of Bennevis, and runs 7 miles west-south-westward,  $\frac{1}{2}$  northward, and 1 westward, to Loch-Eil at Fort-William. It is overhung, over two-thirds of its course, by the southern and western fronts of the vast monarch-height, Bennevis. Its career is rapid; and it forms several very romantic cascades. The narrow vale which it traverses derives from it the name of Glen-nevis; it is, for 4 miles opposite the south side of the mountain, adorned with wood; and, some miles from Fort-William, it has a large and curious rocking-stone, and, farther up, the vitrified fort of **DUNDORNADILL**: which see.

**NEVIS (LOCH)**, a long inlet of the sea, in the parish of Glenelg, and between the districts of Knoydart and Morar, Inverness-shire. It is about 13 miles long, and varies in breadth from 2 miles to 2 furlongs. Mountains almost everywhere rise from its margin; and, in many places, are sheeted far up with wood,—flinging, by their forms and altitude and dress, not a little scenic interest over the lake. On the north shore stands the curious Celtic mansion of Macdonell of Glengarry, built by the late Colonel Macdonell, so noted by common fame as the last perfect specimen of a Highland chieftain. The house has no ceiling, and no other artificial floor than an adjustment of clay and hard sand; and its two chief rooms are constructed from the floor to the roof tree with strong wattle work.

**NEWABBEY**, a parish on the east coast of Kirkcudbrightshire; bounded on the north-west by Troqueer; on the north and north-east by Troqueer; on the east by the estuary of the Nith, and the frith of Solway; on the south by Kirkbean; on the south-

west by Colvend; and on the west by Kirkgunzcon. Its greatest length, from Lanecroft on the north-west to the mouth of Nunby burn on the south-east, is 8½ miles; its greatest breadth, in a line north-eastward from Rise-hill, is 4 miles and 5 furlongs; and its area is about 25¼ square miles. The district on the sea-board, comprising upwards of one-fourth of the whole area, is regularly enclosed, and highly improved, and commands a noble prospect of the Solway frith and the coast of Cumberland. Its soil is, in some parts, rich carse clay on a dry sub-soil, hut, in general, a light brown loam, from 6 to 10 inches deep, superincumbent on fine dry gravel, deepening by liming, and becoming blackish in proportion as it is richly manured. The upper district consists of rocky hills, and muirs, and mosses; yet contains numerous pendicles of arable ground. Its soil lies on a bed of wet, cold till, and is slowly and not abundantly productive; but when well-manured, and enjoying comparative drought, it yields excellent crops. A water-shedding chain of very lofty heights forms for 8 miles the southern and western boundary-line, commencing with the magnificent Criffell on the coast, [see CRIFFELL and KIRKBEAN,] and continued by Abbey-fell, Thorter-fell, Rise-hill, Long-fell, Bow-hill, and Lowtis-hill. The Nith and the Solway, where they form the eastern boundary, are respectively about 2 and 12 miles broad; during the recess of the tide, they are mere sandy wildernesses, threaded by the wandering fresh water stream; and at the flow of the tide, they exhibit in its richest form their peculiar phenomenon [see GLENCAPLE], and have a depth in spring-tides of 15 or 16 feet. A streamlet called the Newabby Pow rises among the hills in the west, and runs 5½ miles eastward to the Nith at the boundary with Troqueer; augmented in its progress by about 12 brooks, the chief of which, on the right bank, are Kinharvie and Loch-Kinder burns. This stream is navigated for some way up by vessels of 60 or 70 tons, which import lime, shells, and coal, and export agricultural produce and charcoal. There are in the parish three lakes,—KINDER, which we have separately noticed, Loch-arthur in the north-west corner, about ¾ of a mile long, and half-a-mile broad, and Lochaber on the north-east boundary, nearly equal in size. The latter two abound with pike. The village of Newabby stands on the Pow, 1¼ mile from the Nith, and 7 miles south of Dumfries. Population, in 1836, 366. Population of the parish, in 1801, 832; in 1831, 1,060. Houses 223. Assessed property, in 1815, £4,979.—Newabby is in the presbytery and synod of Dumfries. Patron, the Crown. Stipend £233 2s. 1d.; glebe £20. Unappropriated teinds £254 6s. 1d. The church was built prior to the Reformation, partly rebuilt about 35 years ago, and internally enlarged 17 years later. Sittings 416. A Roman Catholic chapel exists at the village, hut since 1832 has been neglected in favour of one in Troqueer. The population, according to a survey in 1836, was then 1,048; of whom 936 were churchmen, and 112 were dissenters. There are three parochial schools. Salary of the first master £29 18s. 9½d., with fees, and £3 other emoluments; and of each of the other masters £10 13s. 10½d., with fees. There is likewise a private school.—The ancient parish long took its name from Loch-Kinder. The church was, in 1275, given by the Lady Devorgilla to the monks of Newabby; and, during the latter period of Protestant Episcopacy, was possessed by the bishop of Edinburgh. The present parish comprehends, in addition to the whole of the ancient parish, the western half of that of Kirkconnel, annexed to it in the reign of Charles I.

The ruins of the ABBEY, whence the parish has

its modern name, are an imposing object in the centre of a magnificent landscape. They occupy the middle of a fine level field of about 20 acres, called the Precinct, in the vale of the Pow, and in the immediate vicinity of the village, enclosed by a stone wall 8 or 10 feet high, built of granite stones of very great size. A dilapidation of the edifice was effected to a great extent on a pitifully mercenary bargain for giving it up as a quarry, and was prevented from being carried on to extermination by a subscription of £40 being raised on the part of some neighbouring gentlemen, as the price of desisting. The chapter-house, part of which remains, was what chiefly suffered from the barbarous dilapidator, and is said to have been an elegant piece of architecture. The church is the principal part of the existing ruin. The measurements, as communicated by Dr. Clapperton to Grose, are: Height of the tower 90 feet; length of the whole church, 200 feet; breadth of the middle aisle, 25 feet; breadth of the side aisles, 15 feet; transept, 102 feet; breadth of the arches, 15 feet; diameter of the columns—of which there are six—at the base, 4½ feet; height of the shafts of the columns from base to capital, 10 feet; base of the columns supporting the tower, 10 feet; height of the shaft of these columns 20 feet. In the roof of the south transept is an escutcheon, charged with 2 pastoral staves *in saltire*; over them a heart, and beneath them 3 mullets of 5 points, 2 and 1; said to be the arms of the abhey. An inscription over the escutcheon is, from its height and want of light, illegible; but is said to be "*Christus Maritus meus*,"—rather an odd motto for a fraternity of monks. On the south side of the ruinous pile stands the parish-church, formed out of part of the connected edifices, and in the vicinity of a small gate leading into the abbey, of a singular style of architecture, surmounted by a bell, and bearing several defaced carvings in *basso relievo*, with two escutcheons. In the hurrying-ground east of the abhey church are some ancient tomstones: on one a cross, with a large and broad sword on its sinister side.—The abbey was founded in 1275 by Devorgilla, third daughter of Alan, lord of Galloway—niece to David, Earl of Huntingdon—widow of John Baliol of Bernard-castle, who died in 1269,—and mother of John Baliol, the mean and mercenary suitor for a dependent crown. Her husband's body seems to have been buried in a ehurch or chapel on or near the site of the abbey; and this circumstance may have been the reason of the abhey's being built. When Devorgilla died in 1289, at the age of 80, the heart of her husband—which she had caused to be taken out of his body, to be embalmed, and to be deposited in a box of ivory, bound with silver and enamelled—was solemnly shut up with her own body in sepulture, near the high altar. Hugh de Burgh, the prior of Lanecroft, according to the manuscript chronicle of that house, composed an elegy for Devorgilla, which was inscribed on her tomh:—

"In Dervorvilla moritur sensata Sibilla,  
Cum Marthaque pia, contemplativa Maria  
Da Dervorville requie, rex summe, potiri,  
Quam tegit iste lapis, cor pariterque viri."

"In Dervorgil, a sybil sage doth dye, as  
Mary contemplative, as Marthia pious;  
To her, O deign, high King! rest to impart,  
Whom this stone covers, with her husband's heart."

The abbey, owing to the characteristic circumstance of its foundress' sepulture, was called Sweetheart, Duzquer, Douze-cœur, Dulce-cor; and it probably had its more modern name from its being altogether or nearly the last edifice of its class erected in the province. The monastery was colonized by Cister-

tian monks, and appears to have been richly endowed. Grose assigns to it some possessions, which appear from the charter of the hishopic of Edinburgh, to have belonged to the abbey of Holyrood. But, irrespective of these, it owned the churches of New-abbey, Kirkpatrick-Durham, Crossmichael, Buittle, and Kirkcolm, the baronies of Lochkenderloch and Lochpatrick, and much other property. In 1513, the monks placed themselves and their tenants under the protection of Lord Maxwell; in 1544, they feued to his family at a low rate, in compensation for services done them, their barony of Lochpatrick; and, in 1548, they gave him the five mark lands of Loch-Arthur, and constituted him heritable baillie of the whole jurisdiction over all their lands. The property was, in 1587, vested in the Crown by the annexation act; granted, in 1624, to Sir Robert Spottiswood and Sir John Hay; resigned by them, in 1633, in order to be given to the hishop of Edinburgh; given back soon after the suppression of Episcopacy, to Sir Robert Spottiswoode; and sold by his heir to the family of Copeland. Part of it, however—consisting of the lands of Drum in New-abbey—was hurdened with a mortification by Queen Anne in favour of the second minister of Dumfries. The last and only noted ahhot was Gilbert Brown, who had a written controversy, on the doctrines of Romanism, with the celebrated John Welch of Ayr. Brown's treatise, though short, is erudite, and as far excels in literary properties the writings of his own hrethren of the period, as it is inferior in argument, truth, and usefulness to the production of the Reformer. Welch vished to have a *viva voce* and public disputation, but could not conquer Brown's dislike to the measure as likely to damage his reputation. Calderwood says, that Brown sat in the parliament of August 1560, which approved the Confession of Faith. "Brown," says Dr. M'Crie, "was a busy trafficker for Rome and Spain, and a chief instrument of keeping the south of Scotland under ignorance and superstition." In 1596, he was denounced by the commissioners of the General Assembly to the King as a Jesuit and excommunicated Papist, and recommended to be seized and punished; and in 1605, he was with difficulty apprehended by Lord Cranston, captain of the Border guard, and, after brief confinement, banished from the kingdom. He died at Paris in 1612.—Near the abbey, but on higher ground, in a healthy situation, and commanding an extensive prospect, stands a ruin called the Ahots' tower, the quondam occasional residence of the ahots of Newabbey. A view of the ruin is given by Grose.

NEWARK-CASTLE, a venerable ruin on the right bank of the river Yarrow, in the parish and county of Selkirk. It stands on a peninsula cut out by the encircling stream, amidst a fantastically wild scene of grandeur and beauty; but, though renovated, and in a state of tolerable conservation, it is inhabited only by the moping owl and the chattering daw. Its distance from the confluence of the Yarrow and the Ettrick is 2½ miles, and from the hurgh of Selkirk 4½. It belongs to the Duke of Buccleuch, whose beautiful and princely seat of Bowhill stands a little lower down the river; and, in the years of her widowhood, it was the residence of Anne, Duchess of Buccleuch and Monmouth, whose husband, James, Duke of Monmouth, was beheaded for insurrection in the reign of James II. Newark is the well-known scene in which 'the Last Minstrel' is made to sing his 'lay' to the sad-hearted Duchess:

"He passed where Newark's stately tower  
Looks out from Yarrow's birchen bower;  
The Minstrel gazed with wishful eye—  
No humbler resting-place was nigh.

With hesitating step, at last,  
The embattled portal-arch he passed,  
Whose ponderous grate and massy bar  
Had oft rolled back the tide of war,  
But never closed the iron door  
Against the desolate and poor.  
The Duchess marked his weary pace,  
His timid mien, and reverend face,  
And bade her page the menials tell  
That they should tend the old man well:  
For she had known adversity,  
Though born in such a high degree;  
In pride of power, in beauty's bloom,  
Had wept o'er Monmouth's bloody tomb!"

The appearance of Newark-castle, and of the landscape in its vicinity, is finely etched by Wordsworth:

"That region left, the vale unfolds  
Rich groves of lofty stature,  
With Yarrow winding through the pomp  
Of cultivated nature;  
And, rising from these lofty groves,  
Behold, a ruin hoary!  
The shattered front of Newark's tower,  
Renown'd in Border story."

YARROW VISITED.

Mary Scott, the flower of Yarrow, is supposed by many to have been born in Newark-castle; but she really was a native of the neighbouring parish, and a daughter of the Scotts of Dryhope: See YARROW. The scene of the beautiful old ballad, called 'The Sang of the Outlaw Murray,' though also belonging to Yarrow—in our notice of which it shall be glanced at—is almost universally identified by the common people with Newark-castle.

NEWARK-CASTLE. See MAYBOLE.

NEWARK-CASTLE. See PORT-GLASGOW.

NEWBATTLE,\* a parish in the eastern division of Edinburghshire; bounded on the north-west by Lasswade and Dalkeith; on the north by Dalkeith and Cranston; on the east by Cranston; on the south-east and south by Borthwick; and on the west by Cockpen. Its form is that of a triangle, rounded at the corners, presenting its sides to the north, the west, and the south-east, and deeply indented on the last of these sides. It measures along the west 4 miles; along the north nearly the same distance; and along the south-east 4½ miles; and has an area of about 8 square miles. The South Esk runs half-a-mile on the southern boundary, and, after making a detour of nearly 2 miles into Cockpen, runs 2½ miles along the western boundary, and leaves the parish in the immediate vicinity of Dalkeith. From the beautiful and romantic vale of this stream the surface gradually rises to a ridge, 2 miles distant, whose loftiest point attains 680 feet above sea-level; and thence it falls, almost regularly, off to the eastern and northern frontiers. A nodule or slight summit on the hilly ridge commands an enchanting view of the rich circumjacent country, and is crowned by a quadrangular enclosure, about 3 acres in area, believed to have been a Roman camp, and now densely phalanxed with plantation. The south-east slope of the ridge was not long ago a waste marsh; but, by draining and other operations, has become opulent and beautiful arable ground. The south-west slope, also a brief period ago a mimic wilderness, now nearly all has a rough, green, velvety surface of thriving trees, or owns the dominion of the plough, and vaunts the chastely ornamental enclosure. The western and northern slopes descend in a sheet of retentive sandy earth, which gradually gives way, first to a strong clay and next to a good loam; and are well-enclosed, and under the best process of agriculture. The low ground, or vale of the river, is all over a rivalry between the

\* The ancient and strictly proper name is Newbottle. The Saxon word 'bottle' signifies simply a residence; and the prefix 'New' was assumed probably in contradistinction to Eld-bottle or Old-bottle in Haddingtonshire. As in the case of Morebattle and other places of kindred names, the original 'bottle' has been irremediably corrupted into 'battle.'

wealth of a very deep and fertile alluvial soil, and the soft romance of a gaily wooded landscape. Gardens and orchards are so extensive as to yield an annual produce for the market worth between £400 and £500. The coal measures lift their immediately superincumbent strata to the surface toward the apex and on the river-ward sides of the hilly ridge, and dip at a very acute angle toward the course of the stream; and they constitute, within the limits of the parish, a mineral field equal in wealth to that of any equal extent of territory in the kingdom. Limestone and sandstone are obtained in plenty from surface quarries; and coal can be mined in upwards of twenty seams, of from  $1\frac{1}{2}$  to 8 feet thick. To facilitate the exportation of the mineral produce, a private railway was constructed a few years ago at the expense of the Marquis of Lothian; and is carried across the vale of the South Esk by a viaduct 1,200 feet long, supported over most of its length by stone pillars, and at the river by three cast-iron Gothic arches, each 65 feet in span, and the main one 70 feet high. The railway is  $1\frac{1}{2}$  mile in length, joins the Edinburgh company's railway at Dalhousie-mains, and communicates by it with the terminus or depot at St. Leonard's in Edinburgh. The turnpike from Edinburgh to Kelso, by way of Lauder, bisects the north-east wing of the parish; and that from Edinburgh to the extensive districts reached through the vale of Gala-water runs closely parallel to the western boundary, and passes beneath the viaduct of the railway. The ancient village, now the pitiful hamlet, of Newbattle, stands in the lowest grounds of the vale of the Esk, a mile south of Dalkeith, sheltered in nearly every direction by rising grounds, and embosomed among orchards and gardens. Its little cluster of plain houses, and its aspect of desertion and decay would ill accord with the surrounding landscape, but for the adjunct of the parish-church, a grotesque building, with an equally grotesque spire, squeezed into seclusion by a press of trees, and for the near vicinity of the principal gate to the pleasure-grounds of Newbattle-abbey. There are three other villages, all inhabited chiefly by colliers,—Easthouses, with 400 inhabitants, 1 mile east of Newbattle; Westhouses, with 150, about 2 miles to the south-east; and Stobhill, with 210, situated  $2\frac{1}{2}$  miles to the south. Population of the parish, in 1801, 1,328; in 1831, 1,882. Houses 352. Assessed property, in 1815, £8,722.—Newbattle is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Marquis of Lothian. Stipend £183 4s. 7d.; glebe £21. The church was built in 1727, and is in good repair. Sittings about 400. A preaching-station, in connection with the Establishment, was commenced at Stobhill in 1837, and a chapel afterwards built with 305 sittings, and capacity for 600. A district, chiefly from Newbattle, and partly from Cockpen, Temple, and Borthwick, and containing a population of about 1,200, is annexed to the chapel. Original salary £60. According to an ecclesiastical survey, in 1856, Newbattle had then 1,636 churchmen, and 579 dissenters; or a total population of 2,015.—The present parish of Newbattle comprehends the ancient parish of Maisterton, and the Abbey parish of Newbattle. Maisterton adjoined Cockpen on the west, and was surrounded on all other sides by Newbattle. Its whole area and its church were acquired at successive but early epochs by the Monks of Newbattle, and secured for 'their proper use.' The Abbey-church of Newbattle arose, in the 12th century, out of the establishment of the monastery.—In 1834 the parish-school was attended by 79 scholars; and four private schools by 172. Parochial schoolmaster's salary £34 4s. 9d., with about £25 fees, and £8 10s. other emoluments.

NEWBATTLE-ABBAY, the prime object both of antiquarian and of modern interest in the above parish, was anciently, as its name imports, a monastery, and is now the seat of the Marquis of Lothian. David I.—that prince of monk-feeders, and prime Scottish saint of the Romish calendar—founded the monastery in 1140 for Cistercian monks, and fetched to it a colony of these cowl'd followers of the Burgundian Bernard from Melrose. Though he showed them less lavish favour than he prodigally expended upon the fraternity of Holyrood, he gave them incomparably more of worldly substance than decently comported with the austereness of their professions. He bestowed on them the district of Morthwaite, now called Moorfoot; the lands of Buchaleh on the Esk; some lands, a salt-work, and rights of pasturage and wood-cutting in the carse of Calendar in Stirlingshire; a salt-work at Blakeland in Lothian, the right of pannage, and the privilege of cutting wood in his forests; and the patronage of several churches, with a right to some of their revenues. David's example—one of many kindred courses of priest and monk exalting conduct, which procured him canonization from the pope—was followed by Malcolm IV., by the Countess Ada, the widow of Earl Henry, by William the Lion, who gave the monks the lands of Mount Lothian, and, with some special services, confirmed the grants of David and Malcolm, and even by a very unlikely sort of person to fling a gold purse at a cowl, Alwin, the first abbot of Holyrood, who relinquished to the inmates of the new abbey, the lands of Petlendreich on the Esk. Various other persons emulated the effort to turn the professed mendicants into virtual princes, and gave them lands in the country, tofts in the town, and churches in the several shires. Alexander II.—who delighted to reside at Newbattle—obtained a grave there for his consort, Mary; and deeply moved by so affecting an acquisition, he gave the condescending owners of the place various donations and rights for the salvation of himself and his predecessors, and for the salvation of Mary his spouse, "que corpus suum apud Newhotle sepeliendum reliquit." The monks, enriched with specie, likewise acquired much property and many privileges by purchase; and, in particular, they obtained the lands of Monkland in Lanarkshire, and secured the right of cutting a road to them for their proper use. In 1203, Pope Innocent, by a bull, confirmed all their possessions and privileges; and, by another bull, he prohibited all persons from levying tithes from lands which they either held or cultivated. In 1293, William de Lindsay gave the monks an annuity of £20 sterling, which he received from Symington in Ayrshire, and directed it to be distributed in specified modes which exhibit at once the ganderism of the wealthy laity, and the sly epicurism of the cautious monks, in a rude and superstitious age. His grant directed that 140 shillings sterling should be given annually to the monks 'ad pitancias,' a small extra portion of meat and drink on some festival; that, every Sunday, two shillings should, for their solace, be distributed among the monks to amend their usual diet; and these momentous cares disposed of regarding the prime 'poor,' the professed 'mendicants,' that the abbot should be bound under a penalty to bestow, on stated days, certain charities on the poor of Haddington and Ormiston. David II. gave the monks a charter, enabling them to hold their lands within the valley of Lothian in free forestry, with the various privileges which belonged to a forestry. But the monks—though figuring chiefly as astute and rapacious accumulators of worldly property, incidentally conferred great advantages on the incipient but engrossingly important occupations of

husbandry, of mining, and of commerce; for they incited and directed agricultural operations, they discovered, and perhaps were the first to discover Scottish coal, and brought it from the mine, and they constructed a sea-port, and gave Scotland a specimen of the arts of traffic: see articles HADDINGTONSHIRE and MORISON'S-HAVEN.—The first abbot of Newbattle was Radulph, who, in 1140, accompanied the colony from Melrose. John, the 18th abbot, had to act a part in the difficult transactions respecting the succession to the Crown after the demise of Alexander III.; in March, 1290, he sat in the great parliament at Brigham; in July, 1291, he swore fealty to Edward I. in the chapel of Edinburgh-castle; and in 1296, he again, with his monks, swore fealty to Edward, and, in return, obtained writs to several sheriffs for the restoral of his property. In January, 1296-7, Edward directed his treasurer, Cressingbam, to settle with the abbot for the 'form' due by the abbey of Newbattle for his lands of Bothkennar. Whether Abbot John witnessed the accession of Robert Bruce is uncertain. In 1385 the abbey was burnt during the furious incursion of Richard II.; and during the 40 years which followed, the monks were employed in its re-edification. Patrick Madour, who was abbot in April, 1462, collected the documents which at present form the chartulary of Newbattle; and in October, 1466, he instituted a suit in parliament against James, Lord Hamilton, "for the spoliation of a stone of lead-ore," taken from the abbot's lauds of Fremure in Clydesdale, and triumphantly compelled the coronet to make compensation, and do obeisance to the cowl. Andrew, who was abbot in May, 1499, granted his lands of Kinnaird in Stirlingshire to Edward Bruce, 'bis well-deserving armiger,' for the yearly payment of 16 merks; and in December, 1500, he gave to Robert Bruce of Binning and his wife, the monastery's lands of West Binning in Lulithgowshire, for the yearly compensation of four shillings. James Hasnall was probably the last abbot; he was present at the parliament of November, 1558; and, while he governed the abbey, it was burnt during the invasion of the Earl of Hertford. Mark Ker, the second son of Sir Andrew Ker of Cossford, becoming protestant in 1560, obtained the vieirage of Linton; and, in 1564, was made the first commendator of Newbattle. In 1581 he obtained a ratification by parliament of his commendatorship; and he appears to have annually drawn from the abbey property, £1,413 1s. 2d. Scottish, besides 99 bolls of wheat, 53 bolls 2 pecks of bear, and 250 bolls 2 firloths of oats,—subject, however, to several disbursements, and particularly the remarkable one of £240 Scottish to six aged, decrepit, and recanted monks. He died in 1584, an extraordinary lord of the court-of-session. His son, Mark, had a reversion of the commendatorship; on succeeding to it, he had it formally confirmed; and, in 1587, he obtained from the facile James VI. a grant of the whole estates of the monastery as a temporal barony, and afterwards, in the same year, got the grant ratified by parliament. In October, 1591, he was dignified with the title of Lord Newbattle, and had his barony converted into a temporal lordship; and in the parliament of next year he saw his title and its basis finally recognised. In 1606, he was created Earl of Lothian; and, in 1701, Robert, the 4th Earl, who was a member of the privy-council of King William, was raised to the dignity of the marquisate.—The buildings of the monastery have long ago been either wholly demolished, or, in any small remains which may exist, entirely concealed from observation by the erection on their site of the present noble mansion, the seat of the Marquis of Lothian, and the

successor in name of the extinct abbey. An ancient wall which surrounded the monastery still retains the name of the Monkland-Wall, and is in some places in tolerable preservation. The mansion—the present Newbattle-abbey—is a large, commodious, modern edifice, and evinces, especially in its interior arrangements, good taste and judgment in the architect. Several folio manuscripts, which formerly belonged to the monks, enrich the library: they are written on vellum, in the Saxon character, and are adorned in every page with pictorial illustrations of the subjects which they treat: the most highly finished are 'Jean Bocacc des cas des Nobles Hommes et Femmes, 1409,'—'John Tikyt Hymni,'—'Titus Livius, per P. Berceun,'—and 'Augustin de la Cité de Dieu.' Many valuable paintings and portraits enrich the gallery, particularly a Titian, a Morillo, several Vandykes, and some family portraits. A lawn of upwards of 30 acres expands around the mansion. On one side it is watered by the South Esk, which, after brawling among the rocks of Cockpen, flows along the park in a quiet stream, and is overlung with plantations; and on the other side it is skirted by a waving line of woods, which, complying with the ascents and undulations of the banks, stretches upward in a many-curved surface, and exhibits a beautiful variety of shades. The belts of wood which flank the two sides of the lawn approach each other at the ends, and, on a grand scale, embower the mansion and its park, and exclude them from exterior view. At the east end stands a bridge across the Esk, of high and unknown antiquity, rudely built, and overspread with ivy. Newbattle-abbey was visited in 1822 by George IV.; and it has within the hall a brass-plate, in the form of a shoe, on the spot on which his majesty set foot.

**NEWBIGGING**, a suburb of the burgh, partly compact with the town, and all within the parliamentary boundaries of Musselburgh, in the parish of Inveresk, Edinburghshire: see **MUSSELBURGH**.

**NEWBIGGING**, a frequent name of hamlets, especially in Perthshire and Forfarshire. One of these in the latter county, not far from Dundee, is the site of an United Secession meeting-house.

**NEWBIGGING**. See **CARNWATH**.

**NEWBRIDGE**, a small village on the river Almond, and on the turnpike between Edinburgh and Glasgow by way of Bathgate; 9 miles from Edinburgh, in the Mid-Lothian section of the parish of Kirkliston. The place is remarkable chiefly as the scene of extraordinary mortality by cholera, in April, 1832. Of 65 human beings, who then constituted its whole population, 11 were cut off in the course of 10 days. Present population about 100.

**NEWBURGH**, a parish forming the extreme north-west part of Fifeshire. It is of very irregular form; a portion of it lying along the margin of the river Tay; and the remaining portion stretching to the south, across the ridge of the Ochils. It has thus something of the appearance of an ill-shaped boot, or of the letter L reversed. The portion which forms, as it were, the foot of the boot, or the horizontal part of the L, stretches along the Tay, and is about 2 miles in length from east to west, by scarcely half-a-mile in breadth from north to south; while the other portion is nearly 3 miles in length, from north to south, by three quarters of a mile in breadth from east to west. It is bounded on the north by the Tay; on the west, partly by the parish of Abernethy, in Perthshire, and partly by Ahdie; on the south by Abernethy, Auchtermuchty, Collessie, and Ahdie; and on the east by Abdie. The northern part of the parish is a beautiful and finely wooded level; the southern portion, which occupies the ridge of the Ochils, is an alternate series of hills

and valleys. Here Craigsparrow rises to the height of 600 feet; and the Blackcairn to that of 800 feet above the level of the sea. The soil of the land in the northern division, north-east of the town of Newburgh, is a rich clay, not inferior to any part of the carse. In the upper part of the parish it is generally either a loose black loam, or a compact ferruginous mould, of little depth, but of great fertility. The number of imperial acres in the parish are 1,145; of which there are 737 in cultivation; 280 are waste or in pasture; 88 under wood; and 40 under fruit-trees. The principal woods are those of Mugdrum, which cover about 34 acres; Pitcairly, about 12 acres; and about 41 acres of the lands belonging to the town of Newburgh which have been lately planted with larch, spruce, and Scotch firs. The orchards owe their origin here, undoubtedly, to the skill and industry of the monks, and the venerable remains of the trees they planted are still to be seen around the abbey of Lindores. In 1815, the annual value of real property assessed for the property-tax, was £3,429 sterling; but this included the rents of property within the burgh. The real rent of the parish at present is about £2,400 sterling; the valued rent, £2,174 Scots. Population, in 1801, 1,936; in 1831, 2,642. Houses 322.—This parish is within the presbytery of Cupar, and synod of Fife. Patrons, the Earl of Mansfield, and Hay of Leys. Stipend £225 14s. 2d.; glebe £40. The parish-church is situated in the town of Newburgh. It is a new and elegant structure, capable of containing 1,000 persons. The number of persons in the parish belonging to the established church, in 1836, was 1,656. Besides the parish-church, there is a chapel in connexion with the United Associate Synod. The persons attending this chapel and their families form very nearly one-third of the whole inhabitants of the parish.—There are also three small meeting-houses of Baptists, Methodists, and Independents. The total number of dissenters in the parish, in 1836, was 1,008. The parish-school, at which there is an average attendance of about 100 pupils, is in the town of Newburgh. Besides his fees, the teacher has the maximum salary, a school-house, house and garden, a glebe of nearly four Scots acres, which lets for £9 per annum, and a sum of £1 15s. sterling, arising from feu-duties and altarge money. There are two other general schools in the town, and a female-school, which are unendowed. There are also two schools for females in the suburbs, which, though not within the parish, really belong to it, as the pupils almost wholly come from the town of Newburgh. Originally this parish formed part of the neighbouring parish of Abdie, there being a chapel within the burgh, dedicated to St. Catherine; besides the church of the monastery of Lindores, in the immediate neighbourhood. After the Reformation, the parishes were disjoined, by act of Synodal assembly, with consent of all having interest. In 1632, this tacit separation was sanctioned by the commissioners for the surrender of teinds; and Newburgh was erected into a separate parish. By a subsequent application, a portion of the parish of Abernethy was disjoined and annexed to that of Newburgh.

North-east of the town, and at the extremity of the parish, on a gentle rise, in the middle of the rich clay land near the Tay, stand the ruins of the ancient abbey of Lindores. This monastery was founded in 1178, by David, Earl of Huntingdon, brother of William the Lion, and heir-presumptive to the Scottish throne, after his return from a crusade in the Holy Land, in commemoration of his escape from shipwreck, and of his having taken Ptolemais from the Saracens. He planted it with monks of St.

Benedict, of the order of Tyronensis, and dedicated the church to the Virgin Mary and St. Andrew the apostle. The monks were brought from the abbey of Kelso. The monks of Lindores drew the tithes of twenty-two parish-churches which belonged to them. In 1208, Sirbald says, he finds that there resided in the monastery an abbot and 26 monks.\*

\* The first abbot, Fordun says, was named Guido; and Spottiswoode, in his 'Religious Houses,' says, "there is a bull of Pope Innocent III., granted at Lateran, in the year 1198, the second year of his pontificate, confirming all the lands and privileges granted to the monastery, and addressed 'Guidoni, Abbati monasterii Sancta Mariae de Lindores ejusque fratribus.'" In the beginning of the 15th century, Lawrence, who is said to have been 'magnus theologus et vitæ venerabilis vir,' was abbot of Lindores. He was appointed by the Pope to the important office of inquisitor in Scotland. In this office he was stern and severe; and it was by him that Rosby and Crawar, the earliest of our Scottish martyrs, were condemned to the flames. We have a more favourable view, however, of Lawrence of Lindores, when we find him associated with Bishop Wardlaw, in founding the university of St. Andrews, and explaining to the students the fourth book of the Sentences of Peter Lombard. John, another abbot of Lindores, was present at the condemnation of Sir John Borthwick for heresy, in May 1540. He was afterwards appointed a judge in the Court-session. In August 1560, he attended the parliament which established the reformed religion, and was appointed a lord of the articles, much to the displeasure of the Popish party, who stigmatized him as an apostate. John Leslie, the celebrated Bishop of Ross, and the faithful adherent to the unfortunate Mary, Queen of Scots, succeeded the abbot John. Some doubts have been thrown on the parentage of this prelate by Knox, who, in his history, calls him "a priest's get;" but in the account of his life, prefixed to his negotiations in behalf of his mistress and sovereign, during the time of his confinement in England, he is said to have been born of credible and honourable parents. In 1544, he was advanced, by the bishop of Aberdeen, to the character of an acolyte in his cathedral church; and in 1550, he was canon of Aberdeen and Ellou, prebend of Aberdeen, and perpetual vicar of the parish-ork of Dyke. He now applied himself to the study of law, and with this purpose went to France, where he studied the canon and civil laws for four years at Punctiers, Toulouse, and Paris. There he was made doctor of laws, and lectured for nearly a twelvemonth in the schools of law. He returned to Scotland in 1554, was appointed official of Aberdeen on 15th April, 1558, and inducted into the parsonage and prebend of Oyne in 1559. He disputed with the Reformers at Edinburgh in 1561; and was selected by the Catholic party to proceed to France, and invite Queen Mary to return to Scotland, after the death of Francis II. He went accordingly, and attended the Princess home; and was shortly afterwards appointed a privy councillor, and, in 1564, an ordinary lord-of-session. Not long afterwards he obtained the abbacy of Lindores, *in commendam*; and in 1565 was appointed to the see of Ross. Bishop Leslie was one of the Queen's lords, who, in June 1567, tried to rouse the citizens of Edinburgh to resist the associated lords. After the imprisonment of the Queen, he returned to his diocese; but having heard of her escape, he hastened to join her at Hamilton. He accompanied his unfortunate mistress to Carlisle, and was one of the most zealous of her commissioners, in September 1568. He was also ambassador from Mary to Elizabeth, and was most indefatigable in his exertions to befriend the imprisoned Queen. Among others, he entered deeply into the intrigue with Norfolk, and was in consequence deprived of his privileges as ambassador, and committed first to the charge of the Bishop of Ely, and latterly to the tower of London, from which he was liberated after a confinement of two years, only on condition of his leaving the country. He now went to France, where he remained till 1575, when he proceeded to Rome, where he continued three years, and where he published his history. For several years after this he wandered from court to court, vainly endeavouring to rouse the Catholic princes in behalf of Mary. He was, in 1570, appointed vicar-general of the archiepiscopal church of London; and, in 1593, was provided with the bishopric of Cousances in Normandy, but was prevented from enjoying his preferment by the troubles of the period. At length he retired to Brussels, where he died on the 2d May, 1596, in the 69th year of his age. Besides his history,—the *Latiuité* of which is held as only second to Buchanan,—Bishop Leslie wrote and published several treatises in defence of the honour and interest of Queen Mary; and the 'Pious Consolations,' which amidst his own distresses he yet found time to write for her use, cheered her cruel solitude and gained for him her gratitude. One of the last actions of Mary's life was to address Philip II. of Spain on his behalf, whom she styles the most pious, able, and devoted of her servants. He certainly was the most eminent individual both as a prelate, statesman, and historian, who ever held the abbacy of Lindores. After the removal of Bishop Leslie to the continent, the Hon. Sir Patrick Leslie of Pitcairly, second son of Andrew, 5th Earl of Rothes, received the abbacy of Lindores *in commendam*. He was high in favour with James VI. His eldest son Patrick had the abbacy of Lindores erected into a temporal lordship in his favour, and was created Lord Lindores, 31st March, 1600; but was for a time only styled Master of Lindores, in consequence of his father taking the title during life. He was succeeded by his brother James, who is styled the 3d Lord. A great portion of the

The site of the monastery of Lindores on the fine carse-land which here borders the Tay, and was formerly part of the forest of Black Earnside, must have been peculiarly beautiful, commanding a view of the opposite shores of the Tay, and a portion of the valley of Strathcarn; and the several buildings it contained were no doubt in a style of grandeur commensurate with its wealth and importance. The latter, however, is in a great measure matter of conjecture, as little of the ruins now remain to give any idea of its extent or the beauty of its architecture. The first outburst of the Reformers was no doubt attended with an equally destructive attack on the monastery of Lindores as that experienced by so many other venerable buildings throughout the kingdom; but Lindores abbey has been peculiarly unfortunate, as it seems long afterwards to have formed a quarry from which the inhabitants of Newburgh obtained stones for repairing or erecting their houses. The consequence is, that the whole of the polished ashler stones with which the walls of the church and other buildings were faced, both outside and inside, have been removed, and almost nothing now remains of the walls, but the internal packing of small stones and lime which filled up the space between the ashler fronts. A thick matting of ivy serves however, in part, to conceal the long-continued dilapidations which ruthless hands have made on these interesting ruins. If we might be allowed to form any conjecture as to the style of the church, we should suppose it to have been what is now usually styled the Early English, that is, the first and simplest form in which the Pointed style is anywhere found. The appearance of the groinings on the roof of two small vaulted crypts, which are yet entire, would seem to favour this conjecture. It may, however, have been in the Norman style, which immediately preceded the Early English, and was for a time coeval with it; indeed both of these styles were practised about the era of the erection of this monastery. The wall which surrounded the precinct of the abbey is still pretty entire, and within it and in its immediate vicinity, are still to be seen many of the "vastly big old pear trees," mentioned by Sibbald. One of these is particularly worthy of notice for its great size and age; although it is now, from the breaking down of one of its principal branches, a third less than it was a few years ago. When we saw it in 1839, it was, notwithstanding its age, and that it is beginning to decay internally, literally loaded with fruit. It is said that David, Duke of Rothsay, eldest son of Robert II., who was barbarously murdered at Falkland, by the contrivance of his uncle, the Earl of Fife, and Sir John Ramorney, was buried here; but this is doubtful, as it is also said he was buried in the old church of Kilgour, near Falkland. A stone coffin is pointed out at Lindores, which is said to have been that of the Prince; but this is mere vague conjecture; for any thing that appears, it may have been the resting-place of some of the abbots of the monastery. The last of the Earls of Douglas, after a life of trouble and turmoil, found a peaceful retreat

for his old age, and died within the walls of this monastery in 1488.\*

Mugdrum-house lies upon the Tay, at the west end of the parish, and in the immediate neighbourhood of Newburgh. It is a large heavy looking building, erected in 1786, but beautifully situated near the river, amid extensive and very fine old woods. The old house stands nearer the water, and is still inhabited and in good condition, but it is much smaller in size than the new house. Within the woods of Mugdrum, a short way westward of the town, there is a very interesting relic of antiquity known by the name of Mugdrum cross. "The term Mugdrum is obviously," says Dr. Anderson, "a corruption of Magriden, the saint in whose honour it may have been erected, and to whom the lands of Mugdrum were dedicated." The cross consists of an upright square pillar of stone, fixed into a large oblong stone as a base. The cruciform part is not now to be seen, as the upper portion has been broken off; but there seems little reason to doubt, both from the appearance of the stone itself, and from its resemblance to other crosses still existing, that it originally had transepts which gave it the form of a cross. The east face is divided into four compartments, the upper two of which together occupy nearly one-half the stone. They obviously each contained the representation of a man on horseback, but the riders and the posterior portion of both horses have disappeared from the decay of the stone. The third compartment contains two figures also partially effaced, the first and smaller of which appears to be a horse; while the other, the head of which has disappeared, seems to be a bullock with a yoke round the neck. In the lower compartment there are five figures apparently representing a boar-hunt,—the boar and four dogs being pretty distinct. The northern side presents two serpentine ornaments, which are often seen on monuments of this description. The cross was measured, in 1774, by James Cant, editor of 'The Muses Threnodie,' when the following results were obtained:—Height of pedestal, 2 feet 2 inches; length, 6 feet; breadth, 3 feet 6 inches; height of the cross from the top of the pedestal, 11 feet 9 inches; breadth, 2 feet 4 inches; thickness, 1 foot 2 inches. The cross is

\* He was the 9th Earl of the elder branch of that noble house. After the death of his brother, who, in 1451-2, was poisoned in Stirling castle by James II., he made a feeble attempt to avenge that deed upon the king; but wanting the energy of his race, and vacillating and procrastinating in his counsels, he was deserted by his principal friends, and obliged to fly into England. There he was well-received, and from thence, aided by the power of England, he made many unsuccessful incursions upon the Scottish border. At length, wearied of exile, he and the Duke of Albany made an attempt to establish themselves in Scotland. With a small force he crossed the Border, trusting that his former friends and followers would fly to his standard; but in this he was disappointed, for the most powerful of the Border-chiefs, little inclined to follow his fallen fortunes, attacked and defeated him at Burnswark in Dumfriesshire. He was taken in flight by a son of Kirkpatrick of Closeburn, one of his own vassals. A grant of lands had been offered for his person, and he appears to have been willing that it should be obtained by young Kirkpatrick. "Carry me to the king," said he, "thou art well-entitled to profit by my misfortune; for thou wast true to me while I was true to myself." The young man wept bitterly, and offered to fly with the Earl into England. But Douglas, weary of exile, refused his proffered liberty, and only requested that Kirkpatrick would not deliver him to the King till he had secured his own reward. Kirkpatrick not only did this, obtaining the lands of Kirkmichael for his service, but successfully stipulated for the safety of the aged nobleman; and the last of the Douglases was allowed to retire to Lindores, muttering as he left the royal presence, "He who may no better be, must be a monk." The following verses are said to have been made upon his assuming the cowl:

"Quod rides rasanque caput, ce laque recessum  
Gonique cucullatis fratribus anumeret?"

Fortuna volente vicis fiet modo princeps,  
Pibeus; monarchus sepe monarchus fuit."

Why do you laugh to see my shaven crown?

My cell, my cloister, and my hooded gown?

This is the power of that Sovereign Queen,

By whom monks, monarchs; monarchs, monks have been.

lands of Lindores were appraised in favour of John Bayne of Pitcairny, in consequence of debts incurred by James, the 3d Lord. David, the 5th Lord, dying without issue, was succeeded in the title by Alexander Leslie of Quarter, the grandson of Sir John Leslie of Newton, a younger brother of Sir Patrick Leslie the commendator, and 1st Lord Lindores, who became 6th Lord. His son Francis John, the 7th Lord, died without issue, when the title was claimed by Leslie of Lumphanan, who voted as Lord Lindores in several elections; but at the general election, 24th July, 1790, his votes were objected to; and the House of Lords, on 6th June, 1793, resolved that "the votes given by the Lord Lindores at the said election were not good." Since then, the title has remained dormant; and the lands are now in the hands of other families. The lands of Lindores, within this parish, are the property of David Balfour Hay, Esq. of Leys.

considerably sunk into the pedestal, which is one solid block of stone. The weight of the column with its pedestal may probably be about 5 tons. "It consists," says Dr. Anderson, "of white sandstone, similar to Maeduff's cross, the nearest locality of which is the Lomonds, about 8 miles south, with the hilly ridge of the Ochils intervening." This opinion of so skilful a geologist as Dr. Anderson, is peculiarly illustrative of what Cant says, in his letter to Paton, was the local tradition with regard to these two very ancient reliques: "The cross and pedestal are of freestone, the same with that of Maeduff's cross, and the antique steeple of Aher-nethy. Tradition says that the stones were dug out of a quarry on the Lomond hills, about 5 miles south." It is certainly rather singular that Sir Robert Sibbald appears to have been ignorant of the existence of this interesting monument, as he has omitted any mention of it in his History of Fife.

About three quarters of a mile south-west of Mugdrum cross, are the remains of another celebrated cross, Norman Maeduff's cross, on which so much has been written, both in prose and rhyme. It is situated upon the high ground, in an opening of the Ochils which forms a pass from the valley of Strathearn into the central portion of Fife. This cross is said to have been broken in pieces by the Reformers, on their way from Perth to Lindores; and nothing now remains but the large square block of freestone which formed the pedestal. This stone is 3 feet 9 inches high; 4 feet 7 inches in length, by 3 feet 9 inches in breadth at the base; and 3 feet 4 inches in length, by 2 feet 8 inches in breadth at the top. There are several holes or indentations on its different faces, which tradition says were nine in number, and in which nine rings were at one time fixed. There is no appearance of any socket in which the cross had been fixed; so that it must have been placed upon the surface of the stone, without any other support than that of its own base. No remains of the broken cross are to be seen in the neighbourhood. Cant says that the pieces were removed by the inhabitants of Newburgh, and built into some of the houses of that town. This cross, like that at Mugdrum, was dedicated to St. Magriden, who appears to have been the patron-saint of the district, and to whom the church of Ecclesia Magriden, or Exmagirdle as it is now called, in Strathearn, was also dedicated. It formed a girth or sanctuary for any of the clan Maeduff, or any related to the chief within the ninth degree, who had been guilty of "suddan chaudmelle," or unpremeditated slaughter. In consequence of this privilege, any person entitled to take advantage of it, and requiring its security, fled to the cross, and laying hold of one of the rings, punishment was remitted on his washing nine times at the stone, and paying nine cows and a colpendach or young cow; the nine cows being fastened to the rings. What peculiar or occult quality was considered to dwell in the number nine, we do not pretend to be able to explain; but we see the privilege only extended to the ninth degree of kindred, the stone contained nine rings, the oblation offered to St. Magriden was nine cows and a colpendach, the washings were nine, and a powerful spring called the Nine wells, where it is supposed the ablutions took place, still takes its rise at no great distance from the cross. This spring, or rather collection of springs, is copious, and of the purest quality, and being collected together forms a considerable stream, which has lately been profitably employed in the operations of a bleachfield.\* A short way west of

the pass in which stands the cross of Maeduff, and on the slope of the Ochils, is a small cairn of stones, known by the name of Sir Robert's Prap. It marks the place where a fatal duel occurred about the close of the 17th century, between Sir Robert Balfour of Denmiln, and Sir James Makgill of Lindores.

NEWBURGH, a royal burgh situated within the above parish. It consists chiefly of one long well-built street, about half-a-mile in length, a range of houses fronting the harbour, and some lanes leading down to the 'shore.' To the south of the town, but within the parish of Ahdie, a considerable number of houses have been recently erected, in consequence of the increased trade and manufactures of the town. In passing through Newburgh, the stranger will at once perceive, from the number of handsome dwelling-houses, and from the appearance of the shops, that it is, for its extent, a wealthy and increasing town. Its situation on the Tay is exceedingly pleasant, and from the gardens attached to the houses, and the numerous fruit-trees with which they are planted, few small towns have a more beautiful appearance when seen either from the river, in going up or down, or from any prominent part of the neighbouring coast. The only public buildings in the town are the town-house, which is surmounted by a spire, and was erected in 1815; and the parish-church, which was erected in 1833. Newburgh is a town of considerable antiquity, and owes its origin to the abbots of the monastery of Lindores in its neighbourhood. It was erected into a burgh-of-barony by Alexander III., in 1266, in favour of the abbot and convent, with all the usual privileges of burghs-of-barony. In the charter it is called 'novus burgus juxta monasterium de Lindores;' and it seems, therefore, probable that there was a more ancient burgh in the neighbourhood belonging to the abbey, any trace of which however is now lost. In 1457 it was erected into a royal burgh; on the 4th of July, in that year, John, Abbot of Lindores, granted to the burgesses of Newburgh the land of Vodriff and the hill to the south of it—about 400 acres in all—for which they were to pay to the abbot, homage and common service used and wont, with 40 bolls of barley. These acres now belong chiefly to a number of individual proprietors, and are held in free burgage, though they pay an annual fee-duty partly to the Crown and partly to the proprietor of the Abbey-lands of Lindores. In the year 1631, Charles I. confirmed the ancient royal charter; but the burgh never exercised its right of sending a member to the

degree. Among the persons who are said to have claimed the right, and to have had their claim allowed, were the Laird of Arblinnot, for being concerned in the murder of Melville of Glenberrie, sheriff of the Means; Spens of Wormiston, for the murder of one Kinninmond; and Sir Alexander Murray of Abercromby, who had been concerned in the slaughter of one Spalding, in the year 1397. It was on all occasions necessary when the privilege of Cross-Maeduff was claimed, that proof should be given of consanguinity within the limited degree; and where in any case the claimant failed in establishing his right, he was instantly put to death, and buried near the stone. There were formerly several artificial cairns and tumuli around the cross, and one rather larger than the rest about fifty yards to the north; but the progress of agriculture which has brought the ploughshare over the fields around the cross, has now removed all traces of them. These tumuli were supposed to have been the burying-places of those who had been executed here in consequence of failing to establish the necessary relationship; but no attempt has ever been made to ascertain the truth of this report. "Superstition," says Cant, "forbids the opening of any of them; no person in the neighbourhood will assist for any consideration, nor will any person in or about Newburgh travel that way when dark, for they affirm that spectres and bogles, as they call them, haunt that place." With the removal of the traces of the graves, it is probable that the superstitious fears attached to the spot will also disappear, if they be not already among the things that were. Sir Walter Scott has made the traditions and antiquities of this place the subject of a short dramatic poem, entitled 'Marduff's cross,' in which, with his usual felicity, he has embodied correct local descriptions, and the various traditions with which the time-honoured relics of this district have been surrounded.

\* The privilege of the clan Maeduff is said to have been often claimed, not only by the direct members of that powerful body, but by others who considered they were within the privileged

Scottish parliament, and consequently, at the Union, was not included in any of those sets of burghs on whom was conferred the right of sending a representative to the British parliament. At the passing of the Reform bill, it might have been expected that the wealth and importance of Newburgh would have entitled it to be conjoined with some of the other burghs of Fife in the election of a member; but this appears to have been overlooked, and its inhabitants who possess the requisite franchise vote only for the member for the county. Newburgh is governed by two magistrates, and fifteen councillors, with a town-clerk. The magistrates have the usual civil and criminal jurisdictions within the royalty; and hold courts at regular periods for the decision of questions which are brought before them. The royalty extends  $1\frac{1}{2}$  mile to the south and west beyond the town, but a considerable part of the town and harbour in the north and east lies beyond it. The sheriff holds a circuit-court once a quarter for the recovery of small debts, in terms of the late act. The gaol of Newburgh, which is the ground-floor of the town-hall, is only used as a lock-up-house; persons charged with a crime requiring more than a night's imprisonment are transmitted at once to the county-gaol at Cupar. The income of the burgh is chiefly derived from the rent of land belonging to the town, which has greatly increased of late years, and is now about £170 per annum. The debt due by the burgh, in 1834, was:

Heritable, . . . . .	£1,400 0 0
Personal, . . . . .	250 0 0
	<hr/>
	£1,650 0 0

The magistrates and council levy no taxes except the customs and market-dues, and a small tax upon the inhabitants, producing about £10 yearly, to pay the interest of the money expended by the community in bringing water into the town. The property of the burgh consists of 174 Scotch acres of land—of which 87 acres are arable, and about 87 not arable—32 acres of young plantation, the town-house, gaol, corn-market, and granary, the burgh's share in the parish-church as an heritor in the parish, and debts due to the burgh, being arrears of rents and feu-dues. The linen manufacture is extensively carried on here, and has made great progress of late years. In the 17th century, Cunningham, in his essay on Cross Macduff, describes Newburgh as 'a poor country village'; and till pretty far in last century, although gradually improving, it remained much the same. Until within a few years of the publication of the first Statistical Account—1793—the inhabitants of Newburgh had been chiefly employed in hushandry; but the linen-trade had occupied them to a certain extent, and when that account was published, the greater portion of the people were employed in that manufacture. At that time, however, there were only two persons who employed workmen; the greater part of the linen manufactured being woven by individual weavers on their own account, who sold their webs, when finished, at Perth, Dundee, Cupar, Auchtermuchty, and Glasgow. The principal branch of manufacture is the weaving of what is called dowlas, for which a ready market is found in London, Leeds, and Manchester; large quantities are also exported to the West Indies and South America direct from Newburgh. The number of looms employed within the town, in 1833, was 564; the number of webs manufactured, 23,600; value £128,325. In 1838 the value of goods manufactured was £170,000 sterling. The merchants of Newburgh also carry on a very considerable trade in grain, which has been much increased and facilitated by the establishment of a weekly stock-market, to which the

farmers of the surrounding district bring their grain. The harbour of Newburgh, usually called 'the sbore,' consists of a long pier parallel to the river, and five projecting piers at right angles to it. There is always here considerable stir and hustle; and not a little real business going on. There are vessels to the amount of about 1,600 tons belonging to the port; and two packets are regularly employed in bringing from Dundee the raw material used in the linen-manufacture, and carrying away the manufactured goods. Besides this, and the shipping of grain and potatoes, there is a considerable importation of wood from America, Norway, and Memel, and of coals from the north of England. The steam-boats which ply daily between Perth and Dundee touch at Newburgh; and many of the vessels bound for Perth are often obliged to wait here for the flow of the tide, and in some instances to discharge a part of their cargo before they can proceed up the river. Ship-building has recently been commenced at Newburgh, with appearance of success. A company for supplying the town with gas was formed in 1836, and having erected suitable works, began to make gas in October, 1837. There are two fairs here yearly, at which markets were formerly held, but these have now degenerated, and the fairs are merely seasons of amusement to the inhabitants. One of these is called the Race fair, when foot and pony races take place. The other is called the Haggis fair. The origin of this name is supposed to be from the bagabag, or coarse linen, formerly sold at it. A branch of the Perth bank was opened here in 1800, and continued to do business till 1811, when it was withdrawn. Newburgh did not again enjoy the benefit of a local bank till 1833, when the increased importance of the town induced the Commercial bank of Scotland to establish a branch here. In 1834, the Central bank of Scotland, whose principal establishment is at Perth, opened a branch here. A branch of the Fife-shire National Security Savings' bank has been established in Newburgh. In 1841, the population amounted to 2,491; and in that year the burgh contained 291 inhabited and 2 uninhabited houses.

**NEWBURGH**, a village in the parish of Foveran, Aberdeenshire, 5 miles south-east of Ellon, and 10 north of Aberdeen. It occupies a pleasant site near the confluence of a tide-expanded streamlet with the Ythan,  $\frac{3}{4}$  of a mile above the latter's influx to the ocean; and it possesses important facilities for both a manufacturing and a fishing station.

**NEWBURN**, a parish in Fife-shire, situated on that part of the frith of Forth called Largo-bay, which bounds it on the south; and bounded by Largo on the west, and Kilconquhar on the north and east. It extends  $3\frac{1}{2}$  miles in length, and 2 in breadth. The soil is in general fertile, and almost all arable and enclosed. Superficial area 2,400 imperial acres. Population, in 1801, 412; in 1831, 418. Houses 84. Assessed property £4,318.—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Craigie of Dumbarrie. Stipend £200 15s. 6d.; glebe £25. Church built in 1815.—Besides the usual endowments from the parish, the parochial-schoolmaster has a liberal allowance for teaching poor children, in consequence of John Wood, Esq. of Orkie, having mortgaged that estate, for the purpose of erecting and maintaining a free grammar-school in this parish. This free-school has existed in the parish since the year 1658.

**NEWBYTH**, a village in the parish of King-Edward, Aberdeenshire;  $5\frac{1}{2}$  miles south-west of New-Pitsligo, 6 north-west of New-Deer, and 13 south-east of Banff. It was founded in 1764 by James Urquhart, Esq., upon his estate of Byth. It

stands on a rising ground, and consists of two streets, which cross each other nearly at right angles. Many of its inhabitants have small lots of land in a fertile little tract of country lying to the south and east. The village is the site of a chapel in connection with the Establishment, of a side parochial-school, and of two inns; and it has a subscription-library, a savings' bank, and three annual fairs. Population about 310.

NEWHALL, a romantic locality chiefly in the parish of Penicuik, Edinburghshire, and partly in that of Linton, Peebleshire; 3 miles south-west of Penicuik, and  $1\frac{3}{4}$  from Edinburgh. The mansion of Newhall stands on the left bank of the North Esk, within a curvature of the stream, 4 miles from its source, and while it forms the boundary-line between the counties. During the 16th century, and an unknown period preceding, it belonged to the family of the name of Crichton. In 1646, Dr. Pennycook became its proprietor; and, in his works, he mentions some particular plants found upon the grounds. He was proprietor also of Romanno,—a place not far distant in the parish of Newlands; and he there, in 1677, witnessed, with strong interest, a serious squabble between two parties of gypsies. In 1683 he built a dovecot on the scene of the quarrel, apparently to show his wit in the following very homely distich:—

“The field of gipsy blood which here you see,  
A shelter for the harmless dove shall be.”

About the period of the Union, Newhall was acquired by Sir David Forbes, Knight, and afterwards it was inherited by his son, Mr. John Forbes, advocate, and became a favourite resort of some of the most eminent literati of the last century. While inhabited by the Crichtons it was an irregular castle, and, with its appendages, covered the whole breadth of the point on which it stands, formed by a stripe or low spur from the base of the Pentlands, cloven down on each side by a deep ravine, and terminating in the glen of the Esk. The ground-floor in the front of the present building, was part of one of the towers; it is vaulted in the roof, and has on every side slits for defence; and it is so strong as, in our place, to have a closet cut out of the thickness of the wall. The eastern ravine is overhung by the remains of a small round tower, with some vaults, and it is densely filled with wildly growing trees, and threaded by a dark and romantic rill, which leaps along in several beautiful cascades, and flings up its spray amid the deep shades and concealment of the woods. The western ravine is overhung by a point on which anciently stood a religious establishment of some note, and a prison remembered, at the close of last century, to have been recently in use; and though this ravine is dry, it vies with the other in romance, and, like it, is shaded with thick foliage. A walk goes round the site of the chapel and prison, forming a noble terrace from the west end of the house looking up the glen, and over to a mineral well among copsewood and pines on the other side. A farm in the immediate neighbourhood bears the name of Spital, and probably formed an endowment for supporting, under the management of the religious foundation of Newhall, an hospital or hospice for the refreshment and shelter of travellers. About half-a-mile above Newhall, amid a general flattening and widening of the Esk's banks, the stream encounters a contracting and forking ridge of limestone; and, forming a linn, bounds down in successive leaps to a circular pool, which, under birches and shrubs, and upon a bed of pebbles, spreads out between the rocks and a little verdant expanse. On the face of a promontory which looks up to this beautiful and sequestered spot, and is formed by the

sudden expansion of the glen, is a round turf-seat, known in romantic association as Mary's Bower, commanding a full view of the linn, and terminating a winding path along the north brink of the glen. About half-a-mile below Newhall, Monk's-hurn, running upon rotten whin, enters the glen of the Esk in several considerable falls, and amidst much fine landscape, and is overlooked at its mouth from the opposite side of the Esk by an upland called the Steel, said to have got its name from being the scene of a skirmish with a straggling detachment of General Monk's army. A little below this stream, and on the left bank of the Esk, is a clear and deep lake, surrounded with rising knolls, and on three sides, by the wooded banks of the river sweeping round far beneath; and the lake has no visible supply, outlet, or variation, and always laves the green sward at the foot of its dry and undulating banks. When a spectator stands at the eastern extremity at the mellowing of a summer's noon, and the fish begin to leap, and the sun gets behind the ornamented farm-house of Old Harleymuir on a height beyond the river above the Steel, and throws his warm em-purpling rays on the Carlop's-hill in the distance to the right, the scene in view forms as enchanting a picture as the pencil could well select. Numerous other landscapes and objects of alternately soothing and thrilling interest exist on the grounds or their vicinity; the chief of which are the scene of Allan Ramsay's Gentle Shepherd, described in our article on HABBIE'S-HOWE, and some antiquities noticed in the articles CARLOPS and LINTON.

NEWHAVEN, a *quoad sacra* parish, a considerable fishing village, and a harbour on the frith of Forth, 1 mile west of North Leith, and 2 miles north of Princes-street, Edinburgh. The parish was erected by authority of the presbytery of Edinburgh in 1838, and, as to population, consists chiefly of the village, which is situated, *quoad civilia*, in the parish of North Leith. Newhaven had, in the 15th century, a chapel dedicated to the Virgin Mary, and was designated from it, in a style characteristic of the period, “Our Lady's Port of Grace.” A small part of the outer wall of the chapel still exists in the burying-ground, in the centre of the village. James IV., who patronized the ecclesiastical erection, encouraged the coeval formation of a village, made it the site of a dockyard, and conferred upon it certain burghal privileges. The town-council of Edinburgh, becoming jealous of the consequence which it promised to attain, and exercising the same selfish and grasping policy which prompted them to enthrall Leith, and purchase the royal charter of Musselburgh, bought, in 1511, from James V., the village and the harbour, with all their pertinents and rights. As a haven, formed, named, and patronized by the Crown, and possessing greater depth of water than Leith, and as the site of accommodation both for the building and the harbourage of vessels, it might early have rivalled and superseded Leith; but it was crushed into insignificance by the policy of Edinburgh, and—so late as the epoch a few years ago of the disruption of the municipal power of the metropolis through insolvency, and the completing of a grand effort to form a suitable harbour for the great commerce of Mid-Lothian—it has been permanently condemned to lose the fruit of its natural advantages in consequence of the difficulty of removing the great house and warehouse establishments of merchants fixed at Leith. Yet, though it continued for a long period to be a mere residence of fishers, with a rude and miserable pier, it has, in modern times, greatly increased in size, and acquired several marked elements of importance. By an arrangement between the trustees of the Fife ferry and Government, a

very substantial low-water stone-pier was erected, enclosing a commodious harbour for wherries and fishing-boats, and accommodating the numerous steam-vessels which ply, at all hours, between the two sides of the frith. Other steam-vessels, and even those of the London and Edinburgh steam company, avail themselves of this pier; but, its end being nearly dry at low water, they can rarely lie alongside to take in or discharge, and receive advantage from it chiefly through the troublesome medium of boats. About 500 yards west of the stone-pier, a chain-pier was constructed in 1821, by Captain Samuel Brown of the Royal Navy, at an expense of £4,000. It is upwards of 500 feet long, and 4 feet wide, extends to a depth at low water of from 5 to 6 feet, and serves for the use of steam packets to Stirling, Queensferry, and various other places above and below Leith; yet it comes far short of affording sufficient accommodation for either the number or the bulk of steam-vessels which frequent the harbours of Edinburgh. Upwards of a mile to the west is the new and better pier of GRANTON: which see. In the vicinity of the chain-pier are the terminus of the Edinburgh and Newhaven railway [see article EDINBURGH], and a considerable number of villas and seabathing cottages, fens of the Trinity-house of Leith, and bearing, in common with the pier, the name of Trinity. In front of these buildings, and at the east end of the village, the beach dips down into excellent bathing-ground, and is the grand resort of pedestrian bathers from Edinburgh. Newhaven promised at a time not long past to rise into a summer-retreat of aristocrats and capitalists, and, to a trifling extent, it has this character in its outskirts; but it has become jilted and forgotten in consequence of the sprightly attractions of its rival, Portobello. The body of the village is ungainly, irregular, noisome, abounding in exterior open staircases, rude and untidy in its houses, and redolent of the offals of fish and every sort of nuisance in its streets. Yet it has some inns and profusion of public-houses, and possesses some note as a resort of the citizens of Edinburgh for fish-diners. Two great thoroughfares connect it with Edinburgh; the one by the villas of Trinity and the village of Canonmills, and the other by Bonnington and Claremont-street; and both are scoured almost every hour by coaches and omnibuses, which connect the metropolis, through the Newhaven ferries, with most districts in the north. The village, as to its political position, is included within the parliamentary and municipal boundary of Leith, and, as to the relation of its harbour to the custom-house, belongs to the port of that town: see LEITH.—The inhabitants, in spite of the filth which surrounds their abodes, are an industrious, hardy, and thriving race. They have for centuries formed a peculiar and exclusive community, all more or less mutually related by marriage, and rarely intermarrying with others than natives of the village. The males are mostly all fishermen, weather-beaten and athletic, and so trained from youth to spend most of their waking hours on the sea, that they are expert in nothing but handling the sailing-tackle and the net. Their wives, and daughters,—well known in Edinburgh, and partially known by report throughout Scotland, as “the Fishwives of Newhaven,”—are a sturdy corps of Amazons, so distinguished by peculiar habits as to be quite a study to the observer of human nature. They partake all the broad features which mark the character of their sisterhood of FISHERROW [see that article], and share with them the trade of supplying the markets of Edinburgh and Leith with fresh fish. But they possess additional features which are less apparent in the Fisherrow women; and, during two-thirds of the year, they have exclusively the

trade of supplying the capital with oysters. They carry, in their creels or huge willow-baskets, load quite as heavy as any borne by their rivals; they entirely equal them in the masculine character of their strength and habits; and when their husbands or fathers are detained from the sea by tempestuous weather, they coolly assign them female domestic duties, and go themselves in search of employment to earn the means of household support. When provoked, they exhibit a rude power of tongue, a coarseness and seaman-like vulgarity of abuse, which rival those of their Billingsgate contemporaries. They are so celebrated, too, for their exorbitant attempts at extortion,—very frequently asking three or four times the sum for their goods which a skilful purchaser induces them to take,—that other trades, when annoyed by purchasers cheapening their wares, or offering a much lower price than has been demanded, are in the habit of exclaiming, “What! would you make a fishwife o’ me!” Yet they are honourable among themselves, and peaceable and orderly as members of the general community; and though a very hard working class, and accustomed, in keeping with their habits and pursuits, to eat and drink in the style of city carters and porters, they do not indulge in an excessive use of ardent spirits. They dress in a manner at once coarse, costly, and peculiar,—sufficiently tidy when viewed in connexion with their occupation, and not a little interesting to the lover of the picturesque. In consequence of their having to support their heavy creels with the whole muscular power of the head and neck, they wear no head-dress but a napkin, and have attached to their loads a broad belt, which they rest across their forehead when moving, and let slip over their head when about to exhibit their merchandise. They usually wear a jerkin of blue cloth, and, on their neck and bosom, several fine neckerchiefs; and they wrap themselves up in a profusion of petticoats of different stuffs and colours, two or three being regularly adjusted on the person, and others so contorted into twists and bundles below the waist as to produce a strange bulkiness and grotesqueness of appearance.—Newhaven gave, at one time, the name of Viscount to an English family of the name of Cheyne, who never had any property in its vicinity. Charles Cheyne of Cogenho, in Northamptonshire, became, in 1681, the first Viscount Newhaven; and his son, who died in 1738, was the second and last.

NEWHILLS, a parish in the south-east corner of Aberdeenshire. It is bounded on the north by Dyce; on the north-east and east by Old Machar; on the south by Bauchory and Peterculter; and on the west by Skene and Kinnellar. It is nearly a rectangle of  $5\frac{1}{2}$  miles by  $4\frac{1}{2}$ ; and contains nearly 17,000 acres. The surface in the north-east is low and level, but elsewhere is in general hilly, and toward the west may be called mountainous. The soil, over much the larger part of the area, is black, light, shallow, and spongy, incapable of resisting the influence of either much heat or much cold; but, in the small level district, it is a deep rich mould, on a good subsoil, and productive of early and luxuriant crops. Upwards of 600 acres are under wood; nearly the same number are in commonage; nearly 1,800 are waste land or mountain pasture; and the remaining area is either regularly or occasionally turned over by the plough. The Don traces the boundary for 2 miles on the north-east, and while in contact with the parish, gives up excellent salmon, as well as pike and trout. Six brooks, tributary to it or the Dee, abound with small trouts and eel. There are several chalybeate springs. The antiquities are a large cairn, several tumuli, the vestiges of an old

chapel, and some remains of a Druidical temple. A cave in one of the dens of the hill of Elrick is supposed by the vulgar to penetrate for miles under ground, and celebrated in their legends as the residence of a noted robber and his gang. Two beautiful and chief mansions are Springhill and Hazelhead, the seats respectively of Mr. Forbes and Mr. Robertson; and other pleasant houses are Fairley, Gateside, Waterton, Sheddocksley, Crailston, and Newhills. Five or six vast quarries of blue granite employ about 200 men, and furnish large supplies of stones both for use and for shipment at Aberdeen. On the Don are 3 paper-mills, employing about 150 persons; 2 snuff-mills; a large brewery; and 10 grain mills,—2 of them for flour. Annual fairs for cattle and horses are held at Greenburn on the second Tuesday of May, old style; the second Thursday of June, old style, and also on the day before St. Sair's, in the same month; the last Thursday of July; the last Wednesday of September; and the third Tuesday of October, old style. The parish is traversed by the roads from Aberdeen to Inverurie and Strathdon; and enjoys rich facilities of communication from being within 2 miles of Aberdeen. Population, in 1801, 1,305; in 1831, 2,552. Houses 421. Assessed property, in 1815, £2,875.—Newhills is in the presbytery and synod of Aberdeen. Patron, the Earl of Fife. Stipend £414 12s. 2d.; glebe £45. Unappropriated tithes £76 1s. 7d. Parochial schoolmaster's salary £32 2s. 3d., with fees, and about £6 other emoluments. There are two private schools. The parish of Newmills anciently formed the south-east corner of the originally very extensive parish of St. Maehar. The lands of Capelhills—a name probably derived from *Capella*, a chapel—were, in 1663, mortified for the maintenance of a minister, and made the site of a church. These lands consist of nearly 700 acres; and they were previously purchased from the town of Aberdeen, and were now devoted to ecclesiastical use, by a person of much benevolence of character, George Davidson of Pettans, an Aberdeen burgess. This gentleman mortified also his lands of Pettans, in Belhelvie, for the support of the ministers of Aberdeen; and erected a bridge over Buxburn, a rapid stream in Newhills, in which he had witnessed some persons perishing. The lands of Capelhills, on being rendered ecclesiastical, assumed the name of Newhills, and communicated to the other parochial lands with which they were associated. The original church was three years a chapel-of-ease, and received parochial erection in 1666. A quite modern edifice now occupies its place.

NEWINGTON, an elegant modern suburb of the Old town of Edinburgh. It forms the extreme south of the city; occupies a site on the very gentle slope of the southern one of the three hills, where it nearly becomes lost in the plain; and is magnificently overlooked, on the north-east by the centre and most towering part of the bold curve of Salisbury crags, and the most precipitous and picturesque face of Arthur's-seat. Minto-street, which runs through its centre, is the grand thoroughfare between Edinburgh and all parts on the border west of the Lammermoors; and forms an approach to the city delightful to persons travelling from England. This fine street, most of whose houses are in the villa style, and chastely elegant, is broadly winged on both sides, with brief streets, and spacious "places," and clusters of villas, which beautifully combine the seclusion and airiness of the country with the pretensions and advantages of the town.

NEW KEITH. See KEITH.

NEWLANDS, a parish in the north of Peeblesshire; bounded on the north by Edinburghshire; on

the east by Eddlestone and Lyne; on the south by Stobo; on the south-west by Kirkurd; and on the west by Linton. It is 9 miles in extreme length from north to south, 3 miles, or a little more, in mean breadth; and 11,000 or 12,000 acres in area. The river Lyne, flowing in a southerly direction, runs 2½ miles along the western boundary, and 3½ through the interior; and receives on its left bank, in drainage of a large part of the parish, the streams of Dead and Flemington burns. The Tarth describes over 2¾ miles the whole of the south-western and southern boundary to the Lyne. These streams are in request with the angler. A ridge of gently-ascending heights extends between the Lyne and the Tarth, occupies the south-west corner of the parish, and is divided between the empires of verdure and the forest. Along nearly the whole of the west side of the parish extends a hilly range bearing various subordinate names, and the general one of Kelly-heads, parallel to the Pentlands, and interrupted only by the glen of Flemington-burn. Along the west base of this range lies the vale of Dead-burn and of the Lyne, forming the central belt of the parochial area, and comprising most of its arable ground. The hills are, for the most part, green and heathless, and frequently dotted and clumped with wood. Trees thrive in every part of the parish, and cover about 340 acres. The land occasionally or regularly in tillage comprises upwards of 3,300 acres; it is chiefly a clayey loam, with a subsoil of close stiff till; and it is, in general, enclosed with hedgerows and fenees, and otherwise finely sheltered. Much attention is given to the dairy; the produce of which is sent to the Edinburgh market. A quarry of excellent red sandstone, in the hill of Broomylees, supplies all the county. Several rich beds of marl have yielded up their treasures to the soil. A species of till abounds which contains alum. Veins of iron-ore occur on the lands of La Mancha; one of them affords a considerable quantity of native leadstone; several contain manganese; and all, with one exception, are either the finest grain ore, or hæmalites, and that grain in mixture. The coal formation stretches beneath the major part of the surface; but in none of its ingredients, except in one instance limestone, is at present worked for the market. Coal, for local consumption, and even for burning lime, is imported from the contiguous parish of Linton. Of ealybeate springs, which are numerous, one near La Mancha contains a great part of aerial acid, which holds the iron in solution.—On the tops of several hills are circular strong walls called rings. Drochilcastle, situated at the confluence of the Lyne and the Tarth, and not very much dilapidated, is said to have been built by Morton, Regent of Scotland, but not finished when he was beheaded. The railroad from Edinburgh to Dumfries, by way of Noblehouse and Moffat, traverses two-thirds of the length of the parish; and a turnpike goes off from it down the Lyne toward Peebles. Population, in 1801, 950; in 1831, 1,078. Houses 186. Assessed property, in 1815, £5,339.—Newlands is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend £243 14s. 2d.; glebe £26. Unappropriated tithes £56 12s. 5d. The church is a very ancient building, and exhibits a strange medley of Gothic archwork, and modern angular masonry. There is in the parish a Relief meeting-house, built soon after the origination of the sect. The parish-church belonged, for a time, to the monks of Dunfermline, but afterwards became a free rectory. In 1834, the parish-school was attended by 55 scholars; and two non-parochial schools, by 114. Parochial schoolmaster's salary £34 4s. 4d., with £15 fees, and £5 other emoluments.—Lord

Chief Baron Montgomery, the first Scotchman who acquired the dignity of Lord Chief Baron, was a native of the parish. The Rev. Charles Findlater, author of the Agricultural Survey of Tweeddale, one of the ablest of the series of works to which it belonged, was long the parish-minister. Dr. Alexander Pennyquick, the author of a small volume of poems, and of a poetical description of Tweeddale, was for some time proprietor of Romanno. See **NEWHALL**.

**NEWMILLON.** See **KIRKLISTON**.

**NEWMILL,** a village in the parish of Keith, Banffshire. It stands on the left bank of the Isla,  $1\frac{1}{2}$  mile north of Keith, and 8 miles south-east of Fochabers; and consists of two parts, Old and New. Population about 600. See **KEITH**.

**NEWMILLS,** a village in the parish of Torryburn, Fifeshire, on the verge of the county,—the burn dividing it from Perthshire; half-a-mile west of Torryburn, and one and a half east of Culross. Here are the remains of a pier, once of considerable extent.

**NEWMILNS,** a large village, and burgh-of-barony, in the parish of Loudoun, Ayrshire. It stands on the right bank of the river Irvine,  $2\frac{1}{2}$  miles east of Galston,  $1\frac{1}{2}$  west of Darvel, 7 from Kilmarnock, 18 from Ayr, and 24 from Glasgow. The weaving of muslins is the principal occupation of the inhabitants. In 1828, the number of handlooms in Newmilns and Garvel was 800; and in 1838, it was 1,130,—of which 700 were plain, and 430 were harness. "A great number of the cotton handloom weavers," says the parliamentary Abstract of Education Returns in 1834, "weave harnesses, a kind of work in which each weaver requires 'a draw-hoy' or girl to assist him. This kind of fabric was introduced here about two or three years ago, and the children who are employed are generally from 7 to 10 or 11 years of age." The village has a United Secession meeting-house, an excellent market, and annual fairs in February, May, August, and October. Newmilns was erected into a burgh-of-barony by royal charter, dated 9th January, 1490. "There are," says the Report on Municipal Corporations, "140 burghesses. Each burghess, at his admission, pays certain dues, which are said to be trifling, but the particular amount has not been specified. The average amount per annum is stated at about 40s., which is applied in keeping the streets in repair. It is not said whether the burghesses enjoy any exclusive privilege or monopoly of trade. As to the burgh's situation in respect of property, revenue, debts, and expenditure, no other information has been obtained beyond a general statement that 'the whole income of the burgh consists in the customs, public green, and feudalities, which in all do not yield £10 per annum.'—The burgh-accounts are kept by the treasurer. They are made out annually, and examined and passed by the magistrates and council. They are said to be open to the inspection of the community.—The nomination of magistrates and council is in the burghesses. They are elected annually, the burghesses choosing 15 councillors; and these again appointing two bailies, a chancellor, treasurer, and town-clerk.—No explanation has been given as to the nature or extent of jurisdiction exercised by the magistrates; but it would appear that they exercise a petty criminal jurisdiction, for mention is made in the return of certain fines imposed upon delinquents, the amount of which, however, does not exceed 10s. annually, and is given to the poor." The Marquis of Hastings, as Earl of Loudoun, is the superior. Population, in 1821, 1,543; in 1831, 1,650.

**NEWPORT.** See **FORGAN**.

**NEWESTEAD,** a village in the vale and parish of Melrose, Roxburghshire. It stands on the right

bank of the Tweed, about a mile east of the town of Melrose, on the road to Edinburgh by way of Lauder. The scenery around it is exquisitely beautiful. Near it is a Roman camp, upwards of  $1\frac{3}{4}$  of a mile in circumference. The village not improbably had its name from the erection in its vicinity of a successor to the venerable, and too early extinct church or ecclesiastical establishment of the Culdees at Old Melrose: see **MELROSE**. During the long interval which elapsed between the overthrow of the old Melrose church—the edifice so intimately associated with the names of St. Boswell and St. Cuthbert—an ecclesiastical structure was built in a field adjoining the village which still bears the name of Red Abbey Stead. Stones which formed part of the edifice have recently been dug up; they belong to the new red sandstone formation; and they seem to have been quarried from the thin upper strata of the sandstone beds of Dryburgh,—those very beds the lower and thick strata of which furnished the beautiful and fine-grained materials of the far-famed abbey of New Melrose. The colour of the stone seems clearly to have originated the name of Red Abbey. All history of the edifice, except some vague tradition, is lost. Population of Newstead about 240.

**NEWTON,** a parish in the north-east division of Edinburghshire. It is a parallelogram of somewhat more than 2 miles by  $1\frac{1}{2}$ , and presents its angles to the cardinal points. Area 1,256 English acres. It is bounded on the south-west and the north-west by Liberton; on the north-east by Inveresk; and on the south-east by Inveresk and Dalkeith. Its western angle is exactly 3 miles from Edinburgh, on the road to Dalkeith; and that road runs along the whole south-west side, over about half the distance on the boundary, and over the other half slightly in the interior. A burn, which falls into the North Esk immediately above the junction with the South Esk, strikes the south angle and the road at the same point, about  $\frac{3}{4}$  of a mile from Dalkeith, and runs along the south-east boundary till within a few yards of its mouth. The surface of the parish is level, or but slightly undulated; and it is everywhere finely cultivated, and beautiful and exultant in appearance. No fewer than 19 seams of coal run through the parish in a northerly direction. Six of them, of from 2 to 4 feet each in thickness, are called flats, and lie in an almost horizontal position. The other 13, each from 2 to 10 feet thick, are called edges, and lie at nearly an angle of 90 degrees. The coal has been mined for upwards of  $2\frac{1}{2}$  centuries, continues to be wrought with vigour, and has become smartly in demand from the transit along the surface of the Edinburgh and Dalkeith railway. Colliers' villages and hamlets, consisting of long rows of red-tiled cottages, impart a grotesque clothing to the landscape, and in some instances, as in those of Cuckold's-raw, Red-raw, Adam's-raw, and Cauldcots, wear no less grotesque names. Edmonstone, Sheriffhall, and Little France—the first, the most considerable village, and situated near the 4th milestone from Edinburgh—are grotesquely named in another fashion, their names being any thing but an index to their appearance. The aggregate population of the villages, in 1838, was 416, and that of the collier population 1,010. Newton, near the east angle, is a neat mansion; and Edmonstone, in the vicinity of the cognominal village, is an elegant seat, surrounded by fine plantations. Population, in 1801, 1,060; in 1831, 2,274. Houses 449. Assessed property, in 1815, £10,351.—Newton is in the presherity of Dalkeith, and synod of Lothian and Tweeddale. Patron, Wauchope of Edmonstone. Stipend £155 4s. 4d.; glebe £135 6s. 4d.,—all of which,

except £20, consists of interest of a sum paid for coal under the glebe, and secured on the lauds of Edmonstone. The church was built in 1742, and re-seated in 1819. Sittings 430. The minister believes the last census to have been much overstated; and, in 1838, found the population to be 1,728,—of whom 1,365 were churchmen, and 363 were dissenters. The present parish comprehends the ancient parishes of Newton on the south-east, and Wymet—now corrupted into Wolmet—on the north-west. Both parishes, of which Wymet was the larger, anciently belonged to the monks of Dunfermline, and were incorporated with their lordship and regality of Musselburgh; and, after the Reformation, they were included in James the Sixth's grant to Lord Thirlstane. The parish-schoolmaster provides and pays an assistant, and has of salary £34 4s. 4½d., with £60 fees, and £37 other emoluments. Attendance, in 1834, at the parish-school, 184; at 5 non-parochial-schools, 252. Two of the latter are for females, and one is an infant-school.

NEWTON, the name of many villages, hamlets, farm-steads, mansions, and villages throughout the Lowlands of Scotland; hardly one of which is of sufficient importance to require separate notice. 'New-tons' and 'Kirk-towns,' whenever they become noticeable, are used to assume a less diffusive and more individualized name.

NEWTON, a village in Fifeshire; 1 mile east of Falkland, containing about 180 inhabitants.

NEWTON-DRYBURGH, a pleasantly situated village, and the site of a Secession meeting-house, in the parish of MELROSE: which see.

NEWTONHALL, an estate and mansion in the parish of Gifford in Haddingtonshire, still occupied by a family of the name of Newton, one of whom, accompanying James VI. to England, is supposed—according to one tradition in Sir Isaac Newton's family—to have been the ancestor of that great philosopher.

NEWTON-OF-MEARN'S. See MEARN'S.

NEWTON-SHAW, or NEWTON-OF-SAUCHIE, a large and thriving village in the parish and shire of Clackmannan. It stands 1½ mile south of the river Devon, 1½ mile north of Alloa, 5 miles north-west of Kincardine, and 7½ miles east of Stirling. It was built for the accommodation of the work-people employed by the Devon iron-company. A dissenting preaching-station was established in it in 1837. Population, in 1838, upwards of 880.

NEWTON-STEWART, or NEWTON-DOUGLAS, a small town and a burgh-of-barony, on the river Cree, chiefly in the parish of Penninghame, Wigtonshire, and partly in that of Minigaff, Kirkeudbrightshire. It stands on the great Galloway road between Dumfries and Portpatrick; 8 miles north of Wigton, 26 east of Stranraer, 17½ west by south of New Galloway, 50 west of Dumfries, about 80 from Glasgow, and 98 from Edinburgh. A younger branch of the Stewarts, Earls of Galloway, possessed the estate of Castle-Stewart, built upon it at his own expense a few houses to form the nucleus of a village, called the place Newton-Stewart, in honour of the family-name, and held out some advantages to attract settlers. The earliest feu-contract is dated 1701. The idle, the giddy, those who hung loose upon society, were the first to flock to the incipient town. The advantages of the feus invited some peasants who had accumulated a few pounds. Smuggling did something to promote its advancement. A decent inn or two, a few shops, and some work-rooms for ordinary artisans, were soon called for by its being a convenient stage between Ferry-town-of-Cree and Glenluce, and a suitable depot and resort for an extensive tract of circumjacent country. By

these and other appliances, the population was raised, 10 or 12 years before the close of last century, to about 900. Mr. W. Douglas, the same respectable and enterprising merchant, who became proprietor of the village of Carlinwark, and changed its name to Castle-Douglas, now purchased the estate of Castle-Stewart, altered the name of its village to Newton-Douglas, obtained for the place under this name a charter, erecting it into a hurgh-of-barony, and commenced vigorous efforts to make it a seat of important manufacture. A company, with Mr. Douglas at its head, erected, at an expense of upwards of £20,000, a large factory for spinning cotton, and connected it with the introduction and support of cotton-weaving. A Mr. Tannahill, under the patronage of Mr. Douglas, commenced a small manufacture of coarse carpets. A tannery had long before been established, and now received stimulating encouragement, and was managed with great judgment and sufficient success. These and many other circumstances concurred to promise that the village would, under its new lord, rapidly rise to be a place of no small consequence; but they flattered and promised incomparably more than they performed. The new name of Newton-Douglas soon fell into disuse, and gave place to the original name of Newton-Stewart. The carpet-factory proved an utter failure. The cotton-factory worked well for a few years, declined, was abandoned, stood for years unoccupied, and, in 1826, was purchased by Lord Garies for a twentieth part of the original cost, and converted into a quarry for the building of cottages and farm-houses. The tanning and the currying of leather is the only trade which continues to prosper. The weaving of cotton, though still kept up by the manufacturers of Glasgow, is rapidly on the decline. The number of handlooms, in 1828, was 311; and, in 1838, it was only 100. The purchasing of wool for the markets of Lancashire, partly on commission and partly on personal risk, is now the staple trade. Bacon-curing also was introduced about 10 years ago, and employs annually a capital of about £6,000. There is likewise an extensive brewery. The town has branches of the British Linen company's bank, and the Southern bank of Scotland; some insurance agencies; nearly 40 inns and public-houses; a subscription-library; a public reading-room; a masonic lodge; a weavers' society; a clothing club; a horticultural society; and an agricultural society. It is the site of the parish-church of Penninghame, a Relief meeting-house, a Cameronian meeting-house, a Roman Catholic chapel, the Douglas endowed charity-school, and various other schools: See PENNINGHAME. A weekly market is held on Friday; a monthly cattle-market is held on the 2d Friday of each month; a horse-market is held in February, June, and November; and annual fairs are held in March, June, July, and October. The business done at the cattle and horse markets is great and increasing; but that at the fairs is little more than an empty pretext, an unmeaning sanction to idleness and folly. Sea-communication is maintained from a barbour at Carty, about 1½ mile down the river, whence vessels of from 35 to 45 tons trade regularly, and vessels of a larger size trade occasionally to various ports. The Galloway and Liverpool steamer sometimes runs up the river, but in general can be communicated with no nearer than Wigton hay. The London and Portpatrick mail-coach is in daily transit; and two other mail-vehicles run daily except on Sabbath,—the one to Girvan, and the other to Stranraer by way of the Mahars. Carriers travel regularly to Edinburgh, Glasgow, Dumfries, Girvan, and the chief towns of Wigtonshire.—Newton-Stewart, unlike Gatehouse-of-Fleet, and other modern towns,

was not began to be edified upon any regular plan; and, in consequence, long bore the appearance of a straggling and whimsical village,—builders raising their houses high or low, small or great, on a line with others, or in recesses or projections, as caprice, accident, or convenience suggested. Irregularity has been so far corrected that the place now consists chiefly of a long principal street, with the town-house, its only ornament, in the centre. At the close of last century the houses were all thatched, and mostly of one story; but now, in the case of more than one-half, they are slated, and of two stories. The bridge across the Cree, which connects the main body with the suburban section of the town, is constructed of granite with freestone parapets. The population has, for many years, been nearly stationary, and amounted, in 1831, to 2,241.

NEWTON-UPON-AYR, a small parish on the coast of Kyle, Ayrshire. It is bounded on the north by Prestwick; on the east by St. Quivox; on the south by the river Ayr, which divides it from the burgh and parish of Ayr; and on the west by the frith of Clyde. It is an oblong, stretching north and south, and broadest at the middle; and it measures  $1\frac{1}{2}$  mile in length, and a mile in extreme breadth. The coast is flat, sandy, and of gloomy aspect; yet, at the northern extremity, projects a brief way in an inconsiderable rocky point. The surface of the interior is very nearly a dead level, and lies very slightly above high-water mark. The soil is naturally a barren sand, but has been greatly improved by intermixture with blue shale, fetched up from the coal-mines. Nearly 350 acres are arable; and about 100 are waste or in pasture. The coal-formation under-stretches the whole parish, but has been much disturbed by the upheaving of trap, and is exhausted in its workable coal-seams. An apparently inexhaustible quarry of good freestone is worked in the north. All the parish, excepting 9 or 10 acres, belongs to the freemen of the burgh of Newton-upon-Ayr. Nearly all its features of interest, as well as the mass of its inhabitants, belong also to the burgh. Population, in 1801, 1,724; in 1831, 4,020. Houses 453. Assessed property, in 1815, not returned.—This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, Thirteen delegates annually chosen by the freemen of the burgh. Stipend £245; \* glebe £13 10s. The church was built by the freemen in 1777, and enlarged in 1832. Sittings 1,032. By ecclesiastical census in 1835 and 1836, the population was then 4,037; of whom 2,960 were churchmen, 990 were dissenters, and 87 were nondescripts. The parish was disjoined in 1779 from that of Monkton and Prestwick, by authority of the Commissioners for the plantation of kirks; and the management of all the civil affairs of the church was assigned to the thirteen delegates who wield the patronage. The tithes still belong to Monkton. In 1834, the parish-school was attended by 116 scholars; and three non-parochial schools by 198. Schoolmaster's salary £34 4s. 4½d. with fees.

NEWTON-UPON-AYR, a burgh-of-barony in the above parish, and a suburb of the royal burgh of Ayr, presses on one side on the right bank of the river Ayr, and on another on the frith of Clyde, and lies compactly on a third side with Wallace-town, a conjoint suburb. The principal street is about 2,100 feet long and 80 broad; but is far from being neatly edified. Three or four streets lie between it and the sea, are regularly planned, and form a new town;

but as yet they are only partially built. Three other small streets belong to the old town. The council-house, erected about the commencement of the present century, and the parish-church, are the only public buildings, both very unpretending in architecture, and the former surmounted by an humble steeple. The town, within less than a century and a-half ago, consisted entirely of one-story houses, thatched and of mean appearance. Towering above these, and situated in Garden-street, amidst gardens and trees, stood Newton-castle, the seat of the Baronet Wallace of Craigie, a castellated edifice of the kind common in the later feudal times. The town was, for a long time, dependent chiefly on the collieries, and when they ceased, it remained stationary; but, during the last 40 years, it has sprung into energy under the influence of trade and manufacture. Ship-building and rope and sail-making are the oldest occupations: in 1791, they employed respectively 50 and 10 workmen; and, at the present date, they hold their ancient ground, but have made small if any advance. Four foundries employ about 50 workmen, and produce all sorts of iron and brass machinery and tools. Two salt-pans are little more than a nominal manufacture, and employ only four or five persons. About 400 weavers, and upwards of 600 hand-sewers, work for the warehouses of Glasgow. The finest kind of the famed Ayrshire needle-work is confined to Ayr and its vicinity, and has a large number of its fair workers, chiefly young women, in Newton. The descendants of a colony of fishermen from Pitsligo, and places in its vicinity in Aberdeenshire, who long were a peculiar race in dress and habits, and conducted an extensive traffic, are now in a comparatively reduced condition, employ themselves chiefly in white fishing, and have no wider market than Ayr and its immediate neighbourhood. Newton possesses a joint interest with Ayr in the harbour of that town, has a railway to it from the coal-mines in the parish of St. Quivox, and exports nearly all the coals, the traffic in which constitutes the chief part of the harbour's trade. Improvements which to a great extent have been made on the harbour have not been completed on the Newton side. A wooden lighthouse, inelegant but useful, was erected on the north side in 1827, to supply the place of one which was built in 1790, and undermined by the encroachments of the sea.

Newton-upon-Ayr has so curious a burgh-constitution that a pretty full digest of the account of it in the Report of the Commissioners on Municipal corporations cannot fail to gratify. The date of the erection of the burgh "is not known. Its origin is traditionally ascribed to a grant by Robert the Bruce, in favour of 48 of the inhabitants, who had distinguished themselves in his service at Bannockburn in 1314. No satisfactory evidence of this can be referred to; but it is matter of history that Robert was at the parliament held at Ayr, 26th April, 1315, when the crown of Scotland was settled on him and his descendants; and it appears certain that the erection of the burgh of Newton must have occurred some time between 1208-14 and 1446. King James VI. granted a new charter to the burgh in 1595, proceeding upon the narrative, *inter alia*, of certain ancient writings and title-deeds having been exhibited to his Majesty and his treasurer, 'quibus antiqua fundatio erectio et libertas dicti burgi clare et lucido testantur, quamvis occasione bellorum pestis temporumq. turbulentorum intra regnum n'rum pro tempore occultantium, antiqui evidenti litere et infeomenta dicti burgi, destructa combusta et consumpta fuisse.' After the clause granting of new, and erecting the burgh, there is in the charter the following clause: 'Cum potestate

\* Consisting of £60 from the burgh, modified by decree of the Court-of-tithes; £90 from the exchequer; and a gratuity of £95 from the burgh since 1833, and depending upon the letting of the seats.

erian et plenaria libertate dictis burgensibus et inhabitantibus dicti burgi ac eorum successoribus, eor. terras communes acras et particatas ejusdem partiendi ac dividendi, et easdem in feudum associationem seu rentalē aut alias prout eis magis videbitur expediens et commodius, burgensibus ac liberis civibus et incolis ejusdem burgi et nullis aliis assedandi et locandi.' The number of burgesses amongst whom this partition was made competent is not mentioned in this charter, but minutes or entries in the old records have been exhibited by the present magistrates, to establish that they then amounted to 48. In 1600, King James VI. granted another charter, narrating that the erection of the burgh of Newton was beyond the memory of man, and that the lands and others therein mentioned had been given and disposed 'burgensibus liberis et inhabitantibus ejusdem eorum hereditibus et successoribus, de quibus ultra hominum memoriam in possessione extiterunt.' It then ratifies and confirms the charter of 1595, 'cum integris contentis privilegiis et immunitatibus in eodem specificatis,' and all other prior rights granted 'prefato burgo de Newton de Air burgensibus et inhabitantibus ejusd. eorumq. predecessoribus hereditibus et successoribus quibuscuq.' There is then a disposition of new of the burgh and its pertinents 'prefato burgo ac halvis consulis burgensibus et liberis incolis ejusdem eorumq. successoribus in proprietate et hereditate,' with all the privileges and immunities in the use or possession of the burgesses and inhabitants, and their predecessors in times past. And there is a revocation of all rights to others prejudicial to the grant in this charter, on the narrative, 'Ac nos inde volentes burgenses et inhabitantes dicti burgi eorumq. heredes aut successores nullatenus ledi nec prejudicari in eorum t'riis prediis possessionibus privilegiis et libertatibus ejusdem ipsis eorumq. predecessoribus per nos urosq. nobilissimos progenitores temporibus preteritis concessis et confectis, sed ut eadem cum prefato burgo burgensibus et liberis ejusdem eorumq. hereditibus et successoribus pro perpetuo tempore futuro absq. ullo obstaculo seu impedimento remanebunt.' After the grant of the lands and others to the burgesses, and their heirs and successors, is the burgh, and also the usual privileges of trade, and of holding fairs and markets; and, generally, the privileges and powers conferred by a grant of burgh, especially in regard to jurisdiction." From records of their own which have, from a very ancient period, been kept by the freemen, the following points were sought to be established,—that prior to the date of the existing charters, the territorial possessions of the burgh were enjoyed by the individual freemen patrimoniaally, each having in old times had his own "dail" given to him, at the periodical partition of the lands, "according to the auld ordour used and wont,"—that the right of a freeman was heritable as well as patrimonial, inasmuch as sons,—whom failing, sons-in-law,—were entitled to succeed to the right on the father's demise, and to enter to the freedom in his stead,—that the number of freemen entitled to "dails" of the common property was limited, and in 1604, the date of the first dail after the existing charters, the limitation was held and understood to be precisely 48, which is said to have been agreeable to the established law and custom,—and that this ancient heritable and patrimonial right of the 48 freemen to have each his "dail" of the common property was subjected, in 1604, to the burden of paying a very large debt which had been contracted on the lands. The state of possession,

from the earliest period till the present, is alleged to have been conformable with this patrimonial and heritable character of the right. The casting of the "dails" is regularly recorded; and, except between 1604 and 1771, even the particular lots and names are mentioned. A cast which took place in 1771, was, with the view of remedying evils which resulted from the short duration of former casts, ordained to continue 57 years. At the expiration of that cast in 1828, a surpassingly good one was made, ordaining the continuance of the lots to be for 999 years. Till the date of this remarkable resolution, the patrimonial rights were never the subject of separate personal titles, and the record in the community books of the entrance of a freeman, and of the right which that entrance gave him to a share of the common property, constituted the only title to his "dail;" but, in 1833, the community resolved that the magistrates and council should grant feu-rights, for payment of an illusory feu-duty to such of the freemen as should choose to hold their possessions by charter and sasine.—The community have, from the operation of various causes, had vacancies in their number, and have uniformly wielded the power of disposing of them by sale. Non-residence in burgh incurred, in early times, a forfeiture of right; the operation of the original law of succession, which admitted only sons or sons-in-law, produced, while it was in force, many vacancies for want of proper heirs; and the commission of crimes or misdemeanors, and the non-payment of the proportion of the original debt, have always been understood to incur a nullification of rights. Admissions to the vacancies occasioned by these means are regularly entered in the minute-books, and were procured by a money-payment, which latterly was ordained to be £30. The rights of sons and sons-in-law to succeed to their father's freedom was recognised in the earliest times; and in the minutes of date 16th December, 1680, in appointing a new cast, it was ordained, "the said dails to be this day casten and dewydit by lot to those who lineally succeed to the same, according to the former acts, and the antiquity of freemen and burgesses, as the several acts of the said toune do prescribe." But subsequently the right was extended to the widows of freemen; and rules were drawn up, and have been uniformly observed, by which daughters as well as sons, and collaterals as well as descendants, have been admitted to the succession. Few instances of sales of the rights of freemen occurred till within the last half century. The value of the right, indeed, was comparatively trifling till the discovery of a rich seam of coal in the lands, about the year 1765. Since that date the right of freedom has become a valuable property, and the list of transferences that have taken place within the last 40 years shows about 30 freedoms that have passed into the possession of singular successors, the price varying, at different dates, from £70 to £500. The mode of transference, from the peculiarity of the right, has necessarily been peculiar. The freeman wishing to dispose of his right renounces it in favour of the community, at a fixed price, to be given out of new by them to the purchaser. It was at one time customary for the community to purchase rights of freedom to be disposed of by public roup to the highest bidder. In these cases, the renunciation by the freeman ceding his right was in favour of the community *ad renantiam*. But, in other cases, the renunciation was the mere form by which the right of the person with whom the old freeman had transacted was completed. The freedoms are said to have been, in some instances, freed and sold by creditors; and the freemen, as the heritable possessors of their

respective lots, have been held liable for the proportion of teinds payable from their lands. The freemen, in addition to the property divided by daills, have, at various times, obtained, out of the common property of the hurgh, steadings of ground for building to be held in feu for payment of a feu-duty, and have had them laid off into 48 lots, in the same manner as the daills. A considerable tract of the hurgh property remains undivided and possessed in common; and in the year 1831-2, it yielded £134 16s. of rental. The coal revenue, and the rent of the common moor, have invariably been divided among the 48 freemen. The other revenues are received by the treasurer, and disbursed under the direction of the community at their discretion; the amount has always been annually exhausted in improving the lands, and in defraying expenses of management; and any surplus which remained of the funds divided among the freemen has likewise been usually employed in the improvement of lands. A large amount of the common fund, however, was employed in building a church at the epoch of the erection of the parish. The revenue of the hurgh, for the year preceding Michaelmas 1832, was stated to be £436 12s. 6d.; the expenditure for the same year £347 5s.; and the debts then due by the burgh £1,300. Poor's stent is the only assessment by the magistrates and council; it is levied from all houses above £2, by a collector named by the council, and is distributed by the kirk-session; and during 10 years preceding 1833, it amounted to 4d. per pound of real rent. The cess levied is very trifling. The council of the hurgh consists of two bailies, one treasurer, and six councillors, who are annually elected by the burgesses. They possess all the jurisdiction in point of law, which burghs-of-harony, independent of the superior, prior to 1748, are entitled to claim. But they have been accustomed to exercise jurisdiction only in processes of sequestration for rent and petty breaches of the peace. Even this limited jurisdiction has not extended to above six cases annually since 1820. There are no incorporated trades within the hurgh enjoying exclusive privileges. But the freemen annually, at the Beltan (May-day) Court held by them, enact, that no unfreeman shall trade or manufacture within the bounds of the hurgh without leave. The law, however, has not been enforced for 40 years, all persons being permitted to trade without licence or fees of any sort. The magistrates and council have no patronage; but the office-bearers of the burgh, viz., clerk, treasurer, and officer, are appointed by the community of freemen, and such of their eldest sons as are entered as young freemen. The magistrates and treasurer get £5 per annum each, and the clerk £10 yearly, the officer £5 5s. The only fees paid to the clerk and officers consist of 2s. 6d. on the entry of every freeman. "It is impossible," say the Commissioners, "to close this account of the hurgh of Newton-upon-Ayr without observing that the rights of the community, as regards the property originally conferred upon this hurgh, have, by the successive encroachments of the freemen, been placed upon a very peculiar footing; and it well deserves being considered whether some steps should not be taken for vindicating the public interests against such encroachments, and still more for the prevention of similar encroachments in future. In so far as the freemen have lately directed their efforts to the conversion of a temporary title of possession,—nowise incompatible with the eventual resumption of the subjects when required for the public service of the burgh,—into a permanent feudal right, which is intended to divest the hurgh for ever of all interest in their own estate,—the Commissioners think it may

be questioned whether every such usurpation be not illegal, and at variance with the chartered rights of the community." Newton is comprehended within the parliamentary boundaries of Ayr. No actual list of the £10 proprietors or occupiers has been furnished; but, in 1833, there were 218 occupants of £5 yearly and upwards,—about 100 of whom were computed to have tenements at or above £10. The population of the town, according to the New Statistical Account written in 1837, was then 3,768.

NEWTYLE, a parish at the south-west verge of Forfarshire, quadrangular in form, and presenting its angles nearly to the cardinal points. It measures  $2\frac{1}{2}$  miles by 2; and is bounded on the north-west by Perthshire; on the north-east by Nevay and Glamis; on the south-east by Auchterhouse; and on the south-west by Lundie and Kettons. The surface runs up on the south-east, and on one-half of the adjacent sides, to a water-shedding line of the Sidlaw hills; and, declining north-westward, it settles down into a pendicle of the level ground of Strathmore. The chief heights are KINPIRNIE [which see], on the north-east boundary, Newtyle hill, on the south-west boundary, and Hatton hill about midway between them. An opening or pass through the Sidlaws, between the hills of Newtyle and Hatton, bears the name of the Glack of Newtyle, and is traversed by the turnpike from Dundee to Newtyle and Meigle, and by the Dundee and Newtyle railway. The greater part of the parish is carpeted with a mixed soil of black earth and clay, and is fertile and well-cultivated. The arable grounds amounted, 50 years ago, to 1,600 acres. The village of Newtyle, situated 11 miles from Dundee, 3 miles from Meigle, and about 1 mile from the parochial boundaries respectively on the north-west and the two adjoining sides, is rapidly rising from village obscurity to the importance of a trafficking and hustling town. Standing on the highway between Dundee and Strathmore, and at the terminus of the railway constructed for draining to the great sea-port the produce of the magnificent strath, and holding communication by the railway several times a-day with Dundee, it is necessarily and very rapidly becoming a depot for grain and other agricultural produce, and a central point of concourse to a far-stretching inland territory. The inhabitants as yet, however, are almost exclusively weavers of linen fabrics, chiefly sheetings, for the manufacturers of Dundee. Near the village to the east are the ruins of Hatton-castle, built, in 1575, by Laurence, Lord Oliphant; and in the vicinity of these ruins are some discernible traces of what is called the Castle of Balcraig,—*Baile Craig*, 'the town of a rock situated at the foot of a hill.' At Auchtertyre, three furlongs west of the villages, are some traces of a camp, said to have been occupied for some nights by the army of the Marquis of Montrose, while the Marquis himself lodged at a neighbouring castle, after burning the house of Newton of Blairgowrie. Population, in 1801, 718; in 1831, 904. Houses 181. Assessed property, in 1815, £6,111.—Newtyle is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, Lord Wharnclyffe. Stipend £163 14s. 4d.; glebe £1 10s. The church was built about 72 years ago, and enlarged in 1824 and 1835. Sittings 498. A United Secession congregation was established in the parish in 1835. Sittings in their place of worship 400. A survey by the parish-minister, in 1836, exhibited the population as then amounting to 1,120; of whom about 1,082 were churchmen, and about 38 were dissenters. In 1834, the parish-school was attended by 97 scholars; and two non-parochial schools by 34.

Schoolmaster's salary £34 4s. 4½d., with about £15 fees, and from £3 to £5 other emoluments.

**NICHOLAS (St.).** See **NEW ABEDEEN.**

**NIDDRY**, a village in the parish of Liherton, 3 miles south-east of Edinburgh, and 1½ south of Portohello, Edinburghshire. It is rural and comparatively sequestered, stands on the ascent of a gentle swell, and commands a magnificent view of some of the richest groupings of the Lothian and Forth and Fifeshire scenery. But, in itself, it consists principally of a long row of red-tiled cottages, inhabited principally by colliers. The place is embalmed in associations of enlightened and persevering voluntary effort to promote the highest, the religious well-being of its inhabitants; it has enjoyed the gratuitous and untiring labours of several eminent dissenters; and latterly it has become a preaching-station in connection with the Establishment. Nidry is the name of a gentleman's seat in the vicinity of the village; and, with various adjuncts, the word designates several places in the eastern or projecting wing of the parish of **LIBERTON**: which see.

**NIELSTON.** See **NEILSTON.**

**NIGG**, a parish, forming the most southern part of the district of Easter-Ross, on the east coast of Ross-shire. It is bounded on the north by Logie-Easter and Fearn; on the east and south-east by the Moray frith; and on the south and west by Cromarty frith and Logie-Easter. Its greatest length is 6 miles; its greatest breadth 2 miles; and its superficial extent about 14 square miles. It extends north-eastward, and is nearly all peninsulated. The hill of Nigg, anciently called the bishop's forest, extends along the Moray frith from the farm of Shandwick on the northern boundary, to Dunskeath at the point of the peninsula, and there beetles up in what is called the North Sutor of Cromarty. This hill is about 5 miles long, and 1 mile broad; varies in height from 300 to 500 feet, and commands very extensive and magnificent views of the vast expanse of the Moray frith, of its long projections into the land, and of the very diversified and occasionally rich country which forms the curiously intersected sea-board. Its coast-side breaks almost sheer down in rocky cliffs, often 300 feet in height, picturesquely torn and perforated with fissures and caves, and in the very romance of beauty, chequered with patches of verdure and extensive escalades of ivy. The rocks have pinnacles for the eagles' eyry, points for the nests of all the different sorts of hawks, and inviting retreats for great flocks of cormorants, and other sea-fowl, on their return from hatching-places in Caithness and the northern isles. About 1,000 acres lie waste; and only about 2,500 acres are in tillage. The plantations cover an area nearly equal in extent to the waste land, and produce from their thinnings cargoes of coal-props for the miners of Newcastle. Neither sheep nor black cattle are objects of much attention. Flocks of goats find sustenance on the cliffs; and owing to the prevalence of rich grasses and medicinal herbs on their giddy walks, are prized for the restorative and salutiferous properties of their milk. The sands of Nigg are a bay of the Cromarty frith, projected northward along the boundary-line between Nigg and Logie-Easter, so as to belong to both parishes, measuring about 2 miles in breadth at the south end, and 1 mile at the north, and alternately forsaken and submerged by the refluxes of the tide. A thick stratum of sea-shells, about a foot from the surface, long supplied the adjacent country with large quantities of manure, and would continue to be productive, but has been superseded by the use of lime. Quicksands were formed in the excavations of this stratum, and often sucked down the unwary traveller,

or even beguiled a parishioner to the jaws jointly of death and the grave; and among several deep pits which still exist in the lower part of the hay, and have very recently been fatal to strangers, one called the Seals pool, may never be approached but at the almost certain peril of destruction. On a small moat at Dunskeath, overhanging the sea, are traces of the foundation of a fort, which was built, in 1179, by William the Lion, to suppress tumults and disperse robbers, and which is mentioned by Sir David Dalrymple in his history of Scotland. At Shandwick-place, and in the church-yard, are obelisks, akin to one in Fearn, which are traditionally said to have been erected over the bodies of three sons of a king of Denmark, or a king of the seas, who, in the days of the Viking, were drowned in shipwreck off the coast. The obelisks have various hieroglyphic sculpturings; and, on a side of one of them, is a handsomely executed cross. A dangerous rock on which the commemorated dead are said to have been wrecked, lies not half-a-mile distant from the shore, stretches 2 or 3 miles in almost a straight line from west to east, is not visible at high-water, has occasioned modern and very serious disasters, and curiously bears the name of 'the King's sons'; and three several objects on the high precipitous coast are called respectively 'the King's harbour,' 'the King's cave,' and 'the King's path.' The principal mansion is Bayfield, the seat of Robert Mitchell, Esq.—Three fishing-villages in the parish have jointly about 430 inhabitants, and upwards of 30 fishing-boats. The largest is Shandwick, with a population of about 190. The parish lies directly opposite Cromarty, is distant from it about 1½ mile, communicates with it by a regular ferry, and is traversed by the road from it to Tain. Population, in 1801, 1,443; in 1831, 1,404. Houses 314. Assessed property, in 1815, £1,177.—Nigg is in the presbytery of Tain, and synod of Ross. Patron, the Crown. Stipend £234 8s.; glebe £10. Unappropriated teinds £194 19s. 7d. The parish-church is of unknown date of erection, and was repaired about 50 years ago, and again, in 1836. Sittings between 400 and 500. An United Secession congregation was established in the parish in 1765. Their present place of worship was erected in 1803. Sittings 627. Stipend £120, with house, garden, and small glebe. The Seceders of the parish amount to about 500, and constitute the entire population of the village of Shandwick. A notable 'intrusion' case occurred in Nigg in 1756, the parishioners, almost to a man, withstood the pretence for three years, and expended £500 in legal proceedings against him; and, when worsted, they very numerously became staunch Seceders. The bishops of Ross anciently held Nigg as a mensal church, and had a residence in the parish. Parochial schoolmaster's salary £34 2s. 2½d., with £5 fees, and £4 other emoluments. The dissenters have a school of their own, and there are two private schools.

**NIGG**, a parish in the extreme north-east of Kincardineshire; bounded on the north-west and north by the river Dee, which divides it from Ahrdrumshire; on the east by the German ocean; and on the south and west by Banchory-Devenich. Its greatest length, from north-north-east to south-south-west, is a little upwards of 4 miles; its greatest breadth, in the opposite direction, is 3 miles; and its superficial extent is 3,376 acres. In the north-east corner the land, turning into a ness or promontory projects into the sea, and is called **GIRDLENESS**: which see. A bold breast of rock from 60 to 80 feet high, covered with grass and herbage, overhangs the sea along all the east coast. A bank or gently graduated ascent, higher in the south than in the north, rises

behind, and is arable for some distance from its base. A heathy ridge of hill, about 200 feet above sea-level, goes off from the summit, and near the middle of the bank, runs quite across the parish, and is crowned with two huge cairns, which are seen, and serve as landmarks at several leagues' distance on the sea. A valley and hill occur north of this ridge; and two haughs extend along the Dee and the side of the height which runs out to Girdleness. A belt of land, upwards of a mile broad, extending the whole length and through the middle of the parish, is, with slight exceptions, an unarable, wild, and uninhabited tract of moss and heath, profusely strewn and intermixed with stones. A very hard granite, now of a beautiful blue and now of a purple or party-coloured hue, abounds both as native rock and as boulder, and supplies abundant materials for enclosing and building. Large quartz veins occasionally intersect the granite. Causeway-stones are worked in several quarries, chiefly for shipment to London; but, though long a principal article of export, they have, in a great measure, ceased to be in demand. The Dee, while in contact with the parish, forms the harbour of Aberdeen, and falls into the sea. Torrypier, projecting into it from the Nigg side, is the resort of vessels for unloading lime and shipping stones; but is now much less frequented than in former years. Above it lie the hoats of the fishermen, and pilots of the village of Torry; and in its vicinity stood, some years ago, a boiling establishment of a Greenland company. A small hay or creek, called Grey Hope, close to the Girdleness lighthouse, is noted as the scene, in 1813, of the shipwreck of the Greenland ship 'Oscar.' The hay of Nigg, immediately south of Girdleness, is of semicircular form, and nearly half-a-mile in diameter. Burnbank-harbour and Alton's-harbour, farther south, are two creeks formerly the scene of considerable fishing settlements, which have gone almost wholly into decay. Cove-harbour, situated about a mile from the southern boundary, affords accommodation to nine or ten hoats belonging to fishermen in the village of Cove, and offers refuge to hoats retreating before a stout northeasterly wind. Several caves and natural arches perforate the rocky coast; and one of them in this vicinity seems to have originated the name of Cove. Along the coast is a free open sea. Lorstown-loch, on the south-west boundary, is ohlong in form, and covers 27 acres. The principal villages of the parish are Cove and Torry, with a population of 400 and 370; see Cove and Torry. The other villages are Charlestown, with a population of 200; and Burnbank, with a population of 60. On the haugh upon the Dee are the ruins of an edifice which belonged to the abbey of Arbroath, and retains the name of Abhots'-walls. The parish is traversed lengthwise, near its western boundary, by the Great North road to Aberdeen. Population, in 1801, 1,148; in 1831, 1,648. Houses 303. Assessed property, in 1815, £2,621.—Nigg is in the presbytery and synd of Aberdeen. Patron, the Crown. Stipend £160 2s.; glebe £27 15s., besides a part not valued. The parish-church is a handsome and quite modern structure, surmounted by a quadrangular tower, so conspicuously situated as to be seen from a great distance, and to command an interesting prospect. Parochial schoolmaster's salary £30, with about £20 fees, and £6 other emoluments. There are five non-parochial schools. The whole parish belonged, before the Reformation, to the abbey of Arbroath; and the church was anciently dedicated to St. Piacer or Fittick.

NINE-MILE-BURN, a village 12½ miles from Edinburgh, on the road from Edinburgh to Dumfries, not far from the romantic locality of Newhall, in

the parish of Penicuik, Edinburghshire. Population about 110.

NINIAN'S (ST.)—vulgarly and locally ST. RINGAN'S—a large and very important parish in Stirlingshire. It is bounded on the north by Kin-cardine, Lecropt, Stirling, Logie, and Alloa; on the east by Airth; on the south by Larbert, Dunpace, Denny, and Kilsyth; on the south-west by Fintry; and on the west and north-west by Gargunnoch. Its greatest length from the point where Pow-water leaves it on the east to Carlin's-Inn on Burnfoot-burn on the west, is 13 miles; its greatest breadth, from the confluence of the Forth and the Teith on the north to Carronbridge at the south-east base of Dundaff-hill on the south, is 8 miles; and its area is about 70 square miles. LOCH-COULTER [which see] lies near the southern boundary, and is the only considerable lake. Bannockburn-water [see BANNOCK-BURN] derives one of two principal head-streams from Loch-Coulter, and the other from the north side of Earl's-hill, and has its whole course in the parish north-eastward to the Forth. Carron-water runs for 5 miles eastward along the southern boundary; receives from the interior Earl's-hurn, a streamlet of about 5 miles in length of course; and frequently overflows a considerable tract of meadow land, and some arable grounds on its banks. Pow-water drains a section of the parish by two head-streams, the one of which rises near Bannockburn-house, and runs 3¼ miles eastward to the boundary, while the other rises on the southern boundary at Garcaiber, and runs about the same distance, chiefly eastward along that boundary, and partly northward along the eastern boundary, to a confluence with the former; and the united stream, after further describing the boundary ¾ of a mile north-eastward, passes away into Airth. The Forth—except where the small parish of Stirling abuts into St. Ninian's—flows along the whole of the northern boundary; and while touching the parish, it receives on the hither side the Bannock, and five or six rills or streamlets,—on the further side, the Teith, the Allan, the Devon, and various rivulets,—and performs the most graceful of those remarkable sinuities, and exults in some of the richest landshifments of beauty and picturesqueness and romance, by which its course and its scenery are distinguished. See the article FORTH. Some of the flat grounds on its banks are invaded by its freshets,—particularly a large farm called Boll-for-nought, which probably has its grotesque name from its having been gained, at a comparatively recent period, from the regular superfluence of water. The surface of the parish, like that of adjacent districts, is naturally divided, in the language of the county, into carse, dryfield, and moorland. The carse was, for many centuries, and up to the epoch of modern agricultural improvement, a flat morassy wilderness; but now it is justly esteemed the most fructiferous description of land in Scotland; forms the chief part of the far-famed Carse of Stirling; and wears all the hahliments of the chastest affluent adorning, and the most luscious beauty. The dryfield rises suddenly, and considerably above the level of the carse; presents, along the boundary-line, the general appearance of the banks of a river,—affording clear indication of having been land long before the carse ceased to be the bed of a frith; occupies by much the most extensive section of the parochial area; and is, in general, arable and in a state of beautiful cultivation. The moorland lies, in a sense behind the dryfield, but, in strict truth, forms a proximately triangular section in the south-west; it comprises about a fourth, or somewhat more of the whole area; it attains an altitude considerably higher than that of the

dryfield, and swells up into elevations which belong to the east end of the long broad range of the LENNOX-HILLS [which see]; and, though in many places arable, and on every farm possessing capacity to supply its own inhabitants with food, it is on the whole most profitably employed in the rearing of black cattle and sheep. Nearly all the dryfield and a great part of the moorland appear to have been, at a comparatively recent period, covered with wood. The royal forest of Dundaff must have comprehended the high grounds at the extreme south of the moorland which still bear the name of Dundaff; and the royal forest of Stirling can hardly fail to have comprehended the extreme northern division of the dryfield. Even the carse must, at one time, have been forest ground; and, in consequence of the felling and the natural fall of its trees, and the settlement upon it of numerous tribes of the long-familied moss-plants; it certainly formed, at the epoch of the battle of Bannockburn, an almost impassable morass. At present, and increasingly for 60 or 70 years past, the face of the whole country—which naturally is beautiful, and derives rich adornings from the forms of the encircling hill-ranges, and the fantastically lovely windings of the Forth,—exhibits the embellishments of innumerable enclosures, many thriving plantations, various smiling villages, and not a few elegant mansions and villas.—Coal everywhere abounds; limestone—so rich as to yield out of 96 holls only one boll of sand or refuse—is plentiful; freestone and ironstone likewise add much to the mineral wealth. The coal is of very superior quality, burns with a bright flame, emits a great heat, and has very little sulphurous impregnation; and, it seems to be inexhaustible in quantity, and is worked for the supply of the northern parts of Stirlingshire, and the southern parts of Perthshire, and for considerable exportation by the Forth. The collieries of Bannockburn, Auchinhowie, and Pleanmuir, are the most ancient, and perhaps the most frequented; but new pits are from time to time opened. The chief manufacture is that of tartans at Bannockburn. Other manufactures are cotton-weaving, the tanning of leather, nail-making, and the distillation of malt spirits. The principal estates and mansions are Touch, Touch-Adam, Polmaise, Sauchie, Bannockburn, Craigforth, Auchinhowie, Stuart-hall, Throsk, Carnock, Grunyards, Plean, and lands belonging to the town and hospitals of Stirling. The villages, with their respective population, in 1838, are ST. NINIAN'S, with 1,329, noticed below; BANNOCKBURN, with 1,927, noticed in its appropriate place; Cambusharron, 2 miles west of St. Ninian's, with 485; Milton and Whins, half-a-mile south of St. Ninian's, with 433; Newhouse and Bellfield, half-a-mile north of St. Ninian's, with 348; Charteris-hall, with 170; Bannockburn colliery, with 479; Greenyards colliery, with 238; Auchinhowie colliery, with 154; Plean colliery, with 146; and a suburban part of the town of Stirling, with 420. The turnpike from Stirling to Glasgow extends 4½ miles southward through the parish, sends off 1 mile from the northern boundary the turnpike south-south-westward to Falkirk and Stirling, and, in either its trunk or its two branches, is lined by the major part of the villages. Another turnpike at right angles with it, and emerging from the southern extremity of the town of Stirling, stretches westward to communicate with Buchlyvie and Drymen, and eastward to communicate with places lying immediately on the Forth. Population, in 1801, 6,849; in 1831, 9,552. Houses 1,706. Assessed property, in 1815, £41,518.

St. Ninian's, owing to its being debateable ground between the Saxon powers on the south and the Pictish and Scottish powers on the north, was pro-

bably the scene of many rude and unrecorded skirmishes and great deeds of arms; and, in comparatively more modern times, it was the theatre of three important and memorable battles. The earliest of the three was the battle of Stirling, fought on the 13th September, 1297, between the Scottish troops under the patriotic Wallace, and an invading English army under Hugh Cressingham, and John, Earl of Surrey and Sussex. When the English came in sight they beheld the Scottish army posted near Cambuskenneth, on the hill now called Ahhey-craig; and they for some time continued harmlessly to gaze on the confronting array, while their generals despatched two cowed messengers to attempt to buy Wallace's submission by an offer of peace, till they were stung by taunts from the patriot knight to march toward the timber bridge which then stood at Kildean, and to rush across the river. After a large portion had crossed, the Scottish advanced to the main attack, and sent off a strong detachment to take possession of the bridge. Many of the English wheeling round to retreat to the north bank, some of them were precipitated into the river, and others became squeezed into a mass upon the bridge, and, either by their aggregate weight, or in consequence of a previous stratagem of Wallace in saving through the main beam, brought down the whole fabric in a wild crash, and were engulfed in the waters. Those of the English who had formed, and stood to sustain the shock of the main attack, fought for a while with great bravery, under the conduct of Sir Marmaduke Twenge, an officer of noted experience and courage; they induced the Scottish to make a feint of retreating, but soon saw them stand at bay, and make a vigorous onset, and, at the same moment, were attacked in the rear by a party who had made a compass round the Abbey-craig; and they were at length entirely routed, and—in addition to those who were drowned in the river—left five thousand of their number, among whom were Cressingham and a nephew of Sir Marmaduke Twenge, slain upon the field. The defeat seems to have been effected about the place now called Corn-town, near the Forth, and to have been completed at the Torwood,—a forest, the only surviving part of which is now in the united parish of Larbert and Dunipace. The victory was the most signal which Wallace ever gained in a regularly fought field, and cost him but an inconsiderable loss in slain.—The second of the great conflicts on the theatre of St. Ninian's was the celebrated and boasted battle of BANNOCKBURN, and is duly noticed in our article on that locality. The third was the battle of Sauchie, or of Sauchieburn, or Stirling, fought on the 11th June, 1488, between James III. and his insurgent nobles. The two armies met on a tract of ground, now called Little Caglar, on the east side of the streamlet of Sauchieburn, about 2 miles south of Stirling, and 1 from the field of Bannockburn. The malcontent army was 18,000 strong, and was ranged in three divisions, commanded respectively by Lords Home and Hailes, by Lord Gray, and by officers acting as prompters to the Prince of Scotland, a youth of 15. The King's army is variously stated in strength, and was also disposed in three divisions, commanded, we are not told under what arrangement, by the Earls of Menteith and Crawford, the Lords Erskine, Graham, Ruthven, and Maxwell, and Sir David Lindsay of Byres. The King was armed cap-a-pie, and mounted on a stately charger, presented to him by Sir David Lindsay, with the assurance that he might at any moment trust his safety to the animal's agility, and surfootedness, provided he could keep his seat; but where he was stationed, or what part he proposed to take in the impending engage-

ment, we are not informed. The malcontents saw their first line driven back, at the onset, by the royalists; but, the second division speedily giving support, all became composed and firm; and they soon, not only recovered their ground, but pushed the first and the second lines of the royalists back to the third. James III. was not noted for courage, and rapidly lost the little he possessed; and—previous to the striking of any decisive blow—he put spurs to his horse, and galloped off, with the view, as is conjectured, of getting on board his fleet, which lay in sight at 5 miles' distance. After the King's flight, his troops continued to fight with great bravery; but, eventually finding themselves unable to stand their ground, and disheartened by a flying rumour of the King's death, they began to retreat towards Stirling, and were allowed to retire without much pursuit. The victorious army lay all night upon the field, and next day marched to Linlithgow. The number of slain on both sides must have been great, as the action was of several hours' duration, and stubbornly maintained; and, on the royalists' side, it included the Earl of Glencairn, and some other persons of high rank. As the King, in his flight, was on the point of crossing the Bannock at the village of Milltown, a mile east of the field of battle, his horse started at the sight of a pitcher which a woman, in the act of drawing water, threw from her at the sight of a man riding toward her at full gallop. James was thrown violently to the ground, and sustained such damage from his fall and the weight of his armour, that he fainted away; and was removed, by the miller and his wife, into a mill in the immediate vicinity, and treated by them, though ignorant of his rank, with every possible care. When he had somewhat recovered, he told who he was; and, supposing himself dying, called for a priest. The miller's wife flew in search of a ghostly adviser, and, meeting a party of the malcontents who had observed the King's flight, and were endeavouring to track his steps, entreated that, if there were a priest among them, he would stop and "confess his majesty." "I," said one of them, whose name is not certainly known, "I am a priest: lead me to him." Being introduced, he approached on his knees under pretence of reverence, treacherously ascertained that the King thought he would recover if he had the aid of a surgeon, and then stabbed him several times in the heart. The scene of this tragedy is still standing, and bears the name of Beaton's-mill, which it is said to have received from the miller who figures in the narrative. When more spacious mills were erected in its vicinity, it was converted into a dwelling-house; it has also been renovated in the upper part, and undergone various repairs; but, in the lower parts of its walls, the stones of which are much mouldered by the weather in the lapse of ages, it is strictly the same which received the unfortunate monarch.

St. Ninian's is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the heads of families. Stipend £345 3s.; glebe £30. Unappropriated tithes £2,700 13s. 8d. Stipend of an assistant £50, from the heritors, and between £70 and £80 by voluntary contribution. The church was built in 1751, has not since been altered, and is cold, damp, and uncomfortable. Sittings 1,500. A chapel at Buckichurn, in the moorland district, 5 miles from the village of St. Ninian's, is officiated in monthly or oftener by the minister or his assistant. A *quoad sacra* parish-church was built in 1838 at Bannockburn, for a district with a population of about 3,000. Estimated cost 41,728. Another *quoad sacra* parish-church was erected in 1839 at Plean, in the southern extremity of St. Ninian's.

Estimated cost £400. Sittings 300. In its immediate vicinity is an asylum, founded by the late Colonel William Simpson, for the residence and support of indigent old men, preferentially such as have served in the army or navy; and, in 1840, it had 22 inmates, and possessed capacity and resources for the reception of more. The trustees of this charity gave ground for the site of the Plean church, and for a cemetery; and agreed that the chaplain of the asylum should be the minister, without any additional salary. A Relief congregation was established in 1774; and their place of worship was built two years earlier, at a cost of about £1,100. Sittings 1,340. The charge is collegiate. Stipend of the first minister £105, with a manse and grounds worth £25; of the second minister, £120; with an allowance to the two alternately of £5 at each communion. A United Secession congregation was established in 1835. Their place of worship—built in 1797—was, in 1837, purchased and repaired at a cost of £468. Sittings 450. Stipend £100. An ecclesiastical census taken in 1836, but supposed by the minister to have made omissions, exhibited the population as then 9,379; of whom 4,428 were churchmen, 4,839 were dissenters, and 112 were nondescripts. In 1834, the parish-school was conducted by two teachers, and attended by 100 scholars; and 15 non-parochial-schools, were conducted by 15 teachers, and attended by 865 scholars. Salary attached to the parish-school, £34 4s. 4½d., with about £65 fees.—St. Ninian's figures conspicuously in the history of what is ecclesiastically called intrusion. In March, 1734, Mr. James Mackie was inducted with the consent of the heritors, but in opposition to the will of a great proportion of the parishioners; and, during his incumbency of nearly 20 years, about one-half of the inhabitants of the parish are said to have become Seceders. In June, 1773, after almost the whole of the parishioners had opposed the settlement of a Mr. David Thomson, and had carried on a process against him during eight years before the General Assembly, he was forcibly inducted. The great body of the adherents of the Establishment now went off, and were formed into the congregation of Relief. But previous to Mr. Thomson's death in 1787, his hearers were indulged with the choice of an assistant, and began gradually to augment in number; and in 1788, they bought up from voluntary contributions, and at a cost of between £600 and £700, the rights of the patron.—A chapel—dedicated to the Virgin Mary—anciently stood at Skoek, about a mile down the stream from Bannockburn. The Kirk of Moor, or 'Kirkamuir,' is stated apart from St. Ninian's in the commissary's list of parishes; and the place of worship—now pulled down—stood about 3 miles south-west of the present moorland chapel of Buckichurn, and was under the patronage of the family of Montrose.—St. Ninian's parish was originally called *Ecclis*, the Gaelic name for church, and a word closely akin in structure to the Latin *ecclesia*, of the same signification. The saint from whom the parish has its modern name is, in Ireland, called Rungan, and in Scotland, indifferently Ringan and Ninian. Monkish legend says much respecting him, but credible history very little. About the year 452, the Scottish ecclesiastics became infected with the Pelagian heresy, and, according to most historians, were visited by Palladius from Rome, with the view of recovering them from error. Ninian is mentioned among Palladius' disciples as highly distinguished by both learning and sanctity. He is said—but on very suspicious authority—to have occasionally inhabited a cave on the sea-shore of Wigtonshire, and to have founded a monastery at Candida Casa, the site of the modern Whithorn, and, in the middle ages, of

the cathedral of the see of Galloway. His labours, whatever they might be, were probably confined to Galloway, or, at most, to the province of Valentia; as the country north of that province does appear not to have received Christianity till a later date. Many churches and chapels, though all apparently in times succeeding the overthrow of Culdeism, and the introduction of popery, were dedicated to his memory.\* Near the south port of Stirling, within the limits of the great St. Ninian's parish, is a very copious and pure spring, anciently dedicated to the saint, and still called St. Ninian's well. Various localities in cities and towns are also named after St. Ninian, and in some instances commemorate ecclesiastical structures, dedicated to his tutelage.

The village of **ST. NINIAN'S** stands nominally 1 or  $\frac{1}{4}$  mile south of Stirling, on the great southern turnpike immediately above its forking into the lines respectively to Edinburgh and to Glasgow; but by means of the Stirling suburb of Melville-place, and of the conjoint village of Newhouse and Bellfield, it is, with two brief interruptions, really continuous with Stirling; and though forming rather a far-off and straggling appendage than a suburb, it is comprehended within the parliamentary boundaries. The village consists chiefly of one long antiquated and not spacious street. Many of its houses are whitewashed, and made, by the simple accident of colour, to wear a comparatively lively appearance; but most are old-fashioned, clumsy, and utterly destitute of sprightliness or grace. Many bear rude but curious sculpturings,—some of considerably ancient dates, and others of the tools of the tradesmen to whom they originally belonged. On one are the principal implements of a smithy, with a horse-shoe and nails; and on another are the utensils of an old-fashioned inn or public-house, the pint-stoup and the punch-bowl particularly conspicuous. The steeple of the town stands at a considerable distance from the church, and rarely fails to excite the traveller's surprise at so singular a divorce. The church—which was attached to it, the predecessor of the present—was used by the Highland army, in 1746, as a powder-magazine, and, either from design, or more probably by accident, was blown up on the eve of their retreat to the north. The explosion very strangely left the steeple uninjured, yet it shattered the church almost to atoms, and left scarcely one stone upon another; it killed several of the Highlanders, and some of the natives; and it was heard in one direction at Dunblane, and in another at Linlithgow. The village has a share in the Bannockburn and Stirling staple manufacture of tartans, and other woollen stuffs; it is the seat of an extensive manufacture of nails, which have the reputation of being very superior in quality; and it takes part in the tanning of leather and other departments of the parish's productive labour. The Relief meeting-house is situated in the village, and occasions a presbytery of the Relief body to take name from St. Ninian's instead of Stirling. Dr. Robert Henry, one of the ministers of Edinburgh, and the author of a well-known voluminous History of Britain, was a native of St. Ninian's.

**NINIAN'S (ST.) ISLE.** See **DUNROSSNESS.**

**NINIAN'S (ST.).** See **GOVAN.**

**NISBET**, a small village in the parish of Pencaitland, Haddingtonshire, situated on the left bank of the Tyne;  $4\frac{1}{2}$  miles south-west of Haddington.

**NISBET**, an abrogated parish in Roxburghshire, now united to **CRALLING**: which see.

**NITH (THE)**, the largest of the three chief rivers of Dumfries-shire, and that which gives the name of Nithdale to the western division of the county. Two of its three principal head-streams rise on the north side respectively of Prickeny and Benbain-hills,  $2\frac{1}{2}$  miles asunder, and both on the boundary between the parishes of New Cumnock and Dalmeilington in Ayrshire; and they run, the one 4 miles northward, and the other  $3\frac{1}{2}$  miles north-eastward, to a junction at Waterhead. The united stream then runs  $2\frac{1}{4}$  miles east-north-eastward, and receives on its right bank the third head-water, a streamlet 5 miles long; and thence it flows  $5\frac{1}{2}$  miles eastward to the boundary between Ayrshire and Dumfries-shire, passing the village of New Cumnock, and receiving in its vicinity from the south, Comal-hurn and the beautiful and rapid Afion-water. Its subsidiary tributaries hitherto are not fewer than about 25; but they are, most part, the tiniest rills, coldly creeping out from among moss and heath. The Nith itself, till after it gets quite away from Ayrshire, is one of the most cheerless of streams, sluggish, shallow, seldom more than 15 feet wide, deeply tintured with moss, and rarely graced with plantation, copse, a sheet of verdure, or even a hold bank to relieve the dreary monotony of its brown moorland landscape. After entering Dumfries-shire, it flows 5 miles eastward through the parish of Kirkconnel, and 8 miles south-eastward to Enterkinfoot in Durisdeer,  $1\frac{1}{2}$  mile of the distance, being on the boundary between Kirkconnel and Sanquhar, and  $4\frac{1}{2}$  miles through the interior of the latter, and it then assumes a southerly direction over a distance of 7 miles, through Durisdeer, along the boundary between Morton and Penpont, and across small wings of Morton and Closehurn, to the confluence with it of the Skaar. Its chief tributaries thus far, are, on its right bank, Kello-water between Kirkconnel and Sanquhar, Euchar-water and Polhroke and Ellioc-hurns in Sanquhar, Marhurn between Durisdeer and Penpont, and Skaar-water at the termination of the southerly course; and, on its left bank, Aymer-water in Kirkconnel. Cawick-water between Kirkconnel and Sanquhar, Minnick-water in Sanquhar, Enterkin-hurn in Durisdeer, Carron-water between Durisdeer and Morton, and Cample-water in Closehurn. The principal architecture on its banks are the pleasant village of Kirkconnel, the ancient hurgh and ruined castle of Sanquhar, the magnificent ducal palace of Drumlanrig in Durisdeer, and, on a rising ground a little to the east in Morton, the large and beautiful village of Thornhill. Its banks till below Sanquhar, though quite redeemed from the dreariness which characterizes them in Ayrshire, are simply agreeable, consisting chiefly of a verdant vale overlooked by variform but not grand or bold mountain-land; but they are afterwards exquisitely rich in almost all the varieties of the choicest landscape, now exhibiting a narrow and acclivitous pass thick with copse, or crowned with grove, shaven down into the naked scour, or rugged, shelving or precipitous with rock now hursting ahead into an expanse of valley, blooming and luscious as a garden, and screened with warm-coloured and finely outlined mountain-heights, and now presenting such rapid alternations of slope, undulation, haugh, and hill as surprise and charm a tourist by the mingled wealth and number of the transitions. From the confluence with it of the Skaar, it flows over a die-

\* Thus we have Kil Ninian in Mull; Kil St. Ninian in Colmonell; St. Ninian's in Ayrth; St. Ninian's chapel, now a cemetery, in Bauffshire; St. Ninian's in Inverness-shire; Nonc-kil or St. Ninian's chapel in Kiltarn; the chapel of St. Ninian in the cathedral church of Ross; the chapel of St. Ninian in the cathedral church of Elgin; St. Ninian's chapel in Castle-lid, Aberdeen; St. Ninian's chapel at the west port of Linlithgow; St. Ninian's chapel in the parish of St. Vigean's, in the vicinity of which is St. Ninian's well, once a reputed cure for many diseases; St. Ninian's chapel on Roma-Riguan, or Ninian's Point, in Bute; and St. Ninian's chapel in Ringuan's, or Renyan's isle, in Shetland.

tance of  $11\frac{1}{2}$  miles south-east by southward to a point 5 furlongs above the confluence with it of the Cairn; it then makes a bold and beautiful sweep of  $\frac{3}{4}$  of a mile westward; and thence, over a distance of 8 or  $8\frac{1}{2}$  miles, it runs nearly due southward to the Solway frith. Its sinuosities are numerous, and in some places constant; but, with the exception noticed, they are never bold, though always graceful, and do not impair the general or prevailing character of the direction. Over all the distance south of the Skaar—abating some trifling pendicles in the parish of Holywood—the river forms parochial boundary-lines; and has on its right bank, Keir, Dunscore, and Holywood in Dumfries-shire, and Terregles, Troqueer, Newabbey, and Kirkbean in Kirkcudbrightshire; and, on its left bank, Closeburn, Kirkmahoe, Dumfries, and Caerlaverock, all in Dumfries-shire. Its chief tributaries in this division, are, on its right bank, the Cairn or Cluden, between Holywood and Terregles, the Cargen in Troqueer, and the Newabbey Pow in Newabbey; and, on its left bank, Duncow-hurn in Kirkmahoe. The architecture which overlooks it consists of a profusion of mansions at intervals in all the parishes, and occasionally in thick files of the venerable ruins of Lincluden college in Terregles, of the ruined hut still splendid monastery of Newabbey in Newabbey, of the glad and lovely burgh of Dumfries, with its less attractive Galloway suburb of Maxwelltown, and of the beauteous and cheerful sea-port village of Glencaple in Caerlaverock. For  $3\frac{1}{2}$  miles after receiving the Skaar, the river runs between the beautiful grounds of Keir, slowly rising like a green and softly wooded gallery on the one hand, and the fine expanse of the singularly improved and now luxuriant plain of Closeburn, darkly overhung by the Queensberry heights on the other; it now becomes pent up for about 2 miles by the low and delightfully variform terminations opposite to each other of spurs from the mountain-ranges on the back-ground, and, while traversing this space it is decked out with mansion, and demesne, and wood, and lawn, amidst nooks and recesses, hilly abutments and diversified slopes, till picturesqueness becomes absolutely profuse and almost excessive. On its clearing the sort of gorgeous pass—in the course of which the great Nithsdale road crosses it by the well-known “Auld Girth brig”—the hills recede from it in sweeps which respectively describe the arc of a circle; and while they form soft and finely-featured screens which terminate on the one side in the low green heights of Mousewald, and, on the other, in the bold grand form of Criffel, they enclose an oval plain of from 6 to 8 miles in breadth; and along the centre of this, the joyous and pebbly Nith trots amidst constant verdure, and multitudinous gardens and other elements of the most luscious landscape, to the sea. About  $2\frac{1}{2}$  miles below Dumfries, it begins slowly to expand into an estuary; and between Craigebock-rocks and the tiny headland at Caerlaverock-castle, where it fairly becomes lost in the Solway frith,  $4\frac{1}{2}$  or 5 miles below the point of hegun expansion, it attains a breadth of  $2\frac{1}{2}$  miles. A high wier or “caul” is carried across it at Dumfries, to divert its water-power to the burgh’s suite of large grain mills; and beyond this obstruction the tide does not rise. Nowhere is the magnificence, or at least the rare and romantic character, of the famous Solway tide displayed with finer effect than in the estuary of the Nith: see GLENCAPLE. Owing principally to the tide’s impetuosity, the navigation of the river is difficult to seamen unacquainted with its peculiarities; but it has been greatly improved, and is identified with considerable traffic. The Nith, exclusive of all minor bends and windings, has altogether a course of

about 49 miles; but, if viewed in connexion either with its scenery or the agricultural wealth of the country which it drains, it possesses a degree of importance much beyond the proportion of the length of its stream, or the volume of its waters. In the bleak or upper part of its course, it is celebrated for the excellence of its trout; and, near the sea, it abounds with salmon.

NITHSDALE, the western one of the three great divisions of Dumfries-shire, so named from its being drained and traversed by the river Nith. Except that the Ayrshire and the Kirkcudbrightshire portions of the natural basin of the Nith and its tributaries are not included in what is called Nithsdale, we should, were we to attempt to describe the district, do little more than repeat what we have said in the preceding article on the river. The soil, in most parts of Nithsdale, is light and dry; capable, except in frost and snow, of being ploughed at any period during the winter; and well-fitted for an early reception of the seed-furrow. But in the larger part of the other two divisions of the county the soil is wet, and, when ploughed early in winter, is so apt to run into grass, and to have corn sown upon it choked, that it cannot, without imprudence on the part of the husbandman, receive the seed-furrow till spring. One plough on a farm in Nithsdale, will, in consequence, turn up nearly as much ground as two will do in the wet parts of the other districts. Owing to so important a difference, the Nithsdale farms are, in general, much larger than those of Annandale and Eskdale.—The district even yet is of not very well-defined limits, or has along its east side much ground which is debateable between it and Annandale; but anciently it had still more uncertain and occasionally shifting limits, and probably included at times, not only all or nearly all the territory actually drained by the Nith, but tracts of country on its exterior. The original name was Strathnith or Stranith. In the reign of David I., Stranith was possessed by Dunegal, a Gaelic chief. To this eminent person—who is scarcely mentioned by history—genealogists trace up the descent of the celebrated Randolph, Earl of Moray. Four sons of Dunegal appear, after his death, to have shared among them his extensive possessions of Stranith; only two of whom—Randolph and Duvenald—can now be traced. Randolph, the eldest son, possessed a large share; and, as the head of the family, he was superior of the whole, and transmitted the designation of Lord of Stranith to his posterity. He married Bethoc, the heiress of the lands of Bedrule and Buecastle in Teviotdale, and gave his name Randolph as a surname to his descendants. Thomas Randolph, his grandson, who was lineally Lord of Stranith, and became, in 1266, sheriff of Roxburgh, and from 1269 to 1278, the chamberlain of Scotland, married Isabel, the eldest daughter of Robert Bruce, the daughter of the Earl of Carrick, the sister of Robert Bruce, the restorer of the monarchy. Their son was the famous Sir Thomas Randolph of Stranith, who, for his eminent services, obtained from his uncle the earldom of Moray, the lordship of Annandale, and other estates. Duvenald, the younger son of Dunegal of Stranith, appears to have obtained the barony of Sanquhar, the lands of Morton, and some other possessions in Upper Nithsdale; and he was probably the Duvenald who, along with Ulric, led the men of Galloway at the battle of the Standard in 1138, and fell in the conflict. His descendants assumed, in the 13th century, the surname of Edgar from the name of his son; and they continued, in the 14th century, to hold various lands in Dumfries-shire. Richard Edgar, during the reign of Robert Bruce, possessed the castle and half the barony of

Sanguhar, with some adjacent lands; and Donald Edgar obtained from David II. the captainship of the *elan Maegowan* in Nithsdale.—Other considerable families enjoyed, at an early period, some possessions in the district; and, in particular, Sir John Comyn possessed the manors of Dalswinton and Duncow, and the progenitors of the Lord Maxwells possessed Caerlaverock, and held out its ancient castle against many a stout siege. On the accession of Bruce, and the forfeiture of Comyn, Dalswinton was given, to Walter Stewart, the third son of Sir John Stewart of Jedburgh, and Duncow was given to Robert Boyd. Under Robert II., Nithsdale obtained new superiors. Sir William Douglas, the natural son of Archibald Douglas, Lord of Galloway, married Giles, the daughter of the King, received with her a grant of Nithsdale; and was constituted lord of the district and sheriff of Dumfries. His only child, his daughter Giles, who was called, in the encomiastic language of a simple age, 'the Fair Maid of Nithsdale,' and who inherited her father's possessions, lordship, and sheriffdom, married, first Henry Sinclair, the Earl of Orkney, and next, in 1418, Alexander Stewart, the son of James, who was the brother of Robert II.; and had obtained from Robert Bruce the lands of Durisdeer. Her son, by her first marriage, was William, Earl of Orkney, and inherited Nithsdale and the sheriffship of Dumfries; but, in 1455, he was induced to resign the two latter to James II. for the earldom of Caithness. Sir Robert Crichton of Sanguhar is, 1457, called Vicecomes de Nithsdale, and again, in 1459, is called Sheriff of Nithsdale; and his son Robert obtained, in 1464, from James III., a confirmation of the sheriffship, and in 1468, a grant of the office of coroner of Nithsdale. The two offices of sheriff and coroner continued to be enjoined, during two centuries of civil destruction, by the Crichtons of Sanguhar; and between the Restoration and the Revolution, they passed into the possession of the Douglasses of Drumlaing, who rose, by most rapid strides, to the highest rank. This family—whose eventual identification with the Scotts of Buecleuch, has placed under the shadow of the united ducal cornucopia of Buecleuch and Queenshery such magnificent portions of Nithsdale, Eskdale, Teviotdale, Ettrick-forest, and other districts in the border counties—continued to hold the offices, with other local jurisdictions which were annexed to them by every mode of acquirement till the abolition of all hereditary jurisdictions; and they then claimed for the sheriffship £6,000, and for the other jurisdictions £8,500, but were allowed for the former £5,000 and for the latter only £1,621 8s. 5d.,—a fact which evinces that the court-of-session thought the local jurisdictions more vexatious to the people than profitable to the proprietor.—In 1620, Robert, 8th Lord Maxwell, was created Earl of Nithsdale. William, the 5th Earl, took part with the Pretender in 1745, and was attainted, and condemned to be beheaded; but, through the address and courage of his Countess, the Lady Winifred Herbert, a daughter of the Marquis of Powys, he made an extraordinary escape from the Tower.

**NOBLEHOUSE**, a stage inn, 18 miles south of Edinburgh, and 3 east of Linton, on the road from Edinburgh to Dumfries, and in the parish of Newlands, Peebles-shire. The lieutenantcy of the county, and the trustees of its turnpike roads, hold here their annual meetings.

**NOCHTIE (THE)**, a rivulet of 7 miles length of course, in the parish of Strathdon, Aberdeenshire. It rises close on the boundary with Banffshire, and runs south-eastward to the Don. Strathdon church, being situated at its mouth,

occasioned the parish to be formerly called Inverlochty.

**NODESDALE (THE)**, an interesting stream in the parish of LARGS: which see.

**NORAN (THE)**, a clear, rapid, and beautiful stream in the northern division of Forfarshire. It rises between Common Cotes and Mount Sued, on the boundary between Tannadice and Lethnot; flows  $4\frac{3}{4}$  miles southward and 1 mile south-eastward in the interior of the former parish; and then runs  $3\frac{3}{4}$  miles south-eastward, and  $\frac{3}{4}$  of a mile south-south-eastward, between Tannadice on its right bank and Fearn and Caralstone on its left, to a confluence with the South Esk, between Roughmount and Wardend. The Noran is an excellent trouting stream. An elegant mansion, called Noraside, with a suite of offices, was recently erected on its banks.

**NORMAN'S LAW.** See **ADDIE**.

**NORRIESTOWN**, a *quoad sacra* parish and village in the district of Monteith, Perthshire. The parish consists of certain portions of the *quoad civilia* parishes of Port-of-Monteith, Kincardine, and Kilmadoek, disjoined *quoad sacra*, in 1652, by an act of the Scottish parliament. Its length is about 7 miles, its breadth about 5 miles, and its area about 35 square miles. Population, in 1836, 1,750; 1,700 of them churchmen, and the rest dissenters. The church was rebuilt in 1812, and repaired in 1833, at a cost of £1,100, obtained by local assessment. Sittings 870. Stipend £95; glebe £12. An endowment on the parish, called the Norriestown fund, was obtained by collections in the congregations of the seven northern synods, consists of the rents of two farms in which the proceeds were invested, yields a gross annual amount of £134, and is under the trusteeship of the General Assembly.—The village stands nearly in the centre of the detached part of Kincardine, 2 miles north of the Forth, 6 south-east of Callander, and 10 west of Stirling, on the road to the south side of Loch-Katrine, and to the fort of Inversnaid. It is now continuous with the village of Thornhill, and, along with it, stands on both sides of the road along the summit of a rising ground. Most of the inhabitants are labourers or handicraftsmen, and a few are employed in the tanning of leather. Population of the united village, in 1836, 750.

**NORTH BERWICK.** See **BERWICK [NORTH]**.

**NORTH FERRY.** See **QUEENSFERRY**.

**NORTHMAVEN**, or **NORTHMAVINE**, a parish in Shetland, comprehending the northern part of Mainland, and a number of adjoining islets. The mainland part is washed on the west and north by the Atlantic ocean; on the east by Yell-sound and Sulem voe, which separate it from the island of Yell and the parish of Delting; and on the south by an isthmus of only 100 yards, nearly all submerged at spring-tides, and by St. Magnus-bay, which divide it from the parishes of Delting, Aithsting, Papa-Stour, and Sanduess. Its length is 16 miles, its greatest breadth 8 miles, and its superficial extent about 80,000 acres. Its outline is proximately triangular, but has many irregularities. The cultivated lands, or farms—here called 'rooms'—bear a very small proportion to the hill and pasture-grounds, and are mere scattered peniciles situated near the shore and round the bays. On each side of the isthmus, at the south end of the parish, the hills rise almost perpendicular. Seven miles from the northern extremity rises Rona's-hill, or Mons Ronaldi, the highest ground not only in this parish but in all Shetland, stated in the Old Statistical Account to be 3,944 feet of ascertained altitude, but estimated by Dr. Edmonston, in his 'View of the Zetland Islands,' at certainly not more, though possibly less, than 2,000 feet. This hill is a land-mark to the fishers all round the country, and

generally the first Scottish land seen by ships approaching from the north-west; and it commands a prospect of all Shetland, with the ocean everywhere for a horizon. On its summit is a rude antique structure surmounted by a pyramidal tower of small stones, and called the Watch-house, which coveringly accommodates six or seven persons, and may have anciently been used as a heacon-post. Islets, holms, stacks, and solitary rocky pillars, form an almost continuous cordon round the parish, and, at all times, but especially in a storm, render its coast grandly picturesque. The chief of them, for size and pasture, are Lamba, Eaglesbay, Nihon, and Gunister. Among the most remarkable are a rock which rises sheer up on all sides, and, at a few miles distance, has the appearance of a ship with all her sails set; two very high and quite inaccessible pillars in its vicinity, on which the larger kind of cormorants nestle in alternate years; and a rock, called the Maiden Skerry, whose summit has never been trodden by man, and affords undisturbed nestling-ground to the largest or black-backed gulls. Other islets and objects still more remarkable will be noticed in the article **SHETLAND ISLES**. The west coast of the parish consists, in several places, of stupendously high crags, which seem to have been rather rent and abraded by storm and hallow than torn by volcano or upheaved by earthquake. The northern extremity is a small peninsula, called Fetheland, and enclosed by a stone-fence. The parish is commodiously situated for navigation and commerce, and abounds in excellent harbours, whence there is a safe and ready passage to the different ports of Britain, to the Greenland seas, to the Baltic, Norway, and Spain; and, round all its coast, which is provided with large beaches, and every requisite appliance, for an extensive fishing, are vast shoals both of the smaller varieties of fish which mainly subsist the inhabitants, and of ling, cod, tusk, herrings, and other species which form valuable articles of exportation. The principal voes which indent the coast are Hillswick and Sandwick, on the south; Hamna, Rona's, and Sand, on the west; and Burra, Colafirth, Quoyafirth, Gluss, and Sulem, on the east. The antiquities are, a chain of watch-houses similar in structure to that on Rona's hill, and many remains of burrows, or dunes, commonly called Picts' houses, but none of them entire or of remarkable magnitude. Population, in 1801, 2,045; in 1831, 2,386. Houses 407. Assessed property, in 1815, £245.—Northmaven is in the presbytery of Burra-voe, and synod of Shetland. Patron, the Earl of Zetland. Stipend £158 6s. 7d.; glebe £15. The parish-church is situated at Hillswick, in the south-west, and was built in 1733, and re-seated in 1822. Sittings 583. Another parish-church existed in the south-east; but, on becoming ruinous, was abandoned in 1761. A Wesleyan Methodist congregation was established at North Rae in 1825. Their chapel was built in 1828, at a cost of £97; and is used also both stately for a Sabbath-school and occasionally for service by ministers of other denominations. Sittings 208. Stipend moderate and variable. An independent congregation was established at Sulem in 1810. Their place of worship was built in 1828, at a cost of £40 or £50. Sittings 160. Stipend not known. About 250 of the parishioners are dissenters. In 1834 the parish-school was attended by 50 scholars, and six private schools

by 130. Parochial-schoolmaster's salary £25, with £4 fees.

**NORTH YELL**. See **YELL (NORTH)**.

**NOSS**, an island in Shetland, about 5 or 6 miles in circumference, lying east of Bressay, and separated from it by a narrow and dangerous sound. The island is reckoned one of the most fertile and pleasant in Shetland. A promontory on its east side is called Nosshead. But the most interesting object connected with it, and one of the greatest curiosities in Shetland, is a holm or islet on its south side, called the Holm of Noss. This islet, only 500 feet long, 170 broad, and 160 high, is perfectly mural, rises sheer up to its greatest altitude on all sides from the sea, and possesses a level and richly-swarded surface. The opposite rock, on Noss island, is also mural, and of the same height as the Holm; and is separated from it by a channel 240 feet wide. The apparent opulence of the Holm's pasture, and the seemingly vast profusion of eggs and young sea-fowl which whitened its surface, induced the proprietor; many years ago, to offer a reward to any adventurer who should scale its stupendous walls, and establish a communication between it and the Noss. A hardy and daring fowler performed the giddy feat; but, disdaining in his pride to avail himself of his own contrivance for crossing the boiling surge of the channel, and attempting to descend the precipice in the way that he had climbed it, he fell and perished. His whole work consisted in driving two strong stakes into the rock, and firmly attaching to them two strong ropes. These ropes similarly fastened at their other end in Noss island, form the entire means of communication, at a giddy height, across the vexed and tumbling chasm of sea. A wooden trough or cradle is suspended to the ropes, and made to acquire a sliding motion; and, possessing sufficient capacity for conveying a man with one sheep at a time, it has fully served to keep the Holm in command as a valuable piece of sheep-pasture. A rock called the Noup towers up like a stupendous tower in the vicinity of the Noss, and attains, on one side, a precipitous and almost perpendicular height above sea-level of not much less than 500 feet.

**NOSS-HEAD**, a bold rocky promontory on the south side of Keiss or Sinclair's bay,  $3\frac{1}{2}$  miles north-east of Wick, Caithness-shire. A little west of it stand the ruins of Castle-Girnigoe, the chief ancient baronial stronghold of the Earls of Caithness. From a cove or small bay, called Mursligoc, and frequented by seals, a dry passage leads through a rock into a vast cave under Noss-head.

**NOTH**, a hill in the parish of Rhyne and Essie, Aherdecnshire. It is of a conical form, and rises about 600 feet from its base, and at least 1,000 above the level of the sea. Some appearances on its summit have been variously regarded as the remains of a vitrified fort, and as the indications of an extinct volcano.

**NUNGATE**, a suburb of **HADDINGTON**: which see.

**NUNRAW**. See **GARVALD**.

**NUN'S-ISLAND**, an islet in the Hebrides, in the immediate vicinity of Iona. Its sole interest consists in its being the scene of some legendary, or, at best, very doubtful passages in the Monkish or Romish version of the history of the Culdees: see **IONA**.

**NUTHILL**. See **FALKLAND**.

## O

OA, a parliamentary parish in the island of Islay. It belongs *quoad civilia* to the parish of Kildalton; and occupies the south-eastern peninsula of the island. The church is of modern erection. Patron, the Crown. Stipend £120; glebe £3. The name Oa, indifferently with that of Keannoath, belongs topographically, as well as parochially, to the peninsula. On the summit of the rock which forms the western extremity of the point of Oa, stands the old castle or fort of Dun-Aidh. The structure, though quite a ruin, indicates quondam possession of very remarkable strength; and it presides over a scene of much impressiveness and grandeur.

OATHLAW, a parish in the centre of Forfarshire; bounded on the north by Tannadice; on the east by Aberlemno; on the south by Aberlemno and Rescobie; and on the south-west and west by Kirriemuir. It is 6 miles long from east to west, and nowhere more than 3 miles broad. Area 3,870 acres. Its ancient name, and the name still in use of several of its chief localities, is FINHAVEN: which see. From the summit of the bill of Finhaven, which forms a ridge along the southern boundary, the surface slopes gently into Strathmore, and stretches out toward the other boundaries in a plain. The soil is, in general, clayey and retentive; and, though much improved by marl from Rescobie, and by draining, is repressed in its energies by the distance and dearth of lime. Upwards of 2,800 acres are arable, and about 900 are under plantation. Neat and commodious farm-steads, well-trimmed hawthorn enclosures, and a profusion of wood disposed in ornamental belts, give the district a peculiarly snug appearance. The river South Esk traces for  $\frac{3}{4}$  of a mile the northern boundary, passes away for  $2\frac{3}{4}$  miles into the parish of Tannadice, resumes for half-a-mile its course along the boundary, runs for  $1\frac{1}{2}$  mile across the interior, and then for half-a-mile traces the southern boundary. It here flows between very low banks, occasionally floods the adjacent grounds and changes its channel, and is, in general, shallow, and about 46 or 47 yards broad. Salmon formerly abounded in it, but are now very scarce. The rivulet Lemno runs 4 miles north-eastward to the South Esk,—one-fourth of this distance on the southern boundary, and the rest in the interior. A hore of upwards of 150 feet having been made in an unsuccessful search of coal, a very powerful spring of excellent water wells up from it, but is artificially covered from view, and carried off in a drain. The hill of Finhaven consists of conglomerate. In the west end of the parish, and at a considerable depth, is a quarry of excellent freestone. A flax-spinning-mill, which employs about 60 work-people, and the small village of Finhaven, stand on the South Esk, a little above the confluence with it of the Lemno,  $5\frac{3}{4}$  miles north-north-east of Forfar. The west road between Dundee and Aberdeen touches the village, and passes 4 miles diagonally through the parish.—On the north bank of the Lemno there are traces of a Roman camp, called the camp of Battledykes, more than double the extent of the celebrated one at Ardoch. It measures about 2,970 feet in length, 1,850 feet in breadth, and about 80 acres in area; and now forms a good and well-worked farm. The pretorium is the only part now visible; but some small urns and other minute antiquities, which were dug up within it, are preserved in the vicinity. A grand Roman iter connected it with the

camp of Ardoch; and smaller iters connected it northward with camps at Wardykes and Ilaerfaulds, distant respectively 11 and 19 miles.—Near Finhaven-castle grew a famous chestnut-tree, 42 feet in girth a foot from the ground, 33 feet in the smallest part of the trunk, 35 feet at the offshoot of the branches, 23 in the largest grain, and 13 feet in the smallest. Population, in 1801, 384; in 1831, 533. Houses 76. Assessed property, in 1815, £2,558.—Oathlaw is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, the Marquis of Huntly. Stipend £158 5s. 2d.; glebe £18. Schoolmaster's salary £34 4s. 4 $\frac{1}{2}$ d., with £9 14s. fees. Some vestiges exist, a little below Finhaven-castle, of an ancient church, called the church of Aikenhauld, which seems to have been the church of the barony of Finhaven, and was probably that of the original parish.

OBAN, a *quoad sacra* parish, on the coast of Mid-Lorn, opposite the north of Kerrera, and the middle of Mull, Argyleshire. It is in the presbytery of Lorn, and synod of Argyle; and consists of part of the town of Oban, and a small landward district. Its greatest length is about 4 miles; its greatest breadth about  $2\frac{1}{2}$  miles; and its superficial extent from 5 to 6 square miles. It was disjoined in 1834 from the united parish of Kilmore and Kilbride. About seven-eighths of the whole population reside in the town. According to an ecclesiastical survey made between December 1835 and April 1836, the population then consisted of 1,398 churchmen, 148 dissenters, and 80 nondescripts, or 1,626 persons. Only about one-fourth speak English. No fewer than about 1,300 belong to the poor and working classes, principally labourers and artisans; the rest are chiefly small annuitant pensioners, shopkeepers, and publicans. The Gaelic population, themselves about 1,200, are said to be "all very poor." The parish-church was built in 1821 as a chapel-of-ease, and cost £1,142 18s. 11 $\frac{1}{2}$ d. Sittings 530. Stipend £100, with £8 6s. 8d. for communion elements. The Society for propagating Christian knowledge formerly contributed £30, and now contributes £20 of the stipend. This society contributes also to the maintenance of a parochial school. Salary £5, with a house and £15 fees, subscriptions, and donations. A Sabbath school is taught in the parish-church.—An United Secession place of worship, for the uses of a then nascent congregation, was built in 1836, and cost £310. Sittings 257. It was constructed and is maintained partly by aid from the congregation of the Rev. Dr. King, Glasgow. Stipend £90.—An Independent congregation was formed about 36 years ago. Their chapel was built in 1820, and cost about £450. Sittings 300. Stipend from £40 to £50, partly paid by the Scottish Congregational Union.—A Baptist congregation dates obscurely to about the year 1817.

OBAN, a parliamentary burgh, and a thriving little town and sea-port, is situated in the *quoad civilia* parish of Kilmore, 25 miles south-east of Tobermory, 33 west-north-west of Inverary, 35 south-south-west of Fort-William, 24 north of the west end of the Crinan canal, 92 north-west by north of Glasgow, and 136 west-north-west of Edinburgh. The site of the town is singularly happy, as to at once scenic interest, burghal comfort, and commercial influence. Its command of the Western islands, both in their finest groupings into landscape, and in nearly all their facilities for communicating with

their principal marts and sources of supply, has occasioned the town to be called the Charing-cross of the Hebrides; its position midway between the Caledonian and the Crinan canals, its consequent power of pouring the productions of the north and the south over most of the Hebrides and of the interior of Argyleshire, and its immediate and complete influence over all the chief marine highways of the west, and the most practicable paths of ingress to the interior, have rendered it the virtual capital of the Western Highlands; and the salubrity of its air, the cleanliness of its streets and houses, the agreeableness of its sea-beach, the wealth of its environs in natural and artificial objects of attraction, and the beauty, the power, the exulting brilliance of the scenes in nature which hang in gorgeous panorama around it, unite in demanding for it a high character as a watering-place and a chosen home of annuitants. The town stands at the head of a small bay which recedes from the sound of Kerrera, and has a boldly indented coast, backed by moderate-sized hills. The southern entrance to the sound bends so far inward from the bay as to become lost to the view; the northern entrance, though all seen from the town, is shut up, at 5 miles' distance, by the island of Lismore; so that the portion of sea which lies under the eye appears quite landlocked, and has scenically all the attributes of a large, intricate, and romantic lake. The enviring lands are sufficiently high to produce repose in the landscape, and afford protection from the violence of winds; yet not so high as to confine the vision to a limited range, or prevent the grand revelation in the distance of vast alpine heights, with the play around them of vivid cloud-scenery, and the war of storms. The cliffs on the north side of the bay are lofty and hold, and are finely embellished with trees and overspreading ivy; and, from their brow, they lift the eye athwart an expanse of island and coast scenery whose combined extent and magnificence are not excelled by any kindred view in Britain. In the interior, too, the whole foreground is pleasing; and is set off with superb effect by a back-ground of no common character, "the blue broad-shouldered, and double-peaked Ben-Cruachan, swelling in the distance into gigantic proportions."

Oban is of comparatively quite recent origin, and has risen rapidly from a trivial commencement. Its nucleus, twenty-six years before Dr. Clarke visited it, consisted of but a single thatched house with five inhabitants. In 1713 arose the first house which it possessed of any consequence, a storehouse erected by a trading company of Renfrew. The sagacity which gave it this accession soon became general, and very markedly appreciated the site of the town as the best station for commanding the trade of the far west of Scotland. During the progress of last century, the place was constituted one of the ports of the custom-house; and, when it began fully to demonstrate its advantageousness of position, it drew attention from the Duke of Argyle and Mr. Campbell of Combie, the proprietors of its grounds, and won from them a willingness to grant, to a considerable extent, encouraging building leases. Two brothers of the name of Stevenson, who settled in it in 1778, introduced to it different departments of traffic, and, while they enriched themselves, greatly aided its advancement, and promoted the prosperity of the country in its neighbourhood. The opening of the Crinan and Caledonian canals, the construction of parliamentary and statute labour roads in the interior, the introduction and improvement of steam-navigation, the general and rapid amelioration of the Highlands, the sudden and vast expansion of traffic between the western coasts and islands and

the Clyde, and the origination of trade between the Highland west and very distant parts of the empire, have all kept the prosperity of the town in steady movement, and occasioned an annual, though safely small, addition to the number of its houses.

The front view of the town from the bay exhibits, behind a dry sea-beach, about an hundred substantial houses, and two large and good inns. The main body of the town is cut into two parts by a small stream. In the eastern division stands the church of the *quoad sacra* parish, a neat and even handsome structure. On a commanding site, cheerily looking out upon the bay, stands the custom-house, built in 1763. If other public buildings be inquired for, they are not found; town-house, court-house, gaol, *quoad civilia* church, burgh academy, assembly-room, subscription reading-room, and public buildings of every class which usually grace the streets and areas of burghs, being all, with the single exception of a Freemason's-hall, unknown and probably undesired. But such buildings as exist, though nearly all private, produce a greatly better tout-ensemble than the mingled edifices of pretension and of meanness, which compose the architecture of not a small proportion of Scottish towns. They are all white-washed with lime; they possess much aggregate neatness; and they compose a town of decided cheerfulness of aspect.—The harbour and anchoring-ground of the port are particularly good. There are two commodious quays; one of which was improved and enlarged in 1836. The bay is semicircular, has a depth of from 12 to 24 fathoms of water, is quite sheltered from every wind, and affords at all times a safe retreat to ships of any burden. Several vessels belong to the port. The imports are principally miscellaneous goods, from Glasgow and Liverpool, and the exports chiefly pig-iron, whisky, wool, fish, kelp, and Easdale slates. The port is a central point for all the shipping which visits the north-western parts of Scotland, or passes through the Caledonian canal; and it has constant and animating communication by steam-vessels with Glasgow, Greenock, Tobermory, and Inverness; and in summer sends off steamers to Staffa, Iona, Skye, Stornoway, and Liverpool. In 1839 the number of steamers which constantly plied from it, either directly or in transit, was six. The chief manufactures are the making of whisky in two distilleries, and the making of silk and straw hats. But the produce of the ordinary departments of artisanship is required not only for the town, but for an extensive district around it; and both the iron-works of Bunawe and the slate-quarries of Easdale are, in a subordinate sense, manufactures of Oban, or at least sensibly affect its prosperity.—The town is regarded as one of the most pleasant summer-retreats in the Highlands, is much frequented as sea-bathing quarters, forms the rallying point and the metropolitan haunt of tourists "in search of the picturesque" over western Argyleshire and the southern and central Hebrides, and, in each of these capacities, adds noticeable items to its means of maintenance. Its markets are supplied well and at low rates with farm and garden produce; and its inns and steam-boats furnish facilities which, a few years ago, would have been surpassingly luxurious in the Highlands, for exploring continental and Hebridean scenes. A public coach runs daily in summer between the Caledonian hotel in Oban and the Argyle hotel in Inverary.—The town, additional to the offices and institutions incidentally noticed, has an Excise office, an office of the National Bank of Scotland, a stamp office, 5 insurance offices, a reading-room and circulating library, a ladies' boarding-school, and a ladies' charity female school. A weekly market is allowed

by charter to be held on Friday; and annual fairs are held for horses on the first Tuesday and Wednesday of March, and for cattle on the Monday and Tuesday before the last Wednesday of May, on the Friday and Saturday before the last Wednesday of October, and on the last Tuesday and Wednesday of November.

The parliamentary boundaries of Oban, as fixed by the Reform act, are thus described: "The space on the mainland included within a circle described with a radius of one-half mile from the point as a centre, where the street leading to the old Inverary road meets the street along the shore." But the real territory of the burgh is more extensive, and consists of the lands of Oban and Glenshellie, with the ferry-house, and miller's croft and loch, and of the lands of Glenerutten, comprehending Upper Glenerutten, Lower Glenerutten, and Gleneruttenbeg. The Duke of Argyle was superior of the whole, and proprietor of Oban and Glenshellie, and Mr. Campbell of Combie was proprietor of Glenerutten; and they granted the lands in portions under leases. The town was first erected into a burgh-of-barony in 1811, by a charter of resignation, novodamus, and erection, under the great seal, in favour of the Duke of Argyle. This charter having been set aside by the court-of-session, and Mr. Campbell having acquired the superiority of Glenerutten, another charter was granted, in 1820, in favour jointly of Mr. Campbell and the Duke. Two provisions or incidents of both charters were set aside by the Reform bill,—the first, that burgesses residing within that part of the territory which lies beyond the parliamentary boundaries; and the second, that all inhabitants having a right to a house and garden-ground by feu or lease, for 19 years, whatever the value, were entitled to elect the burgh-magistrates and councillors; and now only those can take part in the municipal elections who are qualified by local position, and by paying rent, or possessing subjects of £10, to vote for a member of parliament. The municipal and parliamentary constituencies are thus identical, and amounted, in 1840, to 64. The town is governed by two bailies, a treasurer, a dean-of-guild, and four councillors. The first municipal election took place in 1817. The burgh is represented in parliament jointly with Ayr, Irvine, Campbellton, and Inverary. Corporate trades and secondary corporations of every sort are happily unknown; and burgh-ship is not required to entitle any person to manufacture or trade within the burgh. Dealers in spirituous liquors alone, and with great propriety, are subject to a certain amount of control, and do not obtain licences from the justices-of-peace without being recommended by the magistrates. The burgh has no public institutions, no property, no annual revenue, and no debt. Such occasional small sums as compose a public fund, are usually applied in charity to the poor, or for burghal purposes, and have, in no instance, produced a more showy act than the expenditure of £30, in procuring to the inhabitants a better supply of water. A dean-of-guild, a nominal treasurer, a town-clerk, a procurator-fiscal of court, a burgh-officer, and six constables, who constitute the municipal and police staff of the place, are all appointed by the burgesses at the annual elections; and excepting the town-clerk, the procurator-fiscal, and the burgh-officer, who are entitled to fees for any actual service performed, they have no public emoluments. The jurisdiction of the magistrates extends over not only the parliamentary burgh, but the whole territory of the burgh-of-barony; but it disposes of very few civil cases, and of no other criminal ones than those of petty delinquency. The want of a prison, and the expense of

sending prisoners to so great a distance as Inverary, entirely defeat the exertions of the magistrates to prevent crime, and even oblige them, when a petty delinquent cannot pay a fine, to let him off with impunity. In virtue of the powers conferred by the charter, they have, from time to time, made certain regulations as to matters of police; but, possessing only very limited means of enforcing them, they cannot be said to maintain a police influence or restraint. Population, in 1801, 1,854; in 1831, 2,836.—Oban commands, within an easy distance, or by cheap and facile means of conveyance, not a few objects of very high interest, both scenic and antiquarian. In its immediate neighbourhood are DUNOLLY, DUNSTAFFNAGE, and BERREGONIUM; and not far from it, or easily accessible, are LOCH-ETIVE, LOCH-AWE, IONA, and STAFFA,—articles on all of which will be found in their appropriate place in our work.

OCHIL HILLS, a range of mountains commencing in the parishes of Dunblane and Logie in the south of Perthshire, about 2 miles from the river Forth in the vicinity of Stirling, and extending in an east-north-east direction to the frith of Tay. The range runs parallel to the Grampians or mountain-rampart of the Highlands; it forms the screen on the Lowland side of Strathallan and Lower Strathearn,—component parts in the large sense of Strathmore; and it lies across the head of the whole peninsula of Fife, magnificently defending it, and the low ground of Kinross, Culross, and Clackmannan, from the scourge of the storms, which come careering down the glens and gorges of the Grampians. Its length is about 24 miles, and its average breadth about 12. Its south-east side, especially toward the Forth, is very steep, and, in some places, almost perpendicular; and even its north-west side rises, on the whole, with a greater abruptness than belongs to most of the Scottish ranges. Its summits are highest at its south-west end, and might, especially there, as well as in other parts of the range, be termed mountainous, but for the vicinity of the Highland alps. Two of the summits overlooking the Forth are Benclough, or the hill of Alva, in the parish of Tillicoultry, 2,300 feet above sea-level, and the loftiest of the range; and Demyat-hill, in the parish of Logie, 1,345 feet above sea-level, advancing a little from the contiguous range, breaking almost sheer down in stupendous rocky cliffs into the plain, and commanding a prospect over the basin of the Forth and its tributaries, which, for united gorgeousness and extent, is probably not surpassed by any in Britain; and the King's Seat, about 4 miles from Dollar, which attains an elevation of 2,000 feet above the valley of the Devon at Dollar, or 2,160 feet above the level of the sea. The prospect from the summit of this last-mentioned hill is thus described: "I had now under my eye a circular space of 100 miles in diameter, comprising nearly one-third of the surface of Scotland, and probably two-thirds of its wealth. On the north were the rugged Grampians of Aberdeenshire and Inverness-shires, rising in ridge behind ridge. In the outer line—which is low and uniform—the pass of Killiecrankie is distinctly seen as a great natural chasm. Below is the well-wooded plain of Perthshire, a part of which is concealed by the spurs or branches of the bills on which you stand. On the west the higher parts of the chain of the Ochils confine the view, but you easily distinguish the summits of Benmore, Benedi, Benlomond, and various hills near the Atlantic. On the south the eye roams over a vast and fertile region, extending from Campsie-hills to the Lammermuir chain, including Edinburgh, Arthur's-seat, the Bass, Pentland-hills, and part of Stirlingshire. The Devon is seen immediately below, winding through the

valley like a silver thread. Beyond it is the hay of the Forth, clear, luminous, and tranquil like a mirror, and enshrined in the centre of a richly cultivated country. The windings in its upper part, with the islets, capes, and peninsulas which they form, are seen to more advantage here than from Stirling-castle. The small hills between the Ochils and Kincardine do not present the slightest inequality of surface, but seem sunk and confounded with the valley of the Devon; while the fields, that cover the whole space with their hedge-rows and stripes of planting, look like the diminutive plots of a nursery. On the south-east is seen Kinross, with Loch-Leven and its two islets, and beyond these the black mural front of the Lomonds, variegated with streaks of red. On the other side of the frith is seen the undulating and well-wooded district of West Lothian, and the fertile carse of Falkirk, in the middle of which an opaque cloud marks the site of Carron. The lower part of the frith is specked with little vessels, and perhaps right before you is a steam-boat, which, when seen upon a pretty large surface of water, with its long train of smoke, forms, in my humble opinion, a picturesque object in the landscape, in spite of all the poets have said in its disparagement." Most of the range is of a beautiful green, and affords excellent sheep-pasturage; and it is sliced down in all directions by defiles and broad valleys, which acknowledge the dominion of the plough, and are in a state of fine cultivation. The Ochils everywhere present rich groupings of delightful scenery, and pleasing pictures of rural life; swelling hills, verdant to their tops, and thickly dotted with sheep and cattle; rivulets trotting along the gorges and the vales, or falling in hoarse murmurs from precipitous cliffs; and villages, hamlets, and farm-houses, skirted or enclosed with wood. Offshoots of the range, but so low that they rarely lift a summit more than 500 feet high, run down the whole peninsula of Fife, and, along with the beautiful Lomond-hills, and some less considerable isolated hills, impart to it that undulated contour which so pleasingly characterizes its appearance. These offshoots and the main range may be viewed as enclosing the outer edge or north-east extremity of the great coal-field of Scotland, which extends, though not without marked interruptions, from the river Girvan in Ayrshire to the banks of the Eden in Fife. The main range is unusually rich in its minerals; and, besides yielding up round its base large supplies of coal and of stratification superincumbent on the coal-measures, has furnished from its interior large quantities of various valuable metals. "In those parts of it which lie in the parishes of Alva, Logie, Dollar, and Tillicoultry, veins of copper and lead have been wrought to a considerable extent: the copper-ore in particular is very rich, and generally found enclosed in a matrix of sulphate of barytes or cawk. About the year 1715, Sir John Erskine of Alva, with the assistance of some miners from Lead-hills, discovered a very rich vein of silver: it made its appearance in small threads, which, being followed, led to a rich mass of ore; some of it was so rich, that 14 ounces of ore yielded 12 ounces of silver. A sum not greater than £50 sterling had been expended on it when this discovery was made; and during the space of 13 or 14 weeks, ore was produced to the value of £4,000 per week; and it is said that Sir John drew from £40,000 to £50,000 besides what was purloined by the workmen. When this mass was exhausted, the silver-ore began to disappear, and lead and other minerals were discovered, on which all farther search was given up. Cohalt has likewise been found in different parts, equal to that imported from Saxony. Arsenic and iron have

also been found;" and the latter is extensively worked.

OCHILTREE, a parish nearly in the centre of Kyle and of Ayrshire; bounded on the north by Stair; on the east by Old Cumnock and Auchinleck; on the south by New Cumnock and Dalmellington; and on the west by Stair and Coyton. It is 8 miles long, 5 miles broad, and a little upwards of 24 square miles in area. The surface consists of ridges partly pastoral and partly arable, and of intervening dingles of moss, meadow, and arable land. The ridges generally run from east to west, are of various lengths, and toward the south have an altitude of about 1,000 feet. A thriving plantation, of no great breadth, stretches nearly across the parish parallel with the Ayr road; and this, with the plantations of Barskimming, Auchinleck, and Dumfries-house, in the adjacent parishes, relieves the landscape from coldness and moorishness of aspect. Moss of various depths covers a considerable area, both in the uplands and in the low grounds, generally rests on a yellowish clay, and frequently expands into flow moss or wet hog. The soil, for the most part, is a clayey loam, superincumbent on stiff retentive clay, and, without deep and close draining, it resists the processes of improved husbandry; and even where well mixed with alluvium washed down upon it from the heights, it remains exuberant in rushes, sprats, and kindred vegetation. About two-thirds of the whole area is regularly or occasionally in tillage. Coal and ironstone exist, but are not worked; and freestone is abundant. Marl of an inferior quality has been found; but lime requires to be imported. There are two lochlets,—one covering about 27 acres, and the other less. The Lugar—running north-westward, and not far from its confluence with the Ayr—traces, for about 2 miles, the north-eastern boundary. Burnock-water rises in the southern extremity, and runs northward to the Lugar at the village. The Coyl, or Coila or Kill, running in the same direction, touches the boundary in some points in the west. Faint vestiges exist of two baronial mansions which belonged to the ancient proprietors of the Ochiltree estate. A ruined square tower lifts its gaunt grey form amid the wilds of the most upland region; but is unstoried by either document or tradition. The turnpike between Ayr and Cumnock runs across the north end of the parish; and subordinate roads, to the amount of about 16 miles, intersect other districts. The landowners are 10 or 12 in number, and nearly all non-resident: the chief are the Marquis of Bute, and Sir James Boswell of Auchinleck. Population, in 1801, 1,308; in 1831, 1,562. Houses 272. Assessed property, in 1815, £8,782.—The village of Ochiltree is pleasantly situated on the left bank of the Lugar, immediately below the confluence with it of the Burnock. It stands on the Cumnock and Ayr road, 4 miles from the former, 11½ from the latter, and 13 from Kilmarnock. It has about 30 handlooms, employed in cotton-weaving; a considerable trade in hand-sewing, conducted chiefly by young women, and fitted to unnerve them for any other employment or class of duties; a manufactory of reaping hooks; a small trade in snuff-hox-making; and a share in the various kinds of artificers' work required by a rural and agricultural population. Annual fairs are held on the second Wednesday of May, and the first Tuesday of November. Population 650.—The parish is in the proshytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Bute. Stipend £246 10s. 1d.; glebe £15. Unappropriated tithes £172 7s. 11d. Schoolmaster's salary £34 4s. 4½d., with £25 fees, and £11 3s. 4d. other emoluments. In 1834 the parish-school was attended by 115 scholars,

and 2 private schools by 70. The parish, till 1653, comprehended, in addition to its present territory, what now forms the parish of Stair. In the 12th and 13th centuries it was a rectory, under the patronage of the lords of the manor; but, before 1321, it was granted by Eustace, the daughter and heiress of Sir William Colville of Ochiltree, to the monks of Melrose. In 1530, the barony of Ochiltree was exchanged by Sir James Colville with Sir James Hamilton of Finnart, for the barony of East Wemyss in Fife; and, in 1534, it was exchanged by its new possessor with Andrew Stewart, Lord Avondale, for the barony of Avondale in Lanarkshire. In consequence of the latter exchange, Stewart was, in 1542-3, created Lord Stewart of Ochiltree, instead of Lord Stewart of Avondale. Andrew, Lord Ochiltree, the son of the preceding lord, acted a stirring part in the Reformation, and obtained a grant of all the church-lands and property of the parish, which had been held by the monks of Melrose.

**OICH (LOCH)**, a lake in Inverness-shire, forming the summit-level of the Caledonian canal; from which, as from a centre, it descends towards the eastern and the western seas. It is not above 4 miles in length, nor more than a mile or a mile and a-half in breadth. The hills on the north side are, like those of Loch-Lochy, of rather an insipid character; but the scenery on the south has considerable variety, and is among the finest on the line of the canal. Here, at the opening of Glengarry, where the water which gives name to the glen joins the lake, amidst lofty and beautiful woods overtopped by bold and majestic mountains, are situated the ruins of the ancient castle, and near it the present mansion-house of Invergarry, the principal residence of the late Maedonald of Glengarry, the chieftain of a considerable branch of that powerful sept; by many held to have been the head of the clan; by all looked upon as the last genuine specimen of a Highland chief. In him the spirit of clanship was as strong as ever warmed the heart of a Highlander; and within the dwelling of Glengarry, the last remains of ancient manners and institutions found a refuge from the influence of modern feelings and modern innovations. The ruins of the castle of **INVERGARRY** [which see] are in the immediate neighbourhood.

**OICH (THE)**, a brief river of the great glen, Inverness-shire. It conveys the superfluent waters of Loch-Oich, north-eastward, but in the line of the segment of a circle, with the concavity facing the south-east to the head of Loch-Ness, and it has altogether a run of only 5½ miles. At its head stands the bare slated house of Aberebald, where Prince Charles Edward concentrated his forces before commencing his march toward the low country. The part of the glen which the Oich traverses is occupied by low, rocky, and heath-clad bills; and brings down, on the left bank of the river, the public road, and, on the right bank, the Caledonian canal. The rivulet Tarff falls into Loch-Ness, about 400 yards west of the mouth of the Oich; and, on an alluvial bank, in a pleasant peninsula, between the two streams, and close upon the lake, stands Fort-Augustus.

**OIKELL (THE)**, **OICKEL**, or **OYKELL**, a large and romantic river of Sutherlandshire and Ross-shire. It rises in the parish of Assynt in Sutherlandshire, traverses two small lakes; and, from about 7 miles below its source, till it falls into the head of Dornoch frith, it invariably divides the two counties. Its length of course, exclusive of sinuosities, is about 32 miles; and its direction is, for one-half of its way, south-easterly,—for the next fourth, easterly,—

and, for the remaining fourth, east-south-easterly. The Dornoch frith is strictly its estuary; and, if recognised in its due connection with it, would add at least 15 miles to its length. The Oikell's principal tributaries are the Cassley on its left bank,—a little more than half-way on its course; the Shin, on the same bank, 7½ miles lower down; and the Caron, on its right bank, just before it enters the Dornoch frith. Several hundred yards above the inn of Oikell-bridge, and 7 miles above the influx of the Cassley, the Oikell, tumbling over a remarkably rugged and declivitous path, makes a series of wild cataracts, which terminate in one bold and very formidable fall. The banks which overhang this multiplied inn, are quite precipitous, and exhibit from their crevices, at spots where no soil can be detected by the eye, several large fir-trees springing up from curiously twisted roots. For several miles below this point, the vale of the stream, or Strathoikell, is flanked by dreary heath-clad hills, and derives relief from the pervading irksomeness only by occasional clumps of stunted birch, and a few verdant meadows on the margins of the stream. Three miles above the influx of the Cassley, an impetuous burn tumbles headlong into the vale; and at a brief distance from its mouth rises an elevated and picturesque bank, sheeted with verdure, and sunned into beauty, but lugubriously crowned with an unenclosed, forsaken, and melancholy burying-ground. This part of the vale is called Tutumvarach,—a name which alludes to a fierce and successful onslaught, early in the 15th century, upon a freebooting party of the Macleods of Lewis by a body of the men of Sutherland. From Tutumvarach to the Cassley the stream trots tortuously along a winding strath; and, while markedly Highland in its sercens, has a profusion of birch and alder coppice upon its immediate banks, and, in one place, is overhung by a whole forest of firs coming down the mountain's side from the clouds. At the junction of the Cassley a fine view is obtained of Rosehall-house, embosomed in luxuriant and very extensive woods, near the foot of Cassley-glen, and of the old walls of Castle-na-Coir, situated on a meadow on the left bank of the Oikell. The river is navigable by boats from the sea to Rosehall, and brings up the tide to a point only 1½ mile farther down. The united waters of the Oikell and the Cassley form a fine large river, and make a well-defined boundary-line between Ross and Sutherland. The strath, down to Bonar-bridge at the head of the frith, is every where beautiful, and forms part of the ancient district of Ferrinbusklyne or Sleischillis, which the bishops of Caithness obtained, in the 12th century, as a gift from the Earls of Sutherland. From Rosehall to about 3 miles above the influx of the Shin, it forms on the one side a craggy barrier, and on the other a low expanse of continued forest, and winds perpetually in its progress; and, lower down, it has extensive meadows along the edges of the stream, highly ornamental clumps of coppices on the declivities, and groups and sprinklings of neat stone-cottages, picturesquely perched on rocky heights, and seeming to blush with consciousness of the deep pervading beauty which they survey.

**OIA (ST.)**, or **ST. OLAUS**. See **KIRKWALL** and **ST. OLA**.

**OLDHAMSTOCKS**, a parish partly in the north of Berwickshire, but chiefly in the extreme east of Haddingtonshire, and consisting of a main body and a small detachment. The detached part is nearly a square 1½ mile deep, and lies all in Berwickshire, 1½ mile east of the southern part of the main body; and it is bounded on the north-west by Coekburnspath; on the south-west by Eye-water, which divides it

from Abbey St. Bathan's; and on the south east and the north-east, by a tributary of the Eyc, which divides it from Coldingbam. The main body resembles in form the blade of a sickle or reaping-hook, with the convexity or back of the blade facing the west; and it is bounded on the north-east by the German ocean; on the east by Cockburnspath and Abbey St. Bathan's; and on the south-west, west, and north-west by Innerwick. Its greatest length, measured curvingly along its centre, is  $8\frac{1}{2}$  miles; and its breadth varies from 1 mile to  $2\frac{1}{2}$ . Except about  $2\frac{1}{4}$  square miles at the extreme south, the whole is in Haddingtonshire. The coast is bold and rocky, and extends but  $1\frac{1}{2}$  mile. The surface, for about  $1\frac{1}{4}$  mile from the sea, is but slightly undulated; and thence it consists of heights which at first are but swells and hillocks, and afterwards form part of the slowly climbing ascent of the Lammermoors. The soil is in general sharp and dry, very fertile toward the sea, but barren and moorish toward the south. The lower division is highly cultivated and finely embellished with wood; but the upper division is entirely pastoral, and chiefly bleak and heathy. Numerous rills rise a little south of the centre of the parish, and flow northward, eastward, and southward, occasionally cutting out defiles and glens which are not a little picturesque. The chief are Dean-burn, which runs across the parish at the village, traces for 2 miles to the sea the boundary between the counties, and traverses, over great part of its course, a romantic wooded dell; Eye and Heriot waters, which, while they rise in the parish, speedily leave it on the east; and Whare-burn and Monnynut-water, tributaries of the Whittadder, the latter of which runs for  $2\frac{1}{4}$  miles on the boundary with Innerwick. In the lower district, coal, limestone, ironstone, and freestone occur; but the coal has been worked only in the upper stratum, which lies near the surface. On Dean-burn stands Dun-glass-house, the elegant modern mansion of Sir James Hall of Dunglass, occupying the site of an ancient and storied castle of the same name: see DUNGLASS. The Edinburgh and London railroad, and the Dunhar and Duns turnpike cross the parish, the one in the immediate vicinity of the sea, and the other about 2 miles in the interior. On the former, about midway between the boundaries, stands the hamlet of Bilsdean, and on the latter, also about midway between the boundaries, stands the village of Oldhamstocks, the site of the parish-church, and the scene of great annual fairs for sheep and cattle on the first Tuesday of July and November. Population of the parish, in 1801, 575; in 1831, 720. Houses 131. Assessed property, in 1815, £3,820.—Oldhamstocks, anciently a rectory, is in the presbytery of Dunhar, and synod of Lothian and Tweeddale. Patron, Hunter of Thurston. Stipend £297 15s. 6d.; glebe not stated. Schoolmaster's salary £25 15s. with £18 19s. fees, and £5 19s. other emoluments. There are two private schools, one in each of the villages.

OLDNEY, or OLDERNAY, a small island belonging to the parish of Assynt, and lying on the west coast of Sutherlandshire. It flanks the south side of the entrance of Loch-Assynt; gives the name of Oldney-hay to a piece of sea between it and the point of Store, and is distant about  $\frac{1}{4}$  of a mile from the coast. Its length is supposed to be a mile, and its greatest breadth  $\frac{1}{4}$  of a mile. It is swarded with excellent pasture, and belongs to a sheep-farm of its own name on the adjacent part of the continent. A little flat island called Crona lies on its south side.

OLD WATER, or OLD WATER OF CLUDEN, a rivulet in the extreme east of Kirkeudbrightshire. It rises on the east side of Anglenhay hill in the

north of the parish of Kirkpatrick-Durham, and runs  $5\frac{1}{4}$  miles eastward through that parish and to Kirkpatrick-Irongray to near the middle of the latter, receiving Shellocb-burn on its left bank, and Glen-burn on its right; and it then makes a sudden bend, and runs  $2\frac{1}{2}$  miles northward to the Cairn, at a point  $5\frac{1}{2}$  miles above that stream's confluence with the Nith. See KIRKPATRICK-IRONGRAY.

OLRICK, a parish on the north coast of Caithness-shire. It is bounded on the north by Dunnet-bay; on the east by Dunnet parish; on the south by Bower; and on the west by Thurso. Its greatest length, from north to south, is about 5 miles; its greatest breadth is about  $3\frac{1}{2}$  miles; and its superficial extent is about  $15\frac{1}{2}$  square miles. The surface is neither mountain nor plain. The uncultivated parts are wholly green, and quite free from both heath and rock. A congeries of verdant little hills occupy the south, and, on the whole, arrange themselves into three amphitheatres intersected by numerous rills and vales. A most luxuriant pasturage covers all these gentle uplands, and not only affords ample grazing for cattle in summer, but furnishes them with natural hay for their support in winter. Towards the sea, the surface, with the exception of some sandy links along the beach, is one continued track of rich cultivated soil. So little moss exists that inconveniences and discomfort arise from the want of a sufficient supply of peat fuel. About three-fifths of the entire area are in tillage; about 500 acres are links and moss; 20 acres are under wood; and all the remainder is pastoral, but might easily be subjected to the plough. The soil, in the flat districts, is a deep clay, with occasional and limited intermixtures of sand and till. Loch-Durran, measuring about 3 miles in circumference, has been completely drained, and affords inexhaustible supplies of shell-marl. Limestone, sandstone, gray slates of a light durable kind, and blue flags, all abound. The flags are excellent materials for flooring and foot-paths; they occur from 1 to 6 inches thick, and may be raised of any reasonable extent of superficies; they require no top-dressing, but are capable of receiving a very fine polish; and they are annually shipped to the amount of between 300,000 and 400,000 square feet, and are in high request in several of the principal cities of Britain. The coastline of the parish measures not more than 2 miles; and is rugged and shelving, but not bold. Respectively at its east and west extremities are the small bays of Castlehill and Murkle,—opening from the south side of Dunnet-bay. Both bays were formerly noted for the extent of their fisheries and their manufacture of kelp, 10,000 cod and ling having been dried in one summer at Murkle, and from 15 to 20 tons of kelp being made; but—excepting salmon-fishing, which is let to a tenant—both fish and sea-ware are now almost wholly neglected. Castlehill-bay is provided with a neat and commodious harbour, whence the flags, flooring-stones, hearthstones, mantel-pieces, and table-stones raised in the neighbouring quarries are exported; and Murkle-bay, were it better known, might be rendered a safe retreat from the tempestuous boiling of the Pentland frith to vessels in distress, or retarded by wind or tide. The name Murkle is supposed to be a corruption of Mort-hill, 'the Field of death,' and to allude to a victorious slaughter of Danes in a pitched battle between them and the natives. In various localities are 6 or 7 of the antiquities popularly called Picts' houses. On the top of the hill of Orlrick are evident vestiges of a watch-tower. This hill, though of inconsiderable altitude, commands a view of the southern islands of Orkney,—of great part of Caithness, backed by the Sutherland hills,—and of nearly all the Moray

frith, closed up in the horizon by the county coasts of Elgin, Banff, and Aberdeen. At the head of Castlehill-hay stands the village of CASTLETOWN: which see. The chief mansions are Olrick-house and Rattor, the seats respectively of James Smith, Esq., and James Traill, Esq., who, with the Earl of Caithness and Sir J. G. Sinclair, Bart., are the principal land-owners. The road from Wick to Thurso traverses the parish. Population, in 1801, 1,127; in 1831, 1,146. Houses 201. Assessed property, in 1815, £3,291.—Olrick is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir James Colquhoun, Bart. Stipend £191 8s. 8d.; glebe £8. Unappropriated teinds £27 3s. 7d. The parish-church was built about the year 1633. Sitings 403. An ecclesiastical census of 1836 showed the population then to amount to 1,352, only 88 of whom were dissenters. A church, dedicated to St. Columba, anciently stood near the eastern boundary, and has bequeathed to its site the name of St. Coomb's kirk; and it is traditionally said to have been suddenly wreathed and inhumed in sand-drift during a nocturnal storm. A nunnery anciently stood on the estate of Murkle, and has permanently imposed the name of Closters or Cloisters on a rill which runs past its site. There are four schools; three of which are maintained solely by fees. Parochial schoolmaster's salary £34 4s. 4½d., with £9 fees and £7 other emoluments.

OPSAY, an islet in the sound of Harris, about 1½ mile in circumference, 2½ miles north-north-east of North Uist, and 3½ south-east of Bernera.

ORANSAY, an island in the Islay group of the Hebrides, quite connected at low water with Colonsay, and fully described in our article on that island. See COLONSAY.

ORANSAY (ISLE), an islet, a harbour, and a commercial establishment, in Sleat parish, in the island of Skye. The islet is small, and serves principally to cover and protect the whole entrance to the harbour, and to give name to the locality on the coast. The harbour is in the sound of Sleat, 3 miles north of Knock, and directly opposite Loch-Hourn, on the continent. It is naturally commodious, thoroughly sheltered, and, in every respect, excellent; and is much frequented by shipping. The commercial establishment at the place belongs to Colin Elder, Esq., and is small but thriving. Here also is a small inn. Isle Oransay is regularly visited by the Glasgow steamers on their way to and from Portree; and it thus maintains constant communication with the north of Skye, and the south-west of Scotland.

ORBANSAY, a small island in the Hebrides, about ¾ of a mile long, lying immediately east of the northerly projection or peninsula of Barra, and 2½ miles west-north-west of Gigha.

ORCHY (THE), a beautiful stream in Argyleshire, which has its head-waters in Loch-Tulla, and discharges itself into the north-eastern head of Loch-Awe. See GLENORCHY.

ORD, a flat and sandy moor, the southern part of Mullbuy, in Ross-shire; see MULLBUY. The north road from Inverness by way of Beauly enters it immediately beyond the county boundary. Great cattle, sheep, and horse markets, for which it is well-adapted, and which take name occasionally from Beauly, but more generally from itself, are held on this moor, on the third Wednesday of April, the second Wednesday of May and June, the third Thursday of July, September, and October, and the second Wednesday of November. The October market at the Muir of Ord is generally the most important of the year, as at that time farmers and dealers attend from a great distance to lay in their stock of winter-

ers, or dispose of their surplus stock. The Muir of Ord is also fast increasing in importance as a cattle tryst. Agriculture has made rapid strides in the northern counties; and the different breeds of stock are reared with skill and success. Many thousands of cattle are shown, and farmers attend from the counties of Elgin, Banff, Aberdeen, and Forfar. The unsold cattle are usually re-exhibited at Bogbain, 5 miles from Inverness, on the Perth road. Two upright stone-pillars rise up from the moor, and are said to commemorate an ancient feat of arms connected in some way with the prophesied extinction of the clan Mackenzie; and eastward of them is a very large number of stone circles and cairns.

ORD OF CAITHNESS, a stupendous granitic mountain on the east coast of the north of Scotland, at the boundary between Caithness and Sutherland. It rises with frightful rapidity of ascent right up from the sea, occupies about 9 or 10 miles of the coast, and forms the commencement of a long mountain-chain which runs north-westward, and continues to divide the counties. The public road into Caithness passes over this enormous natural barrier at an elevation of 1,200 feet above sea-level, and expends a whole stage upon it and its huge ramifications. Previous to 1811, when this road was made, the only land-ingress to Caithness proceeded along the edge of a tremendous range of precipices, which so overhanging the sea as to be quite appalling to both horse and rider. "The Ord of Caithness," says Miss Sinclair, "was formerly pre-eminently for being the most dangerous hit of road in Scotland. . . . During the last century, whenever the late Earl of Caithness, my grandmother Lady Janet Sinclair, or any of the chief landed proprietors, entered that county, a troop of their tenants assembled on the border of Sutherland, and drew the carriage themselves over the hill, a distance of two miles, that nothing might be trusted in such a scene to the discretion of quadrupeds. . . . The mail-coach now rattles down the whole descent of the Ord, scarcely deigning even to use a drag!" According to an old established superstition, no Sinclair may without fearful foreboding of evil cross the Ord on a Monday; forty Sinclairs, led by the Earl of Caithness, having on that day ventured over the barrier toward the field of Flodden, where—with the exception of the drummer, who was dismissed before the battle began—all were cut down by the sword.

ORDIE (THE), a rivulet in the Strathmore district of Perthshire, giving the name Strathord to a large section of the parish of Auchtergaven. It issues from a small lake in the hill of Tullybelton, and runs 5½ miles east-south-eastward through the heart of Auchtergaven, receiving nearly all the streams by which that large parish is drained. It then runs 2½ miles south-eastward between Monedie on the right, and Auchtergaven and Redgorton on the left, receives on the right the large trihue of the Shochie, and runs half-a-mile along an artificial cut made for it, by the Luncarty company, through a steep bank to the Tay, a little above Luncarty. It is an excellent trouting stream.

ORDIQUHILL, a parish in the north-east of Banffshire; bounded on the north-west by Fordyce; on the north-east by Boindie; on the east and south by Mar-noch; and on the south-west and west by Grange. Its length, from east to west, is 3½ miles; its breadth is 2½ miles; and its superficial extent is about 5,500 acres. The surface, toward the north, is, for the most part, flat; but elsewhere it is boldly tumulated; and, on the south-west boundary, it rolls aloft a hill called the Knock, 1,640 feet above sea-level. A stratified bed of moss, from 15 to 20 feet deep, covers the summit of this hill, and, at various places, passes

down the declivity in lines of communication with mosses round the base. About one-half of the whole parish has never been touched by the plough; and, excepting about 500 acres, appears to be irreclaimable. The soil of the arable grounds is, in general, deep, but lies upon a cold and retentive bottom. About 400 acres have been planted with larch, ash, Scottish fir, and other trees. The larger part of the area rests on gneiss and coarse micaceous schist. Park-house, the seat of Colonel Gordon, the sole heritor, is an elegant mansion. The village of CORNCAIRN [see that article] stands 7 miles south of Portsoy, and has about 60 inhabitants. Mr. Walter Goodall, author of a 'Defence of Queen Mary,' was a native of Ordiquhill. The parish is traversed southward by the roads from Banff and Portsoy to Hintly. Population, in 1801, 510; in 1831, 655. Houses 138. Assessed property, in 1815, £1,380.—Ordiquhill is in the presbytery of Fordyce, and synod of Aberdeen. Patron, the Earl of Seafield. Stipend £185 6s. 7d.; glebe £6 10s. Unappropriated tithes £55 18s. 7d. The church is a neat modern structure. Schoolmaster's salary £21 9s. 6d., with 8 bolls of oatmeal, £10 8s. fees, and £1 10s. other emoluments. There is a dame school in Concairn.

ORKNEY AND SHETLAND, a county in the extreme north of Scotland, consisting of the ORKNEY ISLANDS, the FAIR ISLE, and the SHETLAND ISLANDS: see these articles. The area of the county is 1,325 square miles, or 848,000 acres; and of this 220,000 acres are cultivated, 112,000 are pastoral, and 516,000 are unprofitable. The valued rent, in 1674, was £56,551 9s. 1d. Scots, but was exclusive of fisheries and the kelp-manufacture. The annual rent of real property, as assessed in 1815, was £20,938. Population, in 1801, 46,824; in 1831, 58,239; in 1841, 60,007. Inhabited houses, in 1831, 10,296; families 11,805. Uninhabited houses, in 1841, 11,426. The county returns one member to parliament. Constituency, in 1839, 526. Kirkwall, the only royal burgh, is the county-town. Though the two archipelagos have long been nominally one county or stewartry, Shetland, till the passing of the Reform bill, had no vote for a member of parliament, and occupied the anomalous position of being part of the United Kingdom, and yet lying beyond the pale of the British constitution. Even the Reform bill has very doubtfully invested it with the franchise. On account of the regular line of post between Orkney and Shetland being by way of Leith, and of the former having communication with less frequently and easily than with the southern counties of Scotland, the Shetland poll-books, at the first election in which it acted, could not, even though a powerful steamer was employed to carry them, be brought to Kirkwall within the time specified by the act; and delay, doubt, debate, and rioting were the result.—The county is ecclesiastically distributed into two synods, five presbyteries, and thirty *quoad civilia* parishes, assisted by five parliamentary churches. The synods are Orkney and Shetland; and the presbyteries are Kirkwall, Cairston, and North Isles in the former, and Lerwick and Burraoie in the latter. The parishes in Kirkwall, are St. Andrews, Evie, Holme, and Kirkwall, with the parliamentary church of Deerness; of Cairston, are Bersay and Harray, Firth and Stennis, Hoy and Græmsay, Orphir, Sandwick, Stromness, and Walls and Flota; of North Isles, are Cross and Burness, Lady, Rousay and Eagle-shay, Shapinsay, Stronsay and Eday, and Westray and Papa, with the parliamentary churches of Westray and North Ronaldshay; of Lerwick, are Bressay, Dunrossness, Lerwick, Sandsting, Tingwall, and Walls, with the parliamentary churches of Quarff and Sandwick; and of Burraoie, are Delting,

Fetlar, Nesting, Northmavine, Unst, and Yell. In 1834 there were in the county 28 parochial-schools, attended by 1,980 scholars; and 113 schools non-parochial, attended by 2,179. An Orkney and Shetland society exists in Edinburgh for relieving distressed natives of the county casually visiting Edinburgh and Leith.

### THE ORKNEY ISLANDS

—the ORCADES of the Romans—form the southern section or archipelago of the northern isles of Scotland. They are separated from the north-eastern extremity of continental Scotland and of Caithness by the Pentland frith; they measure in extreme length, from north to south, about 57 miles, and in extreme breadth, from east to west, about 27 miles: they are, at their southern extremity, with the exception of the Pentland Skerry, from 6 to 12 miles distant from the coast of Caithness; and they lie between the parallels of 54° 47' and 59° 20' north latitude, and between 2° 4' and 3° 23' longitude west of Greenwich. Their aggregate area is computed to be about 384,000 acres; of which 84,000 are supposed to be in a productive state, and 300,000 pastoral or waste. They are grouped with considerable compactness; being separated from one another by sounds or straits which are seldom more than 5, and very often less than 2 miles wide. About two-thirds of their whole area, comprising the mainland and several other large as well as many smaller islands, forms a strictly compact ellipsoidal group on the south; the longer axis extending due north and south, and the general compactness being disturbed only, or at least chiefly, by an interior expansion of sea on the south, called *Scapa flow*. Along the north-east of this group lies a belt of sea, of about 5 miles in mean breadth, called, respectively at the north-west and at the south-east end, the *Westray* and the *Stronsay* friths. The other third of the aggregate area is arranged nearly in the form of three limbs of a Greek cross; ranging the two continuous limbs north-westward and south-eastward along the side of this sound, and sending off the transverse limb in a direction nearly due north-east. The number of inhabited islands is 29; of small islands, locally called *Holms*, covered with herbage, and regularly or occasionally stocked with cattle or sheep, is 38; and of rocky islets, called *Skerries*, which carry little or no herbage, and are altogether waste, is very considerable, but not accurately ascertained.

So full a description of each of the inhabited islands will be found in its appropriate place in our work, that we shall here only so far notice them as to indicate their relative magnitude and mutual positions. Pentland Skerry, the most southerly, and about equidistant from Caithness and Orkney proper, is a barren islet, important only as the site of a lighthouse, and inhabited by but one family. South Ronaldshay forms the south-east district of the greater or ellipsoidal group, and, next to the mainland, is the seat of the greatest population. Swanay lies west of the southern extremity of the former, in the middle of the southern entrance to *Scapa flow*; but is only about a mile long, and has few inhabitants. Hoy and Waas or Walls are considered as two islands, but are really one, sectioned into very unequal parts by the very deep indentation from the east of an elongated bay, called *Long Hope*; they form the south-west district of the ellipsoidal group, have a much larger area than South Ronaldshay, but contain the highest land in Orkney, and are thinly peopled. Faray, Rasa, and Cava, are three small islands triangularly grouped immediately off the middle of the west coast of Hoy, and aggregately subsisting but few inhabi-

tants. Flota lies immediately south-east of this little sub-group, equidistant between Hoy and South Ronaldshay, in the centre of the channel leading up to Scapa flow, and is 3 miles long and 2 broad. Gremsay, a comparatively small but productive island, lies near the north-east extremity of Hoy, in the centre of Hoy mouth, or the western entrance to Scapa flow. Burray, measuring 4 miles by 1, stretches lengthwise parallel to the north end of South Ronaldshay, and is separated from it by Water sound, 1 mile in breadth. Lambholm, 3 miles in circumference, lies north of Burray, in the middle of Holme sound, or the eastern entrance to Scapa flow. Pomona, or the Mainland—the seat of considerably more than one-half of the whole Orkadian population, the site of the capital and of Stromness, and not so much a continuous continent as an aggregation of peninsulae and isthmuses, sectioned off by very deeply indenting bays, a territory which hulks very largely in the archipelago, yet has an area far beneath the proportion or ratio of its population—screens the whole north side of Scapa flow, and of its western and eastern entrances, Hoy and Holm sounds, and extends, in a broad expanse of land, to the north-west extremity of the general ellipsoidal grouping. Copinshay, 1 mile by half-a-mile, and subsisting only 7 persons, lies about  $2\frac{1}{2}$  miles east of the eastern extremity of the Mainland, and forms an excellent landmark for ships. Shapinshay, about 7 miles by 5, lies 2 or 3 miles north-east of the Mainland, forming the south-west screen of the Stronsay frith. Damsay, the Orkadian Tempe, small but beautiful, lies in the centre of the bay of Firth, a deep indentation of the Mainland due south-west of Shapinshay. Gairsay, 2 miles by 1, and consisting chiefly of a conical green hill, lies 2 miles north-west of Shapinshay, and  $1\frac{1}{2}$  east of the Mainland. Weir, or Wire, small but populous, lies 2 miles north of Gairsay. Rousay, nearly a square of about 18 or 20 square miles, forms the northern extremity of the ellipsoidal group. Eagle-shay, a slender oblong of  $2\frac{1}{2}$  miles in length, flanks the east side of Rousay, is separated from it by a narrow marine belt, called Howa sound, and, jointly with it, forms the south-west screen of Westray frith. Eihallow, small but fertile, lies between Rousay and the Mainland.—The twenty-one islands now enumerated—excepting Pentland Skerry, lying to the south—form the larger or ellipsoidal Orkadian group; and the remaining eight constitute, with their Holms and Skerries, the lesser group, or that lying north-east of the Stronsay and the Westray friths. Stronsay, 7 miles by 4, forms the south-eastern extremity of the group, and screens its cognominal frith. Papa-Stronsay, a beautiful islet 3 miles in circumference, lies north of Stronsay, embosomed in one of its bays. Eday, 5 miles by nearly 2, stretching north and south, screens, on the south-west, the inner extremity of Westray frith, or the part where that frith merges in the frith of Stronsay. Faray, a small oblong, lies west of Eday, separated from it by a narrow sound. Westray, containing about 14 square miles, forms the north-west extremity of the northern group, and the north-east screen of the Westray frith. Papa-Westray, 4 miles by 1, stretching north and south, is separated from Westray, on the north-east, by a sound  $1\frac{1}{3}$  or 2 miles broad. Sanday, about 12 miles long by about  $1\frac{1}{2}$  of mean breadth, extends due north-eastward from a point about  $\frac{1}{3}$  mile north-east of Eday. North Ronaldshay, the most northerly of the Orkneys, and considerably populous, is separated, on the north-east, from Sanday by North Ronaldshay frith, a sound upwards of 2 miles broad, and of very dangerous navigation.

These islands appear to have been at one time a

continuous territory, and not improbably were attached to continental Scotland. Their geognostic features, in confronting coasts, have, in general, an exact correspondence; and their intersecting and separating friths and sounds are, to a great extent, so shallow as to offer serious obstacles to navigation. Viewed as an unique territory, they are abruptly and holdly, though not in an alpine sense, mountainous in the extreme south-west; they speedily subside into hills as they recede from the south-western sea-board; they fall off in gentle slopes in the interior, and, with some exceptions, they stretch away toward the east and north-east in valleys or undulating plains which are rarely 100 feet above sea-level.

The strictly rugged or holdest district is confined to Hoy and Walls; and occasionally exhibits some of the finest rock-scenery in Scotland,—blendings of shattered cliffs and stupendous precipices, with basins of water now smooth and translucent as glass, and now whirling and maddened like the wreaths and eddies of a whirlwind of snow. With the exception of a little chasm at Rackwick, the whole coast of about 15 miles is a precipitous mass of freestone rocks, from 300 to upwards of 500 feet high, in some places perpendicular and smooth, in others, rent, and shivered, and broken down into huge fragments, and, in a few, overhanging the sea and frowning on its dark and stormy surges. The heights inland from this coast-line, and those of the hilly but less rugged district, or of Rousay, the western sections of Pomona and Eday, and parts of Westray and South Ronaldshay, are soft in outline, and either rounded or gently curvated; and, in common with the cliffs, they are bleak and sterile, seldom wearing any other vegetation than heath, and extensively abandoned to the moorfowl and birds of other species. The highest ground is the hill of Hoy, which has an altitude above sea-level of about 1,600 feet. The surface of the low grounds is now heathy, now covered with coarse pasture, and now vividly green or mellow, with good or even rich crops of grain; and it has not a few spots, and some entire valleys, which have been pronounced by strangers equal, in the opulence of their gramineous clothing, to some of the best lands in England. Yet from the utter absence of trees, or even of tall shrubs, except in a few gardens principally around Kirkwall, from the great prevalence of heath, from the general want of distinctive contour along the surface, and from the constant monotonous alternation of low bleak grounds and rock-dotted helts of sea, the aggregate landscape is far from possessing attractions to one who has dwelt among the scenic beauties of either the Lowland or the Highland continent. "If, however, the tourist has the good fortune to be in Orkney during a storm, he will cease to regret the absence of some of the softer and more common beauties of landscape, in the contemplation of the most sublime spectacle which he ever witnessed. By repairing at such a time to the weather-shore, particularly if it be the west side, he will behold waves, of the magnitude and force of which he could not have previously formed any adequate conception, tumbling across the Atlantic like monsters of the deep, their heads erect, their manes streaming in the wind, roaring and foaming as if with rage, till each discharges such a Niagara flood against the opposing precipices as makes the rocks tremble at their foundations, while the sheets of water that immediately ascend as if from artillery, hundreds of feet above their summits, deluge the surrounding country, and fall like showers on the opposite side of the island. All the springs within a mile of the weather-coast are rendered brackish, for some days after such a storm. Those living half-a-mile from the

precipice, declare that the earthen floors of their cottages are shaken by the concussion of the waves. Rocks that two or three men could not lift, are washed about, even on the tops of cliffs which are between 60 and 100 feet above the surface of the sea when smooth, and detached masses of rock of an enormous size are well known to have been carried a considerable distance between low and high water-mark." [Anderson's Guide to the Highlands.]—To this we may add a very beautiful poetical sketch of their scenery, though a night-piece:—

Night walked in beauty o'er the peaceful sea,  
Whose gentle waters spake tranquillity,  
With dreamy lull the rolling billows broke  
In hollow murmurs on the distant rock;  
The sea-bird wailed along the airy steep;  
The creak of distant oar was on the deep.  
So still the scene, the boatswain's voice was heard,—  
The listening ear could almost catch each word.  
From isles remote the house-dog's fitful bay  
Came floating o'er the waters far away.  
And homeward wending o'er the silent hill,  
The lonely shepherd's song and whistle shrill;  
The lulling murmur of the mountain-flood,  
That sung its night-hymn to the solitude;  
The curlew's wild and desolate farewell,  
As slow she sailed down the darksome dell:  
The heath-cock whirring o'er the heathy vale;  
The mateless plover's far-forsaken wail;  
The rush of tides that round the Islands ran,  
And danced like maniacs in the moonlight wan,—  
All formed a scene so wild, and yet so fair,  
As might have wooed the heart from dreams of care,"

The coast-line of nearly all the islands, except along the stern cliffs of the south-west and west, is exceedingly curved, dentulated, and jagged, forming numerous recesses for bays and landlocked havens in which fleets of the largest vessels may securely ride. The harbour of Long-Hope in Hoy, and that of Widewall, directly opposite, in South Ronaldshay, in particular, afford shelter amid all winds, except a gale from the north, to vessels passing through the Pentland frith; and for safety, depth of water, great extent, and ease of access, they are inferior to few in the world. The impetuous tides of the Pentland, which have a velocity of nearly 3 miles at neap, and the careering speed of 9 at spring, are nearly if not quite equalled by those of some of the intersecting sounds and friths; yet, in common with these, they are repelled into eddies and counter-motion as they approach the land, and are so much curved and modified as to be navigable in clear weather with probably as little danger as those of any part of the coast of Scotland. Ordinary neap tides rise about  $3\frac{1}{2}$  feet, and ordinary spring tides about 8; maximum neap tides rise upwards of 6 feet, and maximum spring tides 14; minimum neap tides rise not above 2 feet, and minimum spring tides only 5. Within a league of the western coast, the depth of water is from 40 to 50 fathoms; but at the same distance on the east side, it does not exceed 32.

The Orkneys, owing to their peculiar situation, have a much less inequitable heat than the continent, and are strangers to the extremes both of summer heat and of winter cold. They have little snow, less frost, and never any great continuance of either. The mean heat throughout the year is  $45^{\circ}$ , and the widest general range of the thermometer is between  $25^{\circ}$  and  $75^{\circ}$ . Rain often falls heavily, and is supposed to have a deeper aggregate than over an equal extent of country in most parts of Scotland. In 1811, a year of more than average humidity, the quantity was 29.05 inches. The heaviest rains and the prevalent and strongest winds are from the south-west and the south-east. Winds between the north-west and the north-east are cold but dry and salubrious; and they prevail during spring, and sometimes till past the middle of June, checking the progress of vegetation. Calms are of short duration;

and sudden changes in all the elements of weather occur oftener than in other parts of Scotland. Fogs are common even in summer; and both form and disperse with singular rapidity. Thunder-storms are most common in winter, amid high winds, and continued falls of rain or snow. The spring is cold and tardy; the summer, though of short continuance, is remarkable for rapidity of vegetation; and the winter is, in general, a continued series of high winds, heavy rains, and ever-varying storms. During about a month at mid-summer, the light, owing jointly to the highness of the latitude, and the superior reflecting power of water over land, is so strong at midnight that, when the sky is clear, a student may either read in the open air, or regale himself with the continued music of the lark, the land-rail, and other feathered songsters. The night of this halcyon season is but a mellowed and a balmy day, possessing the odours and the melodies and the wakeful activities of the hours of the sun's power, without any of their over-mastering influences or their scorching and dazzling glare. Even the winter nights, notwithstanding what has been fabled about their monopolizing and terrible dominion, give place at the very solstice to 6 hours of day-light; and, when not lit up with the moon, have very frequently a brilliant, and richly tinted, and sublimely fitful play of the aurora borealis, such as both yields a beautiful though faint light, and invites the well-toned mind to admiring and devout contemplation.

Primitive rock occurs only in the district around Stromness, in the south-west of Pomona, and impinging upon Græmsay. It consists chiefly of gneiss, confusedly stratified and often running into granite; it is everywhere disturbed and dislocated in its imperfect strata by veins of quartz and felspar; it occasionally gives place to beds of hornblende; and, in one locality, it passes into micaceous schist, freely gemmed with garnets. The rock forms a hilly rough ridge about 6 miles in length, extending north-westward and south-eastward, behind Stromness. The gneiss of Orkney seems totally to want the metalliferousness which so generally distinguishes that rock in other regions. Around the primitive strata lies a zone of conglomerate, whose base is argillaceous or silicious. All other parts of the islands, south-east and north, appear to lie upon a field of schistose strata, very various in their composition, and ranging from the transition series considerably up the secondary formation. The prevailing varieties are greywacke and greywacke slate; sometimes thin and black, and occasionally used for slating, and sometimes massive, and dark blue, and a good building material. Another variety is bituminous shale, not very plentiful, laden in one place with soft bitumen, or petroleum, and assuming in some places the appearance of glance coal. A third variety is limestone in thin beds, seldom pure, rarely more than two feet thick, nowhere abundant, yet occasionally good, and burnt as a building cement. Sandstone of the newer formations, grey, red, and brown, and sometimes, though rarely, streaked and variegated, constitutes the bold heights and fantastic cliffs and pinnacles of Hoy.—Secondary porphyry in several varieties, and secondary trap in the forms of greenstone, basalt, and amygdaloid, break through the schists and sandstone in all the islands, sometimes forming caves and hollow swells, sometimes rising in large pinnacled nodules, sometimes shooting out into the sea in points and headlands, and everywhere disarranging and contorting the stratified masses with their veins and dykes.—Veins of iron-ore, chiefly brown hematite, traverse the sandstone of Hoy; they were ordered to be explored by the Carvon company soon after the establishment of their

works; but though known to yield from 40 to 60 per cent. of iron, they have not yet been found of workable breadth. Small veins of galena or lead-glance are found among the schistose rocks, particularly in Pomona. One little mine, where several veins lie contiguously near the mause of Stromness, yields a little silver, and has been occasionally worked for about a century. Veins of heavy spar, or prismatic barytes, traverse the same rocks, or are found associated with the veins of galena. Lime-spar or calcareous spar is very common; and on the east side of Shapinsay, it is so abundant that it might be burnt into manurial lime. A compound of sulphate of barytes and carbonate of strontia, which has been treated as a new species, and called Barystrontianite from its composition, and Stromnesite from its geographical position, occurs in association with the heavy spar of Stromness. The different varieties of bog-iron, yielding from 30 to 38 per cent. of iron, occur in considerable quantity, chiefly on the sides of the hills toward their base, and in the vicinity of springs.—Though sand, in some places, and clay or moss, in others, is found of great depth, the general soil of Orkney is shallow, lying upon either till or rock within two feet of the surface, and often so near as to be touched by the plough. Much the greater part of it is peat or moss, forming, from the nature and nearness of the subsoil, a wet, spongy, and irreclaimable moorland. Yet a considerable proportion of the moss is what the inhabitants call yarfa soil, consisting of hent moss, and easily improvable. Loams, of various degrees of tenacity, and, in some instances, though never to any great extent, approaching to clay, cover an area next in magnitude to that of the mosses. Sandy soils are extensive; and, in a few spots, particularly in Westray, Stronsay, and Sandy, they degenerate into beds of loose, drifting sand, entirely sterile, and superincumbent on the real soil. Had not a beneficent Providence zoned most of the islands with a belt of indurated argillaceous and silicious debris, which is so hard as strongly to resist the action of the waves, and which, when pulverized and used as a manure, enriches the prevailing soils, the prevalently arenaceous character of the rocks, and the alluvium of Orkney might have exposed it to fearful havoc from the ocean, in the way both of invasion and of accumulating the materials for a deluge of drifting sand. Of the arable lands, probably about one-third have sandy soils, a larger proportion have different sorts of loam, and the remainder have yarfa or dry benty moss.—Shell marl, consisting of fresh water shells in a basis of clayey chalk, is a common but much neglected production, occurring in almost every considerable meadow or marsh, but grossly unappreciated for its manurial powers. Tufaceous limestone or calc-tuff, though similar in value, and though frequently seen incrusting the rocks and vegetation in the vicinity of springs, is seldom applied to any useful purpose.—Moss of the depth and composition of peat is not so abundant as to prevent scarcity of fuel in several districts of the islands, or to render its conservation and even its increase objects of little public interest. Its ingredients, besides the herbaceous plants found in every moss-soil, are hirsch, hazel, Scottish fir trees, and the cones of the pitch pine; a circumstance which seems to argue that the country was anciently rohed to a considerable extent in forest, or, at all events, was not so cheerlessly destitute as it now is of dendritic embellishment. Peat for fuel is usually dug in the end of May or beginning of June, and carried home in July.

Nearly all the land of Orkney is freehold, but burdened with payments in kind to the Crown, or to the Earl of Zetland, as the Crown's donatory. These

payments, though of various origin, all bear the name of feu-duties, and are exigible on account either of the Crown's having come in the place of the king of Norway, to whom the islands paid tribute till 1468, or of its having acquired rights by purchase and forfeiture, or of its having inherited the claims of the bishop of Orkney. So enormous are the feu-duties, that the property is, in most instances, little more, as to actual value, than nominal, or differs from a high-rented leasehold only in the useless honour of an empty title. A considerable proportion was originally held under udal or allodial tenure,—a system which required no written right; but owing to very numerous and frequent transferences by sale, it has come, in the great majority of instances, to be held under charter and sasine, as in every other district of Scotland. Lands are occupied either by the proprietors themselves, by tacksmen who farm a part and let the remainder, or by tenants who farm all they rent. Farms are of various sizes, from 6 or 8 acres, to several hundreds, or even upwards of a thousand; but they are for the most part small, averaging probably 10 or 11 acres; and when very large, they consist chiefly of extensive tracts of open grazing-ground, or the uninhabited islets called holms. Though many of the farmers are men of considerable property and good education, the great body have but a slender capital and rank in the social scale, simply as peasants. The cultivated portions of farms are in a manner peculiar to Orkney, and so numerous as everywhere to impress upon it a characteristic feature, hung or maintained together in clusters called towns. An Orkadian town is a portion of ground, partly arable and partly in pasture, always—except where there is a marine or some other natural boundary—separated from what is called 'the hill,' or the common moor, by a massive encircling turf-dyke; it is provided with a number of houses corresponding to the number of clustered farms, and severally occupied by the different farmers, whether proprietors or tenants; it was all originally, and in general still is, in runrig, belonging mixedly to the farmers, but apportioned to them in their respective shares; and it has patches of grass-land, and sometimes separate pieces of ground near the houses called 'tumails,' or little enclosures called 'quags.' The lands composing the towns are of very various dimensions; and, whether penny-lands, merk-lands, farthing-lands, cowsworlts, or wearing particular modifications of these uncouth and quite indeterminate denominations, those of any name in the same town are of equal extent; and when they are 'planked,' as the local phrase is, or thrown into severalty, by processes for separating the runrig, and erecting marches among the several proprietors, they are, after due measurement, divided, in both their arable and their grass-grounds, in the proportion of the number of penny-lands, and lands of various other denominations legally belonging to the several claimants. Each resident in a 'town,' besides his possessions within the dyke, has the privilege of sending his live stock to 'the hill,' or common moor, and liberty, according to the nature of his rights, to cut turf in the mosses, and gather manurial sea-weed on the shore.

Though the continuance to a great extent of the mischievous system of runrig represses and impedes improvement, the arts of husbandry have, during the last 30 years, made great progress, and arrayed themselves in a modern and graceful dress. The old Orkney plough, which continued to be 'still too much used' in 1814, the date of the Agricultural Report of Orkney, and which had only one stilt, without either ground-wrist or earth-board, and,

when at work, received against one side the pressure of the ploughman's weight, and was drawn by three or four oxen or small horses yoked abreast, and which only scratched some soils, and slid along others;—this antique but absurd instrument is now completely discarded, and can be met with only in the museum of the antiquary. The old mode of portage, by means of 'the clibber and mazy,' balanced across the backs of horses, and bearing from the ends or at the horses' sides strange-looking heath-baskets, called creels, or quite as strange straw ones, called 'cubbies' and 'cazies;' this mode of portage, which was used in transporting all sorts of heavy or bulky articles, and which made the largest part of horses' labour consist in carrying home peats from the mosses, and which is still practised to a sufficient extent to treat a visiter to the islands with the sight of an antiquated custom highly illustrative of the semi-barbarous social order of bygone times, has now so generally yielded to the use of the very simple two-wheeled vehicle, whose introduction contributed so large a share in revolutionizing the Highlands, that in a parish where, at the end of last century, there were only 11 carts, at least 200 may now be found. Some gentlemen-farmers, and some large proprietors who farm part of their estates, put their arable grounds under a regular rotation of crops, make a free use of turnip-husbandry, judiciously cultivate the artificial grasses, and, in general, set an enlightened and enterprising example of improved methods of agriculture, which begins to be admired and to attract followers among the smaller farmers. By far the chief extent of the arable land of the islands, however, is periodically tortured out of heart by an alternate cropping of oats and bear, and is sustained as long and as fully as possible in its energies by a liberal dosing of sea-weed, but remains a stranger to nearly all those amenities of husbandry which can always keep a soil from even an approach to exhaustion, and yet draw from it a more continuous and greatly a more opulent produce than when it is wrung and overworked by continual demands for grain. Potatoes, though introduced about 75 years, continued to be both scantily and incorrectly cultivated several years after the opening of the present century; but they are now regularly raised on every farm, and at once form an important part of the farmer's diet, and serve to clean a small portion of his farm.

On account of the damage to crops by the frequent gales of autumn, by blights from the sea-spray, and by the general humidity of the climate, and on account also of the comparatively great equableness of the temperature, and the short continuance in winter of snows or frost, circumstances so favourable for the rearing of black cattle and sheep, pasturing seems much more suitable than husbandry for most of the land in Orkney; and, it is said, would long ago have become general but for the peculiar nature of the tenure; and, even under the present system, is so far an object of attention with tenants as to be made more than tillage to contribute to the paying of their rents.—The cattle of the islands do not seem to be of a breed materially different from those of Caithness and Sutherland; they are larger in size, and would even exceed their own largeness were they not when young very often half-starved in winter; and, as to colour, they are black, white, and brown, and, in a few instances, party-coloured, mottled, or brindled.—The only breed of native sheep seems to be the *ovis cauda brevis*, 'the short-tailed sheep' of Iceland, Shetland, the Hebrides, the interior of the Highlands of Scotland, and, in general, the far or mountainous north of Europe. Sheep of this breed, confusedly, and to the most untraceable

extent mixed with other breeds, and amounting jointly with them to about 50,000, run wild in the hills and common moors, so little tended and so abandoned to a state of nature, as at once to escape improvement in themselves, and to yield but trivial advantage to their owners. But on holms or separate grazing islands, and on some peninsulas artificially shut out from the adjacent commons, there are some thriving and profitable flocks of Swedish Merinos, South Downs, Cheviots, and approved cross-breeds.—The first horses of Orkney were probably imported from Norway, and, for many ages, were not much different from those of that country in size and shape. But those now generally used appear to be descended from the breed of the northern counties of Scotland; and they are reared in such numbers as to be sent back in considerable annual supplies to the land of their origin.—The swine—though somewhat resembling the native breed of the Highlands—are very different from that which prevails in the lower districts of Scotland. They are of a middle size, generally black or dark-red in colour, flat-hodied, with backs highly arched, carrying a quantity of long stiff bristles over a fleece of coarse wool, their ears erect and sharp-pointed, their nose amazingly strong, and their whole figure and appearance—as well as their habits, while they range at will over hill or common, or are allowed possession of an entire island—bearing a closer resemblance than is found in any other of our domesticated breeds, to the wild boar.—Rabbits are found in most of the islands; they occupy an extensive warren in Burray; and in one year 36,000 rabbit-skins were shipped from Stromness.—Poultry of all sorts are reared; the common sorts everywhere, and particularly geese.

The manufacture of linen-yarn and cloth, for a considerable period previous to the commencement of the present century, was somewhat extensively conducted; but it received a severe check from the difficulty and uncertainty of obtaining flax during the war with the continent; and it has since dwindled away into a state approaching extinction.—The manufacture of kelp, during the halcyon days of that rude and easy and congenial employment, was pursued with such avidity, and so fondly clung to as a staple, that perspicacious economists were at no loss, even so early as 1806, to foretell that it would be 'the ruin of Orkney.' The greatest annual export occurred in 1826, and amounted to 3,500 tons, bringing into the country, at the rate of £7 per ton, the sum of £24,500. The events which have destroyed the manufacture elsewhere have destroyed it here, and, by rendering its recovery hopeless, have damaged all and completely ruined some of the principal landed proprietors.—Straw-plaiting, for ladies' bonnets and gentlemen's hats, has been a large but fluctuating manufacture. It was introduced about the beginning of the century, and, about 10 or 15 years after its introduction, employed 6,000 or 7,000 females, and annually brought into the country about £20,000. The material then employed was split ripened wheat-straw; and the produce could be worked into only a flimsy, colourless, brittle piece of head-gear, which soon and deservedly lost the favour of fickle fashion. When a successful imitation, by the Messrs. Muir of Greenock, was made of the Leghorn plait, and found, under the name of Tuscan, a speedy promise of general patronage, the Orcadian damsels were easily instructed to substitute the unripened, unsplit, boiled, and bleached straw of rye, for the former material, and, to employ themselves upon the new fabric, chiefly for the Messrs. Muir, and also for smaller manufacturers. But they never could work as numerously, or as remuneratingly with it, as with the slender split wheat-

straw; and they have, more than once, come into rude collision with the wayward caprices of that viewless and subtle but powerful controlling power called fashion, which has them entirely at its mercy. They numbered, 7 years ago, about 3,000; annually producing about 2,000,000 yards of plait; and were paid with the pitiful earnings of only from 1s. 6d. to 2s. 6d. per week. They, for a long series of years, were collected in groups into confined apartments, and are understood to have seriously suffered in the moral character of the many, from the corrupting influence of the evil communications of the few; but they have latterly worked in their own homes, and, while freed from an outward mischievous pressure upon both their health and their hearts, they find their employment an incentive only to cleanliness and neatness.—The only other manufactories are three distilleries,—two of them at Kirkwall, and one at Stromness. Their annual produce, which amounts to about 14,000 gallons, is unhappily not more than the amount of local consumption.

The fisheries were long shamefully neglected, or seemed to be all but forgotten amid the absorbing attention which was given to the manufacture of kelp. Lobster-fishing is the only department of some standing; it was introduced by an English company; and, for several years preceding 1814, it annually produced for the London market about 120,000 lobsters, and brought into the country about £1,500. It is still vigorously conducted, and sends off its produce in walled smacks, which make regular weekly calls at appointed stations; but it now produces only about 100,000 in the year, and, as they have for some years decreased in both size and plenteousness, it may be considered as seriously on the decline. The cod-fishery was carried on about half-a-century ago, in the neighbourhood of Stronsay, and afterwards was, for many years, neglected; it was revived and extended generally among the islands during the latter period of the war with continental Europe, the fishing-ground being less exposed than the Dogger bank to annoyance by the enemies' privateers; but it again fell into neglect; and, at present, it has been of only a few years' continuance, but is conducted by well-appointed sloops, and has a promising appearance. The herring-fishery, down to about twenty-five years ago, had scarcely an existence, owing, as some say, to the want of enterprise, or, as others say, to the want of herrings; it suddenly rose to such importance, however, as, in 1820, to produce for exportation 17,989 barrels; and, though it afterwards declined, it so rallied and progressed as, in 1832, to produce 65,000 barrels, and bring into the country about £32,500. English and Scottish whale-ships annually touch at the islands of both Orkney and Shetland, and obtain from them a large proportion of their quota of men for working the Baffin-bay fishery. When the ships resorted to Davis' straits, so many as sixty would have called in one year, taking on board 1,400 men, and leaving about £18,000; but since they began to resort to Baffin's-bay, and required men to continue away from home during the harvest months, when their domestic services were most wanted, they have had less connexion with the country, and allow the quondam harpooners of the king of the arctic seas to employ themselves, more benignly for their morals, in catching the edible tribes of the seas which gird their own islands.

The registered vessels of Orkney and Shetland, in 1833—much the larger proportion of them belonging to Orkney—were 78, carrying 4,049 tons and 319 seamen. They are, for the most part, schooner-rigged; they are well-built, uninsured, worked by able and sober seamen, and subject to fewer acci-

dents than vessels of most other districts; and they trade chiefly with the ports of England and of Ireland. In 1770, the vessels were 17, carrying 825 tons and 76 seamen, and exporting produce to the value of £12,018; and, in 1800, they were 21, carrying 1,375 tons and 119 seamen, and exporting produce to the value of £39,677. The commerce of the country, both outward and inward, in bygone times and at present, exhibits a motley, and a width of range, and the occasional prominence of curious articles, which at once amuse the observer and illustrate the social condition of the people. The exports of 1806, for example, consisted of kelp, hear, heef, pork, pork-hams, calf-skins, cow-hides, tanned-leather, seal-skins, cow-hair, feathers, tallow, butter, fish-oil, linen-cloth, linen-yarn, rabbit-skins, otter-skins, quills, malt, dried podlies, small fish, eggs, woollen stuff, oatmeal, dried cod and ling, wool, slates, ale, and live cows and oxen; and the imports of the same year, as exhibited in a table before us, consisted of no fewer than 100 items, some of them curious for their littleness and simplicity, such as '1 bottle turpentine,' '2 carts complete,' '3 bundles spades,' and '6 casks whitening;' and some remarkable for their multifariousness and intrinsic variety, such as 'haberdashery,' 'apothecaries' ware,' 'confections,' and 'groceries,'—'gingerbread' and 'candy-sugar' being allowed to form separate items. The imports of late years, say the Messrs. Anderson in their excellent 'Guide to the Highlands,' "may be stated to be annually a few thousand pounds less" than the exports. "They consist of a great variety of articles, which would be best understood by an inspection of an Orkney shop, which is a sort of hazaar, the keeper of which is grocer, clothier, haberdasher, hosier, hatter, silkmonger, ironmonger, tobacconist, &c. &c. A considerable annual quantity of wood from various places, and coals from Newcastle, are also imported."

One or two elegant mansions, a small number of neat and comfortable villas, and the manse of the parish-ministers, are the only Orkney dwellings of note out of Kirkwall. The farm-buildings are, in many instances, substantial and convenient, and occasionally they are expensive and aim at consideration; but they consist, at best, of a dwelling-house, and a detached barn and cow-house, with inferior offices; and, in the case of nearly all the small farmers, whether proprietors or tenants, or the retainers of gentlemen-farmers, they are single buildings, miserable primitive cottages, with an exterior blotched round by the excrescences of peat-stalk, kiln, and dunghill, and an interior laid out for the accommodation of man, beast, and fowl. These cottages are generally built with stones and clay, or with stones and clod, and are slenderly and clumsily covered, almost every year, with a little fresh straw. The door is sometimes less than 5 feet high, and affords ingress and egress to every inmate, whether biped or quadruped, plumeless or feathered. While many cottages, like the abodes of the better sort of farmers, have detached out-houses, they are, as a class of buildings, characteristically at once dwelling-house, cow-house, and hen-roost. The cows, for the most part, occupy their own end of the building, though a few calves, or a favourite cow, may be seen in 'the hutt,' or end of honour, in company with the family; and fowls and geese, while assigned an appropriate place, are fully admitted to the comforts of the central fire, blazing on the middle of the earthen floor, and sending up to a constant canopy of smoke supply ample enough to compensate the upward drainage through an awry aperture, and various undesigned crevices in the roof. Around the fire, during the long winter nights, sit the family,

the men making or mending some utensils of husbandry, the women plaiting straw or plying the needle, and both seemingly more contented and free from sensible discomfort than the trim and refined peasants and farmers of Lowland Scotland and merry England. The cottages, besides the main apartment, have generally an interior one, or 'hen,' which is used, on great occasions, as a bed-room; they sometimes have, between the two apartments, a space for lumber; and, in their general character and accommodations, even in spite of their broad and dark faults, they are superior to houses of the same rank in some of the northern districts of the mainland of Scotland. Attached to each cottage, and connected with the barn, is a small round antique-looking tower, used as a kiln,—an appurtenance rendered necessary by the absence of any public or purchasable means of drying corn.

The Orcadians, though of the same parental stock as the Shetlanders, have fewer and less marked peculiarities of manner, and, maintaining a far freer and more frequent intercourse with the Scottish Lowlanders than with them, experience toward them the same feelings of strangeness which are entertained in the far south. The better classes are noted for their politeness; and even the middle and lower orders assume to be so much superior in good breeding to the corresponding orders on the continent, that, come from what quarter emigrants may, they are able to impart a polish to their manners. The language spoken is a dialect of the English, considerably purer in vocables and pronunciation than that spoken in almost any part of the Lowlands of Scotland, but marked in the utterance by the sibilant and guttural softness which belongs more to the Celtic than the Saxon tongues. Funerals, as in England and Ireland, are attended promiscuously by men and women. The dress, the customs, and all characteristic properties, have little or nothing in common with those of the Celtic Highlanders. The food of the peasantry, in summer, is pottage for breakfast, bread and milk for dinner, and either of these for supper; and, in winter, it consists of the same fare, variegated with potatoes, which are enriched occasionally with hutter or fish, or very rarely with hatcher-meat; and in both seasons of the year it frequently gives place, for both dinner and supper, to a meal of cahhages furnished from the well-stocked kail-yard which every cottage has as an appendage. All classes are, in the aggregate, as intelligent and as distinguished for attendance on the ordinances of Christianity as those of almost any part of Scotland. The patronage of the parochial places of worship, except that of two parliamentary churches, which belongs to the Crown, and that of Kirkwall, which belongs to the Town-council of the hurch, is all in the hands of the Earl of Zetland. The ministers of the Establishment have made great exertions, by their own activity and by the employment of assistants, to supply the deficiencies which have arisen from the union of parishes, or are occasioned by physical obstructions and the dispersedness of population; and they have been rivalled, perhaps stimulated, in their work by efforts of great enterprise and missionary devotedness, and not a little success on the part of dissenters, particularly the United Seceders and the Independents. In 1839 the United Secession had in the islands eleven congregations, all provided with settled ministers, and constituting the entire care or jurisdiction of a presbytery; the Independents had three congregations provided with settled pastors; the Original Seceders had two; and the Baptists had several stations. For the statistics of the Establishment, see **ORKNEY** and **SHETLAND**. Superstitions of the same idle and wild character as

those which prevailed till a comparatively late period in even the Lowlands of Scotland, and which still unqualifiedly intral nine-tenths of the peasantry of Ireland, have, during the last forty years, been in the progress of expulsion from Orkney, and have, to a chief degree, disappeared. Yet a considerable number of natives still tell stories of fairies and their elfish pranks, and tremble to turn a boat at the commencement of a voyage contrary to the course of the sun, and apply pet names to the elements to propitiate their favourable influences in culinary or agricultural operations. The common people are inured to great fatigue, and are very adventurous both in fishing during rough weather and in climbing the rocks for sea-fowl and their eggs. In some parts they sweep the faces of bold cliffs and perpendicular or overhanging sea-coast in the same manner as the Norwegians, the Icelanders, and the people of St. Kilda,—one person being dangleingly lowered down at a rope's end by others to the place where the birds nestle; but, in general, they practise a method of their own, one party rowing, under the rocks where the fowls build, a boat provided with a large net, and fastening to the upper corners of the net two ropes lowered down from the top of the rocks, and another party, stationed at the top, and who had let down the ropes, hoisting up the net till it is spread opposite the cliffs where the birds are sitting, holding it there while the boatmen below suddenly affright the birds, and make them fly out in disorder, with the sound of a rattle, and then immediately enclosing them in the bosom of the net, and lowering the prize into the boat.—Of various distinguished persons whom Orkney claims as natives, two of the best known, at least in the literary world, are Mrs. Brunton, the amiable authoress of 'Self-Control,' 'Discipline,' and several other well-toned works of imagination, and Malcolm Laing, Esq., the author of a widely diffused history of Scotland, who was buried in the cathedral of Kirkwall.

The Orkney islands seem to be the Cape Orcas of Diodorus Siculus, which, in the year 57, he notices as an extremity of Britain; and they were, if not subdued, at least surveyed, by the Roman fleet which sailed round the north of Scotland in Agricola's memorable campaign of the year 84. Under their classical or Romanized name of *Orcades*, they became familiar to the Romans, from their communications with the Celtic inhabitants of Britain, before the Scandinavian rovers appeared in the British seas. *Orc* is one of the three principal isles of Britain mentioned by the Welsh Triads; and it stands as the Welsh name of the Orkneys in Davis' and Richards' Dictionaries. *Orch*, in the British language, signifies what is outward, extreme, or bordering, and aptly designates the relative position of the islands during the British period; and joined to *ynys*, *enys*, or *ius*, the words respectively in British, Cornish, and Gaelic, for an island, it occasioned the group, as Romanizing or purely Celtic influence prevailed, to be variously denominated *Orcades*, *Orcadia*, *Orchadia*, *Orchades*, *Orkenies*, and *Orkneys*. Such is the apparently clear and natural origin of the name as traced by that astute etymologist, the author of 'Caledonia.' Yet a writer in the Edinburgh Encyclopedia, speaking "undoubtedly," but assigning a reason only "probably," and substituting "a large marine animal" for a word, says, "The origin of the name is undoubtedly Teutonic, and is probably derived from Orkin, a large marine animal which has been applied both to whales and seals. Orkney, therefore, means 'land of whales or of seals.'"—The stone monuments which still remain, appear to indicate that the Orkney islands were colonized during an early period by the posterity of the same

people who settled Western Europe. Druid monuments abound, and, in one instance, [see STENNESS.] are so magnificent as to be inferior, in the estimation of antiquaries, only to those in Salisbury plain, and celts, flint arrow-heads, flint axes, and swords made of the bone of a whale, have numerous been found; yet such monuments, so characteristic by the Celtic tribes, and so common throughout the territories which were possessed by the Celtic Britons, are altogether unknown, and have been untraceable, in Shetland. Not the Scandinavians, then, who colonized alike the archipelago of Orkney and the archipelago of Shetland, but the same Celtic people who colonized South and North Britain, seem to have been the original or earliest inhabitants of the Orkneys. A tradition accordingly came down to the 15th century that two nations, denominated Pcti or Papé, possessed these islands during ages before the more recent arrival of the Scandinavians. Yet, owing probably to some physical cause, the original people seem to have disappeared at some period prior to the Roman discovery of the country. The names of places in Orkney are almost as universally Teutonic as in Shetland; and exhibit such slender and doubtful traces of Celtic influences as would seem to prove that it had substantially ceased long before the epoch of the new colonization by the Scandinavian rovers. Celts paved the way for the Teutonic race even in Scandinavia itself, and, as settled there, were the giants of Rudbeck; and, in that country as in Orkney, they ceased to have any decided monuments in the topographical nomenclature. Tacitus asserts the Orcaades to have been subdued by Agricola, but uses language too general to throw light on their condition. Pomponius Mela mentions them about the middle of the 2d century, and states their number at 30. Pliny numbers them at 40. Ptolemy brings them back to 30. Solinus, writing in 240, and looking possibly at only the considerable southern islands, reduces them to 3, and pronounces them uninhabited by men, and "only," according to Richard, "the haunt of seals, and orcs, and sea-mews clang." Chalmers, contemplating their desolation at this period, and not flinging away his former etymology of their name, which is necessary in order to account for at once the "Orcaades" of the Romans, "the Orc" of the Welsh, and the "Inis-Orc" of the Gaelic people of the neighbouring coast, thinks it not improbable, "if we may believe Wolf," as to *Ork* or *Oerck*, meaning in Danish, "a desert or uninhabited place, that the Danes, on visiting the islands, and seeing their wilderness appearance, gave them, from that word *oer* or *ey*, "an isle," the name *Ork-ees*, "the uninhabited isles;" or, contemplating the abandonment of the islands to "seals, orcs, and sea-mews," and, observing that in ichthyology *orc* or *orca*, signifies a monstrous sea-fish, he even thinks it possible that the Scandinavians derived or formed the name *Ork-ey* out of that word, and their own *ey*, "an isle." Truth, we would conjecture, lies between, and points to the British derivation as that of the original name, or the name as it became known to the Romans,—and at one or other of the Teutonic derivations as that which, suggesting itself and seeming graphic to the Scandinavians, recommended the original name to their adoption.

The Orkneys appear to have become, toward the close of the 3d century, or early in the 4th, the harbours of the ferocious seamen of northern Europe; and, in the time of Constantine, they loomed so bulkily in the distant view, as, at the division of the empire, to be specially mentioned along with Gaul and Britain as the patrimony of the emperor's youngest son. In 366, the great Theodosius pur-

sued the fleet of the northern pirates into their usual haunts, and, in a panegyric by Claudian on his victory, is said to have stained the Orkneys with the effusion of Saxon blood:—

"———— Maduerant Saxone fusio  
Orcaades; incluit Pictorum sanguine Thule,  
Scotorum cumulus flevit glacialis Ierne."

In 570, Columba found one of the Orcadian chiefs at the court of the Pictish king Bridei II., and arranged with him a mission of his disciple Cormac to the Orkneys. Cormac was possibly less successful than most of his fellow-Culdees, who either did not remain long in his adopted field of labour, or was not succeeded in it, as other Culdee missionaries were in theirs, by a college of preaching brethren; for he figures no further in the known history of the islands, and did not prevent them from being, for generations afterwards, an adopted home of Scandinavian heathenism. The islands, in an age rather of naval enterprise than of domestic industry, must have been but thinly inhabited and little cultivated. Yet their inhabitants, living chiefly by adventure, and signalized by reckless daring, seem frequently to have invaded the coasts of Pictavia; and, somewhere between 674 and 695, they were vigorously repulsed from one of their attacks by Bridei IV., and pursued by him into their usual retreats, amidst their shoals and isles. For two centuries afterwards they appear very dimly, and but as a phantasmagoria in history. Yet, during that period, many congenial colonists were very probably driven to share their bleak retreat and common exile from the frequent perturbations of their parent country; and, as well as the older settlers, they most likely yielded little subjection to any sovereign, and still less obedience to any government, and looked with stirring interest on the wild sea-kings wielding the dominion of the German main, and coming down with the swoop of an eagle, at intervals of their own choosing, upon whatever points they pleased of the Hebridean, the Pictavian, and the Scottish coasts.

In 870, Harold Harfager, or the Fair-haired, one of the chiefs of Norway, who had been dissatisfied with the territories he possessed, and had introduced discord and civil war among the little states around him, achieved by a naval victory the union and consolidation of the Norwegian provinces in subjection to his sway. Many of the princes and people, disgusted with his usurpations, or compelled to flee from his anger, left their native land, made a lodgment on Iceland, the Feroes, and the Hebrides, but especially on Orkney and Shetland, and thence sailed out in piratical or retaliative expeditions to intercept the trade and ravage the coasts of his kingdom. In 876, Harold, having equipped a fleet of invasion, made a descent on both the Orkney and the Hebridean islands, and subdued both, and established them under the authority of his vigorous government. On his return to Norway, he conferred the administration of Orkney on Ronald or Rognovald, Count of Merca, and the father of Rollo, the famous invader of Norway, and the great-great-grandfather of William the Conqueror. In 920, Sigurd, the brother of Ronald, received by peaceful cession from him the Orcadian dominion; and he afterwards added to it Caithness, Sutherland, Easter Ross, and Moray; and he eventually fell on the battle-field in the last of these districts, attempting to fight his way to further conquest. The two brothers are jointly—and sometimes the one, sometimes the other, singly—reckoned the founders of the Orcadian dynasty. A long line of Scandinavian earls or jarls who succeeded them, affected the style of independent princes in Orkney; maintained possession of Caithness and

Sutherland, and made their power to be felt in various parts of both the eastern and the Hebridean coasts of northern Scotland; wore the attributes and wielded the influence of enterprising and dauntless regult; and, amid the dissensions of Norway, and their own plundering and piratical excursions, probably yielded but slight obedience to the Norwegian kings. Gottorm, the nephew of Ronald, and afterwards Halled his son, succeeded to the Orcadian earldom; but both were stupid and incompetent, and were allowed a hasty quaff of the luxuries of power. Rollo and Einar, brothers of Halled, competing for the succession, the former "gained a loss" by defeat, marched off to try his fortune in France, and became Duke of Normandy, leaving to Einar the icied little throne of Orkney, and opportunity to earn the curious fame of being the first to teach the Orcadians to use turf for fuel,—a fame which shows how primitive was their condition, and which has occasioned him to be known in history under the name of Torf-Einar. At or toward the close of the 10th century, Christianity, in the corrupted or papisticated form in which it had been set up in the north-west of continental Europe, was forcibly introduced to Orkney, and made to supersede any slender remains, if indeed any remains there were, of its Culdee form, under the influence of Olaus, the first nominally Christian king of Norway. In 996, Sigurd, the 14th Earl, succeeded to the dominion; he enjoyed the Orkneys, Caithness, and Sutherland, with a tribute from the Hebrides, and also, for a time, established his power on the coasts of Ross and Moray; he was of the blood of the Vikingr, and did not disparage the race by his adventures; and he, for years, made the eastern shores of Scotland writhe under the torture of his frequent piracies and forays, hut, in 1,006, bound himself up from further harassing his neighbours by marrying, as his second wife, a daughter of Malcolm II., the Scottish king. Yielding himself fully to the rough blandishments of those motives which were most seductive among the Vikingr, and wearied with the dull amenities of repose around his own shores, he sailed away to the aid of Sigtrig, the sea-king of Dublin, and, in April, 1014, fell in the bloody field of Clontarf, fighting against the renowned Brian Borabh, the King of all Ireland. A wild ode was composed in celebration of his fate, and has been translated by Gray, under the title of "the Fatal Sisters." Einar, the eldest of four sons, whom he left by his first wife, succeeded to his earldom. But Torfin, his son by his second wife, the grandson of Malcolm II. of Scotland, only five years old at his father's death, and left in the Scottish king's care, was immediately put by Malcolm into military and tutorial possession of Caithness, and such other territories as had still, after his many conflicts, remained to Sigurd on the Scottish shore. Torfin resembled his father in stature of body, vigour of mind, and ambition of enterprise; he commenced, at the age of fourteen, his career as a Vikingr; he often, during his grandfather's reign, disquieted the coasts of Scotland by his ruthless and piratical exploits; he refused the usual tribute to the good Duncan, and necessitated him to march into Moray to enforce its payment; and he, at last, engaged in avowed warfare against Scotland, and held in scorn the favours it had bestowed. While, in an attitude of revolt, he rushed into hardy conflicts with "brave Macbeth, who well deserved that name;" and, though represented in a doubtful tone by Torfæus as the successful party in the strife, is poetically, and perhaps truly, sung by Shakspeare as defeated and overawed by the "peerless Macbeth." Yet he was neither crushed in power, nor sohered in ambition; he engaged in hostilities with

his half-brothers in Orkney, slew one in battle, compelled another to flee, and wrested from the eldest several islands; he forced the Hebrides to purchase his forbearance by payment of tribute; he emulated the Scottish kings in splendour, and possibly equalled them in power; and at length, wearied with savage grandeur, and feeling "the compunctious visitings of nature," he went to Rome in search of remission of his crimes, and returning with mitigated emotions from the seat of priestly delusion and pretended pardon, he died about the year 1074, at the age of 65. Torfin's successors, as well as some whom we have named of his predecessors, maintained the peculiar dominion, and exhibited the characteristic properties of the Vikingr. The whole race of Scandinavian earls, jarls, or sea-kings, were considered high in rank, skilful in peace, and almost redoubtable in war. They intermarried with the noble families of neighbouring countries, with the daughters of the petty kings of Ireland, and with the powerful royal families of Norway in Scotland. Commanding fleets to which antagonist powers had little or nothing to oppose, and roving from point to point of attack with a swiftness and a caprice which continually put vigilance to fault, they were known and feared along the sea-board of every territory within their reach; and sharing in the Norwegian expeditions against Scotland and England, or occasionally exhibiting, in expeditions of their own, the colours of the predatory hosts from the European continent, they were confounded with other assailants of the British shores under the general name of Danes, and figure in masques along the pages of English and Scottish historians as the constant and hereditary scourges of their countries. Their followers probably comprehended, not only the subjects of their proper dominions, but many independent adventurers, who only served with them for a time, or were periodically, or at intervals, attracted to their standard by the news of an intended expedition, or the prospect of war and plunder. They nursed their people for conflict by encouraging them to reap the fruits of the earth during the mellowness of autumn, and treating them to festivity during the gloom of winter; and then, in summer, they hounded away to the Western Islands or the Scottish shores, to England or to Ireland, to conduct "predatory excursions against their fellow-men, much in the same manner as their descendants of the present day join in expeditions against the fish of the neighbouring seas, or the leviathans of Greenland. These were the men,

\* Who for itself could woo the approaching fight,  
And turn what some deem danger to delight."

From the year 1098, when Magnus Barefoot, the powerful king of Norway, castigated the Orcadians, and made them smartingly feel his superiority, the Earls acknowledged their dependence on the Norwegian crown, and formally declared their allegiance; and, at a later date, when refinements began to be observed in the courts of the northern princes, they even received from the kings of Norway regular investiture. At length, about the year 1325, the male line of the ancient Earls, the descendants of Ronald, failed in the person of Magnus V., leaving the earldom to pass into an entirely new current of both possessors and events. The succession of the Scandinavian Earls is carried down to its close, and the exploits of each stirring individual of the series are fully exhibited in the *Orcades of Torfæus*, a work which he compiled from the ancient sagas and the Danish records, and are shown with sufficient amplitude in the abridgment of *Torfæus' work* in Dr. Barry's *History of Orkney*.

On the failure of the Scandinavian dynasty, the earldom passed to Malis, Earl of Strathbearn, who was married to the only daughter of the last Earl, Magnus V.; and afterwards, in 1379, it passed to "the lordly line of high St. Clair" or Sinclair. While William Sinclair, the 3d of his name, held the earldom, the young king of Scotland—James III.—pressed with the difficulty of Christian I., king of Denmark, Norway, and Sweden, having demanded payment of a long arrear of "the annual of Norway"—married Margaret, the princess of Denmark; and, in 1468, obtained as her dowry 2,000 florins in money, and the impignoration of Orkney for 50,000 florins, and of Shetland for 8,000 more. As the islands were never ransomed from the pledge, they thenceforth became politically and entirely attached to Scotland. In 1470–1, the earldom of Orkney and the lordship of Shetland were, as to their "hail richt," purchased by James III. from the Sinclairs, and annexed by acts of parliament to the Crown, not to be alienated, except in favour of a lawful son of the king. The power of the Orcadian bishop, however, which had grown up from littleness to grandeur under the administration of the later Earls, was, to a certain extent, co-ordinate with that of the king as lord of the islands. "The old bishopric of Orkney was a greate thing, and lay sparsim throughout the baill parochines of Orkney and Zetland. Beside his lands, he had ye teinds of aucteen kirks: his lands grew daily, as delinquencies increased in the country." Many small proprietors, too—the ufallers—had heritages intermingled all over both archipelagos, with the lands of the king or the quondam Earls, and with those of the bishop; and, while they paid seats and other articles to the regnant superior of the soil, they claimed to retain Norwegian customs, and to be governed by Norwegian laws. In 1474, and at two subsequent dates, leases for various periods of years were given of the earldom to the bishop, and occasioned the country, till the death of James III. in 1488, to be almost entirely, in its civil matters, under prelatie administration. In 1489 and 1501, Henry Lord Sinclair, a descendant of the quondam Earls, obtained from James IV. leases of the earldom, at the low rate of £336 13s. 4d. Scottish, at which it had been leased to the bishops; and though he fell in 1513 at Flodden, the property was, at the same rent, continued, by successive leases to Lady Margaret, his widow, till the year 1586. In 1529, the Earl of Caithness and Lord Sinclair, either to usurp the renewed lordship of the whole purchased earldom, or to take forcible possession of Lady Margaret's lease, or to adjust some question arising out of intermixture of rights, or to extinguish the udal holdings of the ancient inhabitants, and to subject them to feudal grantees of the Scottish crown—for all these reasons have been, by turns, assigned—invaded Orkney with an armed force, and were encountered by the governor of Kirkwall castle, heading the Orkney-men and others at Summerdale or Bigswell in Stenness; and there they sustained a disastrous and extinguishing defeat, the Earl of Caithness and 500 of his followers being slain, and Lord Sinclair and all the survivors of the force made prisoners. In 1530, a grant of the islands, in form of a feu, was—in defiance both of the settlement by parliamentary acts under James III., and of Lady Margaret Sinclair's lease—given to the Earl of Moray, the natural brother of James V.; but it proved nugatory, and never brought any proceeds of the islands into the grantees' possession. About 1535, James V. made a personal visit to Orkney,—the only royal visit which was ever made to it by either the Stuarts, or the present dynasty, both descendants of Ronald, the founder of the Scandinavian

earldom; and during his stay, at Kirkwall, he was hospitably entertained in the bishop's palace, and received the homage of the loyal among the natives, and directed maritime surveys to be made of the intricate navigation of the surrounding and intersecting seas; and, at his departure, he carried off to the seat of justice the more turbulent and dangerous of the inhabitants. In 1540, the favourable leases to Lady Margaret Sinclair terminated by a general act of annexation and revocation. Oliver Sinclair of Pitcairns was the last lessee of his family; and he obtained, for an advanced annual rent of £2,000 two successive leases, the latter of which expired in 1548. His name is associated with one of the most humiliating transactions recorded in the history of our country,—the disloyalty of the Scottish nobles, the dishonour of the Scottish arms at Solway moss, and the consequent captivity of the army, and heart-breaking of the promptest and most enterprising of the Stuart dynasty. The family of Sinclair in Orkney may be regarded as having been extinguished at the premature death of James V., and they have now, on the scene of their ancient greatness, and the seat of their ancient residence and power, no memorial except the rubbish of their castle,

"——— Where restless seas  
Howl round the storm-swept Orcaes,—  
Where erst St. Clair bore princely sway  
O'er isle and islet, strait and bay;"  
—"Still nods their palace to its fall,  
Thy pride and sorrow, fair Kirkwall."

The earldom of Orkney became part of the jointure of the widow of James V. immediately after his death, and remained with her till her own death in 1560; and, when she was called to the regency, it was placed by her under the administration of Bonot, a Frenchman, whose appointment was extremely unpopular. How it was disposed of during 15 years following her death, is not known. At the accession of Mary the country began to be subjected to a series of changes and oppressions, in its masters and their tyrannies, which to a great extent revolutionized its condition, and continue to the present day to affect very deeply in many points the most important interests of individuals and of the whole community. In 1564, Lord Robert Stuart, the natural brother of the queen, received by written charter, for an annual rent of £2,000 13s. 4d. Scottish, "all and whole the lands of Orkney and Zetland, with all and sundry the isles belonging and pertaining thereto, with all and each of the castles, towers, fortalices, woods, mills, multurecs, fishings, tenants, service of free tenants, with the whole superiority of free tenants, advocation, donation of churches, and with the office of sheriff of Orkney, and sheriff of the Fouldrie of Zetland." James, Earl of Bothwell, for a brief moment, in 1567, enjoyed an annulment in his favour of this grant to Lord Robert, and was plumed with the big designation of Duke of Orkney; but, if ever he at all obtained infefment, he had but momentary possession, for, exactly a month after the date of the marriage-deed, which assigned him Orkney with its new title, he fled from Carberry-hill, and for ever lost sight of his phantasmagorical dukedom. At the close of the same year a question was agitated in parliament "quhider Orkney and Zetland sal be subiect to the commone law of this realme, or gif thai sal bruike thair awne lawis?—when it was found that thai aught to be subiect to thair awne lawis." Lord Robert Stuart, on obtaining possession of the earldom, had as commendator or abbot of Holyrood, exchanged his temporalities with the bishop of Orkney for those of the bishopric, thus uniting in himself the rights both of the Earl, or the Crown and the bishop; and, a little

before the queen's marriage, he got a right to her third of the revenues of Holyrood abbey, or a pension of £990 of money, besides a large quantity of every sort of grain, and was in consequence prevented from clamouring at the change which was made in favour of Bothwell. The earldom, or crown estate of Orkney, is said by some authorities to have been resumed by him on Bothwell's disgrace; but from an extant act of parliament it appears to have, for 14 years, or till 1581, regularly yielded up its revenues for behoof of the Crown. In 1581 it was restored to him by act of parliament, with the same latitude of possession and loftiness of jurisdiction as when originally granted by Mary; in 1587 it was revoked by another act of parliament, and for two years afterwards was let out for £4,000 Scottish a-year, to Sir John Maitland of Thirlstane and Sir Ludovick Ballantine, who were respectively Lord-chancellor and Justice-clerk; in 1589 it was re-granted to Lord Robert Stuart for an annual rent of £2,073 6s. 8d. Scottish; and in 1591 it was infefed to his lordship in life rent, and his son Patrick in fee. After Lord Robert's death, which occurred in 1592, and another resumption made by the Crown, Patrick got charters, in 1600, of both the earldom and the bishopric, so that their joint rights were concentrated in his person; yet he obtained not, as Mary's grant gave to his father a right either to "the whole" lands and isles of Orkney and Shetland, or to the feudal superiority over the landholders, hut, on the other hand, was bound to administer justice according to the peculiar laws of the region before it belonged to the Scottish crown. Both his father and he, however, were proud, avaricious, cruel, and dissipated; and, whether they possessed power legally, or could wield it by extortion and usurpation, they cared not, provided they could so work it as to demolish the rights and liberties of their people, and amass for themselves the influences, the monopolies, and the possessions of tyranny. Udal lands and tenements were free from taxation to the Crown, or vassalage to a lord superior; they could not be alienated, except by what was called "a shynde bill" obtained with the consent of all heirs in the Fouldry court; and, at the death of a possessor, they were divided, without fine and in equal portions, among all their children. Earls Robert and Patrick aimed with their whole energy to destroy the system, and to introduce feudal tenures; they so summoned and adjourned the great Fouldry court, as to possess a master-key to its movements; they perverted both this court and every other by the introduction of their creatures; they silenced and overawed the refractory udallers by means of a licentious soldiery; and they employed their rights over the temporalities of the bishopric as a pretext for levying fines from such landholders as incurred any censure of the church. They, in consequence, wrested much landed property from the rightful owners, and terrified not a few of the udal proprietors into a surrender of their peculiar privileges, an acknowledgment of feudal vassalage, and an acceptance of tenure by charter. The rents of the earldom being paid chiefly in kind, too, they, in order to increase the amount of proceeds without changing the nominal hulk, twice arbitrarily increased in value the weights used in the country; raising the mark, which was originally 8 ounces, first to 10 and next to 12, and the lispund, which was originally 12 pounds, first to 15, and next to 18. Earl Patrick even excelled his father in outrageous despotism; he compelled the people to work like slaves in carrying on his buildings and other works; he confiscated the lands of the inhabitants on the most trivial pretences; he summarily distrained the

moveable goods of any man who dared to leave the islands without his own or his deputies' special licence; and—in crowning display of at once his savageness and his avarice—he ordained that "if any man tried to supply or give relief to ships, or any vessel distressed by tempest, the same shall be punished in his person, and fined at the Earl's pleasure." Such lugubrious wailings and indignant complaints were eventually and increasingly addressed to the throne, in appeal from his multiplied oppressions, that he was at length recalled, shut up in prison, and accused of high treason. His natural son, the hastard of Orkney, aided by about 500 persons—probably military retainers who identified their own interests with the family's illegal greatness—made an ineffectual attempt to achieve some feat in his favour. The miserable Earl was abhorred over the scene of his despotisms; he was violently suspected at court; he was vigilantly prosecuted by Law, the bishop of Orkney; he probably suffered from contorted and exaggerated because interested accusation; and, in 1612, by really a judicial murder, however foul were his crimes, he was ignominiously hanged at Edinburgh. His name, particularly in Shetland, continues to the present day to be mentioned with antipathy and disgust.

The lands of the earldom, under the pretext that a forfeiture might injure those proprietors who had resigned their udal tenures and taken out charters, were not, according to the usual course, declared forfeited immediately upon Earl Patrick's attainder. Many of the proprietors were instantly alarmed into the measure of asking and accepting charters from the Crown in the usual feudal form; and all, under apprehension that another taskmaster might be set over them akin in character to the two last, importuned the king to annex the islands inalienably to the Crown. James VI. thus all hut completed the ruin of the feudal tenures; and he, at the same time, mocked the distracted islands with a most unkingly double-tonguedness of treatment. He formally annexed "the lands and earldom of Orkney and Zetland to the Crown to remain in time coming," and he admonished the people by proclamation against all fear of the islands reverting "to their former condition of misrule, trouble, and oppression;" yet he made no restoration of the lands which had been unlawfully seized by the last Earls, he set up the rental of Earl Patrick as the rule for future guidance, and, to complete his tantalizing, he immediately began to let them out on high terms to a series of farmers-general. Sir James Stewart of Kilsyth held them for a brief period. Sir George Hay of Kinfauns, the Lord-chancellor, next rented them for 40,000 merks Scottish a-year; hut, probably finding them no great bargain, after they had been so long plundered by the two Stewarts, he resigned them at the end of 3 years. The inhabitants, after being for a short period oppressed without mercy by some other farmers-general, petitioned the king that no man might "be interponed between his majesty and them, hut that they might remain his majesty's immediate vassals." In response to this appeal the islands were, for a few years, closely annexed to the Crown; hut they again began to be leased out for rents, high or low according to the interest the lessees had with the court or the ministry, and to be subjected as before to such ceaseless maltreatment as was utterly incompatible with social prosperity, or with advance in the arts. In fact, for two centuries after their cession by Norway to the Crown of Scotland, Orkney and Zetland seem to have been much in the condition of a Turkish province undergoing the rival and emulating scourgings of a quick succession of rapacious pashas. In 1643, they were, with all the regalities belonging

to them, granted by Charles I. in mortgage to William, Earl of Morton, but were redeemable by the Crown in payment of an alleged debt of £30,000. They were, however, mortgaged by the next Earl to assist Charles, and were afterwards confiscated by Cromwell. At the Restoration in 1662, they were given back to the Earl of Morton; and under the arbitrary control of the Earls, Chamberlain, Douglas of Spynie, the Fouldry court was abolished. In 1609 they were again, by act of parliament, annexed 'for ever' to the Crown; and, during upwards of 30 years, they were anew leased out to various farmers-general. In 1707 they were restored in the old form of a mortgage—redeemable by the Crown for £30,000, but subject to an annual feu-duty of £500 to James, Earl of Morton, and were placed under his jurisdiction as their admiral and hereditary steward and justiciary. In 1742, Lord Morton, though his revenues from the islands were computed to amount to £3,000 sterling a-year, pretended that they did not yield a rental equal to the interest of the alleged mortgage, and contrived, on this pretext, to get an act of parliament declaring them irredeemable. In 1747, at the abolition of hereditary jurisdictions, he was compensated for those of Orkney and Sutherland with £7,500; and, in 1766, after being harassed with complaints, quarrels, and lawsuits, he sold the estate for £60,000 to Sir Lawrence Dundas, the grandfather of the present Earl of Zetland. One of the lawsuits, and the chief one which annoyed the Earl of Morton, was a judicial attempt on the part of the proprietors to get the weights which regulated their rental in kind restored to their original value; but it proved unsuccessful. Sir Lawrence Dundas, in his turn, met a similar defeat; for, conceiving soon after he made his purchase, that he was entitled to higher powers than had been wielded by his predecessor, he made an expensive but vain effort to get them recognised by the law-courts. In later times the Dundas family, who continue to enjoy the great estate, have flung many amenities over islands which were so long desolated by oppression, and have erected so many monuments in the hearts of the people, and sprinkled so many improvements over the surface of the soil, as furnish materials for an altogether new era in their history.

The lands which belonged to the bishops of Orkney, and which lay intermixed on every island, parish, and even township, with those of the earldom, were, about the close of the 16th century, so exchanged and compacted as to be substituted by continuous and unique lands in Pomona and other islands. The jurisdictions of the bishopric and of the earldom were, at the same time, rendered distinct, and instead of perpetuating the contentions which arose out of their union, began to be exercised with concord to the country. Bishop Law, by whose influence these changes were effected, and who interested himself much in the civil welfare of Orkney, was, in 1615, translated to Glasgow. His successor, threatened with excommunication by the General Assembly which met at Glasgow in 1638, and awed by its proceedings in pronouncing the abolition of episcopacy, quietly resigned his see. The bishopric was afterwards, for a short time, revived; nor, till about the year 1700, did it wholly yield to the ascendancy and final establishment of Presbyterianism. The revenues of the see have, since that period, been either held by the Crown, and managed by an agent, or leased out to the holders of the earldom, or to farmers-general; and at present they are under the control of the commissioners of the Queen's woods, forests, and land-revenues, to be expended, as is believed, for the benefit of the Crown.

ORMISTON, a parish in the middle of the western verge of Haddingtonshire; bounded on the north by Tranent; on the east by Gladsmuir, Pencaitland, and Salton; on the south by Humber; and on the west by Cranston in Edinburghshire. Its length, from north to south, is  $4\frac{1}{2}$  miles; its breadth, owing to deep indentations and projections on its east side, is exceedingly changeful, and varies from 3 furlongs to  $3\frac{1}{2}$  miles; and its area is 3,245 acres. The surface, along the southern frontier, is somewhat upland and bare; but everywhere else it is low, beautifully cultivated, and richly embellished with wood and hedge enclosures. About 30 parts in 33 of the whole area is in tillage; and between 160 and 180 acres are under plantation. Gardens abound, and, in two instances, send a large produce of fruit and vegetables to the Edinburgh market. The Tyne runs  $1\frac{1}{4}$  mile north-eastward in the interior, and  $\frac{1}{2}$  eastward along the south edge of one of the projections. It is here a mere streamlet, about 8 miles from its source, and does little more in summer than serve to drive a mill; yet it occasionally comes down in large freshets, and lays the adjacent meadows under water. Bellyford-hurn—a tributary of the Tyne in Pencaitland—flows eastward a mile along the northern boundary, and the same distance through the interior of a projection. Coal exists in at least three workable seams; but, south of the Tyne, appears to have been worked at a date beyond record, and is nearly exhausted. Some curious occurrences have transpired connected with the discovery of its excavated seams. Much of what remains lies at an inconsiderable depth beneath the surface. Limestone abounds in the south, and has long been extensively worked. Freestone is plentiful, and in several places has been quarried, but appears to be but an inferior building material. Ironstone seems to exist, but has not actually been discovered.—Nearly in the centre of the parish stands Ormiston-hall, a seat of the Earl of Hopetoun, the proprietor of the whole parish. Part of the old mansion-house of the manor stands about 200 yards to the west, and is consolidated with buildings which form the suite of offices and servants' houses. The modern mansion consists of four parts, three of them built at various periods since 1747, when the estate was purchased by the Earl of Hopetoun, and one by the former proprietor in 1745. In the old house George Wishart the Reformer, then under the protection of Cockburn its proprietor, was, in January 1546, made prisoner by the Earl of Bothwell, and thence led away to martyrdom, under the infamous Cardinal Beaton, at St. Andrews. In the garden flourishes a remarkable yew-tree, under which the venerable martyr is said to have occasionally preached. The tree is probably upwards of  $3\frac{1}{2}$  centuries in growth, having been considered old in 1561; it measures 18 feet in girth, 38 feet in height, and 180 feet in the circumference of its branches, or the area which they overlie.—In the south corner of the parish are vestiges of a circular camp, British or Danish. A profusion of roads chequers the area, and, among them, a turnpike from north to south. Population, in 1801, 766; in 1831, 838. Houses 185. Assessed property, in 1815, £4,446.—The village of Ormiston is pleasantly situated on the left bank of the Tyne, and on the turnpike-road through the parish,  $1\frac{1}{4}$  mile west of Pencaitland,  $2\frac{1}{4}$  miles south of Tranent, 6 miles from Dalkeith, 8 from Haddington, and 12 from Edinburgh. It consists principally of one broad street extending east and west. Some of the houses are of two stories; and these, as well as some cottages, are occasionally let to genteel families as summer retreats. Gardens are attached to all the principal houses, stocked with fruit-trees and shrubs, and, in some instances, well-

enclosed with stone-walls. The village is shaded with wood, stands in the vicinity of the Earl of Hopetoun's beautiful demesie, and presents soft but powerful attractions to lovers of quiet, balmy, rural landscape. Toward the end of last century it had a bleacfield, a starch-work, a distillery, and a brewery; but it is now bereft of them all, and has become the home chiefly of an agricultural people. In the centre of it stands an old cross, on the site of an ancient Roman Catholic chapel, which remained entire at the end of last century, and was then used as the parish school-house, but has since been removed. The village is a station of the Haddington itinerating libraries, and has a small library of its own. Population, in 1792, 600; in 1838, 330.—Ormiston is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Earl of Hopetoun. Stipend £230 4s. 3d.; glebe £15. Unappropriated teinds £210 13s. 11d. Schoolmaster's salary £29 18s. 9d., with about £30 fees. There are two private schools.—The ancient church was dedicated to St. Giles; and was granted, with its pertinents, to the hospital of Soutra. When the possessions of that hospital were annexed by the widowed queen of James II. to her collegiate church of Trinity in Edinburgh, the ecclesiastical revenues of Ormiston were distributed in equal shares among the four prebendaries of Ormiston, Gileston, Hill, and Newlands, belonging to her college. The estate of Peaston, which now forms the south end of the parish, was annexed to it after the Reformation; and previously belonged to Pencaitland. The descendants of the Orme, whoever he was, who gave name to the original parish, possessed it during the 12th and 13th centuries. In 1368 it passed by marriage to the family of Cockburn, and remained with them till the middle of last century. The Cockburns were, for several generations, distinguished as lawyers and statesmen, figuring illustriously both in the college-of-justice and in parliament. John, the last but one of the family, acted a prominent part in the negotiation of the National Union, and represented Haddingtonshire in successive parliaments of the United Kingdom from 1707 to 1741. But his grand fame is, that he was the grand promoter of modern agricultural improvement in East Lothian,—the model farming-ground of Scotland, the originator at Ormiston of the first bleachfield in the kingdom, and the introducer of various other though less signally useful arts and establishments.

ORMSA, a Hebridean islet about  $1\frac{1}{2}$  mile in circumference, lying north of Lunga, and separated from it by a narrow sound. A lighthouse was built on its western extremity in 1823-4.

ORONSAY, a small fertile island of the Hebrides, in the district of Jura and Colonsay, from which latter island it is separated by a narrow channel. The walls of a priory, said to have been founded by St. Columba, still remains, a fine relic of the religious antiquities of the Hebrides. See COLONSAY.

ORPHIR, a parish in the southern district of Pomona, Orkney. It is bounded on the north-west and north by Stenness and Forth; on the east by Kirkwall; and on the south and west by Scalpa flov. It is nearly a parallelogram extending from east-north-east to west-south-west, and measures 7 miles by about 3 $\frac{1}{2}$ . A range of hills runs along the north-western and northern boundary, lifting the highest summit 700 feet above sea-level; and the surface thence to the sea is a tumulated descent, giving, amidst a continued series of hills and dales, a prevailing southerly exposure. The eastern district is characterized by heathy rising grounds and large peat-mosses, whence fuel is supplied to both Orphir and Kirkwall. The soil of the other districts is pre-

dominantly clay or moss, separate or in mixture; and, when well-manured, it yields, even under indifferent culture, more than sufficient produce for local use. A few places near the coast have a rich loam mixed with stones. The Loch of Kirbister, a little south-east of the centre of the parish, is between 2 and 3 miles in circumference, abounds with excellent sea-trout, and sends off a streamlet of sufficient water-power to drive extensive machinery. The sea-coast, including sinuosities, extends to 12 miles; it has, in general, a bold rocky shore of from 40 to 50 feet high, and it is finely indented with bays and creeks, one of which, called the bay of Houtou, is protected by an islet at the entrance, and forms a safe harbour for small vessels. Mineral springs occur in every district; and one at Scoridale has long been famous for its tonic, diuretic, and antiscorbutic properties. Sandstone abounds; trap, of a kind suitable for building, is frequent; some excellent flag-stones are quarried; fine white and blue clay, such as serves for colouring hearth-stones, is dug up in Staugro-bay; and bog iron-ore is comparatively plentiful. The island of CAVA [vbich see] belongs to Orphir. About a mile east of it is a curiously formed rock or skerry, well-known to seamen, and fantastically called the Barrel of Butter. In the churchyard are the remains of a very ancient building, rudely resembling the Pantheon at Rome, a rotundo, open at top, 20 feet high, 18 feet in diameter and sending out, on the east side, a vaulted recess, the site probably of an ancient altar. Remains of Romish chapels—of which this seems to have been one—occur in every district. Barrows or tunuli are numerous. An ancient circular tower, about 180 feet in circumference, stands in the district of Swanhister, and probably was the residence of Sueno Boerstop, who was killed at the house of Paul, one of the Norwegian Counts of Orkney.—The parish is advantageously situated for commerce; and is traversed by the road from Kirkwall to Stromness. Population, in 1801, 864; in 1831, 996. Houses 210. Assessed property, in 1815, £1,166.—Orphir is in the presbytery of Cairston, and synod of Orkney. Patron, the Earl of Zetland. Stipend £158 6s. 7d.; glebe £12. There are a parochial school and two mortification schools. Salary attached to the former £26 with fees.—A hill behind the manse commands a view of twenty-five islands and twenty-three parishes, or of most of Orkney and much of Caithness and Sutherland, with a large expanse of the eastern and western oceans. Orphir is supposed to have its name from *yarfo*, or 'fire-land,' a species of fuel-earth with which its eastern district supplies the circumjacent country.

ORR (THE). See AUCHTERDERRAN.

ORR (LOCH). See BALLINGRAY.

ORRIN (THE), a river of the south-east of Ross-shire. It rises on the north side of Craig-Mon, 5 miles north of Loch-Monar, and has an easterly course of about 27 miles to the Conan, below Brahan-castle in Urray. A little below its source it expands into the lochlets Negin and Neriech. The Orrin is a very irregular stream; now very generally fordable, and now rolling along in sudden and vast floods which spread terror and devastation over lands adjacent to its banks. A wooden hridge thrown across it behind the manse of Urray, at the expense of Mr. M'Kenzie of Seaforth, was swept away by a flood in 1839; but has been replaced by a stronger erection at the expense of the county.

ORWELL, a parish in Kinross-shire; bounded on the west by Perthshire; on the north by Perthshire and the Kinross-shire section of Forgardenny; on the north-east, east, and south-east by Fifeshire; and on the south by Loch-Leven, and by Kinross

and Fossaway. Its greatest length, from north-west to south-east, is  $9\frac{1}{4}$  miles; its greatest breadth is about  $3\frac{1}{2}$  miles; and its superficial extent is about 21 square miles. The surface, in all the southern and south-eastern districts, is low, prevailingly level, and diversified with gentle swells and rising grounds; and thence it gradually rises into hilly heights, called the braes of Orwell, and then, toward the northern border, shoots suddenly up into a frontier range of the Ochills, with summits of about 1,000 or 1,100 feet above sea-level. About 500 acres are waste or pastoral; between 600 and 700 are under wood, principally oak, ash, and pines; and all the rest of the area is regularly or occasionally in tillage. The prevailing rock is the old red sandstone, extensively dislodged and not a little contorted by trap. A mass of clay porphyry, unusually hard and compact, occupies several miles in the west; and a smaller, though still vast, mass of greenstone occurs in the east. The stream called the South Queich begins to touch the north-west extremity of the parish a little below its source; and, before passing into Kinross, runs nearly 5 miles along the western and southern boundary. The North Queich rises very near the north-west extremity; makes some beautiful little cascades among the hills; and, over a course of about 6 miles south-eastward to Loch-Leven, drains the greater part of the parish. Pure water wells up in many a spring; and may anywhere be obtained by a brief boring. Loch-Leven touches the parish over  $1\frac{1}{2}$  mile along the north-east of the lake. The only village is MILNATHORT: which see. On the farm of Orwell, and near Loch-Leven, are two standing stones, respectively  $6\frac{1}{2}$  and 8 feet high. About half-a-mile south-east of Milnathort stand the ruins of BURLEIGH-CASTLE: which see. Among the Ochills stands Cairn-a-vain, formerly a prodigious collection of loose stones, but now much reduced by the loss of many hundreds of cartloads which were carried away for dike-building. The parish is traversed northward by the public road from Edinburgh to Perth, and eastward by that from Stirling to Cupar. Population, in 1801, 2,036; in 1831, 3,005. Houses 455. Assessed property, in 1815, £8,201.—Orwell is in the presbytery of Dunfermline, and synod of Fife. Patron, Graham of Kinross. Stipend £155 19s. 11d.; glebe £20. The parish-church was built in 1729; sittings 646. An United Secession meeting-house was built at Milnathort in 1764; sittings 756. An Original Burgher meeting-house was built at Milnathort in 1737, and rebuilt in 1821; cost £600; sittings 550. Stipend £100.—A small part of the parish is attached *quoad sacra* to Arngask. In the reign of Robert Bruce, Orwell was only a chapelry; and, in its ecclesiastical interests, was given by that king to the monks of Dunfermline. Besides the parish-school there are two private schools taught by females, and two others for general rudimentary education. Parochial schoolmaster's salary £34 4s. 4½d., with about £40 fees.

OTTER. See KILFINAN.

OTTERBURN. See LONGFORMACUS.

OTTERSTON (LOCH). See DALGETTY.

OTTERVORE, a piece of sea,  $4\frac{1}{2}$  miles by 2, at the north end of the Barra group of Outer Hebrides. It extends westward between Gigha and a vast powdering of islets on the south, and Fuday on the north, to the isthmus between the main body and the northerly peninsula of Barra. The name is sometimes applied, more largely, to the whole sound between Barra and South Uist.

OUDE (THE), a rivulet of Nether Lorn, Argyleshire. It rises among the braes of Lorn, and has a run of between 7 and 8 miles eastward to the head of Loch-Melfort, in the parish of Kilniver. About

2 miles below its source it expands, for  $1\frac{1}{2}$  mile, into Loch-Tralig.

OVERBIE. See ESKDALEMUR.

OVERTON, one of three divisions of the village of Smalholm, in the parish of Smalholm, on the turnpike between Kelso and Edinburgh,  $5\frac{1}{2}$  miles north-west of the former, Roxburghshire. Jointly with the other divisions, West Third and East Third, its population is 360.

OXNA, a small inhabited island in the parish of Tingwall, Shetland. It measures about 3 miles in circumference, and lies about 4 miles south-west of Scalloway.

OXNAM (THE), a rivulet of Roxburghshire. It rises in the parish of Oxnam,  $2\frac{1}{2}$  miles from the English border, runs  $5\frac{1}{2}$  miles north-north-westward to the village whence it derives its name, and then moves northward another mile through Oxnam, a mile on the boundary between it and Jedburgh,  $1\frac{1}{2}$  miles across the neck of territory which connects the main body of the northern division of Jedburgh with its eastern wing, and 2 miles through Crailing, past the village of that name, to the Teviot,  $\frac{3}{4}$  of a mile above the village of Eckford. Above the village of Oxnam it flows amid the glens and gorges of pastoral uplands; and afterwards it moves along in many serpentine windings between generally steep and romantic banks. Its tributaries are numerous, but all inconsiderable, and chiefly mountain rills in the parish of Oxnam. It abounds in excellent trout, and has a sufficient quantity of salmon to tempt the illegal practice of spearing by torch-light.

OXNAM—anciently ÖXENHAM—a parish in the eastern division of Roxburgh; bounded on the north by the northern section of Jedburgh; on the east by Hounam and Northumberland; on the south by Northumberland; and on the west by the southern section of Jedburgh and by Southdean. It is an irregular oblong, stretching north-north-westward, and runs out into a point on the north; and it measures 10 miles in extreme length, 5 miles in extreme breadth, and 33 square miles in area. The southern, and part of the eastern boundary, except for a brief way where it is touched by the English river Coquet, near the rilly source of that stream, is formed by the water-shed of the Teviots, between Blackhall-hill and Fairwood-fell, a distance of 7 miles. The swells or summits of the ridge have an altitude of less than 2,000 feet; but they lift the eye away to the German ocean, and command a magnificent and map-like view of the vast tract of alternately brilliant and luscious country enclosed between the screens of the Cheviot, the Hartfell, and the Lammermoor mountain-ranges. The interior, generally viewed, is a sea of dome-like hills, smooth and green, and gracefully curved in their outline, diminishing in altitude as they recede from the monarch heights of the frontier, and eventually admitting tillage up their soft ascents. One valley, the basin of the Oxnam, lies along the centre of nearly two-thirds of the parish, and is beautifully undulated and otherwise diversified in its surface. Ravines, and picturesque defiles, and romantic dells, ploughed up by the long action of the mountain streams, run in various directions among the hills, adorned, over much of their aggregate extent, with an imposing distribution, and a rich exuberance of natural wood. Belts and clumps of plantation, amounting in all to 600 acres, and consisting chiefly of the Scottish fir and the larch, climb the upland ascents, or crown the summits of the gentler eminences. So many elements of attractive landscape are foiled rather than marred by a frequent carpeting of heath and bent on the depressions or intervening flats of the hills. Pasture-grounds and arable lands are in the proportion to each other over the whole

of 36 to 5. The chief flocks are Cheviot sheep,—some of the choicest of that valued breed. Agriculture has made rapid strides both in reclaiming and enriching a various soil, and in improving its own skill and practices. The river Jed touches the parish, for  $1\frac{3}{4}$  mile on the west, and fringes it there with one of the most beautiful sections of its much and justly admired dell. A tributary of the Jed, akin to it in character, joins it at the point of its running against the parish, and previously traces for  $1\frac{1}{2}$  mile the western boundary. The Oxnam—see preceding article—drains the greater part of the parish. The Kail rises in several head-streams in the extreme south, and runs 4 miles northward into Hounam, at the distance all the way of about  $1\frac{1}{2}$  mile from the water-shed of the Cheviots. Limestone exists near the Jed; but being under a deep cover, and at a great distance from coal, cannot be worked. Sandstone, of firm texture and a beautiful whiteness, and believed to belong to the coal measures, abounds in the south, intersected by a thick dyke of trap. The transition rocks prevail in the north. A chalybeate spring of some repute wells up near Fairloans in the south. A Roman causeway—that which has been traced from Boroughbridge in Yorkshire to the Lothians by way of St. Boswells—forms the whole east boundary, and is a favourite resort and squatting ground of the border ‘muggers’ or gypsies. Three old forts—survivors of the numerous strengths which studded this battle-territory of a thousand Border raids, and places so strong in masonry that building materials may be taken more easily from a natural quarry than from their walls—exist in partial preservation respectively at Dolphiston, at Mossburnford, and on an eminence on the east side of Oxnam-water, about 500 yards west of the church. The chief landowners are the Duke of Roxburgh and the Marquis of Lothian. Two villages, Oxnam and Newbigging, which formerly made some rural figure, have—with the exception that the former continues to be ‘the Kirktown’—entirely disappeared. Annual fairs, for the sale of sheep and lambs, and a tryst for the hiring of shepherds, all of very recent establishment, are held on respectively the 31st of July, the 15th of October, and the 25th of March. A road, coming up from Jedburgh, whence the church is 4 miles distant, leads into the vale of the Oxnam at the church, and forks into two lines, one extending to the Roman causeway, and the other to the Jedburgh and Newcastle turnpike.—Population, in 1801, 688; in 1831, 676. Houses 118. Assessed property, in 1815, £8,248.—Oxnam is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £237 1s. 7d.; glebe £16. Unappropriated teinds £1,196 18s. 5d. Schoolmaster’s salary £25 13s. 4d., with £10 fees, and £7 10s. 4d. other emoluments. The ancient church belonged to the abbey of Jedburgh, and was served

by a vicar. A chapel, the ruins and cemetery of which still exist, stood at Plenderleith. The barony of Oxnam was given by David II. to Sir Duncan Wallace, and his consort the Countess of Carrick.

OXTON. See CHANNELKIRK.

OYKEL. See OICKEL.

OYNE, a parish in the district of Garioch, Aberdeenshire. It is bounded on the north-west and north by the river Shevock, which divides it from Inch and Culsalmond; on the north-east by the Ury, which divides it from Rayne; on the east by the parish of Chapel-of-Garioch; on the south by Monymusk; and on the west by Tough and part of Bremnay. The Don forms part of the southern boundary-line; and the rivulet Gady runs eastward through the parish to the Ury. The greatest length of the parish from north to south, is 6 miles; the greatest breadth is  $3\frac{1}{2}$  miles; and the superficial extent is about 11,000 imperial acres. The mountain of Bennachie towers aloft a little south of the centre of the parish; and, during winter, obstructs the access of a portion of the parishioners to the parish-church. The lands of Tillyfour, lying south of it, are comparatively infertile, and have only about 100 inhabitants. The lands on the north are rich and early; and usually salute harvest eight days sooner than any neighbouring parish. Part of the estate of Pittodrie lies within the houndaries, and is richly planted. Tillyfour-house, situated amidst much wood, is a pleasant summer seat, presiding over scenes of beauty and romance. Westhall-house rejoices in the centre of a profusion and a great variety of trees; and possesses the honour of association with some of the earliest modern plantations in the north. The old statist, writing 6 or 8 years before the close of last century, says:—“Mr. John Horn, advocate, about 90 years ago, beautified this place very much with several plantations of firs, which thrive so well, that it is said he himself was buried in a coffin made out of a fir-tree of his own planting. He likewise made out a fine avenue from the entry of his house, which at last ascends a pretty green hill, on the top of which he built a small lodge of two rooms, and called it Parnassus. He ornamented his seat with a great number of pleasure-walks, with statues in them, which show a great deal of taste, considering how long it is since these walks were laid out.” The antiquities are two Druidical temples, one of them of great extent.—Population, in 1801, 518; in 1831, 796. Houses 148. Assessed property, in 1815, £1,744.—Oyne is in the presbytery of Garioch, and synod of Aberdeen. Patron, Erskine of Pittodrie. Stipend £161 1s.; glebe £15 15s. The church was built in 1807. Sittings from 450 to 500. Schoolmaster’s salary £30, with £12 10s. fees, and £4 5s. other emoluments. A private school is conducted by a female.

## P

**PABBA**, a small island of the Barra group of Outer Hebrides. It lies  $6\frac{1}{2}$  miles south of the mainland of Barra,  $2\frac{1}{2}$  south-south-west of Sandera, and  $1\frac{1}{2}$  north-north-east of Mingala. Its length is nearly  $1\frac{1}{2}$  mile, and its breadth is about 1 mile. It consists of a single hill, all of gneiss, rising about 800 feet above sea-level, and presenting a somewhat precipitous face to the west. A few fishermen inhabit its eastern and flatter end.—The sound of Pabba divides the island from Sandera, and is studded with the islets Lingay and Grianimull.

**PABBA**, a flat and fertile pasture-island of the Skye group of Hebrides. It lies across the entrance of Broadford-hay in the Skye parish of Strath; and is  $2\frac{1}{2}$  miles south-east of Scalpa. Its figure is nearly a circle of about a mile in diameter. It forms a flat table scarcely 60 feet high; is abrupt and precipitous on the south-east side, but on the opposite side declines to the water's edge; and is surrounded with low reefs, which cause a foul shore. Its rocks are predominantly limestone, corresponding with those of the opposite coast of Skye; but toward the south-east they become micaceous shale, with numerous interspersions of rounded nodules of trap. At the north end of the island are remains of a small chapel.

**PABBA**, an inhabited island of the parish of Harris, and at the north-west end of the sound of Harris, in the Outer Hebrides. It lies  $3\frac{1}{2}$  miles north of Bernera, and  $2\frac{1}{4}$  west of Cape Difficulty, in the mainland of Harris. It measures  $2\frac{1}{2}$  miles from east to west, and  $1\frac{1}{2}$  mile from north to south. Seen from sea, it has a conical appearance; and it sends up a peak to probably 1,000 feet above sea-level. It formerly was, to a noticeable extent, productive in corn; but it has, in a great degree, been rendered infertile and desolate. Sand-drift has overwhelmed its south-east side; the spray from the Atlantic almost totally prevents vegetation in the north-west; and only on the south-west, where it is sheltered by Bernera, does the island retain anything like its former noted fertility.

**PAISLEY**, a parish in the upper and finest district of Renfrewshire. It is bounded on the north and north-east by the parishes of Renfrew and Govan, in which direction it approaches within 2 miles of the Clyde; on the east by Eastwood; on the south by Neilston; and on the west by Lochwinnoch and Kilbarban. In point of extent, this is the third parish in the county, and, as regards value, by far the first. From north-east to south-west, it stretches out nearly 9 miles in length. It is so deeply indented on all sides by corners of adjoining parishes, that its breadth varies from half-a-mile to  $5\frac{1}{2}$  miles, in consequence of which, notwithstanding its great length, and, in some parts, breadth, it only contains 16,153 imperial acres, which may be arranged thus:—Arable or in cultivation, 12,500; natural pastures and meadows, 1,500; moss, sites of houses, roads, waters, &c., 1,153; woods and plantations, 1,000. The surface, for the most part, waves gently, and frequently swells into beautiful little eminences. A considerable portion to the north of the town of Paisley is a perfect level, having been anciently moss, which extended in 1719, when a survey was made, to 300 acres, but has since been mostly reclaimed by the operation of burning. The southern border of the parish rises into a range of hills called Paisley or Stanely Braes, known also, at least in one part, as 'the Braes of Gleniffer,' which

have been celebrated in song by Tannahill. Their highest point is 760 feet above the surface of the river Cart at high-water mark at Paisley. Though interspersed with moss and heath, they afford good sheep-pasture, and where they decline into lower ground, a considerable part is in cultivation. In these heights there is a picturesque glen with a waterfall. The view from Duchal-law, the eastern summit, is varied, beautiful, and extensive, comprising the towns of Glasgow and Paisley, with villages, mansions, and hamlets, thickly scattered. The soil of the parish is, in general, thin, with a bottom of gravel, more frequently of till, very retentive of moisture. In the flat grounds, and along the banks of the rivers, it is rich and fertile; less so, thinner, and more stony, as it rises to the south.—The principal river is the **WHITE CART**: which see. See also the **BLACK CART** and the **LEVERN**, which partly bound the parish. Several rivulets proceed from the hills on the south. One of these, bearing the pretty name of the **Espedair**, and aptly termed in ancient Latin writings a torrent (*torrens*), comes hawling down to the White Cart, into which it falls above the Abbey-bridge of Paisley. To the westward are the Candren and Altpatrick burns, which lose themselves in the Black Cart. Near the Candren is a saline spring, called Candren-well, a pamphlet strongly recommendatory of which was written by the late Robert Lyall, M.D. Within the town is the Seed-hill-well, a slightly mineralized spring, which was formerly used as a tonic.—Coal, sandstone, limestone, greenstone, and ironstone, abound: see, in particular, **HOUSEHILL**, **HURLET**, and **QUARRELTON**. The principal sandstone quarry is that of Nitshill, which gives employment to nearly 100 men. Aluminous schist is abundant at Hurlet. Fire-clay and blue-clay are prevalent in the lower part of the parish; and potter's-clay occurs at Brediland, where coarse earthenware is manufactured.—With regard to estates and mansions, those of **HAWKHEAD**, **HOUSEHILL**, and **JOHNSTONE**, have been already noticed. About a mile east from Paisley is the estate of Ralston, long possessed by the respectable family of Ralston "of that ilk," by whom it was sold about the beginning of the 18th century. In 1800, nearly the whole of it was acquired by the late William Orr, Esq., who built a handsome mansion, called Ralston-house, on part of the adjacent lands of Ingliston, which he had, 3 years previously, bought from the Earl of Glasgow. Throughout the parish, and especially in the vicinity of the town, there are many neat villas.—The parish contains not a few objects of antiquity. Near the base of the Gleniffer-hraes is an old tower called Stanely-castle, which is of unknown date. This harony first occurs in the 14th century, as belonging to the Dennistons, from whom it passed to the Maxwells, and from them, in the 17th century, to the Lords Ross of Hawkhead, to whose descendant and representative, the Earl of Glasgow, it now belongs. The structure consists of a quadrangular body, with a projecting rectangular tower to protect the entrance; has contained four stories; and is about forty feet in height. A cornice at the top, the corbels of which project considerably, gives an agreeable finish to the pile. It was unroofed in 1714, and has since remained in a ruinous condition. It stands at the south-western extremity of the reservoir lately formed for supplying Paisley with water. The reservoir has

given an entirely new character to the appearance of the venerable ruin. They are mutually improved; the fine sheet of water supplies the place of bare uninteresting fields, and the castle—"yon hoary veteran, grey in arms,"—imparts grace and dignity to the scene.—In the field on the south of the castle, are the shaft and pedestal of an ancient stone cross, between four and five feet high, the cross piece at the top being awanting. On the edges, the remains of wreathed work are visible. Semple (p. 238,) mentions a similar object, called 'the Stead-Stone cross,' as existing in his time at Auldhar, 2 miles, or so, to the east. He calls them 'Danish stones;' but they were more probably devotional crosses, set up in Popish times. On a rock at Harclaw Craigs, in the same neighbourhood, are 72 small holes of an oval form, an inch deep, and placed at irregular distances, the origin of which is unknown.—On the right bank of the Levern, below Barrhead, is the ruined tower of Stewart's Raiss, once the property of Stewart of Halrig, a branch of the noble family of Darnley.—Cardonald, an antique structure, embowered in wood, on the right bank of the Cart, 3 miles east of Paisley, has belonged to the Blantyre family since the reign of James VI., and was once a seat of theirs, but is now let to various tenants.—Adjacent to the town, on the south-east, is the harony of Blackhall, belonging to the Shaw Stewart family, and granted to their ancestor, Sir John Stewart, by King Robert III. The charter is dated on the 12th day of December, in the 6th year of the King's reign, which, as he ascended the throne on 19th April, 1390, corresponds to the year 1395, not 1396, as has hitherto been represented. The house is a strongly built plain old pile, and affords a specimen of the confined and homely accommodation enjoyed by families of consequence so recently as 1710, when Craufurd mentions it as "one of the seats" of the Blackhall family. Latterly it was occupied by a farmer, but now it is unroofed and deserted, and presents a very dismal appearance. Of the "beautiful planting" with which it was adorned in Craufurd's time, not a shrub remains.—On the western side of the parish lay the harony of Cochrane, the original seat, and for five centuries the property of the family bearing that surname, ennobled as Lords Cochrane and Earls of Dundonald. About the year 1750, it was sold by Thomas, 8th Earl of Dundonald; and as his lordship, 16 years afterwards, sold the abbey lands of Paisley, the family ceased to have any connection with a county where they had long been of great consideration. The greater part of the estate of Cochrane now belongs to Mr. Houstoun of Johnstone. The ruins of the manor-place have been completely swept away since 1810, and the plough now passes over their site.—To the interesting localities of CROOKSTON and ELDERSLIE, separate articles have been devoted. The Abbey of Paisley, by far the most important antiquity in the district, will be more appropriately introduced hereafter.

The TOWN OF PAISLEY is situated near the centre of the parish, and is spread out on both sides of the river White Cart, 3 miles from its junction with the Clyde. The distance of the cross of Paisley from that of Glasgow is  $7\frac{3}{4}$  miles. From Greenock, Paisley is distant 16 miles, and from Edinburgh 52 miles; all these calculations being by the turnpike roads. The original hurgh, or older part of the town, is chiefly built on and around a fine terrace-like eminence that runs westward from the Cart, and partly on the north side of a similar eminence running parallel on the south. On the east side of the river, which is crossed by three stone-bridges, the ground is level, and is principally occupied by the New-town, the building of which was commenced in 1779, having

been planned and feued out by James, 8th Earl of Abercorn, the proprietor of the ground on which it stands, who named the most of the streets in honour of the manufactures of the place. Contiguous to these, but forming no part of the plan, are Wallneuk, Croft, Smith-hills, and other streets, which were begun earlier in the same century. The suburb called the Seedhill is of much older date, and is the only part of the town, on this side of the river, which belongs to the original hurgh. On the east of the town is the suburb of Williamsburg; on the south are Dovesland, Lylesland, and Charleston; and on the west Maxwelton, Ferguslie, and Millerston. The parliamentary burgh, as formed under the act of 1832, includes the old and new towns, with the above and other suburbs, and is spread over a surface of about 3 miles by  $2\frac{1}{2}$ , including a very small portion of the parish of Renfrew. From the nature of the surface, and the manner in which the streets branch out on the low grounds, leaving open space between them, it was thought proper, in defining the parliamentary hurgh, to draw a regular boundary, by taking points chiefly on rising grounds. To have followed any other course, would have made intricate boundaries; and it was necessary also to leave space for the increase of the town. The main street runs from east to west, under various names, for about 2 miles, forming part of the road from Glasgow to Beith and the coast of Ayrshire. Another long line of streets passes through the town from north to south—but with some deflections—being the continuation of the road from Inchinnan, and merges in that to Neilston. Although the situation of Paisley is pleasant, it cannot, in point of elegance, cope with some of the larger towns of Scotland. Many of the streets, it is true, are regularly formed, and of handsome houses there are not a few; but the effect of these is often marred by the lowly thatched dwellings with which they are surrounded. An accurate plan of the town and its environs, from an actual survey by James Knox, was published in the year 1822; and a new edition, with the necessary changes and improvements, by George Martin, was published in 1837.

Though of comparatively recent date as a seat of manufactures, Paisley is of venerable antiquity. It was the site of a station formed by the Romans during their occupation of Scotland between the years 80 and 446, and designated by Ptolemy, the ancient geographer, Vanduara. By Camden it is called Rauduara, and by Chalmers, in his Caledonia, Vanduaria, one or other of which has been usually adopted by subsequent writers; but they were undoubtedly in error, as the word mentioned by the geographer, given in Roman characters, can have no other form than Vanduara. This was probably a Latinized modification of the British words *wen dur* (white water), applied by the natives to the White Cart, which flowed past the eastern side of the encampment. Misled by the fancied similarity of name, Camden regards Renfrew, which is 3 miles to the north, as the site of the station; but the lowness of the ground there rendered it quite unsuitable for a place of defence and observation; whereas Paisley was peculiarly fitted for such a purpose, as it occupied an isolated height, and commanded an extensive view of the surrounding country, including the Roman road down Clydesdale, and the termination of Antoninus' wall at Duglass. But we are not left to conjecture respecting the site of the station in question; for writers of authority have given minute descriptions of considerable remains as existing at Paisley at no distant date: We allude to Bishop Gihson\* and

\* Gihson's edition of Camden's Britannia, p. 918.

Principal Dunlop,\* both of whom wrote in the end of the 17th century, and George Craufurd,† whose work was originally published in 1710. All their accounts are to the same effect; and with regard to Dunlop and Craufurd, it is to be observed that they resided in this neighbourhood, and had every opportunity for inspecting the objects described. Principal Dunlop says:—"At Paisley there is a large Roman camp to be seen. The prætorium, or innermost part of the camp, is on the west end of a rising ground, or little bill, called Cap Shawhead, on the south-east descent of which bill standeth the town of Paisley. The prætorium is not very large, but hath been well fortified with three fousées and dikes of earth, which must have been large, when to this day their vestiges are so great that men on horseback will not see over them. The camp itself hath been great and large, it comprehending the whole hill. There are vestiges on the north side of the fousées and dike, whereby it appears that the camp reached to the river of Cart. On the north side, the dike goeth along the foot of the hill; and if we allow it to have gone so far on the other side, it hath enclosed all the space of ground on which the town of Paisley stands, and it may be guessed to be about a mile in compass.‡ Its situation was both strong and pleasant, overlooking the whole country. I have not heard that any have been so curious as to dig the ground into this prætorium; but when they tread upon it, it gives a sound as if it were hollow below, where belike there are some of their vaults. Near to this camp, about a quarter of a mile, stand two other rises or little bills, the one to the west, the other to the south, which, with this, make almost a triangular form, where have been stations for the outer guards. The vestiges of these appear, and make them little larger than the prætorium of the other camp, of the same form, without any other fortification than a fousée and dike." From this description, it is manifest that the prætorium, or general's quarter, stood on the site of the present bowling-green at Oaksbawhead, and that the two hills occupied as outposts were at Woodside and Castlehead. The expansion of the town, and the cultivation of the country, have almost obliterated these interesting memorials of the invaders. In support of the above account, we may add, that Horsley in his *Britannia Romana*, published in 1732, (p. 377,) takes Paisley to be Vanduara, and says;—"There are yet some visible Roman remains at it, as well as a military way leading to it." This way was traced by Gordon in 1725, but can be no longer seen. It diverged to the left at Glasgow, from the great Clydesdale road, and passing the Clyde at a ford which existed till 1772, went across the country to Paisley. The well-known street in Paisley, called Causewayside, may have taken its name from its running by the side of the Roman causeway. In Bleau's map, 1654, "Causwaysid" is represented as at a little distance from the town. Beyond Paisley, on the west, no Roman station has yet been found, though some roads have been traced, and coins and armour discovered.

The Romans having finally quitted Scotland in the 5th century, the name of Vanduara was lost, and no place connected with its site occurs till the year 1157, when King Malcolm IV. granted a charter in favour of Walter, the son of Alan, first of that family, Steward of Scotland, confirming a gift (not now extant) of certain extensive possessions which King

David, who reigned from 1124 to 1153, had conferred upon Walter. Lands called 'Passeleth' formed part of those specified in the grant, and were identical with the modern Paisley.§ There, on the east bank of the river, Walter founded a monastery, about the year 1163. At that time there does not appear to have been any village at the place, but one soon arose on the opposite bank, inhabited by the retainers and "kindly tenants" of the monks, to whom, as it stood on their lands, it belonged. In 1488, the village was created a free burgh-of-harony, but for some centuries it made little progress, the population having been only 2,200 in 1695. A view of the town and abbey, in 1693, is given in Slezer's 'Theatrum Scotæ.' The earliest symptom of external traffic occurs about the same time, in Principal Dunlop's 'Description of Renfrewshire,' where it is stated (p. 145,) that by the river "boats come to Paisley with Highland timber and slates—6,000 in a boat—fish of all sorts, and return with coal and lime." Thus we find that, in the end of the 17th century, coal and lime were sent from hence to the Highlands, in return for timber, slates, and fish; but there is no notice of any manufactures: yet there must have been some such, for Craufurd only a few years afterwards says (p. 61.):—"This burgh has a weekly mercat, on Thursday, where there is store of provisions. But that which renders this place considerable is its trade of linen and muslin, where there is a great weekly sale in its mercats of those sorts of cloath; many of their inhabitants being chiefly employed in that sort of manufactory." About the same time (1710) Hamilton of Wishaw (p. 73) described Paisley as "a very pleasant and well-huilt little town; plentifully provided with all sorts of grain, fruits, coalls, peats, fishes, and what else is proper for the comfortable use of man, or can be expected in any other place of the kingdom." From this graphic notice, Paisley appears to have been a very desirable place of abode. It then consisted of one principal street (the High-street), about half-a-mile in length, running westwards from the river, with some wynds and lanes in different directions.

It was not long after the Union with England, in 1707, when a free trade was opened with that country, that the spirit of manufacture began to show itself in Paisley. The fabrics produced were made upon such just and economical principles, and with so much taste and judgment, that they found a ready market not only at home, but likewise in the neighbouring kingdom. At first they consisted of coarse checkered linen cloth, and imitations of striped muslins, called hengals; afterwards of checkered linen handkerchiefs, some of them fine and beautifully variegated by the manner in which the colours were disposed. These were succeeded by fabrics of a lighter and more fanciful texture, consisting not only of plain lawns, but likewise of such as were striped with cotton, and others that were ornamented with a great variety of figures. About the year 1730 the making of white sewing thread—known by the name of *ounce* or *nuns' thread*—was begun by the inhabitants, and was prosecuted to such an extent, that Paisley became the principal seat of that manufacture. Towards the end of the century it began to decline, and was gradually superseded by an article made of cotton, in which branch eight or nine factories, propelled by steam, are now employed. This

§ In ancient deeds the name is also written *Passelet*, *Passelay*, and (Latinized) *Pasletum*. It afterwards became *Paslay*, *Pasley*, and finally, in the 18th century, assumed the present form—*Paisley*. Of this name various etymologies have been suggested. Those who are curious in such investigations are referred to Mr. Ramsay's book on Renfrewshire, p. 6, and the New Statistical Account of Paisley, at the beginning of the article.

\* Description of Renfrewshire, in Appendix to Hamilton of Wishaw's work, printed by the Maitland Club in 1831, p. 145.

† Craufurd's Renfrewshire, ed. 1818, p. 14.

‡ This, it must be recollected, means the small town, as it existed about the year 1690.

cotton thread meets with an extensive sale throughout the kingdom. By the middle of the 18th century, the making of linen gauze was a considerable branch of trade in Paisley. In 1759 the manufacture of silk gauze was first attempted here in imitation of that of Spitalfields. In consequence of the taste of the masters, and the patient application of the workmen, their success was complete; and the result was, that elegant and richly ornamented silk gauzes were issued from Paisley in such vast variety as outdid everything of the kind that had formerly appeared. Companies came down from London to carry on this manufacture in Paisley, where it prospered to an unexampled extent. Indeed, it not only became the great distinguishing business of the town, but it filled the country round to the distance of 20 miles, and the traders engaged in it not only had warehouses in London and Dublin, but employed persons in Paris and other great towns on the continent for selling their goods. About 1785 the change of fashion, on which this trade must entirely depend, had an unfavourable effect. It was gradually dropt, and as it was necessary that new and varied fabrics should be brought forward to meet the change of fashion, muslin goods next engaged the attention of the artisans of the district. The skill of the Paisley weavers was consequently directed to this object, and productions from their looms were soon exhibited which surpassed the muslins of any other part of the kingdom. This branch rose to an unexampled height of prosperity. Of late years comparatively little has been done in it; but the fabrics, which are chiefly designed for the London market, are not surpassed anywhere in point of taste and elegance of execution. The ornamenting of muslins by fine needle-work employs a great number of young women, and is carried to great perfection. In 1817 the silk gauze began to revive, and has since thriven well; so much so that Paisley now furnishes nearly all the silk gauzes that are used in the kingdom, with the exception of those exported from France.

In 1805 the shawl manufacture was introduced in this place, and has gradually become the staple trade of the place. Imitations were at different times made of Thibet shawls and Cashmere shawls, and of the striped scarfs and turbans worn by the nations of the east, which, from their resemblance to the skin of the animal of the name, are called zebras. For making the Cashmere shawls the genuine wool is imported, and the first cloth of this description made in Britain was fabricated in Paisley. Another beautiful and ingenious species of shawl manufactured here is that known by the French name of the caterpillar, chenille. This name it received from its variegated colour and softness of feel; and it is often labelled in shops with the very descriptive words, *velours au soie* (velvet on silk). About the year 1823 the manufacture of crape dresses, damask and embroidered shawls, similar to those imported from Canton, was introduced to Paisley, and has since been extensively prosecuted. But the shawls chiefly made now are of three qualities;—the first is wholly silk; the second, half silk and half cotton; the third, wholly cotton. The total sales, in 1834, were estimated at nearly a million of pounds sterling, and in subsequent years they were considerably greater. Machinery, invented by a Frenchman, has, since that year, been advantageously employed in finishing the shawls, in the operation of *clipping*, which was formerly done in a tedious and comparatively clumsy way by the hand. All the trades depending upon the shawl branch have necessarily increased, in particular that of dyeing, in which from 400 to 500 hands are employed. In the beginning of 1837 the number of looms employed in all kinds of weaving in Paisley

was ascertained to be about 6,000; of which 5,700 were employed by Paisley houses, and the remaining 300 by Glasgow ones. About 2,000 looms were employed in the country by Paisley capital, chiefly in the neighbouring villages, but including some hundreds in Kilmarnock, Perth, Largs, Strathaven, &c. At that time the number of apprentices to the looms in Paisley was 728,—harness-weavers, 5,350; plain weavers, 650; female weavers, 40,—in all, 6,040. Each harness-weaver requires a draw-boy, for whom he pays, on an average, 3s. 6d. per week off his earnings. The jacquard machine, used in place of a draw-boy, has lately been attempted here in an improved form.

In the town there are two large factories for spinning cotton, and one on a smaller scale; one large silk throwing mill; and one power-loom factory for cotton cloth used in the printing of silks and other fabrics, has lately been attempted, but on a small scale. The town has also several founderies of iron and brass, flour-mills, and timber-yards, three breweries, two distilleries, one large soap-work which has been in operation since 1776, and one large tan-work which was established about the same time. In and around the town are several bleachfields. We do not here take any account of the mills and other works at Johnstone, Elderslie, and other villages at some distance, though within the limits of the original parish of Paisley.

Besides the manufactures before-mentioned, others have at different times been carried on here. About 1748 a large stocking-factory was established in New-street, and some time after other two were commenced in the town, but the business was given up about 1760. In 1772 the fabrication of silk ribbons, both flowered and plain, was begun, but it only lasted for six years. In 1788 a company began the manufacture of tapes, for which a low range of buildings, called 'the Knitting-factory,' was built on the north side of the town, on the line of the road to Greenock. In 1818 about 100 people were employed in this branch, and produced goods of the value of £6,000 yearly.

Paisley was the seat of a regality court, but had no corporate rights or separate municipal jurisdiction till 1488, when it was erected into a free burgh-of-barony by charter from King James IV., granted in favour of the abbot of the monastery, who, as superior, was invested with the right of electing annually a provost, bailies, and other officers. In 1490 the abbot, George Shaw, with consent of his chapter, disposed the burgh, with sundry lands and privileges, to the provost, bailies, burgesses, and community thereof, to be held of him and his successors for payment of certain burgage farms and annual rents. King James' charter having been granted during his minority, it was confirmed by him in 1512. In 1648 the burgh obtained from parliament a ratification of its rights and privileges. Lord Cochrane, afterwards Earl of Dundonald, having, as will appear in the sequel, become superior of the burgh, the bailies and community, in 1658, purchased from him the superiority of the burgh, and the right of electing the magistrates; and in 1665 they obtained an independent tenure from the Crown by charter of King Charles II. Though Paisley is in form a burgh-of-barony, its jurisdiction and privileges are, in most respects, similar to those usually possessed by royal burghs. Real property within the burgh is held in feu of the magistrates, council, and community. According to an ancient and peculiar practice (the validity of which has been sanctioned by the Supreme court) investiture was given in burgage lands—but not houses—by a very simple process. The heir, or other person holding a con-

veyance to lands, and desiring to be entered or invested in place of the ancestor, or grantor of the conveyance, appeared personally, or by attorney, and, in the usual manner, made symbolical resignation of his right in the hands of the magistrates, for the purpose of obtaining what is termed 'new and heritable booking.' This 'booking' consists in the registering of the *res gesta* (including a description of the land, and a statement of the party's right in connexion with the person last 'booked') in the chartulary of the burgh; and an authenticated copy or extract under the hands of the town-clerk, was held to complete the investiture, without charter, sasine, or any other written instrument. This practice, however, became exposed, in process of time, to great inconveniences, and is now little resorted to, except in the transmission of property in the different churches. It seems to have come down from the time of the monastery, when the entry of vassals was recorded in its books. Till 1739 the burgh was governed by two bailies; but in that year the magistracy was enlarged to three bailies, a treasurer, and seventeen councillors. In 1812 the municipality was increased by the appointment of a provost, the office having remained in abeyance since the erection of the burgh. Under the act of parliament, passed 28th August, 1833, the council is composed of a provost, four bailies, a treasurer, and ten ordinary members. The magistrates are *ex officio* justices-of-the-peace for the county; and the provost holds, in addition, the honourable office of deputy-lieutenant. In 1837 there were forty-two justices-of-the-peace residing in the town and neighbourhood; in 1841 they amounted to 60. The Report made by the Commissioners on Municipal Corporations, stated the heritable property of the burgh, in the year from September 1832 to September 1833, as worth £53,914 8s. 7d., according to a valuation made upon oath by persons appointed for the purpose. Added to this, debts due to the community to the amount of £4,210 14s. 11d., made the property of the burgh amount altogether to £58,125 3s. 6d. Its revenue during the same year amounted to £3,848 12s. 7d., arising from rents of houses, lands, and church-seats, casualties of non-entry, feu-duties, and hurgess entries, dues of river and flesh-market, and other items. The expenditure, including the payment of the interest of debts during the same period, had been £3,778 14s. 4d., leaving a surplus of £4 18s. 4d. in favour of the town for that year. The debts of the burgh, in 1833, amounted to upwards of £33,000, leaving a surplus of property or assets, in favour of the town, of about £25,000. The commissioners say: "It appears, on inspection of the books, and from the annual statements of balance sheets, that this debt has been gradually increasing since the year 1802, when it was about £18,000. But during that time many public works have been executed by the magistrates, which were stated to have rendered the contraction of these debts unavoidable; nor did it appear that there had been any misapplication of the funds." In September 1841 the revenue of the corporation amounted to £3,474 1s. 9d. The value of its property at that time was £69,047 15s. 1d.; and the debts due by it were £43,086 14s. 9d.; leaving a surplus, in favour of the community, of £25,961 0s. 4d.

Under the Reform act of 1832, Paisley returns one member to parliament. Previously the town had no voice in the representation, farther than that, till the year 1770, the chief magistrate voted in name of the burgh, at all elections of a member for the county. Within four years from the first election under the Reform act, Paisley had not fewer than four representatives, namely, Sir John Maxwell of

Nether Pollock, Baronet; Sir Daniel K. Sandford; Captain Alexander G. Speirs of Culcreuch; and the present member, Archibald Hastie, Esq., a native of the town and a highly respectable merchant in London. These rapid changes were caused by the resignation of the three first members. The constituency, parliamentary and municipal, as ascertained in 1841, amounted to 1,175. The ancient boundaries of the burgh, described in the charter, are much less than those fixed on for parliamentary and municipal elections. These last include that part of the town on the east side of the Cart, together with a large agricultural district which lies wholly in the Abbey parish, except a very small portion on the north, belonging to the parish of Renfrew.

In 1806 an act of parliament was passed for forming two police-establishments, one for the burgh comprising nine wards, and one for the suburbs comprising six wards. This separation having been found inconvenient, the establishments were united in 1836. Each ward returns two commissioners, making thirty in all, besides the sheriff-substitute, and the provost and bailies, who are commissioners *ex officio*. The right of election is vested in householders who pay £5 or upwards of yearly rent. The expense is defrayed by an assessment on the inhabitants. The income for the year ending on the first Monday of October 1841, was £2,634 17s. 6d., and the expenditure £2,417 17s., leaving a surplus income of £217 0s. 6d.

Paisley is lighted with gas, in virtue of an act of parliament passed in 1823, by which a company was incorporated. The capital was £16,000, which has since been doubled. The works are advantageously situated on the north-west of the town.

Until lately great inconvenience was experienced from the want of a sufficient supply of water. Some of the inhabitants drew it from public and private wells, and from barrels and cisterns into which rain was conveyed from the roofs of houses; while many others purchased water from persons who made a trade of carting it along the streets in large barrels, and selling it at the rate of one penny for ten gallons; the water thus sold being partly filtered from the river, and partly procured from wells and springs in the neighbourhood. In 1825 a company was formed, and an act of parliament obtained, for raising water from the river; but objections by the proprietors of the Sacl and Seedhill mills, to the abstraction of water without an amount of compensation to which the company were unable or unwilling to agree, caused the scheme to be abandoned. A few years afterwards an ingenious and much respected townsman, James Kerr, M.D., after a laborious examination of the Gleniffer-hills, called the attention of the public to the practicability of procuring from thence an ample supply of the desired element, by the interception of the drainage and the formation of a reservoir at Stanely. The scheme having been approved of, a capital of £40,000 was speedily subscribed, and in 1835 an act of parliament for carrying the scheme into effect was obtained. The works were commenced in 1836; were opened on 13th July, 1838; and have since been in full operation. Perhaps there are none in Britain so perfect in design, and so beautifully and substantially executed.

Paisley enjoys great facilities of communication with all parts of the country. Turnpike roads lead to it in various directions. A canal from Glasgow to Johnstone, opened in 1811, passes Paisley. By it goods and passengers are conveyed. It was originally intended that this canal should proceed to the sea at Ardrossan, but the intention has been abandoned. It is led over the river by a beautiful aqueduct bridge on the east side of Paisley. A railway for

the conveyance of goods and passengers between Paisley and the river Clyde near Renfrew-ferry—a distance of 3½ miles—was opened in 1837. The line of railway to Glasgow and Ayrshire, opened in 1840, and that to Greenock, opened in 1841, have been described in separate articles. In consequence of a short canal, to avoid the shallows at Inchinnan bridge, having been cut, and of the river Cart having been deepened soon after the year 1786, the river is navigable up to the town for vessels of from 60 to 80 tons burthen. Additional improvements upon it, for which an act of parliament was obtained, have been in progress since 1835. The expenditure on these for the five years ending November 1840, amounted to £19,032 7s. 4½d. A branch of about ¾ of a mile in length from the Great canal to the Clyde, nearly opposite the mouth of the Cart, was opened in 1840, for the benefit of the Paisley trade.

With regard to public buildings, the first place is due to the Abbey-church of the monastery, which, as has already been incidentally stated, was established here by Walter the High Steward, about the year 1163. It was founded for monks of the Cluniac order of Reformed Benedictines, who were brought from the priory of Wenlock in Shropshire, his native country, and was specially dedicated to St. James the Apostle, St. Mirinus, and St. Milburga. The latter was the patroness of the parent-house of Wenlock. Mirinus—or, as he is popularly called, Mirren—was a confessor who, in early times, passed his life in this vicinity, and became the tutelary saint of the place. The monastery was so munificently endowed by the founder and his successors, and other pious persons, that it became the most opulent in the south of Scotland, with the exception of Kelso. By the original constitution it was ruled by a prior, but in 1219-45 it was raised to the rank of an abbacy. This was the burying-place of the Stuarts before their accession to the throne of Scotland; and even after that period, it was sometimes employed as such, Robert III., and the two consorts of Robert II., having been entombed here. Fordun records that this monastery was burnt by the English in 1307. It was afterwards rebuilt, and greatly enlarged and embellished. The greater part, if not the whole of what now exists, appears to have been built in the 15th century, by Abbot Thomas Tarvas, who died in 1459, and Abbot George Shaw, who ruled here from 1472 to March 1498-9.\* A tower or steeple which had, by its own weight, and the insufficiency of the foundation, given way ere it was well completed, was rebuilt at immense cost by John Hamilton, the last abbot, in the 16th century; but about the end of the same century it again "fell with its own weight, and with it the quire [choir] of the church."† The remains of the strong clustered pillars that supported the tower are still to be seen. The buildings of the monastery, with its orchards and gardens, and a small park for fallow-deer, were surrounded by a magnificent wall, upwards of a mile in circumference, formed of squared freestone, and adorned with statues. This wall was constructed by Abbot Shaw, in 1485, as appears from an inscription on a stone which was originally fixed on it, and now forms the lintel of a house in Lawn-street. The wall remained nearly entire till 1781, when the Earl of Abergorn sold the stones to the feuars of the New Town, by whom they were used in building their houses. A portion which has escaped destruction is still to be seen in its place near the Seedhill bridge.

\* See the Auchinleck Chronicle, where (p. 19.) "the mony notable things" done by Abbot Tarvas towards re-edifying the structure are recorded; and Cruxford (p. 17), who says that the "wall, with most part of the fabric of the abbey that now stands, was built" by Abbot Shaw.

† Appendix to Hamilton's Description, p. 147.

The church, when entire, appears to have consisted of a nave, a tower, a choir, and a northern transept, with the chapel, whose proper name is 'St. Mirren's aisle,' but which is better known by that of 'the Sounding aisle.' It does not appear that there was a southern transept, the aisle just-mentioned partly occupying what would have formed its site. The edifice has been 265 feet in length, measured over the walls. The internal measurement of the nave is 93 feet in length, and 59½ feet in breadth, including the width of the aisles. The transept measures internally 92½ feet by 35, and the choir, which has been without aisles, 123½ by 32 feet. The measurement of the transept is carried across the church to the wall of the Sounding aisle. The west front of the church is an elevation of much dignity, composed of a central and two lateral compartments, separated and flanked by buttresses, three of which are terminated by recently erected cones, a similar one of which is on the east end of the nave. These cones are by no means ornamental. The aisles are lighted by pointed windows, in the decorated style. On the north wall towards its west end, is a porch, above which is erected the present vestry. Through this porch is an entrance in a style of architecture somewhat similar to that of the western. On the left wall of the portico is a Latin inscription, which tells that John de Lithgow, abbot of the monastery, chose this for his place of sepulture, on the 20th day of January, 1433. The clerestory windows are twelve in number, and are on each side of the main body of the nave. The eastern gable of the nave is merely a screen of modern masonry filling up the western arch beneath the place where the great tower stood. On the outside of this gable may be traced the remains of a mural tablet, apparently erected to the memory of the unfortunate John Hamilton, the last of the abbots, who was ignominiously put to death at Stirling in 1571, for adhering to the cause of Queen Mary. The initials J. H., and the Hamilton arms, with the motto 'Misericordia et Pax,' are still visible. But neither the modern part of the gable, the window inserted in it, the bell-turret that rises above it, nor the roof of the building, also of modern date, are at all in keeping with the other parts of the edifice.—The interior of the nave is truly magnificent. Ten massy clustered columns, 17 feet in height, with simple but elegantly moulded capitals, divide the aisles from the body of the fabric. Of these columns, the circumference of each of the two nearest the west is more than double that of any of the others, plainly indicating that they were intended by the architect, in connection with the front wall, to support two western towers. From the imposts of the columns spring pointed arches, with delicate and graceful mouldings. From a floor formed above the first tier of arches, spring those of the triforium. Above the triforium rises the clerestory, the arches of which are simple, pointed, and narrow, but of just proportions. The original roof, which has given place to a simple coved one, was finely groined with sculptured bosses, at the intersections of the ribs, of which a specimen is still to be seen, towards the west end of the southern aisle. The modern east window, in the inside, is filled with stained glass, and beneath it is a white marble monument, erected by the county of Renfrew in 1810, in memory of William MacDowall, of Castle-Semple and Garthland, Esq., lord-lieutenant and member of parliament for Renfrewshire. The nave has been employed as a parish-church ever since the Reformation. It underwent a thorough repair in the year 1789. Stoves were introduced into the edifice in 1832; and having since been again cleaned and repaired, it forms not only one of the most magnificent, but also one

of the most comfortable places of worship in Scotland.—The transept, although ruinous, displays in its northern window a fine relic of monastic grandeur. The window, about 25 feet in height, by 18 in breadth, occupies the greater part of the space that intervenes between the graduated buttresses which support the northern angles of the transept. It is formed within an arch of beautiful proportions, and of the decorated kind. The walls of the choir are now levelled to within ten feet of the ground. The font still remains, with a niche on each side near the east end of the south wall. A little to the west, in the same wall, are four recesses, supposed to have been stalls or seats for the priests.

South of the nave, and closely adjoining to it, is the cloister-court, from which entrance is afforded to St. Mirren's aisle, a building on its east side, which is understood to have been erected about the year 1499; for in that year James Craufurd of Kilwinnct, burgess of Paisley, and his wife, founded and endowed a chapel "in the church of the parish of Paisley, on the south side thereof, to the altar of Saints Mirren and Columba." This building is about 24 feet long, by 24 broad. Beneath a window in the cast gable, now blocked up, is a series of sculptured figures, chiefly representing ecclesiastics engaged in various offices of the Romish ritual. In the south is the font. Under the elevated pavement at the east end is a vault, 14 feet deep, the burying-place of the Abercorn family, and on the north wall is an inscription in memory of three infant children of Lord Claud Hamilton. Nearly in the centre of the lower floor is an altar tomb, which, after having lain for many years in a mutilated state in the cloister-court, was, about the year 1816, reconstructed, coated with stone-coloured cement, and placed in its present sheltered situation, under the direction of the late Dr. Boog, senior minister of the church. On the top is the figure of a female in a recumbent posture, with hands closed in the attitude of prayer. This monument is popularly called 'Queen Beleary's Tomb,' and is said to have been erected in honour of Marjory Bruce, daughter of the renowned King Robert, and wife of Walter the High Steward, who died in 1326. But that princess never was queen, and it is not known that she could be fitly designated by the epithet of 'Beleary.' If not referring to her, the monument may represent one of the consorts of her son, Robert II., who, from a remarkable inflammation in one of his eyes, was called 'King Beleary.' This chapel being vaulted, and containing nothing but the monument, has an echo so striking as to have obtained for it the name of 'the Sounding aisle.' Instrumental or vocal music performed in it has a curious effect, from the prolongation and consequent mingling of the notes.

After the Reformation, Lord Claud Hamilton, a younger son of the Duke of Chatelherault, became commendator of this abbacy. In 1587, the whole property of the monastery, which he held for life only, was erected into a temporal lordship, and granted to him and his heirs and assigns in fee, and he was raised to the peerage with the title of Lord Paisley. His eldest son was, in his lifetime, created Earl of Abercorn. In 1652, his grandson and successor, the 2d Earl, sold this opulent lordship to the Earl of Angus, from whom, next year, the larger part of it was purchased by Lord Cochrane, afterwards Earl of Dundonald. Great portions were at different times sold by the Dundonald family. In 1764, what remained was repurchased from Thomas, 8th Earl of Dundonald, by James, 8th Earl of Abercorn, to whose successor, the Marquis of Abercorn, it now belongs.

On the south side of the abbey buildings is an an-

cient mansion, of old called 'the Place of Paisley,' which was successively the residence of Lord Paisley, and of the Earls of Abercorn and Dundonald. The last proprietor of the Dundonald family having, between 1758 and 1764, demolished the gateway, and feued off the adjoining ground for building, the appearance of this place was entirely changed, and it was rendered unfit for a family residence. It was therefore let out to tradesmen's families, and now presents a gloomy aspect.

The next edifice which demands attention is that called 'the County Buildings,' erected in 1818-21, at an expense of about £28,000. This pile stands on the west bank of the river. Its general form is quadrangular, and the style of the exterior castellated. The front division contains a court-house, county-hall, council-chambers, and a number of offices for different departments of public business. The eastern range consists of the correction-house and common jail, with a chapel. The former prison and court-house stood at the Cross, and occupied the site of the new portion of what has long been known as the Saracen's Head inn. They were removed when the County Buildings were erected; but the spire which was attached to them still remains.—On the opposite side of the area of the cross are the Coffeeroom buildings, erected in 1809. The upper part is adorned with Ionic pilasters, and includes a large elegant and comfortable reading-room.—The Town's hospital for maintaining the poor, was opened in 1752, and a small asylum for lunatics was since added. The Dispensary was established in 1786, and about 15 years afterwards a commodious House of recovery or Infirmary, for the reception of persons labouring under contagious disease, was built.—The Grammar-school was founded and endowed by royal charter, dated 3d January, 1576, and was kept in the street called School-wynd till 1802, when the present building adjacent to the High-church was erected. Near the head of Moss-street, on the east side, are the Exchange buildings, erected in 1837, partly on the site of what was till then the Fleshmarket. On the opposite side there stood till the beginning of this century the tron or custom hoth, and above that a place dignified by Semple (p. 318,) with the name of 'the Assembly-hall,' where, 60 years since, the young people of the town were taught the accomplishment of dancing.—At the suburb of Williamsburgh, barracks for the accommodation of a battalion of infantry were erected in 1822.

Of the places of worship to be afterwards noticed, we may here particularize the High Church, a handsome building with a lofty spire, which occupies an eminence, and is seen from a great distance; St. George's church, a spacious Grecian structure; one of the Secession churches, also Grecian; and the Episcopal chapel, which is of chaste Gothic. All these are modern structures.

Paisley was formerly the town-residence of some of the families of the nobility and gentry of the county. On the north side of the High-street, a short distance above the Cross, stands a mansion once the property of the Lords Sempill, and bearing their arms, with the date 1580. On the opposite side of the same street westwards, is a tenement which was built in 1594, and belonged to the family of Ferguslie. Farther west, a little above the head of New-street, there stood the mansion of Cochrane of Craigmuir. To these have to be added the families of Abercorn and Dundonald, successive occupants, as already seen, of the mansion contiguous to the Abbey.

Although Renfrew is the county-town, Paisley has been the seat of the court of the sheriff of the county since 1705, when it was 'transported' hither in virtue of a warrant by the sheriff-principal. In 1815,

the county was divided into two wards, the upper of which was annexed to the court at Paisley. The practitioners before the courts here form one of the few legal bodies in Scotland that enjoy peculiar privileges, a royal charter having been granted to them on 24th June, 1803. The number of members, resident and non-resident, in 1841, is 47.

The Paisley Commercial Banking company, a joint-stock undertaking, was established in 1839. There are besides branches of two Edinburgh and two Glasgow banks, and a National Security Savings' bank, instituted in 1838. The Paisley bank, established in 1787, and the Paisley Union bank, established some years afterwards, were discontinued, the former in 1837, and the latter in 1838.

There is a weekly market held on Thursday: and fairs, each of three days' duration, are held in February, May, August, and November. Horse-races are run on two of the days of the August fair. They were instituted by the town-council, so far back as the year 1603; but it was only of late that they attracted any attention beyond the district. The 'Paisley Meeting' is now a fashionable resort. The race-course has been much improved, and no longer includes part of the turnpike road to Greenock.

An association, called the Philosophical Institution, was established in 1808, for the delivery of lectures on different branches of science and literature, and has since been carried on with various degrees of success. A Mechanics' Institution, which had existed for some years, was incorporated with it in 1825. There are three public libraries—the Paisley, with above 5,000 volumes, the Trades', and the Theological. There are several printing presses, and one newspaper, the Advertiser, which was commenced in 1824, and is published on Saturday.

Alexander Wilson, a poet of some note, but much better known as the Ornithologist of America, and Robert Tannahill, one of our finest song-writers, were natives of Paisley, and both belonged to the working class. The town also claims as natives two of the Edinburgh professors, John Wilson, Esq., and John Thomson, M.D.

In 1590 all the parishes in Renfrewshire, excepting those of Eaglesham and Cathcart, were formed into a presbytery, the seat of which was established at Paisley. This arrangement continued till May, 1834, when, by a decree of the General Assembly, seven parishes in the lower part of the county were, with Largs in Ayrshire, and Cumbray in Bute, formed into a presbytery, having its seat at Greenock. In 1841, the presbytery of Paisley contained 12 *quoad civilia* parishes, and 10 *quoad sacra* parishes and churches. It belongs to the synod of Glasgow and Ayr.

Till the year 1736 Paisley formed one parish, and contained only one church—the Abbey. Owing to the increase of population, a charter was obtained in 1733, from Lord Dundonald, the patron of the parish, granting liberty to the magistrates and community to build within the burgh, a church or churches, the patronage of which was to be vested in the magistrates and town-council. In 1736 a church was, in consequence, built at the foot of New-street, and the burgh was erected into a separate parish, by a decree of the Lords-commissioners for the plantation of churches. The population continuing to increase, another church was built in 1756. Being situated on the most elevated part of the town, it was distinguished by the name of the *High Church*, while the former erection, from its relative situation, was denominated the *Laigh Kirk* or *Low Church*. In 1781, it was found necessary to add a third place of worship, which, from its situation between the other two, received the name of the

*Middle Church*. The burgh, which had hitherto continued one parish, was, on 20th February, 1789, by a decree of the court of teinds, divided into three parishes, which were called from their several churches, the Low church parish, the High church parish, and the Middle church parish. The patronage of these belongs to the magistrates and town-council, and the stipends of the ministers are paid out of the funds of the burgh. Since 1834, several *quoad sacra* parishes and churches have been erected out of these.—The earliest congregation of dissenters in Paisley was one of Antiburghers, formed about the year 1750, and which, since its union with the Burghers in 1820, has been styled the First Congregation in the town belonging to the United Associate synod. Many other bodies of dissenters have, from time to time, been formed, as will appear from the following details, which are chiefly derived from the Appendix to the Eighth Report by the Commissioners of Religious Instruction, who visited Paisley in January 1838.

1. ABBEY PARISH.—Since the burgh was separated from it in 1736, the original parish has been distinguished by the name of the *Abbey Parish*, or, more properly, the *parish of the Abbey of Paisley*. Its greatest length is  $9\frac{1}{4}$  miles, its greatest breadth  $5\frac{1}{2}$ . It is partly landward, and partly town. The great proportion of the population is assembled in the New Town and suburbs of Paisley, and in large villages. By the census of 1831, the population of the parish, *quoad civilia*, was 26,006. According to a survey taken in the end of 1835, the population, *quoad sacra*, was 17,248, of whom there belonged to the Established church 9,040; to other denominations, 7,406; not known to belong to any denomination, 802. The church has already been described. Sittings 1,158. The parish has had the benefit of two ministers since 1648. The stipend of the minister of the first charge is £376 1s. 1d.; manse and glebe £67. Stipend of minister of second charge £362 15s. 2d., without manse or glebe. Patron of both, the Marquis of Abercorn. Unappropriated teinds £1,615 7s. 10d. The parish, *quoad civilia*, comprehends the *quoad sacra* parishes of ELDERSLIE, JOHNSTONE, and LEVERN: which see; and a portion annexed, *quoad sacra*, to the South church parish.—The Second Relief congregation, Thread-street, established in 1807, assembles in a church built in 1808, at a cost of more than £3,000. Sittings 1,640. Stipend rather more than £200. The late minister of this congregation, the Rev. James Thomson, D. D., a pious and learned man, who died in 1841, was Professor of Divinity to the Relief synod. Paisley is the seat of one of the presbyteries of that body.—The Second United Secession congregation, Abbey-close, was established in 1765, and built a church there in 1769. The church was rebuilt in 1827, at a cost of £2,588 19s. 3d., besides nearly £300 for a hall, vestry, and library-room. Sittings 1,178. Stipend, in 1837, £260.—The Roman Catholic congregation was established, and built a place of worship in 1808, at a cost of at least £4,000. Sittings 906. The minister has no fixed salary. He is allowed to take from the funds of the congregation what is necessary for his decent support. In 1838, it was computed that the total population connected with the congregation was about 8,000, one-half of whom were resident in the town of Paisley, and the other half in some neighbouring parishes.—The Old Scottish Independent congregation was established in 1784 or 5; and assembles in a part of the Abbey buildings, which is rented from the proprietor, the Marquis of Abercorn. Sittings 200. Mr. James M'Gavin, who had been pastor for nearly 42 years, and who has since died, stated to the commissioners

in 1833, that "he never received one shilling in his life for preaching."—The Primitive Methodist congregation was established in 1833, and assembles in the hall of the Philosophical Institution, which is rented from the directors, who also make use of it. Sittings 300. Stipend £45, besides a house for the minister, which is provided and furnished by the church, and all taxes paid.

2. **LOW CHURCH PARISH.**—This, as already stated, was formed in 1782. Length, three-fourths of a mile; breadth, half-a-mile. It is almost wholly town. A small part is landward, but it is included within the boundaries of the burgh, and is uninhabited. A portion has been disjoined *quoad sacra*, and annexed to the South parish. The population, in 1831, was 6,955. In 1838 it was 6,934, 1,800 of whom belonged to the disjoined portion. Of the 6,934, there belonged to the Established church, 3,229; to other denominations, 2,651; not known to belong to any denomination, 1,054. The present parish-church was built in 1819 by the magistrates and council, aided by subscriptions from private individuals and incorporations, who retain property in it in proportion to their subscriptions. The cost, including vestry, presbytery-house, piece of ground, expense of opening streets, &c., was upwards of £7,000. Sittings 1,850. Stipend £300, paid out of the burgh's funds. The congregation removed to this church in 1820. It is in George-street, and when built received the name of St. George's, by which name the parish has also been often called. The New Jerusalem congregation was established in 1834, and assembles in a room of a dwelling-house occupied by the leader, whose services are gratuitous. Sittings 18.

3. **HIGH CHURCH PARISH.**—It is about one mile in length, and one-fourth of a mile in breadth. It was formed in 1782, and is wholly town. *Quoad civilia*, it includes the *quoad sacra* parish of Martyrs, and had, in 1831, a population of 14,621. According to a census taken by the elders in December 1835, there were in the parish *quoad civilia* 14,988 persons, of whom 5,672 belonged to the Establishment; 6,612 to other denominations; and 2,706 were not known to belong to any. The church was built by the community, in 1756, and the spire about 1770. The expense—according to Semple, p. 307—was about £2,300. Sittings 1,890. Stipend £300.—The Reformed Presbyterian congregation was established in 1804. The place of worship was erected in 1811, and with a manse and garden, and a burying-ground, cost about £3,000. Sittings 955. Stipend £110, besides manse and garden. The Rev. Andrew Synnington, D. D., minister of the congregation, is professor of divinity to this body of dissenters.—The Third United Secession congregation, St. James'-street, was established in 1819, and in 1820 the church was built at a cost of somewhat less than £2,000. The congregation was originally connected with the Independents, but, in the course of a few years, that portion to whom the property belonged, joined the Secession synod. Sittings 1,212. Stipend £200.—The Fourth congregation of the United Secession, George-street, was at first in connection with the Original Burghers, and continued so until April 1835, when the majority resolved to connect themselves with the Secession body. The place of worship was built in 1822, and cost about £1,700. Sittings 1,058. Stipend £110.—The First Relief congregation, Canal-street, was established in 1780. The church was built in 1783, and, together with the session-house and manse, cost £2,800. Sittings 1,545. Stipend £150.—A congregation of the body terming itself "the Holy Catholic Apostolic Church," was established in 1835,

and assembles in a building held by payment of a rent of £20 per annum. Number of sittings not stated. Average attendance, in 1838, about 50.—The Berean Baptist congregation was established in 1798, and meets in the upper floor of a building in Barr-street, which is their own property, and was erected in 1819, at a cost of £300. Sittings 200. The pastors receive no emolument.—The Scottish Baptist congregation, established in 1795, assembles in the upper part of a house in Storie-street, which is their own property, and was erected, in 1799, at a cost of above £800. Sittings 410. The pastors have no emolument.—The Unitarian congregation was established in 1808, and assembles in a chapel, which, with the property connected with it, consisting of two dwelling-houses and a workshop, belongs to a joint-stock company, composed of members and attenders. The property was built in 1818, and cost £490. Sittings in chapel 170. The pastors enjoy no emolument.

4. **MIDDLE CHURCH PARISH.**—This is in extent upwards of a square mile. Greatest length  $1\frac{1}{4}$  mile, greatest breadth about 1 mile. It was formed in 1782, and is a town parish with a small section of the country. *Quoad civilia* it comprehends the *quoad sacra* North parish. In 1831 the population *quoad civilia* was 9,884. According to a census taken by the elders the population *quoad sacra*, in January 1838, was 6,834; of whom there belonged to the Established church, 3,554; to other denominations, 2,805; to no denomination, 475. The church was built in 1781–2, by subscription, sale of seats, &c., and cost upwards of £2,000. Sittings 1,555. Stipend £300.—The Independent congregation was first established in the High Church parish, about the year 1796, and latterly in this parish, in May 1834, in a chapel then finished, at a cost of £850. Sittings 450. Stipend £90.—The first congregation of the Secession church in Paisley was, as we have already had occasion to state, established about the year 1750. They built a place of worship about 1762, at the head of the alley thence called Meeting-house-lane, and at the east end of what is now called Oakshaw-street. In 1781 the church was enlarged; and in 1825–6 it was rebuilt at a cost of £4,071 17s. 10d. Sittings 954. Total allowances to minister, including house-rent, £199 19s.—A congregation of Original Burghers, which had existed for about thirty-six years, met for worship in this parish in May 1837. Sittings 270. Stipend £75. It was dissolved in 1839.—On 23d November, 1817, a congregation of Protestant Episcopalians was established in Paisley. They met in a school-room till May 1819, when a building in New Snedden-street, previously occupied by various bodies of dissenters, was taken on a lease of fourteen years. In May 1833 they removed to a neat edifice built for them, fronting St. James'-street. It is called Trinity chapel, and cost, with the site, about £1,200. It is capable of containing 600 people, though, as yet, seated for about 350 only. In 1838 the clear income of the minister, including baptismal dues, did not exceed £56. Under his immediate pastoral care there are about 700 souls; but in his district far more than double that number of Episcopalians reside.

5. **NORTH CHURCH PARISH.**—This is a *quoad sacra* town parish, divided from the Middle parish in 1834. Its extent is about 1 square mile; greatest length rather more than 1 mile; greatest breadth nearly 1 mile. The population, by a census taken in 1835 by the elders, was 2,928; of whom 1,580 belonged to the Established church; 1,139 to other denominations; and 209 were not known to belong to any. The church was finished in 1834, and cost about £1,700, which, with the exception of £300 from the

General Assembly's fund, was raised by means of collections and subscriptions, chiefly in Paisley. Sitings nearly 1,000. Stipend £100. Patrons, the congregation.—The United Methodist congregation, established in September 1834, assembles in a large hall rented from a private individual, and fitted up for their use. Sitings 202. Stipend £50.

6. MARTYRS' CHURCH PARISH.—Another *quoad sacra* town parish, divided from the High Church parish in 1836. Extent 20 acres; greatest length 400 yards; greatest breadth 220 yards. In January 1838 the population was 3,412; of whom there belonged to the Established church, 1,338; to other denominations, 1,421; not known to belong to any, 653. The church was built in 1835, and cost £2,120 3s. 6d., which was, to a certain extent, defrayed by subscriptions,—the Church Extension committee having granted £300. Sitings 1,200. Stipend £80, and £20 for communion expenses. Patrons, the congregation.

7. SOUTH CHURCH PARISH.—A third *quoad sacra* district, disjoined from the Low and Abbey parishes in 1837. It is half-a-mile long, and one-fourth of a mile broad, and is partly town and partly landward; the whole population, however, (at least in 1838,) being in the town. The population, in 1835-7, was 3,447; 1,149 of whom belonged to the Established church, 1,281 to other denominations, and 1,017 were not known to belong to any. The church was built in 1835-6, and cost £2,129 1s. 6d., which was defrayed partly by subscription and collections, partly by a grant of £400 from the Church Extension fund. Sitings 972. Stipend £100, secured to the extent of £80. Patrons, the congregation.

8. GAELIC CHURCH.—In 1834 this place of worship was received into the number of churches in the Paisley presbytery, but no parochial locality has been assigned to it. The church was built by subscription in 1793, and cost about £1,800. Patrons, the congregation. Sitings 1,085. Stipend £110, and a manse. The congregation is scattered over the town, and the villages and country districts within 5 or 6 miles of it. In 1837 the Highland population was computed as follows:—Town population, including a small number of dissenters, 2,000; country population, belonging to the Established church, 1,396; belonging to other denominations, 84;—total, 3,480. In this estimate the children of native Highlanders were included, although horn in the low country and understanding English; but the minister believed that he had reckoned none but such as understood Gaelic better than English. The Highland population fluctuates to a considerable extent as to persons, but not as to its gross numbers. They consist almost entirely of the poor and working classes.

As respects education, it appears from the report of the presbytery to the General Assembly, in 1834, that there were then in the Abbey parish thirty-two schools, attended by 2,318 scholars, and in the town parishes thirty-three schools, attended by 2,458 scholars. This amount of persons receiving instruction is greatly less than what it ought to have been, in proportion to the population, which, at the date in question, was about 58,000.\* The above return, however, did not include Sunday-schools, which, in 1836, were attended by 4,198 persons. Since the date of the return considerable additions to the

means of education have been made. These chiefly consist of three school-rooms erected, and one enlarged, by means of a government grant of £700, augmented by the liberality of the inhabitants; an infant school built by public subscription; and a small seminary endowed by the late Mr. and Mrs. Corse of Greenlaw. In 1836 an association was formed for the erection of an institution to be called 'The Paisley Academy,' for the benefit of those whose circumstances might enable them to give to their children the higher branches of instruction; but this laudable project not having met with sufficient support, has, at least for the present, been abandoned. In the course of a few years great benefit will accrue to the children of the poor from a liberal endowment made by John Neilson, Esq. of Nethercommon, a native of Paisley, who died in November 1839, and who had, in company with his father and brother, long carried on the business of grocers and drysalers in the town. This gentleman, by his deed of settlement, set apart a portion of the residue of his estates, amounting to about £18,000, to form an endowment in Paisley for educating, clothing, and outfitting, and, if need be, maintaining of boys who have resided within the parliamentary boundaries of the town for at least three years, whose parents have died either without leaving sufficient for that purpose, or who, from misfortune, have been reduced, or who, from the want of means, are unable to give a suitable education to their children. Although the trustees are, by the deed, appointed to purchase a suitable piece of ground in the town for the erection of an institution-house within five years from the testator's death, yet they are not to build it till after the expiry of that period; so that they will have ample time to mature their plans. We may here mention another endowment, also made by a native of the town, though not precisely of an educational nature. The late Miss Elizabeth Kibble, by her deed of settlement, dated 27th August, 1840, set apart £7,500 to be applied by trustees "in founding and endowing in Paisley an institution for the purpose of reclaiming youthful offenders against the laws."

By the returns of 1801, 1811, and 1821, Paisley ranked as the third town in Scotland in point of population, coming next to Glasgow and Edinburgh. By 1831 Aberdeen exceeded it to the amount of a few hundreds, and now, in 1841, while Aberdeen has increased still more in proportion, Dundee has got ahead of both, thus reducing Paisley to the rank of the fifth town. In truth, this place, once so prosperous, has retrograded. In the course of 1841 an unparalleled number of manufacturing houses have become bankrupt; and in the end of the year, while these sheets pass through the press, the destitution of the working classes, caused by the want of employment, is most appalling; inasmuch that (children and other dependents being included) about a fifth part of the population are maintained by public charity. It is gratifying to be enabled to add, that this deep distress is patiently borne, and that for its alleviation the sympathies of the benevolent throughout the empire are unceasingly exerted.

According to the government census of 1841, there were within the parliamentary boundaries of Paisley 10,133 inhabited houses, 671 uninhabited, and 9 huilding. The population within the boundaries was, by the same census, 43,125. The population of the town and Abbey parishes, in 1841, was 60,963. Illustrative of the statistics of these, we subjoin a statement prepared by Mr. Wilson of Thornly. That statement, it will be observed, makes the population within the parliamentary limits somewhat more than the government return.

\* In a parliamentary paper entitled 'Abstract of Education Returns,' (Scotland,) 1834, we find the following remark under the title 'High Church Parish,' (of Paisley,) p. 621.—"It is a singular fact that of the families employed in factories, a greater proportion of the children are attending school than of the families of weavers or labourers, and this goes far to demonstrate the wisdom of some clauses in the Factory bill."—On the same page the Middle Church parish is erroneously stated to be "entirely landward." Its true condition is stated on our preceding page.

Population of the Abbey and Town parishes of Paisley, during Fifty Years, from the Comparative Account of the Population of Great Britain in the years 1801, 1811, 1821, and 1831, (page 400,) and other sources.

**PALDIE**, or **PALDIEKIRK**, a small village in the parish of Fordoun, in Kincardineshire, noted for its three days' fair, vulgarly called Paddy fair, which begins on the 1st Tuesday after 11th July: See **FORDOUN**.

**PALKILL-WATER**, a rivulet in the parish of Minigaff, Kirkcudbrightshire, rising in the centre of the parish, and running 4 miles southward and 4½ south-westward to the Cree, at Newton-Stewart.

**PANBRIDE**, a parish on the south-east verge of Forfarshire; bounded on the north by Carmylie; and on the north-east and east by Arbirlot, and a detached part of St. Vigean's; on the south-east by the German ocean; on the south-west by Barry; and on the west by Monikie. Its figure is the small segment of a flat ring, the convex side turned to the south-west; and it measures nearly 5 miles in length from north to south-east, 2 miles in mean breadth, and 5,400 acres in area. The coast, 2½ miles in extent, is flat and very rocky, with a pebbly beach, which occasionally affords some gems. The interior is, in general, flat, but rises toward the north. The soil, toward the coast, is sandy; in the central district, is clay or loam; and, toward the north, is moorish. Three-fourths of the whole area is arable, and, in general, beautifully cultivated; and 600 acres of the other fourth are under plantation. Two rivulets, both originating in Monikie, and the larger traversing 8½ miles from its source to the sea, run south-eastward through the parish—one of them a mile along the south-east boundary—form a confluence a mile from the sea, and discharge their united waters midway between East and West Haven. The immediate basin of both is, in many places, a rocky dell, with steep and almost perpendicular sides of from 20 to 50 feet high; and that of the larger bears the name of Battie's den, and is spanned, at a romantic spot, by a bridge which carries across the Great North mail-road. Limestone, but of an inferior quality, and not in plenty, exists; and sandstone, both of an excellent sort for building, and of the slaty kind which yields the Arbroath paving-stone, abounds and is worked. There is in the parish a small flax spinning-mill. The chief villages are the **HAVENS**, (**EAST** and **WEST**;) and **MURDRUM**: which see. The others are Skrine, half-a-mile north of East Haven, and Panbride, the site of the parish-church, half-a-mile north of West Haven. In the north-east of the parish, 2 miles from the 'Live and Let Live Testimonial,' [see **MONIKIE**,] stands the spacious and stately mansion of Panmure, surrounded by an extensive and richly wooded demesne, and commanding, toward the south and the east, a pleasing seaward prospect. In its vicinity are the vaults and foundations of the old castle of Panmure, long the seat of the cognominal Earls. James, the 4th Earl of Panmure, was attainted, in 1716, for having shared in the rebellion of the previous year. The Honourable William Ramsay Maule, representative of the ancient Earls, and the brother of George, the 9th Earl of Dalhousie, was, in 1831, created Baron Panmure of Brechin and Navar, in the peerage of Great Britain; and is the proprietor of the modern mansion, and landowner of the whole parish. Fisheries and a small marine commerce are connected with the Havens. The Edinburgh and Aberdeen mail-road, and the Dundee and Arbroath railway, run across the parish, near its middle. Population, in 1801, 1,588; in 1831, 1,263. Houses 297. Assessed property, in 1815, £9,649.—Panbride is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Stipend £231 1s. 11d.; glebe £10. Schoolmaster's salary £34 4s. 4½d., with £23 3s. 6d. fees. There are two non-parochial schools,—one of them for females. The church,

which is very ancient, was originally dedicated to St. Bridget; and the usual abbreviation of the lady's name, with the prefix *Ballin*, so common in Irish topographical nomenclature, signifying 'a town,' and abbreviated and enphoned into Pan, gives the modern name of the parish, and, without any enphoning of the prefix, gives its earlier name of Balbride. The ancestors of Hector Boethius, or Boece, were, for several generations, proprietors of the barony of Panbride; and the historian himself is generally supposed to have been a native of the parish.

**PANNANICH**, a village and celebrated mineral wells in the parish of Glenmuick, Aberdeenshire. The village stands on the right bank of the Dee, 1½ mile east of Ballater, 18 miles east of the road across the Grampians, by Castleton of Braemar, to Focubars, and 39 miles west of Aberdeen. The wells are the most frequented in the northern counties; and, except for being situated amid a richer landscape than the sister-spring of Cumbria, might be regarded as the Gilsland Spa of Scotland. They issue from the north side of the hill of Pannanich, and derive from it their name. The water is strongly impregnated with gaseous acid, and is said to possess a considerable resemblance to the Seltzer water in Germany. Its healing virtues were discovered about 70 years ago by an infirm and aged female in the vicinity, who experienced a cure in such remarkable circumstances as instantly gave the wells celebrity. Mr. Farquharson of Monaltrie, on whose grounds the spa is situated, cleared away obstructions, taught the water to flow freely, covered in the spring, built several houses for the accommodation of visitors, constructed a public and a private bath, and, at a mile's distance toward Ballater, erected a large and commodious house, called Pannanich-lodge. In the lodge are a spacious public room, and a considerable number of private apartments, besides rooms for servants; and attached to it are offices, particularly carriage-houses and stables. The water of the wells has been found useful in scorbutic and scrofulous disorders, dyspepsy, stone, and gravel. There is an excellent inn at the village.

**PAPA-STOUR**, a suppressed parish and an island in the west of Shetland. The parish is now annexed to **WALLS**: which see. The island, the principal part of the parish, lies on the south side of the entrance of St. Magnus-bay, about 2 miles from the promontory of Sandness. Its length, from south-east to north-west, is about 2½ miles; and its breadth is about 1½ mile. It possesses several small voes or creeks, which afford shelter to the fishing-boats of the inhabitants. Its appearance in summer, as approached from St. Magnus-bay to House-voe, is delightful; the land lying in a sort of amphitheatre, and displaying rich sheets of grain and potato crops. Its soil is, in general, fertile; produces very rich grass; and, when well-manured with sea-weed, yields good returns to the husbandman. Part of the interior or common pasture was converted almost into wilderness by the miserable practice of cutting up and carrying away the sward either for fuel or for manuring the arable lands. The excellence of the beaches for drying fish occasioned the resort to them, last century, of a great English fishing company. On the south side are several magnificent and very curious caves, the abodes of numerous seals: see **SHETLAND**. Around the coast are various picturesque and even sublime porphyritic stalks,—rocks shooting perpendicularly up from the sea—like stupendous towers or castellated keeps. The Stack of Snalda is a grand perpendicular column of rock, probably 80, and at least 60 feet high, altogether inaccessible by man, and proudly possessed by the monarch eagle. Some time in last century an eagle

belonging to the Stack, while carrying a lamb from the mainland, dropped it still alive at Mid-Sater in Papa-Stour. The lamb was instantly rescued from his feathered majesty by a boy who happened to be within a few yards of where it fell; and, being a female, it established a breed on a farm where sheep were previously unknown. The Frau-a-Stock, or Lady's Rock, is accessible only to very practised and adroit climbers, and has on its summit the vestiges of a small human dwelling. It is said, by one account, to have been the abode of a Norwegian lady, who made a vow of celibacy, and retreated hither to be protected from the solicitations of suitors; but who was driven from her wild asylum by a bold uddaler of Islesburgh who scaled the rock; and, by another account, to have been the prison of a fair lady whom her father placed here to be out of the way of a favourable lover, but who was rescued, and made prize of by the very lover in person. Papa-Stour is the only part of Shetland where the ancient Norwegian amusement of sword-dance, noticed in Sir Walter Scott's 'Pirate,' and minutely described in Dr. Hibbert's Account of the Islands, is still preserved.—Two other islands in Shetland bear the name of Papa, but are smaller than Papa-Stour, and individually inconsiderable; and all three appear to have been, in the earliest period of Scottish ecclesiastical history, the retreat of certain Irish missionaries or 'papæ,' who either sought refuge from some commotion in their own country, or, like Columba, came to proclaim in dreary lands, and among a barbarous and heatbenish people, the unsearchable riches of the gospel of divine grace. Papa-Stour is provided with a parochial place of worship, and receives visits regularly from a Methodist minister, and occasionally from an Independent. Population, in 1838, 370.

**PAPA-SOUND**, a village in the island of Stronsay, Orkney. It is of quite recent origin, and, in 1838, had a population of 216.

**PAPA-STRONSAY**, a beautiful little island on the north-east side of Stronsay, Orkney. The strait or channel which divides it from Stronsay is from 2 to 4 furlongs broad; and, while deriving from it the name of Papa-Sound, gives that name in turn to the Stronsay village. Papa-Stronsay is about 3 miles in circumference, flat, and so fertile that, under proper management, it might be made one continued corn field. It has vestiges of two ancient chapels, which were dedicated to St. Nicholas and St. Bride; and, midway between them, an eminence called the Earl's Knowe, which seems to have been a burying-ground. The island has but few inhabitants.

**PAPA-WESTRAY**, a beautiful and very fertile island in Orkney. It lies  $1\frac{1}{2}$  mile west of Akerness, and  $1\frac{3}{4}$  mile north of Sponness, in Westray, and 23 miles geographically due north of Kirkwall, but about 26 miles by the shortest sea-track. Its length, from north to south, is  $3\frac{1}{2}$  miles; and its greatest breadth is about 1 mile. The surface rises gently toward the middle, and terminates on the north in the beadland well-known to mariners as the Mull of Papa. Its soil is very fertile, carries fine natural herbage, and is, to the extent of 1,000 acres, under regular cultivation. In its south-east corner is a small freshwater lake, with an islet, on which are the ruins of an ancient chapel dedicated to St. Tredwall. On the shore is annually manufactured a large quantity of kelp. Two miles north of the island lies an extensive and very prolific fishing-bank, long well-known to the islanders, and latterly an object of interest to parties at a distance. Papa-Westray anciently formed a separate and independent parish; and, though now annexed to Westray, has still its own parochial place of worship: see **WESTRAY**.

There is a Society school on the island.—Population, in 1814, about 200; in 1838, 335.—On this island Ronald, Earl of Orkney, was killed by Thorsin, Earl of Caithness.

**PAPLAY**. See **HOLME**.

**PARKHEAD**, a village in the Barony parish of Glasgow, situated about 2 miles to the east of the city. It is principally inhabited by the humbler orders of society, consisting of handloom weavers, carters, and labourers.—The population, in 1841, amounted to 1,150. Houses 260. The Glasgow water-works, erected in 1806, and situated upon the Clyde, are in the immediate vicinity of the village.

**PARTICK**, a beautiful and romantic village in the parish of Govan, lower ward of the county of Lanark. It is situated on the banks of the classic Kelvin, near its junction with the Clyde, and within about 2 miles of the city of Glasgow, to the humbler classes of whose citizens it forms a favourite summer resort, both from the beauty of the locality, and the reputed salubrity of the air. Here are several public works, in addition to the extensive flour-mills and granaries belonging to the incorporation of bakers of Glasgow, which were granted to them by the Regent Moray immediately after his victory over the forces of Queen Mary at Langside. It is recorded that the bakers of Glasgow were very serviceable in supplying the army with bread, while quartered in the neighbourhood; and upon the Regent returning thanks after the battle, Matthew Fawside, the deacon of the bakers, took this favourable opportunity of craving the mills of Partick—or Pertique as it was then termed—which belonged to the Crown, for his craft. They were at once granted, and have ever since remained the property of the incorporation. Until a recent period, the ruins of an old mansion, said to have been a country-residence of the Archbishop of Glasgow, stood on the west bank of the Kelvin, a little below Partick. It was supposed to have been built in 1611 by Archbishop Spottiswood. This version of its identity is now, however, ascertained to have been erroneous; for documents are in existence to prove that it was erected by, and belonged to, George Hutcheson of Lambhill, one of the founders of Hutcheson's hospital in Glasgow. The contract for its erection, entered into by George Hutcheson with William Millar, a mason in Kilwinning, is still preserved by one of the descendants of the Hutcheson family. With characteristic caution the standard foot expressed in this contract, is declared to be "ye said George's awn futc." There are three places of worship in the village, viz., Partick church in connexion with the Establishment, built in 1834, at an expense of £1,000, and seated to accommodate 580 persons; Partick Secession church, built, in 1824, for 600 sitters; and Partick Relief church, built, in 1824, for 840 sitters. That portion of Partick which lies to the south and east of the Kelvin, with a population, in 1841, of 501, is within the parliamentary boundaries of Glasgow.

**PARTON**, a parish in the northern division of Kirkcudbrightshire, immediately south of the Glenkens. It is bounded on the north by Balmacellar; on the east by Kirkpatrick-Durham; on the south by Crossmichael; and on the west by Balmaghie and Kells. Its greatest length from east to west is  $6\frac{3}{4}$  miles; its mean breadth is about  $4\frac{1}{2}$  miles; and its area is about 28 square miles. The surface is highly tumulated, but nowhere strictly mountainous; and over a large part of its area, both high and low, is clothed with heath. A considerable ridge runs about 4 miles along the north. A congeries of field of heights occupies the centre. Lands, which formerly were prolific in furze and broom, but are now in a fine state of cultivation, spread out along the south.

The soil of the arable grounds, both in the last of these districts, and in helts along the east and west, is, in general, light, and unsuited to heavy crops. The prevalence of stone enclosures, the almost total absence of wood, and the largeness of the soil's dress of russet, render the landscape generally dreary. At least 1,000 black cattle and 3,000 sheep stock the pastures. Slate exists, and was at one period quarried. A mineral spring affected for a while to compete with the old spa of Moffat, but had an evanescent reputation. Seven lochlets, all inconsiderable in size, are plentifully stored with trout. Urr-water—here a paltry, bare, and cold stream—traces the whole of the eastern boundary, an extent of 4 miles, and receives one burn from the northern boundary, another from the southern, and two from the interior. The Ken and the Dee, from about the middle of Loch-Ken to about the middle of Loch-Dee, spread their laky folds along the whole of the western boundary, an extent of  $5\frac{1}{4}$  miles, and completely relieve on that side the prevailing tameness and plainness of the landscape. The stripe of water, while in contact with the parish, is from 100 yards to half-a-mile broad, and from 10 to 30 feet deep; it abounds in pike of from 3 to 40 pounds, and in perch of from 1 to 4 or 5 in weight; and it frequently usurps possession of large tracts of meadow-land. Near the church is an artificial circular mound 120 yards in circumference at the base, and surrounded with a ditch from 6 to 9 feet deep, and about half-a-mile to the north is another nearly twice the circumference of the former, and enclosed with two ditches. Other antiquities are some cairns and a small Druidical circle. Excepting  $3\frac{1}{2}$  miles of the road from Dumfries to Newton-Stewart, by way of New Galloway in the extreme north-east, the parish has no good road, and very little of any sort; and it is, at the nearest point, 10 miles distant from the nearest sea-port. Population, in 1801, 426; in 1831, 827. Houses 133. Assessed property, in 1815, £4,994.—Parton is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, Miss Glendonwyn of Parton. Stipend £231 6s. 2d.; glebe £21. Unappropriated teinds £210 0s. 3d. The population consisted, in 1836, according to the minister's statement, of 673 churchmen, 109 dissenters, and 1 nondescript,—in all 783. The parish-church was built in 1834. Sittings 418. A preaching-station was established in 1836 on the water of Urr. There is a small private Roman Catholic chapel, in which the priest of Dalheattie officiates twice or thrice a-year. The ancient church was called Kirkenan, from St. Innan to whom it was dedicated; and stood a mile east-north-east of the present church, near a hamlet which still bears its name. The name Parton—of debated origin—was assumed before the end of the 13th century. James Hepburn, brother of the 1st Earl of Bothwell, was rector of Parton in the reign of James IV., and rose to be abbot of Dunfermline, and bishop of Moray. In 1458, Sir Simon Glendonwyn obtained a confirmation of the barony, baronial rights, and patronage of Parton. In 1834, two parochial schools were attended by 117 scholars; and a private school by 20. Salary of the first parochial schoolmaster £31 6s. 6d., with £16 fees, and £2 10s. other emoluments; of the second £20, with £8 16s. fees, and £1 5s. other emoluments.

**PATH-OF-CONDIE**, or **PATHSTRUIE**, a small weaving village, in the parish of Forgardenny, 4 miles east south-east of Dunning, Perthshire. It is the site of a United Secession meeting-house. See **FORGARDENNY**. Population 50.

**PATH-HEAD**, a *quoad sacra* parish, and a considerable town, in the south-western extremity of the parish of Dysart, Fifeshire, half-a-mile east of Kirk-

caldy, and three quarters of a mile west of Dysart. The town is seated on a plain, gently sloping to the precipitous rocks on the shore. It consists of three streets, pretty regularly built; and is divided into two districts,—Dunnikier, the superior of which is Oswald of Dunnikier; and Sinclairtown, belonging to the Earl of Roslyn. It formerly enjoyed a great trade in nail-making, which is now decayed; but it still carries on an extensive manufacture of tykes and checks.—Below the town, on a precipice almost surrounded by the sea, stands the old castle of Ravenseraig, once the seat of the ancient family of St. Clair, but now in ruins.—In 1811, the town contained 1,692 inhabitants, in 1831, 2,090.—This *quoad sacra* parish has a handsome church, originally erected at a cost of £3,000, and now vested in the presbytery of Kirkcaldy. There are here an endowed school for 100 children, and three unendowed schools. See **DYSART**.

**PATH-HEAD**, a village in the parish of New Cumnock, Ayrshire. Population, in 1831, 361.

**PATH-HEAD**, a large and pretty village in the northern extremity of the parish of Crichton,  $11\frac{1}{2}$  miles from Edinburgh, 5 from Dalkeith, and  $\frac{3}{2}$  from Fala, Edinburghshire. It runs up the northern declivity of a hill, past the base of which sweeps the infant Tyne; and it lines for some way both sides of the Edinburgh and Kelso road by way of Lauder. Its chief street is broad and straight, and consists mostly of one-story and well-built houses. A considerable number of the inhabitants are colliers. Four public coaches pass through it daily. Beautiful scenery and several fine demesnes in the vicinity unite with the intrinsic cheerfulness of the place to render it a pleasant summer-retreat. In the village are a circulating library and an infant school; and at Ford, in its immediate neighbourhood, is a United Secession meeting-house. Population 750.

**PATNA**, a village and a *quoad sacra* parish in Ayrshire. The village stands on the left bank of the Doon, and on the road between Ayr and Dumfries, 10 miles south-east of Ayr, 7 east of Maybole, and in the north corner of the parish of Straiton. Its houses lie almost as aspersedly among the fields as a handful of sown corn does among the clods. The landscape around it is confined, tumulated, and bleak. The working of coal and limestone, both of which abound in the neighbourhood, gives employment to the inhabitants. Population 236. The *quoad sacra* parish comprehends pendicles of no fewer than six parishes,—Straiton, Kirkmichael, Dalmellington, Ochiltree, Coylton, and Dalrymple; and has a population of about 630. The church was built in 1837. An United Secession meeting-house was built in 1838, and a neat manse for its minister in 1840. Both places of worship are situated in the village, and are neat but very small. There is in the village an endowed school.

**PATTAIG (THE)**, a wild mountain-stream in the south-west corner of Badenoch, Inverness-shire. It rises in Ben-Aulder forest, far from the habitations of men, and runs 6 miles northward, and  $2\frac{1}{2}$  miles westward to the head of Loch-Laggan. While its waters pass through the Spean and the Lochy to the western ocean, one stream, which rises within  $1\frac{1}{2}$  mile of it, passes through Loch-Ericht, Loch-Rannoch, the Tummel, and the Tay to the Eastern ocean; and another stream, which rises within 3 miles of it, passes through the Spey to the Moray frith. The Pattaig, about midway between its source and its embouchure, expands into a lake of its own name, which measures about  $\frac{2}{3}$  of a mile both in breadth and in length; and above this lake it is called first Canan-water, and next Culrea-water.

**PAXTON**, a village in the parish of Hutton,  $4\frac{1}{2}$

miles west of Berwick, and 10 miles east of Dunse, Berwickshire. It stands  $\frac{1}{2}$  of a mile north of the road between Berwick and Kelso, and about  $1\frac{1}{2}$  mile from the beautiful suspension-bridge, called the Union bridge, across the Tweed. It is the site of a school-house, and had, in 1831, a population of 270. In its vicinity is a brick and tile work. The ancient parish of Paxton is now comprehended in HUTTON: which see.

PEATHS, or PEASE, a deep, thickly-wooded, and picturesque ravine or chasm, over which is thrown a remarkable bridge, in the parish of Cockburnspath, Berwickshire. See COCKBURNSPATH. During the period of the international wars, this ravine was one of the strong passes for defending Scotland. Patten, in his account of the Duke of Somerset's expedition, thus describes it:—"We marched an VIII mile til we came to a place called the Peaths. It is a valley turning from a VI mile west straight eastward, and toward the sea a XX skore, a XX skore brode from hantke to banke above: so steepe be these hankes on eyther syde, and depe to the bottom, that who goeth straight doune shall be in daunger in tumbling, and the commer up so sure of puffing and payne; for remedie whereof the travellers that way have used to pas it, not hy going directly, but hy paths and footways, leading slope-wise; of the number of which paths they call it somewhat nicely indeed, ye Peaths. A hrute a day or two before was sprd among us that hereat ye Scottes were very busy a working, and how here we should he stayed and met withal by them, whereunto I harde my Lordes Grace vow that he wold put it in prose, for he wolde not step one foote out of his course appointed. At oure coming we found all in good peace. Howbeit the syde wayes on either syde most used for eas were crost and cut of in many places, with the eastying of traveres trenches, not very depe indede, and rather somewhat hinderyng than utterly letting; for whither it were more by pollecie or diligence—as I am sure neyther of both did want—the ways by the pioners were some so well plained, that our army, caryage and ordonance were quite set over after sunset, and there as then we pigbt our campe."

PEATLAW, a hill in the parish and county, and 2 miles north-west of the town, of Selkirk, situated in the peninsula between the Tweed and the Ettrick, 3 miles above their confluence, and possessing an altitude above sea-level of 1,964 feet.

PEEBLES, a parish nearly in the centre of Peebleshire; bounded on the north-west and north by Eddleston; on the east by Innerleithen; on the south-east by a detached part of Traquair and by Selkirkshire; on the south-west by Manor; and on the west by Stobo and Lyne. Its outline is exceedingly irregular; and its extent is  $7\frac{1}{2}$  miles in extreme length from north to south; 5 miles in extreme breadth; and 18,210 acres in area. The Tweed, running prevalingly eastward, but making several wide detours, moves majestically across the centre of the parish, over a distance geographically of  $4\frac{1}{2}$ , and along its channel of 6 miles. A great and permanent contraction at the river of the southern half-length of the parish, occasions the stream to form the houndary-line  $1\frac{1}{2}$  mile after the first contact, and half-a-mile before departing. The Tweed is here 500 feet above sea-level; and though it has now performed only one-third of its course to the sea, it has fallen 1,000 feet, or two-thirds of the aggregate height between its source and its embouchure. Its banks, for some distance after it becomes connected with the parish, are confined and simply pleasing; but at the bridge and onwards, they expand into a vale of considerable breadth, possessing almost every element of scenic

beauty. The Lyne, immediately above its confluence with the Tweed, flows half-a-mile along the south-west boundary. Meldon-hurn, a streamlet of  $4\frac{1}{2}$  miles in length, traces the western boundary of the northern division  $2\frac{1}{2}$  miles southward to the Lyne. Manor-water runs  $1\frac{1}{2}$  mile northward along the western boundary of the southern division to the Tweed,  $1\frac{1}{2}$  mile below the mouth of the Lyne. Eddleston-water bisects the northern half of the parish southward, and enters the Tweed at the town of Peebles. Three other considerable streamlets, and several minor ones, run either to the Tweed or to the Eddleston,—one of them tracing for 2 miles southward the eastern boundary. All the streams abound in trout; they are much frequented by anglers; and they yield a surprisingly large aggregate of produce. Floods, which are frequent, and occasionally large, and which used to keep up for several days their watery invasions, are now, in consequence of a matured system of drainage, carried speedily and careeringly away down the descent of the basin. The fine vale of the Tweed sends, on the one hand, a detachment strictly akin to itself up the Eddleston, beyond the parochial limits; and is continued, on the other, by a short but beautiful vale up the Glensax and Cruyton hurns, which unite a mile before falling into the Tweed. Hills occupy the rest of the area, sectioned off into little ridges or elusters, or isolated eminences, by the glens or gorges which give waterway to the streams. The hills are, in no instances, very high; and, in the aggregate, much lower than those of most other parishes in the county; they are soft and finely curved; and, except in a healthy game district, in the extreme south, they are luxuriantly green. The vales and the acclivities which screen them are profusely embellished with wood, being to the large amount of about 1,700 or 1,800 acres covered with modern and thriving plantation. Upwards of 3,000 acres are in tillage. The soil, in the bottom of the vales, is clay mixed with sand; on the interior edge of the vales, is generally loam on a gravelly subsoil; and, on the skirts and sides of the hills, is a kindly and rich earth. The pastoral grounds produce a fine herbage, and sustain, besides black cattle, about 8,000 blackfaced and Cheviot sheep. Greywacke, the prevailing rock of the county, is the chief stone of the parish, and, from the fineness of its texture, furnishes an excellent building material. Sandstone is unknown. Transition limestone exists, but cannot be profitably worked. The climate is singularly pure and healthy. Situated in the centre of an extensive hilly region, the frontiers of which are mountain-ridges, the parish has rain from all quarters in so moderate a degree as to hulk not more than 25 or 26 inches in the year; and usually not one day in a twelvemonth is it visited by the eastern fog.—On the hill of Cademuir—*Cadhmore*, 'the great fight'—a broad-backed upland in the south-east, are remains of camps and nearly 200 monumental stones, the transmuted vestiges of military possession first by the Britons and next by the Romans, and of a great and sanguinary local conflict. Camps and rings, the monuments of war in early times, and of predatory invasion in the feudal ages, surmount many of the hill summits.—Neidpath-castle, the chief landward antiquity, is situated about  $\frac{3}{4}$  of a mile west of the old town of Peebles, on a rock overhanging the north side of the Tweed. It is the strongest and most massive of the numerous fortalices which survive in the county from the feudal period; and, though ruinous and partly fallen, still exhibits to the eye a bulky and imposing, yet lumpish, square pile. Its walls are 11 feet thick; they, last century, received, without damage, the imperforation of a staircase; and they are agglutinated with a cement almost

as hard as the greywacke of which they are built. Its site is at the lower end of a wide semicircular bend of the Tweed. The concave bank, or that on the side of the castle, is very steep, and of great height; about 40 years ago, was thickly feathered over with wood, from its top to the river's brink; and, in its form and features, it is a vast romantic amphitheatre. The convex bank commences with a little plain half encircled by the river, and rises in a bold and beautiful headland, which seems to stand sentinel over the bend. Amidst this scene, the castle commands, on the north-west side, an important pass; and, on the east, it overlooks the opening vale of the Tweed, and the bridge and town of Peebles. Dr. Pennecuik, in his description of Tweeddale, thus celebrates it:

"The noble Nid Path Peebles overlooks,  
With its fair bridge, and Tweed's meandering brooks,  
Upon a rock it proud and stately stands,  
And to the fields about gives forth commands."

The wood which embowered the castle and embellished the landscape, was avariciously destroyed by the last Duke of Queensberry, either meanly to impoverish the estate before it should fall to the heir of entail, or to fling what proceeds of it he could into the lap of his natural daughter. Wordsworth sings the ingloriousness of his conduct, and the natural scenic powers of the landscape, in the following sonnet:

"Degenerate Douglas! oh, the unworthy Lord,  
Whom mere despite of heart could so far please,  
And love of hawk, (for with such disease  
Fame taxes him,) that he could send forth word  
To level with the dust a noble horde,  
A brotherhood of venerable trees,  
Leaving an ancient dome, and towers like these,  
Beggared and outraged! Many hearts deplored  
The fate of those old trees; and oft with pain  
The traveller, at this day, will stop and gaze  
On wrongs, which Nature scarcely seems to heed:  
For sheltered places, bosoms, nooks and bays,  
And the pure mountains, and the gentle Tweed,  
And the green silent pastures, yet remain."

The castle was anciently the chief residence of the powerful family of the Frasers,—proprietors first of Oliver-castle in Tweedsmuir, and afterwards of a great part of the lands from that to Peebles,—sheriffs of the county, and progenitors of the families of Lovat and Saltoun. The last male of them in Tweeddale, was the brave Sir Simon Fraser, who so signally distinguished himself in the triple action of Roslin-moor: see **LAESWADE**. In 1312, the castle passed by marriage to the Hays of Yester, the ancestors of the Earls and Marquises of Tweeddale; and, when Charles II. marched for England, it was garrisoned by John, the 2d Earl, for the King's service, and held out against Cromwell longer than any other place south of the Forth. In 1686, it was purchased by the 1st Duke of Queensberry, and settled by him on his second son, the Earl of March; in last century, it was the home of the early life of the 3d Earl of March, who became by inheritance the 4th Duke of Queensberry; and, at the latter's death without male issue in 1810, it was transmitted to the Earl of Wemyss, the descendant of a daughter of the Queensberry family.—About 2½ miles below the town, and contributing a feature to the landscape of the vale, but situated a few yards beyond the parochial boundary, stands Horsburgh-castle: see **INNERLEITHEN**. About ½ mile south-south-east of Peebles, upwards of a mile from the Tweed, and on the right bank of Glensax-hurn, stands Hayston, "a pleasant dwelling," says Dr. Pennecuik, "with a long and rising avenue of trees from the river and bridge," and the mansion whence the family of Hay, Bart., take their designation. Three-fourths of a mile below Peebles, on the right bank of the Tweed, is Kingsmeadows, the present seat of the Hay family, richly embel-

lished with encincturing woods. The chief seats in the vale of the Eddlestone are Winkstone, Chapel-hill, Venelaw-house, and Rosetta. At the head of Soonhope-burn, east of Winkstone, is the old castle of Shieldgreen, a lofty ruin, and once a seat of opulence. The parish, for an upland one, is singularly well provided with roads; no fewer than eight diverging from the burgh, or its immediate vicinity, and one of these sending off two ramifications before arriving at the boundary.—Population, in 1801, 2,088; in 1831, 2,750. Houses 455. Assessed property, in 1815, £9,255.—Peebles is the seat of a presbytery, in the synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend £298 3s.; glebe £24. Unappropriated tithes, £64 10s. 8d. The parish-church, two places of worship belonging to the United Secession, one belonging to the Relief, and one to the Episcopalians, are all situated in the burgh. There is no parochial school. A burgh grammar-school has an average attendance of 55 scholars, from 40 to 46 of whom are boarders. Salary £10, with a large house and a small garden, jointly worth £50, the emoluments accruing from the boarding establishment, and £18 fees. A burgh English school has an attendance of from 60 to 100. Salary £38, with from £35 to £40 fees, and about £5 other emoluments, but no house. A school for females is salaried by the burgh with £10, but not provided with a school-house. Of 6 unendowed schools, 3 are taught by males, and 3 by females. In 1834, the 9 schools of the parish were conducted by 12 teachers, and attended by 500 scholars. On Eddlestone-water, about 1½ mile above the town, anciently stood a chapel, in the vicinity of the site of the mansion to which it has bequeathed the name of Chapel-hill; and in the extreme east of the parish, at a place which is now known as Chapel-yards, stood an hospitium dedicated to St. Leonard, designed for the relief of the indigent and the infirm, and given in 1427 by James I. to his confessor, David Rat, a preaching friar. Other ecclesiastical antiquarian notices belong properly to the town.

**PEEBLES**, an ancient royal burgh, and the capital of Tweeddale, is situated 6 miles west-north-west of Innerleithen, 22 west-north-west of Selkirk, 22 south of Edinburgh, 27 east of Lanark, 47½ east-south-east of Glasgow, and 54 north-north-east of Dumfries. Its site is on the north bank of the Tweed, and on both banks, but chiefly the east one, of the Eddlestone; exactly on that part of the convergent vales of the parish which commands the richest view all round of the low grounds, with their mansions, ancient castles, woods, and demesnes, and of the encincturing screen of green and beautiful hills, overhung in the distance by a perspective of waving mountain-heights. The Tweed at the place runs nearly due eastward, or in the direction of east by south; and the Eddlestone approaches it in a direction due southward, till within 850 feet of falling upon it at right angles, and then, contrary to the usual manner of 'the meeting of the waters,' bends upward along the basin of the parent stream, runs 1,000 feet south-westward, and debouching round the point of a peninsula, thus fashioned by it in the form of a <, disembogues itself by three channels, enclosing two islets, into the Tweed. The point or extremity of the peninsula is occupied as a howling-green; and the south side of it is disposed in a beautiful promenade and play-ground called Tweed-green. The High-street, a spacious and airy thoroughfare, runs from near the howling-green 750 feet along the ridge of the peninsula to the cross; and thence 250 or 300 feet eastward to the East-port. From the cross the Northgate, or Northgate-street, a narrow and subordinate thoroughfare in comparison with the

High-street, runs nearly 900 feet due northward, lying parallel over most of its length with the course of the Eddlestone. Various brief streets and alleys go off at right angles from these main thoroughfares; chiefly Portbrae, communicating from the lower end of High-street with Tweed-bridge,—School-wynd, communicating from the middle of High-street with the burgh schools, situated on the margin of Tweed-green,—Old Vennel, leading down from the East-port to the lower end of Tweed-green,—and Bridgegate, communicating from the lower end of Northgate with the upper one of two bridges across the Eddlestone. All these parts of Peebles, located in the peninsula and along the left bank of the Eddlestone, and a few houses on the south side of the Tweed, constitute the New town. The ancient district, or Old town, is of small extent, and consists almost entirely of a single street, 1,400 feet long, 300 feet distant from the Tweed, coming down the face of a high ground parallel with that river, and bending for a short way up the right bank of the Eddlestone. The houses of the Old town, though in a few instances modern, are so generally old and thatched, as to have a pervadingly wan and wealthless aspect. Two bridges, one a stone erection of a single arch, and the other a timber bridge for foot passengers, the former on a line with Portbrae and Tweed-bridge, and the latter on a line with Bridgegate, connect the Old town and the New. The New town is of motley character; but it has a pleasing, modern, and recently-improved appearance in its High-street; and it elsewhere possesses many good houses, and some detached mansions and neat villas. The aggregate aspect of all Peebles, in spite of the place occupying one of the most charming sites, and being curtained with one of the most delightful landscapes in Scotland, is rendered cold and dingy by the prevalence of grey and ashy blue in the hues of its masonry. A wall which originally encircled all the New town north of the Tweed, has now, except at the exterior side of some gardens parallel with Northgate, entirely disappeared. Tweed-bridge is a structure of unknown antiquity, various in the architectural style of its different parts, and probably as various in the dates of their respective erection. It has five main arches in the ordinary channel of the river, and three smaller ones at the ends to admit the transit of a flood; and, till 3 or 4 years ago, when it was improved and widened, it measured only 8 feet between the parapets, and, in consequence, had not roadway for two oppositely moving vehicles. A little below the town a light, handsome iron-bridge, constructed in 1818 for foot-passengers, spans the Tweed, at a point where it is 108 feet wide. On the south side of the High-street is a large and very commodious tontine inn, erected in 1808. At the west end of High-street stands a neat modern building, used as the town and the county jail. In the same locality, on a small rising ground, stands the parish-church, a plain but substantial edifice, built in 1784, and surmounted by a steeple which is more massive than elegant or neat. The church, by being Romanistically placed due east and west, instead of being set right in front of the whole length of the High-street, is made to look squintingly down the thoroughfare; and, by wanting some cheap graces of architecture which it should naturally have received, it wears an air of looking at the burgh, and being looked at in return, with derision. In the roadway of High-street near the cross, is a well dedicated to St. Mungo, from which the town obtains a plentiful supply of water.

At the western extremity of the Old town are the ruins of St. Andrew's church, occupying the site of an earlier ecclesiastical erection, the pristine parish-church of Peebles. The ruins, in the state in which

they existed toward the end of last century, are depicted in a drawing by Grose; but they were even then greatly dilapidated; and they have since suffered such decay, that little more than the wreck of the tower or steeple remains above ground. The cemetery around it continues to be the ordinary burying-ground of the parish. That the original church on the site was one of Culdee erection, one belonging to the British people, one connected with a social and a religious state long prior to that of the Anglo-Saxon period, is extremely probable. From some very old free-stone in its walls, the church which survived in ruin to a comparatively recent date, and which must have been built several years before the close of the 12th century, appears to have been the successor, and, to a certain extent, the re-edification of a church greatly more ancient. At the Inquisition of David I., in 1116, the church is noted as existing, and as belonging to the see of Glasgow. Ingelram, whom David made chancellor of the kingdom in 1151, and bishop of Glasgow in 1164, was previously rector of Peebles, and archdeacon of Glasgow. The church in which he officiated as rector, that which comes into view at the epoch of record, was dedicated to the Virgin Mary; but probably did not receive the name of St. Mary's church till it ceased to be Culdean, and became the scene of the Romish ritual of the Anglo-Saxon or Anglo-Norman colonists. David I. granted to chaplains of St. Mary's church—who probably were of his own appointing, or whose altars he instituted—the corn and the falling mills of Innerleithen, with extensive manures and the adjacent lands. In 1195, the new church, that dedicated to St. Andrew, was consecrated by Joceline, Ingelram's successor in the bishopric. In this church, and in its predecessor, the bishops of Glasgow occasionally held their synods. Joceline, or his successor, in order to settle a dispute with his archdeacon, assigned him a revenue out of the church's pertinents; and thus converted the rectory of Peebles into a vicarage. An altar in St. Andrew's church, dedicated to St. Michael, had a special endowment for the services of "a chappellane, there perpetually to say mes, efter the valow of the rents and possessions gevin thereto, in honour of Almighty God, Mary his modyr, and Saint Michael, for the hele of the body and the sawl of Jamys, Kyng of Scotts, for the halybeis, ye hurges, and ye communitie of ye burgh of Peebles, and for the hele of their awn sawn sawlis, their fadyris sawlis, their modyris sawlis, their kynnis sawlis, and al Chrystyn sawlis." St. Andrew's had various other chaplainries; it continued to be used as the parish-church till the Reformation; and it was then wilfully damaged, rendered unfit for use, and abandoned. The archdeacon of Glasgow continued till that epoch to be rector both of it and of the church of Manor, and is believed to have annually drawn from the two parishes parsonage tithes to the amount of 6,000 marks. Part of the vicarage tithes was at the Reformation assigned by the patron of the parish to the master of the burgh grammar-school. The dragoons of Cromwell are said, when engaged in the siege of Neidpath-castle, to have used the church as their horses' stable.

Two hundred yards north of the east end of the Old town stand the ruins of the conventual church of the Holy Cross, one of the four in Scotland called Ministries, and founded for 70 Red or Trinity friars. The entire building was a hollow quadrangle 124 feet by 110; and the church formed the south side of the square, and measured 164 feet by 26 within walls. In the front wall was inserted a small open arch over the spot containing the relics which occasioned the erection of the structure; and by this means worshippers of the relics or devotees of the

shrine had access both from without and from within to the object of their veneration. The side-walls of the church were 22 feet high; and the front was perforated and embellished with five large Gothic windows. The convent or cloistered residence of the friars formed the other three sides of the square; its ground floor was vaulted; and its side walls all round were 16 feet asunder, and 14 feet high. From the abandonment of St. Andrew's church, till the opening of the New town church in 1784, the church of the Red friars was used as the parochial place of worship; and till the beginning of last century, the cloisters, which had, at the Reformation, undergone some change in their interior arrangement, were occupied as schoolrooms of the burgh schools, and dwelling-houses of the schoolmasters. Only a fragment of the church now remains; and the cloisters have been obliterated. A steeple was, after the Reformation, added by the town, and inscribed on a corner-stone with its name; and this exists as a sort of *post mortem* memorial of the ancient building to which it was attached. So rapidly, after its relinquishment as public schools and church, did the original pile disappear, so rapaciously did the burghers seize upon it as a convenient quarry for cottage, cowhouse, or sty, and so magnanimously indifferent were the authorities to the work of dilapidation, that even the Protestant steeple might have been as bodily run away with as the Popish convent and mass-house, had not a neighbouring gentleman, for the sake of defending an enclosed family burying-vault, fenced the fragment and scared away the stone-eaters. The church of the Holy Cross owed its foundation to a very common event, which yet, from the superstition of the times, created a great popular sensation. On the 7th of May, 1261, as we learn from Fordun, there was found on the spot which became the site of the church, and, "in the presence of honest men, kirkmen, ministers, and burgesses, a certain magnificent and venerable cross," which seemed to have been very long inlumed, and was supposed to bear marks of martyrly or even higher sacredness. As a stone box which enclosed it bore the inscription, "The Place of St. Nicolaus, Bishop," the sapient opinion was instantly adopted that it had belonged to a Culdean saint and prelate of the name of Nicolaus, who had been martyred in the year 296, under the Maximian or Dioclesian persecution!! Such a medley of anachronisms betrays at once the ignorance, the impudence, and the characteristic craft of the cowed priests of the priesthood; but it was by no means gross enough to provoke the suspicion, or to act otherwise than to charm the credulity of that superstitious age. Even the discovery, "in the same place, about three or four paces distance from the part where that glorious cross was found at," of "the holy reliques of his [St. Nicolaus'] body cut assunder in hitts, or collops, and pieces, laid up in a shrine of stone," could not suggest to "the honest men and burgesses," that the whole inhumation was a monkish imposture, and an act probably of not many days' date; but, on the contrary, operated on them like demonstration, that, by the bequest to them of the uncorrupting flesh and the thaumaturgical cross of a primitive martyr, their town would henceforth be the theatre of sacred prodigies. Nor did the adroit impostors of the cowl permit them to be disappointed. For, "in the place where it was found," says Fordun, "there was, and are yet, frequent miracles done by that cross; and thither the people with holy vows and oblations to God de-

voutly flocked, and still do, from all parts;" and, says another writer, "the place, while the piety of our ancestors continued, was famous by the glory of its miracles, and repaired to by a wonderful confluence of people." Alexander III., then only 21 years of age, drenched with the lessons of monkish tutorage, and prompted or urged by the bishop of Glasgow, lost no time in erecting over the spot "the magnificent church" and cloisters; and he gave for its support about 50 acres of excellent circumjacent land, and various other endowments. In addition to the original relics, a prodigious addition was made to the thaumaturgical and lucrative appliances of the foundation by the accession—though at what precise date does not appear—of a pretended piece of the true cross of our Lord; for a charter of James V. says, respecting the church, "quibar ane part of ye verray croce yat our salvator was crucifyit on is honorit and keepit." An oath in the reputed royal poem of "Pehlis to the Play," in the words, "By the Haly Rude of Peebles," shows in what deep veneration the fictitious relic was held. A foundation so rich in relics could not, in an age when all religious well-being was treated as an affair of merchandise, fail to be rich in worldly wealth. King Robert IV., to whom its minister, Friar Thomas, was chaplain, gave it the lands of King's-meadow. The noble and opulent family of Frazer, the proprietor, in the 13th century, of the greater part of Tweeddale, bestowed upon it several princely donations. Frazer of Forton, in Athelstauneford, gave it a right to an annual revenue of grain from his lands, so considerable in value as to have come down by entail to the Earl of Wemyss as heir to the proprietor after the abolition of Scottish monkery. James V. gave it a splendid mansion in Dunbar, built by the Countess of the 7th Earl of Dunbar, and only daughter of the royal Bruce, for a community of Red friars who were suppressed; and other parties gave it lands in the parish of Cramond, houses in the West Port of Edinburgh, and various other donations of soil and tenement. All these possessions seem to have been transferred to William, Earl of March, second son of the 1st Duke of Queensberry, at the Revolution and the Union. But connected with various chaplainries and altarges which existed in the church, there were numerous endowments of partial, and in some instances, entire rents of houses, by the burgesses of Peebles for the "sawll-heil," or soul-welfare of particular individuals; and all these, as well as similar property connected with altars in St. Andrew's church, were granted, in 1621, by James VI. to the community of the burgh, on the condition of their paying an annual rent into the exchequer, and offering daily prayers for the royal donor.

On the rising ground near the point of the peninsula now crowned by the modern parish-church, anciently stood a chapel, attendant upon Peebles castle. Whatever the castle was, it does not figure in history, appears in record solely or chiefly through the medium of its chapel, and, as a building, has, for ages, been traceable only by tradition. The chapel was of great but unascertained antiquity; and, along with a carrucate of adjacent land, and ten shillings a-year out of the firm of the town, was granted by William the Lion to the monks of Kelso. It stood a little eastward of the site of the present church, looking right along the High-street; it was a long, narrow, Gothic structure; it was, for a long period after the Reformation, the meeting-place of the kirk-session and the presbytery, and the scene of the celebration of marriages; and it stood and was in use, till pulled down at the crection of the modern church.—Other chapels, particularly one dedicated

to the Virgin Mary, and called our Lady's chapel, anciently stood in the town, but are now untraceable in both their history and their ruins.—The contemporaneous existence of the three churches of St. Andrews, the cross, and the castle, with their respective towers, seems to have suggested to Timothy Pont, the compiler, at the middle of the 17th century, of Bleau's Atlas Scotiae, the conceit of searching out triads of objects in Peebles, and celebrating the town by the parade of as many as he could discover. "Celebris est hæc civitas," says he, "quinque tenuis ornamentis, nempe, tribus templis, tribus campanilibus, tribus portis, tribus plateis, tribus pontibus." The quaint Dr. Penneucik, delighted with the conceit, adopts and enlarges it in his usual style of versification:—

"Peebles, the metropolis of the shire,  
Six times three praises doth from me require.  
Three streets, three ports, three bridges it adorn,  
And three old steeples by three churches borne.  
Three mills do serve their turn in time of need,  
On Peebles' water and the river Tweed.  
Their arms are proper, and point out their meaning,  
Three salmon-fishes nimbly counter-swimming."

Several localities and old houses in Peebles present, in their names, their association, or their appearance, memorials of ancient importance or bygone interest. Usher's wynd, Borthwick's-walls, Castle-hill, King's-house, King's-orchards, and some others, are names which still indicate that the town was at one time often graced with the residence or the visits of royalty. "Money," says the writer of the Agricultural Report of the county, "would seem to have been coined in the town; an house still retaining the name of Cuinzee Nook." A straid across the High-street is called Dean's gutter, and an edifice immediately to be noticed is called Dean's house,—names which indicate the residence or influence as parish minister of the archdean of Glasgow. An old house of agreeable aspect, now sectioned off into small apartments for families of the working-class, is called Virgin's Inn, and, not improbably, was a nunnery. Dean's house, situated in the immediate vicinity of Dean's gutter, was the town residence in Peebles, of the noble family of March, and the natal mansion of the last Duke of Queensberry. The edifice is somewhat castellated, has on one of its eorners a curious pepper-box turret, and admits ingress only by an arched passage leading through to the back courtyard. This house is believed to have been the scene of a highly romantic, though merely traditional, incident, which forms the subject of Sir Walter Scott's ballad of "The Maid of Neidpath." When Neidpath castle, says the story, was inhabited by the Earls of March, a mutual passion was cherished by a daughter of the family and a son of the laird of Tushielaw in Etrick. The young man could not win the consent of his loved one's parents to his happiness, and went abroad. The proud Earl soon saw his daughter becoming the victim of consumption, induced by her grief, and, as the only means of saving her life, agreed that her lover should be recalled. On the day when young Tushielaw was expected to pass through Peebles on his way to Etrick, the fond, though greatly enfeebled, young lady caused herself to be removed to the balcony of her family's town residence that she might see him as he rode past. So acute were her organs, from the united effects of disease and eager anxiety, that she is reported to have heard and recognised his horse's footsteps long before they were detected by the ear of any of her attendants. But her lover, totally ignorant that any change had occurred in her appearance, and entirely unapprized, and unexpected of her being in

the town, rode past without recognising her, or even slackening his pace. She reeled beneath the shock of his seeming heedlessness, and, after a brief struggle, died in the arms of her attendants.—The cross of Peebles stood in the centre of a spacious area, at the intersection of High-street and Northgate, and still bequeaths its name to the locality. It resembled the Cross of Edinburgh, both in the elegance of its structure, and in the barbarousness of its fate, possessing beauties too sublimated to be seen by the fat hailes of a rotten hurgh, and ordered off the thoroughfare to give "ample scope and verge enough" to donkeys and their drivers.

Peebles has not all the natural facilities to be a seat of manufacture which it is reputed to possess; and though twitted about its want of enterprise, actually labours under want of resources. Water is plentiful, but water-power is scanty, and is nearly all pre-engaged; coal is distant and dear; and communication with the coast and the great towns is expensive and slow. Yet, as the metropolis of an extensive, though thinly peopled, district, it has a considerable depot trade; nor is it destitute of even a decent amount of manufacture. In a suite of walk-mills on Eddlestone-water waulking and dyeing are an established employment, and the fabricating of plaiding, flannel, and coarse woollen cloth, in all parts of the process from carding onward, is somewhat briskly conducted. Stocking-making employs a few workmen. One brewery exists at Kerfield, about a mile to the east, and another on the Tweed, at the head of Twiced-green. A suite of corn mills—the same to which Dr. Penneucik's lines allude—stands on the Tweed, behind the Castle-hill. The tanning and the working of leather are carried on in Northgate. The manufacture of fine cotton fabrics was introduced from Glasgow at the beginning of the century; but, as in other places, and more than in most, it has greatly declined, and involves its operatives in penury and straits. The fabrics woven are chiefly cambric handkerchiefs with borders; and the clear weekly earnings of a weaver average six shillings. The weavers, as numerous as possible, migrate to the woollen district of Galashiels and Hawick, or obtain employment from farmers and gardeners. The number of handlooms, in 1828, was 190; and, in 1838, it was reduced to 50.—The town has a branch-office of the British linen company's bank; a savings' bank; a printing-press; a reading-room; a subscription-library; a masonic lodge; about 30 inns, public-houses, and whisky-shops; 2 friendly societies; and a curling and coursing club. Three free fairs, according to James VI.'s charter to the burgh, were, for some time, held annually; each of two of them for 48 hours, and the other for 8 days, "according to use and wont." Seven annual fairs were afterwards held, each of 6 for one day, and Beltein for 2 days,—Yule, Fasten's E'en, Beltein, St. Peter's Hook, Runt, and St. Andrew's. Only 4—one of them of very recent establishment—are now held; the chief on the 1st of March and in the beginning of October. A weekly corn and meal market is held on Tuesday.

Peebles was formerly much celebrated for games and amusements, which probably kings in some instances introduced, or at which they presided. "Pebelis to the Play"—an antequely written poem, written in the same stanza as "Christis Kirk of the Green," and first published by Pinkerton in 1783—pertinaciously ascribed by some critics to James I., as pertinaciously regarded by others as an impossible production of his pen, and quietly affiliated by not a few to the parodial genius of Allan Ramsay—gives a fair idea of the ancient pastimes, and, in a humorous manner, exhibits them as a tissue of rustie merrit-

ment and athletic sport. They are noticed in the opening stanza of James I.'s undoubted poem:—

“ Wes nevir in Scotland hard nor sene  
 Sic dansing nor deray,  
 Nouthier at Falkland on the Grene,  
 Nor Peeblis at the Play;  
 As wes of wowarris as I wene,  
 At Christis Kirk on ane day:  
 Thair came our kitties weshen clene,  
 In thair new kirtillis of gray,  
 Full gay,  
 At Christis Kirk of the Grene that day.”

Yet Tytler, the enthusiastic admirer of James I., and the editor of his Poetical Remains, but one of those critics who will not allow ‘Pehlis to the Play’ to be ascribed to him, says, “The anniversary games or plays of Peebles are of so high antiquity that, at this day, it is only from tradition, joined to a few remains of antiquity, that we can form any conjecture respecting the age of their institution, or even trace the vestiges of what these games were. That this town, situated on the banks of the Tweed, in a pastoral country, abounding with game, was much resorted to by our ancient Scottish princes, is certain. The plays were probably the golf, a game peculiar to the Scots, foot-ball, and shooting for prizes with bow and arrow. The shooting huts still remain. Archery, within the memory of man, was still kept up at Peebles; and an ancient silver prize-arrow, with several old medallions appended to it, as I am informed, is still preserved in the town-house of Peebles.” A party of the royal company of archers have, for many years, attired in the elegant costume of the Scottish bowmen, repaired annually to contend for this “ancient silver prize-arrow;” and they keep up the practice of obliging or permitting the successful competitor to add to it a silver medal, inscribed with his name and the date of his victory. The howling-green at the point of the peninsula is a favourite resort of all classes of the inhabitants. Angling in the Tweed and the Eddlestone, and various other trouting streams, within an easy distance, steals largely on the time of both hurghers and visitants. Abundance of game in the uplands which screen the vales draws sportsmen from a distance. The mineral well and the Border games of Innerleithen belong to Peebles very much as the affairs of a suburb belong to an adjacent city. Salubrity of climate, delightful combination of town and rustic life, ample facilities for all sorts of healthful exercise, a fair amount of literary and social appliances, and a well-earned celebrity in the character of its seminaries, unite to render Peebles an attractive scene of retirement for various classes of annuitants.

Peebles, at the passing of the Reform act, was disfranchised as a burgh, and thrown into the county; and, before that date, it united with Selkirk, Linlithgow, and Lanark, in returning a member to parliament. Its town-council are a provost, 2 bailies, a treasurer, and 13 councillors, elected according to the provisions of the Reform act. Constituency 94. The magistrates have jurisdiction only over the property held hurgage; they hold courts only when business requires, and chiefly for the service of heirs; they have not, for many years, held any regular courts; they, between 1820 and 1833, tried about 45 cases of sequestrations for rent, but presided in no other civil actions; they wield criminal jurisdiction only in cases of petty delicts; and, when necessary, they are assisted by the town-clerk as assessor. Their patronage is confined to the election of the town treasurer, with a salary of £5 10s. 8d.; the town-clerk, and the procurator-fiscal, paid by fees; the teachers of the burgh schools, paid by salary and fees; three burgh officers, each salaried at £6; and the town-drummer, scavenger, and

grave-digger. The property of the burgh yields an annual rental of about £506; and its nett debt at Michaelmas, 1832, was £5,150 3s. 5d. The revenue, in 1832, was £649 14s. 6d.; and the expenditure, in the same year, was £767 17s. 6d. The taxes levied are cess, petty-customs, and pontage of Tweed bridge; the first amounting to £9 6s. 10d. a-year, and the second and third jointly to £101. The qualification of hurghess and guild-brother used to be requisite to a trader; but is now seldom insisted upon, and rates at a low fee. The only incorporated craft is that of the weavers; whose number, in 1822, was 32, and their admission-fee 25s. All matters of police are regulated by the magistrates and town-council. The streets and shops are lighted with gas, manufactured by a joint-stock company; justice-of-peace courts, and the courts of the sheriff of the county, are held in the burgh.

Peebles seems to have been a seat of population in British, or, at latest, in Romanized British times. Its name is a British word, or the moulding of a British radix, which signifies ‘shielings,’ or the shingly and slender domiciles of a rude people.\* Its site is one of those fertile and mountain-sheltered vales of the Tweed which are known to have been very early settled, and which were the scene of some of the earliest enterprises of evangelization and social enlightenment. Strongly protected on some sides by the thick forest of Etrick, and on others by high and broad ridges of mountain-rampart, its naturally fortified position would necessarily invite settlement as a retreat and a security from hostile invasion. The town comes first distinctly into notice at the beginning of the 12th century; and it had then a church, a mill, and a brewery, and, though in the midst of a naturally poor and thinly peopled district, possessed sufficient wealth and importance to be immediately pushed into prominent connexion with the see of Glasgow. The castle, with its chapel and other accompaniments, was probably coeval with the date of record. Ingelram, while rector of Peebles in the 12th century, vigorously defended, in a provincial council at Norham, and afterwards in the papal court at Rome, the independence of the Scottish church, against Roger, Archbishop of York’s claim of superiority; and he carried his point with Pope Alexander III., and was translated from his rectory to the bishopric of Glasgow, not only without the archbishop’s concurrence, but in spite of his opposition. Peebles, from about the date of record at the commencement of the Anglo-Saxon period, was a king’s burgh, or royal demesne, and was frequently visited by the Scottish princes for the sake of the pleasures of the chase. Alexander III. was much attached to it, and, as we have seen, rendered it attractive to both himself and crowds of devotees, by the erection in it of the Cross church. In 1296, William de la Chambre ‘the hayliff,’ John the vicar, several hurghesses, and ‘tote la communauté de Pehlis,’ swore fealty to Edward I. at Berwick. In 1304, Edward, then lord paramount, granted Peebles, with its mills and pertinents, to Aylmar de Valence and his heirs. Robert I., when he had become lord of the ascendant, conferred on the burgh

\* Dr. Dalgleish, the writer of the Old Statistical Account of the parish, falling into a rather natural mistake, says that the name “seems plainly to have been taken from the pebbles with which the soil abounds, particularly where the town was first built.” The astute and caustic George Chalmers—whose predilections, however, induce him to fling most of his rancour at presbyterian modes and ministers—dryly remarks on this: “The learned minister of Peebles derives the obscure name of his parish from the pebbles under his feet, though we are not told, indeed, that pebbles are very plentiful in this ancient town of the British tribes. We thus sometimes see antiquaries

collecting toys,  
 Like children gathering pebbles on the shore.”

the privilege of holding a market. In 1334, Edward Balliol conveyed to England, as part of the purchase-money of a dependent crown, "villam et castrum et vicecomitatium de Peblis." In 1357, the burgh sent two representatives to the parliament which was called to grant an aid for the ransom of David II. In 1366, David II. granted it a charter of the chapel of St. Mary in Peebles, and the mill of Innerleithen. James I. seems occasionally to have visited the town on his hunting excursions; and by those who regard him as the author of 'Pehlis to the Play,' is believed to have been residing in it, and to have just witnessed its now obsolete festival of Beltane, or Beltein—the fire of Baal—when he composed that poem. James II. gave the burgh one charter, and James IV. gave it two. A charter, the governing one, granted by James VI. in 1621, recites and confirms former ones, none of which are now extant; and is to the provost, bailies, councillors, and community of the burgh. It confirms to them the burgh, with all its former liberties, privileges, and possessions, including power to hold courts, use merchandise, and levy customs, not only within the burgh but also through the shire, to institute a merchant guild and guild court, to hold a weekly market and three annual fairs, and draw customs, tolls, &c. thereat, and to draw the customs used and wont of the bridge over Tweed. It further grants powers to the said provost, &c. "of making and publishing acts, statutes, and orders for the common good and advantage of the said burgh, and for the defence of the liberties and privileges of the same, by assembling and calling together all the inhabitants and burgesses of the said burgh, to be observed under such penalties as to them shall seem expedient, with special power to them, within the territory of the said burgh, of putting to final execution the said acts and orders." The charter confirms or grants various lands particularly named and described; and also all prebendaries, chaplainries, altarages, and hospitals, within the burgh, with the rents and profits thereof, and all payments, out of the lands or tenelements of the burgh, to any chapel in other parts of Scotland. A great part of the lands described appear from their names to have been long ago alienated. In 1545 the Earl of Hertford reduced the town to ashes, but spared the churches and the cross; and in 1604 it was partially reburnt, but by an accidental fire. In 1566-7, Lord Darnley was for some time pent up in Peebles in a sort of exile, and gave occasion to the historian Buchanan to load the place with charges of poverty, and of being haunted with thieves, which seem far from having been warranted by facts. In 1585, the Protestant lords passed through it in their march against the Earl of Arran at Stirling. "The inhabitants," says Pennecuik, speaking of both the town and the county, "are of so loyal and peaceable dispositions, that they have seldom or never appeared in arms against their lawful sovereign; nor were there amongst that great number twelve persons from Tweeddale at the insurrection of Rullion-green or Bothwell-bridge. Of their loyalty they gave sufficient testimony at the fight of Philiphaugh, where several of them were killed by David Leslie's army, and others, the most eminent of their gentry, taken prisoners." In 1745 a detachment of the troops of Prince Charles Edward encamped a day at Peebles, on their way to Dumfries; but they obtained no recruits, nor did they inflict any damage beyond being the occasion of some needless alarm. While Buonaparte threatened Britain with invasion, this ancient burgh was second to no place in the United Kingdom in the display of loyalty; and jointly with the county, out of an available population of 8,800,

mustered no fewer than 820 effective volunteers and yeomanry, besides furnishing its proportion to the militia.

The arms of Peebles allude to the increase in the number of salmon at their annual spawning migration to the upper waters of the Tweed and the Eddlestone; and they express the allusion by the device of one salmon represented as swimming up the stream, and two represented as swimming down, and by the motto, "Contra nando incrementum." Above the shield appears St. Andrew with his cross, the adopted tutelary of the town, because the patron saint of the most ancient of the churches. The three fishes in the armorial bearings have long been associated with a local drinking usage most destructive to social morals: the inhabitants piquing themselves on the series of triads by which their town has been so long distinguished, observing how an instance of the ternary idea stands out in the town's arms, and seemingly feeling the treble thirst which follows a gormandizing dinner on fish, rarely sit down, no matter in how small a party, to any potation without consuming to the supposed honour of their burgh three bottles, three tumblers, or three measures, in some way, of intoxicating drink. "As much good liquor," says a contemporary, "we almost believe, has been shed on this account as would keep the river in flood for a week." Peebles gives the title of Viscount to the Earl of Wemyss and March.

PEEBLES-SHIRE, or TWEEDDALE, a county in the interior of the southern division of Scotland, situated between 55° 24' and 55° 50' north latitude, and between 2° 45' and 3° 23' longitude west of London. It is bounded on the north and north-east by Edinburghshire; on the east and south-east by Selkirkshire; on the south by Dumfries-shire; and on the south-west and west by Lanarkshire. Its boundary-line, on the north and north-east, is partly a water-shed, partly the water-course of rills or incipient rivulets, and partly altogether artificial; on the east is arbitrarily carried across the basin and current of the Tweed; on the south-east and south is chiefly a water-shed, and partly the course of rills and the waters of St. Mary's-loch; and in the west is one-half a water-shed, and another half partly artificial but chiefly the course of the eastern Medwin, of Biggar-water, and of Spittal-burn. Its form is irregularly triangular; the sides being disposed along the north-east, the south-east, and the west; the north-east side having a symmetrical projection of 2½ miles deep, and the south-east side, a slender indentation of 7; all the three angles being slightly rounded. In straight lines between the angles, or between the middles of the roundings which represent them, the north-east side measures 20 miles, the south-east side 27, and the west side 28½. The extreme length, from north to south, is about 30 miles; the extreme breadth, from east to west, is about 22 miles; and the area, according to Armstrong, is 251,320 English acres,—according to Findlater, the writer of the Agricultural Survey of the County, is 229,778 English acres,—and, according to Chalmers, the author of 'Caledonia,' whose data appear to be the most correct, is 216,320 English acres, or 338 square miles.

The surface lies aggregately higher than that of any other county in the south of Scotland, and is a continuous, tempestuated sea of heights, a congeries of hilly clusters and mountain-ranges, which direct their spurs and their terminations to every point of the compass. The lowest ground is in the narrow vale of the Tweed, immediately within the boundary with Selkirkshire, and lies between 400 and 500 feet above sea-level. The Tweed's entire course, in the segment of a circle, from the extreme south-west

corner, round by the very centre, on to the eastern angle of the county, over a distance along the channel of about 41 miles, forms a great artery into which, with the exception of the few hills on some parts of the boundaries, all the water-courses, like so many veins, pour their liquid accumulations. But this long sweep of central basin is, over a great proportion of its length, a series of mere gorges, affording space for little more than waterway and public road; and nowhere does it expand into vales of more than about 3 miles broad, and seldom into haughs of more than a few furlongs; while its screens are oftener bold heights, or abrupt banks, than gentle declivities and hanging plains. The grandly and prevalently tumulated county everywhere, in a general view, recedingly rises from this great line of drainage, in series of shelving but quite irregularly disposed ascents toward the boundaries; and is cloven down into a ramified or almost tessellated texture by rivulets and brooks, which rarely rival the Tweed in the breadth of their conquests from the hills, and are frequently squeezed between the sides of deep ravines and narrow glens. On the south the surface is so densely and grandly mountainous as utterly to forbid all interior traffic, and barely to allow one wild outlet to Dumfries-shire; on the east it permits communication with the exterior world only by passes near the Tweed; and on the north it is penetrable only through three gorges among the hills, and along an equal number of stupendous elongated furrows, the narrow glens of southward streams. The mountain water-shed for 12 miles, partly along the western but chiefly along the south-eastern boundary adjacent to the southern angle, and also spurs and protrusions thence into the interior, are the summits of the Hartfell group, [see HARTELL,] the highest Scottish ground south of the Forth and the Clyde, and the nucleus of the great mountain-ranges which extend from sea to sea, and constitute the southern Highlands of Scotland. Nearly all this district, as well as the inward continuation for a considerable way of its heights, has alternately a bleak and a dismal aspect, presenting little other evidence of the ken of man than the solitary cots or shielings of shepherds, occurring at drearily long intervals, and heavily relieved in their appearance of loneliness only by the sounds of the moorfowl and the browsing of the fleecy flock. Along the south-east, or the boundary with Selkirkshire, a lofty but uncontinuous series of heights maintains north-eastward to the Tweed, an elevation but slightly diminished from that of the more alpine district; and, among other summits, it sends up Blackhouse-hill to the altitude of 2,360 feet above sea-level, Scawed-law to the altitude of 2,120, and the wide-spreading obese mountain of Minchmuir to the altitude of 2,285. Even along the north-east boundary, the rim of the complicated county basin is so high as to have the summits of Windlestraw and Dundroich respectively 2,295 and 2,100 feet above sea-level. Along the north the surface subsides, for a considerable way, into little more than hilly swells, and nowhere possesses a loftier summit than Cairn-hill, whose altitude is 1,800 feet. Along the west the highest ground, even where the boundary is a watershed, lies somewhat in the interior, and, among other heights, has those of Pykestane, Broughton, and Cadon, with elevations above sea-level of respectively 2,100, 1,483, and 2,200 feet;—and in the valleys, or rather on the streams at the base of these heights, the surface has an elevation of at least 800 feet; but, for several miles at two points, both where Biggar-water enters the county, and where Medwin-water splits into two files, and sends off its forces divergently to the Tweed and the Clyde, the

general level, though upland, is comparatively low, and hangs doubtfully on the common lip of the Tweeddale and the Clydesdale basins. Excepting the highest grounds on the south, and a ridge west-south-westward from Minchmuir, which is black, craggy, and doleful with deep and terrible precipices and chasms, the heights of the county, whether hilly or mountainous, are, for the most part, finely curved in their form and beautifully verdant in their dress; they are easy of ascent, abundant in herbage, and free from the hideous mosses and the horrid precipices which characterize so many of the Highland mountains; though wild, they can hardly be called romantic, and, though high and large and too great to comport with ordinary beauty, they want sufficient abruptness and majesty for the sublime; but, by being blended in the view with dale and glen and glittering streams and hanging woods, they afford many and charming specimens of the softly and picturesquely grand.

The Tweed is so dominantly *the* river of the county as to have popularly imposed upon it, since at least the 12th century, the name of Tweeddale. The only streams which do not pay their tributes to the Tweed, are the Clydesdale, half of the Medwin on the west, and the head-waters of the North Esk and the South Esk on the north, two streams which traverse Edinburghshire, unite at Dalkeith, and enter the frith of Forth at Musselburgh. The other or interior streams, from their having at most only half the length of the county to traverse, are necessarily all of inconsiderable bulk; and are chiefly, on the right bank of the Tweed, Fruid-water, Talla-water, Glensax-burn, and Quair-water, and, on the left bank of the Tweed, Biggar, Lyne, Eddlestone, and Leithen waters, with Holms-water, a tributary of the Biggar, and West-water, and Tarth, or East Medwin, water, tributaries of the Lyne. Megget-water, on the south, finds its way to the Tweed, not in the indigenous manner of the other streams, but as a tributary of the Yarrow, and by it of the Ettrick, through Selkirkshire. The only lakes of the county—additional to St. Mary's-loch, which touches its south-eastern margin for about a mile, and conveys the Megget to the Yarrow—are Water, or Eddlestone-loch in Eddlestone, Gameshope-loch in an uninhabited glen in Tweedsmuir, and a small lake on the estate of Slipperfield in Linton. The chief medicinal springs are those of Heaven-aqua well in Linton, and the celebrated spa of Innerleithen,—resembling respectively the medicinal wells of Tunbridge and of Harrowgate.

Tweeddale, like all hilly countries, is variable in its climate. Owing to its midland situation, it is exposed to rain equally from both seas; it has less aggregate fall of moisture than the sea-board on either the east or the west; it has been known to have, at its centre or at Peebles, only 24·936 inches of rain, when the town of Dumfries had 36·9; and yet, owing to flying clouds and partial falls, it has fewer days free from rain or snow than even the west coast. The higher the elevation of the surface, the greater is the degree of moisture. The spring-months have often a prevalence of cold easterly winds; and the months of winter are rigorous. Immediately after sunset, in the end of August and the early part of September, a low, creeping, frigid mist, or hoar-frost, locally called 'rhyme' or 'crancreugh,' is frequently seen during a dead calm, particularly after a series of rainy days, to settle down on low lands lying by the sides of streams, lakes and morasses; and, if succeeded, on the following day, by bright sunshine, it puts an end to the vegetation of the year. It does small damage to produce that is hard ripe; and as to oats and some other spe-

cies, if it attack them while the juices in the ear are in a watery state, it does not prevent their maturation; but, if it attack them at any stage intermediate between the watery and the hard mature, it renders every species unfit for seed, and of very inferior value for food. Classing the south with the west, and the north with the east, the winds blow oftener from the westerly points than from the easterly, in the proportion sometimes of 4 to 3, and at other times of 5 to 4. The medium height of the barometer at Peebles, is, in summer, 29.2, and in winter 29; and the range of the thermometer—though rarely approaching the extremes—is between 81 of Fahrenheit, and 14 below zero. Chronic rheumatism, locally called 'the pains,' is frequent, but decreasingly so, among old persons of the poorer classes; inflammatory fevers sometimes prevail in spring; yet few diseases are known which have their origin from damp or putrid exhalations.

Peebles-shire is comparatively rich in minerals. Coal abounds in its north-east extremity, forms the westerly termination of the coal-field which extends about 15 miles by a breadth of 7 or 8 on both sides of the North Esk to the sea at Musselburgh, and supplies with fuel the whole county, excepting parts which more conveniently obtain it from Lothian. Carboniferous limestone exists plentifully in the coal-district, and is quarried and burnt for manure over the same extent of the county which is supplied from the same district with coal. Substances fermenting with vinegar, and variously described now as shell-marl, and now as marly clay, sometimes occur in tough indurated strata of a dark-blue colour, lying above the limestone rock, and at other times are found in white calcareous, in the vicinity of springs issuing from limestone, and are occasionally covered with a stratum of moss; but they have not challenged attention for geological uses, and apparently have escaped any very careful examination, on account of the ample supply and the suitability of lime. An endless variety of clays lies over a considerable part of the carboniferous formation, including a very thick bed of fire-clay, like that of Stourbridge, and a small seam of fullers' earth. Alum-slate likewise abounds; and ochres, both red and yellow, with veins of manganese, occur. White freestone, in the same region as all these minerals, is plentiful; and red freestone, of a firmer texture than the white, furnishing good blocks for building, and containing seams, whence excellent pavement-flag is obtained, forms a hilly ridge, called Broomylees, bisecting the district lengthwise, forming the boundary between the two coal-field parishes of Newlands and Linton, and affording ample scope for workable quarries. Greywacke and greywacke slate—here, contrary to the general application of the popular and too comprehensive word, called whinstone—are the prevailing rocks throughout the great body of the county. The greywacke, though everywhere used for more or less refined masonry, and though the building-stone of the towns of Peebles and Innerleithen, is often either so laminous in its texture, or so intersected with cutters, as to fly in all directions under the hammer, and to be incapable of receiving a dressed and regular shape. The blue clay-slate of Stobo, which occurs in two seams, and resembles that of Ballachulish in Argyleshire, has long been in esteem, and is worked for the supply of Edinburgh, of the vale of the Tweed as far as Kelso, and of the Upper ward of Lanarkshire. Some limestone, compact and fine enough to take the polish of white ornamental marble,—a bed of ironstone, and some iron-ore, neither of them rich enough to be remuneratingly worked,—a vein of native loadstone,—galena or lead-ore, which formerly

was mined in several places for lead, and proved to be accompanied by some silver;—these, in addition to the minerals of the coal-measures and of the strata above them, occur in the small but opulcent carboniferous district. Galena is found in the glen of one of the tributaries of the Quair; and gold was formerly found in the parish of Megget,—the poorest parish, with all its gold, in Tweeddale.

The soils of by far the greater part of Peebles-shire never was, and probably never will be, turned up by the plough; and that of the arable grounds comprehends a very extensive variety. Moss, from 4 or 5, to 10 or even 20 feet deep, is found in almost every hollow and patch of level, in the higher parts of the county. At the bottom of the bed it is always of the deepest black colour, of homogeneous consistency, and convertible into the most solid and powerful peat; and nearer the surface it is of a tobacco-colour, has a more spongy texture, and consists chiefly of the interlaced fibres of plants in various stages of decay. Moss of another kind is extensively found on high grounds, lying generally upon a considerable declivity, and forming a soil of from 2 to 4 feet thick, upon a highly retentive or even impervious subsoil or sand or clay till. In its natural state it is always moist, but operated upon by georgic and manurial processes, or mixed by the plough with the ingredients of the subsoil, it assumes a variously workable and fertile character. A natural mixture of moss and sand, a variety of what is usually called moorish soil, is pretty common on the skirts of heath-clad hills, and on high dry-lying flats, especially in the parish of Linton. A mixture of sand and clay in various proportions, with often the addition of freestone, limestone, ironstone, or greywacke gravel, very generally covers the skirts of most part of the hills, at the highest elevations to which cultivation is extended. The same soil mixed with clay, and eventually predominated over by it, generally carpets the declivities in the upper ranges of their arable limits. A mixture of clay and sand, generally deep and fertile, with often a great proportion of the gravelly and stony debris of the prevailing greywacke, generally covers the lower and gentler gradients of the declivities, immediately above the troughs or little plains of the streams. A soil, prevalently light and sandy, and increasingly so toward the margins of the streams, but sometimes having a clayey intermixture, and occasionally yielding to a strong clayey predominance, is spread out athwart the haughs. Loams of the various classes of clayey, sandy, gravelly, and stony, occur only in the old croft lands, those which have been blackened and mellowed by long and constant manuring and cultivation, and occur only in the haughs and on the hanging plains which press immediately on their flank.

The forest of Leithen, the forest of Traquair, a wing of the great Ettrick forest, and a vast expanse of copses in the central district, and in the west and the north, adorned and sheltered nearly all Tweeddale, giving rise to pasturage, and tempering the bleak winds and the withering frosts. So early as the reign of David I., this wavingly and warmly woodland territory was disposed in the demesnes of princes, the granges of monks, and the manors of barons, and was embellished with their mansions, their churches, their mills, their kilns, and their brewhouses; and whether from the resources of the chase and of pasturage, or from the proceeds of an early but forgotten cultivation, it maintained a population more efficient and not less numerous than belongs to it after six centuries of changes, and amid the boasted refinements of modern economy. In those days farming was blended with grazing, the

labours of the plough with the cares of the shepherd; corn was raised in quantity to employ the mills of the manors; dairies were numerous; and orchards were cultivated with a passion which seems to have been inherited from the British Gadeni. The wide seat of the Tweeddale woods, like that of Ettrick forest, and by kindred processes of demolition [see *ETTRICK FOREST*] became stripped of its thick genial dress, and exposed to the erosion of the hoar-frost and the blast of withering winds, little else than masses of brown hill, and expanses of dismal moor, mocked with the rude tufting of the pigmy heath and the stunted furze. The prosperity of the district, from 1097 till 1297, was blasted by four following centuries of wretchedness. Yet Dr. Pennecuik, who published his well-known Description of Tweeddale in 1715, saw its resuscitation commence; and he even praised the young nobility and gentry for beginning to form plantations, which he foresaw would, in many ways, enrich just as surely as they tended directly to embellish. The farmers, though beginning to acquire a character for industry and enterprise, were still somewhat wilful in prejudice, and tenacious of old customs; they would not suffer 'the wrack' to be taken off their lands, because they supposed it to keep the corn warm; nor sow their hear-seed till after 'Runchie-week,' 'the week of weeds,' or the first week of May, had, with its imaginary malign influences, passed away; nor plant trees or hedges, lest they should wrong the undergrowth and shelter birds; nor ditch or drain a piece of boggy ground, because, by doing so, they would lose a few feet of grass; nor refrain from making their cattle lean, small, and low-priced, by overlaying their grounds, because they loved the notion of what they called 'full-plenishing.' Pennecuik, by showing the farmers their prejudices, and teaching the gentry the properties of plants, is himself entitled to praise as one of the earliest improvers. Sir Alexander Murray of Stanhope, about the years 1730-40, raised plantations, and inculcated on his neighbours the doctrines of improvement. Even the Earl of Islay, the far-famed Duke of Argyle, made choice of a moss at the Whim in Newlands, as the scene of a grand georgic experiment, and showed to the country an inspiring example of agricultural enterprise. But James Macdougall, a small farmer of Linton, originally from the neighbourhood of Kelso, was the first person to introduce the rotation of cropping, the cultivation of turnips for the use of sheep, the growing of potatoes in the open fields, and some other practices of unostentatious but powerful utility. The Duke of Queensberry having begun about the year 1788, to receive fines of his tenants, and give them compensatory leases of 55 years, the notion of property of more than half-a-century's continuance speedily prompted the erection of commodious houses, the making of enclosures, and the conducting of variform enterprises of reclamation and improvement. Yet, till within 10 years before the close of last century, the practical management of arable farms continued to be comparatively skillless. Now, however, and increasingly, Peebles-shire, in the proportion of its natural capabilities, rivals even Haddingtonshire itself—that model farming-ground of Scotland—in the methods and most beneficial practices of husbandry. To detail what the methods are, what the rotation of crops, what the treatment of the various soils, and what the adaptations of produce to geognostic position and meteorological influence, would only be to mention those which, in the estimation of all scientific and skilful agriculturists, are the most approved.

The county, as to its configuration and entire physical character, is essentially and at the same time

vigorously pastoral; and possibly may one day be as confessedly the model ground for sheep husbandry as East Lothian is for tillage. The number of sheep upon its pastures was, in 1814, 112,800, and is at present only about 102,000; but it is likely to augment to its former amount. Nearly the whole annual produce in live stock, as to at once lambs, wedders, and cast ewes, is sent to the south of England. Over nearly one-half of the county, constituting the south-east district, the Cheviot breed not only predominates, but constitutes unmixedly almost the whole stock; and, over the rest of the area, it now yields to the predominance of the blackfaced breed, now shares about equal dominion with it, and now—though in a limited district—is crossed with the Leicester sheep. A curious circumstance, the causes of which do not seem to have been yet investigated, is that, while on both banks of the Tweed in the south-west division of the county, the sheep are in general and indiscriminately healthy, no sooner does the river debouch eastward than all along its south bank, till it enters Selkirkshire, the sheep are tenfold more subject to the diseases called "sickness," and "louping-ill," than those on the left bank,—no discernible difference appearing to exist in their position, or in the influences which affect them, except that the walk of the one has in general a northern, while that of the other has in general a southern, exposure.—The number of black cattle is about 5,000. The Tees-water and the Ayrshire breeds are distributed very nearly in the same way as the two breeds of sheep,—the Tees-water corresponding in territory with the Cheviot, and the Ayrshire with the blackfaced. Much attention is given, in some districts, particularly in the north, to the dairy.—Since about the beginning of the present century, horses have been advanced to the working-stations on farms which formerly were occupied entirely by oxen; and they number about 1,200.—Swine, in consequence of a local but decreasing prejudice against their flesh, and the absence of any sufficiently exciting demand from without, are very limitedly reared.—Poultry are sometimes imposed as rent in kind; but, except in so far as additional numbers are needed to meet so foolish an imposition, they are reared only in such numbers as can feed themselves on the offals of barn-yards. Rabbits are found wild on the sand-hills of Linton. Pigeons do not thrive, and are rarely seen.

The whole landed property, as it stood in 1814, was held by about 60 proprietors; 13 of whom had estates of about £100 each, 24 of from £100 to £400, 15 of from £400 to £1,000, and 8 of from £1,000 to £4,000. About 80 farmers rented farms of from £100 to £500 of yearly rent; and a much greater number farms of from £20 to £80. The smaller farms, chiefly arable, consist of from 40 to 100 acres, and in one or two instances rise to 200. Few of the sheep-farms comprehend less than 600 or 700 acres, and most comprehend from 1,000 to 4,000; but though sometimes disposed nominally by admeasurement, they are in general let out according to their capacity, or are estimated by their known or appreciated power of supporting so many head of black cattle, and scores of sheep. About one-fifth of the county-territory lies under strict entail; and, in various features of both progress and management, is some degrees inferior to the rest of the area. The farmers, as a body, are intelligent, sober, industrious, and successful; and rarely afford an instance of dotish and stubborn antiquatedness in practice, or of bankruptcy in their business. The houses of those whose rent exceeds £50, are almost all substantial, neat, and comfortable residences. Cottiers are a class nearly, or in a great measure, unknown, their place

being supplied by day-labourers, who plod their long and weary way between the scenes of their toils and the lanes of Peebles or Linton. The peasantry, or even all classes except the few individuals who have received a polished education, are, in general, strangely characterized by ignorance of music. Pennecuik says, "Music is so great a stranger to their temper that you shall hardly light upon one amongst six that can distinguish one tune from another;" and his editor, who wrote a century after him, says, "In confirmation of this general want, it has been remarked, that from a band of Tweeddale shearers a song is scarcely ever to be heard; that a ploughman seldom enlivens his horse by whistling a tune; and that, although the scenery is so purely pastoral, the sound of a pipe, or flute, or cow-horn, or stock-in-horn, or even of a Jew's harp, is a rare occurrence in travelling through it." The population are, in general, a simple, primitive, unsophisticated race, quite alive to the substantial comforts and the real refinements of modern improvement, but uncontaminated by the tastes which have starchyed up one moiety of some communities in an utter artificiality of character, and have begreased the other moiety with the dripping unguents of luxury, or the malodorous lubrications of vice.

The sum of the manufactures of Peebles-shire will be seen by a glance at our articles on Peebles, Innerleithen, Carllops, and Linton. Viewed in connexion with the extent and resources of the county, and especially with the purity and great aggregate power of its waterfalls, and the numerous highly advantageous sites for paper and spinning mills, for bleach-fields, for woollen-works, and for general manufactories, the amount of existing machinery for factorial produce is surprisingly small. Peebles-shire ranks as low in manufactures as some districts in the interior of the Highlands, though it might rank as high as the most prosperous districts in the Lowlands. Though the county-town itself, indeed, and the small district around it, jointly containing one-fourth of the whole population, do not enjoy much water-power, why should not the coal-district in the north rival the busy paper-mill and carpet-work industry of Penicuik and Lasswade, or the majority of the vales in the interior, and on the south-east rival the highly-prosperous woollen districts on the Gala and the Teviot,—districts quite as disadvantageously situated as they with respect both to coals and to facilities of communication? Excepting the exportation of the surplus produce of the sheep, dairy, and arable farms, the whole commerce consists in the importation and retail of the small amount of goods required for local consumpt.—About one-fifth of the compact area of the county, lying on the right side of the Tweed, is so ill-provided with roads, having only footpaths or miserable mere hoof-formed tracts, as to be quite impervious to a wheeled vehicle. Other districts, considering that the country is so tumultuously hilly, are well-provided. The road from Edinburgh to Dumfries, by way of Biggar, passes through the north-west wing. The better road from Edinburgh to Dumfries by way of Moffat traverses the extreme length of the county, down the Dead-burn and the Lyne, and up the higher Tweed. The road between Glasgow and Kelso traverses the extreme breadth of the county down the Tarth and the Lyne and the lower Tweed. The road from Edinburgh respectively to Peebles and to Innerleithen passes along the dales of the Eddlestone and the Leithen. On all these roads there are both public coaches and public carriers.—Additional to the fairs of Peebles and Linton, noted in the articles on these towns, annual fairs are held at Eddlestone on the 25th of September, old style, or, if that day

be a Sabbath, on the Monday following; at Broughton, 9 days after Eddlestone fair, or on Monday, if the ninth day fall upon a Sabbath; and at Skirling, on the first Tuesday after the 26th of May, new style,—on the first Wednesday of June, old style,—and on the 4th of September, old style, or on the Monday following, should the 4th be a Sabbath.

The principal gentlemen's seats in Peebles-shire are Traquair-house, the Earl of Traquair, Darnhall, Lord Elihan; Kingsmeadows and Haystone, Hay, Bart.; Castle-craig, Carmichael, Bart.; New Posso, Nasmyth, Bart.; Stobo-castle, Montgomery, Bart.; Glen-Ormistone, Stewart, Esq.; Holylee, Ballantyne, Esq.; Kailzie, Campbell, Esq.; Glen, Allan, Esq.; Drummelzier-house, White, Esq.; Polmood, Hunter, Esq.; Rahan, Loch, Esq.; Mossfennan, Welch, Esq.; Quarter, Tweedie, Esq.; Barns, Burnett, Esq.; Cairnmuir, Lawson, Esq.; Whim, Montgomery, Bart.; Lamancha, Macintosh, Esq.; Magbiehill, Rev. Mr. Berresford; Romanno, Kennedy; Portmore, Mackenzie, Esq.; Horseburgh castle, Horseburgh, Esq., &c., &c. The only town is Peebles, till recently a royal burgh; and the only villages are Innerleithen, Linton, and Carllops. The county returns a member to parliament. Constituency, in 1838, 782; in 1841, 803. Valued rent, in 1674, £51,937 Scottish. Real property, as assessed in 1815, £64,182. The number of crimes charged, in 1832, was 22, and convicted 17; charged in 1833, was 24, and convicted 16; charged in 1840, 7, and convicted, 7. The sheriff-court for the county and the sheriff small-debt court are held on every Tuesday from the 15th of October till the 4th of April, and from the 15th of May till the last Tuesday of July.—Tweeddale unites with Lothian in giving name to the first synod on the General Assembly's list. Its parishes are only 14 in number, 2 of which belong to the presbytery of Biggar, and attach it to the synod of Lothian and Tweeddale, while the other 12 constitute the presbytery of Peebles. In 1834, there were 16 parochial schools, conducted by 17 teachers, and attended by a maximum of 858 scholars; and 14 non-parochial schools, conducted by 17 teachers, and attended by a maximum of 685 scholars. Population, in 1801, 8,717; in 1811, 9,935; in 1821, 10,046; in 1831, 10,578. In 1831, there were 1,789 inhabited houses; 2,072 families; 5,342 males; and 5,236 females. In 1841, the number of inhabited houses was 2,119. Population 10,520.

The portion of the ancient British Gadeni who inhabited the districts on the upper Tweed, are believed to have intermixed less with foreign races, and to have sent down their British blood to their modern successors on the soil in a stream of greater homogeneity, than their brethren either of their own tribe, or of any of the tribes south or east of the Grampians. The natural mountain-barriers around their territory, the impervious forests which hemmed them in on the side of Etrick, and the strong artificial bulwark of the Catrail flung fencingly across the inlets to their fastnesses, all served both to repel foreigners approaching from without, and to shut up in an exclusive fellowship the occupying community within. The county, accordingly, abounds with the monuments of the Britons. Its topographical nomenclature is replete with denominations from their significant language. The existing names of nearly all the waters, of eight of the parishes, and of a vast number of the mountains, bills, and knolly swells, are British. Remains of Druidical oratories or circles exist at Sheriffmuir in Stobo, at a place in Tweedsmuir near the church, and at Gatehope in Innerleithen; and are said by tradition to have existed also at Hairstones in Kirkurd, and Quarter Knowe in Tweedsmuir. Sepulchral tumuli occur,

or stone-coffins with human remains have been found at Mundick-hill, at Chapel-hill, above Spital-haugh, and in the neighbourhood of King-seat in Linton,—in the parks of Kirkurd, and at Mount-hill in Kirkurd,—by the side of the Tweed, in Glenholm,—on Kingsmuir, in Peebles,—near Shiplaw, in Eddlestone,—near Easter Hartree, in Kilbucko,—on Sheriffmuir, in Stoho,—and in the vale of the Tweed between Tweedhope-hraefoot and Biold. But by far the most illustrious of the British sepulchral monuments, and one which occasions those of their warriors to be almost utterly forgotten, is the reputed grave of their poet Merlin, or Myrddin:\* see DRUMMELZIER. Memorial stones, commemorative of events in the history of the Gadeni, yet possibly in some instances the 'grandes lapides' which were set up by kings to ascertain the true limits of disputed boundaries, occur on the Tweed, in Traquair, and Innerleithen,—on Bellanrig, in Manor,—on Sheriffmuir, in Stoho,—and on Cademuir, in Peebles. Four strengths or hill-forts are traceable on Cademuir, 2 on Janet's-brae, 1 on Meldun-hill, 1 on the hill above Hutchinfield, 1 near Hayston-Craig, 1 on the hill above Wham, and 1 on Ewe-hill-craig, all in Peebles; remains of several occur in Manor, particularly of 5, two of which are on one hill; and traces, more or less distinct, exist of several called 'Chesters,' in Innerleithen, of 3 in Eddlestone, of 6 in Newlands, of 2 in Linton, of 3 in Kirkurd, and of 2 in Skirling. "Armstrong the surveyor," says Chalmers, "was induced by his folly to laugh at the country people, who believe those British hill-forts to be Roman, because most of them are called 'Chesters;' and he is prompted by his ignorance to talk confidently of those hill-forts being constructed 'not only to secure cattle,' but as exploratory camps to 'the lower forts.' By 'the lower forts,' he absurdly alludes to the old towers of recent times, which were built during the anarchy which succeeded the sad demise of Robert Bruce. The map-maker thus confounds the open hill-forts of the earliest people, with the close-fortlets of the latest proprietors. With the same absurdity, he talks of the Druid temples being constructed for the worship of Woden; and with an extraordinary stretch of stupidity, he supposes some of the sepulchral tumuli of the ancient Britons to have been erected to direct travellers from one place to another. The popular tradition of the country, however, assigns these hill-forts, as well as all the British works, to the Picts, who were ancient Britons, as we have seen. Some of the less intelligent of the local antiquaries ascribe those very primitive works to the Roman legionaries."—Though the Romans conquered Tweeddale, and kept it in military possession, they seem to have had power over it chiefly in consequence of its being isolated among districts which they completely commanded, and do not appear to have held it under any severe restraint, or by means of much fortified position within its own

limits. They carried through it neither of the great roads which they constructed northward on the lines of their Caledonian conquests, nor did they lead into it from either of them a communicating branch. The Watling-street, which courses from Cumberland into Clydesdale, approaches, indeed, within half-a mile of the western extremity of Tweeddale, at a point where there is a natural passage from the Clyde to the Tweeddale; and they probably made this opening, with the connection to which it led by Watling-street with their strong posts in Clydesdale, a succedaneum for all artificial means of access to averawe the district. Vestiges of only three Roman camps exist; one on the east bank of the Lyne, near Lyne church, one at Upper-Whitefield in Linton, and one, though of doubtful character, in Manor.

During the 9th century, the Britons of Tweeddale, in common with those of Strathclyde, felt severe pressures from the Scoto-Irish on the west, and the Saxons on the east, and numerous emigrated to Wales. After the kingdom of Cambria, with which the remainder were incorporated, was overthrown by the Scottish king in 974, a portion of the Scoto-Irish came in, not as hostile intruders, but as fellow-subjects of a congenous people, and soon began to give a complexion to the language and the institutions of the community. Aware of the significance of British names, and seeing the fitness of their application to the several objects, they seem to have extensively adopted the pre-existing terms of the topographical nomenclature, or to have remodelled them to suit the variations of their own language. The British *glyn* and *cnoc*, for example, which respectively mean 'a deep narrow vale,' and 'a knob,' or metaphorically 'a hill,' were retained in the Irish or Celtic *glen* and *cnoc* of the same signification. Yet a very long list of purely Celtic names of places in Peebles-shire might be given, and would afford distinct evidence of how far the Scoto-Irish people spread over the district, and how long they exerted an influence on its speech. The Scoto-Saxons, who were the last race to multiply the blood, and to assume the mastery of Tweeddale, have a considerably less proportion of monuments in its nomenclature than what belongs to them in even the districts immediately adjacent; and, from the fact that such names as they imposed are strictly the same as to dialect with those of Selkirk and Roxburgh, but somewhat different from those of Dumfries-shire, they appear to have immigrated from not the west, but the east side of England. How they entered, whether as incursionists in the days of the Northumbrian monarchy, or as peaceful subjects after the commencement of the Scoto-Saxon period, is not known; but, by whatever title, or at whatever period, they came in, they eventually prevailed in the district, and established feudal settlements among the Scoto-Irish, and the descendants of the original Britons.

Two great classes of antiquities belong to one or other of the races who had possession after the Roman abdication,—terraces and castles. The terraces are noticed in the Introduction to our work; and, though they have counterparts in some other districts of Scotland, they are singularly prominent in Tweeddale. The largest, called Terrace-hill, is near Newlands; another, called Moot-hill, occurs a mile to the north; appearances of two others exist at Kirkurd and Skirling; and several are traceable in the vicinity of Peebles. They were constructed probably by the Romanized Britons, who abundantly evinced their capacity for such works by constructing the Catrail; and though afterwards appropriated, in some instances, as seats of feudal justice, they seem evidently to have been intended to accommo-

\* Myrddin's poetry may still be seen in the Welsh Archæology published by Owen; and though written by a Caledonian Briton so long ago as the 6th century, is still intelligible to any person moderately acquainted with Welsh. Merlin, like other gifted men whose story was handed down to a dark age by tradition, and exaggerated in ages of ignorance by superstition, was alleged to be a prophet, and, in popular credulity, stood accredited in vaticination, before the period of Edward III. "At the epoch of printing," says the author of 'Caledonia,' "which was also the era of popular prophecy, every absurd saw was attributed to noted men, who still lived in the popular voice.—to Merlin of the sixth century, to Bede of the eighth, and to Waldeve of the twelfth. During ages of ignorance, and times of superstition, the prophecy of traditional characters became extremely grateful to the popular taste." For once, this very astute but bigotted writer opens his eyes to the surpassing follies and romances of a state of things which he generally admires, or that which intervenes between Cuideism and the Reformation; only he wears the appearance of very anachronous, placing "in the ages of ignorance and times of superstition, of which he speaks, after instead of before" the epoch of printing.

date spectators in viewing some description of public sports.—Castles or Peel-houses, almost all very closely of the simple and model kind described in our Introduction, formed a thick dotting over Tweeddale; they belonged, as a specific and characteristic class of buildings, to the wild feudal barons of the age succeeding the Saxon ascendancy; and, by both their numerousness and their relative position, they are a striking evidence of how rude and marauding were the manners of the period. They were, by mutual arrangement of their proprietors, built within view of one another, as a sort of cordon of fortalices; on bartizans which surmounted them, beacon-fires were kindled at a moment of invasion, to announce to the district that a foe was approaching; the smoke gave the signal by day, and the flame by night; and over a tract of country 50 miles broad, along the banks of the Tweed, and 70 miles long, from Berwick to the Bield, intelligence was, in a very few hours, conveyed. “As these are not only antiquities, but evidences of the ancient situation of the country, and are now most of them in ruins, it will not be improper to mention those along the Tweed for 10 miles below Peebles, and as many above it. Thus Elibank tower looks to one at Holyeak, this to one at Srogbank, this to one at Caberstone, this to one at Bold, this to one at Purvis-hill, this to those at Innerleithen, Traquair, and Griestone, this last to one at Ormiston, this to one at Cardrona, this to one at Nether Horschurgh, this to Horschurgh-castle, this to those at Hayston, Castlehill of Peebles, and Nidpath, this last to one at Caverhill, this to one at Barns, and to another at Lyne, this to those at Easter Happlew, Easter Dawick, Hillhouse, and Wester Dawick, now New Posse, this last to one at Dreva, and this to one at Tiunis or Thaness-castle, near Drummelzier.”

The districts on the upper Tweed were not formed into a shire or sheriffdom till near the close of the 13th century. David I. and Malcolm IV. respectively call the county Tweedal and Tuededale, and seem to have had no notion of designating it as ‘a shire.’ But owing to the existence of two royal castles, the one at Peebles, and the other at Traquair, there were, in the reigns immediately succeeding Malcolm IV., two sheriffdoms, named, not from Tweeddale, but from the seats of the royal castles. A curious precept of Alexander II. to his sheriff and bailies of Traquair, commands them to imprison all excommunicated persons within their jurisdiction. The two sheriffdoms probably continued throughout the disastrous times which succeeded the demise of Alexander III. Yet before the epoch of Edward I.’s ordonnance settling the government of Scotland, in 1305, the sheriffdom of Peebles had engulfed that of Traquair, and extended over all Tweeddale; and, from about the time of the accession of James I., it became hereditary in the Hays of Locherworth. In 1686, John, the 2d Earl of Tweeddale, and the lineal descendant of the Hays, sold it, with his whole estates in the county, to William, Duke of Queensberry; and, in 1747, the Earl of March, the Duke’s second son, who had received it from his father, received in compensation for it, and for the subordinate regality of Newlands, the sum of £3,418 4s. 5d. The first sheriff on the new regimen was James Montgomery of Magbiehall, who rose to be Chief Baron of the Exchequer.—Tweeddale gives the title of Marquis to the noble family of Hay, created Baron Hay of Yester in 1488, Earl of Tweeddale in 1646, and Marquis of Tweeddale, Earl of Gifford, and Viscount of Walden, in 1694. The family-seat is Yester-house, Haddingtonshire.

PEFFER (THE), a rivulet chiefly in the parish of Fodderty, in Cromarty and Ross-shire. It has a

run of only about 5 miles, and flows eastward to the head of the Cromarty frith, a little north of Dingwall. It is chiefly remarkable for giving name to the now beautiful and noted district of STRATH-PEFFER: which see.

PEFFER, two streamlets in the northern division of Haddingtonshire. They rise within a brief distance of each other in a meadow in the parish of Athelstaneford, and flow, the one westward to Aherlady-bay, and the other eastward and north-eastward to a creek 1½ mile north-west of Whitherry-head. The western Peffer has about 6½ or 7 miles of course; and, except for ¾ of a mile immediately below its source, flows the whole way between Dirleton on its right bank, and Athelstaneford and Aherlady on its left. The eastern Peffer has 6 miles of course, though measured along its nominal tributary but real head-water of Cogtal-hurn, it has at least 8; and it flows, over most of the distance, through Preston and Whitekirk. Each stream has a fall, from source to embouchure, of not more than 25 or 30 feet, and is, consequently, sluggish in its motion, looking like a large drain, and corresponding in character to the import of its name, ‘the slowly running river.’ The entire strath, traversed by both streams, though now a rich alluvial mould and blushing all over with luxuriance, was anciently a morass, bristling with forest, and tenanted with wild hoars and heasts of prey. Large oaks have often been found inhumed in moss on the banks, their tops generally lying toward the south. At the widening and deepening of the bed of the streams not very many years ago, for preventing an overflow and stagnation of water during winter, several stag-horns were dug up very near the surface of the former bed.

PENCAITLAND, a parish in the western division of Haddingtonshire; bounded on the north by Gladsmuir; on the east by Salton; on the south by Ormiston; and on the west by Ormiston and Tranent. It is, in a general view, an oblong of 3½ miles by 3, stretching east and west, but it has a prolonged contraction and four small projections; and, in area, it measures 3,800 Scottish acres. The surface slightly declines toward two streams which drain it, yet remarkably resembles a pendicle of flat and fine central England, all cultivated, all luxuriant, all charmingly frilled and flounced with hedge-rows and trees, but without one marked feature, and simply an expanse of prettiness. Both of the streams claim to be the Tyne. The smaller—which is locally allowed a monopoly of the name—runs eastward through the interior, cutting the parish into nearly equal parts; and the larger, or geographically the true Tyne, comes down from the south, receives at the point of contact Kinchie-hurn, which had flowed 1½ mile eastward along the southern boundary, and runs 2¾ miles northward and north-north-eastward, chiefly along the eastern boundary, but repeatedly deviating, hoth into Pencaitland and into Salton. The soil is naturally wet and clayey, but has been surprisingly improved. About 300 acres are covered with wood, partly plantation and partly natural oak and birch; about 160 are laid out in artificial pasture; and all the rest are regularly tilled. Coal, though constituting apparently the outer margin of the Lothian coal-field, abounds, and is worked for the supply of the southern and south-eastern district of the county and of part of Lauderdale. Carboniferous limestone, enclosing numerous fossils of the kinds usual to this rock, is very abundant and is largely worked. Freestone has been worked in several quarries. Though the climate possesses more than average salubrity, the colliers are much subject to pulmonary complaints, one of which is very peculiar, and bears, among themselves, the name of ‘the black spittle.’

The only noticeable works are a bleachfield, a distillery, and a variety of rural mills. The villages of Easter and Wester Pencaitland stand a brief way distant from each other on opposite banks of the smaller Tyne, very nearly in the centre of the parish, 6 miles south-west of Haddington. The Tyne is spanned between them by a bridge of three arches. Between Easter Pencaitland and the bridge stands the parish-church, a picturesque pile, all old, but of various date and architectural style. In Wester Pencaitland are the parish-school, a comfortable inn, and an old cross unstoried by history or tradition. On the united Tyne stands the village of NISBET: which see. The only other village is Newton, inhabited by colliers.—Winton-house, half-a-mile north-east of Wester Pencaitland, is a large castellated edifice, partly modern and partly built in 1619, sombre in appearance, yet situated amid some beautiful artificial banks, and pleasant woods with several uncommonly fine trees. The ancient part of it belonged to the noble family of Seaton, Earls of Winton, attained, in 1716, in the person of George, the 5th Earl,—who, captured and condemned for taking part in the rebellion, escaped from the Tower of London, and died an exile and a bachelor in Rome at the age of 70.—Pencaitland-house, in the immediate vicinity of Wester Pencaitland and Fountainhall,  $1\frac{1}{4}$  mile to the south-west, are both fine mansions, the latter surrounded with extensive and pleasant woods. Former proprietors of both—James Hamilton, son of Lord Presmannan, and Sir John Lauder—were distinguished lawyers, and members of the College-of-Justice, under the titles respectively of Lord Pencaitland and Lord Fountainhall. Sir John Lauder was eminent also as a statesman and as a zealous follower of the Protestant faith, and is well-known by two legal volumes called 'Fountainhall's Decisions.' The chief proprietors are Lady Ruthven, the Earl of Hopetoun, Sir Thomas Dick Lauder, Bart., and Fletcher of Salton. The parish is traversed by the road between Tranent and Lauder, and has abundant facilities of communication. Population, in 1801, 925; in 1831, 1,166. Houses 256. Assessed property, in 1815, £6,362.—Pencaitland is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Hamilton of Pencaitland. Stipend £291 0s. 2d.; glebe £14. Schoolmaster's salary £34 4s. 4d., with about £30 fees, and £16 other emoluments. There are two non-parochial schools, the one in Easter Pencaitland, and the other in Newton.—Everard de Pencaithlan, who probably obtained the manor, whence he took his name, from William the Lion, granted the church, with its pertinents, to the monks of Kelso. Both the manor and the church passing from their owners during the war of the succession, the manor was given to Robert de Lawder, and soon afterwards passed to John de Maxwell, younger brother of Sir Eustace Maxwell of Caerlaverock; and the church, along with its pertinents and the chapel of Payston, was given to the monks of Dryburgh. The ancient parish was more comprehensive than the present; and, after the Reformation, the lands of Payston were annexed to Ormiston, and those of Winton to Tranent.

PENICUICK, a parish in the middle of the southern verge of Edinburghshire; bounded on the north-west and north by Currie and Colinton; on the north-east by Glencorse; on the east, including the north side of a long easterly projection, by Lasswade and Carrington; on the south-east by Temple; on the south and south-west by Peebles-shire; and on the west by Liston Shiels, the detached part, civilly of Kirkliston, and ecclesiastically of Kirknewton. The form is very irregular; but, in a general view, is a parallelogram of  $7\frac{1}{2}$  miles by 4, stretching north-

westward and south-eastward, with a square projection  $1\frac{1}{2}$  mile deep from the north-east corner, and a triangular projection of upwards of 2 miles along each side, from near the south-east corner. The area is about 20,000 Scottish acres. The North Esk, coming in a little below its source, traces most of the south-western and part of the southern boundary; then runs north-eastward, with about two-thirds of the parish on its left; and, before taking leave, lingers on the boundary with Lasswade. Its immediate basin or glen is, over most of the way, not a little picturesque,—in some places highly romantic,—and, in two, deeply associated with the musings of genius: see articles HABBIE'S HOWE and NEWHALL. Though the stream is small, it sprinkles its path with beauty, and, by driving a succession of mills, contributes more to the wealth of the population than if gold dust were mingled with its sands. Owing to georgical improvement by draining in its upper basin, it has lost some of its former water-power, and now requires to be drawn off in its prodigal moments into a storage of large reservoirs. The South Esk traces the boundary northward along the whole eastern side of the triangular projection. Logan-water, or Glencorse-hurn, cleaving down the Pentland range, and furrowing out a vale of pastoral loveliness and romance, rises in the interior, not far from the south-west corner, and runs away north-eastward, lingering for a while, and swelling into Compensation Pond, on the boundary with GLENCORSE: which see. About ten or twelve burns traverse the interior, or run along the boundaries, and pay their tiny tributes to one or other of the three principal streams. Bevelaw-hurn, a tributary of the water of Leith, and the feeder of a reservoir for regulating the water-power of that most distinguished of all Scottish streams for driving mills, forms for 2 miles the division with Currie. Springs, both numerous and copious, supply the district with a profusion of the purest water, and at one time drew the attention of the Edinburgh Water company for the supply of the metropolis, and yielded only to the famous Crawley spring in Glencorse. Some petrifying springs occur, and also some chalybeates,—the latter neglected. The north-western half of the parish is wholly occupied with the picturesque range of the Pentlands, sending up some summits about 1,600 feet above sea-level, but occasionally giving place to softness and forms of beauty along the course of the streams. The south-western division is, to a great extent, bleak moorland, and contains, near the village of Penicuik, extensive heds of sand and gravel; but it has many pendicles, and several stripes of both scenic and agricultural interest. The soil of the parish is exceedingly various, consisting of clay, gravel, sand, moss, and their numerous combinations. The expanse of moorland, though yet for the most part unreclaimed, is gradually confessing the power of the plough; and the other districts are warmed and beautified with wood to the large aggregate extent of considerably more than one-twentieth of the whole parochial area. The arable lands amount probably to little short of 7,000 Scottish acres; and exhibit large specimens of some of the holdest and most energetic land-reclamation in Scotland. The sheep and cattle pastured on the heights and declivities of the uplands are almost all of cross-breeds, the Ayrshire and the Cheviot giving the tone. The climate is none of the healthiest, but improves with the invasion and taming of the wastes. The minerals of the south-eastern district nearly all belong to the strata upwards from the transition rocks. Fossils, especially the conchal and the dandritic, are unusually numerous and interesting. Specimens of an unknown fossil-tree exist at Newhall; and an account of an-

other remarkable fossil-tree found in the parish is given in the supplement to the *Encyclopædia Britannica*. Coal abounds, but, owing to the frequency of its disturbance by dikes, it has hitherto been little worked. Limestone is extensively quarried and hurned in aid of georgical improvement; and some of it, in the upper part of the parish, is so hard as to take the cut and the polish of marble. Iron-ore occurs in nodules and in beds and veins of schist. Lead ore is found in small quantities in Carlops-hill on the southern boundary; and at the Picket-craig, half-a-mile west, a vein was for some time worked which yielded silver. The hills, in one direction, are chiefly porphyritic, and, in another, abound with freestone, ironstone, and the species of stone called *Petunse Pentlandica*.

Penicuik-house, situated on the left bank of the North Esk  $1\frac{1}{2}$  mile above the village, and the seat of Sir George Clerk, Bart., the proprietor of one-half of the parish, has many features of interest at once in itself, in its pleasure-grounds, and in its associations. It was built in 1761, and afterwards environed with the rich and numerous embellishments of its grounds, by Sir James Clerk, Bart. It stands on a flat in a curve of the river, with a picturesque glen behind carrying up the view to the ruins of Brunstane-castle, and the western extremity of the Pentlands,—a little plain in front, gemmed with a beautiful artificial pond and a rich garden, and overhung by ascents which are mantled all over with wood,—and swells and eminences on each side, dis severed by ravines, and moulded into many curvatures of beauty. Westward, and above the level of the house, is a second large piece of water well-stocked with various kinds of fish. The ponds are notable as the scene of hoatings in his boyhood, which kindled the enthusiasm of John Clerk of Eldin, the brother of Sir James, for nautical studies, and remotely led to the production of his work on *Naval Tactics*. The house has, in front, a handsome portico supported by eight columns, and a flight of steps on each side, defended by balustrades; and it is surmounted by a row of vases, and roofed with lead. The offices, 280 feet distant, form a large square, with a rustic portico, and an elegant spire and clock, and, behind them, serving as a pigeon-house, is an exact model of the quondam celebrated Roman temple on the Carron, called by Buchanan, "*Templum Termini*," but popularly denominated *Arthur's Oven*. On the opposite side of the river, at the end of an avenue on the top of the bank, and half-a-mile from the house, stands an obelisk, raised by Sir James Clerk, to the memory of his friend and frequent inmate, Allan Ramsay. On a conic eminence directly in front of the house, and 3 furlongs distant, stands a round tower which is seen at a great distance. On another eminence close on the Esk, and midway between the house and the village of Penicuik, stands another tower, formerly called *Terregles*, the original seat of the ancient proprietor of the parish; and onward from it to the termination of the grounds at the village is a profusion of luxuriant and striking scenes. About a furlong above the garden, on the margin of the Esk, is *Hurly-cove*, a subterranean passage 147 feet long, 7 high and 6 broad, with a dark cell in the middle in which are seats for 6 or 8 persons, the whole cut out of the solid rock in 1742. Directly opposite this, is a third artificial sheet of water, stored with perch and trout. The interior of the house fully corresponds with such wealth and variety in the interesting features and furnishings of its grounds. The rooms are spacious, and splendidly furnished and embellished. *Runeiman* owed both his celebrity as a painter, and the occasion of his death to his acting a part in adorning

them; being, when young, one of the persons who painted them, he drew the notice of Sir James Clerk, then a chief patron of Scottish genius, and was sent by him to study the ornate departments of his art at Rome; and after he had reached the zenith of his fame, he was employed to decorate with his brush the large apartment called *Ossian's hall*, the ceilings of which are painted with designs from *Ossian's Poems*; and contracted his death-illness from being obliged to lie constantly on his back while executing the performance. In the house is an excellent collection of books, paintings, Roman antiquities, and miscellaneous curiosities. The Roman antiquities are chiefly from *Antoninus' wall*, and the camp at *Netherby*; and among the miscellanea is a buff coat which *Graham of Claverhouse*, Viscount *Dumdee*, wore at the battle of *Killiecrankie*, and through which, beneath the arm-pit, he received the fatal bullet. *NEWHALL*, which competes with *Penicuik-house* in interest, is separately described.

Remains of various towers and mansions exist, all historical knowledge of which is lost. About  $\frac{3}{4}$  of a mile south of the village of *Penicuik*, on a peninsula between the glen of the North Esk and that of one of its tributaries, are the remains of old *Raven-snook*, once the property of *Oliver Sinclair*, brother to the laird of *Roslin*, and, under *James V.*, commander-in-chief of the forces, who was defeated and made prisoner at the battle of *Solway-moss*. About  $1\frac{1}{2}$  mile above *Penicuik-house*, and on the same bank of the Esk, stands *Brunstane-castle*, an extensive ruin, said to have been inhabited by the predecessors of the *Earl of Dumfries*. Three miles north-west of the village, on the left bank of *Logan-water*, completely surrounded by the *Pentlands*, stands *Logan-house*, a ruin of remarkably thick walls and small narrow windows, and once a favourite hunting-seat of the Scottish kings. On the neighbouring grounds occurred the celebrated match between the hounds of the royal *Bruce* and those of *Sir William Sinclair of Roslin*, detailed by *Sir Walter Scott* in the *Notes to the 'Lay of the Last Minstrel'*. Upwards of 2 miles farther west stands *Bevelaw-house*, once also a royal bunting-box, but still entire and uninhabited.—On the summit of the pass over the *Pentlands*, alluded to in the article *Newhall*, and at an elevation of 1,500 feet above sea-level, are remains of a Roman Catholic station; the cross gone, but the pedestal remaining, with two deep erosions, obviously formed by the kneelings of multitudinous wayfarers across the dreary wild.—In central situations in the parish are vestiges apparently of towns or large villages, no historical notice of which exists.

The village of *Penicuik*, a burgh-of-barony, stands on the left bank of the North Esk, where it forms the boundary-line with *Lasswade*, 10 miles south of *Edinburgh*, and 9 miles north-east of *Linton*. It consists chiefly of a single street, extending north-east and south-west. The parish-church—which stands at its north-east end—is a chastely elegant Grecian structure, built in 1771 at the expense of *Sir James Clerk*, and both highly creditable to his taste and memory, and not a little ornamental to the village. It has a portico, supported by four *Doric pillars*, and surmounted by a stone-cross,—the portico inscribed, in Hebrew characters, with the word '*Bethel*.' The shops and dwelling-houses have in general an air of neatness and comfort, decidedly superior to those of most places of its size; and a number of new houses are both spacious and elegant. The village is lighted with gas, and has a monthly baronial haillie court, and a number of special constables, nominated by the haillie, but seldom required to act. Annual fairs are held on the third Friday of *March* and the first Friday of *October*

The place has a subscription library, a savings' bank, two friendly societies, and a total abstinence society. Its population is about 700. The other villages are Nine-mile-hurn, 2½ miles south-west of Penicuick, with a population of about 100, and KIRK HILL and HOWGATE: which see.—The manufactures are seated principally in and below Penicuick, and are mainly concentrated on the production of paper. There is a gunpowder manufactory at Marfield, upon the North Esk. A large building, erected by government during the war as a cavalry barracks, has been occupied during the last ten years as a foundry. A few looms in Penicuick bring their workmen a similar pittance to what now too generally belongs to their class. A saw-mill was erected three or four years ago, and is constantly employed. No fewer than six paper-mills line the banks of the North Esk, and annually consume about 12,000 tons of rags, produce a quantity of paper 1½ yard wide, equal to about 7,500 miles in length, and yield government about £29,000, or £30,000 of duty. In 1810 the older factories were converted by government into dépôts for prisoners of war,—that of Valley-field for 6,000, and that of Eskmills, then a cotton factory, for 1,500; and the cottages of the workmen were fitted up as barracks for the necessary military guards. The place became stirring and active, and was considerably enriched, but suffered damage in the moral tone of its people. The reversion of the mills, at the close of the war, from their warlike occupancy to the manufacture of paper, was felt to be an event of general joy, and was celebrated by a general illumination, and some other kindred demonstrations. On a spot in the grounds of Valley-field, where upwards of 300 of the prisoners of war were interred, stands a neat chaste monument, from a design by Hamilton, with the inscriptions, “Grata quies patriæ, sed et omnis terra sepulchrum,” and “Certain inhabitants of this parish, desiring to remember that all men are brethren, caused this monument to be erected.”—The parish is traversed through Howgate by the old Dumfries turnpike; through Penicuick by the new Dumfries and the Peebles turnpike; and through Nine-mile-hurn by the Biggar turnpike. Population, in 1801, 1,705; in 1831, 2,255. Houses 379. Assessed property, in 1815, £7,570.

Penicuick is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Sir George Clerk, Bart. Stipend, £158 6s. 8d.; glebe £16. The church has been thrice enlarged since 1830. Sittings 800. An United Secession meeting-house, usually designated of Penicuick, is really situated at Bridgend, ¾ of a mile north of the village, and within the *quoad sacra* parish of ROSLIN: which see. An United Secession congregation was established, and built a chapel in Howgate about the year 1750. Sittings 390. Stipend £100, with £10 for sacramental expenses, and a house and a glebe, the latter worth from £8 to £10 a-year. A school-house belongs to the congregation. A survey by the parish-minister, made in 1835, exhibited the population then as 2,286, of whom 1,434 were churchmen. Most of the paper-workers, however, are dissenters. Schoolmaster's salary £34, with about £40 fees, and at least £12 other emoluments. There are 8 non-parochial schools, 3 of them conducted by females, and one an infant-school.—The present parish comprehends the greater part of the old parish of Penicuick, and the whole of the old parish of Mount Lothian. Part of old Penicuick, jointly with part of the abolished parish of Pentland, was, in 1616, erected into the parish of GLENCROSS: which see. On the bisecting line which marked off the disjoined portion, anciently stood the chapel of St.

Catherine's, erected by Sir William Sinclair, in consequence of his hunting-match with Bruce, and curiously storied in the Notes to the ‘Lay of the Last Minstrel.’ The ancient church of Penicuick was dedicated to St. Mungo, and long bore his name; and it was an independent parsonage. The parish of Mount Lothian consisted of the district on the south-east, lying inward from the South Esk. The church belonged, before the Reformation, to the monks of Holyrood, and was served by a vicar. In 1635 the church was transferred to the Episcopate of Edinburgh; and, in 1638, the parish was suppressed. The name Penicuick, so very variously written in modern times, was, in early times, spelt Penicok, and is believed to have been derived from the Gaelic *Bein-na-cuaich*, or the British *Pen-y-coc*, both of which mean ‘the Cuckoo's hill.’

PENIELHEUGH, a hill in the parish of CRAILING: which see. The battle fought on Lilliard's Edge, in the contiguous parish, and usually designated of Ancrum, is sometimes called the battle of Penielheugh. See ANCRUM.

PENNAN. See ABERDOUR, Aberdeenshire.

PENNERSAUGHS, an ancient parish, now comprehended in the parish of Middlebie, Dumfriesshire. It is on the eastern bank of the river Mein, at the distance of a mile south-east from Ecclesfechan.

PENNINGHAM, a parish in the north-east extremity of Wigtownshire; bounded on the north by Ayrshire and Kirkcudbrightshire; on the east by Kirkcudbrightshire; on the south by Wigton and Kirkcubright; and on the west by Kirkcovan. Its greatest length from north-north-west to south-south-east is 15 miles; its greatest breadth is 6½ miles; and its area about 52 square miles. It forms a belt of very irregular and ever-varying breadth between the rivers Cree and Bladenoch, which respectively trace the whole of its eastern and western boundaries. Its chief features of interest are its town of NEWTON-STEWART and the CREE: see these articles. Most of the surface is tumulated and moorish, nowhere mountainous, but prevalently bleak; and, in a general view, is a long, dimpled, broken swell, inclining to the rivers. The moss of Cree is a flat, in the south-east extremity, of nearly 2,000 acres; it seems first to have been submarine, next a forest, and next a moss: it has, to a considerable extent, been reclaimed, and is undergoing steady invasion; and, wherever improved, it produces excellent crops. If the whole parochial area were divided or arranged into 58 parts, 1 would be found covered with wood, 3 disposed in meadow, 8 occupied by moss, water, and roads, 24 occasionally or regularly tilled, and 40 pastoral or waste. The rental of the estate of Penningham comprising 16,236 acres, betwixt the rivers Cree and Bladenoch, in 1823, was £3,300. Among the moorlands, especially along the Cree, there are many fruitful and agreeable spots, and a large proportion of the uncultivated grounds would, with comparative ease, yield to agricultural improvement. Eleven lakes and lochlets, all tame and cheerless, but variously stored with fish, lie in the northern division; the most considerable are Lochs Maberry and Dornal, both on the boundary with Ayrshire, and the former in the basin of the Bladenoch. Springs are pure and numerous; and one is a chalybeate. The parish has scarcely any native rock except greywacke, but is sprinkled all over with boulders, many of them of great size. Out of Newton-Stewart, the only things approximating to manufacture, are two grain-mills. The mansions are Carsbie and Corriwell, in the vicinity of Newton-Stewart; Merton-hall, 2 miles to the west, and Penningham-house, 4 miles to the north, on the

Cree. The chief landowners are the Earl of Galloway, and Blair of Penningham. The ruin of Castle-Stewart—the ancient seat of the Stewarts of that ilk—stands 3 miles north-north-west of Newton-Stewart. The great mail-road between Dumfries and Portpatrick crosses the parish directly westward; a road follows the whole boundary-course of the Cree; and there are various subordinate roads. Population, in 1801, 2,569; in 1831, 3,461. Houses 523. Assessed property, in 1815, £10,985.—Penningham is in the presbytery of Wigton, and synod of Galloway. Patron, the Earl of Galloway. Stipend £231 15s. 11d.; glebe £22 17s. 2d. Unappropriated tithes £449 7s. 7d. All the places of worship are situated in Newton-Stewart. The old parish-church was built in 1778, and enlarged about 23 years ago. A new and elegant church, seating 1,200, was recently built. It has a tall and handsome spire, and, being seated on an eminence, is seen at a great distance. The Relief meeting-house was built in 1792. Sittings 400. The Roman Catholic chapel was built in 1831, at a cost of about £300. Sittings 177, besides some standing-room. There is likewise a Reformed Presbyterian place of worship. The minister stated the population, in 1836, to be 3,556, and the proportion of that number belonging to the Establishment to be 2,723. Parochial schoolmaster's salary £34 3s. 4d., with £15 fees. In 1834 the parish-school was attended by 30 scholars, and 10 non-parochial schools by 442. The ancient church was dedicated to St. Ninian, the patron saint of Galloway, and had a bell with the inscription, 'Campana Sancti Niniani Peningham, M.' When James IV. passed through the ancient and extinct hamlet or kirktown, on his pilgrimage a-foot to Whithorn, in 1506-7, he gave a donation of nine shillings 'to an man that bore Sanct Ninian's hell.' The house of Clary or Clachary, still traceable, and the fruit-trees in whose garden still yield some produce, was anciently the chief residence of the bishops of Galloway, who were proprietors of the manor, and, for a long time, also of the church of Penningham. In the 16th century the church was annexed to the archdeaconry of Galloway; and during the period of Protestant episcopacy, the parson was archdeacon of the diocese, and first member of the bishop's chapter. The ruins of the old church still exist, 3 miles south of Newton-Stewart. There were anciently two chapels subordinate to the church; the one at the Cruives of Cree, 4 miles north of Newton-Stewart, built, in 1508, by John Kennedy of Blairquhan, endowed with an annual rent of £8 10s. from the barony of Alloway, and dedicated to St. Ninian; and the other 2½ miles farther north, of earlier erection, and called Kery, or Keir chapel. Ruins of only the former exist.

PENPONT, a parish in upper Nithsdale, Dumfries-shire; bounded on the north by Sanquhar; on the north-east by Sanquhar and Durisdeer; on the east by Morton; on the south and south-west by Keir and Tynron; and on the west by the Kirkcudbrightshire Dalry. It measures 14 miles in extreme length from north-west to south-east, 2½ or 2¾ miles in mean breadth, and 32¾ square miles, or 16,418½ Scottish acres in area. The surface, at the north-west extremity, is wildly but romantically upland, flinging up summits which compete in all the elements of mountain landscape with any south of the Grampians; in the central district, it is still upland, hut of softer feature and lessened elevation; and, in the south-west district, it passes through the gradations of towering hill, considerable eminence, and gentle swell, till it finally subsides into a belt of alluvial plain. Two-thirds or more of the whole area are arranged lengthwise into four generally

steep ridges, and three deep and narrow glens, each of the latter watered by a very pure and plentiful stream. Skarr-water rises close on the boundary, in the extreme north-west, runs 10 miles in a long curvature, or nearly the segment of a circle, through the interior, traces for 5 miles the boundary with Tynron and Keir, and leaves the parish only 1½ mile before falling into the Nith. Its hill-screens over a great part of its course are so steep and high, tufted with copses below, and dotted over with heeces in the ascent, and its basin is so narrow and rocky, so rapid in gradient, and so embellished with trees and cultivation, as to be replete with picturesqueness and romance. Chanlock-burn, a streamlet of 5½ miles course, and entirely indigenous, strikes the Skarr at an acute angle 1¼ mile above the point where the latter begins to run along the boundary. The ridge which lies between them, comes boldly and steeply down in the form of a grand mountain-wedge, to their point of confluence; and there it is velvety and furred all over with trees, and confronts hill-screens on the opposite sides of the glens, arrayed in the richest green, and forms with them, as seen a little down the course of the united stream, one of the finest varieties of romantic landscape. In the bosom of the Skarr's left mountain flank, 2½ miles above this point, rises almost perpendicularly from the glen, the naked stupendous crag of Glenquhargen, a mountain mass of nearly bare stone, amidst highlands where all else is green; or russet, one of the greatest curiosities in the south of Scotland: see GLENQUHARGEN. About 1½ mile south-east of it appears the summit of Cairnkinna, crowning a gradual ascent, possessing an altitude of 2,086 feet above sea-level, and commanding a view of large parts of Nithsdale and Annandale, considerable portions of Ayrshire, Kirkcudbrightshire, and Clydesdale, and some blue and hazy summits in Cumberland and Westmoreland. Mar-burn, for 2½ miles above its confluence with the Nith, traces the boundary with Durisdeer, trotting cheerily through the brilliant demesne of Drumlanrig-castle, and overlooked on the Durisdeer side by that magnificent ducal pile. The Nith, the heauteous Nith, rich here in the beauty of its dress, forms for 2¼ miles after receiving the Mar-burn, the boundary-line on the west. The general prospect down both this stream and the lower Skarr is extensive and enchanting, and presents a foreground of highly cultivated and tastefully embellished haughs and hanging plains, diversified by swells and soft eminences, thriving woods, and neat villas, with a singularly varied hack-ground, now boldly and abruptly mountainous, and now retreating slowly upward from lowland to soaring summit. From a plain, the site of the church and manse, on the left bank of the Skarr, 30 feet above its level, three-fourths of a mile above the point where it leaves the parish, and a mile distant from the nearest part of the Nith, both rivers are distinctly seen for about 8 miles, first separate, and then united, their pools appearing at intervals as smooth sheets of water, and their delightful haugh-ground converted, on occasion of a sharp freshet, into a little inland sea about a mile broad. Not far from this point of observation, a neat new erection spans the Skarr, between two steep rocks, on the site of a venerable hanging bridge, of very remote but unknown antiquity, of one large semicircular arch, completely mantled with ivy and woodbine, but removed in 1801. The banks of the stream are here high and skirted with wood, and the channel rocky and obstructed with loose blocks; and immediately above, the stream comes tumultuously along in a leap, and in foaming cataracts, receives at right angles on its Tynron side the waters of the Shimmel from between

high and wooded banks, and invites the eye to wander up its glen amid a little expanse of forest, and a variform congeries of abrupt green swells and hills. Only about one-tenth of the parochial area is cultivated; and probably not more than one-eighth is capable of cultivation. Improvements of every sort upon the land have been conducted, and are still carried forward, with the greatest energy and success. Plantations, already extensive, are almost annually on the increase. The magnificent new gardens of Drumlanrig-castle, which, together with the elegant cottage for the gardener, from a design by Mr. Burn, cost upwards of £10,000, and also part of the adjacent demesne, bring enchantment over the district lying on the Mar-hurn. Orchards and small gardens are objects of general care. The soil in the many arable spots among the hills is light, early, easily improvable, and very fertile. The herbage on the uplands is excellent, and maintains at least 980 black cattle, and 1,200 sheep. White and red sandstone abound in the lower district; whinstone is quarried as a building material from among the hills; lead ore exists, and is supposed to be abundant; coal is said to have been accidentally stumbled upon, but has not been formally searched for, and is not certainly known to exist. Dow-loch, which, as well as several springs, has some mineral qualities, and which occupies the summit of a hill about a mile below Drumlanrig, was famed, in the days of superstition, for the alleged power of healing all sorts of diseases, and had a guardian demon or saint, to whom devotees left some part of their dress as an offering. Marburn is notable as the beautiful streamlet beside which Burns wrote the song commencing

"Their groves o' sweet myrtles let foreign lands reckon,"

Glenmannow-hurn, an early and wild little tributary of the Skarr, though a bleak sheep-walk among the mountains, is associated with curious and stirring anecdotes of a sheep farmer, known only as Glenmannow, who lived in the latter half of last century, and performed wonderful and almost incredible feats of physical strength.—At the confluence of Marburn with the Nith, are slight vestiges of what is called Tibber's-castle, an erection which is supposed to have been of Roman origin, and to have had its name in honour of Tiberias Cæsar. This castle was garrisoned by the English in the early part of the wars of the succession, and was taken by surprise by Sir William Wallace. The barony on which the castle stands, and a hill in its vicinity, also bear the name of Tibbers. A Roman causeway is traceable up the Skarr, and into Tyron; and there are vestiges of a Roman encampment. Other antiquities are two moats, an ohelisk, and four very large cairns.—The chief landowner is the Duke of Buccleuch. For  $4\frac{1}{2}$  miles at the upper end, the parish has no road; for  $5\frac{1}{2}$  more it has only one along the Skarr; and in the remaining district, it is tolerably well-provided.—The village of Penpont stands on the Skarr, 2 miles west of Thornhill, 5 north-east of Minnyhive, and 15 north-north-west of Dumfries-shire. It is a stragglung, rural, pleasant place; and consists of three clusters, Penpont Proper, Townhead of Penpont, and Brierhush. Its population is between 400 and 500. Hiring-markets are held on the 3d Tuesday of March, of June, and of October. The small village or hamlet of Burnhead stands 1 or  $1\frac{1}{4}$  mile to the east, on the road to Thornhill. Population of the parish, in 1801, 966; in 1831, 1,232. Houses 211. Assessed property, in 1815, £5,113.—Penpont, anciently a vicarage of the abbey of Holywood, is the seat of a presbytery in the synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £236 6s. 9d.; glebe £20. Unappropriated teinds £621 4s. The

parish-church, and also a meeting-house of the Reformed Presbyterians, are situated in the village of Penpont; and at Burnhead is a meeting-house of the Relief. The parish minister stated the population in January, 1835, to be 1,261; of whom 570 were churchmen, 347 Relievers, 235 Reformed Presbyterians, and 109 Seceders,—the last connected with congregations in Thornhill and Minnyhive. There are two parochial and two private schools; the former attended, in 1834, by 104 scholars. Salary of the first master £29 6s. 6 $\frac{3}{4}$ d., with £16 fees, and £4 other emoluments; of the second £22, with £9 fees.—Penpont seems to have had its name from the British *Pen-y-pont*, 'the head of the bridge,'—the site of the church and village being at the end of the recently demolished bridge,—an erection which was seemingly Roman, and which probably succeeded an earlier and simpler one of the British *Selgovæ*.

PENSTON, a village and a barony in the parish of Gladmuir, Haddingtonshire. The village stands on an eminence half-a-mile south of the nearest point of the Edinburgh and London railroad, 3 miles east of Tranent, and 5 west of Haddington. It occupies the centre of one of the most extensively-worked coal districts in the county, and is inhabited chiefly by colliers. Though situated amidst probably the richest agricultural landscape in Scotland, it has a comfortless and almost pestiferous appearance, and is mean and ruinous in its houses, and filthy and putrid in its thoroughfare. The place has a school, or friendly society, a mortcloth society, and a coffin society. Its inhabitants are an unsettled migratory race. Population, nearly 400. At the west end of the village stands the farm-house of Penston, with a neat set of offices, a steam-engine, and a saw-mill.—The barony of Penston, lying around the village, and at the south end of the parish, has belonged to the family of its present proprietor during about  $5\frac{1}{2}$  centuries. William de Baliol, son of Alexander Baliol, Lord-high-chamberlain of Scotland, and grand-nephew of John Baliol of Barnard-castle, the father of John Baliol, king of Scotland, was proprietor of Penston and Hoprig toward the close of the 13th century, and, in 1296, as lord of these baronies, swore fealty to Edward I. By marriage, as is said, with a daughter of Sir William Wallace, the Scottish patriot, he acquired the barony of Lamington in Lanarkshire, and assumed for himself, as well as bequeathed to his descendants down to the present possessor, the name and designation of Bailie of Lamington, Hoprig, and Penston.

PENTLAND, an ancient but suppressed parish, in the centre of Edinburghshire. It comprehended the manors of Pentland and Falford, with the northern portion of the Pentland-hills, including the vale or sequestered glen of Logan or Glencross-water. The name Pentland was written in charters of the 12th century, and has continued to be written from that epoch onward, exactly as at present; yet it is of obscure and doubtful origin. From the circumstance that the northern division of the great Mid-Lothian hill-range was in the 13th and the 14th centuries, called the Moor of Pentland, the author of 'Caledonia' has no doubt that the hills borrowed the name from the parish, and not the parish from the hills; and, from among various possible etymologies, he prefers as the etymon of the name the Old English *Pent*, signifying enclosed, which, with the word *land*, would mean the enclosed land, the enclosure on the moor. The parish-church stood at the village of Pentland, and has left some vestiges to greet the eye of the antiquarian. It seems to have been granted to the monks of Holyrood at the founding of their abbey, and was confirmed to them in 1240; but before the demise of Alexander III., it became

an independent rectory, and, in the 14th and two following centuries, it was under the patronage of the Earls of Orkney and Barons of Roslin. The parish was suppressed after the Reformation; and the northern part annexed to Lasswade, while the southern, comprehending the barony of Falford, was united to the new parish of St. Catherine's, afterwards called Glencross. The small decayed village or hamlet of Pentland stands a little west of the Peebles and Dumfries road, while New Pentland stands on that road each about  $5\frac{1}{2}$  miles south of Edinburgh.

**PENTLAND HILLS**, a beautiful range of heights, partly in Peebles-shire, and chiefly in Mid-Lothian. The range is geographically an isolated or slender continuation north-eastward of the broad congeries of mountains and hills which comes off from the central nodule of the Southern Highlands, and occupies most of the area of Peebles-shire; and it extends about 12 miles from the interior and western boundary of the parish of Linton to points in the parishes of Colinton and Lasswade, about 4 miles south-west of Edinburgh. The hills do not form strictly a ridge; but, over most of their length, they are spurred by the gory or developing basins of streams, and near their middle, they are diagonally cut across by the lonely pastoral vale of Logan or Glencross-water. The summits at the north-east end, or in Colinton and Lasswade, rise, in several instances, about 1,600 feet above-sea-level; and several which form a group about the middle, or in the parishes of Glencross and Penicnick, have an altitude of upwards of 1,700 feet; East-cairn-hill, the highest, rising 1,802 feet above the level of the sea at Leith. The hills, though of a bare, beathy, barren appearance, are covered with fine pasture, and sustain numerous flocks of sheep; and they exhibit in the openings among their spurs and through their diagonal cut, various landscapes of very pleasing pastoral romance. Their outline also arrests and delights the eye; and, as seen respectively in the north-east and in the south-west, is said, in the one case, to resemble that of the Andes, and, in the other, to be a duplicate of that of the Malvern range in Worcestershire. From some of the copious springs of pure water which they in numerous places send up, Edinburgh is regularly and unfailingly supplied by pipes.—The Pentlands have geologically no affinity to the Tweeddale heights, but, in most cases, consist entirely of porphyry,—chiefly of the claystone and the felspar varieties. Caerketan or Kirkyettan crags, on the boundary between Colinton and Lasswade, and elevated 1,580 feet above sea-level, are composed principally of a clayey felspar, strongly impregnated with black oxide of iron. This substance, but for its impregnation, would be highly useful to the potter; and, from its resemblance to the Chinese petunse or kaoline, out of which the best native china is made, it has obtained the name of Petunse Pentlandica. Some specimens of it are white, some of a flesh colour, and some of a cream colour, with small red spots. It occurs, in general, in amorphous blocks or masses; but it is found also—especially in other parts of the Pentlands—in veins about  $\frac{3}{4}$  of an inch thick, and variously bent, and even lies dispersed among the porphyritic rock in nodules about the size of pease. Boulders of granite, gneiss, and other primitive rocks, lie on the very summits of the Pentlands; and belong to varieties whose nearest indigenous position is among the Grampians, at a distance of not less than 60 miles. Jaspers, some of which are of great beauty, are frequently picked up. Fluor spar—so rare in Scotland, and till 20 years ago believed not to exist in the country—has, at least in one instance, been

found; but it is thought not to be indigenous. Malachite, or green carbonate of copper, and one or two other rare minerals, occur.

**PENTLAND FRITH**, the strait or sound betwixt the continental Scotland and the Orkney islands, connecting the Atlantic and the German oceans. Its length is about 17 miles; and its breadth is from 6 to 8. But, at the middle, it expands, on the north side, into Scalpa Flow; and, if identified with the lower and unsheltered part of that Orcadian mediterranean, or the part south of Flota, it attains an extreme breadth of 11 miles. On the coast of Caithness it terminates, on the east, at Duncansby-head, and, on the west, at Dunnet-head; and, on the north, or Orkney side, it is terminated, on the east, by a headland of South Ronaldsay, and, on the west, by a headland of Hoy. The distance, or breadth of sea, between the eastern terminations, is 6 miles; and that between the western terminations, is 7. Nearly in the centre of the east end of the frith, but  $2\frac{1}{2}$  miles east of a straight line between Duncansby-head and South Ronaldsay, lie the **PENTLAND SKERRIES**: see that article. Twelve miles north-west of Duncansby-head, and  $1\frac{1}{2}$  mile from the nearest point of the Caithness coast, lies the island of **STROMA**: which see. About  $3\frac{1}{2}$  miles north-north-east of this island, 2 miles west of the nearest point of South Ronaldsay, and looking right up the centre of Scalpa Flow, lies the island of **SWONA**: which also see. Two miles west-south-west of Stroma, and not far from the Caithness coast, are some very dangerous rocks, called the Merry Men of Mey, which are not always visible, and cause a dreadful agitation of the sea. See MEY. At the east end of the frith, outward from Duncansby-head, is another very rough and dangerous piece of sea, occasioned also by rocks alternately submerged and visible, called the Boars of Duncansby. Near the north side of Stroma is a perilous whirlpool, which whitens a considerable extent of circumjacent sea with its foam, and bears the name of the Swalchie of Stroma. Other constant whirlpools near Swona island are called the Wells of Swona; and tidal or occasional whirlpools and eddies are so numerous and shifting that they cannot wear a name. The Pentland frith is the most dangerous of the Scottish seas; yet must be traversed by all vessels passing from the east of Scotland to the Atlantic, or from the west to the German ocean, which cannot navigate the limited capacities of the Caledonian canal. Its perils have been delineated with powerful and emulating appeals to the sense of the wonderful and the terrific, by artists, poets, and historians; yet, though frankly acknowledged by even the most experienced mariners, they have been much exaggerated; and, by Orkney pilots and boatmen, who have long and carefully studied their humours, they are regarded as by no means formidable. The phenomena of the frith, amid the aids of light-houses and high nautical skill, are rather subjects of sublime marine scenery than objects of terror to navigation. The tide varies in rate from 3 to 9 miles an hour, according to the height of its rise, and the consequent amount of its mass of waters. At full spring, it rises 8 feet, and on extraordinary occasions 14; and at neap it rises from  $3\frac{1}{2}$  to 6. The flood comes northward along the west coast of Scotland, runs eastward through the frith, and then courses away southward along the eastern coast. But, in consequence of sudden contractions and expansions of the channel, and of the intervention or obstruction of headlands, islands, rocks, and shoals, counter currents are produced in the frith as rapid as the tide itself; and these, in their collisions with one another, or with the tide, or with sunken rocks,

produce powerful eddies and stupendous spoutings which, when lashed and infuriated by gales, are menacing to even the largest vessels. The stream along the coasts flows in a direction opposite to that of the central or main current. At spring-tides, says a very graphic notice of this phenomenon in the New Statistical Account of the parish of Dunnet, "it is high water at Scarfskerry at nine o'clock. Immediately as the water begins to fall upon the shore the current turns to the west; but the strength of the current is so great in the middle of the frith, that it continues to run east till about twelve. These contiguous currents, running with such a velocity from opposite directions, have a strange appearance from the land. With a gentle breeze of westerly wind about eight o'clock in the morning, the whole frith seems as smooth as a sheet of glass, from Dunnet-head to Hoyhead in Orkney. About nine the sea begins to rage for about 100 yards off the head, while all without continues smooth as before. This appearance gradually advances toward the frith, and along the shore to the east, though the effects are not much felt upon the shore till it reaches Scarfskerry-head, which is about three miles distant from Dunnet-head, as the land between these points forms a considerable bay. By two o'clock, the whole frith seems to rage. About three in the afternoon, it is low water on the shore, when all the former phenomena are reversed—the smooth water beginning to appear next the land, and advancing gradually till it reaches the middle of the frith." These contiguous and opposite currents, even in calm weather, are quite perplexing to mariners unacquainted with this peculiar sea, and sweep along to destruction any of their vessels which incautiously approach the land; but they are so well-known to the native sailors and boatmen of the flanking coasts, that they are taken advantage of to expedite sailing, and in the event of threatened danger, to steer steadily toward some one harbour or sheltered creek. The greatest danger may be apprehended, not in a gale, but in a calm, especially during a fog. Persons unacquainted with the tides have been known to drift along at the rapid rate of nine miles in the hour, while they supposed themselves to be stationary; and, a few years ago, while the crew of a large ship supposed themselves becalmed in the frith during a mist, their vessel came ashore, and was wrecked in Dunnet-bay.

PENTLAND SKERRIES, two islets and some contiguous rocks, a little seaward of the middle of the eastern entrance of the Pentland frith. The smaller islet lies  $1\frac{1}{4}$  mile south by west of the larger, and is uninhabited. The larger islet lies  $4\frac{1}{2}$  miles east-north-east of Duncansby-head, and  $3\frac{1}{2}$  miles south by east of the Loather rock, on the nearest part of the Orkney coast; and is inhabited only by the keeper of a lighthouse. Owing to their relative position to the Pentland frith, and to their full exposure to its rapid tides and currents, and to the impetuous surges of the Northern sea, the Pentland Skerries were long eminently perilous to mariners, and presented a site of no common importance for a lighthouse. In 1794 one of these useful erections was built on the larger Skerry. It stands in north latitude  $58^{\circ} 41'$ , and in longitude west of Greenwich  $2^{\circ} 55'$ . It consists of two towers, and has a higher and a lower light. The north-west or highest light is elevated 170 feet, and the lower light 140 feet above high water. The two light-rooms, relatively to each other, bear S. S. W. and N. N. E., distant 100 feet. The hearings, as taken from the highest light-room by compass, are the western extremity of the Little Pentland Skerry S. by W., distant  $1\frac{1}{4}$  miles; extremity

of the foul ground of that Skerry S. E. distant  $1\frac{1}{2}$  miles; Duncansby-head in Caithness W. S. W., distant  $4\frac{1}{2}$  miles; Noss-head S. W. by W., distant 14 miles; north-west point of the island of Stroma, N. W. by W., distant  $6\frac{1}{2}$  miles; south-eastern extremity of the Loather rock on the Orkney shore N. by W., distant  $3\frac{1}{2}$  miles. The expense of maintaining these lights, in 1840, amounted to £1,222.

PERSIE, a chapel-district in the Grampian part of the eastern border of Perthshire. It comprehends the Highland district of Bendochy, the north-western portion of Alyth, the detached portions of Rat-tray and Caputh, a small portion of Kirkmichael, and parts of Blairgowrie and Kinloch parishes. It belongs in nearly equal proportions to the presbytery of Meigle, in the synod of Angus and Mearns, and to that of Dunkeld in the synod of Perth and Stirling; but the chapel is situated in Bendochy, which belongs to the former. Population about 1,000; of whom about 190 belong to Bendochy and about 300 to Alyth. The chapel was built about 60 years ago, at the cost of £150; and it has about 340 sittings, and can be enlarged. Stipend of the preacher £70, with a manse and garden. A school-room near the church has been given rent-free for the district; but there is no salary for the teacher.

PERTH, till 1807, one compact and undivided parish, and, since that date, a cluster of four *quoad civilia* and two *quoad sacra* cognominal parishes, in the district of Perth Proper, or that which is surrounded by the districts of Strathmore, Gowrie, and Strathearn, in Perthshire. The East Kirk or landward parish of Perth—all the others lying within the town—may, in a general view, be regarded as including whatever does not fall to be described in the article on the burgh. Its form is extremely irregular; but may be represented as a square of about  $1\frac{1}{2}$  mile deep, its sides facing the cardinal points, its north-east angle sending off a narrow stripe  $1\frac{1}{2}$  mile northward, and its south-east angle sending off a similar but broader stripe  $1\frac{1}{2}$  eastward. The river Almond bounds the further end of the northerly stripe, and divides it from Redgorton; and the river Tay bounds the east sides of the northerly stripe and the square, and also the north side of the easterly stripe, and divides them from Scone, Kinnoul, and Kinfauns. In other parts, the parish is bounded on the east by Rbynd; on the south by Rhynd, Dunbarrie, and Porteviot; and on the west by Aberdalgie and Tippermuir. Its area is about 3,410 imperial acres. Various hills of a ridgy character, but soft in outline, and of inconsiderable elevation, occur in the south and the west. The highest is MONCRIEFF HILL: which see. The others vary in height from about 300 feet to a little upwards of 600. But though uncommanding in bulk or altitude, they contribute by the beauty of their contour and the richness of their dress some fine features to a singularly ornate landscape, and lift the eye over a large expanse of scenery unsurpassed in Scotland by the loveliness of its natural features, the opulence of its artificial decorations, and the number, variety, and harmony of its parts. The view in the interior of the parish, aided by the hill-screens of Kinnoul, is that of an exquisitely ornamented cavity,—a gorgeous but limited amphitheatre,—a magnificent nest feathered all round with the softest and most finely tinted elements of scenic luxury. But the view from the hill-tops, particularly from Moncrieff, where the eye minutely scans the clustering of all sorts of picturesque things in Kinnoul, and wanders over the luscious and far-stretching districts of Strathearn and Gowrie, is so exultant, so superb, that Pen-nant's laconic panegyric upon it can hardly become stale,—“It is the glory of Scotland.” Both the

New York

heights on the boundaries, and numerous swells in the interior, subside by gentle gradients into a luxuriant stretch of plain, which extends along the Tay. Nearly three-fourths of the whole parochial area is arable ground in a state of the highest cultivation; upwards of 700 acres are covered with wood; and the caps of some of the hills, as well as the two beautiful pendicles of level ground called Inches, in the immediate outskirts of the town, are disposed in pasture. The soil on the higher grounds is a rich loam; and, on the low or level grounds, it is a clayey alluvium lying upon gravel. The old red sandstone, dipping toward the north-west, lies beneath most of the parish; it was at one time quarried as building-stone, but was found too perishable. A vast bed of conglomerate occurs in the south-west. Greenstone, basalt, and other forms of trap, constitute the hills along the south; and the trap-rock is in one place quarried as road-metal. Boulders of granite and gneiss, which must have been tossed along from the Grampians, were at one time common, and are still not infrequent; but wherever they obstructed cultivation they have been removed. The Almond, during its brief connection with the parish, has lost all its high romance, and is tamely pretty. The Tay, as it sweeps along the boundary, and makes a hold dehouch from a southerly to an easterly direction, and splits, just before the curve, into two streams, which forms the beautiful islet of Moncrieff, and marches on in the united column of its waters, to stem the tides from the frith and to flank the Carse of Gowrie, is a majestic and sumptuous stream, luxuriating in the picturesqueness and beauty of its lowland path, after its wild race among the romance and the sublimity of the Highlands. The salmon-fisheries are valuable, and rent at between £1,300 and £1,400. The villages of the parish are TULLOCH [which see], Craigie, with 250 inhabitants, and Pitheavless and Cberryhank, with jointly 120. The principal land-owners are the Earl of Kinnoull, Earl Grey, Lord Elihank, and Sir Thomas Moncrieff, Bart. A notice of antiquities, manufactures, traffic, and other matters, belongs to our article on the town. Population, in 1801, 14,878; in 1831, 20,016. Houses 2,049. Assessed property, in 1815, £34,838.

Perth is the seat of a presbytery in the synod of Perth and Stirling. The parish of East Kirk of Perth comprehends all the landward part of the ancient parish, and a portion of the suburbs of the town; and was erected into its present form, in 1807, by the court of teinds. The church is a section of a very ancient edifice, which will be described as one of the town's public buildings, and the other sections of which are fitted up as the churches of the Middle and the West parishes. Sittings 1,286. Stipend £266 9s. 5d. Patron, the Town-council.—An United Secession church was established at Craigend in 1780; and built a chapel in 1780, a house for the minister in 1792, and a schoolhouse in 1826. Sittings in the chapel 413. Stipend £100, with £8 8s. for sacramental expenses.—An Original Burgher congregation was established in the parish upwards of 33 years ago. Their chapel was built in 1821, and cost £1,000. Sittings 740.—A Roman Catholic congregation was established in 1830. The chapel was built in 1833, and afterwards improved, at an aggregate cost of about £1,000. Sittings 450. The minister or priest officiates over all Perthshire. Stipend £8, and the proceeds of the seat-rents.—A Glassite congregation was established about 1730, and built a place of worship between 1760 and 1770. Sittings unascertained. No stipend.—The population of the parish, in 1831, was 7,188; and, in 1838, it had probably increased not more than 200.—A small portion of the parish, containing about 80 in-

habitants, is included *quoad sacra* in the Perth parish of St. Leonard's.—The schools are the town seminaries and an infant-school. The town seminaries consist of two English schools with each one teacher, a grammar-school with two teachers, and an academy for mathematics, arithmetic, writing, French, and other modern languages, with a rector and three masters. The infant school was, in 1834, conducted by one teacher, and attended by 80 boys and 100 girls. In 1834 subscriptions were commenced with the view of building four new schools.

The parish of Middle Kirk of Perth was divided from the original parish in 1807, by authority of the court of teinds. It is wholly a town-parish; and measures 250 yards in extreme length, and 160 yards in extreme breadth. Sittings in the church 1,208. Stipend £259 0s. 7d. Patron, the Town-council. An assistant and successor has £70 from the minister and £80 from the congregation. A town-missionary acts for the various parishes, but has regular evening service in the Middle Kirk. Two congregational and 9 parochial Sabbath schools are taught by the members of session, and attended by upwards of 200 scholars.—The South United Secession congregation was established in 1739, and built a chapel in 1740. Sittings 932. Two Sabbath schools connected with the congregation are attended by about 140 children.—The Original Seceder congregation was established in 1820, and built their place of worship in 1821, at the cost of about £1,000. Sittings between 600 and 700. Stipend £100; annuity to a colleague £40. There are two Sabbath schools.—The first Relief congregation was established in 1785, and built their chapel next year, at the cost of about £700. Sittings 915. The charge is collegiate. Stipend of each minister £90. Two Sabbath schools have an attendance of 120.—The Baptist congregation was established about the year 1788. Their chapel was built in 1831 at the expense of about £700. Sittings 300. Stipend, between £70 and £80. A city-missionary is salaried at £5, to visit one day in the week, and a Sabbath school is kept.—In 1831, the population of the parish was 5,238; but, in 1836, in consequence of several old houses having fallen, it was reduced to 4,726. At the latter of these dates the minister classified it into 2,805 churchmen, 1,674 dissenters, and 247 nondescripts.—In 1834, there were 10 schools conducted by 10 teachers. Three of the schools were maintained by subscription for poor children, and by small fees, and were attended by 332 scholars; two were private schools, taught by females, and attended by about 70 girls; and five were private schools, for reading, writing, and arithmetic, and were attended by 230 scholars.

The West Church parish is about half-a-mile square, lies almost all in the town, and comprises a great part of the *quoad sacra* parish of St. Leonard's. Sittings in the parish-church 957. Stipend £250. There is one Sabbath school, attended by about 200 children.—An Episcopalian chapel in the parish has between 250 and 300 sittings. Stipend £150.—The population, *quoad civilia*, was, in 1831, 4,406; and, *quoad sacra*, it was, in 1838, 2,327,—of whom 1,500 were churchmen, 685 were dissenters, and 142 were nondescripts.—In 1834, there were four schools, all private, conducted by six teachers, and attended by 129 scholars.

St. Paul's parish lies wholly in the town, and measures about a mile in extreme length, and about  $\frac{1}{2}$  of a mile in extreme breadth. The church was built in 1805-6. Sittings 884. Stipend £280. Patron, the Town-council.—The North United Secession congregation was established in 1739. Their meeting-house was built in 1791 at an expense of

£1,111, and has since undergone many improvements. Sittings 1,404. Stipend of each of the ministers while the charge was collegiate £200, with expenses of attending synod, and at sacramental occasions. In 1838, there were in the congregation twenty fellowship meetings, and more or less connected with it about sixteen seminaries for the young, attended by about 600 pupils.—The Independent congregation was established in 1798. Their place of worship was built in 1824, at the cost of about £1,500. Sittings 750. Stipend £120.—In 1831, the population, *quoad civilia*, was 3,184; and, in 1835, it was, *quoad sacra*, 2,938,—of whom 904 were communicants in the Establishment, and 385 were dissenting communicants.—In 1834, there were five schools, all private, conducted by six teachers.

St. Leonard's parish was divided, *quoad sacra*, chiefly from the East and the West Church parishes, in June 1835, by authority of the General Assembly. It lies almost entirely in the town, and measures about half-a-mile by about a furlong. In 1838, the population, according to a census taken by the elders, was 2,581,—of whom 1,137 were churchmen, 1,319 were dissenters, and 125 were nondescripts. The church was built in 1834-5, at a cost of £2,450 6s. 5d. Sittings 980. Stipend £100, with £20 for communion elements. Patrons, the heads of families. Classes for religious instruction are attended by about 200 children.—The Holy Catholic Apostolic congregation was established about the year 1835. They assemble in a house fitted up for their use and rented at £20. Sittings about 120. Stipend not known.—The second Relief congregation was established in 1807. Their place of worship belongs to their minister, and was purchased about 23 years ago for £450. Sittings £580. Stipend not known.—A General Baptist congregation meet in a school-room rented at £1. Sittings 50. No stipend. A Sabbath school in connection with them is attended by from 20 to 100 children.

St. Stephen's parish, or the parish of the Gaelic church of Perth, was erected, *quoad sacra*, in 1836, by the General Assembly. Its bounds are a circle round the parish-church, drawn upon a radius of 4 miles; but they have reference exclusively to the inhabitants who speak Gaelic. The population under charge of the minister was, in 1838, 1,046,—all of whom belonged to the Establishment, and 828 were above 12 years of age. Sittings in the church 762. Stipend £80. Patrons, the male communicants.

PERTH, a large and beautiful town, a royal burgh, the capital of Perthshire, the seat of a presbytery and a synod, and formerly the metropolis of Scotland, stands in 56° 23' 40" north latitude, and 3° 6' 20" west longitude of Greenwich; 15 miles south-south-west of Dunkeld; 17½ east-north-east of Crieff; 22 west-south-west of Dundee; 61 north-east of Glasgow; and 39 and 43½ north-north-west of Edinburgh, respectively by Burntisland and by Queensferry. Its site is an alluvial plain, on the right bank of the Tay, about 28 miles above the influx of that river to the sea; and, as to its general character, has been described in the preceding article. The town itself has a rich and sumptuous urban aspect, second in Scotland only to that of Edinburgh; it presents, over more than one-half of its outskirts, arrays of architectural elegance and finish, which may almost compare with the brilliant displays of the metropolis; it is wooded in front by the majestic Tay, and fanned on both sides by breezes circling over large and bright-green expanses of public meadow; it looks away, through a pure atmosphere, to the hazy summits of the Grampians, and yet is, on all sides, and at a brief distance, encinctured with soft and gentle and undulating hills, thickly gemmed

with embowered villas, or worked into luscious picturesqueness, with wood and culture; and from the summits of two of these heights, Moncrieff—'the glory of Scotland,' and Kinnoull, that museum of beauty and romance—it offers to its citizens and to tourists a series, a whole circle of views, whose profusion and magnificence of landscape fill even a dull mind with rich and long-remembered images. Of several views of the gem-city itself, seen jointly in its own brilliance and in the lustre of its setting, a very rich one is obtained from Moncrieff island, immediately below in the Tay, and another from the bridge—especially when the sun is sinking beyond the distant Grampians, and the background of mountains is enshrouded in the purple of a summer's evening—is truly exquisite, and has but few rivals in Scotland.

The Inches of Perth, or public grounds devoted to a free ventilation of the town, and to the promenading and out-of-door amusements of the inhabitants, are so spacious and beautiful as instantly to attract the notice of a stranger, and entirely vindicate the taste which makes them figure prominently in the description we have quoted. They derive their name from having formerly been insulated by the river; and they still extend close along its margin. The South Inch, situated—as its epithet implies—on the south side of the town, is nearly a square of about 680 yards each way. A noble avenue of stately trees adorns it on three sides; and, previous to 1801, when it began to be edificed on the north by the fine street-line of Marshall-place, went completely round it. Another sylvan avenue, nowhere excelled in Scotland for the beauty and tasteful arrangement of its trees, bisects the Inch a little eastward of its middle. Along this avenue runs the new Edinburgh road, opened about the year 1770, and presenting to the tourist, as he surmounts Moncrieff hill, and then debouches through the Inch, a singularly imposing approach to a city. The elegant terrace of Marshall-place along the north, and a line of handsome villas, called St. Leonard Bank, or Glover's Croft, along the west, impart to the landscape of the Inch the ornamental aids of architecture. This fine expanse of ground was, in former times, the arena of the athletic sports of the citizens, and frequently the theatre of active military movements. Many feats of archery, in particular, were performed upon it,—an accomplishment for which the town appears to have been celebrated.—Adamson, in the 'Threnodie,' gives high credit to the citizens of his younger days for their dexterity as bowmen; and he appears inclined to draw a small share of the honour to his own account. Thus does he laud the benders of the yew:—

And for that art our skill was loudly blown,  
What time Perth's credit did stand with the best  
And bravest archers this land hath possess'd.  
We spar'd not gains nor pains for to report  
To Perth the worship, by such noble sport;  
Witness the links of Leith, where Cowper, Grahame,  
And Stewart won the prize, and brought it home;  
And in these games did offer ten to three,  
There to contend; *Quorum pars magna fui.*

Mr. Cant, Adamson's continuator, informs us that the distance between the stones in the Inch, marked for the flight of an arrow, was 500 fathoms. The North Inch is more spacious and less umbrageously shaded than its rival; and has, at various modern dates, received considerable additions. It forms a broad and long hand of about 1,400 yards by 350, extending north-westward from the vicinity of the bridge. A race-course, curved at the ends, straight along the sides, and measuring about 950 yards from end to end, and 370 from side to side, is laid out upon it parallel to the river. Previous to about the year 1790, when

the present line of road was formed, considerably to the west, the Inch was traversed through the middle, by the road to Dunkeld and Inverness. The Inch is now used for the open-air exercises of the inhabitants, and for reviews of the military; and, in ancient times, it seems to have been the favourite arena for judicial combats. In the reign of Robert Bruce, and under that monarch's eye, it was the scene of a combat between Hugh Harding and William de Saintlowe; and in the reign of Robert III., it witnessed a deadly encounter between chosen parties of the M'Phersons and the M'Kays, or of the clans Chattan and Quhele,—one of the most striking events of its class in the ancient history of Scotland. The Earl of Dunbar and the Earl of Crawford, having failed to effect an arrangement of a feud between the M'Phersons and the M'Kays, proposed that the quarrel should be settled by open combat. Accordingly, on an appointed day, the combatants—thirty of each clan—appeared on the North Inch, to decide, in presence of the king and queen and a large body of nobles, the truth or justice of their respective claims. Barriers had been erected on the ground, and the king and his party took their place on a platform to view the combat. According to some accounts, one of the M'Phersons fell sick; or according to Bower, one of them, panic-struck, slipped through the crowd, plunged into the Tay and swam across, and although pursued by thousands, effected his escape. As the combat could not proceed with the inequality of numbers thus occasioned, the king was about to break up the assembly, when a diminutive and crooked man, Henry Wynd, a burgher of Perth, and an armourer by trade, sprang within the barriers, and thus addressed the assembly:—"Here am I! Will any one see me to engage with these hirelings in this stage play? For half a merk will I try the game, provided, if I escape alive, I have my board of one of you so long as I live." This demand, or proposal, of *Gow Crom*—that is, Crooked Smith, as Henry was familiarly styled—was granted by the king and nobles. A murderous conflict then took place. The armourer hending his bow, and sending the first arrow among the opposite party, killed one of them. After a discharge of arrows, the combatants rushed upon one another, and a terrific scene ensued. The violent thrusts of the daggers, and the gashes inflicted by swords and battle-axes, hastened the work of butchery and death. Victory at last declared for the M'Phersons, but not until twenty-nine of the M'Kays had fallen; nineteen of the M'Phersons were killed, and the ten remaining were all grievously wounded. Henry Wynd, and the survivor of the clan M'Kay, escaped unhurt. This passage of history, or of arms, if so it may be called, is vividly exhibited in the 'Fair Maid of Perth;' and it is also told well and succinctly in Dr. Brownie's 'History of the Highlands and Highland Clans.' Wyntoun says of the combatants—

"All that entrit in barreris,  
With bow and axe, knyff and sword,  
To deal among them thair last word."

The old part of Perth, or what existed previous to extensions which were commenced toward the end of last century, forms the central division, and occupies less than one-half of the area of the present town. It extends west-south-westward, in a direction at right angles with the course of the river, and measures about 600 yards by 450. Four straight, parallel, and completely edified thoroughfares, called Mill, High, South, and Canal streets, traverse its area lengthwise, or outward from the river; and these are connected or crossed, at irregular and very widely different intervals, by shorter streets, which are

variously old, new, and renovated. All these streets stood, at one time, upon a level so much lower than the present, that they were constantly liable to be inundated by the freshets of the river; and they have gradually, and by a long process of improvement, been raised to their present elevation. Their houses, too, till about 70 years ago, were generally of mean and antique construction, numerous faced with wood, and aggregated so closely piled and so projecting as to render the thoroughfares mere lanes, malodorous, dingy, and dismal. Canal-street, in particular, was simply an unpaved, confined, disagreeable pathway along the edge of an open part of the aqueduct or fosse which anciently surrounded the city walls. Watergate, running between High-street and South-street, near the river, still retains much of its ancient character; and several others of the thoroughfares continue to be more or less chequered with antique tenements. But, with these exceptions, the present town, both old and new, everywhere presents a modern, airy, substantial, and handsome appearance,—the majority of its thoroughfares vying with one another in the neatness of their general architecture, or the imposing character of their public buildings, or the *impressment* of their scenic vistas, to draw the attention and win the eulogium of the stranger. The High-street is broad and spacious. John-street, running between it and South-street, parallel to Watergate, is an entirely renovated old thoroughfare; and, in its new form, with lines of elegant buildings, and fine shops on the site of the demolished mass of hideous and crazy edifices, was opened in 1801. George-street, leading from the end of the bridge to a point in High-street opposite Watergate and John-street, was formed about the year 1770, and contains no house of earlier date. Princes-street, carrying out the Edinburgh road from South-street toward the Inch, was in one part built about the same time as George-street, and, in another, not till 39 years later. Charlotte-street, leading from the end of the bridge to the Dunkeld road, was not commenced till 1783. All the south wing of the town, consisting of King's-place, Marsball-place, Nelson, Scott, and James' streets, the southern half of Princes-street, besides some other thoroughfares—the whole arranged somewhat in the style of the New town of Edinburgh, and terminating in terraces—has been built since 1801. A suite of horticultural grounds, called the Spey gardens, and the northern line of the sylvan avenue which begirt the South Inch, occupied, up to that date, the whole of the area now covered by these thoroughfares and their buildings. The north wing of the town, though constructed much less upon the straight line and right angle principle than the south wing, possesses an arrangement which gives finer effect to its handsome and occasionally superb edifices, and which, in combination with the North Inch and the landscape beyond, produces several fascinating specimens of the urban picturesque. The division consists of Athole-place, the North-crescent, Athole-street, Rose-terrace, Stormont-street, Melville-street, Barossa-place, and some other lines of edifices; and, with unimportant exceptions, it has all, like the southern division, been built since the commencement of the present century. An extension of the town on the west, consisting principally of two considerable and several minor streets, is all likewise of modern origin. A splendid street, called Tay-street, to extend along the margin of the river from the bridge to the South Inch, a distance of about 750 yards, was projected but two or three years ago, and is only now in progress.

The Bridge of Perth is a noble structure, simple, yet elegant, and constructed from a design by the

eminent engineer, Smeaton. It has 9 arches, and extends over a clear water-way of 590 feet. Its length is 880 feet; its breadth between the parapets is 22 feet, and is divided into 4 feet of pavement, and 18 of carriage-way. Proposals have repeatedly been made to widen it; but they have never obtained a concurrence of view among interested parties, and necessarily remain unexecuted. The bridge was founded in January, 1766, and finished in February, 1772, at the cost of £26,446. The town contributed £2,000 of this sum; £4,000 was obtained from the Crown, and £700 yearly for 14 years, all payable from the rents of the annexed estates; and the Earl of Kinnoull contributed £500, and so strenuously used influence, and made exertion for obtaining the subscriptions which composed the remainder, that he must be viewed as the grand constructor of the important work. A large timber-bridge is said, but not on good authority, to have been thrown across the Tay at Perth by Agricola. A stone-bridge was, in 1329, erected by the magistrates opposite the foot of High-street; it was twice, or in three successive parts, thrown down by floods, respectively in 1573, in 1582, and in 1589; it was afterwards temporarily repaired with timber; it was next, from 1599 till 1617, entirely rebuilt with stone, and rendered virtually a new bridge, with ten spacious arches; and it was finally, in 1621, just 4 years after its completion, irreparably demolished by a flood. Successive subscriptions for the restoration of the structure were headed by James VI., Charles I., Charles II., and other potent personages; but, owing to the turbulence of the times, and to other causes, all previous to that of the Earl of Kinnoull proved abortive. From 1621 till 1771, communication across the river was maintained solely by a ferry. The bridge destroyed at the former of these dates is said by Mr. Cant, the annotator upon the 'Muses Threnodie,' to have been built under the direction of Mr. Mylne, a celebrated architect, whose father, also an architect, was patronized by James III. Mr. Mylne was buried in the Greyfriars' cemetery, and is commemorated there by a tomb, bearing a long poetical inscription. Two sons of his were distinguished architects, the one in London and the other in Edinburgh; and the former constructed the London Blackfriars' bridge. In the town's charter granted by James VI., dated 15th March, 1600, the bridge of Perth is referred to as "a most precious jewel of our kingdom, and a work profitable and primely necessary to our whole kingdom and dominion, and for the suppression of rebels, and such as are viciously affected, most commodious; and also keeping the one-half of the kingdom, with the other half thereof, in faith, obedience, duty, and office, towards our kings, in our kingdom and dominion." The destruction of this bridge caused a great sensation, and was extensively regarded as a judicial visitation of divine providence. "The people," says Calderwood, "ascribed this wrack to iniquity committed in the town; for there was held the last General Assembly, and another in 1596, when the schism in the kirk began; and in 1606, here was held that parliament at which bishops were erected, and the lords rode first in their scarlett gowns."

A chief architectural attraction in Perth is a magnificent suite of county-buildings, erected in 1819, from a design by Mr. Smirke, at a cost of £32,000, and situated in Tay-street, at the foot of Canal and South streets. The principal building confronts the Tay, is constructed of fine polished sandstone, and has an elegant portico, whose pediment is supported by twelve massive fluted columns. A spacious entrance-hall opens from the portico; and a flight of steps leads thence to the gallery of

the judiciary-hall. This gallery can accommodate about 1,000 persons; and the hall itself has the form of a large segment of a circle, and measures in the upper part 66 feet by 43½. The prisoners' box communicates by a descending flight of steps and a passage with the prison. The jury's and some of the witnesses' rooms are beneath the gallery; and the judges' rooms and others of the witnesses' rooms are behind the judges' bench. The county-hall occupies the south wing of the principal building, measures 68 feet by 40, and is elegantly painted and fitted up. It contains full-length portraits of the late Duke of Athole, and of Lord Lynedoch, by Sir Thomas Lawrence, and a portrait of Sir George Murray, by Pickersgill. A committee-room to the right of the entrance to the county-hall, measures 30 feet by 30; and a tea or card-room, in the upper story, measures 44½ feet by 30, and has a portrait of the celebrated Neil Gow, by Sir Henry Raeburn. The sheriff's court-room and the sheriff clerk's office are in the north wing; the office of the collector of cess is above the north entrance; and, among other apartments, are arched fire-proof-rooms for the conservation of the city and county records.—Behind these county-buildings, and extending from them to Speygate, are the new city and county prisons, surrounded by a high wall. The governor's house confronts the entrance-gate; and the felons' and the debtors' jails occupy respectively the northern and the southern areas, and contain 29 apartments. They were built in 1819, and have been greatly improved within these late years. A general prison for Scotland, which will contain about 400 prisoners, or about a fifth of the average number in Scotland, is now erecting on the space of ground formerly used as a depot for French prisoners, on the south side of the South Inch, about half-a-mile from the city, on the banks of the Tay. To this prison all criminals ordered to imprisonment for six months or upwards may be sentenced or removed. The building is adapted to the separate system of prison-discipline; and is to consist of four wings, each four stories in height, radiating from a centre; but only two of these wings are at present erected. Each wing contains 184 cells, with 4 rooms for warders, and 8 punishment-cells placed in the sunk floor. Each cell is 13 feet long, and from 6½ to 8½ feet wide. They are built in two separate ranges, divided by a corridor 15 feet wide, and 220 feet long, and of the whole height of the four stories. The building is lighted with gas, and each cell has one light. The entire cost of the structure will be about £28,000. The prison is placed under the management of the board of directors of prisons in Scotland, who have power to apportion the several counties and burghs the sums required for building and maintaining the prison.

Below the county-buildings, at the foot of Marshall-place, and overlooking the river, stands the water-reservoir, constructed in 1830, at a cost of about £13,600. This valuable establishment, and all the machinery and appliances connected with it, were planned by Dr. Anderson, then rector of Perth academy, and elected, in 1837, to the chair of Natural Philosophy in the university of St. Andrews. The reservoir, as a mere edifice, is one of the finest ornaments of the town; but draws off attention from its external beauty, by the ingenuity and greatness of its interior, and its attached mechanism for affording an abundant supply of pure water. A filtering bed, 300 feet in length, is constructed in the gravel of the upper end of Moncrieff-island, and secretes a large and constant volume of soft and limpid water from the Tay, through a natural bank of gravel and sand; a suction-pipe of great power, laid

beneath the bed of the river, draws the water hence to a tank beneath the great reservoir; two steam-engines throw it up 55 feet to the great reservoir; and pipes conduct it from that grand receptacle in minute ramifications through the town. An act of parliament sanctioning the construction of these works was obtained in June, 1829; and confers permanent powers, yet provides that all debt shall be liquidated in not less than 30, or more than 40 years, after which the assessment authorized shall be only for the annual expense. The assessment is leviable from proprietors and occupants, and is limited within a maximum of 5 per cent. on the actual rent or annual value. Six public functionaries of the town and county, and two persons elected from each of six wards of the city and suburbs, constitute the body of water-commissioners,—£5 of yearly rent being the qualification of an elector, £10 that of a person eligible to be a commissioner.—At the head of Athole-street, in the north-west extremity of the town, is a spacious suite of barracks, built in 1793, and originally designed for cavalry, but now fitted up for infantry.—At the foot of the High-street, beside the old shore, are the city council-room and the police-office,—the latter formerly the chapel of the Virgin Mary, and the former erected in 1696, and originally much ornamented and gaudily furnished.—In the same street stands the Guild-hall; and in Parliament-close, off that street, stands the Free-masons' hall, erected in 1818, on the site of the old parliament-house.—The gas-works of Perth, situated in Canal-street, vie in excellenc with the very superior water-works of the town; and were planned in their design, and superintended in their execution, by the same scientific gentleman,—Dr. Anderson. They were constructed in 1824, and cost £19,000. The gas is purified according to a method, alike simple and ingenious, invented by Dr. Anderson, and is noted for its brilliancy.

At the north end of George-street, near the bridge, is a tasteful and elegant building, erected by subscription, in 1824, to commemorate the public services of Provost Marshall. It is circular in form, but has an Ionic portico, and is surmounted by a dome; and it contains halls for the public library, and for the museum of the Literary and Antiquarian society of Perthshire. The museum, besides comprising an extensive collection of curiosities, is enriched with several excellent paintings by old masters, presented by the Marquis of Breadalbane,—the most striking of which is a painting of Prometheus chained to the rock.—In the centre of Rose-terrace, confronting the North Inch, are the public seminaries. They were built in 1807, from a design by Mr. Burn, and at a cost of about £6,000; and are provided in the interior with ample accommodation, and embellished in the exterior with some fine pillars. Jointly with an adjoining building which is entered from Barossa-place, these edifices contain apartments for seven schools, all of which are under the patronage of the town-council, and salaried from the burgh funds, and have acquired a high reputation. The grammar-school, of long standing, and yielding a salary of £50 to its rector, is for Latin, Greek, ancient geography, &c.; the academy, instituted in 1760, and yielding its master a salary of £100, is for natural philosophy, chemistry, astronomy, and all the departments of scientific and practical mathematics; the French school, is for French, Italian, and Spanish; the English school, for rudimental branches, and for composition, history, geography, and astronomy; the writing and arithmetic, the drawing and painting, and the singing and church-music schools for the branches named in their designations; and they yield, to masters and assistants, various salaries

of from £12 10s. to £25.—The theatre, situated at the junction of Kinnoull and Athole streets, was built in 1820, at a cost of £2,625; but, much to the credit of the citizens of Perth, is very generally regarded as a moral nuisance. "This place of amusement," says the Rev. Dr. Thomson, in the New Statistical Account, "has fallen very much into disrepute. Few inhabitants of any respectability frequent it. Prices of admission have been lately lowered, not to the improvement of the morals of the place, for that has brought to it the lowest and the most questionable characters of society. A correspondent of the Perth Constitutional newspaper, December 21, 1836, identifies the multitude of its frequenters with the baser sort who squander their means in tipping-houses."

King James the VI.'s hospital, situated at the extremity of South-street, is a large, handsome, well-arranged structure of three stories. Two charters, for founding the institution and endowing it with property, were given respectively before and after the King attained his majority; but, while making provision for "poor members of Christ's body residing in our burgh of Perth," they do not enjoin the erection of an almshouse. How the original hospital was built is not known; but it was demolished by Cromwell in 1652, to assist in the supply of materials for his citadel. The present edifice was erected by public subscriptions and collections, in 1750; and stands near the site of the quondam Carthusian monastery. Till 1814, it was literally an almshouse, or place of retreat and residence to the poor; but since that date, it is all, excepting the hospital master's and the managers' rooms, let out for rent. The annual receipts of the charity amount to nearly £600, and are distributed among received paupers as out-pensioners.—The city and county infirmary, situated in County-place, at the head of South-street, is a graceful and capacious edifice, erected in 1836-7, from a design by Mr. W. M. Mackenzie, the city architect. It accommodates nearly 60 patients. The sum of about £5,000 belonged to it at the date of its foundation; and £600 and £400 were realized for it respectively by bequest of the first and donation of the second Marquis of Breadalbane.—The royal Lunatic asylum, situated on the west side of Kinnoull-hill, is one of the most perfect establishments of its class in the kingdom, and an almost unrivalled work of individual benevolence. Upwards of £40,000 have been expended upon it; and the funds have arisen from the gift, by the late Mr. James Murray of Tursappie, a native of the town, of a large proportion of a princely fortune amassed by him in the East Indies. The edifice was so far advanced, in 1827, as to be then opened for the reception of patients; but it was extensively enlarged in 1834. It exhibits a pleasing and ornate specimen of the Grecian Doric style; and was built from a design by Mr. Burn of Edinburgh. It surmounts an eminence or swell on the face of the hill, about six minutes' walk from the end of Tay bridge; and commands a magnificent view of Perth, Strathtay, and the distant Grampians. The institution is incorporated by royal charter.—The dispensary of Perth was commenced in 1819, and adopted the self-supporting system in 1834. Immediately after the change, a second dispensary, in continuation of the old system, was commenced.

At once the most ancient, the most imposing, and, in all respects, the chief public building of Perth, is the church of St. John's, originally called, 'The Kirk of the Holy Cross of St. John the Baptist.' It stands in a large open area, on the west side of St. John's-street. The original edifice—some say, the oldest part of the present structure—is believed to

have been erected as early as the beginning of the 5th century,—probably before Ninian of Galloway had terminated his labours among the Southern Picts, as a missionary for the introduction of Christianity. The structure, as it existed in the 12th century, and the early part of the 13th, is proved by historical documents as well as by parts of its architecture which remain, to have been both magnificent and extensive. During about 100 years succeeding 1226, its being gifted to the monks of Dunfermline, its having to compete with the new-fangled and seductive churches of the monasteries, and its suffering the abrasion of the tumultuous movements of the successional war, all occasioned it to fall into disrepair, and nod toward ruin. Orders were given for its restoration by King Robert Bruce; but they were only partially executed, and became a dead letter at his death in 1329. At the beginning of the 15th century, the choir or east end had been re-edified,—the whole structure was in complete repair,—former altars, excepting the great one of the patron saint, had been removed,—and numerous new altars, including one to St. Ninian, began to be founded. The edifice, as it stands, is of very various dates, has undergone many modifications, and is divided into three parochial places of worship,—the east, the west, and the middle, churches. The length of the entire building is 207 feet. The east church is elegant and impressive in the interior; contains the tombstone of James I. and his queen, with outline figures of both of these royal personages; and has an eastern or altar Gothic window of stained glass, regarded as the most beautiful in any presbyterian place of worship in Scotland. The middle church is situated to a great extent beneath the tower, and exhibits in its interior four enormous pillars supporting that vast superstructure. The west church, then extensively ruinous, was taken down in 1828, and re-edified according to a plan by Mr. Gillespie. The square tower is the principal remaining part of the original or early edifice; it is of so imposing a character as instantly to impart conviction of the object's ancient grandeur; and, with a curious and clumsy exception, it exists in its original form. The exception is a wooden erection of a pyramidal form, covered with lead, and rising from the summit of the tower, and designated in an act of the town-council in 1675, “the pricket of the steeple.” The entire height is 155 feet. Five bells of great and celebrated tone anciently hung in the tower; one of them—now the great bell—still repeats the strong and solemn vibrations which spread from it over the town before the Reformation; three other bells are of a comparatively modern date; and a set of music-hells chimes, in a variety of Scottish airs, a half-hourly division of time. In St. John's church, the reformer Knox preached the celebrated sermon which was followed by the demolition of the monasteries; and here Edward III. of England slew, in 1336, his brother, John, Earl of Cornwall. Edward, while standing before the high altar, was told by John that the latter had just completed a journey of desolation and rapine through the west of Scotland,—that, in particular, he had fired the church and priory of Lesmahago, and various other churches, while they were the retreat of persons who had fled from the disasters of the open country; and the King indignantly reproaching the Earl for his truculent and savage conduct, and receiving a disdainful reply, plunged a dagger into the body of the boasting devastator, and laid him gory and dead at his feet.—St. Paul's church, situated in St. Paul's-square, at the west end of High-street, is an elegant edifice, with a fine spire.—St. Leonard's church, situated in King-street, at the head of Canal-street, is also a handsome building, from a design by

Mr. W. M. Mackenzie. St. Stephen's church is situated in Canal-street. Several of the dissenting places of worship, particularly those of the Independent and the Second United Secession congregations, are very pleasing edifices. That of the First United Secession congregation is venerable as one of the four original structures belonging to the nascent “Associate Presbytery.”

The extinct public erections of Perth are numerous, and aggregately possess great interest. Military walls, of sufficient strength to resist vigorous sieges, surrounded the town from a very early date till far in the last century, they were originally built, no one can tell when, or by whom,—though Adamson, in the ‘Muses Threnodie,’ says, by Agricola; and they often suffered partial demolitions, restorations, and changes, from the ordinary progress of events, and the alternations of peace and war. Not a vestige of them now remains, except a small fragment at one spot on the north side. A fosse, or aqueduct, supplied with water from the Almond, and also boldly ascribed by Adamson to Agricola, went round the outer side of the walls; and though still existing, it has, since a year or two after the commencement of the present century, been arched over on the south and partly on the west, and has elsewhere been much narrowed.—The Castle of Perth, the original of which also has been ascribed to Agricola, stood without the walls, in the immediate vicinity of the Skinner-gate, and, previous to the erection of the Blackfriars' monastery, was the usual Perth residence of the Scottish kings; but it has completely disappeared.—A citadel was, in 1652, built by Cromwell's army on the north side of the South Inch, and was designed to overawe the town. It was a stately and strong work; square, with a bastion at each corner, and surrounded with strong earthen ramparts, and a deep moat filled with water. Opposite to it the army built a pier for the loading and unloading of vessels. “The entry towards the town,” says Cant, “had an iron gate. The commanding officer ordered great trees to be cut down in the king's hunting-park at Falkland, and brought to the citadel. The school-house was demolished. It contained 360 scholars, was three stories high, with room for the rector, doctors, and music-master. They demolished the high walls of the Greyfriars, carried away the stones, with nearly 300 tombstones, and 140 dwelling-houses, with the garden walls; also the hospital, a stately building. The stone-pillars and abutments of the bridge, besides many kilns and fishing-boats,—all were carried away to build the citadel. One hundred and forty families were turned out of their houses, and had starved if they had not been supplied by the town. The surface of the two Inches, which yielded 2,000 merks yearly for grass, was carried off to build the ramparts.” The citadel, soon after the Restoration, was given by Charles II. to the town as some indemnification for their losses; it immediately after fell into disrepair, and was pilfered from as a quarry; it was, in 1666, sold for 4,702 merks, but under conditions which subsequently made the wreck of it public property; and it was finally removed piecemeal by grant or permission of the town-council. During some years previous to the erection of the barracks, a remnant of it was fitted up for cavalry, and contained stabling for 200 horses, a riding-house, a tavern, and other accommodations. So completely are the trenches filled and the ground levelled, that not a trace of the huge structure exists. Each of the four walls which formed the square of the citadel was 266 feet in length; and that on the north side ran parallel to the Greyfriars' burying-ground, from near the river to the site of Marshall-place;

so that the ground on which the fort stood is now bisected by the public road to Edinburgh.—The Parliament-house stood on the north side of the High-street, a brief distance inward from the street; and still gives the name of Parliament-close to the avenue by which it was approached. During the early years of the present century, it continued to retain distinct though very tarnished traces of ancient magnificence, but existed in a state of time-worn decay, and gave a cheerless shelter to a few poor families; and in 1818, it was razed to the ground. Meetings of the Scottish parliament were held usually in this building, and occasionally in the Blackfriars' convent, till the reign of James II.; and then they and the courts of justice were formally removed to Edinburgh.—Earl Gowrie's palace, the scene of a mysterious event in the national history of Scotland, afterwards to be noticed, and known in the days of the city's pride as the Whitehall of Perth, projected its garden on the south to the city wall, presented fronts on other sides to the river, to South-street, and to the Water Vennel, and occupied the ground which now forms the site of the County buildings. It was erected in 1520 by the Countess of Huntly. After the Earl of Gowrie's murder, it passed into the possession of the city; in 1746, it was presented to the Duke of Cumberland; afterwards, it was sold by the Duke to the government, and, till the commencement of the French war, was transmuted into an artillery barracks; in 1805, it was repurchased by the city; and, several years later, it was coolly doomed to destruction, its site granted for the County buildings, and its material sold for about £600.—Spey Tower, a fortress on the city-wall near the Gowrie palace, and the latest in existence of that wall's towers, was taken down about 35 years ago, and is noted for having contained a strong prison,—the prison of Protestant martyrs and confessors. Cardinal Bethune shut up in it the Christian men whom he procured to be condemned for alleged heresy; and he witnessed from it their execution.—Among noted city-residences of noblemen and courtiers at Perth, while the city was the seat of the Scottish court, may be noticed the house of Lord-chancellor Hay, at the south end of Watergate, in the immediate vicinity of the Gowrie palace, that of the Earl of Errol, in the same street, and nearly opposite; that of the Earl of Errol on the west side of Speygate, nearly opposite the Gowrie palace; that of the bishop of Dunkeld, in the same vicinity, and with an entrance from South-street; that of Lord Crichton of Sanquhar, also in Speygate; and that of Lord John Murray, in Couvre-feu-street, a little north of the Old Glover hall. Excepting the front part of the last, all these houses have disappeared.—Among extinct civil edifices, we may, almost as a matter of course, look for the hurgh cross,—that most obnoxious of all ancient town-erectments to modern generations of carters, and split-the-farthing utilitarians; and, in the case of Perth, we find that the hated structure was sold at public auction to a mason for the long sum of £5, and may therefore infer, that it possessed some very high architectural attractions. It was built in 1668 by Mr. Mylne, the king's master-architect, who contracted with the magistrates to render it a rival to the most beautiful in Scotland; and, by special permission of the Lord Lyon, it was afterwards emblazoned both with the royal arms and with those of the city. It had a flight of steps within, was 12 feet high, and terminated in a spacious terrace. Its embellishments of statuary and architecture may be surmised from the historical notice that, on the anniversary of the Restoration, in the year after its erection, "the treasurer was appointed to cover the terrass of the new

crois with a carpet, and to prepare glasses and two gallons (Scottish) of French wine, to be run out of the mouths of lions, bears, griffins, and other heads with which the cross was ornamented." This fine structure was situated in the middle of the High-street, between Kirkgate and Skinnergate. A previous cross, which occupied the same site, and seems to have been ancient, was demolished by Cromwell to aid the supply of material for his citadel.

The monasteries and other religious houses of Perth, were numerous and notable in the days of popery, and, as is well-known, stand out on the foreground of that picture of demolition which records the early external movements of the Reformation. The Blackfriars or Dominican convent,—frequently spoken of as a palace, on account of its being an occasional residence of the Scottish kings, was an extensive, and probably a sumptuous edifice. It stood on the north side of the town, and had attached to it the chapel in which some parliaments were held. In 1231, Alexander II. founded the establishment; and, in 1244, he bestowed upon it all the area of his garden, and a valuable supply of water from his mill-lead.—The Carthusian monastery or Charter-house stood at the west end of the town, and was founded in 1429 by James I. or his queen, for 13 monks and their servants. The chapel connected with it contained the tombs of James I., of his queen, and of Margaret, the queen-mother of James V.—The Whitefriars, or Carmelite convent, stood a little west of the town, and was designated 'the Prior and Convent of the Carmelite friars of Tublum, near Perth.'—The Greyfriars, or Franciscan convent, was founded in 1460 by Lord Oliphant, and stood near the river, at the south-east corner of the town: The site of both the convent and its chapel became, in 1580, the common burying-ground for the citizens, and is the present Greyfriars' cemetery.—The Nunnery of St. Leonard, to which were attached a chapel and an hospital, was founded in the 13th century, and stood a little south-west of the town. Lady Elizabeth Dunbar, the daughter of the Earl of March, and the privately espoused and afterwards rejected wife of Prince David, Duke of Rothesay, became, in 1411, the superior of the convent, and the governess of its hospital.—The Nunnery of St. Mary Magdalene, with a chapel attached to it, was of early but unascertained origin, and stood nearly a mile south of the town. Both this convent and the former were suppressed after the erection of the Carthusian monastery, and their lands and revenues given to that establishment.—Our Lady's chapel, or the chapel of St. Mary, is, with the exception of part of St. John's church, the only surviving ecclesiastical edifice of Popery in the city. The original chapel stood close by the old bridge at the foot of High-street, and, in 1210, when already an old building, it was destroyed by a great flood in the river. The succeeding structure was built, for sake of safety, a little farther from the river; and, after the Reformation, became partly transmuted into the old jail.—St. Ann's chapel, dedicated to the Mother of the Virgin Mary, was of early but unknown foundation, had attached to it an hospital for the poor, and stood on the south side of St. John's church. Sir Walter Eviot was chaplain of it during a large part of the first thirty years of the 16th century.—The chapel of Our Lady of Loretto or Allareit, stood on the north side and near the head of South-street; but seems to have had little or none of the absurd and mischievous fame of the chapels of the fabled "sancta casa" in other towns.—The Rood chapel, or Chapel of the Holy Cross, stood at the north side of the South-street port.—St. Paul's chapel was founded in 1434 by John Spens of Glen-Douglas, had connected with it

an hospital for strangers and the poor, and stood at the north-west corner of the New-row.—Sts. James' and Thomas' chapel was dedicated, in monstrous conjunction, to the Apostle James, and to Thomas-a-Becket, the roistering prelate of Canterbury. It stood on the south side of St. John's church. The original chapel became ruinous about the commencement of the 15th century; and a new one was then built by the magistrates, aided by a large donation from a burgess.—The chapel of St. Catherine was founded in 1523 by Sir John Tyrie, provost of the collegiate church of Methven, had connected with it an hospice for poor travellers, and stood "at the clay-pots," at the west end of the town.—St. Laurence chapel was founded by some Scottish king prior to Robert III., and stood on part of the ground belonging to Perth-castle. The Blackfriars received it from Robert III., as the price of masses to be said for the soul of his mother, Elizabeth More, whose body had been buried in the Blackfriars' chapel; and, after getting it into their possession, they allowed it to fall into decay.

Two or three objects of antiquity, not strictly classifiable with extinct buildings, and possessing strong interest for antiquaries, remain to be noticed. The ground, covered by a house built about 55 years ago, on the south side and near the foot of High-street, is traditionally asserted to have been the site of a British temple, erected before the Christian era. When the ground was excavated for laying the foundation of the present house, two apartments were discovered each 26 feet by 14, with strongly-cemented walls  $3\frac{1}{2}$  feet thick; and the apartments were spanned or surmounted by two parallel arches. The ground, up to the preparations which immediately preceded the excavation, was for ages occupied by a tenement called the House of the Green, to which tradition attached the fame of surmounting the supposed temple's site. Geoffrey, who wrote in the beginning of the 12th century, states as history what the tradition conveys as a report; and Hollinshed, who wrote in 1571, boldly traces the founding of the temple up to a prince of a goodly date before the incarnation of the Redeemer.—Three Roman iters, approaching from different quarters, led toward Perth, and possibly met within its area; and they are stoutly appealed to by parties who contend that the town was the Victoria of the Britons, and a fortified and castellated post of Agricola. One of these iters leads from Abcrnethy; another leads from Stirling through the famous Roman camp at Ardoch; and a third leads from Kinross, yet is properly the joint continuation of two iters coming up respectively from Aberdour and North Queensferry. At the excavating of the ground for founding St. Paul's church, where the height of the surface is about 23 feet above the ordinary level of the Tay, there was found, at the depth of 10 feet from the surface, a work of well-built ashler masonry, extending in a direction parallel to the river, and provided with iron rings and staples which seemed to indicate its having been a quay. In two different localities, and at different depths from the surface, willow-trees have at recent periods been discovered in their upright or growing position in the alluvium, surrounded with such vegetable matter as indicated that they stood, *in situ*, or in the very position and on the very level of their natural state. In numerous localities there have been found, in the making of excavations for the founding of houses, scissiors, spurs, pieces of leather, and various other articles which demonstrate, what we stated in our general description of the town, that the level of the streets has, at periods subsequent to their thorough edifying, been very considerably raised. But very ancient coins, vases,

urns, and other similar minor antiquities, which are rife in many much less pretending localities in Scotland, and which always afford presumptive, and sometimes certain, evidence of Roman or otherwise ancient allocation, are not among the boasts of Perth; but, on the contrary, the coins found have been both few in number and aggregately very modern.—A common seal, but of unascertained impression and legend, is known to have been in the possession of the burgh so early as the reign of Alexander II., or first half of the 13th century. A subsequent seal, which was in use at the commencement of the 15th century, had, on one side, a representation of the beheading of John the Baptist, on the other, a representation of his enshrinement, attended by four priests,—and on both, the legend, "S. communitatis ville Sancti Johannis Baptiste de Berth." The modern seal shows the impression of an imperial eagle, its two beads looking in opposite directions, and its breast surmounted by a red escutcheon charged with the holy lamb passant, carrying the banner of St. Andrew; and has the legend, "Pro lege, rege et grege."

The institutions of Perth, remedial, benevolent, religious, educational, literary, and commercial, have, to a large amount, been noticed in connection with the town's public buildings. The Literary and Antiquarian society, incidentally named in the description of Provost Marshall's monument, was established in 1784, is presided over by the Earl of Kinross, has a charter from the magistrates, and, since 1818, has issued diplomas. Of six public or circulating libraries which the town possesses, five are the property of private associations, and Perth library, the largest, was instituted in 1786, and contains between 5,000 and 6,000 volumes. The public news-room of the town is brilliantly lighted with gas, and well-supplied with Scottish, English, and Irish newspapers, and with the larger literary periodicals. Four weekly newspapers are published in the town,—the Perthshire Courier, commenced in 1809, and issued on Thursday,—the Perth Constitutional, 1835, Wednesday,—the Perth Chronicle, 1836, Thursday,—and the Perthshire Advertiser, Thursday. A periodical called the Perth Magazine was begun in 1772, but, after the issue of five volumes, it ceased. Another periodical was commenced about ten years ago, but proved unsuccessful. An annual periodical, under the title of 'the Perth and Perthshire Register,' containing lists of the nobility, constituency, and institutions of the town and county, is issued from the press of Mr. Morrison. This press, under the Messrs. Morrison, father and son, has long been extensively and nobly worked, and has been distinguished for the number and worth of its literary and religious productions,—and particularly for the Encyclopædia Perthensis, the largest work ever printed anywhere in Scotland except in Edinburgh. The charitable institutions, and their respective revenues, in 1835, were the Destitute Sick, £74 6s. 6d.; the Hospital Female school, £46 12s. 6d.; the Aged and Indigent Females', £67 10s.; the Clothing Indigent Females', £60 18s. 5d.; the Clothing Indigent Old Men's, £118 3s. 6d.; the Infant-school, £73 8s. 6d.; the Sabbath school, £10 1s. A savings' bank was instituted in 1815, and, several years ago, possessed deposits to the amount of about £3,200. About 18 friendly societies, some of them of long standing, existed at the date of the legislative interference on the subject of such institutions; and they suffered so ruinous a panic that only three or four, and these in a languishing condition, survive. Eight of the incorporated bodies of the city act as beneficiary institutions. Strictly religious societies, though still at work, have sustained much damage from the re-

cent collisions and excitements among the evangelical denominations. The banks of the city are the Central Bank of Scotland and the Perth Banking company; and the branch banks are the British Linen company, the Bank of Scotland, the Glasgow Union Banking company, and the Western Bank of Scotland. The weekly markets are held on Wednesday and Friday; and annual fairs for wool are held on an early but not fixed day of July,—for general business, on the first Friday of September,—for cattle and cheese, on the third Friday of October,—and for cattle and horses, on the first Friday of March, April, and July, and the second Friday of December.

The manufactures of Perth were, at an early period, extensive, and are still various and important. Gloves were early and long a staple produce; they possessed much fame throughout the kingdom, and were produced for home use to the amount of between 2,000 and 3,000 pairs a-year; but they have almost entirely ceased to be made, and are now an article of import. The dressing of sheep and lamb skins was carried on, about the year 1795, to the extent of about 30,000 skins; and was at an earlier period so prominent an occupation as to have given the name of Skinner-street to one of the city thoroughfares; but, though still of noticeable extent, it suffered serious declension from the ruin of the glove manufacture. The cotton-goods manufacture was, with great and spirited enterprise, introduced about 55 years ago; but it soon received a serious check, and became comparatively limited in its operations. An umbrella gingham manufacture was established about the year 1806, is now the staple, and is increasing; and it sends its produce to London, Manchester, and other great British towns. Pullicates, ebecks, and similar fabrics, and also imitation Indian shawls and scarfs, are woven for the manufacturers of Glasgow. In 1838, the number of looms employed upon the umbrella gingham was 663,—upon pullicates, checks, &c., 523,—and upon shawls and scarfs, 169; total, 1,355. In 1800, a  $14^{\circ}$  umbrella gingham was paid 24s. per cut of 24 yards; but, in 1838, it was paid only 8s. 6d. The average nett weekly wages in 1838 were, for shawls, 8s. 1d.,—for first and second class umbrella gingham, respectively 6s. 4d. and 5s. 4d.,—and for first, second, and third class pullicates, &c., respectively 6s. 8d., 4s. 8d., and 3s. 2d. The number of looms in the city, in 1819, was about 2,400; and it continues to be decreasing. The weavers are remarkable for their good conduct; they know nothing of embezzlement; but they, in few instances, have looms of their own; and their cottages generally show signs of great poverty. A mill for spinning flax and tow yarns was erected a few years ago, has 1,250 spindles, and employs about 140 persons. There are three extensive iron foundries, several coach-building establishments, distilleries, breweries, ropeworks, tanneries, dyeworks, saw-mills, and corn-mills, and various minor operative establishments. Ship-building is an extensive and increasing employment. Mr. Brown has built by contract several fine large sea-steamers, and has launched sailing-vessels of each from 400 to 500 tons. Messrs. Macfarlane, iron-founders, built, in 1837, the earliest iron steam-vessel constructed on the east coast. A ship-building company, formed in 1838, have already built several very fine vessels. Messrs. Graham carry on to a large extent ship-building for the immediate trade of Perth; and, in 1840, they were owners, for their own commerce, of shipping to the amount of 2,400 tons.

Perth was anciently a place of extensive commerce and vast wealth. Alexander Neckham, an English writer, who was abbot of Exeter in 1215, and died in 1227, takes notice of the town in

the following distich, quoted in Camden's *Britannia* :

"Transis ample Tui, per rura, per oppida, per Perth,  
Regnum sustentant illius orbis opes."

Thus translated by Bishop Gibson :

"Great Tay through Perth, through town, through country  
Perth the whole kingdom with her wealth supplies."

Before 1236, and during many ages, the merchants of Perth conducted an extensive traffic with the Netherlands, and visited the Hanse towns in their own ships. An eulogium pronounced on Alexander III, by history, is, that he exerted such influence and maintained such measures as protected the ships of Perth, and all other Scottish trading vessels, from being embargoed in foreign ports, or preyed upon by pirates at sea. The German merchants, or Flemings, very early frequented the port of Perth; and, in numerous instances, they even settled in the town, received the privilege of burgess-ship, and introduced the manufacture of woollen and linen goods, and the staining and dyeing of cloth. The narrow-minded natives took alarm at the prosperity of these plodding artisans, a blundering and prejudiced legislature clamoured against them; and two monarchs—David I. and his grandson, William the Lion, greatly to the damage of the town's traffic—laid restrictions on their liberties and movements. The latter monarch, in particular, pronounced them disqualified to be burgesses, placed a virtual proscription on a large part of their industrious proceedings, and, at the same time, invidiously granted to the burgesses of Perth, 'that they might have their own mercantile-guild, fullers and weavers excepted.' The modern prosperity of Perth commenced immediately after the rebellion of 1745. During the previous rebellion it had been made a place of arms, to which the rebels retreated after the battle of Sheriffmuir; during 1745-6 it was the central point of rendezvous for the forces and friends of Prince Charles Edward; and afterwards it continued, for a considerable period, to be the place of resort for the whole disaffected party. The march and residence of armies made it a mart for every kind of commodity; the gatherings of gentlemen from all the points of a far-spreading territory stimulated its citizens to enterprise; and, while the season of stimulus and profusion lasted, adroit persons acquired fortunes, and spread among their neighbours the contagion of animated industry.

The harbour of Perth, till within the last few years, was so inaccessible by vessels of any considerable burden, and so utterly devoid of advantages to enable it to compete with that of Dundee, situated on the margin and near the mouth of the frith, that its incapacities threatened to bring the commerce of the town to extinction, or to occasion its entire transference to the superiorly situated rival. Yet, even had the commerce seaward been overthrown, Perth is so commandingly situated as an emporium for the centre of Scotland, a centre of supply to a very extensive and populous circumjacent country, and sends out in every direction such a profuse radiation of excellent and much-frequented roads, that its trade must have continued to be considerable. But recent improvements have been made on its harbour, and recent deepening effected in the channel of the river, which have quite revived its sinking hopes as a port, and given a sudden and increasing impulse to its seaward trade. An act of parliament was obtained, about 12 years ago, for enlarging the quays, constructing a tide-harbour and wet-dock, connected by a canal, and generally improving the navigation of the river. Though hut

part of the plan has as yet been executed, the results are highly important. Only sloops of 60 tons burden could formerly be seen at Perth, and even these not often, except when they had undergone the tedious process of lightening; but now vessels of 300 tons reach the harbour, and need scarcely ever be longer on the river than during one tide, and can easily and at small expense be brought up by tug-steamers. The lumpish barges, known as Bridg-end boats, and formerly used as lighters, are now quite laid aside, or used only for occasional transferences of sand. Except in the exportation of coals to London, and in some other and inconsiderable items, shipments from Perth to points beyond the frith had nearly ceased; but, since the river and harbour improvements, vessels sail freely away from it to the ocean, and even make voyages direct to North America and the West Indies. The Dundee, Perth, and London Shipping company, very recently employed at Perth only one agent, and paid about £40 of salary; but now they employ, not only several persons of this one's description, but two local clerks or managers. The customs' revenue, some time after the commencement of the present century, was so small that it sometimes did not pay local expenses; and, in the years 1834-5-6, though beginning to feel the effect of the improvements, and to mount up before them, it was so low as respectively £3,702, £4,942, and £5,190. But in 1837 it was £6,270; in 1838, £8,760; in 1839, £11,893; and in 1840, £25,767. The shipping belonging to the port, in 1828, was not more than 4,000 tons; in 1837, was 5,467 tons; in the beginning of 1840, was 7,508 tons; and, toward the end of the same year, was 10,163 tons. Merchants and other inhabitants of Perth, in addition to employing the vessels of their own port, freight numerous vessels belonging to other ports, and hold shares in the whale shipping companies of Dundee, and are the principal party in the Dundee, Perth, and London shipping company, whose fine sailing smacks, and three powerful and splendid steam-ships, never proceed farther up the Tay than to Dundee. Perth was made a free port in January 1840. The principal articles of import are Baltic and American timber, hides, hark, tar, madder, flax, linseed, cloverseed, cheese, foreign spirits, coals, salt, lime, and bones; and the principal articles of export are the produce of the manufactories, potatoes, corns, slates, Scottish timber, pit-props, rails, and oak-hark. Coals are imported to the amount of about 55,000 tons a-year; and potatoes exported to the amount of from 100,000 to 150,000 Scottish holls. Steam-vessels ply daily between Perth and Dundee, touching at the intermediate port of Newburgh in Fife. Mail and stage coaches maintain daily communication with Edinburgh, Glasgow, Dundee, Aberdeen, Inverness, and intermediate places.

Perth owes much of its prosperity to the loveliness of its situation, the excellence of its schools, and the connexion of its diverging thoroughfares, and its means of communication with a very large proportion of everything in Scotland which is most interesting to an accomplished or a tasteful tourist. Its relation to Dundee considerably resembles that of Edinburgh to Glasgow; and, like its metropolitan prototype, it possesses a polish, an intellectuality, a cultivated taste, a social refinement, and a calm and easy gentility which can be appreciated by only a limited proportion of the rival town's inhabitants, and are regarded by the greater part with senseless apathy or vulgar stupid scorn. Wealthy annuitants who desire a quiet home, or men with a competency who wish to live in a city retreat rich in the appliances which soothe the imagination and healthfully

stimulate the judgment, must necessarily regard Perth with peculiar favour; and they already form a sufficient proportion of its population to render it strictly in social character what its aggregatedly tasteful and handsome architecture has rendered it physically, 'a genteel town.' A very large number of strangers, too, are attracted to it in brief visits during summer, and—excepting persons who have spent all their days in a brick field, and can see no object in scenery to match that of a tall chimney-stalk—they never fail to be delighted, as the Romans were, with the superb landscape in which the 'Fair city' is embosomed; and numerous tourists of taste pour into the town, and make their passing donations to its maintenance, on their way to explore the regions of romance and beauty and sublimity among the magnificent head-waters and tributaries of the Tay.

Perth is usually deemed to have been erected into a royal burgh by a charter dated 10th October, 1210, and attributed to William the Lion, who, in a subsequent charter, is styled "the founder and instaurator of our said royal burgh of Perth, after the vastation and ruin thereof by the inundation of the said flood and river of Tay." The Commissioners on Municipal corporations, on inspecting this alleged earliest charter at their visit, found strong reasons for doubting its authenticity; but they name, and briefly describe, a long series of subsequent charters, which they pronounce authentic. These are a charter of rights of gildry and letters of enforcement by Robert I., the latter dated in the 12th year of his reign; a confirming charter, in the 36th year of David II.; a charter of feu-farm, in the 4th year of Robert II.; a charter, in the 5th year of Robert III., empowering to choose a sheriff; two charters, in the 8th year of Robert III., empowering to apprehend forestallers and confiscate goods; a charter of confirmation, in the 10th year of Robert III.; a charter of monetic grants, in the 15th year of Robert III.; a charter conferring self-legislative power on the guildry, in the 16th year of Robert III.; a charter of confirmation relative to the lands of Tullilum and the common moor, in 1450, by Patrick, Lord Ruthven; a declaration in favour of the aldermen and sheriff of Perth, by the Exchequer-court of James IV., in 1474; an indenture, of 1494, by Lord Ruthven and his son, relative to certain mill-leads and water-passages; two royal and parliamentary charters of confirmation, in the 3d and 21st years of James VI.; a decret of the commissioners of burghs, in 1582, giving the commissioners of Perth precedence to those of Dundee; and a charter of confirmation of the whole rights and privileges of the burgh, granted by James VI., in 1600; the 34th year of his reign. This last is of great length, and is deemed the governing charter.

The public property of the town consists of the lands of Nether Tullilum, Meikle Tullilum, and Unthank, Cow-cansway, and Soutarland; the North and South Inches, Sand Island, and Maggie's Park; ten tenements let to tenants; four parish-churches; flour, meal, harley, oil and saw-mills, kilns and granaries; fishings in the Tay; harbour-customs; the fish, vegetable, and hutter-markets, situated westward of St. John's church; the fish-market, on the north shore, at the foot of High-street; and two other items,—one of them valuable suites of sheds. Including the customs, the produce of which, at the time, was about £823 a-year, and after deducting debts, the total value of the property, in 1833, was estimated at £67,510 11s. 10d. The average corporation revenue, for seven years ending Michaelmas 1832, was £6,560 14s. 2½d.; and the average expenditure, during the same period, was £6,752 6s.

17d. The revenue, in 1839-40, was £6,225. The imposts leviable by power of charter and usage, are harbour-customs, shore-dues, meal-market-dues, flesh-market-customs, and weigh-house-dues. The average annual amount of cess levied between 1823 and 1832, both these years included, was £372 12s. 8½d.; and the average number of persons assessed was 1,458.—The town is governed by a lord-provost, who is sheriff and coroner, four bailies, a dean-of-guild, a treasurer, and nineteen councillors. Municipal constituency, in 1839, 605; in 1841, 688. The jurisdiction of the magistrates extends over the royalty of the burgh,—whose boundaries, however, are not well-defined; and is exercised by them personally and directly, the town-clerk acting gratuitously as assessor. The dean-of-guild exercises judicial functions in conjunction with a council of ten, consisting of four magistrates, and six representatives of the guildry and the incorporated trades; and he holds a guild-court on the fourth Monday of each month, and oftener if business require. The four bailies, in rotation of each three months, hold a burgh-court every Tuesday. All the usual civil causes for which the court is competent, are occasionally tried; but criminal causes have not, for a number of years, been entertained, except in a few instances for removing nuisances, or punishing, in a pecuniary way, breaches of the public regulations. The civil patronage of the town-council is limited to the appointment of the city-chamberlain, salaried at £90; the procurator-fiscal, at £51 13s. 4d.; the superintendent of works, at £80; three town-sergeants, at each £40; and four other, and minor officers, at aggregately £55 9s. 8d. The ecclesiastical and school patronage includes the appointment of the four *quoad civilia* parish-ministers, the four precentors, and the teachers of all the seven schools of the public seminaries.

The exclusive privileges in Perth are important and rigid. The guildry corporation, which is of great antiquity, consists chiefly of dealers, about 560 in number, nine-tenths of whom are merchants, yet who, as a body, are said to exercise the four 'sciences,' of merchants, maltmen, surgeons, and dyers. All these have the privileges of 'merchandizing,' or of keeping open-shop for buying and selling, and are styled 'merchant-burgesses.' But another portion of the guildry are 'trades-burgesses,' 'exercising crafts,' who are entitled to 'merchandize' by becoming burgesses and guild brethren, but cannot exercise any craft without entering with its particular corporation. The administration of public rights, as of admission of burgesses, is vested in the guildry-court; and the administration of pecuniary concerns has, since 1817, been conducted by a separate committee. The costs of admission consist of a small sum to the common good of the town, certain sums for stamps and dues, and a chief sum to the guildry; and they vary for each class of applicants according to the party's age in decades from under 30 to 50 and upwards. For merchants' sons and sons-in-law, they vary from £4 2s. 2d. to £10 2s. 2d.,—for merchants' apprentices, from £7 8s. 10d. to £14 8s. 10d.,—and for merchant strangers, from £24 15s. 6d. to £39 15s. 6d. But those for trades' burgesses are uniform, and, for sons and sons-in-law, for apprentices and for strangers, amount respectively to £1 10s. 11½d., £2 17s. 7½d., and £6 4s. 3½d. The real property of the guildry was valued, in 1833, at £28,000, and consists of burgh subjects, of feu-dues, and of land 5 or 6 miles from the town. Their average revenue is between £1,300 and £1,400; and is just about equal to the expenditure, the largest item of which is about £800 a-year in weekly allowances to the poor who have claims upon the fund. The incorporated trades are seven, and aggregately num-

ber about 454 members; and they have a court, of trivial moment and no real power, called the convenor-court. Four of them consist of more than one 'science,' or, in unambitious, sober English, are composed of different crafts,—the hammermen, of 10; the wrights of 7; the glovers of 2; and the tailors of 2. But the other three, the bakers, the fleshers, and the shoemakers, consist each of only one craft. The general statistics of these incorporations, as they existed in 1833, may be given in brief space. The hammermen were 76 in number, exacted £30 18s. 6d. of entry money from a stranger, and had an annual revenue and expenditure of respectively £154 18s. and £168 8s. The bakers number 58; fee, from a stranger, £35; revenue £223 8s.; expenditure £176 13s. 8d. The glovers, 64; fee £100; revenue £1,094 4s. 8½d.; expenditure £996 4s. The wrights, 160; fee from £32 2s. 8d. to £62 2s. 8d.; revenue £774 7s. 1d.; expenditure £773 8s. 7d. The tailors, 35; fee from £30 to £35; revenue £238 2s. 6d.; expenditure £275 8s. 7½d. The fleshers, 23; fee, for apprentice, £10 10s. 4d.; revenue £132 7s. 6d.; expenditure £159 0s. 7d. The shoemakers, 53; fee, for a stranger, £20; revenue £139 13s. 3d.; expenditure £104 15s. 2d. The weavers have sometimes been styled a corporation; but are properly no more than a friendly society. A very considerable number of persons, residing within the parliamentary boundaries, but without the royalty, exercise the same callings as the freemen of the corporations. The guildry-court have been in the practice of licensing non-burgesses to 'merchandize' for an annual fee of £1 10s. 6d.

The police establishments, including the departments of paving and lighting, are administered under two statutes obtained in 1811 and 1819. The police commissioners are the provost, the 4 bailies, the dean-of-guild, 7 members of the guildry, and 7 members of the incorporated trades, one chosen by each of these bodies according to certain statutory rules. The police territory extends beyond the royalty, and is divided into districts and wards. Power is possessed to regulate markets, to impose a fine not exceeding £5, and to commit to hard labour or to solitary confinement for a period not exceeding 60 days. The lighting department is managed by contract with the gas company. The assessment is imposed on rents of £7 and upwards,—20 per cent. being first deducted from the actual rent; and it must not exceed 5 per cent., but is levied up to the maximum. The expenditure for the year ending in September, 1833, was £2,027 5s. 6d.; and the revenue fell short of this by £24 8s. 3d. There was, at the same date, a debt of £1,400.—Perth returns one member to parliament. Constituency, in 1840, 895. The parliamentary boundaries are very extensive: they comprehend, on the east side of the river, a district of rather more than 2 miles in length, and nearly half-a-mile in mean breadth; and, on the west or Perth side, they extend nearly 1½ mile south, the same distance north-west, and 1½ mile south-west of the county buildings or east end of South-street.—Population of the burgh, in 1801, 14,878; in 1811, 17,248; in 1821, 19,068; in 1831, 20,016; in 1841, 18,281. Houses, in 1841, 4,770. Assessed taxes £2,452 19s.

So much of history and of antiquarian notice has been interwoven with our description of the town, that our task, on these topics, is already half-performed. The etymology of the name of Perth has been too hotly and often contested by philologists to be a manageable subject for our calm and rapid remarks. Even the origin of the town, or the question of its antiquity within so wide a range of difference as eleven centuries, is a topic on which we must for-

bear to state an opinion. Certain objects discovered during excavations and borings on the site of the town, and noticed in our concluding paragraph on the antiquities of the place, would require so elaborate a process of discussion in order to be judiciously dovetailed into history, that they must pass with us as mere objects of topographical notice. Documentary evidence, or rather the statements of historians respecting the early condition of Perth or its site, though sufficiently varied and bulky, are either very doubtful in character, or comparatively quite modern in date. Richard de Cirencester, Geoffroy de Monmouth, Fordun, Major, Hollinshed, Boethius, Buchanan, Adamson, and Cant, all touch the question of antiquity; but, in some instances, are laconic, in some are obscure, and in most, or perhaps all, are of no real authority. Richard de Cirencester, who, though he flourished so late as the 14th century, is usually quoted as a final authority—says that, of three towns of the Horestii, the British tribe who inhabited what forms the south-east division of the present Perthshire, the largest, called Victoria, stood on the Tay 20 miles from the exit of that river into the sea, and that this town was built—or, as his meaning seems to be, remodelled, and transmuted into a modern town—by Agricola. Hoffman, in a work written so late as in the 7th decade of the 17th century, gives computations of distances from Perth which are alleged to sanction such an interpretation of Richard's *twenty* miles above the Tay's embouchure as should make the distance *twenty-eight* miles; and place his Victoria on the site of Perth; for Hoffman states the distance to Dunkeld at 12 miles instead of 15,—to Stirling, at 2<sup>o</sup>, instead of 32,—and to Edinburgh, at 32, instead of 43. Adamson, writing in 1620, and partly copying from Fordun, partly embodying current tradition, relates the exclamation of Agricola's army as stated in our commencing paragraph, and adds:—"The Italians, many ages after, were in use to give to the Tay the name of New Tiber, and Fordun gave the name Tiberinore, (now Tibermuir,) to an extensive moor which lies west from the town of Perth. As the field at Rome was, by the early Romans, consecrated to Mars, so their descendants found, in the field adjoining the Tay, an old temple, which, say the British and Welch historians, was built many ages before by one of the British kings, and dedicated to Mars. The Romans performed worship here to that heathen deity, in hopes of their expeditions being favoured in the new country into which they were come. Agricola pitched his camp in the middle of that field, on the spot where Perth stands. He proposed to make it a winter camp, and afterwards built what he intended to be a colonial town. He fortified it with walls, and with a strong castle, and supplied the ditches with water by an aqueduct from the Almond. Also, with much labour to his soldiers, and probably to the poor natives, a large wooden bridge was constructed over the river at Perth." Whatever may be thought respecting this pretty story as a whole, that part of it which traces the name of Tibermuir or Tibbermore, to a supposed application of the name Tiber to the Tay, must be a mistake; for the word, as traced in the Gaelic, means, according to the orthography adopted, either 'the well in the muir,' or 'the great well.' Boethius, and, after him, Hollinshed, Buchanan, and others, take up entirely different ground respecting the origin of the present Perth; and state that Old Perth or Bertha [see article BERTHA] was situated at the confluence of the Almond and the Tay, two miles farther north than the present town,—that it was swept away by a flood in 1210,—and that, in the same year, modern Perth was founded and built, and received from Wil-

liam the Lion a charter of erection into a royal burgh. But the assertion that Bertha and Perth were different places, is confronted by the following passage in the earlier authority of the *Scoto-chronicon* of Fordun,—a passage which, if it does not quite disprove that Perth was a successor to Bertha, proves at least that, according to Fordun, Bertha and Perth were names of the same place: "*Villam quoque quæ olim dicebatur Bertha, nunc quoque Perth, in Scotia aqua de Taya cum aqua de Almond, maxima ex parte pertransiit.*" The charter of William the Lion, too, is triumphantly quoted as conclusive authority; and certainly the document which exists under that name purports to confirm privileges enjoyed by the burgh in the time of David I., who died in 1153, and otherwise uses language very distinctly assuming the existence in a prior age of a regular town on the site of Perth; but that document, as we already had occasion to notice, bears startling marks of being spurious. Other and earlier alleged charters have been appealed to, and are flourishingly mentioned in the following terms by Mr. Scott, in the *Old Statistical Account*:—"It is certain that the town had the name of Perth long before the year 1210. There are many hundreds of charters, from about the year 1106 to the year 1210, still extant. Any person who will take the trouble of looking into these charters, will find, that, whenever there was occasion to mention the town, its name was always written Perth, or Pertht, or, by way of contraction, Pert. \* \* It is also certain that tenements and streets in Perth are described in charters prior to the year 1210, the same as they afterwards were." But "hundreds of charters," "*many hundreds of charters,*" "*many hundreds of charters from about the year 1106 to the year 1210,*" or during only 104 years—conveying the idea of 30 or 15, or at least 7 or 8 charters for every year of the period, is language scarcely fitted to draw a very ready credence. The *New Statistical Account*, however, throws the "hundreds" away, and reduces the "many hundreds" to a simple and sober "many;" and, as an instance, it gives *one* which, if the reasoning respecting the date be correct—and we see no cause to doubt its being so—decidedly proves the existence of the modern Perth as a town at least ten years before the alleged substituting of a new city on a different spot for the older and destroyed Bertha. But we have probably said more than enough to satiate the curiosity of most readers on a dry though interesting subject of inquiry; and must leave the question and the dates of Perth's antiquity to be fought out or settled, as they best may, by local amateurs and professed antiquaries.

Previous to the accession of James II. Perth possessed, in many respects, the character of the capital of Scotland, or seat of the national government. The Kings were crowned at Scone, in the vicinity, [see SCONE,] had a stated residence in Perth, and so often made that residence their home that the town was esteemed the first in the kingdom,—not only the Windsor, but also the London, of Scotland. Events having proved that neither Perth, Scone, Stirling, nor Dunfermline could protect royalty against the treasonable plots of the turbulent nobility of the period, Edinburgh, in connexion with its castle, came to be formally declared the Scottish metropolis. See EDINBURGH. Yet, in spite of its apparent loss of rank, Perth did not cease to contest, and occasionally to win, the honour of being the capital till 1482, in the reign of James III. Several of the public writings of even subsequent periods, especially of the reign of James IV., designate it the city of Perth; and the charter of confirmation, granted by James VI. in 1600, speaks of it in the following very lofty

terms:—"Our most renowned predecessors have not only beautified, but abundantly heaped on our said royal burgh of Perth greatest benefices and egregious gifts, liberties, privileges, and immunities, that almost all the donations, liberties, benefits, and privileges conferred on other royal burghs of our kingdom are referred to our said royal burgh of Perth." Even up to the present hour, Perth, though greatly outstripped in population and importance by six towns of Scotland, and sharply competed with by several others, continues to rank next to Edinburgh on the list of royal burghs. In connexion with its metropolitan character, Perth was the peculiar seat of the great national councils till the accession of James II., and the occasional seat of them till that of James IV.; and the seat also, till 1465, of the provincial councils of the Scottish clergy,—or those councils which affected the Scottish department of the papal domination. No fewer than 14 parliaments were held in it between 1201 and 1459; and of a total number of 37 ecclesiastical councils of Scotland, held from the earliest times of Popish footing in the country till the era of the Reformation, no fewer than 16 were held, between 1201 and 1465, in Perth; and this circumstance is the more remarkable that the remaining 21 were distributed among 9 different towns,—Edinburgh, St. Andrews, Roxburgh, Linlithgow, Scone, Dundee, Carlisle, York, and Northampton.

Perth makes a prominent figure in the history of the wars of the succession, immediately subsequent to the demise of Alexander III. Edward I. of England, after the battle of Falkirk in 1298, while reducing and destroying all the fortresses of Scotland, strongly fortified Perth as the capital of the kingdom he had subjugated, and as the chosen residence of his deputies. As he carried away with him to England "the sacred coronation stone" from Scone, and destroyed over the whole country whatever documents might even remotely impugn his monstrous claim of sovereignty over Scotland, he may, without any breach of charity, be fairly supposed to have covered himself with the disgrace of destroying or carrying off a mass of both national and civic records from Perth, and annihilating nearly all authentic history of the town prior to the date of his stupendously marauding inroad. Sir Aymer de Valence, as Edward's deputy, took up his official abode in Perth; and, in 1306, he defeated Robert Bruce at Methven. In 1311, Bruce invested it with a powerful force, and pressed it, for a considerable time, with a vigorous siege; but not having sufficient engines for making a breach in the walls, or instruments for scaling them, he was compelled to withdraw. Scotland's patriot hero-king, however, was not to be huffed; and, returning suitably provided with ladders and other tools, he silently approached at the head of a chosen band, on a dark night and when the laggards within were luxuriating in the idea of the town's impregnability, and partly wading, partly swimming across the large moat on the exterior, he and his followers suddenly stood unchallenged on the walls, and, in a few minutes, were masters of the city. Bruce himself so literally headed this bold and perilous enterprise, that but one man among the emulous many preceded him, in either surmounting the walls or entering the town. His subsequent measures were as summary as his success was silent and sudden: he slew the garrison, razed the walls, and filled up the moat. In 1332, Edward Baliol, after his success at the battle of Dupplin, took possession of Perth, and was crowned at Scone. But when, immediately after his coronation, he went toward the Scottish border to open a communication with England, the town was left with only temporary fortifications, and

with little other garrison than the attendants and vassals of the Earl of Fife; and, suddenly assailed by a party of the friends of David Bruce, it quickly yielded to their joint stratagem and force. The town, however, went soon back to the possession of minion royalty; and in 1335, it was skillfully and strongly fortified by Edward III. at the expense of six rich abbeys, provided with a gallant garrison, and placed under the governorship of Sir Thomas Ochtrede. In 1339, Robert, the Lord-high-steward, who had just been made Regent, and afterwards became King, vigorously besieged the town,—vainly, for three months, lay before it, and performed deeds of valour, for its reduction,—was reinforced by Douglas, Lord Liddesdale, with a large supply of men and provisions from France,—pressed the siege for one month longer,—and then, adopting the expedient of digging mines and draining the moat, he led his troops on dry ground to the walls, beat down the besieged who opposed him with engines of war, and accepted the surrender of the town on the condition of sparing the lives and respecting the property of the garrison. In 1437, James I. was murdered in the Blackfriars' monastery, by Walter, Earl of Athole, and his kinsmen, Robert Stewart and Robert Graham. The regicides were seized, tried, and ignominiously put to death; and the Earl and Robert Graham—the two most deeply implicated—were previously and publicly tortured in a manner too appalling to be recorded,—too horrible not to have left a black and indelible stain upon man's punishment of even the foulest crimes. In 1443, the town once more underwent siege and capture.

Perth, as to a considerable number of its citizens, early received the reformed doctrines; and suffered more severely than most places from the truculent wrath of the blood-drinking priests of Rome. That the Perthensians, and our readers, in general, may prize the respect now paid to the sacred rights of conscience, and see from how horrible a thrudom the Reformation was the means of delivering the "fair city" and Scotland at large, we must quote in full, from the historian of the town, the narrative of the leading incident of one year,—the year 1544. "This was a busy year. Cardinal Bethuene, in the last convention, having obtained an act in favour of the bishops and clergy, to persecute and punish heretics to death, came in January this year to Perth, with the Regent Hamilton, Earl of Arran, who was a weak man. Friar Spence accused Robert Lamb and his wife Helen Stark, William Anderson, James Ronald, James Hunter, and James Finlayson. Lamb and his wife were accused of interrupting Spence in a sermon, in which he taught that there was no salvation without intercession and prayers to the saints. They confessed the charge, declaring that it was the duty of every one who knows the truth to hear testimony to it, and not suffer people to be abused with false doctrine, as that was. Anderson, Finlayson, and Ronald, were indicted for nailing two ran's horns to St. Francis' head, putting a cow's rump to his tail, and eating a goose on All-Hallow even. Hunter, a butcher, simple and unlearned, was charged with haunting the company of the heretics. Helen Stark was further charged with refusing to pray to the Virgin Mary when in childbirth, and saying that she would only pray to God in the name of Jesus Christ. They were all imprisoned in the Spey tower, being found guilty and condemned. Great intercession was made to the regent for them, who promised that they should not be hurt. The citizens, who were in a tumult, relying on a promise of Arran, dispersed and went peaceably home. The cardinal, who had the regent in his power, had taken his measures. Determined to make an example of

these heretics, he brought them forth next day to the gibbet, January 25th, being St. Paul's day, and feasted his eyes from the windows of the Spey tower with their execution. The men were hanged, and Helen Stark was drowned. Robert Lamh, at the foot of the ladder, made a pathetic exhortation to the people, beseeching them to fear God, and forsake the leaven of popish abominations. Helen Stark earnestly desired to die with her husband, but her request was refused; however, they permitted her to accompany him to the place of execution. In the way, she exhorted him to constancy in the cause of Christ, and, as she parted with him, said, 'Husband, be glad, we have lived together many joyful days, and this day of our death we ought to esteem the most joyful of them all, for we shall have joy for ever; therefore I will not bid you good-night, for we shall shortly meet in the kingdom of heaven.' As soon as the men were executed, the woman was taken to a pool of water hard by, where having recommended her children to the charity of her neighbours, her sucking child being taken from her breast, and given to a nurse, she was drowned, and died with great courage and comfort." This atrocious murder of excellent persons, under the pretext of serving the cause of religion, exerted a powerful influence, along with the kindred martyrdom of George Wishart and Walter Mylne at St. Andrews, to render the character and superstitions of the popish priests an object of public execration, to fan the ignited elements of ecclesiastical, doctrinal, and moral reform, and to push up to a crisis the silent but powerful process of antagonism which was at work between a large portion of the people and their cowed and ghostly oppressors.

On the 11th of May, 1559, seven days after his arrival in Scotland, John Knox appeared in Perth, made public confession of his faith, and immediately commenced his ministerial duty. "In a sermon delivered in the Old church," says Calderwood, "he declared what commandment God had given for the destruction of the monuments of idolatry, and denounced the mass as an abomination. The service being closed, a priest opening a splendid tabernacle which stood above the altar, was about to celebrate mass, when a boy cried out, 'This is intolerable!' The priest gave him a blow. The boy lifted up a stone and throwing it at the priest, hit the tabernacle, and broke down an image; and immediately the multitude despatched the tabernacle and the other monuments in the kirk, before the tenth man in the town understood the matter, for the most part were gone to dinner. This being noised abroad, the rascal multitude assembled, and, finding nothing to do in the kirk, ran to Gray and Blackfriars; and, after they had destroyed the monuments of idolatry, they began to seek some spoil." This insurrection—which must be regarded as an unpremeditated and accidental irruption of popular feeling, and which was publicly censured and condemned by the preachers and all the chief leaders of the Reformation—did not pause till it hurled altars, images, crucifixes, and other similar paraphernalia to ruin, and laid the walls of several of the ornate and sumptuous monasteries nearly level with the ground. Mary, the queen-regent, who had already concentrated her French mercenaries at Stirling, was enraged when she heard of the tumult, and, resolving to inflict fell vengeance on the whole of the reforming party, she made a sudden levy of whatever Scottish forces could be gathered to her standard, and, at the head of them and of her French forces, marched toward Perth. She had, by wily and disingenuous promises, induced the Protestant leaders to dismiss their armed followers; and she hoped to surprise the town before any new or effective force

could be collected to oppose her. But though her army were 7,000 strong, and led by the experienced French general, D'Oysel, and powerfully aided by her unprincipled tampering with truth and honourable dealing, they found themselves confronted by such a large and lofty-spirited host, whom the bruit of the queen's proceedings and zeal for their religion and liberties had poured suddenly down from all quarters upon the town, that they dared not attempt their meditated enterprise, and could only stand embodied as a practical argument for a peaceful negotiation. Both armies having been disbanded by mutual stipulation, Mary peacefully entered the town on the 29th of May; yet she no sooner found herself in quiet possession, and knew the Protestant forces to be broken up and at a distance, then she flung her agreement by treaty to the winds, introduced French troops to the town, dismissed the magistracy, and restored the popish rites and the priestly domination. When she departed, the inhabitants again became tumultuously insurgent, and invoked the Lords of the congregation to send soldiers to their aid. Lords Argyle and Ruthven and others marched in consequence to the town, and prepared regularly to invest it: they were plied, through the mediation of Lords Huntly and Erskine, with proposals from the queen designed to divert them from their purpose; but they could no longer believe her word, or regard her terms in any other light than that of faithless artifice; and they stoutly began and conducted the siege, and, against the 26th of June, 1559, compelled the garrison to capitulate. The queen endeavouring, after the loss of Perth, to seize on Stirling, 300 inhabitants of "the fair city" joined the standard of Argyle and other leaders, in an enterprise for her overthrow, and for the complete establishment of religious liberty; and so galled had they been by the combined tyranny of priests and Frenchmen, and so determined were they to succeed in their enterprise or perish in the attempt, that, to indicate their zeal and resolution, they wore ropes about their necks to be hung up with them in ignominious death if they should desert their colours. A picture of the march of this resolute body is still preserved in the city; and the circumstance of their substituting ropes for neckerchiefs or ribands is the subject of the frequent popular allusion to 'St. Johnstone tippets.'

In the year 1600, occurred, in Gowrie palace, the event which, under the name of the Gowrie conspiracy, has perplexed historians, and been the subject of not fewer than 11 or 12 controversial treatises. John Ruthven, 6th Lord Ruthven and 3d Earl of Gowrie, succeeded to the family honours when 11 years of age, and was carefully trained up in the doctrines of the Reformation. When only a student at Edinburgh university, he was elected provost of Perth,—an office which had been filled by his immediate four predecessors in the line of ancestry; and, during six years—1594-1500—of his being absent on the continent prosecuting his studies, he was annually chosen to the office. In February 1600, when 22 years of age, he returned; and, on the one hand, was warmly received by those who had reposed such high confidence in him, but, on the other, was coldly treated and coldly spoken of by the reigning monarch, James VI. In the month of August, he and his brother were murdered in Gowrie palace, under a belief or a pretext of their having attempted to

\* At an early period, and during several ages, the city was often called, from its patron saint, St. John's-town, and abbreviated St. Johnstone; but it was never so designated in public writs, and very seldom in historical documents. An assertion is frequently made that its ancient church, or that of St. John the Baptist, was called 'the Kirk of St. Johnstone;' but this is very obviously a mistake.

murder the king. The current story is that James, menaced by them with assassination, called out of a window for help, and was rescued by his attendants rushing into the room. But, whether the Earl intended to assassinate the king, or the king intended to assassinate the Earl, or whether any attempt at assassination on either side was meditated, are points which have been keenly contested. Several contemporary writers strongly asserted that the Earl was guilty, and painted in the deepest colouring the supposed circumstances of his imputed crime; while multitudes, at the same period, regarded their whole story as monstrously fictitious. Lord Hailes, in republishing the account inculcating the Earl, and published "by authority" in 1600, preparatory to his further observations upon it, regarded it as not worthy of credit. Dr. Robertson appears to believe that the Earl wished to secure the king's person for political purposes. Adamson, in the 'Muses Threnodie,' asserts that the king was the guilty party, and that he wished to get rid of two popular characters, whose family had long been hostile to his measures; and Adamson has been joined in opinion numerously by Scotchmen in general, and almost uniformly by the citizens of Perth. "The scrutiny," says Dr. Thomson, in the New Statistical Account, "which has been made into the circumstances of the case, leaves an impression unfavourable to his Majesty, which the ingenuity of his most powerful advocates has not been able to remove. His Majesty volunteered to give the city a very full and kindly expressed charter of confirmation of rights and privileges. This, it has been believed, was intended by him to weaken the people's hostility to him, occasioned by the catastrophe. To the same cause is ascribed his entering his name on the guildry-hook as a burges."

In 1623, three women, after being formally tried, and condemned in an assize of seven days' continuance, were strangled at the stake, and then burnt, for the imputed crime of witchcraft. The place where they and former victims of superstitious and sanguinary ignorance suffered death, is said to have been a hollow in the North Inch. In 1617, James VI., while on his royal tour through Scotland, visited Perth, and, agreeably to previous secret instructions, was received with adulatory poems and addresses, and with jejune and ridiculous pageants, which delighted the small-hearted pedant-king as much as they provoked the stare and incurred the contempt of every gentleman and peasant of common sense. For example, the skimmers were instructed to "provide for the sword dance, the baxters for the Egyptian dance, and the schoolmaster and the bairns gud dance to his majesty;" and "anent the speche that is to be maid to his majestie," said a preparatory missive from the secret council at Edinburgh, "zou sall inform him whome you are to trust with that matter, that first in name of the town he mak his majestie welcome, and then, in sensible and good language, he sal sette forth his majesties awin praise, by innumerable comfortis and blessings, quhilk this country has haid haith in kirk and pollicie under his majesteis moist happie government,—and lait go far as modestie may permit." [New Statistical Account.] In 1632, Charles I. visited the city, and was received and entertained in the same style of ineffable folly; but with the exquisitely ludicrous addition, that two tailors personated the city and the Tay, and performed before the king what courtesy called a poetic comedy. In 1644, after the battle of Tippermuir, Perth was taken possession of by the Marquis of Montrose. In 1651, Cromwell, after his victory near Burntisland, marched directly to Perth, found its gates shut against him,

and purposed to besiege it; but, in consequence of a noisy and imposing bustle being kept up by stratagem within the walls, he imagined that a powerful military force were prepared to offer vigorous resistance, and he offered advantageous terms of capitulation, and was peacefully admitted. In 1715 and in 1745, as we formerly noticed, Perth was the head-quarters of the insurgent Jacobites. On the anniversary of George II.'s birth-day, while the Prince and his Highland army were still at Holyrood, a mob rose in Perth, placed guards at all the town's gates, took possession of the main guard, rung the fire-bell, and drew about 200 persons to join their enterprise; and they then sent a message to the Jacobite governor, requesting him immediately to deliver up to them arms and ammunition, and to withdraw from the town. The governor refused; they again rang the fire-bell: and hostilities commenced about two o'clock in the morning, and continued about three hours. The people fired upon the council-house from the heads of the lanes, from windows, and from behind stairs; so that the party within could not look out without the greatest hazard. Four of the mob were wounded; and one of the governor's party, an Irish captain in the French service, was killed, and three or four were wounded. To prevent any similar outbreak, 190 of the Prince's followers were added to the previous garrison.

Remarkable floods in the Tay inundated the town, and occasioned dismay and damage in the years 1210, 1621, 1740, 1773, and 1814. A notice of the earliest of these is given in our article on BERTHA, and will sufficiently illustrate the disastrous character of the others. That appalling pestilence, the plague, visited and scourged the town in the years 1512, 1585-7, 1608, and 1645. An old manuscript volume, quoted by Dr. Thomson in the New Statistical Account, says, respecting its visitation in the last of these years: "Three thousand of the inhabitants died of it during that time, besides many who died afterwards, it not ceasing for several years, though not raging with such violence. It almost depopulated Perth; many houses in different places being shut up, which afterwards, in back parts, went to ruin; and what houses stood to the streets uninfected, were inhabited by few. Several houses were infected in a great degree to the front, and even some streets were entirely forsaken, particularly one between the church and the Meal-Vennel. And the inhabitants, being few in number, had no courage to carry on trade, or manufacture, and buildings, for many years."—Perth formerly gave the title of Earl to a branch of the family of Drummond; created Baron Drummond in 1488, and Earl of Perth in 1605. James, the 4th Earl, attached himself to the cause of James II. after the Revolution, and was created by him Duke of Perth; but he was outlawed by the established government, and dying in 1716, his two sons were attainted. The earldom is said to be represented by George Drummond, commonly called the Duke of Melfort, formerly a captain in the 93d regiment—the claimant of the earldom of Melfort, attained in 1695; and it is claimed also by Mr. Thomas Drummond, a working collier, or pitman, at Pensher near Newcastle, who represents himself to be the grandson of General James Drummond, commonly called the Duke of Perth. The estates were restored in fee simple, in 1785, to James Drummond; and the British title of Lord Perth was revived in his person, but became dormant at the death of its first possessor. The only surviving child of this nobleman, the Hon. Clementina Sarah Drummond—who would be Countess of Perth were it a female peerage—was married, in 1807, to Lord Willoughby d'Eresby.

PERTHSHIRE, one of the largest, and, in all respects, most important counties of Scotland. It is situated in the centre of the kingdom, and connects the northern Highlands with the southern Lowlands, and the Highlands of the west with the Lowlands on the east. A small section of it, consisting of the parishes of Culross and Tulliallan, and lying on the north side of the upper part of the frith of Forth, is dis severed from the main body, by the intervention of the counties of Clackmannan and Fife. This section is bounded, partly on the west and partly on the north, by Clackmannanshire; partly on the north, and wholly on the north-east and east, by Fifeshire; and wholly on the south and south-west, and partly on the west, by the frith of Forth, which divides it from Stirlingshire. It lies at the nearest point, only  $1\frac{1}{4}$  mile from the main body; and measures in extreme length from east to west  $6\frac{1}{4}$  miles; and in extreme breadth from north to south  $4\frac{1}{2}$  miles. The rest, or body of the county, is bounded on the north-west by Inverness-shire; on the north by Inverness-shire and Aberdeenshire; on the east by Forfarshire; on the south-west by Fifeshire and Kinross-shire; on the south by Clackmannanshire and Stirlingshire; on the south-west by Stirlingshire and Dunbartonshire; and on the west by Argyleshire. Its form is not very far from being a circle, upon a radius of about 30 miles, drawn from a centre a little north of Healsnaddow, near the head of Glenalmond; but the outline is in many places jagged, and otherwise irregular; and where it touches Fifeshire and Stirlingshire, particularly the former, it makes long-continued, though not very deep recessions. The boundaries are, to a great extent, natural, and very holdly defined; yet over considerable distances they are quite artificial, and not a little capricious. From a point in the south-west, within about 3 miles of the head of Loch-Fyne, the longest arm of the frith of Clyde in Argyleshire, to a point at the base of Mount-Blair, between Glenshee and Glenisla, a distance of at least 117 miles, all over the west and the north, and part of the east, the boundary-line consists, with inconsiderable exceptions, of vast central summits, —the water-sheds of the most alpine and elongated mountain-chains of Scotland. The exceptions are at the points where the moor of Rannoch plaes Loch-Lydoch and the lochlet Lochanachly on the boundary with Argyleshire, and that at which a recession of the mountains conducts Loch-Ericht within the frontier of Badenoch. From Mount-Blair, the boundary-line follows, for 2 miles, the river Shee; it then, for 12 miles, alternately runs along secondary water-sheds, and the courses of nascent streams, till it falls upon the Isla, at the ruins of Airley-castle; it now follows the Isla down to the confluence with it of the Dean, —then, for  $3\frac{1}{2}$  miles, ascends the latter stream, —and then, for 27 or 28 miles, wends tortuously, and with whimsical deviations, and with hardly a mile of natural boundary, till it falls upon the frith of Tay at Invergowrie, 3 miles above Dundee. The boundary-line travels 11 miles up the frith of Tay, before recommencing on the south shore; and it thus occasions a deep incipient recession of the county from Fifeshire. After leaving the Tay, a little west of Muddrum island, the line has a course of at least 36 miles before reaching the south-east extremity of the main body, at a point upon the South Devon,  $\frac{3}{4}$  of a mile south of Solsgrith; but it moves with such sinuosities, and so capriciously, over most of the way, follows now the ridges, and now the rills of the Ochils, that it cannot be succinctly described. From the south-east extremity, it recedes nearly 5 miles due north, up the South Devon, across the Devon, and along a generally artificial path; it then proceeds 17 miles chiefly westward and partly south-westward,

across the Ochils and Strathallan, guided most of the way by a range of heights, by a tributary of the Allan, and by the Allan itself, till, deviating from that river, it falls upon the Forth, just at the confluence with it of the Teith. Except for cutting off a few farms in the parish of Kippen, immediately west of the cognominal village, and some others stretching from Gartmore through a hilly country toward Benlomond, —except for cutting off these, which belong to Perthshire, and lie on the south side of the river, the houndary-line now runs undeviatingly up the Forth, and its southern head-stream, the Duchray, till within  $3\frac{3}{4}$  miles of Benlomond: and it then, for 6 miles, passes along a ridge of heights; it next, for 6 miles, crosses Loch-Arklet, and the upper part of Loch-Katrine, and runs up the northern head-water of the Forth nearly to its source; and it finally, for 7 miles, walks along the heights round the head of Loch-Lomond, crosses Glentalloch at a point less than a mile north of that great lake, and passes up a tributary of the Falloch, through Lochanlarig, on to Crochrechan, the point whence we commenced our delineation. —The county lies between  $56^{\circ} 4'$  and  $56^{\circ} 57'$  north latitude; and between  $3^{\circ} 4'$  and  $4^{\circ} 50'$  longitude, west of Greenwich. Its extreme length from Invergowrie on the east, to the top of Benloi on the west, is 77 miles; and its extreme breadth from the houndary of the east forest of Athole, at the source of the Tilt on the north, to the frith of Forth at Culross on the south, is 68 miles. Its superficial extent, were its form quadrangular, would be 5,236 square miles; but, allowing for the rounding away of the angles, and for indentations, it may be estimated, in round numbers, at 5,000 square miles, or 4,068,640 English acres. These are the measurements of Dr. James Robertson, in his Agricultural View of Perthshire; but they are probably marred by considerable inaccuracies, and as regards the area, they profess to be mere approximations. Other measurements, given in Oliver and Boyd's Almanack, and copied into graver works, but evidently falling far within the truth, state the area at no more than 2,588 square miles, or 1,656,320 acres; and compute the distribution of it to be 500,000 cultivated acres, 550,000 uncultivated, and 606,320 unprofitable.

Perthshire was anciently divided into jurisdictions, or subordinate territories, which still retain their designations, but differ widely from the modern districts, which subdivide and facilitate administration. Monteith, in the south-west, was a stewartry, and, with the exception of the parish of Balquidder, comprehended all the territory lying west of the Ochils, and drained by the Forth and its trihutaries. Breadalbane was, with all its dependencies, a haliary, or separate jurisdiction of its earls, and comprehended the western division of the county, from the north-west boundary down to the south sreen of Glendochart. Strathcarn was a stewartry, and comprehended Balquidder, and all the country drained by the Earn and its trihutaries. Metliven was a separate regality, and comprehended a small territory round the site of the present village. Athole was also a separate, but, territorially, a very large regality; it was under the immediate jurisdiction of its dukes, who, at the same time, were hereditary sheriffs of whatever parts of the county were unrobbed of independency; and it comprehended all the north-western division of the present county, from the northern boundary down to the heights which overlook Dunkeld and Blairgowrie. The other ancient divisions, whose names continue to be in use, are Rannoch, a subdivision of Breadalbane, occupying its north-western or northern corner; Strathardle and Glenshee, subdivisions of Athole, along the courses respectively of the Arde and the Shee; Stormont,

a beautiful band of country of about 7 miles broad, extending from the Erchie and the Isla to the vicinity of Dunkeld; Gowrie, a district on the eastern frontier from Stormont to the frith of Tay; and Perth Proper, a portion of Strath-tay and its screens from Stormont to the congress of Strathearn and the Carse of Gowrie. These divisions include the whole county except the detached district of Culross and Tulliallan.—Since the abolition of hereditary jurisdictions, in 1748, the sheriff-depute exercises rule over all the county, and appoints two substitutes, the one of whom resides at Perth, and the other at Dunblane. By an act of parliament passed in 1795, extending the jurisdiction of justices-of-peace in determining causes for the recovery of small debts, the county is divided into the 10 districts of Perth, Dunkeld, Blairgowrie, Weem, Auchterarder, Culross, Crieff, Dunblane, Carse of Gowrie, and Cupar-Angus.

The county, in a general view, has a prevailing south-eastern declination or exposure. While about the region of the Moor of Rannoch, it receives one or two inconsiderable streams from the west, it nowhere sends in that direction even a rill in return; and except at the Moor and at Loch-Erchie, it is stupendously walled up along all the far-stretching west and the far-stretching north, by alpine ramparts, which form the grandest water-shed in Scotland, and an almost impervious barrier against any sort of inter-communication. The streams, and the general slope of the country, coming down from these soaring mountain enclosures, decline now southward and now eastward, but averagely toward the south-east. A band of country along the south, possessing a mean breadth of about 11 miles, but suffering vast deductions from the indentation of Fife and Kinross, and the interventions of Clackmannan and Stirling, is sectioned off from the rest of the county, by a line of water-shed, at first lofty, but afterwards of gentle elevation, which extends from Benharra on the west to Coalridge hill among the Ochils on the east, and forms the south screen successively of Glenfalloch, Glendochart, Glenogle, Glenartney, and Strathearn. Excepting a nook on the south-west, of about 30 square miles, which is drained by the Falloch toward Loch-Lomond, the whole country north of this line is the vast, the varied, the beautifully intricate, and the exquisitely scenic, basin of the monarch-river of Britain,—the majestic Tay and its noble tributaries. As the Earn sweeps away to the east on a line parallel to the southern water-shed, and at but a brief distance from it, a mere ribbon belt of the basin declines toward the north, while incomparably the greater expanse of it follows in its dip the south-easterly declination of the Tay. All the band of country which is sectioned off from the Tay's basin belongs to the basin of the Forth; and nearly the whole of it takes its declination from the south-easterly course of the Teith and the upper Devon, and the southerly course of the Allan.—But Perthshire is affected in its climate more by relative position than by interior declination. Situated in the zone where the Highlands melt down into the Lowlands, at nearly equal distances from the German ocean and the Atlantic, it possesses a medium heat between the temperatures respectively of the northern and the southern counties, and experiences all the varieties of climate which belong to both the eastern and the western coasts. Easterly winds bring rain and unsettled weather on Gowrie, Stormont, Glen-shee, and Strathardle, while the weather is dry and serene in Breadalbane; westerly winds waft the clouds of the Atlantic over Monteith, Breadalbane, and Rannoch, while not a drop of rain falls on the east; and the two classes of winds so strive for the

mastery in the interior, and are so dishurdened of their loads by the attractive power of mountain-ranges on the frontier, as very often to have little dominion, and small moistening influence about the region of Methven, Monzie, Dull, and Dunkeld. The climate of extensive localities is powerfully affected also by the peculiar configuration of the surfaces, and the mutual positions of adjacent mountain-ranges, and intermediate valleys. The westerly winds, for example, which sail along the Grampians, almost due east, till they arrive at the bold headland between Drummond-castle and the house of Braeo, instead of continuing their course in the same direction over the flat country of Strathearn, for the most part cross south-east to the Ochils at Glenegles, or north-east to the hills behind Crieff and Fowlis; and, in the same way, the westerly winds, guided by the mountain-ridge which separates Glenloch from Glendochart, and terminates at the village of Killin, rarely continue their course eastward along the opening made by Loch-Tay and its vale, but for the most part assume either a northerly course toward the hills above Finlarig, or a southerly one toward those above Achmore. Northerly winds—which, in most parts of the island, blow with penetrating and ehilly keenness—are powerfully mollified over a large part of Perthshire by the same heights which give it a southerly exposure,—the vast broad alpine range along the northern frontier, the Ochil hill-screen of the Carse of Gowrie, and the long ridge which separates from each other the basins of the Tay and the Forth. According to observations continued during five consecutive years, westerly winds have been found to prevail during from 165 to 220 days in the year; fair weather from 189 to 250 days; rain from 95 to 141; and frost from 11 to 66. The mean height of the barometer has been found, during three consecutive years, to range between 29.59, and 29.71; and the mean height of the thermometer between 41 and 42½. The annual quantity of rain during five years of observation, varied between 31.45 inches and 38.4. The climate, on the whole, is so mild, that, even in some valleys of the Grampians, barley has been reaped in good order nine weeks after being sown. These results were ascertained partly at Meikle, in the extreme east, and partly at Coldoch in Monteith, on the south-west.

The mountain-rampart which runs along the north is a main part, and contains some of the bulkiest forms, and some of the most towering summits, of that vast alpine range, the greatest in Scotland, which extends from Ben-Nevis on the west, to Mount-Battock on the east, and thence forks off into diminished lines to the German ocean at Stonehaven and the mouth of the Dee; and so stern and resistful is it, that only at three points over its great extent,—at the heads respectively of the Shee, the Bruar, and the Garry,—have military roads been drilled through its high and terrific passes. The rampart which towers aloft along the west is a chief part of the continuous range which, second in importance only to the former, extends from the Moor of Rannoch away southward by the peaks of Arroquhar to the extremity of the peninsula of Cowal. The Moor of Rannoch intervenes between the commencement of the one range and the transit of the other, and presents at the boundary on the north-west a lugubriously waste table-land or huge upland plain, lying about 1,000 feet above sea-level. From the two continuous ramparts along the boundaries, and from the inner edge of Rannoch Moor, ridges run direct into the interior, going off at right angles with the boundaries, southward from the north, south-eastward from Rannoch, and eastward from the west; and, in a general view, they are spreading, and agglomerated, at their

commencement,—they attenuate in breadth, and diminish in altitude, during their progress,—and they now thin out, or form concentrations, so as to merge two or even three ridges into one,—now make mutual recessions, so as to enclose ample expanses of lowland,—and now send off spurs and protuberances, and oblique elongations, so as to cover a district with an almost confused assemblage of heights. In a few instances, also, as in the marked and magnificent one of Schichallion, mountains tower solitarily up from the plains formed by the recesses of the ridges. All these heights, from the boundaries inwards, wear the general and unmeaning name of Grampians; and over the whole of their aggregately slow and sublimely undulating descent to the interior, they lie within the Highlands, and form, with their valleys and gorges and retreats, at once the strongest, the most varied, and in every respect the most distinctive and fascinating section of that vast and very diversified territory. Among their very numerous and grand summits, Ben-Lawers lifts its peak 4,015 feet above sea-level; Ben-More, 3,903; Schichallion, 3,564; Ben-iglo, 3,724; Benedi, 3,009; Ben-Venue, 3,000; and Ben-Chonzie, in Strathearn, 2,922. The mountains are, in general, enormous lumpy piles, broad in their bases, and heavy in their features; yet, in many instances, they are steep in ascent, sharp in outline, very diversified in form, and both striking and peculiar in the erosions, protuberances, or deep fissures of their surface. Most of them exhibit bare and utterly weather-worn summits; and, in the region below the crowning one where the rock breaks the surface, and claims in its nakedness a sturdy and savage ascendancy, they are generally covered with a moorish soil, so comparatively rich as to be greatly superior to that of most upland tracts in England, and three or four times better than that of the eastern moorlands of Yorkshire. Their lower declivities, and, in some cases, even their middle zones, are very extensively green with emerald sward, or ho-hy and warmly tinted with a profusion of copses and plantation. The valleys which wind among their lines, and their recesses, though bearing a small proportion to the aggregate measurements of the Highland area in which they lie, are, for the most part, both more extensive and more fertile than the valleys at the foot of the mountains which advance northward from Northumberland into Scotland, along the eastern border of Dumfries-shire. The contrast which the luxuriance and the warmth of these reclusive valleys exhibit to the barrenness and the coldness of the snow-wreathed or cloud-capped elevations which environ them, flings a charm upward to the chilliest part of the landscape, renders them extremely refreshing to the eye of a stranger, and dresses them into fine keeping with whatever woods may dangle in loveliness upon the lower declivities.—About two-thirds of the whole county, from Loch-Erich or the Moor of Rannoch south-eastward, is comprehended in the Grampian or Highland region. But as an approach is made to the low country, the mountains lose much of their sternness, the valleys considerably expand, summits are less generally bare, and declivities more frequently glide off into hanging plains; and eventually the Highlands, disclosing themselves through a long series of vastly magnificent portals, come exulting out in dresses of opulence and surpassing beauty, which well befit the scene and the occasion of their union with the Lowlands.—Nearly at right angles with the opening valleys, and with the terminating headlands of the ranges which separate them, runs from south-west to north-east across the whole of the county, what concurrent geographical nomenclature describes as STRATHMORE: see that article. Yet the notion of a great plain, lying along

the base of the frontier rampart of the Highlands, applies better, or with less violence, to the whole extent, of what is geographically termed Strathmore, than to the section of it which lies within Perthshire. Our description of the low grounds here, or of the upper frontier of the Lowlands, within the county, must be more particular. The most southerly of all the Highland valleys suddenly expands and flattens down at Gartmore, 18 miles above Stirling, into a level strath, a broad hand of carse ground; and this strath,—the luxuriant, wheat-bearing vale of the Forth,—after quite leaving the over-shadowing flank of any spur of the Grampians, sweeps along all the remaining part of the southern boundary of the county, so far as it lies upon the Forth. Strathallan, or the rich broad vale of the Allan, goes off from this plain in a north-eastward direction, at points opposite the parish of Stirling; and till it is closed up by the long low ridge from east to west, which separates the basin of the Forth from that of the Tay, it might very literally be understood as part of the largely defined Strathmore. STRATHEARN [which see] opens from among the Grampians on a line parallel with the vale of the Forth, and in a style of kindred suddenness and expansion; and, while the greatest of the openings which spread out in Lowland fulness after debouching from the Highlands,—while, also, extending due eastward all the way to the Tay, at a point very near the northern extremity of the boundary with Fifeshire,—it contributes not its length, but its breadth, to the continuation of the alleged great plain along the base of the Highland frontier. Another low ridge, similar to that which flanks the south side of Strathearn, at first mountainous and rugged, but afterwards gentle and undulating, now divides the feeders of the Earn from those of the Almond, and once more interrupts the strict continuousness of Strathmore. But beyond this ridge, or from Methven north-eastward to the boundary at Meikle, the undoubted Strathmore, a well defined plain across the ribs and inlets of the Highlands, stretches along in richly cultivated luxuriance, and includes the low grounds of Methven, Perth Proper, Stormont, and Upper Gowrie. The various plains and valleys which, as strung together thus, compose a broad hand of Lowland frontier, are exceedingly various in the breadth of contribution which they make to the consecutive 'great strath;' and are better and more justly understood, if considered seriatim as the vale of the Tay, encroaching far on the Highlands, and coming out directly to the east; the vale of the Teith, coming down south-eastward, and losing itself in the former, very soon after becoming Lowland; the vale of the Allan, sweeping round south-westward and southward, invaded by Grampian detachments, and compelled by them to have comparatively unexpansive limits; the vale of the Earn, making an early conquest over the Highlands, and extending away eastward in a long broad march of freedom from mountain control; the vale of the Almond, breaking away from the choking grasp of the Grampians above Buchanty, spreading itself out in a sheet of verdure, around Methven, and extending strictly parallel to Strathearn; the vale of the Tay, coming down south-eastward and southward, in extreme magnificence of landscape, long maintaining dubiousness of character between Highland grandeur and Lowland amenity, and eventually sweeping along in undulations, or otherwise incessant changes of valley contour; the vale of the Luan, the brilliant district of Stormont, with its chain of fine lochlets, its sheets of forest, and its expanse of tumulated plain, extending south-eastward parallel to the left bank of the Tay, from the vicinity of Dunkeld; and the vale of the Isla,

coming down south-westward from the boundary, and blending the undoubted section of the Strathmore of Perthshire with the far-extending and distinctly marked Strathmore district of Forfarshire.—Along the south-east skirt or margin, of this concatenation of vales, extend the Ochil and the Sidlaw hills,—the former from the side of the strath of Forth, a little below Stirling, to the Tay at Abernethy; and the latter from Kinnoul-hill, 6 or 7 miles farther up the Tay, and on the opposite bank, to the eastern boundary of the county: see OCHILS and SIDLAWS. The Ochils have the whole of their water-shed or summit-range in Perthshire; they are sectioned off from it at their south-west end solely by the intrusions of the counties of Stirling, Clackmannan, and Fife; they rear aloft in it some of their grandest summits, and their most metalliferous piles; and in their far march north-eastward, they give but their skirts and their lower declivities to the shores of Fife and Kinross. The Sidlaws, till they pass the frontier, into the contemninous county, are wholly within Perthshire; they section off the rich district of the Carse of Gowrie from the broad plain of Strathmore; and they claim various detached and straggling hills, among the most noted of which is the celebrated Dunsinnan.—The Carse of Gowrie, between the Sidlaws and the frith of Tay, differs from every other part of the county, except part of Strathearn, and the hand of carse lands along the Forth, in being nearly a dead level, singularly opulent in its soil, highly fructiferous over every square foot of its surface, and athwart all its expanse an uninterrupted scene of the most luxuriant cultivation.
