INC

**I-COLM-KILL.** See **IONA.**

**ILANMORE**, an islet of the Hebrides, about a mile in circuit, and lying half-a-mile north of Coll.

**ILANROAN**, and **ILANTERACH**, two of the Hebrides, lying on the south and east of Oransay.

**ILAY.** See **ISLAY.**

**ILLERAY**, one of the Hebrides, about 4 miles long, and  $1\frac{1}{2}$  broad, lying to the westward of North Uist, and insulated only at high water. The soil is partly sandy and partly black loam, yielding tolerable crops of barley, and pasture for cattle.

**ILK**, a word of frequent occurrence in the surnames of Scottish families. The following explanation of the word is given by the old Earl of Cromarty, in his 'Account of Gowrie's Conspiracy.' "The word *ilk*, in our Scots language, denotes that either the person has given his name to the land, or has taken his name from the land: and this practice was one of King Malcolm Canmore's wise inventions; who, finding that oneness in name was a cause of the clubs and cahals called clans, in place of these old patronymics, the king did encourage all on whom he conferred any title of honour, as of earl, lord, or baron, to take their denominations from the lands erected into the lordship, or barony, so to divide, and break the clans, by loosing the ligament of these patronymic names; and so, *Divide et impera* was his project." Whatever, for political reasons as stated by his lordship, may have been the wise encouragement given by Malcolm Canmore to landed proprietors, to induce them to take their surnames from their estates, the doing so seems, however, originally to have arisen naturally, and of itself, from the necessity of distinguishing one person from another.

**IMERSAY**, an islet on the south-west coast of Islay.

**INCH**, an adjunct of frequent occurrence in Scottish topography. It signifies 'an island,' and is derived from the British *Ynys*, or the Gaelic *Inis*. It is said that the word occurs, with the same signification, in some of the aboriginal languages of North America. In Scotland, but more frequently in Ireland, the word is also used to denote level ground near a river.

**INCH**, a parish in Inverness-shire, united to that of **KINGUSSIE**: which see.

**INCH**, a parish in the western division of Wigtonshire; bounded on the north by Ayrshire; on the east by New Luce and Old Luce; on the south by Old Luce and Stoneykirk; on the south-west by Portpatrick; and on the west by Leswalt, Stranraer, and Lochryan. It approximates to the oblong form,

but has marked irregularities of outline; and measures in extreme length, from north to south,  $10\frac{1}{4}$  miles; in extreme breadth  $7\frac{1}{2}$ ; and in average breadth  $4\frac{1}{2}$  or  $4\frac{1}{4}$ . The southern division—comprising more than one-third of the whole area—has a surface so gently undulating, that, when viewed from the neighbouring hills, it appears to be entirely level. All of it forms part—and that the larger one—of an isthmus between Lochryan and Luce bay, and is believed to have been anciently covered by the sea; and it is bored at intervals into curious hollows, called by the peasantry "pots," which vary in measurement from 1,000 feet in circumference and 100 feet in depth, to comparatively small dimensions, and are supposed to have been scooped out by an eddying motion of the retiring billows. North-eastward and northward of the plain, the parish rises into ranges of beautiful hills. The southern face of these is partly arable land and partly green pasture; their tops, and interior sides inland and toward the north, are rugged, heathy, and incapable of culture; and a declivity, which they make toward the whole of the eastern boundary, again becomes partly verdant and partly subject to the plough. The soil, on the west side of the plain, is a good loam; in the rest of the plain, and other arable parts, is light and sandy; and, on the hills, is to a great extent mossy. The cultivated acres of the parish as compared with the uncultivated, are nearly in the proportion of two to three. About 700 acres are under wood. Toward the end of the last century the face of the country underwent an entire and renovating change, under the enterprising and skilful agricultural improvements and incentives of the Earl of Stair. Main water comes down from Carrick on the north, traces the eastern boundary for 5 miles, is joined by Luce water from the east at Waterfoot, or opposite New Luce, and thence deposes to the new stream, with the aid of its own tribute, to trace the eastern boundary-line, over a farther distance of  $1\frac{1}{2}$  mile. The stream is rapid in its course, and trots along a rocky path, but yields an abundant supply of salmon. The Piltanton comes down from the north-west, within the Rimus of Galloway, and, in a placid, and even sluggish course—during part of which it abounds in tiny sinuosities—traces the south-western and southern boundary, over a distance of 7 miles. No fewer than twelve lakes spread out their little expanses of water in the parish,—most of them in its level, or southern division. They abound in pike, perch, carp, tench, roach, and white and red trout; are frequented by wild ducks, teals, widgeons, coots, and cormorants; and during the winter-months,

especially if the temperature be below the average, oocome the resort of immigrant swans from Ireland. Those of Souleseat and Castle-Kennedy are beautiful sheets of water, and possess, in a marked degree, the gentler features of fine lake scenery. The loch of Souleseat,  $\frac{3}{4}$  of a mile long, and  $\frac{1}{4}$  of a mile broad, was formerly called the Green loch, and, during part of the year, is sheeted over with a green granular sort of substance, which gives an appearance of watery verdure. "On a calm summer morning," says the writer in the New Statistical Account, "the banks of the loch of Souleseat present an appearance not a little curious. What seem to be pillars of cloud, appear here and there, rising to a height of 50 feet or more. A stranger, viewing them at a distance, might suppose them to consist of vapours of smoke; but on a nearer approach, they are found to consist of living creatures, engaged in ceaseless action, performing the most graceful evolutions; and, on listening, will be heard the rush of their little wings, and the piping of their tiny voices. These flies have, I believe, their nativity in the water, from which they emerge to an ephemeral existence in the region of air. One species of them go through a very singular process—throwing off the skin. They fix themselves to a tree or bush, or any resting-place, and literally crawl out of their skin; and, having left behind them their *exuvie*, hie themselves off with freshened agility to their aerial dance. On remaining for a short time by the water-edge, I have found myself covered with the filmy skins of these gay ephemere." The loch is of the form of the arc of a circle, and has its concavity or peninsula covered with wood; and appears to have anciently had a deep fosse or trench stretching like a chord between its projecting points. In its vicinity stood an ancient abbey: See **SOULESEAT ABBEY**. Castle-Kennedy loch is cut so very deeply by injecting peninsula, and is so slenderly continuous by a connecting thread of waters, as sometimes to be reckoned rather two lakes than one. The parts run parallel to each other, the one a mile, and the other  $1\frac{1}{2}$  mile in length, from north-west to south-east, and are each about  $\frac{1}{2}$  mile in breadth. A peninsula  $\frac{3}{4}$  of a mile long, and  $\frac{1}{4}$  of a mile broad, runs down between them on the north-west; another peninsula, of a half-moon form, about  $\frac{1}{4}$  of a mile in radius, and  $\frac{3}{4}$  of a mile in length of chord, sends up its convexity on the south-east; and between the peninsula stretches the water-line, which, in a sense, makes the two lakes one. In each section of the lake is an islet; resting on the hosom of the waters, or skimming their surface, or playing "in the lift" above them, are herons, sea-mews, and numerous species of water-fowl; on their banks are two rookeries; and, above all, in the long north-western peninsula, are the romantic edifice and demesne of Castle-Kennedy, the property of the Earl of Stair. Castle-Kennedy, in its original form, was a spacious, stately, square edifice, built probably in the reign of James VI. It belonged at first to the Earls of Cassilis, who had extensive possessions in Wigtonshire; but, in the reign of Charles II., it passed, with its adjacent property, into the hands of Sir John Dalrymple, younger of Stair. The castle was burnt by accident in 1715, and, down to 1839, continued, with walls 79 feet in height, to be uninhabitable and ruinous. The grounds and plantations around it were planned by Marshal Stair; and, if destitute of the graces which adorn more modish demesnes, possess attractions nearly peculiar to themselves.—Along Lochryan, the parish has a coast-line of about 8 miles. This includes most of the southern part, or head of the loch, and the whole of its west side, till within  $2\frac{1}{4}$  miles of its opening into the sea: See **LOCHRYAN**. In the northern part, the

shore is bold and rocky, and is perforated with several caves, which run 80 or 100 yards under ground; but elsewhere it is flat, and covered with sand or gravel. The loch has an extensive fishery of salmon, haddock, whiting, cod, flounders, herring, and excellent oysters. A slate quarry is wrought on the estate of Lochryan, the property of Sir Alexander Wallace. Repeated but vain attempts have been made to find coal. Granite occurs in detached blocks. Sepulchral cairns are very numerous in the uplands of the parish; on the average, about 60 feet in diameter, and 7 feet in height; having a considerable cavity in the interior, in which—as has been proved by the exploration of several—are deposited urns enclosing ashes and burnt bones; and consisting of stones which, in the case of many, must have been fetched from a distance of several miles. On a moorland farm, called Cairnarran, are 9 of these cairns within the range of a Scottish mile. Burrows or tumuli occur in the lowlands, of exactly similar character to the cairns, except that they are formed of earth instead of stones; and they have the same interior cavity and sepulchral contents, and are supposed, in common with the cairns, to be monuments of the British tribes who inhabited Galloway during the early centuries of the Christian era. On the farm of Innermessan, on Lochryan,  $2\frac{1}{2}$  miles north-west of Stranraer, stood the ancient *Reigionium*, a town of the Novantes, and in more modern times, the town and castle of Innermessan. Symson, in his 'Description of Galloway,' says "Innermessan was the greatest town thereabouts till Stranraer was built." Only faint vestiges of it, however, now remain,—such as cannot be detected except with the aid of a cicerone. In its vicinity rises a beautiful moat, 336 feet in circumference at the base, 60 feet in perpendicular elevation, 78 feet in sloping ascent, with a fosse encincturing its base, and an esplanade shaving off its summit, and commanding a fine view of the expanse and shores of Lochryan. "On the 24th November, 1834," says the Rev. James Ferguson, the minister of the parish, in his report in the New Statistical Account, "I caused a hole 3 feet deep to be dug in the centre of the plain on the top. After passing through a fine rich mould, we came to a stratum consisting of ashes, charred wood, and fragments of bone. In the days of the ancient Novantes, this was probably the public cemetery of the adjacent town, *Reigionium*." On the farm of Larg, near Main water, are remains of an old castle, once the property and seat of the Lyns of Larg. The Castle of Craigeaffei, formerly the seat of the extinct family of the Nelsons of Craigeaffei, is still entire, and has been transmuted into a farm-house. The only village is **CAIRN**, or **CAIRNRYAN**: which see. The monthly Stranraer cattle-market, held from April to October, has for its arena a spot within the western limits of Inch. The parish is traversed along the whole of its western border by the mail-road between Glasgow and Portpatrick, and across its southern division, by the mail-road between Dumfries and Stranraer; and, in its lowlands, it has abundant ramifications of subordinate roads, but, in its uplands, offers hardly an ingress to a wheeled vehicle. Sir John Ross, the celebrated arctic navigator, is a native of the parish, and adopts it, at his residence of North West Castle, as the home of his advanced years. Population, in 1801, 1,577; in 1831, 2,521. Houses 481. Assessed property, in 1815, £11,275.—Inch is in the presbytery of Stranraer, and synod of Galloway. Patron, the Crown. Stipend £263 15s. 7d.; glebe £15 15s. The parish-church was built about 74 or 84 years ago, and has never been much altered. Sittings 400. A preaching-station connected with the Establishment was commenced in 1836 at Cairn-

ryan. According to an ecclesiastical survey in 1836, the population then consisted of 965 Churehmen, 302 members of the United Secession, 139 Roman Catholics, 132 Cameronians, 87 members of the Relief, 29 Episcopalians, and 30 persons not known to belong to any religious body,—in all, 2,684. The dissenters are all, except the Episcopalians, connected with congregations in Stranraer. The present parish comprehends most of the ancient parish of Inch, and all the ancient parish of Souleseat. On the island or "inch" in Castle-Kennedy loch, opposite the present parish-church, is supposed to have stood the earliest place of worship in the district; and from this circumstance the parish seems to have derived its name. Before the Reformation, the church of Inch belonged to the bishops of Galloway, and was served by a curate; by the annexation act of 1587, it was vested in the king; in 1588, it was granted for life to Mr. William Melville, the commendator of Tongueland; in 1613, it was returned to the bishop of Galloway; in 1641, it was transferred to the University of Glasgow; in 1661, it was again restored to the bishop of Galloway; and in 1689, it finally reverted to the Crown. In the old parish of Inch there were two chapels. St. John's chapel stood at the head of Lochryan and the east end of Stranraer; and, though in ruins in 1684, when Symson wrote his 'Large Description of Galloway,' it was commemorated in the names of various objects in its vicinity. A modern castle, or large building near its site, was called "the castle of the chapel;" a piece of land which had belonged to the chapel, was called St. John's croft; the part of Stranraer lying east of the rivulet which intersects the town, was popularly called the chapel; and a copious spring of water, which rises within flood-mark, is still called St. John's well. All these objects were detached from Inch, and included in the modern parish and burgh of Stranraer. A second chapel, dedicated to St. Patrick, and giving name to the modern town of Portpatrick, stood on the west coast on the site of that town, and served the south-west division of the old parish, which was popularly called the Black quarter of Inch. This district was detached in 1628, and erected into the separate parish of Portpatrick. What the old parish lost by this disseverment, was afterwards compensated by the annexation to it of the parish of Souleseat. The church of Souleseat belonged, before the Reformation, to the monks of its abbey. When vested, by the act of annexation, in the Crown, a portion of the revenues was settled as a stipend on its minister; and in 1631, the remainder was granted by Charles I. to the minister of Portpatrick. The manse and glebe of the modern parish of Inch are in Souleseat,  $1\frac{1}{2}$  mile distant from the present church.

INCH. See INSCH.

INCH-ABER, a small island of Loch-Lomond,  $\frac{3}{4}$  of a mile south-west of the mouth of the river Endrick.

INCHAFFREY, an ancient abbey on the banks of Pow, or Powaffray water, in the parish of Madderty, Perthshire. The name is said to mean 'the Island of masses'—the island where masses were said; and certainly is written in Latin, *Insula missarum*. Its site is a small rising ground, which seems to have been insulated by the Pow. The abbey was founded in 1200, by Gilbert, Earl of Strathearn, and his Countess Matilda, and dedicated to God, the Virgin Mary, and John the Apostle; and it was endowed with many privileges and immunities by David and Alexander, kings of Scotland. The ruins have been nearly all carried away, as materials for modern houses and roads in the vicinity. A small adjacent territory, formerly attached to the abbey, belongs to the Earl of Kinnoul, and constitutes him patron of about 12

parishes, over which the abbots anciently had right. Mauritius, one of the abbots, attended Robert Bruce at the battle of Bannockburn, and carried with him, in the infatuatedly superstitious spirit of the times, an arm of St. Fillan. The abbey furnished the first of two titles of nobility, which were conferred on its commendator. James Drummoud, a younger son of David, Lord Drummoud, was first styled Lord Inchaffrey, and afterwards, in 1607, was created Lord Madderty. He married Jean, daughter of Sir James Chisholme of Crombicks, and with her got the lands of Innerpeffray, she being heiress, through her mother, of Sir John Drummond, the owner of that property. From the first lady Madderty sprang two sons, John, Lord Madderty, and Sir James, the first Laird of Machony. Innerpeffray lies on the banks of the Earn, in the parish of Trinity-Gask, 4 miles south-west of the ancient abbey of Inchaffrey.

INCHARD (LOCH), an arm of the sea on the west coast of Sutherlandshire, projected into the northern part of the parish of Edderachylis. Macculloch says that this loch is not absolutely wanting in picturesque beauty, but that the head of it is very desolate and bare.

INCH-BRAYOCK, or ROSSIE ISLAND, a low flat islet of about 34 acres superficial area, in the strait or channel of the South Esk, between Montrose basin and the German ocean. It belongs to the parish of Craig, but was included by the boundary-bill within the burgh of Montrose, and is rapidly becoming the site of a suburban appendage to that town. At its east end is a dry-dock. The currents which pass along its sides, owing to the narrowness of their channels compared with the expanse of Montrose basin, which is filled and emptied at every tide, are very rapid, and almost impetuous. Till the latter part of the last century, the great North road along the east coast of Scotland was continued across the South Esk only by the incommodious expedient of a ferry below Inch-brayock, at Ferryden; but now, by means of connecting bridges, it is carried across the island, and cuts it into two nearly equal parts. The bridge on the south side—where the channel has greatly less breadth than that on the north side—is a work of solid and massive stonemasonry. The original bridge on the north side, was one of timber,—a great work of its kind, but constantly needing repair, and too fragile to resist fully the careering tide; and about 11 years ago, it was substituted by a suspension-bridge, which, if it want the intrinsic magnificence, and the circumjacent splendour of scenery which distinguish the famous Welsh bridge across the Menai, is at least one of the most interesting public works in the lowlands of Britain. See MONTROSE. The population of the island, in 1835, was about 120. —Inch-brayock, comprehending some adjacent territory, was anciently a separate parish, and in the year 1618, was united with that of St. Skecho or Dumnald, to form the parish of Craig. The ancient church and cemetery were on the island; and the latter continues to be in use for the united parish. Inch-brayock, or *Inis-Breic*, means 'the Church or chapel island.'

INCH-CAILLIACH, 'the Island of old women,' an islet in Loch-Lomond,  $\frac{3}{4}$  of a mile north-west of the mouth of the river Endrick, and  $\frac{1}{4}$  of a mile from the eastern shore of the lake, in the parish of Buchanan, Stirlingshire. The islet is 7 furlongs in length, from north-east to south-west, and nearly  $3\frac{1}{2}$  furlongs in breadth near its north-east end, but contracts at first slowly, and afterwards rapidly, to a point at its opposite extremity. Amidst the green and the golden islands of a landscape unsurpassed in its beauties by the most fairy districts of Scotland, Inch-caillach is one of the most beautiful. It is the property of the

Duke of Montrose, exquisitely wooded, and turned to some account in husbandry. In ancient times it was the site of a nunnery, whose inmates are alluded to in its name; and down to a more modern period, it gave name to the parish which now wears the usurped title of Buchanan, and was the site of the parish-church and cemetery.

INCH-CLAIR, or CLAIR-INCH, an islet in Loch-Lomond,  $\frac{1}{2}$  a mile from the eastern bank, in the parish of Buchanan, Stirlingshire. It is  $\frac{1}{4}$  of a mile long from north-east to south-west, and runs parallel with Inch-Caillach, about  $\frac{1}{4}$  of a mile distant from it on its south-east side. The islet is finely wooded, and resembles in general appearance the larger and very beautiful islet in its vicinity.

INCHCOLM, an island in the frith of Forth, forming part of the parish of Dalgetty. It lies about 2 miles to the south of Aherdour; 6 miles west of Inch-Keith; and within about  $4\frac{1}{2}$  miles of Queensferry. It is scarcely a mile in length, and is of a bleak appearance, though partly arable. "A considerable portion of this island is composed of greenstone, exhibiting either the earthy, syenitic, or common appearance, and which, by the felspar being replaced by steatite, frequently passes into an imperfect serpentine. On the south side of the island, a variety of greenstone occurs containing numerous scales of pinchbeck-brown mica; it is traversed by a number of contemporaneous veins of greenstone, which frequently passes into steatite; this mineral occurs also in minute strings without exhibiting any such transition, and in them sometimes there may be observed threads of amianthus. On the south of the island, where a junction of the trap and the sandstone is exposed, the latter dips to the north at  $52^\circ$ ; while the greenstone, as it approaches the sandstone, passes into a compact yellowish-white claystone, a vein of which occurs running parallel with the strata. With the exception of a body of sandstone, which is enveloped in the greenstone, the western half of the island is entirely composed of trap, having in some places a slightly columnar disposition." [Cunningham's 'Geology of the Lothians,' p. 76.]—Though destitute of beauty, this island is rich in historical and antiquarian associations, and exhibits the ruins of one of the most extensive monastic establishments in this part of Scotland. The ancient name of the island was *Æmona*, which in Celtic means 'the Island of Druids,' and from which it would appear that before the introduction of Christianity the Druids had had a place of worship here. After Christianity had been introduced, this island seems to have been taken possession of by some of the followers of St. Columba, who here erected a small chapel dedicated to that saint, and from which circumstance the present name of the island is derived. The origin of the religious house of which the ruins still remain, is thus related by Fordun:—"About the year 1123, Alexander I. having some business of state which obliged him to cross over at the Queen's ferry, was overtaken by a terrible tempest blowing from the south-west, which obliged the sailors to make for this island, which they reached with the greatest difficulty. Here they found a poor hermit, who lived a religious life according to the rules of St. Columba, and performed service in a small chapel, supporting himself by the milk of one cow and the shell-fish he could pick up on the shore; nevertheless, on these small means he entertained the king and his retinue for three days,—the time which they were confined here by the wind. During the storm, and whilst at sea and in the greatest danger, the king made a vow, that if St. Columba would bring him safe to that island, he would there found a monastery to his honour which should be an asylum and relief to navigators;

he was, moreover, farther moved to this foundation, by having, from his childhood, entertained a particular veneration and honour for that saint, derived from his parents, who were long married without issue, until, imploring the aid of St. Columba, their request was most graciously granted." The monastery founded by Alexander in virtue of this vow was for canons-regular of St. Augustine, and being dedicated to St. Colm or Columba, was richly endowed by its royal patron. Allan de Mortimer, Lord of Aherdour, gave also to God and the monks of this abbey, the entire moiety of the lands of his town of Aherdour for a hurrying-place to himself and his posterity in the church of that monastery. Walter Bowmaker, abbot of this place, was one of the continuators of John Fordun's 'Scoti-Chronicon.' He died in the year 1449. James Stewart of Beith, a cadet of Lord Ochiltree, was made commendator of Inchcolm, on the surrender of Henry, abbot of that monastery, in 1543. His second son, Henry Stewart, was, by the special favour of King James II., created a peer, by the title of Lord St. Colm, in the year 1611. Fordun records several miracles done by St. Columba, as punishments to the English, who often pillaged this monastery. In the Duke of Somerset's expedition, 1547, this monastery was, after the battle of Pinkie, occupied as a post commanding the Forth. The circumstance is recorded by Paton, in the following words:—"Tuesday, the 13th of September, in the afternoon, my Lord's Grace rowed up the Fryth, a vi or vii myles westward, as it runneth into the land, and took in his way an island thear called Sainet Coomes Ins, which standeth a iiiii mile beyond Lieth, and a good way ner at the north shore than the south, yet not within a mile of the nerest. It is but half a myle about, and hath in it a pretty ahbey, (but ye monks were gone,) fresh water enough, and also coonyes; and is so naturally strong, as but one way it can be entered. The plot whearof my Lordes Grace considering, did quickly cast to have it kept, whearhy all traffik of merchandise, all commodities els comyng by the Fryth into their land, and utterly ye hole use of the Fryth itself, with all the havens upon it shood quyte be taken from them. Saturday, 17th of September, Sir John Luttrell, Knight, having bene by my Lordes Grace, and the counsell, elect abbot, by God's suffraunce, of the monastery of Sainet Coomes Ins, afore remembered, in the afternoon of this day departed towards the island to be stalled in his see thear accordingly; and had with him coovent of a C hakbutteres and L pioneers, to kepe his house and land thear, and ii rowe harkes well furnished with amnicion, and lxx mariners, for them to kepe his waters, wherehy it is thought he shall soon hecum a prelate of great power. The perfytness of his religion is not alwaies to tarry at home, but suntime to rowe out ahrode a visitacion, and when he goitbe, I have heard say he taketh alweyes his sumners in harke with hym, which are very open-mouthed, and never talk but they are harde a mile of, so that either for loove of his hlessynges, or fear of his cursinges, he is like to be souveraigne over most part of his neyghours." Inchcolm was visited by Grose in 1789, and in his 'Antiquities of Scotland' are given several views of its ecclesiastical ruins. "Great part of the monastery," says he, "is still remaining; the cloisters, with rooms over them, enclosing a square area, are quite entire; the pit of the prison is a most dismal hole, though lighted by a small window; the refectory is up one pair of stairs; in it, near the window, is a kind of separate closet, up a few steps, commanding a view of the monks when at table; this is supposed to have been the abbot's seat; adjoining to the refectory is a room, from the size of its chimney, probahly the kitchen.

*W. H. Miller*

The octagonal chapter-house, with its stone roof, is also standing; over it is a room of the same shape, in all likelihood the place where the charters were kept. Here are the remains of an inscription, in the black-letter, which began with *stultus*. The inside of the whole building seems to have been plastered. Near the water there is a range of offices. Near the chapter-house are the remains of a very large semi-circular arch. In the adjoining grounds lies the old carved stone, said to be a Danish monument, engraved by Sir Robert Sibbald, in whose book it is delineated as having a human head at each end. At present it is so defaced by time or weather, that nothing like a head can be distinguished at either end; indeed, it requires the aid of a creative fancy to make out any of the sculpture; something like a man with a spear is seen on the north side, and on the south the figure of a cross; it has been removed from its original situation." The island, which is fertile in some places, and is in repute for its crops of onions, was made a station for a battery of ten guns, for the protection of this part of the frith, during the last war. In more recent times the place has been partly modernized, as a residence for a party who farms the island from the Earl of Moray. Some years ago an attempt was made to plant it, but the trees failed.

**INC-CONACHAN**, or **COLQUHOUN'S ISLAND**, an islet in Loch-Lomond, a mile south-east of the village of Luss, one of a cluster of 3 islets of nearly equal size, in the parish of Luss, Dumbartonshire. It has Inch-Tavanach immediately on the south-west, Inch-Moree immediately on the south, and Inch-Cruin, in Stirlingshire, not far distant on the east. The islet is nearly 6 furlongs long, and 3 furlongs broad, and comprehends 94 Scottish acres under natural oakwood and some fir; but is uninhabited.

**INC-CORMAC**, an islet near Kiels, at the opening of Loch-Swin. There are the remains of a chapel upon it.

**INC-CROIN**, an islet in Loch-Lomond,  $\frac{1}{2}$  a mile north-east of Inch-Murrin, 3 furlongs south-west of Torrinch, and  $1\frac{1}{2}$  mile from the bank of the south end of the lake, in the parish of Kilmarnock, Dumbartonshire. It is nearly a square, with the angles rounded off, measures about 3 furlongs on each side, and is finely wooded.

**INC-CRUIIN**, an islet in Loch-Lomond,  $\frac{1}{2}$  of a mile north-east of Inch-Mean,  $\frac{3}{4}$  of a mile north-west of Inch-Fad, and about mid-distance between the western and the eastern banks of the lake, in the parish of Buchanan, Stirlingshire. It is more than  $\frac{3}{4}$  a mile long, and 3 furlongs broad, has little wood, and was formerly the site of an establishment for the insane. Its name signifies 'the round island.'

**INC-FAD**, 'the long island,' an islet in Loch-Lomond,  $\frac{1}{2}$  of a mile from the eastern bank of the lake, and  $\frac{1}{2}$  a mile north-west of Inch-Cailliach, in the parish of Buchanan, Stirlingshire. It is 7 furlongs in length, and nearly 3 in breadth, and stretches from north-east to south-west. The islet is but partially wooded, but has a very fertile soil, and is inhabited.

**INC-FRIEHLAN**, 'the shaggy island,' a rock in Loch-Lomond opposite the village of Luss, in Luss parish, Dumbartonshire. The name alludes to the fern by which the appearance of the little islet is characterized.

**INC-GALBRAITH**, an islet of only a few acres of area, in Loch-Lomond, 3 furlongs from the western bank of the lake, and the same distance south of Inch-Tavanach, in the parish of Luss, Dumbartonshire. It is chiefly noticeable as having been the site of an ancient castle, once the residence of the family from which the islet derives its name. The ruins of

the castle still exist amidst a few overshadowing trees, and are now the habitation of the osprey.

**INC-GARVIE**, a rocky islet in the frith of Forth, about 5 furlongs in circumference, lying  $1\frac{1}{2}$  mile from the southern shore of the frith, and 1 mile from the northern shore, immediately south of the passage at Queensferry. In the reign of James IV. a fort was erected upon it by Dundas of Dundas, which in later times, was used as a state prison. Ruins either of the original fort, or of a castle afterwards built on its site, still grace the summit of the islet. In 1779, after the alarm occasioned by the appearance of Paul Jones and his squadron in the frith, the fortifications were repaired, and provided with four iron 24 pounders, but they have since been dismantled.

**INCHINNAN**,\* a parish in Renfrewshire, bounded on the north by the Clyde; on the east and south by the Cart and the Gryfe; and on the west by the parish of Erskine, touching at one point on the south-west the parish of Houstoun. Its length is  $3\frac{1}{2}$  miles, and its breadth varies from nearly 1 to 2 miles. It contains 3,060 English acres, which may be arranged thus:—arable in cultivation, 2,600; woodlands, 300; natural pasture, 100; sites of houses, roads, and waters, 60. The yearly produce is estimated at £14,000. The soil is excellent, consisting chiefly of strong productive clay; while on the banks of the rivers it is of a rich loamy quality. The land is in a high state of cultivation; all the modern improvements with respect to rotation of crops, manures, and draining, having been adopted. With the exception of a small portion of moorland not yet reclaimed, the whole parish is enclosed. The surface is diversified by rising grounds, some of them arable to the summit, others beautifully wooded, and all commanding extensive views of the surrounding country. Few parishes afford so many delightful situations for small country-seats. In the Clyde, adjacent to the farm of Garnaland in this parish, is an island, containing about 50 acres, called Newshot—corruptly Ushet—Isle. In the Cart, before its confluence with the Clyde, is a much smaller one, called Colin's Isle, which, according to tradition, originated in the stranding of a vessel. The former is set down in Blaeu's map, dated 1654; the latter is not. Limestone and coal abound in this parish. Freestone of superior quality is wrought at Park and Rashielee; and at the latter place large quantities of whinstone have, since 1760, been procured, forming excellent materials for the construction of jetties and other improvements on the channel of the Clyde. The population is chiefly agricultural; and there are no manufactures, although the parish is situated in a great manufacturing district. Of villages it can scarcely be said there are any, the largest collection of houses, consisting of 6, with the average number of two families in each. Towards the end of the 18th century, there was a distillery at Portnaul, on the east side of the parish.—The lands of Inchinnan were granted by King Malcolm IV. to Walter the high steward, in 1158; and in the possession of a branch of the Stewart family—that of Lennox—a portion of these lands remained till the beginning of the 18th century, when it was sold by the Duke of Lennox and Richmond to the Duke of Montrose. It now belongs to Mr. Campbell of Blythswood, whose ancestor purchased it from the Duke of Montrose in 1737. Mr. Campbell is the principal land-

\* The parish of Inchinnan is of a peninsular form, being bounded by rivers on three sides, which obviously gave rise to the first syllable of the name, being the Celtic word for a peninsula, as well as an island. The adjunct is probably the name of St. Inan, to whom the church is supposed to have been dedicated. See the New Statistical Account, where an error of the author of Caledonia is pointed out.

owner in the parish. The palace of Inchinnan was built by Matthew, Earl of Lennox, in 1506. It stood near to the site of the farm-steading of Garnaland, looking towards the Clyde. Crawford mentions that there were "some considerable remains" of it in 1710; but before the end of the century it had altogether disappeared, and the very foundations had become arable land. The structure appears to have been *palatial* only in name: had it been of any great consequence, it is not likely that it would have fallen so early into decay. The materials were partly employed in the building of a corn-mill at this place, in the gable of which, Semple, in 1782, observed one of the stones bearing an inscription. The mill having been lately pulled down, the stone was deposited within the tower of the church. The inscription is as follows:—

D . D  
F S L . H C L  
16 . 31

The greater part of the estate of Northbar was acquired in 1741 by Lord Sempill, who built a house upon it on the bank of the Clyde. In 1798 it was sold to Mr. James Buchanan, from whom it was acquired by Lord Blantyre, about 14 years afterwards. Southbar, the property of Mr. Maxwell Alexander, was acquired by his uncle in 1785. The mansion-house was, with the exception of one wing, accidentally destroyed by fire in August, 1836. The other estates are Park, Lord Blantyre; Freeland, Mr. Killoch; Rashielee, Mr. Maxwell of Dargevel; and House of Hill, Miss Balfour.—At the church of Inchinnan the waters of the Gryfe and the White Cart unite. Here there was formerly a public ferry, which gave name to a property, still called Ferry-craft. In 1759 a bridge was built, a few yards below the point where the rivers join. It consisted of 9 large arches, with a communication from the middle of the bridge by an arch connecting it with the point of land between the rivers. It cost only £1,450. The foundations of this structure were so insecure, and the work so imperfect, that it gave way in consequence of a flood, in the spring of 1809. A new bridge was completed in 1812, at an expense of £17,000, on a different site. It is composed of two divisions, which cross the streams 30 or 40 yards above their junction; an end of each division resting on the intermediate peninsula. They do not run in a straight line into each other, but the road takes a bend in the middle, where they join, and forms nearly a right angle, each of them crossing its own water at a right angle also. Upon the whole, this structure is at once substantial and elegant, and has a fine effect amidst the surrounding scenery, which is deservedly admired for its amenity and tranquil beauty. There is another bridge connected with the parish, that of Barnsford, which crosses the Gryfe and Black Cart about half-a-mile below their junction. The old high-road from Glasgow to Greenock, by Renfrew, intersects the length of the parish; and two good roads communicate with Paisley. Population of the parish, in 1831, 642. Houses 89. Assessed property, in 1815, £5,268. Inchinnan is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Campbell of Blythswood. Stipend 16 chalders, one-half meal and the other half harley, with £8 6s. 8d. for communion elements, and a glebe of 7½ acres. Part of the incumbent's emoluments he, like his predecessors, derives as superior of a piece of land, consisting of 2½ acres, called Ladyacre, which in Popish times formed an endowment for an altar dedicated to the Virgin Mary, and situated in the parish-church. At the

Reformation, this land was sold by the chaplain, for payment of a small feu-duty. The teind and duty annually arising from this source amount to £1 5s. 5d. In the charters granted by the ministers of Inchinnan in virtue of the superiority referred to, they have uniformly styled themselves "undoubted chaplains of the altar and altar, commonly called Our Lady's Altar, of old founded and situated in the parish-church of Inchinnan, and as such undoubted superiors of the lands after-mentioned." The present incumbent truly says, in the New Statistical Account,—“The attachment of a superiority to a living occurs nowhere else in Scotland, in similar circumstances; and the Popish title connected with it is a still more extraordinary anomaly.”—Schoolmaster's salary £34 4s. 4½d., with about £22 school fees, and £5 of other emoluments. There is another school with one teacher.—According to ancient historians, St. Conval, or Connal, taught Christianity at Inchinnan, where he died in 612. David I. gave the church of Inchinnan, with all its pertinents, to the Knights Templars, to whom it continued to belong till their suppression in 1312, when all their property in Scotland was transferred to the Knights of St. John, who enjoyed the rectorial tithes and revenues, and had the cure served by a vicar of their own appointment, till the Reformation. The former church of Inchinnan—which was pulled down in 1828—was a very ancient fabric, 50 feet in length, by only 18 in breadth, with an antique scarcement to throw off the rain from the foundation. The walls were of great thickness. “In the churchyard all the old tomb-stones, of which many remain, have crosses of different forms sculptured upon them. The parishioners point out what tradition has taught them to call the Templars' graves. The stones covering them, now reduced to 4 in number, are not flat, but ridged; and upon their sloping sides, figures of swords may be distinctly traced. If ever there were stone coffins under them, it is long since they have disappeared, and the graves themselves have been appropriated, from time immemorial, to the use of the parishioners.”\* The present church is Gothic, with a massive square tower, buttresses, &c., and is much admired. It occupies the situation of the former one, upon the Gryfe, near its junction with the White Cart. Both it and the bridge of Inchinnan were built of the freestone from Park quarry in this parish.

INCH-KEITH, an island in the frith of Forth, about 3 miles south-east of Pettycur, 22 miles west-half-north from the isle of May, and 17 west-north-west from the Bass rock. It belongs to the parish of Kinghorn, and is rather more than half-a-mile in length, and about an eighth of a mile in breadth. Throughout, its surface is very irregular and rocky, but it is in many places productive of rich herbage well-suited for pasturing horses and cattle. Near the middle of the island, but rather towards its northern end, it rises gradually to a height of 180 feet above the level of the sea; and here a light-house has been erected. The island possesses abundant springs of the most excellent water, which is collected into a cistern near the harbour, from which the shipping in Leith roads are supplied. It is supposed to be the *Caer Guidi* of Bede, and, from the name, must have been fortified previous to his time. In Maitland's 'History of Edinburgh' there is an order from the Privy council to the magistrates of Edinburgh, dated September 1497, directing “that all manner of persons within the freedom of this burgh, who are infected of the contagious plague

\* New Statistical Account, p. 124.

called the *grangore*. devoid, rid, and pass furth of this town, and compeer on the sands of Leith at ten hours before noon; and there shall have and find boats ready in the harbour, ordered them by the officers of this burgh, ready furnished with victuals, to have them to the Inch (Inch-Keith), and there to remain till God provide for their health." It early belonged to the family of Keith, afterwards Earls Marischal, and from them received the name it now bears. How long it continued in possession of this family does not appear, as it afterwards belonged to the Crown, and was included in the grant of Kinghorn to Lord Glamis. With this family it remained till 1649, when, according to Lamont, it was bought, along with the mill of Kinghorn and some acres of land, by the well-known Scot of Scotstarvet, for 20,000 merks. It afterwards became the property of the family of Buccleugh, and formed part of their barony of Royston, in the parish of Cramond, in Mid-Lothian. In 1549, Inchkeith was fortified by the English, then in Scotland, under the Duke of Somerset. Having been dislodged by the French, then in possession of Leith, the works erected by the English were thrown down, and a more complete fortification was erected. Upon a portion of the fort, which remained about the end of last century, were the initials M. R. and the date 1556. In 1567, by an act of the Scottish parliament, the fort was demolished to prevent its being of use to the English.—The lighthouse on this island was erected in 1803; and was at first a stationary light, but in 1815, it was changed to a revolving light as at present. It is elevated 235 feet above the medium level of the sea. On the 1st of October, 1835, the reflecting light on this island was discontinued, and a dioptric light exhibited in its place. It consists of seven annular lenses, which circulate round a lamp of three concentric wicks, and produce bright flashes once in every minute; and of five rows of curved mirrors, which, being fixed, served to prolong the duration of the flashes from the lenses. The appearance of the new light does not, therefore, materially differ from that of the former one, excepting that the flashes—which recur at the same periods—are considerably more brilliant and of shorter duration. In clear weather, the light is not totally eclipsed between the flashes, at a distance of 4 or 5 miles. The expense of this lighthouse, in 1839, was £467 14s. 5d.

INCH-KENNETH, one of the Hebrides, in the district of Mull, and constituting part of the parish of Kilfinichen. It is at the entrance of Loch-na-Kell, off the western coast of Mull, and at the distance of 12 miles south-west by west from Aros. This island, says Dr. Johnson, in his beautiful and emphatic description, is "about a mile long, and perhaps half-a-mile broad, remarkable for pleasantness and fertility. It is verdant and grassy, and fit both for pasture and tillage; but it has no trees. Its only inhabitants were Sir Allan Maclean, and two young ladies, his daughters, with their servants. Romance does not often exhibit a scene that strikes the imagination more than this little desert in these depths of Western obscurity, occupied not by a gross herdsman, or amphibious fisherman, but by a gentleman and two ladies, of high birth, polished manners, and elegant conversation, who, in a habitation raised not very far above the ground, but furnished with unexpected neatness and convenience, practised all the kindness of hospitality and refinement of courtesy. Inch-Kenneth was once a seminary of ecclesiastics, subordinate, I suppose, to I-Colm-Kill. Sir Allan had a mind to trace the foundation of the college, but neither I nor Mr. Boswell—who bends a keener eye on vacancy—were able to perceive them.

Our attention, however, was sufficiently engaged by a venerable chapel, which stands yet entire, except that the roof is gone. It is about 60 feet in length, and 30 in breadth: on one side of the altar is a bas-relief of the blessed Virgin, and by it lies a little hell; which, though cracked and without a clapper, has remained there for ages, guarded only by the venerableness of the place. The ground round the chapel is covered with grave-stones of chiefs and ladies; and still continues to be a place of sepulture. Inch-Kenneth is a proper prelude to I-Colm-Kill. It was not without some mournful emotion that we contemplated the ruins of religious structures, and the monuments of the dead. On the next day, we took a more distinct view of the place, and went with the boat to see oysters in the bed, out of which the boat-men forced up as many as were wanted. Even Inch-Kenneth has a subordinate island, named Sandiland—I suppose in contempt—where we landed, and found a rock, with a surface of perhaps four acres, of which one is naked stone, another spread with sand and shells, some of which I picked up for their glossy beauty, and two covered with a little earth and grass, on which Sir Allan has a few sheep. I doubt not but when there was a college at Inch-Kenneth, there was a hermitage upon Sandiland."

INCH-LOONAIG, an islet in Loch-Lomond,  $\frac{3}{4}$  of a mile from the village of Luss, and 5 furlongs from the eastern bank of the lake, in the parish of Luss, Dumhartonshire. It is about a mile long, stretching from north-east to south-west, and nearly  $\frac{1}{2}$  a mile broad; and contains an area of 145 Scottish acres. About one-half of its surface is covered with a natural forest of very old yew-trees. This islet has long been used as a deer-park by the Colquhouns of Luss, and has about 150 deer. Its only human inhabitants are the inmates and keepers of a boarding-establishment, or place of restraint and cure for persons who have been addicted to drinking.

INCHMAHOMIE, the larger of two islets in Monteith-loch, parish of Port-of-Monteith, on the southern verge of Perthshire. This islet possesses such historical and antiquarian interest as to have been the subject of a quarto volume, by the Rev. Mr. Macgregor of Stirling. In itself it has an area of only about 5 acres, and is an object of simple beauty,—an emerald gem on the bosom of the smiling lake. But it was the site of an extensive and noted priory, the ruins of which still sufficiently indicate its ancient grandeur. One arch of very elegant Gothic architecture, a considerable extent of wall, and the dormitory and vaults, are embosomed in a grove of large and somewhat aged trees. The vaults have long been used as sepulchres by several ancient families; and in the choir of the church are sculptured figures of the last Earl and Countess who bore the dormant title of Monteith. Immediately to the south-west lies the smaller islet of Tulla, the site of a ruined castle, anciently the principal residence of the Monteith family. Inchmahome united with Tulla to form the castle's insulated demesne; and it still bears memorials, in an intermixture of aged fruit-trees with its little forest, of having been laid out in garden and orchard. Several of its forest-trees are chestnuts, planted before the Reformation, one of them having a girth near the ground of 18 feet. The priory belonged to the Canons Regular of the Augustinian order, and was founded by Edgar, king of Scotland. It had four dependent chapels, and was represented in 1562 to Government as having property of the annual value of £234, besides tithings in grain. Originally it was connected with the abbey of Cambus-Kenneth; afterwards, it was attached by James IV. to the royal chapel of Stirling; and eventually it was bestowed

by James V. upon John, Lord Erskine, as commendatory abbot. In 1310 it was visited by King Robert Bruce, and was the scene of his exercising some royal prerogatives. In 1547, when the English invaded Scotland with the view of forcing a marriage-contract between Edward VI. and Mary, the infant queen, then 5 years of age, she was carried to the priory, and remained there, protected by her attendants, till she was sent off to France. The priory was visited likewise by James VI., and was occasionally honoured with the presence of many distinguished subjects.

**INCH-MARNOCH**, an islet in the frith of Clyde, on the south-west of the isle of Bute, to which it is politically annexed. It is about a mile long; and lies 2 miles west of St. Ninian's point. On the west side are vast strata of coral and shells. The ruins of a chapel dedicated to St. Marnoch are still to be seen upon it. This island belonged, in former times, to the monastery of Sadell in Kintyre; it is now in the parish of Rothesay.

**INCH-MICKERY**, a rocky islet in the frith of Forth, 2 miles and a furlong from the southern shore, and  $3\frac{1}{2}$  miles from the northern shore, lying a little south of Cramond island and Incheolm, and at about mid-distance between them. It is only about 3 or 4 furlongs in circumference, and is chiefly remarkable for an extensive oyster-bed on its shore, and for the profusion of sea-weeds, lichens, and mosses on its beach and surface.

**INCH-MOAN**, or **MOSS-ISLAND**, a low, flat, boggy islet in Loch-Lomond,  $\frac{2}{3}$  of a mile from the western bank of the lake, and immediately south of Inch-Tavanach and Inch-Conachan, in the parish of Luss, Dumhartonshire. It stretches from east to west; is  $6\frac{1}{2}$  furlongs in length, and 3 furlongs in breadth; contains 99 Scottish acres, chiefly moss; and supplies the villagers of Luss with turf-fuel.

**INCH-MURRIN**, or **INCH-MARRIN**, an islet in Loch-Lomond, the largest, and, with one exception, the most southerly of the beautiful earth-gems which are sprinkled in the bosom of that brilliant and joyous sheet of water; lying  $\frac{3}{4}$  of a mile from the western bank, the same distance from the southern bank, and upwards of  $2\frac{1}{2}$  miles from the efflux of the river Leven. It forms, with Inch-Croin, Torrinch, and Inch-Faillach, a belt of islets from south-west to north-east, on a straight line across the broadest part of the lake; and lying direct in front of the navigation from Balloch, is the first object on which the eye of a nautical tourist rests when commencing a trip upon the lake from the south. The islet is upwards of  $1\frac{1}{2}$  mile in length, and nearly  $\frac{1}{2}$  mile in breadth. It is beautifully wooded, is used as a deer park, and has a hunting-seat and offices on it belonging to the Duke of Montrose. At its south-west end, in a grove of venerable oaks, are the ruins of an ancient castle, once the residence of the Earls, and afterwards of the Dukes of Lennox. The islet, as regards position, belongs decidedly to Dumhartonshire, and might be competed for with nearly equal claims by the parishes of Luss, Bonhill, and Kilmarnock; but it seems, singularly enough, not to be included in any division either county or parochial.

**INCH-NA-DAMPH**. See **ASYNT**.

**INCH-TAVANACH**, or **MONK'S ISLAND**, an islet in Loch-Lomond, stretching north and south at about  $\frac{1}{4}$  of a mile's distance from the western bank of the lake, and  $\frac{3}{4}$  of a mile south-east of the village of Luss, in Luss parish, Dumhartonshire. It measures nearly a mile in length, 3 furlongs in breadth, and 135 Scottish acres of superficial area. Its sides are steep; its surface is higher than that of any other islet in the lake; and 127 of its acres are covered with natural oakwood. One family resides on it.

**INCH-TORR**, or **TORR-INCH**, an islet,  $\frac{1}{2}$  mile long, and beautifully covered with oaks and lofty beech-trees, in Loch-Lomond; lying between Inch-Cailliach and Inch-Croin, and forming with these islets and Inch-Murrin, a belt across the broadest part of the lake. It is situated upwards of a mile respectively from the southern and from the eastern bank, and within the parish of Buchanan, Stirlingshire.

**INCHTURE**,\* a parish in the Carse of Gowrie, Perthshire; bounded on the north-west by Abernyte; on the north-east and east by Longforgan; on the south-east by the frith of Tay, which divides it from Flisk in Fife; on the south-west by Errol; and on the west by Kinnaird. It is of an elongated but very irregular form; and measures about 4 miles from north to south, and about 3 from east to west. Its coast-line, or line of beach upon the Tay, is only about a mile in length, and overlooks, at high water, only about  $2\frac{1}{4}$  or  $2\frac{1}{2}$  miles breadth of frith. A rill rises in the interior, runs  $1\frac{1}{4}$  mile down to the western limit, traces for  $1\frac{3}{4}$  mile the boundary with Errol, and, aided almost at its mouth by a brook of more than twice its own length of course coming in from Errol, forms at Powgavie, a small but not unimportant harbour. Another brook, coming down from the north-west, forms for  $3\frac{1}{4}$  miles the north-eastern and eastern boundary-line, receives in its course a rill flowing  $1\frac{1}{2}$  mile through the parish from Abernyte, and diverges away into Longforgan. The parish, with very trivial exceptions, is a dead level, but commands a delightful view of water and hill scenery; and is one of the most fertile and beautiful in the rich and exulting district in which it lies. The soil is opulent carse-land, well-improved by lime and other appliances suited to clay; and, in general, produces heavy crops of prime grain. The area is embellished with fine enclosures and sheltering plantations, and, at intervals, is beautifully studded with gentlemen's seats, and laid out in pleasure-grounds.—Rossie priory, a superb monastic-looking pile, spacious and elegant within, imposing in aspect without, and surrounded by an extensive demesne, lifts up its fine form near the northern extremity of the parish. This mansion belongs to the noble family of Kinnaird, whose ancestor, Sir George Kinnaird of Inchtute, was raised to the peerage in 1682 by the title of Baron Kinnaird of Inchtute; and was built by Charles, 8th Lord Kinnaird, in 1817. Drimmie house, the predecessor of the priory, stood within the limits of Longforgan, but spread out most of its attendant pleasure-grounds in Inchtute.—Near the south-eastern extremity of the demesne, and close on the eastern boundary of the parish, stand the ruins of the ancient castle of Moncur, embosomed in shrubbery and plantation.—Ballindean house is delightfully situated, near the northern boundary, at the foot of the rising ground which bounds the Carse of Gowrie on the north.—Balledgarno house, south-east of Ballindean, is another fine mansion, surrounded by plantation.—The parish has several quarries of excellent freestone, and a complement of mills and thrashing-machines. Roads intersect it in every direction; and the mail-road from Edinburgh and Glasgow to the north runs through it from east to west. On this road stands the cheerful village of Inchtute, 13 miles from Perth, and 9 from Dundee, occupying the summit of a rising ground in the centre of the luxuriant expanse of the carse-lands. The hamlet of Ballindean stands  $1\frac{1}{2}$  mile to the north-

\* Inchtute, or Inchtower, in the original application of the word, was possibly an inch or island, bearing aloft a tower, on the bosom of the sheet of sea-water by which the Carse of Gowrie is believed to have been covered; and the island or inch may, after the recession of the sea, have become the rising ground which is now the site of the church and village.

west. The other villages are BALLERNO and POL-GAVIE or POWGAVIE: which see. Population of the parish, in 1801, 949; in 1831, 878. Houses 157. Assessed property, in 1815, £1,731.—Inchture is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend £224 10s. 7d.; glebe £30. An assistant and successor has £30 from the incumbent, and £30 from the heritors. The parish-church, a neat Gothic edifice, was built in 1834, and is situated at the village of Inchture. The present parish comprehends the ancient parishes of Inchture and Rossie, which were united in 1670. The church of Rossie, half-a-century ago, was a ruin. Schoolmaster's salary £34 4s. 4½d., with £27 fees, and about £8 other emoluments. The maximum attendance at the parish-school is 83; and at 3 non-parochial schools, 72.

INCHYRA, a small district and a village on the north bank of the river Tay, between the parishes of Kinfauns and St. Madoes, Perthshire. The district measures 1½ mile along the course of the river, but only 1 mile direct east and west, and ¾ of a mile north and south, and is a detached part of the parish of Kinnoul. The village is a port, 8 miles distant from Perth, and a little south of the post-road between that town and Dundee. It has a good harbour, which admits vessels of considerable burden, and a ferry which communicates with Fingask in the parish of Rhynd.

INGANESS-BAY, a bay of about 3 miles in length, nearly 2 miles to the east of Kirkwall bay, in Orkney. The headland on its west side is called Inganess-head.

INHALLOW. See ENHALLOW.

INIS-CONNEL. See AWE (LOCH).

INIS-FRAOCH. See AWE (LOCH).

INIS-HAIL. See AWE (LOCH).

INNERKIP, the most westerly parish in Renfrewshire, is bounded on the north and west by the frith of Clyde; on the east by Greenock and Kilmalcolm; and on the south by Largs, in Ayrshire; extending about 6 miles from north to south, and about 4 from east to west. The coast is indented, but not deeply, by the bays of Gourrock, Lunderstone, Innerkip, and Wemyss. There are several rivulets, the principal of which are Shaw's burn, the water of which is turned from its proper course towards the sea for the supply of the works at Greenock; Kelly burn, which forms the boundary on the side of Ayrshire; and the Kip and the Daff, which unite at the village of Innerkip, and then fall into the sea. The parish has obviously received its name from the *Kip*, and the word *Inver*, signifying the issue of a river. From the shore to the south-east is a gradual ascent, beautifully varied with plains, gentle declivities, winding streamlets, and heath-covered hills. There are fine fertile tracts, embellished with plantations, around the bays of Innerkip and Gourrock. The other arable lands are nearly limited to narrow stripes along the shore, or by the sides of the rivulets. The greater part of the parish consists of bleak moors and pasture ground. It contains 12,540 English acres, which may be thus arranged: moss or moors, 5,860; arable, 4,500; sound pasture, 1,500; woodlands, natural or planted, 540; sites of houses, roads, and rivulets, 140. The village of Innerkip is a neat and pleasant place, inhabited chiefly by fishermen, and frequented for sea-bathing, though it has not become a place of general resort. It was made a burgh-of-harony before the Union, and has the privilege of holding 3 fairs annually. Along the shore are some elegant marine villas. The principal land-owner is Sir Michael Robert Shaw Stewart, Baronet, whose ancestor obtained from Robert III., in 1403, a grant of the lands of Ardgowan, to which several large ad-

ditions have since been made by purchase.—Ardgowan house, a stately structure, surrounded by beautiful plantations, was built in the beginning of this century. Elevated on a terrace overhanging the frith, it commands an extensive prospect of the shipping, and the surrounding scenery. Near the house there is an ancient square tower, probably a portion of the castle of Innerkip, which was held by the English in the time of Robert Bruce, and to which Sir Philip de Mouhry escaped, after being discomfited by Sir James Douglas. Barbour in his poem distinctly indicates the course of the flying knight as having been by Kilmarnock and Kilwinning, to Ardrossan:

"Syne throw the Largis, him allane,  
Till Ennerkyp,"

which (says Barbour) was "stuffyt all with Inglessmen," who received him 'in daynté.'—Kelly house, the seat of Robert Wallace, Esq., is another beautiful mansion upon the Clyde. It was erected, in 1793, by Mr. Wallace's father, who, in the previous year, purchased the estate from the representatives of its ancient proprietors, the Bannatynes. Although the settlement of this branch of the Wallaces at Kelly is hut recent, they have for many ages been connected with Renfrewshire. The present proprietor has here formed extensive plantations, and made great improvements in agriculture. In this neighbourhood is the range of braes mentioned in a fantastic old song, altered by Burns:

"There lived a earle on Kelly-burn-braes,  
(Hey and the rue grows bonnie wi' thyme!)  
And he had a wife was the plague o' his days,  
(And the thyme it is withered and rue is in prime!)" &c.

On an eminence, overlooking the coast, stand the ruins of a large square tower, called Laven castle. The lands of Laven, of old, belonged to a family named Morton, from which they passed, in 1547, to the noble house of Sempill. They are now the property of the Shaw Stewarts, to which family also belong the lands of Dunrod, an ancient possession of the branch of the Lindsays, who, from the time of Robert Bruce, made a considerable figure, but came to an end, in 1619, in the person of Alexander Lindsay, who alienated the estate to Sir Archibald Stewart.—Innerkip was famous for its witches, and probably this Alexander Lindsay is the person spoken of in the following popular rhyme, one of the very few we have observed relating to this county:

"In Innerkip the witches rid thick,  
And in Dunrod they dwell;  
The grittest loon among them a'  
Is auld Dunrod himself."

These witches are noticed in our account of Gourrock. See also Mr. C. K. Sharpe's Prefatory Notice to Law's Memorials, Edit. 1818, p. 70.—On the brow of the rock, at Cloch-point, stands a lighthouse, consisting of a circular tower, 80 feet high, with a stationary light, of a star-like appearance. It bears north-east 4 miles from the Point of Wemyss; and 6 miles north-east by east from Toward-point. The jurisdiction of the river-haillie of Glasgow terminates at this point. In the immediate neighbourhood there is a ferry across the frith, which is here much narrowed, to the opposite shore at Dunoon. Before the introduction of steam-boats this was the principal means of communication with the West Highlands. It is still used chiefly for the transporting of cattle from that district.—In the 12th century the church of Innerkip, with all the land between the rivulets where it stood, was granted to the monastery of Paisley by Baldwin of Biggar, who appears to have held these lands under Walter, the first Steward; and to the monastery the church continued to belong till the Reformation. At Christ-

well there stood a chapel, which was founded in the reign of Robert III., and was endowed with lands in this parish. In 1594 Innerkip was deprived of part of its territory by the formation of the parish of Greenock, which had previously been comprehended in it. A new church having been built at Greenock at that time, the old place of worship at Innerkip was termed 'the auld kirk,' which, by a natural figure of speech, is now the name popularly applied to the village of Innerkip itself. In 1832 the *quoad sacra* parish of Gourock [which see] was divided from Innerkip. Population of Innerkip, in 1831, including Gourock, 2,088. Houses, in 1831, 258. Assessed property, in 1815, £5,392.—Innerkip is in the presbytery of Greenock, and synd of Glasgow and Ayr. Patron, Sir M. R. S. Stewart, Bart. Stipend upwards of £230, with a glebe of 4 acres. The Independent body has a church here; stipend not known.—Salary of parochial schoolmaster £30 15s. 11 $\frac{1}{4}$ d., with from £26 to £28 of school-fees. There is also a side-school with one instructor.

INNERLEITHEN, or INVERLEITHEN, a parish chiefly in the north-east of Peebles-shire, and partly in the north of Selkirkshire; compact in position, and proximately triangular in form, presenting its angles to the north-west, to the south-west, and to the east. It is bounded on the north-east by Edinburghshire and the Selkirkshire part of Stow; on the south by the Tweed, which divides it from Yarrow parish in Selkirkshire and Traquair parish in Peebles-shire; and on the west by the parishes of Peebles and Eddlestone. Measured as a triangle, and not including sinuosities, it extends on the north-east side from Dunreich to the angle a little below New Thornylee, 11 $\frac{1}{4}$  miles; on the south side, from the angle just mentioned to the confluence of Spittlehope-burn with the Tweed, 7 $\frac{1}{4}$  miles; and on the west side, from the mouth of Spittlehope burn to Dunreich, 6 miles. But it has, on all sides, especially along the course of the Tweed, some projections and considerable recessions of outline; and contains an area, according to Armstrong, of 27,587 English acres, and, according to the minister of the parish in his evidence before the Commissioners of Religious Instruction, of 30,100 acres. The part which falls within the limits of Selkirkshire is a stripe on the south-east side, ascending 5 $\frac{1}{2}$  miles from the Tweed, with a breadth, over most of the distance, of less than a mile, and an extreme breadth of 2 $\frac{1}{2}$  miles. The surface gradually rises from the Tweed to the northern extremity, and has, in general, a broken, rugged, and precipitous appearance. Hills, forming part of the broad range which diverges at an acute angle from the central chain of the southern Highlands at the Hartfell group, and runs north-eastward to St. Abb's head, and attaining here, in many of their summits, the elevation of about 1,000 feet above sea-level, crowd nearly the whole area, and, in some places, leave, in their interstices, scarcely sufficient space for the breadth of a road. The highest ground is Windlestraw-law, 1 $\frac{3}{4}$  of a mile from the boundary with Edinburghshire, and  $\frac{3}{4}$  from the nearest point of the north-east boundary of the parish, yet standing on the boundary-line between Peebles-shire and Selkirkshire. The hills are cloven asunder from north to south by several deep glens, each bringing down the tribute of a crystal stream to the Tweed. The largest of the rivulets is the Leithen, which, rising within  $\frac{3}{4}$  of a mile to the north-west angle, and running 5 $\frac{1}{2}$  miles south-eastward, and 3 $\frac{1}{2}$  miles southward, cuts the parish into two not very unequal parts, and contributes the main quota of its name: see the LEITHEN. Craighope-burn 1 $\frac{1}{2}$  mile in length of course, Woolandslee-burn 2 $\frac{3}{4}$  miles in length, and Blakehopebyre-burn, also 2 $\frac{3}{4}$  miles in

length, and all rising close on the north-eastern boundary, come down in a south-westerly direction upon the Leithen in the upper or south-easterly part of its course, and, in common with their mimic tributaries, find their way along cleughs or glens. Spittlehope-burn rises on the side of Carsman hill, and after a course of  $\frac{3}{4}$  of a mile in the parish, forms, for 1 $\frac{3}{4}$  mile, the boundary with Peebles, and then falls into the Tweed. Another streamlet, parallel to this, 1 $\frac{1}{2}$  mile eastward of it, and 2 $\frac{3}{4}$  miles in length of course. Walker's burn, 1 $\frac{1}{2}$  mile eastward of the Leithen, and 3 miles in length; and Gatehope burn, 1 $\frac{1}{4}$  mile farther to the east, and 3 $\frac{3}{4}$  miles in length,—all pursue a southerly course to the Tweed, and, along with Leithen water and Spittlehope-burn, cleave the lower part of the parish into nearly regular sections, divided from one another by parallel glens. The course of the Tweed, in majestic sweeps along the southern boundary, especially for 3 $\frac{1}{2}$  miles above the influx of the Leithen, and over some distance below it, is exquisitely beautiful, and though inferior in effect to its course respectively past Peebles and past Kelso, where the competition of claims for superiority in brilliance has engaged the attention and debates of connoisseurs, may compare with almost any other part of the noble and exulting and everywhere interesting river. Along its banks, and also along those of the Leithen for 3 or 4 miles above the confluence of the rivers, are level stripes of very rich haugh; behind these are narrow borders of gravelly loam, skirting the foot of the hills; and farther back, gentle ascents, waving with corn or covered with plantation, lead the eye gradually upward to an array of rocky or heath-clad summits, chequered and patched on their sides with verdure. Though, in passing along the Tweed from Kelso to Peebles, a stranger might suppose the interior to be a hilly wilderness of rocks and desolation, yet the southern exposure of the general surface occasions the growth of much succulent herbage, and the carpeting of much excellent sheep-pasturage. Estimating the whole area at somewhat more than 30,000 acres, nearly 26,000 have been enclosed and constant sheep-walk, about 2,500 have been occasionally in tillage, nearly 550 are under wood, chiefly plantations of oak, larch, and elm, and in a small degree hazel and birch and indigenous copsewood, and about 1,500 are in a waste condition, or carelessly open for sheep. All the farms of the parish, with two exceptions, are pastoral, having either limited scope or none for the use of the plough; and, for the most part, are of large extent. About 16,000 black-faced and Cheviot sheep, much improved in the breed, and nearly 400 black cattle feed upon the pastures. The sheep-walks, though elevated, are much valued by the farmer as sure spring-ground, and produce a vegetation which, both for its earliness and its succulency, gives sustenance to the sheep just at the time when they most need to be rallied from the wasting effects of the winter, and when the dam needs nourishment for her tender brood. In the arable parts of the parish the most fertile soil is that part of the haughs formed by the subsidence of the Tweed and the Leithen; and, in consequence of this being occasionally flooded by the rivers, the most manageable is the gravelly loam on the hanging plains behind, formed, in the course of ages, by the decomposing action of the atmosphere on the rocks and the decay of vegetable substances, but obstructed at intervals by blocks of stone, and curiously traversed by what are called 'blind springs' bursting from fissures in the subjacent rocks. A quarry of pavement slate, which finely combines with the Arbroath stone [see FORFARSHIRE] to form a tessellated stone floor, was wrought for some time at Holylee; and a quarry

of clay-slate for roofing was wrought at the eastern angular extremity below New Thornylee. Peat is abundant at the north-west angle, and occurs in smaller patches on Windlestrae-law; hut is so difficult of access as not to prevent a demand on the Lothian coal-mines for fuel.—At the mouth of almost every defile throughout the parish tower-houses are met with in a ruinous condition; hut, except in two or three instances, they have intrusted neither to record nor to tradition the names of their occupants. If similar scenes of iniquity were practised in all of them to some which the archives of the presbytery of Peebles ascribe to one of their number, they have deservedly become the habitation of owls. On a rising ground in the immediate vicinity of the village of Innerleithen, are vestiges of the fossum and the circumvallating lines of a strong fortification. The lines appear to have been formed without cement by a compact masonry of a vast mass of stones, fetched from a distance; and the third of them encloses a space of rather more than an English acre.—Horshurgh castle, the property of the Horshurgh family, about the origin of whose possessions in the parish a gossiping tradition points to a romantic hawking expedition of a king of Scotland, is an ancient edifice on the Tweed, near the mouth of Spittlehope burn.—The most noticeable modern mansions are Glen-Ormiston and Holylee, both on the Tweed, the former near the village of Innerleithen. Three roads of importance traverse the parish,—the Glasgow and Kelso turnpike along the banks of the Tweed, the new turnpike between Edinburgh and Peebles up Blakehopeyre burn, and a road along the Leithen from its mouth to its source.—Population, in 1801, 591; in 1831, 810. Houses 138. Assessed property, in 1815, £7,012.—Innerleithen is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, Livingston Booth. Stipend £231 1s. 10d.; glebe £20. Unappropriated tithes £173 18s. 11d. The church was built in 1786. Sittings 350. According to an ecclesiastical survey in 1835, the population then consisted of 624 churchmen, 155 dissenters, and 19 persons not known to belong to any religious denomination,—in all, 798. The dissenters are Episcopalians, Seceders, and members of the Relief connected with congregations in Peebles, and Roman Catholics, who attend a chapel at Traquair. Dissenting ministers frequently preach in the village; and the Independents have, for several summers past, supplied it as one of their stations. The parish had annexed to it, in 1674, about one-third of the old parish of Kailzie, the other two-thirds of which were annexed to Traquair. Kailzie was dismembered and suppressed in opposition to the remonstrances of the presbytery, and to the protest of the only heritor residing in two-thirds of its extent: see KAILZIE. The church of Innerleithen was given by Malcolm IV. to the monks of Kelso, and endowed with a power of giving refuge to persons fleeing from justice; hut, as the village and the circumjacent district continued to be a part of the royal demesne during the reign of Alexander II., it must have been given to them without its appurtenances. A natural son of Malcolm IV. was drowned in a pool near the mouth of the Leithen; and his body, during the first night after his decease, was deposited in the church. William, an ancient parson of the parish, was one of the witnesses to a charter of William Morville, who was constable of Scotland from 1189 to 1190.

The village of INNERLEITHEN stands on the haugh-ground of Leithen water, about half-a-mile above the influx of that stream to the Tweed; 6 miles from Peebles; and about 28 from Edinburgh; overlooked on the east and the west by high and partly wooded

hills, and commanding, especially towards the south, a limited hut delightful prospect. Deriving its chief importance from the attraction of visitors and summer-residents to its medicinal well, it is rich, as to the position and the character of its environs, in the advantages of a choice retreat for invalids, and a place of fashionable retirement. To persons who are fond of angling it offers the teeming waters of the Leithen and the Tweed, and is within an easy distance of the Quair, St. Mary's loch, and various other trouting waters. To lovers of ease and quiet, who, while they enjoy the luxuries of rustication, deprecate the toils of travelling, and the dulness of far removal from the busy scenes of life, it presents, at the distance of a comfortable drive from Edinburgh, a retirement almost Arcadian, stilly and delightful in pastoral repose, where walks at will and solitary rambles are liable to hardly an intrusion. To persons who luxuriate in drives and pedestrian incursions among the beauties of landscape, it offers in profusion the romantic dells and softly highland expanses of green Tweeddale,—a gorgeous stretch westward to Peebles, and eastward to Ahhotsford and Melrose, of the magnificent Tweed,—the retreats of Elibank and Horshurgh wood, the classic scenes of 'the hush ahoon Traquair,' and, above all, at no great distance, those thrilling charms of the hraes and waters, and 'dowy dells' of Yarrow, which have drawn melodious numbers from perhaps a moiety of the poetic genius of Britain. To invalids it presents a dry and healthy climate,—the medicinal properties of its well, in various appliances expressly framed to hear salutariously upon visitors,—and what persons who are really or judiciously in quest of health will highly prize, comparative freedom from the fashionable dissipation which absurdity has contrived to make ascendant in some watering-places of Britain. Even to men of intellectual pursuits or of a literary taste, it possesses a sufficient character for attracting persons of their class, to afford a hope that they will not want suitable society; and it offers, on the spot, enough of hooks and periodical literature to prevent habits from becoming rusted; and everywhere in its vicinity, it holds out objects of antiquarian and scientific research. A writer, some 25 years ago, on the district in which it is emhosomed, made, therefore, more display of his alliterations and pleonasm, than of his soundness of judgment, when he mentioned as a "defect" incompatible with its prosperity, the want of "feature, force, fulness, and novelty, in the scenery, by the expressive holdness of striking rocks, and the romantic enrichment of their sheltering trees, to impress and attract the senses, and, through them, rouse, stir up, raise and enliven the spirits, by removing that dulness which the tame tranquillity of loneliness, in a pastoral district, in unison with its flocks, is apt to produce in its inhabitants, where its surface is uniform, insipid, uninteresting, and bald." [Note on p. 233 of the annotated edition of Dr. Pennecuik's Works. Leith, 1815.]—If Innerleithen—with the hanging woods on the hill-sides which overlook it, and the mansion of Traquair peeping out from a rich grove on the further bank of the Tweed, and the alternately green and rocky eminences which flank the glens coming down through the parish, and the near vicinity of the supereminent district of song and poesy—is thus to be denounced, where is the vocabulary which shall supply terms for the proportionate denunciation of the most hoasted spa-scenes of England?

Part of Innerleithen stands on the estate of Pirn, on the east side of the Leithen; hut by far the greater part is built on the property of the Earl of Traquair, on the west side of the stream. One reason of the balance being so much on the west bank is, that the

ground has been feued by the noble proprietor on advantageous terms. The village consists chiefly of one neatly edified street along the public road, winged with detached buildings, and little clusters of houses. Most of the structures have been erected as accommodation for summer-rusticators and invalid visitors to the spa, and are not unworthy to receive as inmates the persons to whom mainly the village looks for support,—those accustomed to the delightful city-homes of the metropolis of Scotland. In the village are some good shops,—two large and commodious inns, each of which has a public table or ordinary during spring and summer,—one inn of secondary spaciousness,—a circulating library, with an attached reading-room,—and appliances for concerts, halls, public recitations, and occasional histrionic exhibitions. Over the medicinal well is an elegant structure erected by the late Earl of Traquair; and the pump-room combines with its proper character that of a public news-room. Across the Leithen is a stone-bridge, connecting the two parts of the village, and carrying over the Glasgow and Kelso turnpike. Over the Tweed, in the immediate vicinity, is a beautiful wooden bridge, constructed by the skill and personal superintendence of Mr. Jardine, civil engineer, and opening a delightful communication with the grounds of Traquair, and with the attractive northern section of Ettrick Forest. In the immediate vicinity of the village rises the neat small form of the parish-church. On the Leithen stands a large factory, a building five stories high, presenting an aspect strangely out of keeping with all the other features of the village and country landscape. A friendly society was instituted in 1808, and is in a prosperous condition. A club, formed in 1827 by upwards of forty noblemen and landed proprietors, managed under the auspices, or with the personal care of some of the most distinguished individuals connected with Tweeddale and Selkirkshire, and the Border districts, and bearing the name of the St. Ronan's club, patronizes a fondness which the natives of the district have during ages displayed for athletic sports, holds an annual festival called 'the Border games,' for the exhibition of gymnastic exercises, and promotes an annual competition during one day in trout-fishing. Great concourses, on these occasions, are drawn to the village; men eminent in the exploits of literature are attracted to witness peaceful feats of prowess; and aristocrat, philosopher, lawyer, yeoman, and artisan—sturdy and skilful in muscular effort, or pleased to watch its play and emulation—sit down at a common board, and forget, for a season, the artificial distinctions of a modern age, in admiration of the rough energies which formed the prime object of attention to ancient republics.

The mineral spring to which the village mainly owes its prosperity, seems to have been unremarked for its medicinal properties till about the commencement of the present century. Till then it was noted chiefly or altogether as the resort of pigeons from the circumjacent country, and bore the name of the Doo-well. Had any saint in the Romish calendar been acquainted with it, the priests of the age preceding the Reformation would have pictured him to their gullible flocks as performing a far different exploit in connection with its waters, than that which Meg Dods ascribes to the patron saint of 'the Aulton' in reference to St. Ronan's Well, and would hardly have failed to send down to posterity the fame of miracles achieved by the naturally salutiferous properties of its waters. Even after it came into late notice, the well was a trivial, repulsive-looking fountain, hubbling up amidst a little marsh; and had no better appliance than a rustic bench placed at its side

for the accommodation of the infirm invalids who crept or were carried to it in quest of health. A simple pump afterwards rose gauntly from its mouth, amidst the wet miry puddle around it. But about twenty years ago, or not much earlier, the spa, with remarkable suddenness, and in a way nearly unaccountable, became celebrated among valetudinarians of all classes in Edinburgh and throughout the south of Scotland. The well, in the decorations built over and around it, in the character assigned to it by popular opinion, and in the influence it exerted on the village in its vicinity, now rose, as if by magic, from the status of a watery hole in a quagmire, to that of an infant competitor with the proud spas of England. In 1824, the publication of Sir Walter Scott's tale of St. Ronan's Well, greatly enhanced its celebrity, and poured down upon it some rays of that lustre which popular opinion then assigned to 'the Great Unknown;' for nearly all the readers of light literature, in spite of the utter difficulty which a topographer would have felt to discover resemblances, unhesitatingly identified the Marchthorn and the St. Ronan's of the tale with Peebles and Innerleithen. The well springs up at the base of the Lee-pen, about 200 feet above the street of the village. In its original state, it issued in small quantities, and at only one spring; but, when the ground was dug to its source, in order to clear away admixtures near the surface, it became emitted in two streams of different strength. On analysis, a quart of the less impregnated stream was found to contain 5·3 grains of carbonate of magnesia, 9·5 grains of muriate of lime, 21·2 grains of muriate of soda,—in all, 36 grains; and a quart of the other stream, 10·2 grains of carbonate of magnesia, 19·4 of muriate of lime, and 31 of muriate of soda,—in all, 60·6 grains. The waters, jointly with the salubrious influence of the fine climate, are efficacious chiefly in cases of ophthalmic complaints, old wounds, and dyspeptic and bilious disorders.

Previous to the enriching discovery of the medicinal qualities of the well, Innerleithen gave some promise of its being about to cast off its pristine and ancient condition of a tiny sequestered hamlet, consisting of a few thatched houses, a mill, and a church, by becoming the adopted seat of an important manufacture. Toward the close of last century, Mr. Alexander Brodie, a native of Traquair, who had acquired wealth and mercantile insight in London, thought the site of the hamlet, upon a streamlet of much water-power, and in the midst of an extensive pastoral country, peculiarly favourable for a woollen manufactory, and expended £3,000 in erecting the edifice which now lifts its lumpish form beside the village. But though the factory enjoyed several years of his personal superintendence, and, in the first instance, occasioned colonizing and stir around its site, it never fairly prospered; and, after his death, it passed into the hands of various and successive lessees, and entailed upon some of them pecuniary loss. The fabrics are partly tartans, and chiefly broad-cloth. The annual consumption of raw material is between 2,500 and 3,000 stones. A few of the tartan weavers earn the same wages as those of Galashiels,—16s. 6d. a-week; but some, glad to break away from cotton-weaving at Peebles, have been engaged for 11s. 6d. a-week, but at the expense of being frowned upon by their craft. The condition of the operatives engaged in the manufacture is good. The number of hand-looms was, in 1828, 10; and in 1838, 24. Population of the village, in 1838, irrespective of summer-visitors, or persons attracted by the spa, 412.

INNERPEFFRAY. See INCHCAFFERY.

INNERWELL, the name of various localities in the parish of Sorbie, Wigtonshire. The chief are

Innerwell-point, a tiny headland  $1\frac{1}{2}$  mile north of Eagerness; and Innerwell-port, a fishing-station  $\frac{3}{4}$  of a mile farther north, where there is a salmon fishery rented at about £200 a-year.

INNERWICK, or INVERWICK, a parish in the eastern division of Haddingtonshire; bounded on the north-west by Spott and Dunbar; on the north-east by the German ocean; on the east by Oldbamstocks; on the south by Berwickshire; on the south-west by a detached portion of Spott; and on the west by detached portions of Dunbar and Stenton, and by the main body of Spott. It is of somewhat a horse-shoe form, with the convex side facing the west, and measures about  $9\frac{1}{2}$  miles in length, by about  $2\frac{1}{2}$  in average breadth. Two-thirds of the surface stretch across the Lammermoor hills. The highest ground is about mid-distance between the sea and the southern boundary. Upward by a slow ascent, from the south to this point, and downward by a considerable descent from it, till within 3 miles of the sea, the surface is in general heathy and wildly pastoral, yet contains some patches of arable soil, and is occasionally relieved by verdure on the hills, by the cheerful aspect of the cottage and the farmstead, and by the lively movements and green dells banks of its pastoral streamlets. Along the northern side of the Lammermoors, in a belt which connects them with the plain, are ravines which break precipitously down in dresses of wildness and of hanging woods, to brooks which trot noisily along their stony bottoms, and dells clothed in verdure and various herbage, and disclosing here and there a pleasing prospect over a richly cultivated valley to the sea. Intervening between this chequered belt and the sea is a luxuriant and very fertile plain,—rich in all the features of scenery which kindle the enthusiasm of a keen farmer, variegated in three instances with the tracery of plantation, but, in general, not sufficiently tufted and frilled with wood to awaken a sensation of unqualified pleasure in a person of taste. The coast—which, followed along its indentations, is about  $2\frac{1}{4}$  or  $2\frac{1}{2}$  miles in extent—partakes, in a general way, but tamely, of the rocky boldness with which the ocean is confronted from Dunbar to St. Abb's Head. About five-ninths of the area of the parish are in natural pasture; nearly four-ninths are in tillage; and about 350 acres are under plantation.—Monynut water rises in a peat-moss in Innerwick common, near the centre of the highest ground of the parish; flows southward alongside of the hilly ridge called Monynut edge, and assuming now a south-easterly direction, traces for  $2\frac{1}{2}$  miles the eastern boundary,—performing from its source to the south-eastern extremity of the parish, a course of  $4\frac{1}{2}$  miles. Philip-burn rises on Peat-law, and, not far from its origin, begins to trace for 2 miles the southern boundary, when it falls into the Monynut. Craig-burn rises at the central heights of the parish, and forms, from its origin to its junction with the Whitadder at St. Agnes, over a distance of  $4\frac{1}{2}$  miles, the western boundary-line; and, in its progress, it is joined generally at right angles, by a surprising number of brief rills, whose cleugh-heads or glens form with its valley, a sort of rib-work of vales. Back-burn rises within 3 furlongs of the former, and has about the same length of course, and, like it, forms all the way the western boundary-line; but, of course, flows in an opposite direction, and cheerily moves along the plain to the sea. Thornton water rises within  $\frac{1}{2}$  of a mile of the source of Monynut water, flows 2 miles eastward,  $1\frac{1}{2}$  northward, and 3 north-eastward,—receiving several indigenous little tributaries among the hills, turning a grinding-mill about the middle of its course, and curving round the village of Innerwick at a brief distance on the plain,

—and falls into the sea at the village of Thornton-loch. Numerous springs, welling up in a plentifulness quite in keeping with the profusion of streams, supply the inhabitants with abundance of excellent water.—Limestone abounds on the lands of Skateraw, and is there burned in such quantities as supply a large part of the circumjacent agricultural district. Coal seems to have been anciently worked, but has ceased to draw attention. Sandstone is abundant, but is quarried only for local use.—On a steep eminence overhanging a rocky glen, near the village of Innerwick, stand the venerable ruins of Innerwick castle, an ancient strength of considerable importance. Grose gives a drawing of it in his Antiquities. Originally, it was the property of the Stewarts; but afterwards it passed into the possession of the Hamiltons of Innerwick. On an eminence opposite to it, on the other side of the glen, anciently stood Thornton castle, a stronghold of Lord Home. Both of the fortresses were attacked and beaten into ruins by Protector Somerset, during his invasion of Scotland.—A short way south of their site are slender remains of a bridge variously called Edirkeus, Edinkens, Edincain, and King Edward's,—a name which has been connected by antiquarian criticism sometimes with Edward of England, and more frequently with Edwin of Northumbria, to whom the metropolis of Scotland is supposed to owe her designation. Near the bridge stood, till a very modern date, four grey stones, which were conjectured to indicate the sepulchre of some ancient person of great note. In a field near Dryburn bridge, two stone coffins, containing a dagger and a ring, were not long ago discovered.—The parish is intersected along the coast by the mail-road between Edinburgh and London, by way of Berwick; and along Monynut edge by a road between Dunbar and Dunse; and it has, in its lowlands, a fair provision of well-kept subordinate roads. A small barbour on the coast of the Skateraw property serves for exporting lime and importing coal. The villages are THORNTON-LOCH [which see], and Innerwick. The latter is situated at the base of a steep but cultivated hill, about a mile west of the Edinburgh and London road; and though clean, and not unpleasing in appearance, is plainless and straggling. Population of the parish, in 1801, 846; in 1831, 987. Houses 191. Assessed property, in 1815, £12,182.—Innerwick is in the presbytery of Dunbar, and synod of Lotbiau and Tweeddale. Patron, Mr. Ferguson of Raith. Stipend £277 19s. 2d.; glebe £15. Unappropriated tithes £382 9s. 10d. Walter, son of Alan, the first Stewart, received a grant of the extensive manor of Innerwick from David I., and he gave to the monks of Paisley, at the epoch of their establishment, the church of Innerwick, with its pertinents, a mill, and a carrucate of land. Various English vassals settled within the manor. The second Walter, the Stewart, gave to the monks of Kelso some land, and pastures within the manor, and liberty to erect a mill. In 1404 the barony, jointly with all the possessions of the Stewarts, was erected into a free regality as a principality for the eldest sons of the Scottish kings. As part of that regality, it was annexed to Renfrewshire at the erection of that district into a county. In 1670, and 1671, Sir Peter Wedderburn of Gosford obtained grants of the rectory, vicarage, and tithes of Innerwick, and the baronies of Innerwick and Thornton. Anciently, there was within the parish a chapel dedicated to St. Dennis. The ruins of the building existed till a recent date on a small promontory on the Skateraw coast, but they have now entirely disappeared.—Parochial schoolmaster's salary £31, with £40 fees, and other emoluments.

INSCHE, a parish in the district of Garioch, Aberdeenshire; bounded on the north by the water of Urie, which divides it from Drumhlade and Forgue; on the east by Culsalmond; on the south by Kemnay; and on the west by Kinnethmont and Gartly. Its figure approaches to a square; length 5 miles; breadth 3; square area 7,500 acres. Houses 270. Assessed property, in 1815, £2,360. Population, in 1801, 798; in 1831, 1,338; in 1836, 1,365. The soil in the southern part of the parish is fertile; but a small part only is arable. The higher lands afford excellent pasturage, especially Dun-o-deer hill, a conical eminence about 3,000 yards in circumference at the base, and rising, insulated from the level plain of the Garioch, to the height of 300 feet. According to that voracious historian, Hector Boethius, the pasturage of this hill was wont to turn the teeth of sheep, in cropping it, to the semblance of gold. We need scarcely say that though the sheep themselves are turned into gold, the pasturage has now no such effect on the teeth in particular. On the summit of this hill are the vitrified ruins of a castle said to have been erected by Gregory the Great. Dun-o-deer has much the appearance of an extinct volcano. Part of Fouldland hill, rising 300 feet above sea-level, is within this parish: in its higher parts are extensive quarries of fine blue slate. The kirk-town of Insch is a small burgh-of-harony with a weekly market: it is situated at the southern extremity of the parish, 26 miles north-west from Aberdeen, with which this district principally communicates by the Inverury canal.—This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Sir John Forhes, Bart. Stipend £204 7s. 9d.; glebe £15. Unappropriated teinds £47 0s. 9d. Church built, according to date on helfry, in 1613; repaired in 1794; sittings 413. Here is a Baptist congregation who assemble in a thrashing-mill provided with forms for 160 sitters. Schoolmaster's salary £27, with £17 fees, and other emoluments. There are three private schools in the parish.

INSCHE, a *quoad sacra* parish in the presbytery of Abernethy, and synod of Moray. It was at one time partly united to the parish of Alvie, and partly to Kingussie; but, in 1828, was disjoined from these parishes, and erected into a parish, *quoad sacra*, under the act 5<sup>o</sup> Geo. IV. c. 90. Population 644. The church is an ancient building; sittings 300. Stipend £120, paid by Government, with a manse and glebe.

INVER (Lochn), a small arm of the sea, on the north-west coast of Sutherlandshire, near the promontory of Ru-Stoer. It gives name to the only village in the parish, Inver or Lochinver, which is a post-station, 245 miles north-north-west of Edinburgh: see ASSYNT.

INVER, or INVAR, a hamlet on the great road from Perth to Inverness, at the confluence of the Braan and the Tay, on the eastern verge of the parish of Little Dunkeld, Perthshire. It stands immediately opposite the town of Dunkeld, and, previous to the erection of the bridge, it was the ferry-station of the town.

INVERALLEN, partly in the shire of Inverness, and partly in the shire of Elgin, an ancient vicarage now comprehended in the parish of Cromdale. The church is on the western bank of the Spey, and, together with the surrounding hurying-place, is still in use. It is  $1\frac{1}{2}$  mile south-west of Grantown.

INVERARITY, a parish in the centre of the southern division of Forfarshire; bounded on the north-west by Kinnettles; on the north by Forfar; on the north-east by Dunnichen; on the east by one of the parts of Guthrie; on the south-east by Monikie; on the south by Muirhouse; on the south-

west by Tealing; and on the west by Glamis. In outline, it approaches the figure of a circle; and, in measurement, it is about  $4\frac{1}{4}$  or  $4\frac{1}{2}$  miles in diameter. Arity water, a large tributary of Dean water—so large, and so greatly longer in course than that sluggish drain of Loch-Forfar, as to be really the parent stream—comes in upon the parish from the east, and intersects it right through the middle; and about halfway across it is joined on its left bank by Corbourn, which rises in several head-waters at and beyond the south-western boundary, and comes bending round, first eastward, and next northward, to the point of confluence. Where the streams unite, or a little eastward, a valley or little strath commences, and stretching thence to the western boundary, forms a sequestered level, overlooked and encinctured by an amphitheatre of hills. Ascending gently on almost all sides from this valley, the surface rolls upward to the boundaries in soft hills, variegated, and, in some instances, covered with plantation. But though the parish seems not naturally favourable to the plough, two-thirds of it are cultivated, and one-sixth under plantation, only another sixth being left in a waste or uncultivated condition. The soil, in the valley, is chiefly alluvial; on the high grounds, is, extensively, a hard loam; but, in numerous districts, is clayey or various. Sandstone and grey slate abound, and are plentifully worked. Dotterels visit the parish; rails and woodcocks also abound. Roe-deer are numerous. The mansions are Fotheringham and Kincaldrum, both in the central valley. There is no village.—On the eastern boundary, and partly in the parish of Guthrie, are traces of the outer ditch and rampart of a Roman camp, called 'Haer Faads.' The parish is traversed northward and southward by the great western road between Dundee and Aberdeen, and is otherwise well provided with roads. It is also intersected in its northern part by the Dundee and Forfar railway. Population, in 1801, 820; in 1831, 904. Houses 173. Assessed property, in 1815, £6,093.—Inverarity is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, Fotheringham of Powrie. Stipend £226 2s. 5d.; glebe 10 acres of land and a manse. Unappropriated teinds £65 13s.—Parochial schoolmaster's salary £34 4s. 4½d., with about £25 fees, and about £7 other emoluments. The present parish comprehends the ancient and united parishes of Inverarity and Meathie.

INVERARY,\* a parish in Argyleshire, extending about 18 miles in length, and on an average 3 in breadth, somewhat in the form of a crescent, and lying chiefly betwixt LOCH-AWE and LOCH-FYNE: see these articles. Its appearance is hilly and even

\* "Inverary,—in Gaelic, *Ion-ar-ao-reidh*,—is the modern name of the parish. The appellations by which it was formerly distinguished, viz., Kilmilieu and Glenery, were either given in consequence of its being the cell of some monk, or from a glen which forms a considerable part of the district. The river which runs by Inverary,—in Gaelic, *Ao-reidh*,—is a contraction of *ao*, a privative, 'not,' and *reidh*, 'smooth.' This etymology suits with the appearance of some parts of the river at this day, and was very applicable to the whole of it before its channel was cleared. *Ao-reidh*, is evidently contrasted with *Sio-reidh*, 'always smooth,'—the name of another river near the town, remarkable for its smoothness. From *Ao-reidh*, is derived *Glenao-reidh*, the valley through which the river passes, and *Ion-ar-ao-reidh*, the flat ground on both sides the mouth of the river. It is probable, that agriculture was first attempted on such fertile spots as were thus situated. The name universally given in Gaelic to such pieces of ground, favours this idea. *Ion-ar*, or *Inver*, means, 'worthy of tillage,' from *ion*, 'deserving of,' and *ar*, 'to till.' *Ion-ar-ao-reidh*, may therefore signify 'a piece of flat fertile ground at the mouth of a rapid rough river;' or, *ao-ath*, may signify unlucky, from the frequent accidental drownings which may be supposed to have happened in a rapid rough river, before bridges were built on it, and which, from the contiguity of the hills, is apt to be overflowed in a very short space of time, an instance of which happened on the 3d of August, 1792, when, in consequence of a high flood, salmon and trout were caught on the very roads and meadows."—*Old Statistical Account*.

mountainous, though interspersed with several tracts of flat ground, particularly about the town, and the vale of Glenshira. The whole of the flat ground is arable, with a rich deep soil; but the rest is shallow, and not naturally fertile, though much improved by the use of lime as a manure. The parish lies along the coast of Loch-Fyne, and is watered by the ARAY [which see] and the Shira, both of which fall into the loch near the town. The latter stream, in its course through Glenshira, forms an expanse of water called Loch-Dow,—‘the Black loch,’—from the darkness of its bottom, or the depth of its water. In high tides, the sea flows as high as this lake; and it is no uncommon circumstance for herrings and other salt-water fish to be caught here in the same net with trout and salmon.—Not far from the town, on a level space on the south bank of the Aray, is the castle of Inverary, the principal seat of the Duke of Argyle. It is a large quadrangular building, with a round tower at each corner, and a high glazed pavilion, by which the staircase and saloon are lighted, shooting up above the towers in the centre. It was founded in 1745, and is built of a variety of micaceous slate, brought from the other side of the lake, which is extremely soft, but will, in all probability, long stand the effects of the weather. This stone is of a blue grey colour; a single shower of rain turns it almost black, but a gleam of the sun restores its original colour. The hall is hung round with arms very neatly arranged, and other ornaments suited to the grandeur of a Highland castle; but the rest of the house is fitted up in a modern style, and some of the rooms are hung with fine tapestry. From the lawn the scenery is very fine. The Aray, with its beautiful cascades,—the expanded bay of Loch-Fyne, which here forms an irregular circle of about 12 or 14 miles in circumference,—the hill of Dunnyqueach, or Duniquoich, rising in the form of a pyramid to the height of 700 feet, clothed to near its summit with a thick wood of trees, and surmounted with a rude watch-tower,—the richly wooded banks towards Essachossan, and the distant screen of mountains,—form a noble assemblage of grand and beautiful objects. A manuscript journal now before us, thus narrates the ascent of Duniquoich:—“Immediately after breakfast we set out with the view of ascending the abrupt cone-shaped hill which had attracted so much of our attention last night. C. led the way; and as we had acquired a sheep-like habit of implicitly following our leader, we moved in a line behind him, and a pretty bit of a dance he led us! In fact, we were soon convinced that he knew no more than ourselves about the road by which we might best achieve the enterprise on which we were bent, and that we had acted more discreetly in this—as in other instances—had we taken counsel of the natives before we began to climb the sugar-loaf shaped Duniquoich. At first we got on pretty well for a few yards,—the soil being firm, and the trees kindly lending us their aid; but the path ‘grew faint and fainter still,’ and at last disappeared entirely, leaving us to fight our desperate way over large stones and deep fosses, and through strong tufts of underwood, and long rank grass, and huge ferns, all linked together by intricate brambles, and forming a kind of jungle which it required both address and strength to penetrate. Here and there appeared a few most deceptive patches of bright green moss, on which, as soon as you had placed your foot, you found yourself immersed over the ankles in water. Still we worked our way upwards, ‘thorough brake, thorough briar,’ though often compelled to pause in our ascent; and at last, after about an hour’s hard labour, we stood upon the summit of Duniquoich,—not a naked spiry pinnacle—as we had somehow premised—hut

green as a meadow, and of considerable breadth. A scene of ample extent, and mingled barrenness and beauty, stretched around us. On three sides was an amphitheatre of mountains and moorlands. Beneath us lay the richly grouped woods and verdant meadows of Glenarary; and the noble loch, on which a few little sails flitted to and fro, stretched away in calm beauty into the distant horizon, between the long and waving outline of its mountain-bank. We descended at hap-hazard from our cloud-kissing elevation, and as each took paths and ways of their own in the descent, we had each our peculiar mishaps and grievances. My boots perished in the service, and it was unanimously agreed in recounting our adventures, that the ascent of Duniquoich is a feat which none should attempt unless in woodland trim.”—The plantations are extensive, and finely laid out; every unimprovable crevice, glen, and mountain is covered with trees, of which the present value is still immense, although the late Duke sold upwards of £100,000 worth of timber from the estate. Population of the town and parish, in 1801, 2,051; in 1831, 2,133. Assessed property £6,261. The valued rent, in 1751, was £274 11s. 11d., which was then considered to be about half the real rental. Houses 289.—The parish of Inverary, formerly a vicarage, is in the synod of Argyle, and is the seat of a presbytery. It was originally under the charge of one minister, but by the commission of parliament in 1650–1, it was placed under two, with separate kirk-sessions, and presiding respectively over what are called the Highland and the Lowland congregations, or the English and the Gaelic churches. Both churches were built under one roof, in 1794, at the expense of the Duke of Argyle, the only heritor in the parish. Stipend of English minister £168 15s. 6d.; glebe £45; of the 2d or Gaelic minister £157 15s. 7d.; glebe £30.—A United Secession church was opened in 1836, at an expense of about £500; sittings 205. It is built on a feu of 42 years from Whitsunday 1836, and is vested in trustees appointed by the United Secession congregation of Regent-place, Glasgow.—There are two parochial schools; one in the burgh, and another about 4½ miles distant. The united salaries of the masters are £51 6s. 8d. per annum, with about £60 fees. There were also five private schools in 1834.

INVERARY,—in Gaelic *Ion-ar-aoreidh*,—a royal burgh in the above parish, and the county-town of Argyleshire; 60 miles north-west of Glasgow, by Luss and Arroquhar; 39 north by west of Rothesay, in Bute; 73½ north by east of Campbelltown; and 22 south-east of Oban. It is situated on a small bay on the north-east side, and within 5 miles of the head of Loch-Fyne, where the Aray falls into that arm of the sea. It is a small town, consisting chiefly of one street, running nearly east and west, in the centre of which stands the church, and another row of houses which face the bay. The population, in 1831, was 1,117; in 1821, 1,137. The houses are well-built, and covered with slate. There are two very good inns. The old town—which was a dirty ill-built village, situated on the north side of the bay, on the lawn immediately before the castle—was removed to its present situation, about half-a-mile from the castle, and the greater part rebuilt by Archibald, Duke of Argyle. It seems probable, that, prior to the beginning of the 14th century, Inverary was little more than a place for fishermen, who lived by their occupation, and erected their huts here. About that period, the family of Argyle fixed upon it as their place of residence; and, as the hereditary jurisdictions of sheriff and justiciary were vested in that family, it became of consequence the seat of the courts and the county-town. It was erected into a

royal burgh by charter from Charles I., dated at Carisbrook castle, in the isle of Wight, 28th January, 1648. The territory of the burgh lies within the following boundaries, viz.: "The burn called the Cromalt, at the south; the green and yard-dykes of the Duke of Argyle's house of Inverary, the lands of Kilmahew, and the burn of Auchareoch, respectively, on the north; Loch-Fyne, on the east; and the Duke's park-dyke, and the common muir, respectively, on the west part." The whole territory, with the exception of one small feu, belongs in property to the Duke of Argyle. The inhabitants hold the houses and ground within burgh under leases from his Grace, or as tenants at will. His Grace, from the terms of the entail of his estate, cannot give leases for a longer period than 19 years. The burgh-territory, as described in the charter, extends beyond the parliamentary boundaries. By the charter, the council is declared to consist of a provost, 4 bailies, a dean-of-guild, treasurer, and 12 councillors. It has, however, been the invariable usage, for the last forty years, to elect only 2 bailies. It has also been the custom to elect one or more honorary councillors, but this was considered a mere compliment to the persons elected, who seldom or never attended a meeting of council. The right of election was vested by the charter in the inhabitants, and they were to elect the provost from a leet of 3, and the bailies from a leet of 12 persons. These leets were to be furnished by the Duke; and if he failed to do so, the burgh was entitled to elect its own magistrates for that year. The practice, previous to 3<sup>d</sup> and 4<sup>o</sup> William IV. c. 76, had always been for the old council annually to choose the succeeding or new council. The only revenues of the burgh arise from the right of ferrying passengers and cattle to the opposite side of the loch, which is now leased at £40 per annum, certain petty customs, and the rent of a common, called the muir of Auchenhreck; both these last produce about £120 sterling annually. In 1750 Duke Archibald, seeing how inadequate this revenue was for the occasions of the burgh, added to it a perpetual annuity of £20, secured on his estate of Stronshira. The total revenue, in 1839-40, was £157. Inverary unites with Ayr, Irvine, Campbelltown, and Oban, in returning a member to parliament. The parliamentary and municipal constituency, in 1840, was 55.—The chief support of the place is the herring-fishery, which appears to have subsisted here from time immemorial. Its harbour was anciently called *Slochh Ichopper*, 'the Gullet where vessels harter fish;' and the arms of the town represent a net with a herring, with the motto, 'Semper tibi pendeat halec.' It appears also, that the merchants of France were in use to come here and harter their wines for herrings; and a point of land, called the Frenchman's point, is stated by tradition to have been the place where the merchants transacted their affairs.—Near the centre of the town is a monument erected to the memory of several gentlemen of the name of Campbell, who were put to death during Montrose's inroad into Argyle, on a spot near the present castle, marked by a rude pillar of unhewn stone.

INVERAVEN, a parish partly in Morayshire, stretching from the river Spey to the borders of Aberdeenshire, but chiefly in Banffshire; bounded on the north by Mortlach and Aberlour; on the east by Cabrach; and on the south and west by Cromdale and Kirkmichael. Its form is irregular, tapering towards the north-west. Length about 20 miles; breadth from 4 to 9. Houses 537. Assessed property, in 1815, £5,470. Population, in 1801, 2,107; in 1831, 2,648. The river Livet intersects this parish, rising from numerous sources within its limits, and flowing

north-westwardly through the celebrated Glenlivet—which occupies a considerable portion of this parish—to the Aven, whence the name Inveraven is derived. The Aven, however, only skirts the parish on the west, in its course to the Spey, which runs across the north-western boundary: See article THE AVEN. Most part of this parish consists of moor and mountain, giving the district a bleak aspect, except along the banks of the rivers where the land is arable, and occasionally adorned with attractive and picturesque scenery. Much waste land, however, has been deemed, particularly in Glenlivet, where the Gordon estate is being rapidly brought into a good state of cultivation. On the banks of the Spey here, there is a considerable extent of oak wood, and copses of birch and alder abound on the banks of the rivers in general. Inveraven-Proprietor is studded with plantations. The woods of Ballindalloch are extensive, and contain some noble trees, particularly two spruce firs near the mansion-house, and a number of splendid trees adorning the lawn. Roe deer are numerous on this estate, and game is abundant throughout the parish. Benrinnes [see article ABERLOUR] is partly in this parish. On its top is a small basin usually filled with water, and a cave in which Grant of Carrion—'James of the Hill'—is said to have made his hiding-place. The chief mineral production of this parish is the peculiar limestone of Glenlivet, imbedded in gneiss. It is extensively burnt with peat by the farmers. Many of the houses here—two storied and slated—are of a highly respectable order. The house of Ballindalloch is an excellent specimen of the ancient Scottish stronghold. It consists of a square building flanked by three circular towers, the central and largest of which, containing the gateway, is surmounted by a square watch-tower, called the Cape house, built in 1602. Two extensive wings were added in the beginning of the 18th century. Kilmarchie is a venerable mansion, very appropriately adorned with ancient firs, the trunk of one of which measures no less than 11 feet in circumference at the base. At Blairfeldy are the ruins of a hunting-seat of the Earls of Huntly, and at the confluence of the Livet with the Aven are the ruins of the ancient castle of Drumin. There are traces of three Druidical temples in the parish. The old bridge over the Livet at Upper Downan was destroyed by the great floods of 1829; but in 1835 an elegant one was built a little further up the river. Three miles higher up is Tomnavoulen bridge. Over the Aven at Crag-Achrochan, and over the rapid burn of Tommore there are also bridges.—This parish is in the presbytery of Aberlour, and synod of Moray. Patron, the Earl of Seafield. Stipend £238 17s. 11d.; glebe £7. Unappropriated tithes £138 16s. 7d. Church built in 1806; sittings 550. It is situated on the brink of the river Spey.—The inhabitants of Glenlivet are superintended by a missionary employed by the General Assembly. Church rebuilt in 1825; sittings 300. This mission has been in operation since 1727. The population of the mission-district, in 1836, consisted of 839 individuals belonging to the Established church, and 1,118 Roman Catholics.—A Roman Catholic congregation has existed in the parish time immemorial,—in 1829 it was subdivided into two. Chapel at Tombae built in 1829; sittings 567. The other congregation is at Chapelton of Glenlivet.—Schoolmaster's salary £29, with £21 fees, and other emoluments, besides a share of the Dick bequest. There are 5 private schools in the parish.

INVERBIE. See BERVIE.

INVERBROTHOCK, a *quoad sacra* parish, comprehending the suburbs of the town of Arbroath, and surrounding Arbroath parish on the east, north, and north-west, on the coast of Forfarshire. It is

in the presbytery of Arbroath, and synod of Angus and Mearns, and was disjoined by the presbytery, in 1834, from the parish of St. Vigeans. According to an ecclesiastical census, taken partly in 1835 and partly in 1836, the population then was 4,759; of whom 3,435 belonged to the establishment, 967 were dissenters, and 357 were not known to be connected with any religious body. The whole population, except a very few families, are of the labouring classes. The church was built in 1828, at a cost of about £2,200; sitting 1,224. Stipend £175.—There are in the parish two dissenting places of worship. The Wesleyan Methodist congregation was established in 1770; and their chapel was built in 1772. Sittings 405. Stipend £113 4s.; hut variable according to the domestic circumstances of the minister.—The Original Seceder congregation was formed in 1805. Their place of worship was built in 1821, and cost about £500. Sittings 450. Stipend £70, with £10 for house-rent.

INVERCAULD. See BRAEMAR.

INVERCHAOLAIN, a parish in the district of Cowal, in Argyleshire; about 15 miles in greatest length, and 8 in greatest breadth. It is bounded on the north-west by Kilmorlan; on the north-east by Kilmun; on the south-east by Dunoon; and on the south-west by the East Kyle of Bute. It is intersected for 8 miles by Loch-Striven, an arm of the sea, and watered by a small rivulet which flows into the head of the loch. The surface is for the most part rugged. A ridge of mountains rises with a steep ascent all along the coast. In some places there are small flat fields nigh the shore; but, for the most part, the ascent from the sea is immediate. About half-a-mile inland, the soil is thin and sandy, only adapted for pasturage. All the mountains formerly were covered with heath, but many of them are now clothed with a rich sward of grass, since the introduction of sheep. There is a considerable extent of natural wood, which forms an article of importance to the proprietors. The only plantations are around the seats of South-hall and Knockdow. Tradition mentions a battle which took place in this parish, during the reign of Robert III., and many graves and cairns are said to point out the places where the bodies of the fallen were interred. The small island of EALLANGHERRIG [which see] is in this parish. Population, in 1801, 626; in 1831, 596. Assessed property, in 1815, £4,137. Houses, in 1831, 105.—This parish, formerly a vicarage, is in the presbytery of Dunoon, and synod of Argyre. Patron, the Marquess of Bute. Stipend £169 19s. 5d.; glebe £13 10s. Church built in 1812; sittings 250. The minister officiates at least once in the six weeks at Strone, and occasionally at Loch-Strivenhead.—There are two parochial, and two private schools within the parish. The principal schoolmaster has 400 merks per annum, the other 200 merks. Their school-fees amount to about £10.

INVERESK, a parish in the extreme north-east of Edinburghshire; bounded on the north by the frith of Forth; on the east by Haddingtonshire; on the south-east by Cranston; on the south by Dalkeith; on the south-west by Newtown; and on the west by Liherton and Duddingston. But for a considerable projection on the south-east, its form would be nearly that of a half-moon, the straight side or chord being on the north. Its extreme measurement, from West Pans on the north to the limestone quarry south of Chalkyside on the south, is  $3\frac{1}{2}$  miles; and, from St. Clement's wells' distillery on the east to an angle west of Whitehill mines on the west, is  $3\frac{1}{2}$  miles; hut, north and south on the parallel of Musselburgh, it is only  $2\frac{3}{4}$  miles, and east and west along the coast only 2 miles and 3 furlongs. The situa-

tion of this parish is one of the most delightful in Scotland; and its surface one of the most beautiful. Along the shore stretches a broad belt of pleasant and fertile downs, formed by the subsidence of the sea, and only a few feet above the level of high-water, furnishing a charming field for the favourite exercises of golf and walking. Behind this plain—which is about half-a-mile in breadth—the surface rises in a very slow ascent of verdant fields and highly cultivated soil, variegated with soft and irregular undulations, and sending up across the south-western projection or extremity the hills of Fallside and Carberry, 540 feet above sea-level. Beginning at the eastern extremity, the ascent immediately behind the plain, extends westward in a swelling curve to the beautiful rising ground, called the Hill of Inveresk, on which has stood, from time immemorial, the parish-church, commanding a most brilliant prospect, and forming itself, in its present form, with its tall and elegant spire, an attractive object from many points of view, in a limited hut opulent part of the exulting landscape of the Lothians. This rising ground—which is about  $\frac{3}{4}$  of a mile from the sea, and a little westward of mid-distance between the eastern and the western boundaries—has the form of a crescent, with the concave side toward the south, and the rich vale of the river Esk ploughed curvingly round its southern and its western base; and, though of very inconsiderable elevation above the level of the sea, it has so free an exposure on all sides, except the east, as hoth to seem conspicuous from a little distance, and to command, for the town which hangs on its sides, delightful prospects and healthful ventilation. On the concave side, in particular, the clustering town, with its adjacent ornamental woods and sloping gardens and elegant villas, gives to the view from its south side one of the finest village-landscapes in Britain; and, in its turn, commands such a prospect of the luxuriant haugh and beautiful water-course of the Esk, and the splendid demesne of Dalkeith-house, and an expanse of richly clothed country stretching away to the Moorfoot hills, as affords an almost perennial feast to the taste. The situation of the village, and of places adjacent, is as healthy as it is agreeable, and long ago obtained for the locality the name of the Montpelier of Scotland.—The river Esk, combining just at the point of entering the parish the waters of the NORTH Esk and the SOUTH Esk, [see these articles], comes in on the demesne of Dalkeith-house from the south, and bisects the parish into considerably unequal parts, in a beautifully winding course northward to the sea between Musselburgh and Fisherrow. An unimportant rill begins to touch the parish a few yards from its source in Haddingtonshire, and forms the eastern boundary over a distance of  $2\frac{3}{4}$  miles to the sea. The celebrated Pinkie burn rises a little south-east of Inveresk hill, and flows first northward and then north-westward to the Esk, between Musselburgh and the sea; hut being little more than a mile in length of course, it derives all its interest from historical association with the disastrous battle to which it gave name. Pinkerton burn comes in upon the parish from the south-west, and flows  $1\frac{1}{4}$  mile north-eastward to the Esk near Monkton hall. Springs, though none of a medicinal kind, are abundant, and supply the parish with excellent water.—The soil, on the flat grounds round Musselburgh and Fisherrow, is sandy, hut having been for ages in a high state of cultivation for gardens and small fields, is abundantly fertile; on the fields above Inveresk, on both sides of the river, it is of a better quality; and toward the highest ground on the south-eastern district it is clayey, and, when properly managed,

carries heavy crops of grain, especially of wheat. Almost the whole surface of the parish exhibits a highly cultivated appearance, and is well-enclosed with stone fences or thriving hedges; and, though probably less planted than comports with fulness of heauty and shelter, it is adorned on the south-west by the extensive woods of Buccleuch-park, and on the west by the fine plantations of New Hailes, and the rising woods of Drummore. Freestone abounds, and is worked in several quarries. Limestone also abounds, hut is not much worked. Coal, of remarkable aggregate thickness of seam, of comparatively easy access, and of good quality, stretches beneath the whole parish. It is, at present, mined chiefly at Monkton-hall, New Craighall, and Edmonstone, and produces, with the labour of upwards of 550 persons, nearly 55,000 tons a-year. Under Esk-grove-house, and terminating in the circumjacent plantation, is a subterranean aqueduct or tunnel, which was cut with enormous labour a little before the middle of last century, as a channel for a stream drawn from the Esk to drive a wheel for draining the coal-mines at Pinkie. The manufactures, fisheries, garden-produce, and commerce of the parish, are of considerable importance, and will be seen by reference to the articles on its towns and villages. The parish is signalized by some remarkable moral characteristics in those of its population who arc connected with the fisheries of Fisherrow, and by fond attachment, on the part of its politer inhabitants, to the amusements of archery and golf. An ancient silver arrow is annually an object of competition on the links of Musselburgh to the Company of Royal Archers. The victor receives £1 10s. and a dozen of claret from the magistrates of Musselburgh, and is bound to append a medal of gold or silver to the arrow before the next year's competition. The arrow remains for a year in the victor's custody, and is regarded, even on its own account, as an object of no little interest, as it has attached to it an almost unbroken series of annual medals, hack to the year 1603. The golf—so long a favourite and peculiar exercise of the Scotch—continues to excite to the full as much interest in Inveresk as in any other of the few localities where it still continues in favour. Children are trained to it from their early years, incited by the attractive fitness for it of the links, and by the encouragement of their parents. To preserve the taste for it, a club of gentlemen was formed in 1760, and purchased a handsome silver cup, which continues to be the object of an annual competition, and is disposed of nearly in the manner of the silver arrow of the archers. But healthful and harmless as golfing is in itself, and cheeringly used by multitudes of exemplary persons, it has unhappily become considerably associated with some vices which have much withered its attractions.—**PINKIE, PINKIE-HOUSE, and CARBERRY HILL,** are objects of deep historical interest: see these articles. Carberry-house, on the northern slope of Carberry hill, in the south-eastern part of the parish, is a modernized mansion of unknown antiquity, and curiously combines, both in its exterior and in its interior, the massive and gloomy character of a baronial strength, with the sprightliness and comfort of a modern gentleman's seat. Monkton house, situated at the south-western verge of the parish, a mile west of the river Esk, is a modern mansion, the seat of Sir John Hope of Pinkie; hut it has attached to it as farm-offices an ancient structure, reported to have been the erection and the favourite residence of the celebrated General Monk. Stonyhill-house, the property of the Earl of Wemyss, situated half-a-mile south-west of Fisherrow, seems, in its present form, to be the offices of an ancient

mansion, which, in former times, was the property and the residence successively of Sir William Sharpe, the son of Archhishop Sharpe, and of the inglorious Colonel Charteris; and it has remnants in its vicinity, especially a huge huttressed garden-wall, of fit accompaniments of a very ancient mansion. New Hailes, formerly the seat of Sir David Dalrymple Lord Hailes, the distinguished historiographer and antiquarian, situated near the western boundary, about half-a-mile from the sea, is attractive on account of its containing his lordship's very valuable library, of its being surrounded with a beautifully disposed demesne, and of its having in its immediate vicinity a columnar monument to the great Earl of Stair.— Besides the eminent persons incidentally mentioned, the parish claims either as natives or as domesticated inhabitants, Logan the poet, Professor Stuart and his son Gilbert, and David Macheth Moir, Esq., the well-known 'Delta' of Blackwood, in the walks of literature; Walker, Burnet, and the Ritchies, in the fine arts; and Sir Ralph Abercrombie, Lord Clive, Major-General Stirling, and Admiral Sir David Milne, in the walks of warlike enterprise.—Antiquities of an interesting kind occur; hut they chiefly fall to be noticed in the article **MUSSELBURGH**. The beautiful hill of Inveresk, so exquisitely adapted to their object, did not escape the notice of the Romans as a fit place for fortifying their hold of the circumjacent part of their province of Valentia. Repeated exposure of ruins, the finding of coins, and some hints in history, indicate their having covered the whole northern face of the rising ground with fortifications. Even the site of the pretorium has been conclusively traced to the summit or apex of the hill now occupied by the parish-church.— Besides the village of Inveresk, the parish contains the towns of **MUSSELBURGH** and **FISHERROW**, and the villages of **NEWBIGGING, WESTPANS, WALLFORD,** and **CRAIGHALL**: which sec. Craighall properly is two villages, Old and New, containing jointly a population of nearly 1,000, almost all of whom are colliers and their families. Newbigging is strictly a suburb of Musselburgh; and extending lengthways, or in the form of a street between it and Inveresk, it entails even upon the latter a suburban character. Inveresk consists chiefly of cottages, ornees, villas, and neat houses, all of modern structure, concatenated on both sides of a round along Inveresk hill, commencing with the parish-church and Inveresk-house, the property of Sir D. Milne, at the west end, sweeping gracefully round the concavity of the rising ground—a curve corresponding to a beautiful bend in the Esk—and extending altogether to a length of 900 yards, or about half-a-mile. The tout-ensemble, however, presents the aspect rather of a pleasing and rapidly occurring series of rural and gardened dwellings, than of compact or continuous ranges of buildings.—Both here and in Newbigging are houses—highly recommended by the salubrioness of the climate, and the sweet heauty of the scenery—for the reception and restorative treatment of lunatics.—The church is a lumpish edifice, built about the beginning of the present century, and originally looking more like a huge barn than an ecclesiastical edifice. To relieve the ungainliness of its appearance, a spire was afterwards added, so heautiful as to have been proposed—though not eventually followed—as a model in the erection of the exquisitely fine spire of St. Andrew's church in Edinburgh. What the present church of Inveresk—for it is not a little spacious—has gained in the truly useful and paramountly important property of extensiveness of accommodation, it has irretrievably lost in the properties which most deeply interest the antiquarian. Its predecessor was an edifice of which its last and enlightened incum-

bent, the Rev. Dr. Carlyle, speaks with enthusiasm. The church was dedicated to St. Michael, and was built, as Dr. Carlyle supposes, soon after the introduction of Christianity, out of the ruins of the Roman fort, the site of whose pretorium it usurped. In its main part, it was 102 feet long, and only 23 feet wide within the walls; but it had four aisles, two on each side, built at different periods; and, in its ends, it had double rows of galleries. So antique a structure, though ill suited to the legitimate objects of a modern place of worship, would now be a feast to the eye which loves to look upon the venerable monuments of a far-away age. In minds of the best and most hallowed cast, too, it would excite a thrill of emotion, from the associated idea of its having been ministered in by the reformer Wishart on the eve of his martyrdom. In 1745, the army of the Chevalier erected a battery in the churchyard, but abandoned it on their commencing their march toward England.—The parish is cut from west to east near the shore, through Fishcarrow and Musselburgh, by the great mail-road from Edinburgh to London; it is traversed by a part of the Edinburgh and Dalkeith railway, and contains the inclined plane of the railway passing New Hailes, Fisherrow, and Craighall; and is, in other respects, as to both sea and land, abundantly provided with means of communication.—Population of the parish, in 1801, 6,600; in 1831, 8,961. Houses 1,154. Assessed property, in 1815, £24,519.—Inveresk is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Duke of Buccleuch. Stipend £324 11s. 3d.; glebe £22. Unappropriated tithes £2,034 11s. 8d. An assistant and successor has £150 salary, paid by the minister. An assistant, additional to the assistant and successor, receives £26 18s. from an endowment and seat-rents, and holds the office of session-clerk at an emolument of from £35 to £40. Sittings in the parish-church 2,400.—A *quoad sacra* parish called North Esk, comprehending all the portion of the parliamentary burgh of Musselburgh which lies west of the river Esk, and containing, in 1838, a population of 3,466, was recently erected. The parish-church, situated in Fisherrow, was built in 1838. Sittings 1,000.—Inveresk, *quoad civilia*, had, according to ecclesiastical survey in 1838, 8,542 inhabitants, of whom 5,876 were churchmen, and 2,666 were dissenters. The dissenters are of six classes, and have their places of worship in Musselburgh.—The Relief congregation was established in 1783. Sittings in their chapel 800. Stipend £120.—The United Secession congregation was established in 1765. Their church was rebuilt in 1820, at a cost of £1,200. Sittings 600. In 1838 there were two ministers. Salary of the senior £52, with house and garden, and £10 for sacramental expenses; of the junior £100, with £15 for house rent.—The Independent congregation was established in 1799. The church was built in 1800, and cost, including subsequent alterations, not less than £1,200. Sittings 320.—The Scottish Episcopalian congregation dates back to 1688. The chapel was built about 42 years ago, at a cost of £600. Sittings about 200. Stipend about £80, but variable.—The Wesleyan Methodist congregation was established in 1828. The chapel was built about the year 1833, at a cost of about £500. Sittings 250. The pulpit is served by local preachers from Edinburgh, who officiate gratuitously.—A congregation of local character, and no extraneous connection, was formed in 1839, by a disruption of the United Secession congregation.—Since the summer of 1835, a missionary has been employed to visit the parishioners who are most destitute of religious instruction. The committee of management consists of members

of the Relief, United Secession, and Independent congregations. The funds are raised principally by subscriptions from persons of all denominations. Missionary's salary £50.—There are in the parish 21 schools, conducted by 34 teachers, and attended by a maximum of 1,114 scholars, and a minimum of 1,048. None of them are parochial; but the rector of a grammar-school, and the teachers of two English schools, receive from the town-council of Musselburgh salaries respectively of £27 5s. 4d., £20, and £10. At the grammar-school, two boarding-schools, and an academy, all the branches of a classical and commercial education are taught.

At the epoch to which record goes back, there were two manors of Inveresk,—Great Inveresk and Little Inveresk. Malcolm Canmore and his queen Margaret granted Little Inveresk to the monks of Dunfermline. David I. gave to the same monks Great Inveresk, which included the burgh and port of Musselburgh, and he gave them also the church of Inveresk, with its tithes and other pertinents. The monks got “a free warren” established within the manors by Alexander II.; and they had, in virtue of David I.'s grants, a baronial jurisdiction over them, which they afterwards got enlarged into a regality. The church was in early times of great value; and even the vicars who served it, while the monks enjoyed the revenues of the parsonage, appear, among men of consequence, as witnesses to many charters. In the church were several endowed altars, with their respective chaplains. In Musselburgh were anciently three chapels, one of them of great note for the pilgrimages made to it, and its historical associations, and dedicated to “Our Lady of Loretto.” See *MUSSELBURGH*. Within the grounds of New Hailes was another chapel, dedicated to Mary Magdalene. From this chapel, Magdalene-bridge, and the hamlet of Magdalene-Pans, corruptly called Maitland-bridge, and Maitland-Pans, at the north-western angle of the parish, have their name. The patronage of the church, and of its various subordinate chaplainries, and the lordship and regality of Musselburgh, or of the whole of the ancient Great Inveresk and Little Inveresk, were granted by James VI. to his Chancellor, Lord Thirlestane, the progenitor of the Earls of Lauderdale. Much of this vast estate, notwithstanding the profusion of the noted Duke of Lauderdale and the dangers of forfeiture, came down to Earl John, who died in 1710. From him Anne, Duchess of Buccleuch and Monmouth, purchased, in 1709, the whole property, with some inconsiderable exceptions.

INVEREY (THE), a branch of the Aberdeenshire Dee descending from the mountains on the southern skirts of Braemar, and flowing into the Dee a little above Mar bridge. The ruins of Inverey castle are still visible, a little to the right of the mouth of the stream.

INVERFARRAKAIG (PASS OF), a beautiful defile leading from Loch-Ness, across Stratherrick, into Strathnairn.

INVERGARRY-CASTLE, an ancient stronghold of the Macdonalds on the banks of Loch-Oich, near the mouth of the Garry,  $7\frac{1}{2}$  miles from Fort-Augustus. It consists of an oblong square of five stories, of which the walls only are now standing, the whole having been sacked and burnt after the rebellion in 1745. Near to it is the modern mansion-house of Glengarry, a plain, narrow, high-roofed building.

INVERGORDON, a village in Ross-shire, in the parish of Rosskeen, on the north side of the frith of Cromarty, over which there is a regular ferry to Inverbreckie. It has a good harbour, having 16 feet water at spring-tides, and 13 at neap, and a fine sandy shore, where vessels may safely deliver their cargoes. It is 12 miles from Dingwall.

INVERGOWRIE, a village pleasantly situated at the head of a little bay, formed by the influx of Invergowrie burn to the frith of Tay, in the parish of Liff, Forfarshire;  $2\frac{1}{2}$  miles west of Dundee; and  $19\frac{1}{2}$  miles east of Perth. Besides offering facilities for the landing of lime and coals from the opposite coast of Fife, this little port is of some historical note as a place of royal embarkation. Alexander I. having had a donation made to him at his baptism of the adjacent lands of Invergowrie and Liff, by his godfather, the Earl of Gowrie, began, as soon as he succeeded to the throne, to build a palace in the vicinity; but some of his people from Mearns and Morayshire having formed a conspiracy, and attacked him in his newly-finished residence, he took shipping at the village, and sailed away to the southern parts of his kingdom to gather forces for quieting and punishing the north. In expression of his gratitude for having escaped the conspirators, he made over to the monks of Secon, *in dotem et glebam*, the lands of Invergowrie and Liff. These lands, in the usual style of ancient manors, had their respective churches. The church of Invergowrie is remarkable for being traditionally reported to have been the earliest Christian structure north of the Tay. The original edifice is said to have been built at the village in the 7th century, by Boniface, a legate or missionary, who landed there with some attendants from Rome, and who afterwards penetrated the interior of Forfarshire, and founded various other churches. Apparently a much later erection than the original one survives in the form of a common-place mouldering ruin, half-covered with ivy, near the brink of the water. The churchyard is on an eminence, a mound of singular shape, washed on one side by the Tay. From the variety of mould which is turned up in digging, all or great part of the mound is supposed to be forced earth.

INVERGOWRIE BURN, a rivulet on the southwestern extremity of Forfarshire. What strictly wears the name is a stream of only half-a-mile in length, forming, in the course of Gowrie, the boundary-line between the parishes of Liff and Longforfan, in the counties respectively of Forfar and Perth; but it consists of the united waters of two streams, both of which possess some local importance. One of them rises immediately north of Dundee-law, and flows 3 miles due west, and then nearly a mile south, passing through Locheye, and tracing for some distance the boundary between the parishes of Dundee and Liff. The other stream rises in the parish of Fowlis Easter, in Perthshire, flows  $2\frac{3}{4}$  miles south-eastward to Forfarshire, traces for half-a-mile southward the division-line of the counties, receives from the west a stream of  $2\frac{1}{2}$  miles length of course, running most of the distance also on the division-line, and then flows  $1\frac{3}{4}$  mile south-eastward, to a junction with the branch stream from the east. Invergowrie burn, in the months of March and April, contains excellent sea-trout.

INVERKEILOR, a parish nearly in the centre of the maritime district of Forfarshire. It is bounded on the north by Kinnell and Lunan; on the east by the German ocean; on the south by St. Vigean's; and on the west by Carmylie and Kirken. It measures in extreme length from east to west  $7\frac{1}{2}$  miles; in extreme breadth  $4\frac{1}{4}$  miles; and in superficial area 6,100 Scottish acres. From its east end, where it is  $4\frac{1}{4}$  miles broad, it suddenly contracts to  $1\frac{1}{4}$ ; and, having re-expanded, nearly at its middle, to  $4\frac{1}{2}$  miles, it again suddenly contracts, and maintains to its west end an average breadth of 2 miles. Keilor burn, from which the parish has its name, rises on the southern boundary, and for  $1\frac{1}{2}$  mile flows along it eastward; and then runs along it  $1\frac{3}{4}$  mile, still eastward, through the expanded coast-district of the par-

ish, to Lunan bay. Lunan water comes in from the west; forms for  $1\frac{3}{4}$  mile the boundary-line with Kinnell; flows 3 miles across the expanded northern wing of the parish; traces for 2 miles the boundary with Lunan; and falls into the sea at Redcastle. In its progress it turns the wheels of numerous mills; it flows with a clear current, and as it approaches the sea, frolics in many beautiful sinuosities; formerly it abounded with fine trouts, and had some pike, but is now more scanty in its fishy treasures. Gighty burn comes down from the north-east, forms for  $2\frac{1}{2}$  miles the boundary-line with Kinnell, and, falling into the Lunan, has its waters carried away in a direction not far from being opposite to that of its former course. The coast, including sinuosities, is between 5 and 6 miles in extent, and makes a considerable recession, over a distance of  $2\frac{1}{2}$  miles from the northern limit, to admit the waters of Lunan bay. Along this bay—which, except in easterly winds, affords a safe anchorage for ships—the coast is flat, sandy, and overgrown with bent; but thence southward, it is high and rocky, and, in its progress, sends out the remarkable headland called REDHEAD: which see. Northward of Lunan water, the surface of the parish rises in a beautiful gently ascending bank of good arable land; between the Lunan and the Keilor, it recedes from the coast away westward, in a level expanse of fertile ground; and south of the Keilor, it gradually rises into heights which slightly partake the character of the southern part of the coast. The soil varies, but is, in general, dry and fertile; and the air—though liable in April and May to be laden with fogs—is, on the whole, pure and salubrious. About 270 imperial acres are under plantation; about 126 are scarcely, if at all, fit for cultivation; and all the rest of the surface is arable ground. At Leys mill, in the extreme west, is a quarry for what are called Arbroath-stones [see FORFARSHIRE], which are here dressed by machinery propelled by steam. At Redhead is an inexhaustible quarry of fine freestone; and below the rocks, Scots pebbles, some possessing the colour and density of an amethyst, have been numerous gathered. On the coast, at the south end of Lunan-bay, is a fishing hamlet called Ethie-Haven; but it is a desolate place, and threatens soon to be totally abandoned. On the sands of Lunan bay, and on the estate of Ethie to the south, are considerable salmon-fisheries. In various localities are five flax spinning-mills.—Anniston, Kinblythmont, and Lawton, are agreeable country-mansions. The village of Inverkeilor, situated near Lunan water contains a population of about 150. The parish is traversed from south to north, at nearly its narrowest part, by the mail-road from Edinburgh by way of Dundee to Aberdeen; and has, in its west end, 2 miles of the turnpike between Arbroath and Forfar; and is minutely intersected in every direction with cross roads.—On an eminence, at the mouth of Lunan water, stands a venerable ruin, called Redcastle. Chalmers, in his Caledonia, ascribes the erection of it to Walter de Berkeley, called the Lord of Redcastle, in the reign of William the Lion. But tradition asserts it to have been built by King William himself, and to have been used as a royal hunting-seat; and it seems to be aided in its verdict by the names of some localities in the neighbourhood,—Kinblythmont, being a contraction of Kings-blythe-mount, and Court-hill and Hawk-hill being names still in use. In the coast wing of the parish, south of Keilor burn, stands Ethie-house, the seat of the Earl of Northesk, built and inhabited by Cardinal Beaton. About a mile north-east of it on the coast, are the ruins of a religious house called St. Murdoch's chapel, in which the monks of Arbroath officiated. At a place called

Chapelton, nearly 3 miles west of the village of Inverkeilor, are remains of the chapelry of Quytefield, now the burying-place of the family of Boysack. On the lands of the Earl of Northesk, and on those of Mr. Carnegie, are vestiges of Danish camps; and those of the latter lands are near a farm-house which seems to have borrowed from them its remarkable name of Denmark.—Population of the parish, in 1801, 1,704; in 1831, 1,655. Houses 357. Assessed property, in 1815, £8,101.—Inverkeilor is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Stipend £246 14s. 5d.; glebe £8 15s. Unappropriated teinds £182 2s. 5d. The parish-church was built in 1735, enlarged in 1799, and, a few years ago, repaired. Sitings 703. The parish has a savings bank, and a library,—the latter chiefly religious. There are two schools. Parish-schoolmaster's salary £25 7s. 11d., with fees, a house and garden, and £10 other emoluments. A portion of the parish, at its west end, containing a population of 249, was disjoined in 1835, and along with a large portion from the conterminous parish of Kirkden, erected into the *quoad sacra* parish of Friockheim.

INVERKEITHING, a parish in Fife-shire, consisting of the ancient parish of that name, and of the parish of Rosyth, which were conjoined in 1636. The form of the parish is somewhat like that of the letter L reversed,—the base of the letter being formed by that portion of the parish which lies along the shore of the Forth. This part of the parish is about 4 miles in length from east to west; and varies, except at the east end, from about a quarter of a mile to about a mile-and-a-half in breadth. At the east end, a peninsula runs toward the south into the frith, at the extremity of which is North-Queensferry; the parish here extends for upwards of 4 miles towards the north, between the parishes of Dunfermline and Dalgetty, but scarcely exceeding in any place half-a-mile in breadth. It is bounded on the south by the Forth; on the east by Dalgetty and Aberdour; on the north by Beath and Dunfermline; and on the west by Dunfermline. The island of Inchgarvie, about half-way across the frith, is in the parish. Population, in 1801, 2,228; in 1831, 3,189.—The whole parish has been brought into a state of high cultivation, with the exception of the small portion which is under wood, and the higher acclivities of the hills, which are in pasture. The rent of land varies from £1 5s. to £4 per acre: the average rent being nearer the higher than the lower of these rates. The annual value of real property for which the parish was assessed in 1815, exclusive of the burgh, was £3,966 sterling. That for which the burgh was assessed, was £1,649 sterling. The valued rent is £6,866 Scots. Number of houses in the burgh and parish in 1831, 450. There are considerable quantities of green stone quarried in different places in the parish, for building, paving, and road-making. Sandstone is also quarried in two places; there are also several limestone quarries. There is an extensive distillery in the parish, which employs about 80 men. There are two foundries, in which large articles are cast, and steam-engines and other machinery made; a tan-work, a ship-building-yard, a salt-work, a magnesia manufactory, a fire-brick work, a bone-mill, two meal and flour-mills, and a harley-mill. A number of individuals are also employed in weaving for the Dunfermline manufacturers. The only villages in the parish are NORTH-QUEENSFERRY and HILLENDD which see.—About a mile west of the burgh of Inverkeithing are the castle and lands of Rosyth, the property of the Earl of Hopetoun. Rosyth anciently belonged to a branch of the great family of Stuart, descended from James Stuart of

Durrisdeer, brother-german to Walter the great steward of Scotland, father to Robert II., the first of the family who ascended the Scottish throne. The family of Stuart of Rosyth continued to flourish till about the beginning of last century, when, according to Sibbald, the last laird dying without issue and unmarried, disposed the estate to a stranger, by whom it was sold to the Earl of Roseberry. The old castle is situated on a rock on the shore, connected with the mainland by a causeway. All that now remains is a ruined square tower, which formed the north-eastern angle of what must have been a pretty large square building. Over the gateway is a defaced armorial bearing surmounted by a crown and M. R. 1561. On the mullions of the great windows of the hall—which are obviously alterations on the original building—are the initials F. S. and M. N., and the date 1639. Upon the south side of the castle, near the door, is this inscription:—

IN DEV TYM DRAW YES CORD YE BEL TO CLINK,  
QVHAI MERY VOCE VARNIS TO MEAT AND DRINK.

This ancient castle is alluded to by Sir Walter Scott in his novel of the Abbot; and the tradition is—though we know not on what authority—that the wife of Oliver Cromwell was born here.—The parish is in the presbytery of Dunfermline, and synod of Fife. Patroness, Lady Baird Preston. Stipend £263 8s. 2d.; glebe £40. The parish-church is situated in the centre of the burgh. It was built in 1826, in the pointed style, and accommodates about 1,000 sitters. The old church was burnt in October 1825. There is a chapel in connection with the United Associate Synod.—In the parish-school all the usual branches of education are taught. The teacher has the maximum salary, with a good dwelling-house, and an elegant school-house. There is a school for the higher and ornamental branches of education; and there are 5 other schools which are unendowed.

The town of INVERKEITHING is situated at the east end of the parish, on an eminence overlooking the bay which bears its name; and consists of a main street of considerable length, running north-east and south-west, and several lanes diverging from it, with a number of houses fronting the harbour, and a row called Preston-crescent, running between the East Ness and the harbour. A lazaretto is built on the point of the bay opposite the town, known as the West Ness. The country round is open and agricultural. As a royal burgh it is of great antiquity; the oldest existing charter being granted by William the Lion, confirming one of a previous date. This charter was confirmed by James VI. in 1598. The burgh is governed by a provost, 2 bailies, a dean-of-guild, a treasurer, 9 other councillors, and a town-clerk. This charter of James VI. contains a grant of customs from the great stone near Milnathort on the north, to the middle of the Forth on the south, and from the Water of Devon on the west, to the Water of Leven on the east; and under this grant the town were in the habit of levying custom within the included territory. About 70 years ago the town sold the right of levying custom at Dysart to the town of Dysart; but they still levy customs both at Kinross and North-Queensferry. The charters to the town of Inverkeithing contain very considerable grants of land; and their property at one time extended to near the Crossgates, which is about 4 miles. They had also property at Ferryhill. These properties may now be worth from £500 to £1,000 a-year, but they were feued for very small feu-duties, when in a state of nature, about or previous to the beginning of the last century. Besides the right of customs above-mentioned, the present property of Inver-

keithing consists of the East and West loans and Bois acre, the Town-lane, one-third of the school and school-house, the stock-market, one-third of the parish-church, the town's mill and kiln, the Inner and Outer harbours, and certain debts due to the burgh. The revenue arising from these different sources, according to the accounts made up to the 25th September, 1832, was as follows:—

Rents, including royalty on coal, 1832, . . . . .	£219 8 2	
Feu-duties, . . . . .	86 6 4 <sup>3</sup> / <sub>4</sub>	
Customs and market-dues, . . . . .	86 5 0	
Harbour and shore-dues, . . . . .	156 9 6	
Casual income, . . . . .	£3 7 0	
Street manure, . . . . .	£44 12 0	
Off expense of collecting and cleaning, . . . . .	31 11 1 <sup>1</sup> / <sub>2</sub>	
	£13 0 10 <sup>1</sup> / <sub>2</sub>	
	£16 7 10 <sup>3</sup> / <sub>4</sub>	
	£564 17 5 <sup>1</sup> / <sub>2</sub>	

The corporative-revenue in 1839-40, was £500 8s. 8d. The property of the burgh was valued a few years ago at £7,437 10s. 5d. sterling, exclusive of the town-house and jail; and the debts at £2,029 sterling. The burgh joins with Dunfermline, Stirling, Culross, and South-Queensferry, in sending a member to parliament. The parliamentary and municipal constituency in 1839-40 was 56. The town-house was built in 1770; and besides the town-hall, contains the jail, which is small and not very secure, but fortunately it is very little used except for locking up drunken people for a night. The church, the school-house, the stock grain-market, and a dissenting chapel, are all handsome buildings, which add to the appearance of the town. Five fairs are appointed to be held yearly in the burgh, but they have long been merely nominal, no business being transacted at any of them. A weekly stock-market for the sale of grain, however, has been established, which is well-attended; and a branch of the eastern bank of Scotland has been opened in the burgh. The harbour is pretty good, though it might be deepened and greatly improved; vessels of 200 tons burden can load and sail from it at spring-tides, but it is usually frequented by smaller vessels. There are at present 20 vessels belonging to it, varying in burden from 20 to 100 tons, which are chiefly employed in the coasting trade. A considerable number of foreign and English vessels load coal here, which is brought from the coal-work at Halheath, by a railroad between that coal-work and the harbour. Various other coal-works ship their coal at this port; and when the proposed railroad from Lochgelly has been constructed, the coal-trade here will be greatly increased. In the town there are salt-pans, a distillery, and a brewery; and in the immediate neighbourhood a magnesia work and a pottery. The number of inhabitants in the burgh, in 1831, was 2,020.—The widowed queen of Robert III., the beautiful Arahella Drummond, resided for some time in Inverkeithing. She is said to have wished for a dwelling, from which she could behold the castle of Edinburgh, and made choice of a spot called Rottmell's Inns; but how long she resided there, there is neither record nor tradition to tell. There is a tradition, however, that the queen had a private chapel in the Inns, for herself and her domestics.

INVERKEITHNIE, a parish in the shire of Banff, bounded on the north by Marnoch, from which it is divided by the river Deveron, and in every other quarter by the shire of Aberdeen. It extends along the southern bank of the Deveron, about 6 miles in length, and measures from 1 to 4 miles in breadth. Houses 503. Assessed property, in 1815, £1,772. Population, in 1801, 503; in 1831, 589. This parish derives its name from the rivulet Keithnie, which intersects it from south to north, entering the De-

veron near the parish-church and hamlet. At Boat-of-Inverkeithnie the Deveron is crossed by a bridge. This district is chiefly hilly. The soil is generally fertile and well-cultivated: much of it is in pasture. The Deveron's banks are beautifully wooded, but the parish possesss no object of particular interest.—It is in the presbytery of Turriff, and synod of Aberdeen. Patron, T. G. Bremner, Esq. Stipend £214 18s. 3d.; glebe £10. Schoolmaster's salary £30, with £21 18s. fees, and other emoluments.

INVERKIRKAG. See ASSYNT.

INVERLEITHEN. See INNERLEITHEN.

INVERLOCHY, a hamlet and castle on the eastern shore of Loch-Eil, 2 miles from Fort-William. The estate of Inverloch was purchased a few years back by the Marquis of Huntly from the trustees of the Duke of Gordon; and was recently sold for £75,150. Near the present hamlet, according to Boethius, was in former times an opulent city, remarkable for the vast resort of French and Spaniards, and also the seat of royalty. Here, as is reported, King Achaius signed, in 790, the league offensive and defensive betwixt himself and Charlemagne. In after times it was destroyed by the Danes, and never again restored. Nigh to where this fabulous city is represented to have stood is the ancient castle of Inverloch. It stands alone, in solitary magnificence, after having seen the river Lochy, that formerly filled its ditches, run in another course, and outlived all history and all tradition of its own builder and age. It is a quadrangular building, with round towers of three stories each at the angles; measuring 30 yards every way within the walls. The towers and ramparts are solidly built of stone and lime, 9 feet thick at the bottom, and 8 above. The towers are not entire, nor are they all equally high; the western is the highest and largest, and does not seem to have been less than 50 feet when entire; the rampart or screen between them is from 25 to 30 feet in height. About 12 yards from the exterior walls are the traces of a ditch, which has been from 30 to 40 feet broad. The whole building covers about 1,600 yards, and within the ditch there are 7,000 yards, or nearly an English acre and a half. From the name of the western tower, and other circumstances, it is probable this castle was occupied by the Cummings, in the time of Edward I. of England, when that clan was at its zenith of power; and, previous to that period, by the thanes of Lochaber, particularly by Bancho, or Banquo, the predecessor of the royal family of Stuart. A little below the castle is a pleasant walk still called Bancho's walk.

Near this place the celebrated Marquis of Montrose signally defeated the Campbells under the Marquis of Argyle, in February, 1645. Montrose, after having retaliated upon Argyle and his people in a tenfold degree the miseries which he had occasioned in Lochaber and the adjoining countries, left Argyle and Lorn, passing through Glenceoe and Lochaber on his way to Loch-Ness. On his march eastwards he was joined by the laird of Abergeldie, the Farquharsons of the Braes of Mar, and by a party of the Gordons. The object of Montrose, by this movement, was to seize Inverness—which was then only protected by two regiments—in the expectation that its capture would operate as a stimulus to the northern clans, who had not yet declared themselves. While proceeding through Abertarf, a person arrived in great haste at Kilcummin—the present Fort-Augustus—who brought him the surprising intelligence that Argyle had entered Lochaber with an army of 3,000 men; that he was burning and laying waste the country, and that his head-quarters were at the old castle of Inverloch. After Argyle had effected his escape from Inverary, he had gone to

Dumbarton, where he remained till Montrose's departure from his territory. While there, a body of covenanting troops, who had served in England, arrived under the command of Major-General Baillie, for the purpose of assisting Argyle in expelling Montrose from his bounds; but on learning that Montrose had left Argyle, and was marching through Glencoe and Lochaber, General Baillie, instead of proceeding into Argyle for the purpose of following Montrose, determined to lead his army in an easterly direction through the Lowlands, with the intention of intercepting Montrose, should he attempt a descent. At the same time it was arranged between Baillie and Argyle, that the latter, who had now recovered from his panic, in consequence of Montrose's departure, should return to Argyle and collect his men from their hiding-places and retreats; but as it was not improbable that Montrose might renew his visit, the Committee of Estates allowed Baillie to place 1,100 of his men at the disposal of Argyle, who, as soon as he was able to muster his men, was to follow Montrose's rear, yet so as to avoid an engagement, till Baillie, who, on hearing of Argyle's advance into Lochaber, was to march suddenly across the Grampians, should attack Montrose in front. To assist him in levying and organizing his clan, Argyle called over Campbell of Auchinbreck, his kinsman, from Ireland, who had considerable reputation as a military commander. In terms of his instructions, therefore, Argyle had entered Lochaber, and had advanced as far as Inverloch, when, as we have seen, the news of his arrival was brought to Montrose. The distance between the place where Montrose received the news of Argyle's arrival, and Inverloch, is about 30 miles; but this distance was considerably increased by the devious track which Montrose followed. Marching along the small river Tarf in a southerly direction, he crossed the hills of Lairie-Thierard, passed through Glenroy, and after traversing the range of mountains between the glen and Bennevis, he arrived in Glennevis before Argyle had the least notice of his approach. Before setting out on his march, Montrose had taken the wise precaution of placing guards upon the common road leading to Inverloch, to prevent intelligence of his movements being carried to Argyle, and he had killed such of Argyle's scouts as he had fallen in with in the course of his march. This fatiguing and unexampled journey had been performed in little more than a night and a day, and when, in the course of the evening Montrose's men arrived in Glennevis, they found themselves so weary and exhausted that they could not venture to attack the enemy. They therefore lay under arms all night, and refreshed themselves, as they best could, till next morning. As the night was uncommonly clear and enlightened by the moon, the advanced posts of both armies kept up a small fire of musketry during the night, which led to no result. In the meantime Argyle, after committing his army to the charge of his cousin Campbell of Auchinbreck, had the dastardliness to abandon his men, by going, during the night, on board a boat in the loch, accompanied by Sir John Wauchope of Niddry, Sir James Rollock of Duncrub, Archibald Sydeserf, one of the bailies of Edinburgh, and Mungo Law, a minister of the same city. Argyle excused himself for this pusillanimous act, by alleging his incapacity to enter the field of battle, in consequence of some contusions he had received by a fall two or three weeks before; but his enemies averred that cowardice was the real motive which induced him to take refuge in his galley, from which he witnessed the defeat and destruction of his army.

It would appear, that it was not until the morning of the battle, that Argyle's men were aware that it

was the army of Montrose that was present, as they considered it quite impossible that he should have been able to bring his forces across the mountains, and they imagined, that the body before them consisted of some of the inhabitants of the country, who had collected to defend their properties. But they were undeceived, when, in the dawn of the morning, the warlike sound of Montrose's trumpets, resounding through the glen where they lay, and reverberating from the adjoining hills, broke upon their ears. This served as the signal to both armies to prepare for battle. Montrose drew out his army in an extended line. The right wing consisted of a regiment of Irish, under the command of Macdonald, his major-general; the centre was composed of the Athole-men, the Stuarts of Appin, and the Macdonalds of Glencoc, and other Highlanders, severally under the command of Clanranald, M'Lean, and Glengarry; and the left wing consisted of some Irish, at the head of whom was the brave Colonel O'Kean. A body of Irish was placed behind the main body as a reserve, under the command of Colonel James M'Donald, alias O'Neill. The general of Argyle's army formed it in a similar manner. The Lowland forces were equally divided, and formed the wings, between which the Highlanders were placed. Upon a rising ground, behind this line, General Campbell drew up a reserve of Highlanders, and placed a field-piece. Within the house of Inverloch—which was only about a pistol-shot from the place where the army was formed—he planted a body of forty or fifty men to protect the place, and to annoy Montrose's men with discharges of musketry. The account given by Gordon of Sallagh, that Argyle had transported the half of his army over the water at Inverloch, under the command of Auchinbreck, and that Montrose defeated this division, while Argyle was prevented from relieving it with the other division, from the intervention of "an arm of the sea, that was interjected betwixt them and him,"\* is certainly erroneous, for the circumstance is not mentioned by any other writer of the period, and it is well known that Argyle abandoned his army, and witnessed its destruction from his galley,—circumstances which Gordon altogether overlooks. It was at sunrise, on Sunday, the 2d day of February, in the year 1645, that Montrose, after having formed his army in battle array, gave orders to his men to advance upon the enemy. The left wing of Montrose's army, under the command of O'Kean, was the first to commence the attack, by charging the enemy's right. This was immediately followed by a furious assault upon the centre and left wing of Argyle's army, by Montrose's right wing and centre. Argyle's right wing not being able to resist the attack of Montrose's left, turned about and fled, which circumstance had such a discouraging effect on the remainder of Argyle's troops, that after discharging their muskets, the whole of them, including the reserve, took to their heels. The route now became general. An attempt was made by a body of about 200 of the dismayed fugitives, to throw themselves into the castle of Inverloch, but a party of Montrose's horse prevented them. Some of the flying enemy directed their course along the side of Loch-Eil, but all these were either killed or drowned in the pursuit. The greater part, however, fled towards the hills in the direction of Argyle, and were pursued by Montrose's men, to the distance of about 8 miles. As little resistance was made by the defeated party in their flight, the carnage was very great, being reckoned at nearly 1,500 men, or about the half of Argyle's army; and many more would have been cut off had it not been for the

\* Continuation, p. 522.

humanity of Montrose, who did every thing in his power to save the unresisting enemy from the fury of his men, who were not disposed to give quarter to the unfortunate Campbells. Having taken the castle, Montrose not only treated the officers, who were from the Lowlands, with kindness, but gave them their liberty on parole. Among the principal persons who fell on Argyle's side, were the commander, Campbell of Auchinbreck, Campbell of Lochnell, the eldest son of Lochnell, and his brother, Colin; M'Dougall of Rara and his eldest son; Major Menzies, brother to the laird (or Prior as he was called) of Achattens Parbreck; and the provost of the church of Kilmun. The chief prisoners were the lairds of Parbreck, Silvercraig, Innerea, Lamont, St. M'Donald in Kintyre, the young laird of Glensaddel, the Goodman of Pynmoir, the son of the captain of Dunstaffnage, Lieutenant-Colonels Roche and Cockburn, Captains Stewart, Murray, Hume, and Stirling, Robert Cleland alias Clydson, and MacDougall, a preacher. The loss on the side of Montrose was extremely trifling. The number of wounded is indeed not stated, but he had only three privates killed. He sustained, however, a severe loss in Sir Thomas Ogilvie, son of the Earl of Airly, who died a few days after the battle of a wound he received in the thigh. Montrose regretted the death of this steadfast friend and worthy man with feelings of real sorrow, and caused his body to be interred in Athole with due solemnity. Montrose immediately after the battle sent a messenger to the king with a letter, giving an account of it, at the conclusion of which he exultingly says to Charles, "Give me leave, after I have reduced this country, and conquered from Dan to Beersheba, to say to your Majesty, as David's general to his master, come thou thyself, lest this country he called by my name." When the king received this letter, the royal and parliamentary commissioners were sitting at Uxbridge negotiating the terms of a peace; but Charles was induced by it to break off the negotiation,—a circumstance which led to his ruin.

INVERMAY, the 'Birks' of which are celebrated in Scottish song, a beautiful locality on the banks of the MAY, in the parish of FORTREVOT. See these articles.

INVERNESS,\* a parish in the shire of Inverness; bounded on the north-east by the Beaully and the Moray friths; on the east by Petty; on the south-east and south by Croy and Daviot; on the south-west by Loch-Ness and the parish of Dores; and on the west by Urquhart, Kiltarlity, and Kirkhill. Its length from north-east to south-west is 14

\* "Inverness was anciently written *Innerness*. The town of Inverness, from which the parish has its name, is situated at the mouth of the river Ness. *Inness* is Gaelic, and expressive of that situation. The river derives its name from Loch-Ness, which is its source. Some promontories and headlands in our own and in other northern countries, are called *Ness*,—as Buchanness, the Naes of Norway,—*Ness quasi nose*, from its promineny. But no promontory is in *Lochness*. This led some curious persons (Lowthorp's Abridg. of the Phil. Trans. II. 222.) to seek for the origin of the name in the traditions of old bards. By these traditions they were informed that Nysus, an Irish hero, had settled a colony of his countrymen in Stratherrick. The era of this event is passed over in silence. Vestiges, however, of his castle and fortress are still to be seen on the summit of Dun-Deardill,—a rock of high elevation at a short distance from the lake. The rock had its name from Dornadilla, the Lady of Nysus. This hero built a barge, and was the first who sailed the lake: hence Loch-Ness. We reject not the derivation from Nysus, and will hazard a conjecture of our own. The two rivers which have their course through the country of Stratherrick, and discharge themselves into Loch-Ness, are Carrigack and Fechnoin. These rivers are remarkable for high cataracts, particularly Fechnoin. In this river and near the mouth of it, is the Fall of Foyers, a tremendous cataract. *Ess*, in the Gaelic language, signifies 'a waterfall' or 'cataract.' The lake which is supplied with the water of this fall, might not unaptly be called Loch-Ness, [*Loch-an-Ess*], that is, 'the lake of the cataract.'"—*Old Statistical Account*.

miles; and its average breadth  $\frac{3}{4}$ . It may be considered as the north-eastern portion of the Great glen of Caledonia. The appearance of the country is diversified,—partly flat, and partly mountainous; see succeeding article. On the south the surface rises to an elevation of about 400 feet; on the north the acclivity is higher and more precipitous. The elevation of Loch-Ness above sea-level is only 46 feet. The coast-line is flat, and well-cultivated. The soil is fertile; the general character of it is—with some exceptions—a black loam, rather light and on a gravelly bottom. LOCH-NESS is partly in this parish: see that article. The river NESS, which intersects the parish for 8 miles, will also form the subject of a separate article. Among the minor streams are Inches burn, and the burns of Holm, Dochfour, and Aberriachan. The most remarkable hill is Tomnahurich, near the town, on the west side of the river. It is a beautiful isolated mount, nearly resembling a ship with her keel uppermost. It stands on a base, whose length is 1,984 feet, and breadth 176; its elevation, from the channel of the river, is 250 feet. A little to the west of this hill is another gravel mount called Tor-a'-Bhean, which rises to the height of about 300 feet. The elevation of Craig-Phadric from the sea-level is 435 feet. The number of arable acres in this parish, when the Old Statistical Account was written, was supposed to be about 5,000; in the New Statistical Account they are calculated at from 8,000 to 9,000, with about 1,000 improvable. The land-rent of the whole parish was, in the year 1754, 3,268 holls and 3 firlots victual, and £575 7s. 11 $\frac{1}{4}$ d. sterling. The holl at that period was valued to the tenant at 9 merks Scots, or 10s. sterling, with customs and services, which were of little value to the proprietor, but often of distressing consequences to the tenant. Its present rental is about £20,000. At the close of last century, lands let at from 13s. to £2 an acre; the present rent is from £1 to £2 10s. per acre. Ground near the town lets at from £5 to £7.† Population, in 1801, 8,732; in 1831, 14,324; in 1841, 15,308. Assessed property of the parish, in 1815, £14,980; of the hburgh, £13,161. Houses, in 1831, 2,125.

Two military roads pass through the parish; and are kept in repair by Government. There are two bridges over the Ness in this parish. The principal of them is a beautiful structure of seven ribbed arches, built in the year 1685. It is a toll-bridge, by act of parliament, and makes a good addition to the revenue of the town. The other was built in 1808, at an expense of £4,000. A pontage is also levied at it. About a mile above the town an island in the Ness has been connected with the opposite banks by suspension bridges. There were in ancient times several unimportant rencounters and skirmishes in this parish. The only memorable battle was that of

† When the Old Statistical Account of this parish was written, a ploughman had from £5 to £7 a-year, with 6 bolls, half oat and half bear meal; a house, kail-yard, and land for potatoes; his peats carried home, and, in some instances, grass for a cow. "These services," it was added, "live comfortably; their wives are employed in little manufactures for clothing their own families and for sale, and sometimes in spinning for the manufactures at Inverness, and earn about 2s. a-week." At present their wages are from £8 to £10 with board. A woman farm-servant's fee was £1 12s. with maintenance in the house; and a herd's wages much the same. At present female-servants receive from £3 to £4. The wages of house-maids average £2 per half-year. A mason's wages were from 1s. 6d. to 1s. 8d.; a wright's from 1s. to 1s. 4d.; a tailor's 6d. with maintenance. Weavers and shoemakers worked by the piece. The wages of these artisans are now from 2s. to 3s. a-day. Day-labourers at ditching, digging, and other out-work, had from 8d. to 1s.; they have now 1s. 6d. Beef, mutton, and pork, cost from 2 $\frac{1}{2}$ d. to 4d. the pound; the price is now from 3d. to 5d. per imperial lb. Hens and ducks were sold at 6d., 8d., or 9d. each; chickens and ducklings, at 3d.; a goose, 1s. 4d. or 1s. 6d.; a turkey, 2s. 6d. or 3s. Fowls are now from 1s. 6d. to 2s. a pair; chickens, half-price; ducks, 1s. 4d. to 2s.; geese and turkeys from 2s. 6d. to 3s. 6d.

the 16th of April, 1746,—the important and decisive battle of CULLODEN: which see.—There were several years ago, near the town, and due east from it, on the upper plain of the parish, several Druidical temples. These have been blasted for the purpose of building farm-houses and offices. At some distance from the mouth of the river Ness, a considerable way within flood-mark, there is a large cairn of stones, the origin of which is of very remote antiquity. It is called *Cairn airc*, that is, ‘the Cairn of the sea.’ There is a beacon erected on Cairn airc, to apprise vessels coming into the river of danger from it.—In the Beaully frith, due west from this cairn, there are three cairns at considerable distances, one from the other. The largest is in the middle of the frith, and accessible at low water. It appears to have been a burying-place, by the urns which were discovered in it.—Oliver Cromwell’s fort, and other ancient buildings, will be noticed in our description of the town of Inverness.—The vitrified fort, on the summit of CRAIG-PHADRIC, is a very remarkable structure: see that article.

This parish, formerly a rectory with the ancient rectory of Bona united, is in the presbytery of Inverness, and synod of Moray. There are three livings in the parish, and two portions of the parish have recently been erected into *quoad sacra* parishes by authority of the church-courts. The 1st and 3d livings are in the gift of the Crown. Fraser of Lovat is patron of the 2d. The High church was built in 1772; sittings 1,260. The Gaelic church was built in 1794; sittings 1,220. The three ministers officiate alternately in these two churches, and in a new church recently built at an expense of £2,000, and seating 1,800. The annual stipend of the two senior ministers is £276 10s. 2d.; glebe £50. They had formerly manse; but they became ruinous and were sold; and the one minister receives £3 10s., and the other £1 13s., being the interest of the money got for them. The unappropriated teinds are valued at £1,073 11s. 6d. The junior or 3d minister has £150, with £25 for a glebe.—The eastern portion of the parish was erected, in 1834, into the *quoad sacra* East parish. It embraces a distance of above 5 miles in length, by 2 in breadth, with a population of 1,980 in 1836. The church was built in 1798, and altered in 1822; sittings 1,158; cost £1,400. Minister’s stipend £80, but is at present about £200.—The North church was built, in 1837, at an expense of £1,400; sittings 1,040. Stipend £160, secured by bond of the managers.—An Episcopalian congregation has existed in the parish since the Revolution. The former chapel was built in 1801; sittings 280; cost £1,000; but a new chapel containing 600 sittings has recently been erected for this congregation. Stipend £180, with the rent of a small piece of ground within the town, yielding about £5 per annum. The minister usually officiates every Sunday at Fort-George.—A congregation in connexion with the Secession church was formed in this parish in the latter quarter of last century, but was afterwards given up. It was revived in 1817, and a church built in 1821; sittings 650. Stipend £100, with manse and sacramental expenses.—An Independent church was established a considerable number of years ago; and a chapel built for its use about 1826; sittings 630; cost £800.—A Roman Catholic congregation was established in 1800; chapel built in 1836; sittings 450; cost £2,000. Stipend £50, with a manse. There is a small Wesleyan Methodist congregation.—The ecclesiastical edifices are described in the succeeding article.

INVERNESS, a sea-port, an important town, a royal burgh, the seat of a presbytery, the capital of

the Northern Highlands, and the supposed original metropolis of Pictavia, stands 19½ miles south-west of Cromarty, 38½ west-south-west of Elgin, 61½ north-east of Fort-William, 118½ west-north-west of Aberdeen, and 156½ north-north-west of Edinburgh. Its site is on both banks—chiefly the right one—of the river Ness, from ½ a mile to 1½ mile above its entrance into that long and beautiful demi-semi-circular sweep of marine waters which, inward from this point, is called the Beaully frith or loch, and outward, is assigned a community of name with the great gulf of the Moray frith. Three large openings,—the basin of the Beaully frith from the west,—that of the Moray frith from the north-east,—and the divergent termination of the Glenmore-nan-Albin from the south,—meet at the town and pour around it a rich confluence of the beauties of landscape, and the advantages of communication. A plain, marked with few inequalities, lying at but a slight elevation above sea-level, and luxurious in its soil and its embellishments, stretches inward from the friths, and hears on its bosom the whole of the town except the southern outskirts. A bank about 90 feet high, part of a great terrace which sweeps along from the vicinity of Loch-Ness to the river Spey, rises behind the town, and gives a charming site to a sprinkling of villas and the newest suburban erections. Stretching into the interior from this bank, and forming a table-land equal to it in elevation, lies a plain from one to three miles broad, worked into high cultivation, feathered at intervals with trees, and numerously gemmed with country-seats. The mountain-ridges which screen the Glenmore-nan-Albin, seem to do homage to this plain; they subside from their sternness into picturesque hill-beauty; they lose, as they approach it, both their loftiness and their asperity; and they file off, on the east side, into a smooth and gently-declining ridge about 400 feet high, and, on the west side, into a gorgeous range of many-shaped and many-tinted hills, rocky, scoured, or wooded on their sides, tabular or rounded in their summits, and terminating about two miles west of the town in the magnificent Craig-Phadric, which lifts a mimic forest into mid-air, and is “distinguished by its beautiful tabular summit, and a succession of bold rocky escarpments along its acclivities:” see CRAIG-PHADRIC. The highest adorning of husbandry and gardening and arboriculture along the plain, and hanging woods, verdant slopes, frontlets of rock, and a variety of outline in the hills, fling enchantment over the scenery immediately landward of Inverness; and yet they act but as a foil to the splendid combinations of lowland and marine and mountainous landscape which hang in a profusion of splendour around the town. The mountain-barriers which rise up on the comparatively near horizon, and form, along their summits, a hold well-defined sky-line, exquisitely contrast as a back-ground with the amenities and the lusciousness of the vales and the waters which they enclose. A serrated range on the south-west and south lifts up at its termination in the far distance the fine cupola of Mealfourvounie, well-known to the navigators of the friths as a land-mark, and to the natives as a barometer: see MEALFOURVOUNIE. Peaks, which in mid-summer are capped with clouds, and over a large part of the year are snow-clad, tower aloft in clusters toward the west, round the head of Loch-Beaully. A hilly range, very picturesque in its features, flanks the opposite shore of the friths, and runs off toward Fortrose to terminate in the rugged heights called the Sutors of Cromarty; but, beyond this, though at no great distance, rises the huge form of Benwyvis, upwards of 3,500 feet in height, seldom snowless even in

mid-summer, and sending off elongated heath-clad spurs, which look, in their relation to the landscapes below them, like the rough and ruthless guardians of blushing and unjustly suspected beauty: see *BEN-  
WYVIS*. The Moray frith, or that fine indentation of it which is here made to monopolize its name, carries the eye north-eastward between shores which, while they rival each other, jointly rival Scotland in attraction, to the far-away mountain-ranges of Elgin, Banff, Sutherland, and Caithness, appearing in the dim blue distance like things of sight vanishing into the filmy hut assured objects of faith. While we smile, then, at the enthusiasm of the not very enthusiastic Dr. McCulloch, we can hardly refrain from quietly sympathizing with it when, comparing Inverness with the superb metropolis of Scotland, he says: "When I have stood in Queen-street of Edinburgh, and looked towards Fife, I have sometimes wondered whether Scotland contained a finer view of its class. But I have forgotten this on my arrival at Inverness. Surely if a comparison is to be made with Edinburgh, always excepting its own romantic disposition, the frith of Forth must yield the palm to the Moray frith, the surrounding country must yield altogether, and Inverness must take the highest rank. \* \* Each outlet is different from the others, and each is beautiful; whether we proceed towards Fort-George, or towards Moy, or enter the valley of the Ness, or skirt the shores of the Beaulie frith, while a short and commodious ferry wafts us to the lovely country opposite, rich with wood, and country-seats, and cultivation. It is the boast, also, of Inverness to unite two opposite qualities, and each in the greatest perfection,—the characters of a rich open lowland country with those of the wildest alpine scenery, both also being close at hand, and in many places intermixed; while to all this is added a series of maritime landscape not often equalled."

Approaching the town by the old military road from Fort-Augustus along the right bank of the Ness, we pass the parliamentary boundary at Altnaskiah burn, and travel 5 furlongs due north, with the river immediately on our left, and a rich studding of mansions and villas on our right. At the end of 3½ furlongs we pass through the little manufacturing suburb of Haugh; and immediately beyond it, at a point whence the Culduithill and the Old Edinburgh roads sharply diverge, we enter the main body of the hurgh. A few yards before us, close on the margin of the river, is the Castle-hill, a mere projection of the bank or terrace which flanks the lower plain of the Ness. A stripe, or slightly winged single street, round the east and south-east sides of the Castle-hill, and a cross-street winged with alleys on the south, are the oldest existing parts of Inverness: occupying the site of its humble tenements when a mere village, and exhibiting not a few antiquarian remnants of its condition during the later ages of feudalism. Eighty or a hundred yards below the Castle-hill, the river is spanned by the old bridge: and thence, or rather from the Castle-hill, it runs for half-a-mile north-north-westward, and, over that distance, carries down in the same direction, and on its right bank, the chief district of the town. The High-street, at first narrow, and hearing the name of Bridge-street, but afterwards spacious and airy, extends 320 yards north-eastward, on a line with the old bridge, cutting nearly at right angles the thoroughfares which run parallel with the river. Petty-street continues the High-street for about 100 yards, and then forks into two lines, both of which speedily subside into unedificed highways, the one leading on to the great road along the Moray frith to Aberdeen, and the other to the great Highland road through Badenoch and Glegarry to Perth. A

moundish rising ground, called the Crown, and situated a little east of the forking of Petty-street, was anciently surmounted by the original castle of Inverness, and overlooked the earliest houses of the pristine town, and the alleged site of the ancient cross. Church-street, at about 130 yards' distance from the river, extends 500 yards north-north-westward, and, is continued about 170 yards by Chapel-street. From the upper end of Chapel-street, and going off from it at a very acute angle, Academy-street extends 450 yards south-eastward and north-westward; forming the hypotenuse of a short-hased, right-angled triangle, while the greater part of Church-street forms the perpendicular, and a street which connects them on a line parallel with High-street forms the base. Most of the area within the triangle is unedificed; but all the space lying between it and High-street, is a dense phalanx of alleys, brief streets, and interior courts,—the most crowded district in the hurgh. Six or seven streets, wholly or partially edificed, run down from Church-street and the end of Chapel-street to the river; and on the last of these touching it, it makes a rapid bend from the north-north-west to the north-north-east, so as to be spanned 360 yards lower down by the new bridge, carrying across a thoroughfare which approaches nearly on a straight line from Chapel-street. A few yards below the new bridge is the old pier, and 300 yards farther down is the new harbour, both flanked by Shore-street, extending due north, now on the margin of the river, and now at a considerable distance.—The part of the town which lies on the left bank of the Ness, though all modern, and gracefully laid out, is not strictly continuous or compact, and presents such diversity of street arrangement as cannot in sufficiently few words be properly described. Its streets proportionately to its aggregate bulk, are surprisingly numerous, and charmingly interlaced. In a general view, it is a belt of edifices between 5 and 6 furlongs in length, and from 100 to 420 yards wide, folded along the margin, and following the curvature of the river, from the old bridge to a point opposite the new harbour. Tomnahurich-street, running upwards of 400 yards off nearly on a line with the old bridge, leads out to the road along the north side of Loch-Ness by Urquhart to Glenmoriston, Glenshiel, and Skye. King-street, running parallel with the river, and Telford-street, continuing King-street, but curving away to the east-north-east, point the way across the commencement of the Caledonian canal, and past the canal-basin at little more than ¼ of a mile's distance to the great north road by Beaulie to Dingwall and Tain. On this road, immediately above the sea-lock of the canal, and just within the parliamentary boundary of the hurgh, lies the fishing-village of CLACHNAHARRY: which see. In the extreme north, and in the vicinity of the new bridge, the western division of the town, after having become narrowed, opens in a half fan-like form into Grant, North King, Nelson, Brown, and other streets, and sends off a brief road to Kessock ferry, which, from a pier at the mouth of the Ness, maintains easy and frequent communication with the beautiful coast along the Ross-shire side of the frith.—All the western town, and nearly all the outskirts, as well as some of the interior of the eastern town, may at present compare, in general neatness and taste of masonry, and in the aggregate properties which produce a pleasing impression, with any modern town of its size in the United Kingdom. Even the older streets fully compensate for their want of regularity and beauty, by interesting remains of a picturesqueness which, at a very recent date, arrayed them in gable-end constructions, arched

gateways, hanging balconies, projecting towers, and round turnpike stairs. Though a crowded winter-seat of aristocracy, and packed with mansions, in the Flemish style, belonging to the landed proprietors of an extensive circumjacent country, the town—even so late as the middle of last century—had few houses which were not thatched with heath or straw, or which contained ceiled or plastered rooms; while, at a still later date, it knew nothing of the luxuries of municipal police. About 60 or 70 years ago, the magistrates, in order to induce parties to edifice the airy and modern thoroughfares, granted perpetual feu-rights for very trifling sums, and urged forward the erections by the most condescending encouragements. As the last century closed, Provost William Inglis, a patriotic and energetic citizen, who died in 1801, achieved great improvements in modernizing and polishing the burgh, and strongly impelled it toward its present position. In 1831, a process was commenced, and soon afterwards was completed, of causewaying the carriage-ways with granite, laying the side-paths with Caithness flag, and ramifying the whole town with common sewers. The cost of this great and beautifying improvement exceeded £6,000, and was defrayed by an assessment of 2½ per cent. on house-rents. A suit of gas-works, erected at the expense of £8,757, lights the town with gas,—said to be the best in the kingdom; and water-works, which, along with the conveying pipes, cost £4,872, afford an ample supply of water.

The public buildings of Inverness, though possessing no remarkable features of elegance or beauty, are both creditable and interesting. A suite of county buildings, which crowns the Castle-hill, and was erected, in 1835, at a cost of about £7,000, and after a design by Mr. Burn of Edinburgh, strongly arrest the eye of a stranger. The commanding site of the edifices, the neatness of their architecture, their resemblance to a spacious English castle, and their interior commodiousness and beauty, unite to render them superior to most Scottish buildings of their class.—At the corner of Church-street and High-street stands the jail, surmounted by a remarkably handsome spire 150 feet high. They were built in 1791, at the cost of about £3,400, only £1,800 of which was expended on the jail. The spire resembles that of St. Andrew's church in Edinburgh, and was built by the same architect, but excels it in symmetry, and is remarkably handsome. Its top, however, was severely twisted by the earthquake of 1816, and is ragged and ruinous. The jail—though a vast improvement when it was built, and pronounced by the Old Statistical Account, “such as would give pleasure to the benevolent Howard,” has for many years been too small, admits of little or no classification, is situated in a principal thoroughfare, and has no open courts or facilities of any sort for airing and exercise, or for classification. But for 6 or 7 years past measures have been in progress to erect a new jail—which is here wanted, not merely for the burgh or for Inverness-shire, but for the northern counties—on a site on the Castle-hill, contiguous to the County-buildings, and accordant with them in greatness and tastefulness of design.—In High-street, nearly opposite the head of Church-street, stand, clustered in one edifice, the Town-hall and the Exchange, an unornamented building, erected in 1708. In front of it stands the ancient cross of the town; and at the base of this is a curious, blue, lozenge-shaped stone, reckoned the palladium of the burgh, and called *Clach-na-cudden*, ‘the Stone of the tubs,’ from its having been a noted resting-place for the water-pitchers or deep tubs of bygone generations of women when passing from the river. In the front wall of the Exchange and Town-

house, the armorial bearings of the town—a shield representing the Crucifixion, and supported by an elephant and a camel, with the motto ‘Concordia et Fidelitas’—together with the royal arms, are beautifully carved. In the town-hall are good portraits of Sir John Barnard and Sir Hector Munro, benefactors to the town, the former painted by Ramsay; a full-length portrait, by Syme of Edinburgh, of Provost Robertson of Aultnaskiach, bung up as a testimonial of respect by his fellow-citizens; and a copy of the original portrait, by Ramsay, of the celebrated Flora Macdonald, presented by Mr. Frazer of Madras, a native of the town.—Near the head of Church-street stands a high and spacious but clumsy and heavy edifice, called the Northern Meeting-rooms, built by subscription, and elegantly fitted up into a ball-room and a dining-room, each 60 feet long and 30 wide, and respectively 20 and 18 feet high.—On the north-east side of Academy-street stands the Inverness Academy, an extensive erection, handsome but not showy, opened, in 1792, for the education, on a liberal scale, of the families of the upper classes throughout the Northern Highlands. It has a large pleasure-ground behind for the recreation of the scholars; and is distributed in the interior into classrooms for five masters, and a public hall embellished with a bust, by Westmacott, of Hector Fraser, an eminent teacher of Inverness, and with a masterly painting of the Holy Family variously ascribed to Sasso Ferrato and to Perino de Vaga. The Academy was erected by numerous and munificent subscriptions, is upheld by a fund of upwards of £6,000, besides an annual grant of £70 from the town; has a body of directors who are incorporated by royal charter; and affords liberal training in all departments of a commercial and a classical education, with the elements of mathematics and philosophy. The Northern institution for the promotion of science and literature, established in 1825, have provided the Academy with a valuable museum, and promise to append to it lectureships in the physical sciences.—The Old academy, or hospital, situated near the lower end of Church-street, was bequeathed, in 1668, to the community by Provost Alexander Dunbar; and, since the transference of its funds, in the form of the annual grant, to the New Academy, it has been fitted up for a public library, a lady's school, a soup-kitchen, and some other kindred purposes.—On a tumulated part or swell of the bank immediately south of the Castle-hill, and constituting the highest ground within the limits or the environs of the boundaries, stands a neat and commanding edifice, very recently erected for the accommodation of various public charities of the burgh, and surmounted by an octagonal tower, which terminates in a dome, and is fitted up as an observatory. The institutions which it accommodates are a school for females, a female work-society, an infant-school on the plan of Mr. Wilderspin, and a society for giving clothes and blankets to the poor.—The central or model-school of ‘the Society for Educating the poor in the Highlands,’ instituted in 1818,—Raining's school, endowed by a bequest, in 1747, of £1,000,—a large subscription-school for the poor in the suburb of Merkinch,—and the retreats of some of the more subordinate but useful schools of the town,—are edifices which refresh the mind unspeakably more by the associations which they suggest, than if, with lower aims, or as the gathering-places of fashionable dissipation, they were arrayed in the most ornamental dresses of architecture.—On the left bank of the Ness, 3 furlongs above the old bridge, stands the Infirmary of the northern counties, built in 1804, and including a Lunatic asylum. It consists of a large central front and two wings, the

front decorated with four elegant pilasters; and it is surrounded at some distance with iron palisades, enclosing a spacious area. It is commodiously and salubriously fitted up in the interior, has a suite of hot and cold baths, is maintained chiefly by subscription and benignly conducted, and may, in most points of view, compare with any institution of its class in Scotland.—The High church, situated near the foot of Church-street, and devoted to English preaching, is a large plain edifice, standing compactly with an old square tower, which is said to have been huilt by Oliver Cromwell, and whose soft clear-toned hell is believed to have been brought by him from the ancient cathedral of Fortrose.—The Gaelic church, situated beside the High church, and appropriated exclusively to Gaelic, has no exterior attraction, hut possesses within an old and elegantly carved oaken pulpit.—The North kirk, situated in Chapel-street, is a large and handsome building.—The Episcopalian chapel, standing opposite the High church, is a neat structure, surmounted by a cupola. The other places of worship in the town are all pleasant and creditable ecclesiastical fabrics.

A wooden hridge, which existed in the time of Cromwell, and is characterized by one of his officers as 'the weakest, in his opinion, that ever straddled over so strong a stream,' stood a few yards below the present old hridge, and communicated with the town on the right hank of the river by an arched way which perforated, or was surmounted by a house. Upwards of 100 persons formed a crowd upon this fragile structure, and caused its fall, yet all escaped destruction.—The old hridge was huilt in 1685, at a cost of £1,300, defrayed by voluntary contribution throughout the kingdom. Between the second and third arches is a dismal vault, used first as a jail and afterwards as a madhouse, the air-hole or grating of which is still visible. This appalling place of durance, whose inmate was perched between the constant hoarse sound of the stream heneath, and the occasional trampling of feet and rattle of wheels overhead, was in use so late as 30 years ago, and is said not to have been ahandoned till its last miserable inmate, a maniac, had been devoured by rats.—The new bridge is a wooden erection, huilt in 1808, by public and private subscription.—At two beautiful islets in the Ness, very nearly united, measuring respectively  $1\frac{1}{2}$  and  $1\frac{1}{4}$  furlong in length, and lying about a mile above the town, two airy and handsome suspension-hridges have been hung across to connect them, the one with the right hank and the other with the left. These islands—once noted as the scene of rural feasts and semi-hacchanalian orgies given by the magistrates to the judges at the assize-courts—have been tastefully cut into pleasure-walks, profusely planted and variously beautified as public promenades; and, easily approached by the ornamental hridges, and lying in the bosom of an almost luscious landscape, they prohably excel all public grounds of their class in Scotland.

The extinct and ancient public structures of the town present various associations of stirring interest. The oldest or original castle of Inverness, that which stood on 'the Crown,' has for centuries been untraceable, except by traditional identification of its site. This edifice was very prohably, as Shakspeare assumes, the property of Macheth, who, being by birth the maarmor, or 'great man of Ross,' and becoming by marriage that also of Moray, could hardly fail to have the mastery of a stronghold at the mouth of the Ness; and, true to the description of the prince of dramatic poets, 'this castle had a pleasant seat,' the air around which

"Nimble and sweetly recommends itself  
Unto our gentle senses;"

hut, according to the concurrent opinion of modern antiquarians, it was not, as Shakspeare represents, and as Boethius and Buchanan relate, the scene of King Duncan's murder by Macheth,—that deed having been perpetrated at a spot called, in the Chronicon Elegaicum, *Bothgofuane*, 'a smithy,' and placed by some near Inverness, hut by most near Elgin. When Malcolm Canmore vanquished his father's murderer, he naturally seized his strongholds, and dealt with them at will; and he then razed his castle of Inverness, and huilt instead of it, and as a royal residence, a fortress on the summit of the Castle-hill, the site of the present county-buildings. This new castle figured for several centuries as unitedly a seat of royalty and a place of military strength; receiving at intervals within its precincts the persons of the kings and princes of Scotland, and regularly serving as a vantage-ground, whence they or their servants overawed the insubordinate and turbulent north. Shaw Macduff, son of the 6th Earl of Fife, the assumer of the name of Mackintosh, the assistant of Malcolm in crushing an insurrection in Moray, and the acquirer of great property in the north, was made hereditary governor of the castle. In 1245, it became the prison of Sir John Bisset of Lovat, for the imputed crimes of connection with the murder of the Earl of Athole, and of fealtyship to the Lord of the Isles. Soon afterwards, it was captured, during the minority of one of its hereditary keepers, by the Cummings of Badenoch; and thence till the beginning of next century, it remained in their possession. In 1303, it was seized by the partisans of Edward I. of England; and, in turn, it was captured by the friends of Robert Bruce. The patriot founder of a new dynasty of Scottish kings was a wanderer in the Western islands when this key-fortress of the North became his; and he is said to have been inspired by the news of the acquisition, to that course of daring enterprise which conducted him to triumph and the throne. From Bruce's time till that of James I., the castle was retained in the immediate power of the Crown; and at the accession of the latter monarch, it was repaired and refortified, and again put into the hereditary keeping of the captain of the clan Chattan, the chief of the Macintoshes. In 1427, James I., when in a progress through the north, to castigate some turbulent chiefs, held a parliament in the castle, summoning to it all his northern harons. Alexander, Lord of the Isles, was, on this occasion, made prisoner for a year; and, when freed from durance, he returned with an army at his heels to wreak vengeance on his prison; and, imposing on the authorities by pretence of friendship, and consigning the town to burning and pillage, he made a hold attempt to seize the castle, hut was repelled by its governor. In 1455, John, his successor, quite as turbulent as he, or more prohably Donald Balloch of Isla, acting as John's lieutenant, rushed down upon the town, and, while ahandoning it like Alexander to the flames and plunder, made a more successful effort against the castle, and took it by surprise. In 1464, the castle was visited and temporarily occupied by James III.; and in 1499, by James IV. In 1508, the keepership of the castle was conferred hereditarily on the Earl of Huntly; and though eventually becoming the most merely ideal of offices, it went regularly down to his descendants, and was held by the late Duke of Gordon at his death. In 1553, the castle received the queen-regent, Mary of Guise, and was the scene of a convention of estates and extraordinary courts summoned by her to quiet the Highlands, and punish caterans and political offenders; and, at the same time, it endunged the Earl of Caithness, for breach of her laws and defiance of her authority, in affording his protection to freebooters.

In 1562, Queen Mary, having entered the town attended by the Earl of Moray, was driven from the castle-gates by the governor of the fortress, a creature of the Earl of Huntly, and was obliged to take up her residence and to hold her court in a private house, still in part standing, near the old bridge; but strengthened by the accession to her troops of the Mackintoshes, the Frasers, and the Munroes, she reduced the castle, and put the governor to death. In 1644, on intelligence of the descent of a party of Irish on the west coast to join the Marquis of Montrose, the castle was put into full trim, and fully garrisoned; and next year, it successfully held out, under Urry, the parliamentary general, aided by all the parliamentarians of the town, against a regular siege by Montrose's troops. In 1649, Mackenzie of Pluscardine, Sir Thomas Urquhart of Cromarty, and other royalists, took the castle, nearly demolished its fortifications, and devoted its tapestries and decorated chambers to decay and desolation. Soon after the Revolution the dilapidated pile—now scarce half a fortress—was patched up into a stronghold of the Jacobites, by the magistrates, who were warmly attached to the cause of the dethroned dynasty; but it was soon wrested from their possession, and converted into a means of keeping them in check. In 1718, the reigning authorities repaired it, converted the ancient part into barracks for Hanoverian troops, added a new part to serve as a governor's house, and gave the whole structure the name of Fort-George. In 1745, it was occupied successively by Sir John Cope and the Earl of Loudoun, on behalf of the Government; and next year it was taken by Prince Charles Edward, and by his command was destroyed by explosion. The French officer of engineers who lighted the train which was to explode it, is reported to have been blown into the air and killed. Though the castle was now rendered uninhabitable and useless, a large part of its walls, till a very recent period, remained entire.

A street, which leads from the east end of the Exchange and Town-house to the terrace, along the southern outskirts, still commemorates the fortress in its name of Castle-street, and has on its west side some remaining parts of the old castle wall. This street—which is narrow, dingy, and a dark relic of bygone times—has some very old houses, and was anciently called Doomesdale-street, on account of its conducting to the Gallows-moor.—The houses of Petty-street, in the vicinity of the site of Macbeth's castle on "the Crown," are memorials of the period of meanness and thatch; and are such low slateless tenements as convey to strangers entering from the south a foully unfavourable first impression of Inverness.—A house in Church-street, the third below the Mason lodge, was the domicile occupied successively by Prince Charles Edward and the Duke of Cumberland, amid the closing scenes of the civil war of 1745-6. The apartment in which they slept is on the first floor, and looks into the garden. The house is said to have been the only one then in the town which had a parlour or sitting-room without a bed; and it belonged to Catherine Duff, Lady Drummuir, and is now the property of her descendant, the proprietor of the splendid suburban mansion and demesne of Muirtown.—Remains of a vast fort which Oliver Cromwell built in 1652-7—one of the four which he constructed for checking and overawing Scotland—may be seen at the harbour, two or three furlongs above the mouth of the Ness. It cost £80,000 sterling, occupied nearly seven years in building, and was constructed with fir from Strathglass, oak-planks and beams from England, and stones from the religious houses of Inverness, the priory of Beaulieu, the abbey of Kinloss, and the

cathedral and bishop's castle of Fortrose. It was a regular pentagon, surrounded with ramparts, having the Ness on one side, and a fosse on all the others so deep and broad as at full tide to float a small bark. This great ditch still exists, retains its capacities, and is widened on the south side into a regular harbour. The breastwork of the fort was three stories high, constructed of hewn stone, and lined on the inside with brick. The principal gateway looked to the north; and was approached, first through a vaulted passage 70 feet long, and seated on each side,—and next over a strong oaken draw-bridge, overhung by a stately structure, inscribed with the motto, "Togam tuentur arma." The sally-port looked toward the town. At opposite sides of the area within the ramparts stood two long buildings, each four stories high,—the one called the English building, because built by Englishmen, and the other called the Scottish building, because built by Scotchmen. In the centre of the area stood a large square edifice, three stories high, the lower part occupied as magazine and provision-store, and the highest part fitted up as a church, covered over with a pavilion-roof, and surmounted by a tower with a clock and four bells. The fort had accommodations for 1,000 men; but it so annoyed and chafed the Highland chiefs under the keen administration of Cromwell, that, at their request, and in acknowledgment of their loyalty to the Stuarts, it was destroyed immediately after the Restoration. Its ramparts and houses—though a considerable part of the former still remains—became a quarry to the burghers; and were freely carried off for the construction, as is believed, of many of the existing older houses of the town. The area of the fort is now peacefully occupied by some weavers' shops, and by a large hemp factory, built in 1765.—At least two suites of ecclesiastical buildings, and probably three, which anciently belonged to Inverness, were swept away as building materials for the fort. One was a chapel, dedicated to the Virgin Mary. Another, the probable one, was a convent and church of Franciscans or Grey friars. The third was the monastery and church of a community of Dominicans or Black friars, who were established in the town during the reign of Alexander II. The cemetery of the Dominicans survives, and is the large burying-ground still in use, called the Chapel-yard, and situated in Chapel-street; and, before the present entrance to it was formed, it had a neat and richly-sculptured gateway, inscribed with the words, "Concordiâ parvæ res crescunt."

Inverness, though possessing many advantages for productive industry, has but inconsiderable manufactures. A white and coloured linen thread manufacture, which, at the end of last century, had its seat in the burgh, and was ramified over the northern counties, and employed about 10,000 persons, has almost wholly disappeared before the energetic competition of the towns of Forfarshire. A bleachfield on the Ness has also proved a failure. A hemp manufacture—principally of coal and cotton bagging—was for a time not a little prosperous, but has already greatly declined. The factory within the area of Cromwell's fort employed fifty years ago about 1,000 persons, but now employs at most 300. A second factory, established while this one prospered, was ten or eleven years ago discontinued. The bagging produced yields earnings to the workmen of from 4s. to 10s. per week; and is sent chiefly to London and the Indies. A woollen factory in the suburb of Haugh produces coarse clothing, tartan and plaids for the Highland market, has attached to it apparatus for the carding and spinning of wool, and employs about 25 persons. There are three

tanneries. Ship-building was a few years ago commenced in a spirit of enterprise.—Malting was for generations a chief employment in the town, and enriched the members of by far the largest ancient corporation in the hurbg. Dissipation was unhappily very general throughout the Highlands; and, having as yet neither yielded to the seduction of ardent spirits, nor becoming acquainted with the weaning influence of tea, it expatiated in its orgies upon the produce of the brewery. Inverness enjoyed almost a monopoly in the art and practice of malting, and supplied all the Northern counties, the Hebrides, and the Orkneys with malt. One-half of the aggregate architecture of the town was a huge and unsightly agglomeration of malting-houses, kilns, and granaries. But from the date of the Revolution onward, this trade has suffered a gradual decline; and, at one time, it threatened to involve the whole interests of the community in its fall. So low had the town sunk even at the date of the civil war of 1745-6, that it looked almost like a field of ruins; the very centre of it containing many forsaken and dilapidated houses, and all the other parts of it exhibiting in every alternate space, and that the larger one, the ruin of a kiln, a granary, or some homogeneously building. Had not succedanea for the nearly defunct and once general occupation opportunely sprung up to revive the town, and to occasion the ruined parts of it, some years before the close of the century, to be almost wholly new built, it might already have been on the brink of extinction. A few of the old large malt-kilns and granaries still exist, and there are some breveries and distilleries.

Inverness had anciently a large share in the limited commerce of Scotland. During several centuries previous to the Union, it was the adopted home of foreign traders, or was annually visited by German merchants; and it conducted, with the ports of Holland and other parts of northern continental Europe, an extensive trade in skins and other Highland produce, in exchange for foreign manufactures. The Northern counties, and even the Highlands generally, as well as the Western and the Northern islands, looked to it as the only mart for their commodities, and the only depot whence they could obtain the produce of other lands. But during the effluxion of the former half of last century, the Highlanders of the western and southern districts found their way by agents to Glasgow, and, adopting it as a superior market, abandoned Inverness to the incompetent support of the infertile north. Trade, which synchronized in its decline with the falling away of the malt-manufacture, began to revive with the era of renovation which succeeded 1746. The money circulation by the Hanoverian army after the suppression of the Rebellion, the great influx of money from the East and the West Indies, the opening up of the vast circumjacent country by easily traversable roads, the establishment of manufactures, the improving of agriculture, the rise in the value of lands, and the causes as well as the immediate results of the great social and meliorative revolution which took place in the Highlands, all conspired to educe before the close of the century, a considerable, a various, and a not insecure trade. About the year 1803, its merchants had their attention turned, by convenience, and a view of the cheapness of British manufactures, to London in preference to foreign ports; and they commenced with it, as their great mart of commerce, an intercourse which has been generally prosperous, and has steadily increased. So late as twenty years ago, the town annually imported about 8,000 to 10,000 holls of oatmeal; but since then it has gradually reversed the process, and, for a number of years past it has annually exported from

4,000 to 5,000 bolls of oats. In its custom-house district, which extends from the mouth of the Spey to the Dornoch frith, there were, in 1831, 142 vessels of aggregately 7,104 tons, and, in 1835, 160 vessels of aggregately 7,597 tons. About one-third of the vessels, and about one-half of the tonnage, belong to the town. In 1834, 6 vessels, each of about 130 tons, traded regularly with London, 5 traded with Leith, and 2 traded with Aberdeen. In 1840, steam-vessels sailed from it every ten days to London, every Friday morning to Aberdeen and Leith, and every Monday and Friday morning to Glasgow and places intermediate along the route of the Caledonian and the Crinan canals. From Inverness and its vicinity, including Beaully and Easter Ross, between 30,000 and 40,000 quarters of wheat are annually shipped for London and Leith; and within its custom-house district about 100 cargoes of mixed goods from these ports and Aberdeen are annually deharked. A great trade is conducted also along the Caledonian canal, and disgorges most of its proceeds at the basin near the town. See article CALEDONIAN CANAL.—Three harbours, all small, but good and easily accessible, have at different periods been constructed in the Ness; the lowest admitting vessels of 250 tons burden, and the others vessels of 200 tons. At the Caledonian canal wharfs, within a mile of the town, large ships may receive and deliver cargoes, and in Kessock roads they have safe and excellent anchorage. The piers, inn, and offices at Kessock ferry-station, midway between the mouth of the Ness and the sea-lock of the Caledonian canal, were erected by Sir William Fettes, the proprietor, at an expense of about £10,000. The accumulation of commerce round the peninsula enclosed by the Ness and the canal, terminating in Kessock-point, and bearing the name of Merkinch, has, within the last thirty-five years, carried up its rental value from between £70 and £80 to upwards of £600.

Inverness is well-provided with the appliances of trade, of landward communication, and of social comfort. Its inns have long been noted for their good properties; and the chief of them, the Caledonian hotel, is equal to almost any in Scotland. Its banking-offices are branches of the Bank of Scotland, the British Linen company's bank, the Commercial bank of Scotland, the National bank of Scotland, and the head-office of the Caledonian banking company. A four-horse mail-coach communicates daily with Dingwall, Tain, and Tburso on the north, and with Aberdeen, Edinburgh, and with places in general on the south; two stage-coaches communicate daily with Aberdeen along the coast-road by way of Elgin; a stage-coach communicates twice a-week, and during part of the year daily, with Perth, by the great Highland road through Badenoch; and public vehicles communicate, during part of the summer, with the district of Ross-shire called the Black isle. Some curious facts respecting the lateness of the introduction of wheeled-carriages to Inverness, the very modern acquaintance of the town with public vehicles, and the slow and progressive accession of the luxuries of a mail, are stated in our article on the HIGHLANDS: which see. The Medical society of the North, the Inverness-shire Farming society, and the Association of the Northern counties, hold their meetings in the town. The last of these is a body of noblemen and gentlemen, to whom belongs the building which we noticed for the Northern meetings, and who are associated to patronize horse-racing and fashionable amusements, and to fling, by means of these, what they conceive to be attributes of refinement over the Northern capital. The institutions of the town, literary, social, hence-

volent, and religious, additional to the goodly number we have already had occasion to notice, are a mechanics' institution, established in 1831; two public reading-rooms, to both of which strangers are politely allowed access; several subscription and circulating libraries; a large parochial library, under the management of the kirk-session; a select religious school-library; a dispensary, established by subscription in 1832; nine friendly societies; two mason-lodges; a Sabbath school society; and a Bible society. Funds for purposes of education and charity are noticed in a succeeding paragraph of this article. Inverness has several printing-presses, and stands in such literary pre-eminence among Scottish towns of its class as to possess three weekly newspapers, the *Courier*, published on Wednesday, and the *Herald* and the *Journal*, both published on Friday. Weekly markets for poultry-yard, farm and garden produce, are held every Tuesday and Friday. Hiring-fairs for farm-servants are held on the last Friday of April and of October. Annual fairs for cattle, for general produce, and for coarse household stuffs manufactured by the Highland women, are held on the first Wednesday after the 11th day of February, O. S., or on Wednesday of the 11th; for sheep and wool on the 2d Thursday of July, and for general produce on the first Wednesday after the 18th of the same month; for dairy produce, on the first Wednesday after the 15th of August, O. S., or, if that date be a Wednesday, on the 26th, N. S.; and for general produce, on the first Wednesday after the 11th of November, O. S. These fairs, excepting that of July, are only vestiges of the great commercial gatherings, the vast provincial trysts, for the exchange of all sorts of commodities with the produce of the whole North Highlands, which often drew together a prodigious and most motley population, and were sometimes continued during successive weeks. The establishment of shops throughout the interior of the country, and of cattle-trysts in various competing localities, together with the enormous increase which has been made to the facilities of communication, have reduced the fairs to the mere skeleton of their former hulk; and the prevalence of dissipation and the frequent occurrence of rioting have occasioned them to be restricted as to time of continuance between the forenoon of Wednesday and the afternoon of the following Friday, or between the forenoon of Thursday and the afternoon of the following Saturday. But at the July wool and sheep fair the principal sheep-farmers throughout the north of Scotland are met by the sheep-dealers of Dumfries-shire and other southern counties, and by wool-staplers and agents from England, and sell to them annually sheep and wool to the value of between £150,000 and £200,000. The qualities of the different flocks in the Highlands, both fleec and carcase, are so well-known to the southern purchasers that no samples of wool and sheep are exhibited. The attendance at the fair of 1840 was greater than usual; the streets and inns were crowded; many gentlemen from the Border districts were present for the first time; and the rates of sale assumed even a higher tone than on former occasions in fixing the market-prices throughout Scotland.

Inverness, such as we have described it, exhibits, in almost every feature, marks of recent and entirely renovating transition. Only about forty years have elapsed since its streets were a continuous nuisance, altogether unwitting of a single appliance or process of cleanliness. During the former half of last century, municipal matters were so strangely managed, that, on the 29th of September, 1709, the town-clerk "paid an officer 4s. 6d. Scots, to buy a cart of peats to

he hurnt in the tolbooth to remove the had scent;" and, in December, 1737, the magistrates ordered the town-clerk to purchase "an iron spade, to be given to the hangman for cleaning the tolbooth." In the year 1740, harness and saddlery of all sorts continued to be so little in requisition, but were beginning to be just so much appreciated, that the magistrates advertised for a saddler to settle in the town. Prior to about the year 1775, when the first bookseller's shop was opened in the hurgh, the few persons in the town, and throughout the great extent of country, dependent on its market, who were able and had occasion to make use of writing materials, were supplied with stationery by the post-master. About the middle of last century, a hat had not graced any head in the north except that of a landed proprietor or a minister; and when it was first assumed by a hurgher, in the person of the deacon of the weavers, the father of the late Baillie Young, it excited the highest ridicule of the blue-honneted multitude, and drew from them such constant twitting and rallery, as only the stoutest pertinacity, and the sturdiest independence, could have enabled the worthy deacon to resist. At a comparatively late date, intemperate drinking is understood to have been practised, even among the most polished classes, with such horrid defiance of all moral obligation and all social decency, that a guest would be thought discourteous, or perhaps insulting to his entertainer, who did not drink till he became insensible and actionless, and had to be carried away like a mass of carrion from the presence of the living. About ninety years ago, a leg of mutton, a neck of veal, and a gallon of ale, are said, by tradition, to have been purchaseable for a shilling; and even yet, hatcher-meat, poultry, fish, and ale, sell at much lower prices than in the southern towns.\* At the middle of last century, the universal costume was Celtic and primitive; and, to this hour, it varies in a sufficient number of instances and particulars from that of the inhabitants of the southern towns, to impress upon a Lowland visiter an instant conviction that he is among a peculiar race, whose habits and notions still differ considerably from his own. The young women of the lower classes appear at market or church without any head-dress, and the married women without bonnets; and, in the rest of their attire, they exhibit rather a passion for simple and gaudy finery, than a taste indicative of much advance from the rude notions of hygone times. Men of the lower classes, in some instances, and the landward peasantry in general, wear coarse home-spun blue short coats, small blue honnets, stockings of the kind called "rig-and-fur," and very often some relic or pendicle of the old Highland costume. Yet the population as a whole is, as to social manners and character, certainly the most rapidly, and perhaps the most materially, improved of any in Scotland. Games of foot-hall,shintie, howls, and throwing the stone and hammer, which formerly were common among adults of the lower orders, are now entirely abandoned, or practised only by school-boys and apprentices on gala days. Appliances of fashionable folly, the theatre, the hall-room, the turf, and kindred means of killing the time and squandering the moral energies of the upper classes, have not half the prominence or attraction in Inverness as in several Scottish towns which are very far behind it in the resources of wealth and aristocracy. Knowledge and general intellectual attainment distinguish the higher orders, and are swelling upward with steady tidal flow in every recess and crevice of society. Gaelic, though not long ago the prevailing language, is wholly unknown to many of the rising generation, even among the poorer

\* See a preceding Note.

classes; and though still spoken by some, and understood by most, is rapidly becoming extinct. The Inverness dialect, or pronunciation of English, has long been, and is still, justly noted for its intrinsic purity, and for its being but little, if at all, affected by such broad Doric provincialisms as are everywhere impressed on the varieties of the Lowland dialect. This comparatively correct and elegant English—purer by far than that of most parts of England itself—is generally ascribed to the modelling influence of the soldiers of the Commonwealth during the years of their occupying Cromwell's fort; but it seems rather to have arisen, and to be even yet occasionally arising, from the circumstance of English being acquired, not by the lessons of imitation, but by the process of translating from the Erse,—a circumstance which conducts, not to a corrupted spoken language, but directly to the pure English of literature. Ireland exhibits along the debateable ground in the far west between the strictly aboriginal or Erse district, and the Anglo-Irish territories, just such a phenomenon as Scotland has in Inverness, and there pours forth, from the lips of her peasantry, an English so untainted by brogue and provincialism as would delight the ears of a master of orthoepy.

Inverness, viewed in connection with its environs, is perhaps the most delightful town-retreat in Scotland; and were it situated farther to the south, or not so remote and difficult of access, would speedily become the adopted home of numerous classes of annuitants. Its gorgeous encircling natural panorama,—its pure and salubrious air,—its rich resources of school and library,—its charming promenade of the Ness islands,—and its vicinity to a profusion of objects which demolish ennui and delight the taste,—render it almost the paragon of provincial towns. The grounds of Muirtown, embosoming in wood  $\frac{3}{4}$  of a mile north-west of the town a handsome and tasteful mansion, and stretching away in the embellishments of lawn, and glade, and forest, to the base of the romantic Craig-Phadric, form a constant haven, a nook of repose to the eye, after its bold and far-away roving athwart the general landscape. Other mansions and their grounds, particularly the houses of Culloden, Raigmore, Darrochville, and Leys, adorn the immediate neighbourhood. Associations connected with the curious little hill of Tomnahurich, rising abruptly from the plain,  $\frac{2}{3}$  of a mile south-west of the town, like the inverted hull of an enormous ship, feathered all over with trees, peopled by the dreams of ancient superstition with colonies of fairies, regarded by many as the sepulchral mound, the stupendous grave, of Thomas the Rhymer, and used in the olden time as a ward hill for noting the approach of unfriendly clans,—associations connected with this picturesque object may allure a saunterer into many a pleasing reverie; and walks all around its base, and along the banks of the tree-fringed Ness—that river which is alike “noble, broad, clear, and strong,”—may both minister to health, and daily draw a well-toned mind into holy meditation. Other objects and places, which interest the feelings, and are accessible by short walks or easy drives, are the rocky eminences and the columnar monument above Clachmaharry,  $1\frac{1}{2}$  mile north-west; the high gravelly ridge called Tor-a-Bhean, and partly encircled with ditches and ramparts, a little west of Tomnahurich; the Ord Hill of Kessoek, the site of a vitrified fort, 2 miles north; the Druidical temple of Leys,  $2\frac{1}{2}$  miles south; the famous battle-field of Culloden moor,  $5\frac{1}{2}$  miles south-east; Castle-Stewart, 6 miles east; the stone monuments at Clava, 7 miles south-east; Loch-Ness, and the Roman station at Bona, 7 miles south-west; the Aird or vale of the Beauly, from 3 to 16 miles west; Castle-Dalcross, Fort-George, and

Cawdor-castle, respectively 8,  $12\frac{3}{4}$ , and 15 miles east; Glen Urquhart and Castle, from 15 to 20 miles south-west; the Falls of Kilmorack, from 12 to 15 miles west; and the Fall of Foyers, 18 miles south-west.

Inverness is a burgh of great antiquity. There are on record four charters granted in its favour by King William the Lion. By the first of these, the king granted “burgensibus de Moravia” the usual burghal privilege “ut nullus eorum namum capiat pro alicujus debito nisi pro eorum debito propriis.” By the second, the burgesses of Inverness were declared free “a tolneo et omni consuetudine per totam terram regis:” it prohibited “ne quis emat aut vendat in burgo illo aut in vicecomitatu illo extra burghum aliquam mercaturam exerceat nisi fuerit burgensis aut stallarius;” and it granted to the burgesses “ad sustentamentum burgi, terram illam quæ est extra burghum quæ vocatur Burghalew.” In consideration of these grants, the burgesses undertook to erect and maintain a good palisade over a fosse to be constructed by the king. The third charter of William granted to the burgesses of Inverness “perpetuam libertatum quod nunquam inter eos bellum habebunt, nec aliquis alius burgensis aut aliquis alius homo de toto regno super eosdem burgenses de Moravia nec super heredes eorum bellum habebunt nisi tantum juramentum;” and further, “ut dimidium juramentum et dimidium forisfacturam faciant quod ceteri burgenses faciunt in toto regno.” The fourth charter of the same king—which is still preserved in the archives of the burgh—granted to the burgh the privilege of a weekly market, and ratified in its favour some of the remarkable privileges conferred on burghs by the statutes of David, the king's grandfather. A charter of Alexander II. granted to the burgesses the land of Markynch. Alexander III. confirmed the privilege contained in the first charter of William, and enjoined all sheriffs north of the Munth to distrain for payment those “qui debita burgensibus deluerint quod rationabiliter prohare potuerint, ad eadem debita eis juste et sine dilatione reddenda.” Robert I., in the 19th year of his reign, directed a precept to the sheriff of Inverness to do full and speedy justice, at the suit of the burgesses of Inverness, against all invading their privileges by buying or selling in prejudice of them and of the liberties of the burgh. David II. conferred the privilege, or declared the right of the burgesses that no justiciar nor other officer of the crown—except the chamberlain, whose office it is—sit or take cognizance upon the correction or punishment of the weights and measures of the burgesses; and the same king granted to the burgesses and community the burgh, with the land of Drekes, and with toll and petty custom of the burgh. James II., in ratifying certain grants of his ancestors to the church of St. Duthac and to the inhabitants of Tayne, in 1457, declared that they should not prejudice the right of the burgh and burgesses of Inverness to the great and small customs granted to them by his ancestors; and further confirmed the rights, privileges, liberties, and infeftments of the burgh and burgesses of Inverness; from which it would appear that the exclusive privilege of merchandise within the sheriffdom, conferred by the second charter of William the Lion, actually extended over the earldom of Ross, then part of the sheriffdom of Inverness. Queen Mary, on the 3d of May, 1546, granted under the great seal a ratification of an act and ordinance of the provost, bailies, council, and community of Inverness, dated the 19th March, 1545. In the narrative there is set forth “the great hurt and skaith lang time by-gane used through indrawing of outlandish men of great clans not able nor qualified to use merchandize, nor make daily residence nor

policy, nor no manner of bigging within the burgh, but allenarly to hruick the profit of the common tacks and steadings of the hurgh to be spended and used outwith the said burgh,—which has happened from the widows within the hurgh hruicking the tacks and steadings of their husbands after their decease, and hy reason of the interest of the outlandish men of great clans with the said widows." In consequence, it is "ordained that no widow should hruik any tack or steading within burgh hy reason of the decease of her husband, after the old manner, but the same to be hruicked by the heirs male of the hodies of the possessors; providing alway that they be thought qualified by the provost and hailies and their council to scot, lot, walk and ward, with the laif of the neighhours of the said burgh, and make continual and daily residence for the most part of the year within the same; failing of which heirs, the provost, &c., to dispone to other neighhours worthy and qualified." There are, in the reign of Jamcs VI., two charters,—the one granting new, and the other confirming the ancient rights. The first is dated the 6th March, 1588, hy which the king approved of the destruction of a mill huilt on the water of Ness, to the south of the castle; and granted to the hurghesses the astricted and dry multures helonging to that mill for payment of six merks yearly. The second ratifies the ancient charters in favour of the hurgh granted by William, Alexander, David, James I., James IV., and Mary. This charter contains a detail of the lands and other rights of property then appertaining to the hurgh, of which the following may be deemed the most important:—"The lands of Drakes, and forest of the same; Markhinch, with the common pasturage anciently called the Burgh-haugh, Wood Park, Burnhills, Claypots, Milnfield, the Carsc, Carn Laws, as particularly hounded, the common muir of the hurgh, the water of Ness, and both sides of the same between the stone called Clachnahayag and the sea, with the fishings; the fishing of the Red Pool, on the east of the ferry of Kessock, with the privilege of three kists within the water wrak, as use is; the ferry of Kessock, the King's mills, the astricted and dry multures of the Castle lands, and of the other lands which of old pertained to the mills huilt on the Ness to the south of the Castle, called Kannak-hill mills, destroyed."

A large part of the landed property of the hurgh has been alienated at different times, so that this portion of its funds is now comparatively small. The property\* of the hurgh of Inverness was returned, in 1832, as consisting of:—

Fen-duities, . . . . .	Estimated value, . . . . .	£2,583	14	2
Casualties of superiority, . . . . .		1,117	15	0
River Ness fishings, . . . . .		300	0	0
Burgh lands, . . . . .		7,684	6	0
— houses and shops, . . . . .		870	4	0
Town-hall, and subjects not yielding a pecuniary annual return, . . . . .		2,000	0	0
Estimated value of heritable property, but not taking into account gaul, court-house, church, and bleaching-greens, . . . . .		14,555	19	2
Inverness gas and water company, . . . . .		500	0	0
New bridge of Inverness, . . . . .		1,856	15	10
New harbour of Inverness, . . . . .		3,365	1	1

\* This enumeration and estimate, it was stated, included only such property as was deemed capable of being sold, transferred, or made over in security. In consequence, the principal church in Inverness is not included, although built at the expense of the burgh, and yielding from seat-rents an annual revenue of £146 13s. 3d. Nor, in making the estimate, have the proceeds of the old anchorage and shore-dues, customs, old bridge-toll, burgess and apprentice-dues, been taken into calculation. But the town-hall, the bridge, and harbour, and the other subjects of a similar nature, must likewise be excluded, which, by occasioning a deduction of £7,221 16s. 11d., will reduce the amount of available property to £13,589 17s.—*Municipal Corporations Report.*

Arrears of revenue due, . . . . .	506	19	5
Thomas Ross, burgh chamberlain, . . . . .	26	18	5
	6,255	14	9
Estimated value of heritable property brought down, . . . . .	14,555	19	2

E-timated amount of property, £20,811 13 11

The annual revenue of the burgh, for the year ending at Michaelmas, 1832, was as follows:—

Fen-duities, . . . . .	£129	3	8
Casualties of superiority, . . . . .	40	5	7
River Ness fishings, . . . . .	20	0	0
Land rents, . . . . .	290	18	0
House, shop, &c., rents, . . . . .	60	8	0
Dividends from gas and water company, . . . . .	11	5	0
New bridge, interest on debt, . . . . .	83	18	11
New harbour do. . . . .	168	4	10
Church-seat rents, . . . . .	146	13	2
Stent or burgh-cess, . . . . .	196	12	2
Lamp-money, . . . . .	201	11	8
Anchorage and shore-dues, . . . . .	332	0	0
Petty customs, toll of old bridge, &c., . . . . .	357	0	0
Burgess and apprentice dues, . . . . .	21	13	4
Streets cleaning, sales of manure, . . . . .	186	0	0
Miscellanies, . . . . .	1	2	0

Total revenue for 1831-2, 2,236 16 4

But, supposing that the stent or burgh-cess and lamp-money, being destined for specific purposes, should not be included as items of general revenue,—if so, deduct . . . . . 398 3 10

Revenue 1831-2, so restricted, £1,839 12 6

The abstract of the annual expenditure of the hurgh for the year 1831-2, was,—

Interest and annuities on debt, . . . . .	£387	17	3
Education and schools, . . . . .	110	0	0
Church establishment, . . . . .	64	10	0
Stent or burgh-cess, . . . . .	196	0	0
Other public burdeus and taxes, . . . . .	36	9	11
Street-lighting, . . . . .	223	4	3
Street-sweeping, . . . . .	268	11	6
Gaul, . . . . .	222	11	6
General police, . . . . .	216	5	0
Improvements, repairs, furnishings, . . . . .	117	14	6
General management aud miscellanies, . . . . .	215	14	0

Total expenditure, 1831-2, 2,058 17 8

But, supposing that the stent or burgh-cess and the street-lighting should not, for the reasous stated under the head of revenue, be included as items of general expenditure,—if so, deduct . . . . . 419 4 3

Expenditure 1831-2, so restricted, £1,639 13 5

The abstract of the debts of the hurgh was as follows, at Michaelmas, 1833:—

1. To the guildry corporation of Inverness, . . . . .	£1,350	0	0
2. To the Northern Infirmary of Inverness, . . . . .	3,900	0	0
3. To Jonathan Anderson's fund, . . . . .	3,100	0	0
4. To Inverness lesser charitable mortifications, . . . . .	717	5	0
5. To Mrs. Low and Miss Grant, value of annuities, . . . . .	85	7	10
6. To Campbell Mackintosh, town-clerk, . . . . .	753	7	8
7. To receiver-general of land-tax, . . . . .	156	0	0
8. To Roderick Reach, solicitor and accountant, . . . . .	75	2	0
9. To road and street-trustees of Inverness, . . . . .	500	0	0
10. To D. F. Mackenzie, procurator-fiscal, . . . . .	32	12	8
11. To Robert Smith, solicitor, . . . . .	5	10	10
12. To Inverness Journal, . . . . .	6	10	0

Amount of debts, 10,684 16 0

Thus classified:—			
Heritable, . . . . .	£156	0	0
Moveable, . . . . .	£9,567	5	0
On annuity, . . . . .	85	7	10
Disputed claim, . . . . .	679	8	2
Open accounts, . . . . .	196	15	0
	10,528	16	0

Which being deducted from the amount of available property, as before stated, . . . . . 13,589 17 0

Leaves a balance, in favour of the burgh, of £2,905 1 0

The corporation-revenue in 1838-9, was £1,985 13s. 1½d.

The affairs of the hurgh are, under the superintendence of the magistrates and council—21 in number—managed by the town-clerk, chamberlain, and accountant. The first of these officers performs the ordinary duty of legal adviser and law-agent. The duties of the second are to receive the revenues of

the burgh, and to make all payments. The duties of the accountant are those of the ordinary professional nature.—There is nothing peculiar in the jurisdiction of the magistrates of Inverness. The jurisdiction of the magistrates includes the ancient royalty, and the royalty as extended by the statute of 1808. There are no subordinate or dependent territories; but it is important to remark that, on one side, the royalty extends beyond the parliamentary boundaries a considerable way into the country; and that, on the other side, it is much within the parliamentary boundaries, and does not include a considerable portion of the town. The jurisdiction is exercised by the magistrates directly. The courts held practically are, first, a burgh-court, by one or more of the magistrates; and, secondly, a dean-of-guild court, by the dean-of-guild and his council. That council is composed of certain members of the town-council, annually chosen by the dean-of-guild, and subject to the approval of the magistrates and town-council. Both civil and criminal causes are tried by the burgh-court. The jurisdiction is of the same extent as, and cumulative with, that of the sheriff. The dean-of-guild's jurisdiction is of the ordinary nature and extent. The magistrates have no regular assessor, but the town-clerk acts in that capacity without any additional fees or salary. The election of magistrates and council at Michaelmas 1817 was set aside by the court-of-session in December 1818, and the burgh consequently disfranchised. In virtue of a warrant by the Privy council, dated the 9th of August, 1822, a new election of the magistrates and council took place by the persons who composed the magistracy and town-council for the year ending Michaelmas 1817, and that in terms of the usual constitution, sett, and custom of the burgh, which was thus restored. The mode of election was:—The provost, bailies, dean-of-guild, and treasurer, continued councillors for the year after they went out of office, and could not be any of the five merchant councillors turned off. The town-council chose five new merchant councillors, and removed five of the old; so that 13 merchant councillors continued without election. The six incorporated trades chose each one deacon, and those deacons elected a convener, who was, *ex officio*, a councillor; out of the remaining deacons the town-council elected 2 trades councillors, in all 21. The five old merchant councillors having been removed, the council, out of their own number, chose the magistrates. The burgh has no church-patronage; this article is therefore limited to the patronage of civil offices. But along with the ministers of Inverness, and with the concurrence of the moderator of the presbytery, they have the patronage of the following bursaries. By bequest, dated the 30th of September, 1730, of James Fraser, LL.D., treasurer of Chelsea hospital, a sum of £220 was left to King's college, Aberdeen, for two bursaries or exhibitions towards the maintenance in that college of two students from Inverness, both to be of the surname of Fraser; one to be a student of divinity, the other of philosophy. After some temporary arrangements, it was recently agreed upon, between the patrons and the Senatus Academicus of King's college, that out of the said fund there should be two philosophy bursaries of £15 each, and two divinity ones of £11 each.

The sums mortgaged for the purposes of education, and placed under the management of the magistrates and council, are large, amounting to nearly £34,000. Of these, the Mackintosh endowment is the most important. This institution was endowed conformably to the testament of Captain William Mackintosh, of the Hindostan East Indiaman, who died on the 12th of May, 1803. The object is for educating,

in the Inverness academy, boys of the name of Mackintosh, and of the families of Farr, Holm, Dalmigavie, and Kyllachy. The amount of the original bequest was £10,000, but it is now nearly three times that amount. The subsequent accumulation appears to have been created by the excess of income above expenditure, arising from the limited number who could be benefited by the institution.—The mortification next in importance is "Bell's endowment." The testator was the Rev. Dr. Andrew Bell, of Westminster. The purpose was the maintenance of a school, at Inverness, for the instruction of children on the Madras system. The donation was one-twelfth share of £60,000, 3 per cent. consolidated annuities; and one-twelfth of £60,000, 3 per cent. reduced annuities, under deduction of one-twelfth of £2,500, set apart for costs.—Jonathan Anderson, merchant in Glasgow, by bequest of 29th August, 1804, left a sum for the distribution of the annual proceeds, according to the discretion of the magistrates of Inverness, to decayed members of the gildry and poor householders of Inverness, in sums not exceeding £5. The amount of this fund, in 1832, was £3,836 11s. 5d. Frederick Klien of Chiswick, in the county of Middlesex, by bequest dated September 1823, left a sum amounting, in 1832, to £897; the proceeds of which are to be distributed in money, clothing, or fuel, in sums or value not less than 5s., nor more than 20s. to each person, under the direction of the provost, bailies, dean-of-guild, and council of Inverness. There are several smaller charity funds.

The town is the seat of the courts of assize for the Northern counties; of the courts of the sheriff of Inverness-shire; and of monthly justice-of-peace small debt courts. Inverness unites with Forres, Fortrose, and Nairn, in sending a member to parliament. Parliamentary constituency, in 1839, 475. Population, in 1831, 9,663; in 1841, 11,575.

The history of Inverness has so freely mixed with various sections of our description, that but little of it remains to be told. The town is invested with a fictitious interest, and assigned an origin at least 60 years before the Christian era, by Boethius and Buchanan connecting it with one of their apocryphal kings. Yet it probably was a seat of population, and, at all events, it occupies a site in the centre of what certainly was a closely peopled district in the remote age of British hill-strengths and vitrified forts. Scottish antiquaries, however, have raised so many and such conflicting speculations respecting it, while they have no documents, and but few monuments to guide them, that they may be allowed a monopoly of dealing out a history of it in ages for which no history exists. Columba, the apostle of Scotland, as stated by his biographer and successor Adaman, went, "ad ostium Nessie," to the residence at that locality of Bridei or Brudeus, king of the Picts; and remained there sufficiently long to be the instrument of converting the monarch, and to hold several conferences, and make some missionary arrangements with the Scandinavian chief of the Orkney Islands. "Ostia Nessie" means very nearly in Latin what "Inverness" does in Gaelic; or, understood even rigidly, it designates the mouth of the river on which the town stands, and points either to the town's precise site, or to some spot in its immediate vicinity. Inverness is hence believed to have been the original seat of the Pictish monarchs; and is supposed, even after Abernethy and Forteviot became a sort of Pictish capitals, to have retained its pre-eminence, and not altogether lost it till the union of the Scottish and the Pictish crowns. Malcolm Canmore, in the face of the fact that royal burghs did not exist till several ages later, is fabled to have

granted it its first charter, erecting it into a royal burgh. In the reign of David I., it figures as a king's burgh, was made the seat of a sheriff whose authority extended over all the north of Scotland, and is designated in a legislative enactment, one of the chief places of the whole kingdom,—“*Loca capitalia per totum regnum.*” It was thus one of the earliest free towns of the kingdom, and inferior to none in the dignity with which it greets the view at the epoch of record. William the Lion—as we have seen—granted it four charters, appointing it a regular magistracy, exempting it from many burdens, and conferring upon it various privileges as to manufactures. In 1217, and 1237, additional charters and grants of land were given to it by Alexander II. During the whole period on which history throws light previous to the invasion of Scotland by Edward I., the Scottish kings occasionally visited or resided in Inverness, and were at rapid intervals required to repel from it the incursions of the Danes, and the northern Viking, or to quell the insurrections of the reckless inhabitants and the turbulent chiefs of the adjacent country. In 1229, a powerful Highland savage, named Gillespiek M'Scourlane, attempted an usurpation, levied a war of rebellion, burnt the town, spoiled the adjacent Crown-lands, and put to the sword all persons who would not acknowledge him as their sovereign; but he was defeated, captured, and ignominiously beheaded. After the accession of Bruce, and during the successive reigns of the Stuarts till near the Union, Inverness was frequently oppressed by the constables of its own castle, and constantly exposed to the predatory visits of the Islesmen and the Highland clans; so that its annals abound with accounts of burnings, pillagings, ransackings, skirmishes between assailants and its inhabitants, stratagems of skill and prowess against foes, and pecuniary levies, and other expedients for purchasing the forbearance or averting the menaces of truculent and rapacious neighbours. An incident which occurred in 1400, will exemplify the prominent events and illustrate the social condition of the period: Donald, Lord of the Isles, having approached at the head of a small army to the north side of Kessoek-ferry, and sent a message menacing the town with destruction if a large ransom were not paid for its safety, the provost affected to agree to the terms dictated, and sent a large quantity of whiskey as a present to the chief and his followers; and, when the Islesmen, delighted with their fiery beverage, and emulating one another in dissipation, and generally actionless with intoxication, the provost, followed and zealously aided by his hurgesses, pounced upon them like the eagle on his quarry, and devoted them, with the exception of one man, to indiscriminate destruction. Attacks upon the town were more frequent and unrelenting, that few of the wealthy hurgesses were Highlandmen, and most were a community of foreign merchants, or merchants of foreign extraction, connected with Holland, and with the continental seahoard northward thence to the Baltic. In 1280, the town was visited by a French Count as a suitable place for building a ship to replace one which he had lost in the Orkneys; and from that time—as is indicated by the Flemish and Saxon names of its ancient inhabitants—it became increasingly the resort and the adopted home of the children of commerce,—persons differing more in habits than even in extraction from the wild native septa who restlessly scoured the heathy recesses of the north. The nurturing of such a commercial community was unvaryingly and happily regarded by the Scottish kings as a wise policy for at once promoting the general interests of the country, rearing a class of peaceful and loyal subjects, checking the exorbitant power of the barons, and ex-

hibiting a convincing example of the prosperous tendencies of arts which were despised or held in small esteem by the clans; but, by provoking the envy, and tempting the cupidity of the marauding chiefs and their followers, and occasionally giving body to the filmy and nearly impalpable pretences which were urged for the rancorous quarrels and conflicts almost constantly existing among the clans, it obliged the sovereigns to be often on the spot, discharging the offices of chief magistrates of judiciary and police. To tell of the extraordinary as well as ordinary interferences of the Crown to punish sedition and pillage, of citation to chieftain-culprits by the king's summons to attend at the market-cross of the burgh, and of executions of the convicted on the Gallow's-hill, as well as of military executions in the *mêlée* of mimic civil war, would only be a disgusting repetition of the most revolting and least instructive elements of history. One of the last royal visits to the town was that—already glanced at in our notice of the castle—of Queen Mary to quell an insurrection of the Earl of Huntly. Mary is said to have formed during her visit a strong attachment to Inverness; she kept, while there, a small squadron in the harbour to insure her safety; she was sedulously attended by the greater part of the Highland chiefs; and she had soon the satisfaction—or the appropriate feeling, he it what it might, which such an event could impart—of hunting down the Earl of Huntly, and putting him to death in a fair field fight. James VI., who laboured much to quiet the turbulence of the northern Highlands, was particularly friendly to the burgh. The Invernessians distinguished themselves after the Revolution by enthusiastic and hold attachment to both Prelacy and Jacobitism. In 1691, when a presbyterian minister was for the first time after the abolition of Episcopacy appointed to the vacant parish-church, armed men were, by the magistrates, stationed at the doors to prevent his admission; they repulsed Duncan Forbes of Culloden, father of the famous Lord-President Forbes, in an attempt to force him into the interior; and they did not eventually give way till a regiment marched up by order of Government, and lifted the presentee into the pulpit on a couch of hayonets. At the same period, and for years afterwards, the magistrates used every means to support or forward the Jacobitical cause; and, at the accession of George I. to the throne, they openly opposed and endeavoured to prevent his proclamation, and roused the populace to a riot. During the rebellion of 1745–6, and especially amid the stir which preceded and followed its closing-scene in the neighbouring field of Culloden, the town had the harassing distinction, and reaped the bitter awards of being the virtual capital of the losing party in that trial of the dreadful game of war; and, among other characters of lugubriousness and horror which it was obliged to wear, it was the scene of the public execution of 36 of Prince Charles Edward's men. Up to the period of the disarming act, its inhabitants stood constantly accoutred, or at least prepared for war; but, since 1746, they have witnessed an uninterrupted peace, and have learned to regard the stirring and sanguinary history of their town as belonging to a state of things which has entirely and for ever passed away, and have moved silently and fleetly along the delightful path of social amelioration and intellectual and moral improvement. No modern event of note has occurred except the earthquake on the night of the 16th of August, 1816, when the ground was sensibly and alarmingly tremulous, the chimney-tops of many houses were projected into the streets, the bells were set-a-ringing, and many animals were strongly affected with terror.

INVERNESS-SHIRE, one of the most extensive counties, and by far the most mountainous, in Scotland. It is bounded on the north by Ross-shire, and part of the Moray frith; on the east by the shires of Elgin, Moray, and Aberdeen; on the south by Perth and Argyle; and on the west by the Atlantic ocean. A small insulated district, between the shires of Banff and Moray, containing Cromdale and Inverallen, is annexed to it; and several of the Hebrides are politically attached to this county. The mainland extends in length from the point of Arasaig on the west, to the point of Ardersier on the east, where Fort-George is built, about 92 miles; and its greatest breadth, from the ferry of Ballachulish to the boundary of Strathglass, is nearly 80 miles.

Playfair estimates the superficies of the continental part of this county at 2,904 square miles, or 1,858,560 acres; while Robertson estimates the superficies of this part at 7,200 square miles, or 4,608,000 acres; and that of the islands at one-half more. The former admeasurement—though an approximation only—is doubtless nearest the truth; but to it must be added 132 square miles, or 84,480 acres for the lakes. The surface of the islands attached to this county is equal to 1,150 square miles, to which we may add 59 square miles of lakes,—making in all 1,209 square miles, or 773,760 acres. Inverness-shire contained, in 1801, including its islands, 74,292; in 1811, 78,336 inhabitants. In 1821, the population was 90,157; in 1831, it amounted to 94,797: whereof 44,510 were males, and 50,287 females. The number of families employed in agriculture, in 1831, was 9,892; in trade and manufactures, 2,753. The number of inhabited houses 17,312; the total number of families 19,046. The valued rent, as stated in the county-books, is £3,188 9s. Scots; and the real land-rent was estimated, in 1811, at £70,530 sterling. The value of assessed property, in 1815, was £185,565, of which the proportion under entail was nearly one-half.—The shire comprises 37 parishes. The number of parochial schools, in 1834, was 34, attended by 2,639 children; and the total salaries and emoluments of the teachers amounted to £1,335 15s. 11d. The number of schools not parochial was 122, attended by 6,667 children.

The divisions of this county are chiefly determined by natural boundaries. Lochaber comprehends that tract of country whose waters are discharged into the Western ocean at Fort-William. Moydart, Arasaig, South and North Morar, and Knoydart, seem to belong, in an extensive acceptance, to Lochaber, because these districts are amenable to the sheriff-court established in that country. Glengarry is accounted a division; and Glenelg, Glenmoriston, Urquhart, Strathglass, and Aird, the vicinity of Inverness, the lordship of Petty, Ardersier, Stratherrick, the braes of Strathnairn and of Strathearn, and the lordship of Badenoch, are all accounted separate divisions of the county of Inverness. These divisions are generally marked by the different valleys watered by a river peculiar to each, and comprehended within parallel ranges of opposite hills. The divisions of high land and low land can scarcely be applied in this county; unless the Aird, the vicinity of Inverness, Ardersier, and the lordship of Petty, be accounted the low-land division; which indeed it is in relation to the rest, being all bounded on one side by the sea-shore, and by mountains on the other. The reader will find separate articles on most of these divisions inserted in their respective alphabetical order in our pages: at the same time we shall here insert a general sketch of the topography of Inverness-shire from Dr. Robertson's 'Agricultural Survey.' London: 1808, 8vo.

Unless one were to enter Inverness-shire by

the coast of the German ocean, its aspect from any other line of approach is rudely grand and forbidding. The dark blue mountains piled upon one another,—and stretching away in immense chains, with hardly a pass or an opening to afford access from the south or west,—form a barrier which requires a certain degree of fortitude to attempt, and of enterprise to surmount. The frequent sight of poles set up by the side of the public road in these defiles, as beacons to guide the weary traveller in exploring his way, when the fog is so thick that he cannot see, or the snow so deep that the proper path is concealed from view, is a proof of the danger which is sometimes to be encountered in entering this part of the kingdom. These mountains stretch across the island, and lie parallel to every valley,—rising like immense walls on both its sides, while the inhabited country sinks deep between them, with a lake or rapid river flowing in the centre; and no sooner is one defile passed over, than another range of hills comes into view, which conceal in their bosom another defile, and another strath of inhabited country. Over the whole county the same appearance of lofty mountains, in constant succession, seems to intercept the traveller's progress,—except when he descends along the tract of a valley, and follows the course of a river, or the windings of a lake, between two ranges of heath-clad hills, or of towering rocks whose base is generally covered with wood.

There are two Highland roads into Inverness-shire. Going from the county of Perth to Fort-William, a part of Argyleshire must be passed through, between Tyndrum and Ballachulish. In this ride—which is an ordinary day's journey—the Black-mountain, the inn called the King's house, and the valley of Glencoe, are objects which arrest a traveller's attention. The Black-mountain has been covered—at least all round the base—with a forest of natural firs. The remains of this wood are still growing at Inveroran. The soil is a crust of moss, formed by the deciduous parts or the leaves of fir and heath, upon a subsoil of gravel or deep peat earth. The stocks of the old trees are so weather-beaten by the storms that their bleached tops resemble human skulls strewn on the ground. On the south are high hills affording good pasture for sheep. On the north is a boundless flat of deep moss, reaching from Glenlyon and Rannoch on the east, to the braes of Badenoch on the north, and westward to the confines of Lochaber at Lochtreig. There is little doubt of this being the most extensive field of moss in Britain. Numberless little lakes are interspersed throughout its entire extent, and in some of these are islands with tufts of trees. On approaching King's house inn, that steep ascent, with its manifold traverses, called the Devil's Staircase, appears in full view in the west. This path is now deserted; and the public road is turned towards the left, down the valley of Glencoe, which forms a long circuitous line to Fort-William: See GLENCOE. After travelling some miles down the glen, the eye is refreshed by the beauties of Invercoe, and the glen—which had hitherto been dreary and frowning—all of a sudden assumes a pleasant aspect, in its winding limpid stream,—the variety of wood which covers its verdant banks,—the appearance of cultivation in the fields,—and the snugness of the laird's house, situated at the extremity of a bay of the sea which opens to the meridian sun. A few miles below Invercoe, and on the left side of Loch-Leven, that arm of the sea narrows into a strait, named *Calas ic Phatric*,—'the Strait of the Son of Patrick,'—which is the ferry at this place from the county of Argyle into that of Inverness.

At a short distance on the road to Fort-William, there is another narrow ferry on the left, into Ardgower, called **CORRAN**: which see. Beyond Corran the country is little else than lofty mountains, rising from this branch of the sea, whose base in several places hardly affords room for the public road,—an appearance which is frequently presented to a traveller in the West Highlands of Scotland. At Fort-William, however, the eye is gratified by the view of a town in which the houses are covered with slate, and form a regular street.

To catch the leading features, and form some conception of this western part of the county of Inverness, one must suppose a deep valley beginning at Fort-William, and stretching across the whole county, nearly in the middle, from south-west to north-east. This valley [see articles **CALEDONIAN CANAL** and **GLENMORE-NAN-ALBIN**] has a range of lofty mountains on both sides, which, at the north-east extremity, sink down into the sandstone strata of Nairnshire. The rivers, flowing between the openings of these parallel mountains, meet one another, and discharge their streams into the bottom of the valley, as a common reservoir, and feed **LOCH-LOCHY**, which falls westward, and **LOCH-OICH** and **LOCH-NESS**, which fall north-east: See these articles. But after we penetrate back through these parallel ranges of mountains for several miles, either to the right or to the left hand, we find other rivers, which flow in a direction opposite to the former, and take their course away from the great valley of the canal. This range of mountainous ground between the Great valley and the Atlantic, is the highest and wildest throughout all the forbidding surface of this county, and has got the name of 'the rough hounds.' It extends from the head of Moydart, which joins the county of Argyre, to Glensheil in Ross-shire,—a distance of 70 miles or more. There descend from this general range of elevated land, five or six lines of lower but very rugged ground, which penetrate into the Atlantic, and form so many hold promontories on that shore. **LOCH-EIL**, on whose northern shore Fort-William and its village are set down, penetrates 12 miles west, in addition to the distance of 10 miles more from Corran to that village. From the head of **LOCH-EIL**, the waters flow 3 miles eastward into that arm of the sea. Going down the valley of Arasaig, you pass the end of **LOCH-SHEIL**, which falls southward into Morven, is 12 miles long, and divides Ardgower from Moydart. Into Moydart there runs an arm of the sea, called **LOCH-MOYDART**: which see. On the north of Moydart a narrow lake of fresh water stretches 6 miles along the public road, which is called **LOCH-AILT**; and the river flowing from it, after a course of 6 miles, is lost in **LOCH-AYNORT**, an arm of the sea. Then succeeds **LOCH-NANUA**,—a beautiful bay; and turning northward to the ferry of Arasaig on the sea-coast, the branch of salt water is called **LOCH-NAGAUL**. This line of communication from Loch-aher to Arasaig is all hick with gloomy heath, except on the margin of the waters, until the road descend towards Arasaig, where the hills are generally green on the north, but studded with rock in such constant succession, from the bottom of the valley to their summit, that their aspect puts one in mind of the fine freckled sky which generally covers the aerial vault of heaven, in the evening of a serene day. The mountains of Moydart, on the south, are more heathy and barren, but less rocky: See **ARASAIG**.

The next valley to Arasaig, northward, which penetrates into the rough hounds from the mountains bordering on the tract of the canal, commences at Achnacarry, and stretches westward by **LOCH-**

**ARKAIG**: See that article. Between the mouth of this lake and **LOCH-LOCHY**, into which its contents are discharged, the distance is hardly 2 miles. From the west end of **LOCH-ARKAIG** there is a glen of 6 miles more, stretching forward to the highest summit of the rising ground, which is called **Glenpean**,—a beautiful green grazing. It is a singular feature in the complexion of this country, that the lower grounds are in many places covered with barren heath growing on a poor soil; while the tops of the mountains, to their summit, are clad with a rich carpet of green grass, springing from a fertile mellow earth. From this station, at the head of **Glenpean**, a noble landscape is presented to view. In front is a wide expanse of sea sprinkled with islands, at different distances and of different magnitude. **Skye**, the chief of these, appears on the right, with **Rum**, **Egg**, and **Canna**; and in the distant horizon the long train of the **Hebrides** appears like a dark cloud resting on the bosom of the ocean. Turning to objects more at hand, **LOCH-MORAR**, a fresh-water lake, whose length is 14 miles, is heheld at the foot of the table-land on which we suppose our spectator placed; while on the north, **Glendessary** stretches away in a direct line 4 miles. At the head of this glen is the pass named **Maam-Chlach-Ard**,\* which leads down to **LOCH-NEVIS**, an arm of the sea 12 miles in length, having **North-Morar** on the left and **Knoydart** on the right. Both sides of **LOCH-NEVIS** are very rocky; but the side next **Knoydart** has more green ground than the other: See **LOCH-NEVIS**.

The next valley of consequence, whose waters fall at right angles into the line of the Great canal, is **Glengarry**, which is distinguished by the rude magnificence of its old castle in ruins, situated on a rock on the west side of **LOCH-OICH**, and surrounded with venerable old trees. The present family-mansion is a modern house, huilt at a small distance northward. Four miles up this glen you meet **LOCH-GARRY**, which is 4 miles long, closely wooded with natural firs on the south side, and hirsch and alder on the north. The river flowing into the head of **LOCH-GARRY**, reaches to the south end of **Glenqueich**, which stretches northward, and to **Glenkingie**, which runs southward. In the former is a fresh-water lake 7 miles long. The ascent from the head of these glens is 3 miles, immediately above **LOCH-HOURN**,—a deep gloomy branch of the sea, with high rocky banks. In all this stretch, from **Invergarry**, the house of **Glengarry**, on the east, to **LOCH-HOURN** on the west, the lower ground is generally clad with heath, but the higher mountains are covered with green rich pasture: See articles **GLENQUEICH**, **LOCH-GARRY**, and **LOCH-HOURN**.

**Glenmoriston** is the succeeding entrance into the rugged country which leads from the great valley to the Atlantic. This glen may be entered by a **Maam**,—or pass between the shoulders of two hills,—in an oblique direction from **Fort-Augustus**, which points north-west, and is 7 miles long; or by another road, from **Invermoriston**, in the direct line of the river. The latter is the easiest ascent; but the former is the military road, and forms a much shorter communication between **Fort-Augustus** and the military post at **Berneria** in **Glenelg**. These two roads meet a little below a place called **Anoch**. About 8 miles from **Anoch** is a small lake called **LOCH-CLUANY**: which see. To the east end of **Glenshiel**,—where the waters separate, some running east into **LOCH-NESS**, and some into the Western ocean,—is 6 miles more. This point also forms the boundary betwixt the counties of Inverness and Ross, and is the northern extremity of that mountainous and ele-

\* The Pass of the high stones.

vated ridge of country which stretches from Morvan to this place. From Glenshiel, which is 12 miles long, the road returns to Inverness-shire, by a pass called Maam-Raitachan, into Glenelg, which is 8 miles long, and is the richest spot, both in grass and corn, hitherto mentioned in the Highlands of this county: See GLENELG, and GLENMORISTON.

FORT-AUGUSTUS [which see], one of the most pleasant spots in the Highlands, is situated on a smooth green hill at the west end of Loch-Ness, having a river on each side, which washes the base of that hill, and flows gently into the lake. Travelling down the north side of Loch-Ness, a person of any taste must be struck with the beauty of the noble sheet of water, nearly 2 miles broad, which stretches away before him for a distance of nearly 24 miles. The sides present a continued line of bold rocky ground, rising immediately from the lake to the height of mountains, without any opening on either hand, except at Invermoriston, at Urquhart, and at Foyers. These lofty banks consist of shelves of earth incumbent upon rock, and afford nourishment for copse of various kinds. Where the rock is covered with soil,—hazel, oak, and alder abound, and there is also a number of aged weeping birches. The thickness of their fretted indented bark indicates their age; and the pendulous ringlets of these venerable birches frequently overhang the face of rocks, and reach down to the ground. Rocks, rivulets, trees, and mountains are reflected in the smooth mirror below, with an effect which neither description in words can accomplish, nor delineation by the pencil produce: See LOCH-NESS. Passing over a ridge of high bleak moor, and descending by a northerly direction into Urquhart, the scene is reversed. In place of the lofty barriers of Loch-Ness,—which present nothing but barrenness and the rude grandeur of Nature,—in Urquhart, a bottom of about 2 miles in diameter, and flat as a bowling-green, is beautifully diversified with wood and water and enclosed fields. Urquhart narrows into a glen, in a westerly direction, going up to Corrimony, which is more or less confined in different places, but very much beautified by neat houses, well-dressed fields, and plenty of wood, chiefly ash, beech, and birch. Here cultivation reaches an altitude of 800 or 900 feet above sea-level.

Crossing westwards over a small barren moor into Strathglass, which is the most northerly valley of the county of Inverness, the face of the country presents a very singular appearance. In the bottom of this strath the land is almost a dead narrow flat, in which some meadow and arable land, and several small lagoons and marshes are interspersed. The sides of the strath are precipitous, and in most places are strewn with fragments of broken rock. The river Glas has in many places the appearance of a narrow lake, by reason of the slowness of its motion, which in most places is scarcely perceptible, occasioned by the difficulty it meets with in discharging its waters at its confluence with the Farra. In the head of Strathglass there is much green pasture, and an extensive fir-wood; and the lower parts of the valley, in the approach to the castle of Chisholm of Chisholm, abound with alder on both banks of the river. The scenery is uncommonly engaging from the castle of Erchless to the Aird: a majestic river winding its course through a bottom of considerable breadth abounding with wood, and the mountains retiring on either side as you advance, and indicating approach to the low country: See articles ARD-MEANACH, THE BEAULY, and KILMORACK. Between the Aird and Urquhart, in the mountains towards the east end of Loch-Ness, whose summit is tolerably level, the vestiges of ridges are very distinctly

seen in the heath,—that in the furrow being uniformly shortest for want of soil. Culloden stands conspicuous a few miles east from the county-town. The moor, so fatal to the Jacobites in 1746, extends from near Nairn to the foot of Stratherrick, and from the river of Strathnairn to the Murray frith: see CULLODEN. Fort-George is a beautiful place, situated on the extremity of a low promontory or tongue of land, which penetrates far into the Murray frith, and opposite to a similar head-land in the county of Ross: see article FORT-GEORGE. In the division of the county of Inverness which lies east from the Great canal, there are six valleys of various degrees of sinuosity, which send all their waters to the German ocean. Strathglass has been already taken notice of. The tract of Loch-Ness has also been mentioned. Stratherrick is situated on the south side of Loch-Ness, and is supposed to be 400 feet above the surface of the lake. The river Errick, which flows through this strath, and gives its name to the country, is singularly romantic, both in its origin and termination. The small lake which is its source is surrounded with a circle of rocks through which there is hardly a possibility of descending into a plat of land called Killin,—the most beautiful, rich, and verdant, that can be conceived. This fairy-ground is a mile long, and half as broad, and lies in the centre of mountains the wildest perhaps in the kingdom: See KILLIN.

Leaving Strathnairn, and the Murray frith, on coming southward, we emerge into the heart of the Grampians,—bleak, bare, black, and barren. At length the valley of Moy makes its appearance, where the eye is refreshed by the view of a rich extensive plain of arable and meadow land. At a little distance southward, the traveller arrives at Freeburn-inn; from which place all the waters of this mountainous region are seen flowing from the north, the west, and south, in their several glens, to meet below in a point, from which the united stream of Strathdearn holds its course through a narrow chasin eastward to Findhorn, where it is lost in the German ocean. The next place worthy of notice is Slochmhuic-dhu,—‘the Black boar’s den,’—which forms the entrance, in this direction, from the north into Strathspey. The road over this defile has undergone great repairs. From hence there is little variety all the way to Grantown. Extensive fields of dark-brown heath, studded by stocks of fir-trees, with some spots of corn and green ground on the sides of rivulets, form the prospect for several miles. On the opposite side of Strathspey, the dark-blue mountain of Tullochgorm, and his associates in the distant horizon beyond the Spey, studded with perennial patches of snow, rear their heads to the clouds. From the church of Duthil, the country lays aside much of its gloomy appearance. The Dulnain, a branch of the Spey, has some good land on its banks, which increases in fertility and extent as it approaches the bottom of the strath. By and by the Spey, the monarch of this vale, comes in full view, winding his majestic course within green banks to which the heath dares not approach. The farms are now more frequent; patches of turnips and fields of potatoes appear on either hand; and lime is wrought for sale. From Castle-Grant to Aviemore, along the side of the Spey, the face of the country is very much diversified. The natural fir-woods of Rothiemurchus are the most extensive in the county, or probably in the island. At a short distance above this place, and on the opposite side of the Spey, Kinrara is happily set down. The vale, in which the river flows, is narrowed considerably at Kinrara. The banks on both sides are richly wooded by a variety

of trees, whose green foliage far up the acclivity of the hills gratifies the eye, while the sweet fragrance of the birch embalms the air. Between Kinrara and Kingussie the aspect of the country is considerably changed from what it had been below the former place. There are fewer black moors of low ground contiguous to the river; the plains are all green, of considerable extent, and elevated but a few feet above the tract of the Spey. Wherever there are hollow basins in this flat land, water stagnates when the river has subsided after an inundation. This occasions marshes and lagoons of greater or less extent in proportion to these inequalities of the surface. The alders and willows, and other useless shrubs which grow upon this swampy ground, disfigure the country of Badenoch. The ravages of the Spey in the whole of Badenoch, especially in this upper part of the district, are a great hindrance, or rather an entire obstruction, to the success of agriculture within the reach of its inundations. Where the mountains on both sides of the country are so high, and reach so far back, every brook occasionally becomes a torrent; and where there is no reservoir in any part of this long strath, to receive the water from these numerous torrents, the river must swell suddenly, become furious, and in a mighty stream, both broad and deep, sweep all before it that comes within its reach. To the north of LOCH-LAGGAN [which see] we arrive at high ground, where the waters separate in the same manner as at Laggan-achdrom on the side of the Caledonian canal, partly holding their course to the Atlantic, and partly to the German ocean. The rivers Pattack and Massie run almost parallel to each other for the space of 2 miles; and yet the former, after joining the Spean, is discharged into the Western sea; while the latter, uniting its waters with the Spey, flows eastward into the German ocean. The inn of Garviemore in this neighbourhood, announces the extremity of the long vale of Strathspey and Badenoch, and the head of the Spey which derives its source from a small lake of the same name in the northern mountains. Seven miles beyond Garviemore, the military road which leads from Perth to Fort-Augustus, by Corryarrick, being confined between a deep ravine on the one hand, and a chain of rock on the other, ascends by no fewer than seventeen traverses, mounting zig-zag, to the summit of Mona-lia—or ‘the Gray mountain,’—so called because the surface is mostly grey rock and moss, the soil having been worn off by the storms; see CORRYARRICK. The descent on the north side of this hold and tremendous pass, is by the western bank of the Tarf, which holds a winding course, through thick groves of large trees to the head of Loch-Ness. The county of Inverness is everywhere intersected by numerous rapid currents, which uniting form several large rivers. The most noted of these are the SPEY, the NESS, the LOCHY, the GARRY, the GLASS, &c., [see these articles,] which, with the lakes—of most of which mention has already been made—abound with trout and salmon. The western shores, particularly of the districts of Moydart, Arasaig, Morar, and Knoydart, are indented with numerous bays, creeks, and arms of the sea—called lochs—which might be rendered excellent fishing-stations. On the confines of the county there are extensive tracts of natural wood,—evident remains of much larger forests. The fir woods of GLENMORE and STRATHSPEY [see these articles] are supposed to be far more extensive than all the other natural woods in Scotland together.

The climate of the county of Inverness is, in one respect, similar to that of all the rest of Scotland. On the west coast, the rains are heavy, and of long

continuance; but the winters are mild; and when snow falls, it soon disappears, owing to the genial influence of the sea-breeze, unless the wind be northerly. On the east coast the heaviest rains are from the German ocean; but the climate, upon the whole, is not so rainy as in those districts which are adjacent to the Atlantic. In the notes taken by Dr. Robertson from one gentleman's communications, it is stated, that Fort-William, Inverary, and Greenock, are the most subject to rain of any towns in Scotland; and Dr. Robertson thinks “there is little doubt of the truth of this remark, as applicable to that coast in general, when the wind is westerly.” In the New Statistical Account it is stated that the annual number of rainy days at the Inverness end of the Great glen is about 60 less than at Fort-William at the other extremity of the glen. At Inverness, and along the sea-coast, the harvest is said to be early. A variety of causes concur to produce this effect. The soil, in general, is of a light texture, and therefore easily stimulated to bring forth its fruits,—skilful management is applied in this district, which is aided by the quickening energy of lime,—more dry weather than any other district of Inverness-shire is favoured with,—and the strong reflection of the sunbeams from the surrounding mountains,—all concur to produce a rapid vegetation. In the county of Inverness, a very great proportion of the surface is covered with heath. When Dr. Robertson wrote, some persons were of opinion, that 39 parts out of 40 of the surface of this county were clad with its russet hues. The dominion of the heath is, however, daily losing ground before the progress of agriculture and the industry of the inhabitants. A considerable tract of the surface is under wood; much of it is rock; and nearly as much is covered with water. Clay, in a pure state, is but a small proportion of the soil in the county of Inverness. Along the river Beauly, near its confluence with the sea, and on the side of the frith of that name, there is a certain extent of a rich blue clay, producing the different crops peculiar to such soil in the southern counties. About Inverness, and down the border of the Murray frith, where creeks and bays abound in which the tide ebbs and flows very gently, some small fields of a clay soil present themselves: nevertheless the proportion which this species of soil bears to the general extent of the county is very inconsiderable. Haugh is more frequently to be met with, and the fields of it are far more extensive, than any other valuable soil in the county. In the whole lordship of Badenoch, from Kinrara on the east, to the place where the Spey descends from the hill of Corryarrick,—a tract of more than 20 miles,—haugh abounds almost without interruption, on both sides of the river. The whole district consists of a parallel range of lofty mountains, whose skirts have a great declination; and a dead flat spreads out below in the bottom of the valley, reaching in general to the bases of the opposite mountains. This flat, in which the river flows, is a deep, rich, water-formed soil, except where the current is strong, and beds of gravel are accumulated. The head of every loch or arm of the sea, on the west coast, where they receive their respective brooks from the valleys behind, have less or more of this kind of soil, all the way from Moydart to Glenelg. Along the course of the river Moriston are various spots of this soil. In the bottom of Urquhart, by the sides of the river, but more especially on the south side, soil of this description is frequent, and abundantly productive; that next to Loch-Ness is the richest. Strathglass is similar to Badenoch in various respects, besides being all either hill or a dead flat of land formed by

water. Its valley, however, is much narrower, and the hills more abrupt and barren. The Glass has a slower current than the Spey, which prevents its devastating the banks, and the formation of beds of gravel. In the Aird there are few haughs. On the banks of the Ness there is some soil of this complexion; but that river issuing pure from Loch-Ness, carries down stones, gravel, and sand, rather than fine earth; the weight, however, of its water, which flows with a magnificent and powerful stream, under a bridge of no fewer than seven arches, has forced such a quantity of these materials into the Murray frith, in a transverse direction, that a bar has been formed nearly three-fourths across this arm of the sea at the ferry of Kessock. The tide-way above the strait, is called the frith of Beauly; that below, the Murray frith. Dr. Robertson predicts that "this growing headland will, in future ages, approach so near the opposite shore as to allow no more water to escape than what is brought into the frith of Beauly from the higher grounds around it, and the frith itself will become a lake, first of brackish, and afterwards of fresh water." Stratherick has little of this soil, except some patches on the sides of the lakes of that district. Along the Nairn there are small haughs in different places, all the way from the head of that strath to Cantray, where it joins the county of Nairn. Loam, properly so called, is very rare in the county of Inverness.—Sand and gravel form a part of the soil of Inverness-shire in a great variety of places. Strathnairn, and particularly Strathdearn—so far as they are within this county—abound with this light free soil: a great proportion also of Strathspey and of Badenoch is of this complexion.—Till, next to a sandy or gravelly soil, is the most common in this county; and, if the mountains are taken into account, the proportion of till exceeds all the other kinds taken together.—Moss, moor, and heathy ground, in the opinion of some intelligent persons—as already noticed—covers two-thirds of the shire of Inverness. If one-fortieth only be arable land, there are probably twenty-six of the remaining parts covered with heath incumbent on moss or a till bottom. Heath generally produces a crust of moss on the surface, whatever be the soil below. The land occupied now or formerly by natural firs assumes the same appearance, because they seldom grow so closely, or shade the ground so completely, as to destroy the heath. The higher mountains are not covered with heath to the summit; nor are the mountains in all the districts of this county equally gloomy and forbidding. The hills of Lochaber present a good mixed pasture of grass and heath interspersed. Glennevis is of this description, though it forms the skirts of the highest mountain in Britain; the hills of Arasaig, freckled as they are with rocks,—those of Glendessary,—of Glenpean,—of Glenqueich,—those on the north of Glenpean,—those of Glenroy,—those on both sides of Loch-Lochy, particularly at Lowbridge, where the hills in general are as green as a meadow,—those on the sides of Loch-Oich, to its northern extremity, where the dark brown heath begins on the west,—those in both Glenelgs,—those at the head of Strathglass, and on the braes of Badenoch,—all are more or less of the same hue, and yield most plentiful pasture. But on the confines of Strathspey the aspect of the mountains is very different. At the head of Strathdearn and of Strathnairn,—in Stratherick on both sides of Loch-Ness,—from behind the head of Urquhart, and across Glenmoriston to the source of the Oich,—and in several other districts,—the mountains are gloomy, black, and sterile to such a degree, that in a dis-

tance of 12 or 14 miles, hardly any verdure is to be seen, except where a solitary rivulet, by its occasional flooding, produces some green ground in part of its course, to relieve the eye. In all the mosses, the roots of fir-trees stick up, which are dug out and dried for fuel: so plenteous are they, and so singular in their appearance, that there have been seen in Strathspey three tier of fir-stocks in the moss; indicating no doubt that wood had there thrice come to maturity, after every former growth had, by its destruction, formed a soil capable of nourishing the succeeding forest. Almost all the deep mosses of this country are situated on land which is more or less elevated above the general level of the valleys, and lie on gravel, or stones, or till. None of these fields of moss—except a patch at Corpach, and a very few more—are in the bottom of a valley, like the famous Flanders moss of the county of Perth; nor, like it, have they in any case a bottom of rich clay. Limestone is found in every district of the county, and in many places approaches to the nature of marble. Near the ferry of Ballachulish, in Lochaber, there is a fine rock of an ash-coloured marble, beautifully speckled with veins of copper pyrites, and intersected with small thready veins of lead ore which is rich in silver. In the parish of Kilmalie, near Fort-William, in the head of the Nevis, is a singular vein of marble, of a black ground, with a beautiful white flowering like needle-work, or rather resembling the frosting upon a window, penetrating the whole vein. Most of the mountains are composed of a reddish granite, which, according to Williams, the mineralogist, is the most beautiful of any in the world. In the parish of Kingussie a rich vein of silver was discovered, and attempted to be wrought, but without success; in other places veins of lead, containing silver, have been observed. Iron-ore has also been found, but not in sufficient quantity to render it an object of manufacture. In the isle of Skye there are several valuable minerals: see SKYE. The mountains and forests are inhabited by herds of red and roe deer, which here roam in safety, in recesses impenetrable to man; the alpine and common hare, and other game, are also abundant.

Inverness-shire contains one royal burgh, viz. Inverness, and several small villages. The Gaelic is the language of the people on the northern, western, and southern borders; but, in the neighbourhood of Inverness, the better sort use the English language, which, it is said, is here pronounced with as great propriety as in any part of Scotland. We have adverted to this subject in the preceding article. While the feudal system yet existed in the Highlands, and any factious chief had it in his power to embroil the neighbourhood in war—as had been proved in 1715 and 1745—it became necessary to erect military stations to keep the Highlanders in subjection. Accordingly, in the tract of the great vale or Glenmore, Fort-George, Fort-Augustus, and Fort-William, were erected, as a chain of forts across the island. By means of Fort-George on the east all entrance up the Moray frith to Inverness was prevented; Fort-Augustus curbed the inhabitants midway; and Fort-William was a check to any attempts on the west. Detachments were sent from these garrisons to Inverness, to Bernera, opposite to the isle of Skye, and to Castle-Douart in the isle of Mull. The English garrisons which necessarily occupied the forts, and the number of travellers to whom the military roads gave access, undoubtedly induced gentler and more polished manners, and assisted in banishing those exclusive privileges and partialities which had acquired such a withering strength under the system of clanship. The military roads in this county, made by the soldiers under General Wade,

never fail to excite the astonishment and gratitude of travellers. They are executed with the utmost industry and labour, and lead over mountains and through mosses and morasses which before were impassable to the lightest vehicle. The military roads maintained in repair in the extensive county of Inverness are: 1st, the Badenoch road, from Inverness through Badenoch to Dalwhinnie, and further to the borders of Perthshire, reckoned at 52 miles;\* 2d, the Boleskine road, from Inverness to Fort-Augustus, 33 miles; where a road, 30 miles in extent, turning to the left over Corryarrick, reaches Dalwhinnie, and joining the Badenoch road enters Perthshire by a road originally military, at present under repair as a turnpike road; 3d, the road from Fort-Augustus to Fort-William, and farther to Ballachulish ferry, reckoned at 45 miles; 4th, from Inverness another military road passes along the shore to the entrance of the Beaully frith at Fort-George, and with its offset-roads to the eastward is reckoned at 16 miles.—The magistrates of Inverness have recently memorialized the Lords of the Treasury for a survey and investigation of the most practicable lines of railway to Inverness. They say: “Your memorialists, from their general knowledge of the features of the country, are led to believe that such an extension is not only practicable, but admits of being carried into effect, with immediate benefit, as far as Inverness, the capital of the Highlands. They are of opinion that a line of railway communicating with the Glasgow and Edinburgh railway at Falkirk, midway between these cities; extending, by Stirling, through the valley of the Allan, and down the valley of the Earn, towards Perth; thence through Strathmore, by Forfar and Brechin, to Aberdeen; from that city, through the centre of the agricultural district of Buchan, perhaps by the valley of the Ythan, to Banff; and thence along the coast, by Fochabers, Elgin, and Forres, to Inverness,—would form the main trunk of communication between the Northern and Southern counties; there being already lines of railway from Strathmore to Dundee and Arbroath, and one contemplated to Montrose, which, with those now projected through Fifeshire, and other subsidiary branches and offsets, would form a series of collateral accessories, each contributing its quota of traffic, and securing, to every available point, the general advantages of a most direct and speedy intercourse with the best markets. That your memorialists have reason to believe that some such line, as here sketched out, passing as it does, for so great an extent, through a comparatively level country, and nowhere presenting acclivities that cannot be surmounted by gradients of sufficient ease for every practical purpose of communication, could be carried into effect at a much more moderate expense, both as regards the execution of the work, and the value of the land to be required, than has hitherto attended the construction of similar undertakings in the southern parts of the kingdom. That such a line, independently of its bringing the northern and central part of Scotland into immediate connection with the southern part of Scotland, and with England, would, moreover, while it avoided the inconvenient interruption of ferries, effectually unite and connect together the hreeding districts of the North, the feeding counties of Moray, Banff, Aberdeen, and Forfar, and the great commercial and manufacturing cities of Edinburgh, Glasgow, Perth, Dundee, Arbroath, Montrose, and Aherdeen;

while it would cut through the centre of the most fertile agricultural portions of Scotland, from north to south; thus facilitating, in so extraordinary a degree, that mutual relation and interchange between each prominent class of interests, upon which so much of the internal prosperity and wealth of the country essentially depends.” By the spirited exertions of the gentlemen of this populous county, the commerce and industry of the inhabitants have also of late been greatly increased; and to facilitate the communication with the more remote parts, roads and bridges have been formed, under the direction of the Parliamentary commissioners, through every district of this extensive shire. See our general article THE HIGHLANDS. The principal inhabitants of Inverness-shire are the clans of Forbes, Macintosh, Macpherson, Fraser, Grant, and Macdonald. Many of the proprietors possess elegant seats on the Moray frith, the banks of the lakes, and near the western coasts.

The weights and measures of this shire, previous to the act of equalization, were very inaccurate and discrepant. Dutch weight was used for meal, reckoning 9 lb to the stone. Tron weight was used for wool, butter, cheese, and butcher-meat—the stone being 21 lb. Dutch, and 24 lb. Avoirdupois; and the lb. equal to 21 oz. Dutch. Avoirdupois was used for groceries and flour. A pewter pint jug, marked 1652, kept at Inverness, was the standard of measures of capacity, both for things liquid and dry. It has on the inside a plouk, and a little above the plouk a hole drilled through, which was stopped up when they wanted to fill the jug to the brim. The jug filled to the plouk regulated the firlof for wheat, &c., and contained 104.7903 cubic inches; 24 of these pints made the firlof for wheat, pease, heans, rye, rye-grass seed; and contained 2514.967 cubic inches. The jug filled to the hole regulated the firlof for harley and oats, which contained 3519.225 cubic inches, being 37.232 per cent. above standard. A boll of oats in this county was reckoned what would yield a boll of meal, and might sometimes contain 6 or more firlots, but generally 5. The jug filled to the brim contained 115.1613 cubic inches, and was the standard for liquid measures, fish oil, Scots spirits, ale, &c., with the common subdivisions. An ell of 38 inches was in use for coarse linen and woollen. The stone of hay was 16 lbs. of 21 oz. each.

The following extract from the article INVERNESS, in Nicholas Carlisle's ‘Topographical Gazetteer of Scotland,’ is curious and valuable, and may interest many readers, though we demur to some of the views and doctrines propounded in it:—“In the earlier periods of the history of Scotland, its monarchs appear to have had a very slight and doubtful authority over the northern and western parts of the realm. The isles of Orkney and Shetland, and even the province of Caithness, were possessed by Norwegian princes, while the Hebrides, and even the adjacent shores of the Mainland, were entirely under the sway of the Lords of the Isles. The neighbouring mountainous country was inhabited by rude and barbarous tribes, who had never been reduced under regular authority or government. The divisions of the North, therefore, or sheriffdoms, we ought only to consider as comprehending the low country, and that part, in particular, in the immediate neighbourhood of the county-town. Indeed, unless taken in this point of view, the limits anciently assigned to the shire of Inverness entitle it to be considered rather as a sort of vice-royalty, than as one of the secondary divisions of the kingdom. The earliest notice of the existence of the office of sheriff is in the acts of David I., about the middle of the 12th century. It appears that the sheriffdom of Inverness comprehended, at

\* Strictly speaking, part of the Badenoch road (13 miles) between Freiburgh and Aviemore, is in Morayshire; but this is compensated by the same extent of road, (north and south of Grantown,) which though really in Inverness-shire, is usually ascribed to Morayshire.

that time, the whole of the kingdom to the north of the Grampians. An act which allows any man accused of theft a certain period to produce the person from whom he might allege that the goods had been hought, runs in this style:—‘ Aif ane dwellis bezond Drum-Alhin, in Moray, Ross, Caithness, Argyle, or in Kintyre, he sall have fyfteen daies and eke ane month, to produce his warrand before the schiref; and gif he goes for his warrand dwelland in Moray, Ross, or in any of the steids or places pertaining to Moray, and can nocht find nor apprehend his warrand, he shall pass to the schiref of Inverness, wha sall,’ &c.—[‘ Reg. Majes. l. 16. ’] The names Moray, Ross, &c., are indeed sufficiently ancient, as applied to certain districts of the country, hut their signification is vague and indefinite. We may suppose, however, that the ‘steids’ appertaining to Moray, refer to the limits of the hishopric, Moray heing the only existing see north of Spey, previous to the reign of David I. The shire of Moray appears to have been disjoined from Inverness as early as the year 1263, when Gilhert de Rule, knight, is mentioned in a deed in the chartulary of Moray, as sheriff of Elgin. It may, indeed, he reasonably doubted whether his jurisdiction extended over the whole county of Moray in the modern acceptation of the term: in fact, the title of sheriff of Moray does not occur till near a century after this; the office heing first created in the person of Alexander Dunhar, son to the last James Dunhar, Earl of Moray. Even about this time, however, we find the sheriff of Inverness continued to exercise some jurisdiction within the county of Moray or Elgin: for, in a question respecting the mltures of the lands of Quarrywood, near Elgin, Robert Hay, sheriff of Inverness, gave judgment along with ‘ the honourable and potent Lord Archibald Douglas, knight,’ who must have been the Earl Archibald, and not merely the sheriff, as the author of the History of Moray supposes. The shires of Forres, and Nairn, and of Cromhath or Cromarty, appear to have been erected as early as that of Elgin: we find them mentioned in the regulations adopted for the government of Scotland by Edward I., in 1304. The regulations heing little known, an extract—from Rymer’s ‘ Fœdera’—is here made of a part of them, which throws much light on the division of Scotland at that period:—

Likewise it is agreed, that the viscounts [sheriffs] who shall dwell in the land, be people born of the country of Scotland, or English, and be appointed and removed by the king’s lieutenant and by the chamberlain, according to their discretion. These sheriffs perform every thing relating to escheats, as the sheriffs were wont to do; and that they who shall be appointed sheriffs be the most sufficient, the fittest, and most profitable that can be found, for the king, for the people, and for keeping and maintaining the peace; and for the present, the roll of sheriffs to be as follows:—

1. That the chamberlain, who shall have the keeping of the castle of Berwick, appoint under him such a one as he can answer for, to be sheriff of Berwick.
2. Of Edinburgh, Haddington, and Linlithgow, . . . . . Ive de Adeburch, sheriff.
3. Of Peebles, . . . . . Robert Hastings ‘vultet,’ sheriff.
4. Of Selkirk, . . . . . ‘ He who has it in Fief,’ viz. The heritable sheriff.
5. Of Dumfries, . . . . . Richard Sward.
6. Of Wigton, . . . . . Thomas MacCulloch.
7. Of Ayr, . . . . . Godefroi de Ros.
8. Of Lanark, . . . . . Henri de St. Clair.
9. Of Dunbarton, . . . . . John de Montfeth, sheriff and constable, *i. e.* of the castle.
10. Of Stirling, . . . . . William Bissett, sheriff and constable.
11. Of Clackmannan, . . . . . Malcolm de Innerpeffer.
12. Of Auchterarder and Kinross, . . . . . ‘ He who has it in Fief,’ viz. The heritable sheriff.
13. Of Fife, . . . . . Constantine de Lochores.
14. Of Perth, . . . . . John de Inchmartyu.
15. Of Forfar, . . . . . William de Airth.
16. Of Kincardine, . . . . . Richard de Dunmore.
17. Of Aberdeen, . . . . . Norman de Leslie.
18. Of Banff, . . . . . Walter de Barclay.
19. Of Elgin, . . . . . William Wiseman.

20. Of Forres and Inveruairn, . . . . . Alexander Wiseman.
21. Of Inverness, . . . . . John de Stirling.
22. Of Cromarty, . . . . . William de Urquhart, of Urquhart, who is heritable sheriff.

In this list, we may observe Elgin is distinct from Forres and Nairn; no notice is taken of Renfrew, which was probably included in Lanark, nor of Kirkcudbright; Argyle, Caithness, and Sutherland, could hardly he subdued, or with Ross may have been included in Inverness. It does not appear that Edward removed any of those persons who held their offices by charter, since we find the heritable sheriffs of Kinross, Selkirk, and Cromarty, are mentioned: the name of the last is much disfigured by successive transcribers, hut we are still able to discover that the Urquharts of Cromarty had a separate jurisdiction in this small tract, while most of the north of Scotland was comprehended in the shire of Inverness. This system of hereditary jurisdiction,—which we see had already begun,—extended by degrees over the greater part, if not the whole, of Scotland. It was in many instances of the most pernicious effect, in obstructing or defeating the purposes of justice and national polity, while, to accommodate the prejudices of feudal times, some singular annexations and subdivisions were made in the different counties. The abolition of this system, in 1748, is therefore considered, with justice, as one of the greatest national benefits that Scotland ever received,—of greater importance to her prosperity and welfare than even the Union of the kingdom. But the act of 1748, though well-intended, did not do enough; for, although these annexed lands were by that act made subject to the sheriff-courts of that shire in which they are locally situate, or to which they are more immediately adjacent, yet in all other cases, whether of police, taxation, military service, or elective franchise, they remain in the same circumstances as before. Whether the ancient sheriff is to be considered as a civil or a military officer, is not determined. Besides his office as a judge, he had the power of calling out the militia and presiding at ‘ Weapon-shavings,’ though this probably only extended to the freeholders or tenants *in capite*. It would appear, however, that there was no sheriff but in the stations where royal fortresses existed. This was, at least, the case at Elgin, Forres, Nairn, and Inverness, to the north of which last mentioned place there does not appear that any royal fortress ever existed. The sheriff also appears to have been *ex officio* keeper or constable of the castle. We see that this is particularly mentioned with respect to the important fortresses of Stirling and Dunbarton under Edward; and we shall find it the case likewise in Nairn. Justice was at that time more frequently administered in the halls of the haron, or by the decision of the church, than in the court of the sheriff, and hence we may account for the influence which the clergy had in regulating the hounds of counties. The erection of the sheriffdom of Moray, properly so called, took place in the reign of James II., and was, perhaps, the first material dismemberment of the shire of Inverness. In tracing its history, it appears that Thomas Randolph had been created Earl of Moray with very extensive powers by Robert Bruce. His jurisdiction comprehended the whole country from Spey to the Western ocean; and was bounded on the north by the river Forna or Beaul. This earldom, after two generations, reverted, by the failure of male heirs, to the Crown. John Dunhar, descended from the Randolphs by the female line, having married a daughter of Robert II., was created Earl of Moray, with the exception of Badenoch, Lochaer, and some other districts. His descendant Alexander heing accounted illegitimate, was deprived of the earldom in the mi-

nority of James II., but was however knighted, and made heritable sheriff of Moray; he is the first of whom mention is made, and the office remained with his heirs until after the Union, in 1707. It is, therefore, probable that the sheriffdom comprehended only the lands annexed to the earldom after its restoration to the Dunhars, while Badenoch, Lochaber, and the other districts, upon reverting to the Crown, fell again under the jurisdiction of the sheriffs of Inverness. In 1405, Donald, thane of Calder, was seized sheriff and constable of Nairn: his grandson William procured, in 1476, those parts of his estate which were situate in Inverness or Forres, to be annexed to the shire of Nairn. Hence the estate of Ferintosh in the present shire of Ross, that of Dummaglas in Stratherrick, and that of Easter Moy near Forres, form a part of the shire of Nairn; as does also a small field on the east side of Academy-street in the town and burgh-lands of Inverness. With respect to roads, &c., the district of Dummaglas is usually exchanged for that of Budzeat, a part of Inverness, which is nearly as much insulated in the shire of Nairn. The next idea of dismembering Inverness occurs in the beginning of the 15th century, it being proposed by an act of the 6th parliament of James IV., dated the 11th of March, 1503, to make a sheriff of Ross, and one of Caithness, including Sutherland, 'because there has been great lacke and fault of justice in the north parts, as Caithness and Rosse, for fault of division of the schirefedome of Inverness, quihill is over greate, and thay parts are sa far distant fra the said burgh of Inverness,' &c.—The defeat of Haco, King of Norway, at the battle of Largs, in the middle of the 13th century, had destroyed the power of the Norwegian monarchs over the Western isles. Yet, under the Lords of the Isles, they continued independent, even in name of the Crown of Scotland, till after the battle of Harlaw, in 1411. Donald of the Isles having a right to the earldom of Ross, raised an army of his countrymen, in order to take possession of it. Not contented with that, he also marched forward and laid waste the country as far as the shire of Aberdeen: being met at length by the Earl of Marr, at Harlaw, he was defeated with great slaughter, and thereupon immediately retreated to the Isles. He was, however, by no means subdued, but continued a very powerful and dangerous neighbour during the greater part of that century: See article **HEBRIDES**. His influence seems also to have been considerable even on the mainland; for many families in the shire of Inverness held their lands by charter from the Lords of the Isles. In the beginning of 1476, John of the Isles was proscribed by act of parliament; and a powerful fleet and army being collected with a view to reduce him, he was persuaded to make his submission, surrendering the earldom of Ross, which was then declared to be unalienable from the Crown, and consenting to hold his insular possessions of the King in future. Although the independence of this chieftain was thus destroyed, it does not appear that Argyle, Lochaber, or the Isles, were included in any sheriffdom until the beginning of the 16th century. For, at the same time with the act concerning Ross and Caithness, we have another, stating the great want of justice in the North and South isles, 'wherethrow the people are almost gane wilde;' accordingly the act provides, that justices shall be appointed: 'Those of the North isles to have their seat and place of justice in Inverness or Dingwall, as the matter occurs to be decerned by the said justices. In like manner, another justice and schireffe to be made for the South isles, to have his place in the Tarbat of Loch Kinkerrane,' i. e. Campbeltown, in Kintyre. Again, in the acts of James IV., it is stated, that there are parts between

Badenoch and Lochaber, 'which have been out of use to cum to justice-aires' (assizes), wherefore it is provided, that 'the lands called Dowart and Glen-Dowart, and also the lordship of Lorne, cum and answer and underly the law at the justice-aires of Perth, Mawmore Lochaber aforesaid to cum to the aire of Inverness, Ergyle, when it pleases the King, sall cum to Perth,' &c.—Yet, notwithstanding these statutes, the proposed regulations seem either to have been forgotten or very imperfectly executed,—a thing by no means wonderful in a wild and inaccessible country. James V. undertook an expedition to the Isles, in 1539. Setting sail from Leith, he visited the Orkneys, Lewis, Skye, and the Western coasts of the mainland, obliging the several chieftains to submit to his authority. A particular account of this expedition is still extant, and affords a tolerable idea of the progress of the Scots in navigation.\* The hearings and distances of most of the remarkable objects on the voyage are noticed. It is the first time that we are accurately informed of the names of the several clans by our historians, and it may be considered as the first time that the Western parts of the kingdom were reduced into subjection. James seems to have been aware of the importance of this part of his dominions in a commercial point of view, and took considerable pains in endeavouring to introduce the arts of civilization into the Isles. For this purpose, a company having been formed, a colony of settlers—drawn chiefly from the coast of Fife—was established at Stornoway in the Lewis, and various others were projected. They had, however, to maintain their ground in Lewis by force of arms, and suffered so much annoyance from the jealous and hostile disposition of the natives, that at last they were forced to come into terms with them, and entirely abandon the establishment. The task of reducing the island of Lewis was at length accomplished by the Mackenzies, Lords of Kintail; they succeeded partly by force, and partly by fomenting the divisions of the petty chieftains, until the descendants of the principal family were completely extirpated. The manuscript histories of the family of Mackenzie describe the inhabitants, as a race of 'pirates worse than those of Algiers,' prone to commit the most atrocious crimes. But, with mingled pride and satisfaction, we now draw the singular contrast to the manners of the inhabitants of this part of the empire, among whom, from Shetland to the Mull of Cantyre, a capital crime has not been known for many years. Nothing had been done towards the division of the shire of Inverness, so late as the year 1633. In the 1st parliament of Charles I. we find an act against the Clan Gregor, at that time under proscription, wherein 'the sberiffs of Perth, Dumhartane, Angus, Mearns, Sterling, and the stewarts of the stewardries of Stratherne, Mentithe, Banffe, Inverness, Elgyn, and Forres, and their deputies, the sheriff of Cromarty and his deputies, with the provost and haillies of the hurgths there, the Earls of Errol, Moray, &c., are nominated justices for trying the said rebels,' &c. No notice is taken of Ross, Sutherland, Caithness, Nairn, nor Argyle. The shire of Sutherland was first erected during this Parliament, by an act in favour of the Earl of Sutherland; it comprehended the districts of Sutherland Proper, Assynt, Strath-Naver, and Fairmatofan alias Cleipholes. It does not appear, whether Caithness Proper, or the present shire, was at that time a separate jurisdiction or not; but, at any rate, the erection of Sutherland necessarily disjoined it from Inverness. At the Restoration, in 1660, the counties of Argyle, Ross,

\* It has been reprinted in the 3d volume of the *Miscellanea Scotica*. Glasgow, 1820.

Sutherland, Caithness, and Nairn, were all distinct from Inverness, as appears by an act of assessment, in which commissioners of supply are appointed for the several counties in order. The boundaries of Ross, however, were not finally settled until the year 1661; since which time, excepting the abolition of heritable jurisdictions in 1748, there is no material alteration in the limits of the shire of Inverness."

**INVERNETTIE**, a small harbour, and an estate situated about a mile south of the town of Peterhead. The harbour is in the immediate vicinity of an extensive and excellent brick and tile work established about 40 years ago. The bed of clay is worked to a depth of between 30 and 40 feet. This place is now within the parliamentary boundary of the burgh of Peterhead.

**INVERNSNAID**, a small hamlet, a mile east of Loch-Lomond, and  $3\frac{1}{2}$  miles geographically north of the summit of Ben-Lomond; in the parish of Buchanan, Stirlingshire. It stands on the road from Stirling, by Aherfoil, to the ferry near the head of Loch-Lomond, and at the confluence of Inversnaid burn, coming down in a brief course of 2 miles from the north, with a stream bringing westward the superfluous waters of **LOCH-ARCLLET**: which see. A harrack-station was formed here early in the 18th century, to repress the depredations of certain turbulent Highlanders in the vicinity, especially the Macgregors; and it continued to be garrisoned during the reign of George II., but has long been utterly disused. Some interest attaches to it from its having been for some time the quarters of General Wolfe when a subaltern. From the fort south-westward to Loch-Lomond, Inversnaid burn pursues a romantic course, and, near its fall into the loch, makes a fine cascade. At its mouth a ferry communicates across the lake—here reduced to a stripe of  $\frac{3}{4}$  of a mile wide—with the Dumhartonshire shore.

**INVERUGIE**, a small village in the parish of St. Fergus, Aberdeenshire, at the mouth of the Ugie. Near it are the ruins of Inverugie castle, where the celebrated Field-marshal Keith was born. See **FERGUS** (St.).

**INVERUGLAS**, a hamlet in the parish of Luss, Dumhartonshire. It is 4 miles north-west of Luss; at the confluence of the river Douglas with Loch-Lomond, over which there is a ferry here.

**INVERURY**, a parish in Aberdeenshire, bounded by Chapel-Garioch on the north and west; Keitball on the east; and Kemnay and Kintore on the south; but surrounded by the river Urie on the north and east; and by the Don and another of its tributaries on the west and south; the parish thus forming a peninsula by the junction of the Urie with the Don, across which rivers, near their junction, there are two substantial modern bridges. The parish is upwards of 4 miles in length from east to west, by 2 in breadth: square area about 4,000 acres. Houses 260. Assessed property, in 1815, £2,052. Population, in 1801, 783; in 1831, 1,419. On the banks of the rivers the soil is fertile, yielding abundant crops; but the western hilly part is chiefly pastoral. The land rises gradually to the skirts of Benochie, a mountain situated about a mile westward from the boundary in the parish of Oyne. Lime and coals are conveyed from Aberdeen by the Inverury canal which terminates here, and slates, timber, grain, &c., are returned through the same channel, which has thus been of much advantage to the agriculturists and others in this quarter, though it has yielded no profit to the capitalists at whose expense it was made. The principal crops are oats, barley, potatoes, and turnips: numerous sheep and black cattle are also pastured. Half the parish belongs to the Earl of Kintore.—In the south-western part

of the parish, on the northern bank of the Don, stands the building, occupied from 1799 till 1829, as the Roman Catholic college of Aquhorties, in which 27 young gentlemen were educated according to the doctrines of their church: the building is handsome, and beautifully situated; but the college has been removed to Blairs in the county of Kincardine. The mansion of Braco is in this parish; and the **BASS OF INVERURY**:—see that article; see also the **DON**.—The parish is in the presbytery of Garioch and synod of Aberdeen. Patron, the Earl of Kintore. Stipend £257 11s. 6d.; glebe £15. Church built in 1775; sittings 400.—Here are an Independent congregation, with a chapel, built in 1822; sittings 360: a Wesleyan Methodist, with a chapel built in 1819; sittings 200: and a Roman Catholic, with a small chapel, a portion of the old seminary now belonging to the college of Blairs.—Schoolmaster's salary £30, with £35 fees, and other emoluments. There are six private schools in the parish.

The royal burgh of **INVERURY**, in the above parish, is a straggling village, with none of the characteristics of a town. It is situated in the angle formed by the confluence of the Don and the Urie, about 15 miles north-west of Aberdeen,—the road from which is carried across the Don by one of the bridges above noticed, which was erected in 1791. The Inverury canal terminates close to this bridge. The oldest existing charter of Inverury is one granted by Queen Mary, of date 22d June, 1558; but it is traditionally said to have been erected into a royal burgh by Robert Bruce, on occasion of a great victory obtained by him here over Cumming of Badenoch. Previous to the date of the 3<sup>d</sup> and 4<sup>d</sup> William IV., c. 76, the old council of the burgh, consisting of 9 persons, including the magistrates, chose the new magistrates for the ensuing year. The newly elected magistrates, with the old council, then chose the new council. The council now consists of a provost, three bailies, a dean-of-guild, a treasurer, and three common councillors. The jurisdiction of the magistrates extends over the whole royalty; but it has been very little exercised. Petty delinquencies are tried, and diligence granted on bills of exchange against debtors within the territory. Courts are also held for granting warrant of removing before Whitsunday. The burgh is bounded by the natural line of the Urie on the east of the town with a like space on the west: the Urie also bounds it on the north, and a straight line across the Don from the Urie bridge constitutes the southern boundary. The revenue of the burgh, in 1832, amounted to £143 3s. 7 $\frac{1}{2}$ d., of which £96 9s. 7 $\frac{1}{2}$ d. arose from rent for customs and feu-duties: expenditure £84 17s. 10 $\frac{1}{2}$ d.; debt, in 1833, £659 16s. 4d. The revenue, in 1838-9, was £185.\* The municipal constituency, in 1839, was 89. The burgh joins with the Elgin district of burghs in returning a member to parliament. Constituency, in 1839, 94.—Inverury does not appear ever to have been a place of great trade: its prosperity was long retarded by its peninsular situation, which rendered it inaccessible on all sides but one, except by boats, until its bridges were built; and when the Don was in flood, even that form of conveyance was impracticable. Its cattle-markets are large, and well-fre-

\* "The funds of the burgh," observes the municipal commissioner, "if well managed, are sufficient to keep it in excellent order;" but the management is said to have been very objectionable. Amongst various curious statements in the commissioner's report, it is said, that one of the resident chief magistrates "was in the practice of marrying persons coming before him by suing them on their confession of an irregular marriage, on which occasions he received a fee to himself! On this account he was indicted by the Lord-Advocate of Scotland, and incurred an expense of £84 in preparing for his trial before the court of justiciary, which was paid, by order of the council, from the funds of the burgh!"

quoted: they are held once a-month in summer, and every fortnight in winter. Inverury gives the title of Baron to the Earl of Kintore.

IONA, ICOLMKILL, or I-COLUMB-KILL, or I,\* a small hut celebrated Hebridean island, 'a gem in the ocean, 'the Star of the Western sea,' 'the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge, and the blessings of religion,'

" Isle of Columba's cell,  
Where Christian piety's soul-cheering spark  
(Kindled from Heaven between the light and dark  
Of time) shone like the morning-star,"—

situated off the south-west extremity of Mull, in the parish of Kilfinichen, Argyleshire. It is 9 miles south-west of Staffa, and about 36 miles west of the nearest part of the district of Morven, or of the mainland of Scotland. A strait, called the sound of I, or of Icolmkill, about  $\frac{3}{4}$  of a mile broad, and 3 miles long, deep enough for the passage of the largest ships, but dangerous from sunken rocks, separates it from Mull. Islets and rocks—the most conspicuous of which is Soa on the south-west—are numerously sprinkled round one-half of its coast. A heavy swell of the sea, but not such as to imperil navigation, usually rolls toward it from the north. The scenery around it is, in general, desolate in its aspect and cold in its tints, requiring the aids of the burnished or tempestuated sea, the feecy or careering clouds, and above all, the tranquil or the stirring associations of history, to render it interesting or grand. Icolmkill has the attractions neither of pastoral beauty and simplicity, nor of highland wildness and sublimity; it utterly wants both the fertile and cultivated loveliness of Lismore, and the dark and savage magnificence of Mull; and, though relieved by some green panoramic views of Coll, Tiree, and other islands, it would seem to a person ignorant of its history and antiquities, an altogether tame and frigid expanse of treeless sward and low-browed rock. Its length is about 3 miles, stretching from north-east to south-west; its breadth is about a mile; and its superficial area is conjectured to be about 1,300 Scottish acres. All round, it has a waving outline, approaching on the whole to the form of an oval, but exhibiting an almost constant alternation of projection of land and indentation of sea. Its recesses, however, though termed bays by a topographer, would, in general, he refused the name by navigators, and afford no harbour, nor, in boisterous weather, even a tolerable landing-place. The bay of Martyrs, on the north-east side, is merely a little creek; yet it both forms the chief modern succedaneum for a harbour, and was anciently, as tradition reports, the place of debarkation for funeral parties coming hither to inter the illustrious dead. Port-na-Currach, 'the Bay of the boat,' on the south-west side, is a still more inconsiderable creek, lined with perpendicular rocks of serpentine marble; and derives both its name and all its importance from a tradition of its having been the landing-place of the currach, the hide and timber boat of St. Columba. On the shore of this creek are some irregular heaps of pebbles, thrown up apparently by the sea, but represented by legen-

\* I, pronounced Ee, and sometimes written Hi, Hii, or Hy, means 'the Island,' and is the name commonly in use by the natives and other Hebrideans, the place being, among the Ebu-dean archipelago, the island par excellence. But when necessity is felt to speak distinctively, the name used is I-columb-kill, or abbreviated, I-icolumkill, 'the Island of the cell of Columba,' the saint to whom the place owes all its importance, the patron-saint of the Hebrides, and long the patron-saint of all Scotland. The name Iona is either I-thonna, 'the Island of the waves,' or, I-shonna, 'the Holy or Blessed island,' most probably the former, and, in that sense, quite descriptive of its appearance in a storm. This name is sometimes written Hy-ona; and is used by historians, poets, and strangers,—commending itself to them by its euphonioussness.

dary gossip to be—in the case of one heap which is about 50 feet long—a memorial and an exact model of St. Columba's boat, and, in the case of the other heaps, results and monuments of acts of penance performed by the monks. The surface of the island consists of small, pleasant, fertile plains, in most places along the shore, and of rocky hillocks and patches of green pasture, and an intermixture of dry and of boggy moorland in the interior. At the southern extremity, excepting a low sandy tract near a creek called Bloody bay, it is merely a vexed and broken expanse of rocks. The highest ground is near the northern extremity, and rises only about 400 feet above sea-level. Numerous though small springs afford an ample supply of pure water; and several of them combine their treasures to send a pleasant rill past the ruins of the ancient nunnery. Adjoining the gardens of the abbey, and surrounded by little hillocks, extends a morass, the remnant of an artificial lake of several aeres, anciently traversed through the middle by a broad green terrace, and fringed round the edge with agreeable walks. At one side of it are traces of a sluice, and ruins of a corn mill. The pasture of the uplands or little hills consists, during three-fourths of the year, of a fine verdure, and is celebrated among the surrounding islands for its excellence. About 500 Scottish acres, or five-thirteenths of the whole area, are arable. A light sandy soil prevails along the shore, excepting where cultivation and abundance of manures have converted it into a dark loam. The land was formerly held in run-rig, but is now disposed into regular lots, and many places produces good crops of barley and oats. Fuel can be obtained only from Mull, and in the form of peat, and is procured at great hazard and expense. Minerals are various, and cumulatively rich. The Port-na-Currach stone has its name from the bay or creek in the vicinity of which it is found, and possesses fame both as a gem much coveted by modern virtuosi, and an amulet superstitiously invested with miraculous virtues by the adle-headed mob of the Middle ages. The stone is a fluor or crystalized homogenous substance, somewhat resembling quartz, formed in the veins of serpentine rock, and dislodged from them by the waves, and found in nodules from the size of a pea to that of a large apple, along the shore. It is semi-pellucid and green, sometimes clouded with white and yellow opaque spots, and diminishes in brightness as it increases in size. Specimens free from blemish, and of good colour and transparency, are extremely beautiful when polished, and are highly valued by jewellers and lapidaries; but, in consequence of the great demand for them, they are annually increasing in scarcity. The marble of Icolmkill is white and semi-pellucid, composed of small irregular, laminous masses, the laminae being plain, parallel, and resplendent. It breaks with a shining plain surface, strikes fire with steel, cuts freely, receives a fine polish, exhibits, by its micaeous particles and laminous masses, a glittering exterior, and, in its finest specimens, will remain for centuries exposed in the open air without exhibiting other change than a mellowing of its whiteness. Icolmkill hieracites, or hawkstone, resembles in its hues the plumage of a Hebridean hawk, but is known only as having formed the thick slates with which the monastery was roofed, and possibly occurs nowhere on the island except among the ruins. Serpentine—probably the most beautiful stone which is found in large quantities in Scotland—may be quarried to any extent in Icolmkill. Siente or red granite, nearly as hard as the granite of Mull, occurs in extensive rocks in the south-west, and may be cut in any form, and of all dimensions. Spotted

schistus, difficult to be worked, and too coarse for slates, is the chief stone on the north-east. The whole island is the property of the Duke of Argyll, and yields a rental of only about £300.

On the hay of Martyrs, near the ruins which constitute the grand attraction and the glory of the place, stands the village of Threld,—a collection of miserable huts, and the scene of general squalidness, poverty, and filth. In common with the rest of the island, it was long left to thrive or starve for the future world upon its dim and malodorous traditions of the moral influences which once bathed all its neighbourhood in beauty; for though it received a visit some four times a-year from the minister of Kilfinichen, it was utterly destitute of every substantial means of either education or religious instruction. Now, however, it is the seat both of a neat *quoad sacra* parish-church, and of a school-house. Both the minister and the schoolmaster are maintained by the Society, in Scotland, for Propagating Christian Knowledge. The inhabitants of the village constitute very nearly the whole population of the island, and are in a rude semibarbarous condition. Besides conducting a poor trade in fish and kelp, they live, to some extent, on the gullibility and vanity of visitors. Aware how much the gems of the island are in request, young and old run in a mass to the beach on the arrival of a vessel, and obstreperously vie with one another in palming upon strangers, for twopence, for fourpence, for sixpence, or for whatever they can obtain, anything that is likely to be received by a self-conceited starrer at the world's lions as a precious stone. Wordsworth, alluding to the part taken in this traffic by children, and fixing the warm gaze of a Christian upon the means of religious instruction which they now enjoy, says,

“How sad a welcome! To each voyager  
Some ragged child holds up for sale a store  
Of wave-worn pebbles, pleading on the shore  
Where once came monks and nun with gentle stir,  
Blessings to give, news ask, or suit prefer.  
Yet is yon neat trim church a grateful speck  
Of novelty amid the sacred wreck  
Strewn far and wide. Think, proud philosopher!  
Fallen though she be, this Glory of the West,  
Still on her sons the beams of mercy shiue;  
And ‘hopes, perhaps more heavenly bright than thine,  
A grace, by thee unsought and unposses’d,  
A faith more fixed, a rapture more divine,  
Shall gild their passage to eternal rest.”

The inhabitants—though credulous to excess in whatever legendary lore or romancing tradition has said about Columba, and though enthusiastic enough to join chorus in corroborating the money-moving stories of the cicerones of the ruins, and other noticeable objects around them—are a simple and hardy race, not more remarkable for their poverty, than for the thrift and the content with which their large numbers secure a sustenance on so narrow and niggard an arena. By the rearing of cattle on their little crofts, and selling them in Mull, and by their unimportant tiny trade in other matters, they procure a small importation of oatmeal, and then, for every other necessary of life, depend on their own little island and its encircling sea.

Icolmkill was probably uninhabited, or at best hut occasionally visited by the people of Mull, previous to the time of Columba, and, at all events, comes first into notice as a quiet retreat gifted over to the saint for the uses of his missionary establishment. His having been accosted upon his landing by some Druids in the habits of monks, who, pretending to have also come to preach the gospel, requested him and his followers to seek out some other asylum, and who, on his detection of their imposture, made a speedy and complete departure, is either one of the idle legends with which his biographers barbarously

embellished their accounts of his life, or points to some conspiracy formed among the heathen ecclesiastics on their getting hruit of his purpose to attempt an inroad on their territory. Columba was a native of Ireland, descended by his father from the king of that country, and by his mother from the king of Scotland; and, after having travelled in many countries, and acquired great reputation for learning and piety, he concocted a scheme of missionary enterprise, with Scotland and Ireland for its field, which, at once in the Christian heroism of its spirit, and the far-sightedness of its views, and the brilliancy of its immediate success, has had no parallel or even distant imitation in the missionary movements of any subsequent age. He wished to apply to Scotland and to Ireland a moral lever which should lift them up in the altitude of excellence, and bring them acquainted with the moral glories of heaven; and he sought a spot on which he might rest the fulcrum of the simple hut mighty instrument he designed to wield. What he wanted was, not an arena crowded with population, or a vantage-ground of political influence over the rude tribes whom he wished to be the instrument of converting,—for, in that case, he would have remained in his fatherland, or taken a place in the kingly courts to which his birth gave him access; but it was a secluded nook where he could lubricate his own energies for the agile yet herculean labours which he had proposed to himself as his task, and where he could train and habituate a numerous body of youths to the hardy moral gymnastics which should fit them for acting with equal nimbleness and strength against the hattle-array of the idolatries and barbarity of united nations. In 563, or, according to Bede, in 565, when he was 42 years of age, he left Ireland, accompanied by a chosen band who were akin to him in character and the companions of his councils, whom a grateful but incipiently-papisticated posterity canonized, as they did himself, and asserted to be more than mortal, and whom the usages of Columba's successors pronounced to be 12 in number, after the example of the 12 apostles of the Redeemer, though the recorded list of their names shows them to have been 13, and, the heartful simplicity of Columba's character might have demonstrated them to amount to just as many as could be made to appreciate and reciprocate the motives of moral grandeur which impelled his movement,—accompanied by this hand, the saint, since we must call him so, or rather the energetic missionary, ran in among the Hebrides as a territory common, in a sense, to Ireland and Scotland, and offering fair promise of the retreat which he sought. Oronsay, lying only 60 or 65 miles from the mouth of Loch-Foyle, the grand outlet of Ireland on the north, and both nearly of the same size as Icolmkill, and similarly situated with relation to Colonsay as Icolmkill is with relation to Mull, was first tried, and became, as is said, the seat of such commencing operations as afforded some promise of stability. But I—the island par excellence—was destined speedily and permanently to receive the hold and apostolic missionary. Either while his tent was fixed at Oronsay, or after having made a passing visit to Icolmkill, he went into the eastern parts of Scotland, or the territories of the Picts, and was the instrument—with the aid of miracles, say his romancing biographers—of converting Brude or Bridel, the Pictish king, whose reign terminated in 587. From either this monarch, or more probably from Conal, king of the Scots—or, as Dr. Jamieson conjectures, from both, the frontiers of their respective kingdoms not being well-ascertained—he received a grant of either whole or part of the island which was henceforth to be rendered illus-

trious by the association of his name. He now erected on Icolmkill a mission-establishment, whence emanated for centuries such streams of illumination over Scotland, Ireland, the north of England, and even places more distant, as shone brilliantly in contrast to the midnight darkness which had settled down on the rest of Europe, corruscating through the sky and beautifully tinting the whole range of upward vision, like the play of the Northern lights when a long night has set in upon the world. But the establishment was very far from being monastic, and cannot, as to its external appliances, be traced in any of the existing ruins which possess so strong attractions for antiquaries and the curious. Columba and his companions were strangers to all the three vows which unite to constitute monkery; and made a brilliant exhibition of the social spirit, the far-stretching activity, the travelling and untiring regard for the diffusion of the gospel, the enlightened respect for every art which could improve and embellish human society, and the freedom from mummery and religious mountebankism, which monks are as little acquainted with as the red Indians who scour the American prairies are with polite literature or the refinements of a king's drawing-room. Columba, for some time, took up his residence with king Brude at Iuverness, and, while there, met with a petty prince of the Orkneys, and found an opportunity, by his means, of settling Cormac, one of his disciples, in the extreme north, and introducing Christianity to the Ultima Thule of the known world. He also made a voyage in his currach to the north seas, and spent twelve days in adopting such preparatory measures as gave his companions and successors an inlet to the northern parts of continental Europe. Constantine, a quondam king of Cornwall, who had renounced his throne that he might cooperate as a missionary with the saint, founded a religious establishment in imitation of Columba's at Govan on the Clyde, and, after diffusing a knowledge of the gospel in the peninsula of Kintyre, passed away from the world through the golden gate of martyrdom. Other members of the Icolmkill fraternity—their leader guiding the way in every movement—traversed the dominions of the Picts, the Scots, and the Irish, and speedily numbered most of the first, and many of the second and third of these nations among their followers. The Irish annalists state, in round numbers, that Columba had 300 churches under his inspection; and, adopting the language and ideas of a later and corrupted age, they add that he also superintended 100 monasteries. Their figures, as well as their words, are probably in fault. Yet, even making large allowances, the number of missionary stations modelled after the parent one of Iona, and mistakenly called 'monasteries,' and the number of fully organized and self-sustained congregations, which seem to be indicated by the word 'churches,' must have been surprisingly great to be, in any sense, estimated at respectively 100 and 300. Columba's personal influence, too, and the bright and far-seen star of fame which, from very nearly the commencement of his enterprise, stood over Icolmkill, are evidence of the striking greatness of his missionary success. Aidan, the most renowned of the Scottish kings, having to contest the crown with his cousin Duncho, did not, even after the complete discomfiture of his opponents, think his title to royalty secure till inaugurated by Columba according to the ceremonial of the Liher Vitreus; and, in all his great enterprises, he was prayed for in a special meeting of the brotherhood of Iona. So numerous were the missionaries, both in Columba's own day and afterwards, who went out from the island,—so wide was the range of their

movements, and so eminent was their success, indicated in their being popularly canonized,—that, throughout France, Italy, and other parts of Europe, all the saints of unknown origin were, at a later period, reputed to be Scottish or Irish.

The Culdees, 'servants of God,' as the fraternity of Iona and the communities connected with them were called, seem to have had no connexion whatever with the corrupt, pompous, usurping, and multitudinous sect which, from an early period in the 4th century, claimed the alliance of the state, arrogated to itself the title of 'the Catholic church,' and was already far advanced, all indeed but completely matured, in the foul innovations of Romanism. Columba acted, to all appearance, in the same independent manner as the founders of some eight or ten considerable sects in Africa, Italy, and the East, who, in various degrees of purity, maintained soundness of doctrine and approximations to apostolic simplicity of church-order long after these were utterly lost in what are usually called the Latin and the Greek churches, and who—but for the two circumstances of their records having been destroyed during the inquisitorial persecutions of the dark ages, and of the fountain-heads and all the main streams of ecclesiastical history lying within the territories of parties who regarded dissenter and heretic as synonymous terms—would figure illustriously in the religious annals of the Christian dispensation. From causes which are not explained, but probably from acquaintance on his travels with the obscure, because persecuted, dissenting bodies on the continent, and from devout and unjaudiced study of the divine word, aided by the advantages of his position beyond the territories of 'the Catholics,' and by an acquaintance with the recorded usages of primitive times, Columba set up a species of church-order, which had a close resemblance to what Campbell, Mosheim, Lord King, and other impartial writers, agree to have prevailed early in the 2d century,—a species which was removed by but one degree of innovation or corruption from the beautifully simple frame-work set up for the churches by the apostles. An Episcopalian, a Presbyterian, and an Independent, if keener to gather laurels for his party than to obtain an impartial view of facts, will each, and not without plausibility, but under decided mistake, claim the Culdees, as brethren in creed. Columba is represented as 'the arch-abbot of all Ireland,' and is known to have wielded supreme ecclesiastical influence over Scotland; yet he seems to have acted rather on principles of advice than on those of authority, and in the character, not of an office-bearer of any description, much less of a prelate, but simply of the founder and guide of a great Christian mission. He never renounced the humble office of a presbyter; nor ever held higher office than the abbotey, as it was termed, or first and governing function, of the college or ecclesiastical community of Iona. Mission-establishments, or 'monasteries' as history improperly designates them, formed by colonization from the parent one, or under its sanction, usually had each 12 presbyters, and a superior or 'abbot;' the conceit becoming generally adopted that Columba modelled his college with reference to the 12 apostles presided over by the Saviour. But the presbyters who continued in the colleges, and are called 'monks,' and also the presbyters who went abroad in charge of congregations and wore the name of 'bishops,' were all on a footing of equality among themselves, and all acknowledged the authority of the superior or 'abbot.' Nor does the college of Iona seem to have differed from its offshoots in authority, or in any particular whatever except in its being the prolific hive whence succes-

sive swarms of industrious and honeyed missionaries went off to raise accumulations of sweets in the various nooks of the moral wilderness. Even 'the abbot' does not appear to have been, in all respects, the superior of the other members of a college; for he ranked only as a presbyter or 'a monk;' and, in particular, he acted strictly in common with the others in cases of ordination. The fraternity of Iona stood so high in general esteem that they enjoyed, by their advice and influence, a pre-eminence in the civil government of the people. Though they lived under a somewhat strict rule drawn up by Columba, and still extant; yet they were altogether free from asceticism, and exerted their main strength for the training of ministers and missionaries, in a style of cheerful temperance, and liberal regard to the useful and the fine arts, which exhibited a happy medium between the leaden dulness of a popish Maynooth, and the pompous glitter of an aristocratic Oxford. While, like the primitive Christians, they enjoyed many things in common, they divided their property, according to the allodial notions of the period, among their wives and children, and even made partitions of the voluntary offerings or contributions of the people. They knew nothing either of tithes or of first-fruits; and exalted matrimony to the place assigned it in the divine word. At first they had their families around them; but, afterwards, they so far pandered to the prevailing cry on behalf of clerical celibacy, as to assign to their wives separate abodes. They were sober, charitable, and contemptuous of worldly grandeur,—“modest and unassuming,” says Bede, “distinguished for the simplicity of their manners, diligent observers of the works of piety and chastity, which they had learned from the prophetic and apostolic writings.” They despised the ceremonies of a costly ritual, the pageantry of the choir, and the tricks and gambollings of priestcraft. They guarded, to a degree, against the innovations attempted by the wily emissaries of Rome; and, considering the circumstances of the period, made a comparatively long resistance to the influences of degeneracy which had already precipitated the most of Europe into gilded barbarism and antichristian superstition. They occasionally occupied many successive days, and even spent intervening nights, in studying the sacred volume; and, sedulously searching out its meaning, and bowing to its supreme authority; and regarding it as the sole final appeal for every point of faith or morals, they were strangers to the foolery of searching for their creed in the writings of the fathers, or enslaving their consciences to the dictation of those tools of the Christian emperors and the popes of Rome, called General councils. Their doctrines probably were tinged, or even highly coloured, with Pelagianism; yet, when compared with those of the great body of contemporary Christians, and when seen in the rich fruits of moral worth which they produced, they may be suspected to have leaned toward error more in words than in reality.

Iona was the retreat of science and literature, and of the fine and useful arts, almost as conspicuously as of religion. Columba himself excelled in all secular learning, was a proficient in the knowledge of medicine and the practice of eloquence, and laboriously instructed the barbarians in agriculture, gardening, and other arts of civilized life. Not a few of the members of his community, in successive generations, were eminently skilled in rhetoric, poetry, music, astronomy, mathematics, and general philosophy and science. About the beginning of the 8th century, learning of every sort, in fact—with the exception of some poor remains of philosophy and the arts in Italy—was hunted out of every part of Continental Eu-

rope, and concentrated its energies and its glories on the little arena of Icolmkill. Even Ireland, which was at the time brilliant in distinct literary establishments, concurred with the general voice of the civilized world, in pronouncing Iona the pre-eminent seat of learning, in acknowledging the paramount influence of its college, and in awarding to its abbot the designation of Principatus. The arts and sciences which formed the curriculum were writing, arithmetic, the computation of time, geometry, astronomy, jurisprudence, and music. So much was the last of these valued at the period, that heaven was believed to have bestowed musical powers only on its favourites. At first, it allured the barbarians to the Christian modes of worship; and was attended to simply in a degree proportioned to its subordinate importance; but eventually it acquired a predominating influence, far too largely engaged the attention, retarded the progress of deeper studies, and contributed not a little to produce a general deterioration which at length became submerged by the influx of popery.

Only a rapid and interrupted outline of the history of Iona can be here attempted. A continuous list of abbots is preserved from Buithan, who succeeded Columba, and died in 600, to Caoin Chomrach, who died in 945. Another and succeeding list has perplexed antiquaries, but distinctly exhibits four more abbots, beginning in 1004, and terminating with Duncan, in 1099. Under Buithan, St. Giles, a graduate of Iona, introduced Culdeism to Switzerland, was the instrument of converting several thousands of the inhabitants, rejected the hishopric of Constance, held out as a bribe to lure him from his simple creed, and planted an establishment whose superiors, in after ages, were less proof than he to the handshisms of civil greatness, and came to be ranked as considerable princes of the empire. Under Ferguan, who died in 622, and who was considerable in piety and learning, the scientific and literary interests of Iona had to struggle with difficulties, but went through unscathed. Under Cummin, who died in 658, and who was distinguished for his scholarship, the seminary, though sending out fewer missionaries than formerly to Switzerland, Germany, and other continental countries, continued its assiduity in training men in the arts and sciences. About this time, Aidan and some other alumni, in compliance with an invitation of Oswald, king of Northumbria, who had been disciplined to Christianity when in exile among the Scots and Picts, introduced a knowledge of Christianity among the Northumbrian Saxons, and planted the scions of Christian excellence and literary renown among that people, from the northern limits of their territory along the Forth, to their southern limits in the centre of England. Aidan is said to have in seven days baptized 15,000 converts; he commended his cause by great moderation, meekness, and piety; but in common with many others who went from Iona to England, he cared little to retain the simple ecclesiastical discipline of Culdeism; and he was appointed the first hishop of Lindisfarne or Holy Island. Eata, one of those who accompanied Aidan from Iona, after labouring for a season in Northumbria, became the apostle of the tribes who inhabited the basin of the upper Tweed, and laid the foundation, and was the first superior of the Culdee establishment of Melrose, which for centuries occupied the place of the greatly more celebrated, but comparatively the utterly worthless popish abbey. During nearly the same period as that of Aidan and Eata's activity, all the other principalities or kingdoms of England, excepting Kent and Wessex, and the little state of Sussex, were traversed by missionaries from Iona, and received from them their chief initial instruction, or their revival from

total declension, not only in Christianity, but also in the arts and sciences. No institution, either of its own age or of any which intervened till after the Reformation, did so much as that of Iona, at this time, to diffuse over a benighted world the lights of literature, science, and the Christian faith. But as the 7th century drew toward a close, its glory became visibly on the wane, and began to assume sickly tints of remote assimilation to Romanism, or more properly, of substituting frivolous external observances for the spirit and energy of simple truth. A celebrated, but very stupid dispute, at Whithy, in Yorkshire, between Colman, one of its alumni, and Wilfrid, a Romanist, on the precious questions as to when Easter or the passover should be celebrated, and with what kind of tonsure the hair of a professed religious should be cut, conducted on the one side by an appeal to the traditional authority of John the apostle, and on the other to the interpolated dictum of Peter, the alleged janitor of heaven, and supported on the part of Colman with all the zeal and influence of his Culdee brethren, ended, as it deserved to do, in the total discomfiture of the people of Iona, who totally forgot the moral dignity of their creed both by the jejuneness of the questions debated, and by the monstrous folly of appealing to the verdict of the Northumbrian prince Oswi, a diademed ninny, who "determined on no account to disregard the institutions of Peter who kept the keys of the kingdom of heaven,"—this dispute gave a virtual death-blow to Culdeeism, and the influence of Icolmkill in England, and even paved the way for the march of the vanguard of popery upon the delightful institutions both of the island itself, and of the far-extending territory over which its moral influence presided. Colman, with a whole regiment of his clerical brethren, retreated upon Scotland, and left the sunnier clime of the south in possession of the corrupted and corrupting Romanists. Under Adamnan, who died in 703, Iona proclaimed to the world its having commenced a career of apostacy, and invited the multitudinous communities who looked to it as the standard-bearer of their creed, to follow in its steps. The ecclesiastics of the island put some trappings of finery upon their originally simple form of church government; they fraternized with the Romanists on the subject of keeping Easter; they preached the celibacy of superior clerks and professed monks,—prohibited the celebration of marriage on any day except Sabbath,—prayed for the dead,—enjoined immoderate fastings,—and distinguished sin into various classes; and they, in general, yielded themselves, with a surprising degree of freedom, to the power of fanatical zeal and superstitious credulity. Though still far from being as corrupt as the Romanists, and though continuing to maintain the island's literary fame, they very seriously defiled the essential purity of Christian faith and devotion.

Icolmkill underwent, in the course of divine providence, frequent scourgings for its spiritual declension, and henceforth was conspicuous, not more for the loss of its purity, than for the destruction of its peace. In 714, the ecclesiastics, or the monks—as they may now, with some show of reason, be called—were temporarily expelled by Nectan, king of the Picts. In 797, and again in 801, the establishment was burnt by the northern pirates. In 805, the pirates a third time made a descent upon it, and put no fewer than 68 of its monks to the sword. Next year the inhabitants of the island built a new town; in 814, they went in a body to Tarach to curse the king of Scotland, who had incensed them by his vices; and in 818, their abbot, Diarmid, alarmed by new menaces from the pirates, bundled up some saintly relics to aid in averting perils, and ploughed

the seas for two years in making a retreat to Ireland. In 985, the abbot of the period, and 15 monks, or 'doctors,' were killed, and the whole establishment dispersed. In 1069, the buildings, after having been re-edified, were once more destroyed by fire. The place had long before bidden farewell to its pristine glory, and now loomed dimly in the increasing gloom of its evening twilight; and, at last, in 1203, it was formally mantled in the sable dress of night, and became the seat of a new and regular monastery, tenanted by the cowed and mass-saying priests of Rome.—The Culdee monks, with the decline of their religious excellence, grew in earthliness of spirit, and though they originally held little communication with powerful barons except to aid their spiritual well-being, and would not accept from them any donation of land, yet they eventually made no scruple to send their fame to the money-market, and to accumulate whatever possessions were ceded by popular and opulent credulity or admiration. They received numerous and large donations of churches and their pertinents, and of landed property, from the lords of Galloway, and are said to have obtained 13 islands from the Scottish kings. No tolerable estimate can now be made of the amount of their wealth, nor even a certain catalogue exhibited of their islands. Raasay, Canna, Inch Kenneth, Soa, and Eorsa, seem certainly to have belonged to them; Tiree, Colonsay, Staffa, and the Treshinish isles, were probably theirs; and the three Shiant isles, the three Garveloch isles, and the isle of St. Cormack, Dr. McCulloch thinks, are awarded them by the evidence of the ruined cells and other antiquities. In 1180, all the revenues derived from Galloway, and other quarters, were taken away, and granted to the abbey of Holyrood. The Romish monks who succeeded the Culdees, inherited from them little or no property, except the island of Iona, and were left to make what accumulations they could from the fame of the place, and the trickeries of their own craft.

Iona thus concentrates most of the teeming interest of its renowned name within the period of about 150 years succeeding the landing of Columba; and is seen in its real moral sublimity when the doubtful or positively fabulous story of its having been originally an island of the Druids, and the associations of its monkery and its existing ruins of popish edifices, either are entirely forgotten, or are employed only in the limnings of poetry as foils to the grand features of the scene. Regarded as the source of Christian enlightenment to the whole British isles, and as the fountain-head of civilization, and literature, and science, to all Europe, at a period when the vast territory of the Roman empire, and nearly all the scenes which had been lit up by primeval Christianity were turned into wilderness by barbarism and superstition, it excites holier and more thrilling thoughts by far than the most magnificent of the thousand rich landscapes of Scotland, than even the warmest in the colourings of its objects, and the most stirring in its antiquarian or historical associations. "We were now treading that illustrious island," says Dr. Johnson, in a passage familiar to almost every Scotchman, "which was once the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge, and the blessings of religion. To abstract the mind from all local emotion would be impossible, if it were endeavoured, and would be foolish, if it were possible. Whatever withdraws us from the power of our senses,—whatever makes the past, the distant, or the future, predominate over the present, advances us in the dignity of thinking beings. Far from me and from my friends he such frigid philosophy, as may conduct us indifferent and unmoved over any ground which has been

dignified by wisdom, bravery, or virtue! That man is little to be envied, whose patriotism would not gain force upon the plain of Marathon, or whose piety would not grow warmer among the ruins of Iona." "We approached Iona," says a lively tourist, who contributes his sketch to a modern periodical, "We approached it on a lovely afternoon in summer. The steam-boat had left Oban crowded with tourists—some from America, two Germans, and a whole legion of 'the Sassenach.' The quiet beauty of the scene subdued the whole into silence—even the Americans, who had bored us about their magnificent rivers, and steam-boats sailing twenty-five miles an hour. The sea was literally like a sheet of molten gold or silver. Not a breath agitated its surface, as we surveyed it from beneath a temporary awning, thrown up on the quarter-deck. The only live objects that caught the eye were an occasional wild fowl or porpoise. As the vessel moved on among the silent rocky islands, the scene constantly shifting, yet always bearing a stern, solemn, and primitive aspect, it was impossible not to feel that we could not have approached Iona under more favourable circumstances. \* \* \* Iona! There is something magical in the name. Whether its etymology be I-thonna, the Island of the Waves, or I-shonna, the Blessed or Holy Isle, we care not. The combination of letters is most musical, and harmonizes completely with the associations called up by the venerable spot. Some places we admire for their rural or pastoral beauty and simplicity—others for their naked grandeur and sublimity. Iona belongs to neither of these classes; \* \* \* yet undoubtedly in interest it surpasses them all. As the seat of learning and religion when all around was dark and barbarous—as the burial-place of kings, saints, and heroes—solitary and in ruins—inhabited by a few poor and primitive people—and washed by the ever-murmuring Atlantic, Iona possesses most of the elements of romance and moral beauty. Its natural disadvantages would have been counted as attractions by Columba and his pious votaries, when, some twelve centuries ago, they first steered their skiff across the ocean to plant the tree of life and sow the seeds of knowledge on its desert and barbarous shores. The greater the sacrifice, the higher the virtue; and from this solitary spot Columba sent forth disciples to civilize and enlighten other regions, till the fame of Iona and its saints extended over the kingdom, subdued savage ferocity, and made princes bow down before its influence and authority. Here kings and chiefs were proud to send votive altars, crosses, and offerings, and to mingle their dust with its canonized earth—here Christian temples rose in the midst of Pagan gloom—knowledge was disseminated—and Iona shone like the morning star after a long night of darkness! The whole seems like a wild confused dream of romance, as we look on that low, rugged island, with its straggling patches of corn-lands, its miserable huts, and poor inhabitants." Wordsworth has dedicated three memorial sonnets to Iona; and Blackwood's Delta has penned the following lines on this far-famed islet, and its surrounding scenery:—

"How beautiful, beneath the morning-sky,  
The level sea outstretches like a lake  
Serene, when not a zephyr is awake  
To curl the gilded pendant gliding by!  
Within a bow-shot, Druid Icolmkill  
Presents its time-worn ruins, hoar and grey,  
A monument of eld remaining still  
Lonely, when all its brethren are away.  
Dumb things may be our teachers; is it strange  
That aught of death is perishing! Come forth  
Like rainbows, show diversity of change,  
And fade away—Aurora of the North!  
Where altars rose, and choral virgins song,  
And victims bled, the sea-bird rears her young."

Mr. Heneage Jesse thus expresses the emotions he experienced on visiting Iona:—

"Ye who have sail'd among the thousand isles,  
Where proud Iona rears its giant piles,  
Perchance have linger'd at that sacred spot,  
To muse on men and ages half-forgot:  
Though spoil'd by time, their mould'ring walls avow  
A calm that e'en the sceptic might allow;  
Here, where the waves these time-worn caverns beat,  
The early Christian fix'd his rude retreat;  
Here first the symbol of his creed unfurld,  
And spread religion o'er a darken'd world.  
Here, as I kneel beside this moss-grown fane,  
The moon sublimely holds her noiseless reign;  
Through roofless piles the stars serenely gleam,  
And light these arches with their yellow beam;  
While the lone heart, amid the cloister'd gloom,  
Indulges thoughts that soar beyond the tomb.  
All-beauteous night! how lovely is each ray,  
That e'en can add a splendour to decay!  
For lo! where saints have heaved the pious sigh,  
The dusky owl sends forth his fearful cry!  
Here, too, we mark, where yon pale beam is shed,  
The scatter'd relics of the mighty dead;  
The great of old—the meteors of an age—  
The scepter'd monarch, and the mitred sage:  
What are they now?—the victims of decay—  
The very worm hath left its noisome prey;  
And yet, blest shades! if such a night as thine  
Can tempt your spirits from yon isles of bliss,  
Perchance ye now are floating through the air,  
And breathe the stillness which I seem to share."

If any relics of the Culdees exist on the island, they must, to all appearance, be sought only among the oldest of the tomb-stones, defaced, without inscriptions, mere blocks of stone, which cannot now be identified with any age, or twisted into connection with any individuals or events. The ruins of buildings are extensive, but all posterior in date to the invasion of popery. Whatever structures were erected by Columba or his successors, are contended, successfully, we think, by Dr. McCulloch, to have been comparatively rude, and probably composed of wicker-work or timber;\* and even had they been elegant and of solid masonry, must have been destroyed by the frequent devastations of the northern pirates. When Ceallach, the leader of the Romish invaders, took possession in 1203, he could scarcely have failed to appropriate an ecclesiastical edifice, had one existed, or even to have renovated or re-edified any ruins which could have been made available for housing his monks, yet he built a monastery of his own. Even Ceallach's edifice, soon after its erection, was pulled down by a body of Irish, sanctioned by an act of formal condemnation on the part of a synod of their clergy, who still sided with the Culdees, and resisted Romanism. St. Oran's chapel, the oldest existing ruin, is probably the work of the Norwegians, and, were it not confronted with historical proofs which raise very strong doubts of its dating higher than near or toward the year 1300, it might have been esteemed as prior to the 11th century. The building is in the Norman style, rude, only 60 feet by 22, and now unroofed, but otherwise entire. Excepting that the chevron moulding is, in the usual manner, repeated many times on the soffit of the arch, it is quite without ornament; and, even in the poor decorations which it possesses, it displays meanness of style and clumsiness of execution. In the interior, and along the pavement, are some tombs, and many carved stones,—one of the latter ornamented in a very unusual manner, with balls. A tomb pointed out as St. Oran's, but more probably

\* Dr. McCulloch's reasons may be seen in his 'Highlands and Western Isles.' We add to them, in reference to England, the following from Somner's 'Antiquities of Canterbury':—"Indeed it is to be observed, that before the Roman advent, most of our monasteries and church buildings were all of wood.—All the monasteries of my realm," saith King Edgar, in his charter to the abbey of Malmesbury, dated in the year of Christ 974, 'to the sight are nothing but worm-eaten, and rotten timber and boards,'—and that upon the Norman conquest, such timber fabrics grew out of use, and gave place to stone buildings raised upon arches."

belonging to a sea-warrior, and very evidently of a more modern date than the chapel, lies under a canopy of three pointed arches, and possesses more elegance than most of the relics of the island. On the south side of the chapel, and adjacent to it, is an enclosure called *Relig Oran*, 'the hurrying-place of Oran.' This was the grand cemetery of Iona, the cherished and far-famed spot whither, for ages, funeral parties voyaged from a distance to inter the illustrious dead. According to Donald Munro, Dean of the Isles, who visited the place in the 16th century, and to the historian Buchanan, and a thousand other writers who copied the Dean, or copied one another, there stood within this area three tombs, formed like little chapels, bearing on their ends or gables the inscriptions "*Tumulus Regum Scotiæ*," "*Tumulus Regum Hyberniæ*," and "*Tumulus Regum Norwegiæ*," and enclosing the ashes respectively of 48 kings of Scotland, 4 kings of Ireland, and 8 kings of Norway. The tombs, if ever they existed,—and they almost to a certainty never did—have utterly disappeared. King Duncan, says Shakspeare, was

"Carried to Colm's kill,  
The sacred store-house of his predecessors,  
And guardian of their bones."

But though Duncan of Scotland, and also Neill Frassach, the son of Fergal of Ireland, who died in 778, actually were buried here, some of the other kings pleaded for were fabulous, some died prior to the date of Columba's landing on the island, some are known to have been interred at Dunfermline or Arbroath, and the small remainder may or may not, for anything either documents or monuments say on the subject, have been, as Munro says, "eirded in this very fair kirkzaird, weil higgit about with staine and lyme." A lump of red granite is pointed out as the tomb of a French king; but may have been the monumental stone of a person nearly as nameless as itself. Yet the grave-stones of the place are so very numerous, and have collectively so imposing an appearance as to impress a visiter with a much stronger conviction of the former grandeur and reputed sanctity of the island, than is conveyed by the contemplation of its ruined structures. They seem to lie in rows in a north and south direction, but, on the whole, are huddled together in a manner rather confused than orderly or tasteful. While the greater proportion are plain, the rest are, in many instances, finely carved with knots and sculptured imitations of vegetables with figures of recumbent warriors, and with other emblems and devices, and seem to be monumental of the chiefs of the isles, Norwegian sea-kings, influential ecclesiastics, and other persons of considerable station or note. None of the entire collection exhibit certain or intrinsic evidence of high antiquity. Some with Runic sculptures may be as old as the 9th century, the date of the commencement of the Danish invasion, but may, on the other hand, be just as probably more modern. Two, with mutilated Erse or Irish inscriptions—one of them commemorative of a certain Donald Longshanks—appear to be among the most ancient. One commemorates a Macdonald, and another the Angus Og who was with Bruce at Bannockburn. Many statues and monuments, additional to the profuse mass which previously lay exposed, were, in 1830, discovered and laid bare in a search conducted by Mr. Rae Wilson; and they possibly, though not very probably, suggest the concealed existence of a sufficient number of others to verify the assertion of Sacheverel, that, about the year 1600, copies were taken of the inscriptions of 300, and deposited with the family of Argyll.

The chapel of the nunnery—usually the first of the

ruins shown to visiters—seems next in antiquity to the chapel of St. Oran. The nuns to whom it belonged were canonesses of St. Augustine, and were not displaced at the Reformation. Nor, while popish themselves, had they any Culdee predecessors; no monastic establishment for females having existed during the period of Columba's discipline. The building is in good preservation, about 60 feet by 20, its roof anciently vaulted and partly remaining, and its arches round, with plain fluted soffits. As the architecture is purely Norman, without a vestige or a concomitant ornament of the pointed style, it might, if judged simply by its own merits, or apart from the evidence of circumstances, be assigned a higher date than the period of the Romish influence. Though a court is shown, and also some vestiges of what is pronounced to have been a church, the other buildings belonging to the nunnery have so far disappeared that they cannot be intelligibly traced. In the interior of the chapel is the tombstone of the last prioress, with the inscription, in old British characters, round the ledge, "*Hic jacet Domina Anna Donaldi Ferleti filia, quondam prioressa de Iona, quæ obiit anno M. D. XIimo, cujus animam Altissimo commendamus.*" A figure of the lady, in bas relief, in barbarous style, and in the attitude of praying to the Virgin Mary, is supported on each side by the figure of an angel, and has under its feet the address, "*Sancta Maria, ora pro me.*" The Virgin Mary holds the Infant in her arms, and has on her head a mitre, surmounted by a sun and moon. Within the building are many other tombs, one said to be inscribed to Beatrice, daughter of Somerset, and a prioress, but none really known to have inscriptions or carvings.

The chief ruin on the island is that of the Abbey church or cathedral. Originally it seems to have sustained only the former character; but afterwards it became cathedral as well as Abbey church, the bishops of the Isles occasionally adopting Iona as the seat of their residence and the centre of their influence. The building is manifestly of two distinct periods, both difficult or impossible of fixation. That which stretches eastward of the tower is probably of the same date as the chapel of the nunnery; and the other part belongs probably to the 14th century. "At present," says Dr. McCulloch, "its form is that of a cross; the length being about 160 feet, the breadth 24, and the length of the transept 70. That of the choir is about 60 feet. The tower is about 70 feet high, divided into three stories. It is lighted on one side, above, by a plain slab, perforated by quatre-foils, and on the other by a catharine-wheel, or marigold window, with spiral mullions. The tower stands on four cylindrical pillars of a clumsy Norman design, about 10 feet high and 3 in diameter. Similar proportions pervade the other pillars in the church; their capitals being short, and, in some part, sculptured with ill-designed and grotesque figures, still very sharp and well-preserved; among which that of an angel weighing souls (as it is called by Pennant), while the devil depresses one scale with his claw, is always pointed out with great glee. This sculpture, however, represents an angel weighing the good deeds of a man against his evil ones. It is not an uncommon feature in similar buildings, and occurs, among other places, at Montvilliers; where also the devil, who is at the opposite scale, tries to depress it with his fork, as is done elsewhere with his claw. The same allegory is found in detail in the legends; and it may also be seen in some of the works of the Dutch and Flemish painters. The arches are pointed, with a curvature intermediate between those of the first and second styles, or the sharp and the ornamented, the two

most beautiful periods of Gothic architecture; their soffits being fluted with plain and rude moulding. The corded moulding separates the shaft from the capital of the pillars, and is often prolonged through the walls at the same level. The larger windows vary in form, but are everywhere inelegant. There is a second, which is here the clerestory tier; the windows sometimes terminating in a circular arch, at others in trefoil hends; the whole being surmounted by a corbel table." [‘Highlands and Western Isles,’ vol. iv. p. 155. London: 1824.] This church or cathedral was dedicated to the Virgin Mary. The altar-piece, situated at the upper end of the chancel, formed of Iona marble, exhibiting one of the richest specimens of that fossil, 6 feet long and 4 broad, had the doubtful and mischievous fame of affording, by a splinter from it, preservation from shipwreck, fire, murder, and other evils, and, though seen in its last fragments by Pennant, has by piece-meal demolition utterly disappeared. The font and pavement are still entire. On the north side of the site of the altar, is the monument of the abbot Macfingon, or Mackinnon, formed of mica-slate, containing hornblende, standing on four feet, exhibiting a fine recumbent figure of the priest in a high relief with his vestments and crosier, having four lions at the angles, and bearing the inscription: “Hic jacet Johannes Macfingone, Abbas de Ii, qui obiit anno M. D. cujus animo propicietur Altissimus: Amen.” “Here lies John Mackinnon, abbot of Iona, who died A. D. 1500, to whose soul may the Most High be merciful.” Opposite this monument, on the south side of the choir, is another, apparently of an older date, executed in a similar manner with episcopal ornaments, but consisting of freestone, and almost obliterated in its sculpture, commemorative of the abbot Keuneth, who was a Mackenzie or a Seaforth. In front of the site of the altar, and in the middle of the choir, lies a fine monumental stone of basalt, cut in relief into the figure of a man in armour, representative, as is said, of one of the Macleans of Dowart, who were for many ages the lords of Mull, and having a sculptured shell by its side to denote his maritime claims. Adjoining the south wall of the choir, but on the outside, is the tombstone of Lochlan Macfingon, the father of the abbot whose sumptuous monument we have just noticed: it is a plain slab, with the inscription: “Hæc est crux Iacolani M’Fingone et ejus filii Johannis Abbatis de y facta anno Domini MCCCCLXXXIX.” “This is the cross of Lachlan M’Kinnon, and of his son John, abbot of Iona, erected in the year of the Lord 1489.”

Other ruins and relics are either very much dilapidated, or of inconsiderable importance. Various parts of the abbey may be traced; but they are uninteresting and without ornament. Four arches of the cloister are distinct; three walls exist of what was probably the refectory. The remains of the bishop’s house, also, are clearly traceable, but do not deserve notice. Various little clusters of stone and fragments of wall are supposed to have been chapels. Buchanan says that there were on the island several chapels founded by kings of Scotland and chiefs of the Isles; but, as he joins the romancers respecting the tombs of the kings and other subjects, he fails to command unhesitating belief. A causeway called Main-street, ran between the cathedral and the nunnery, and was joined by two others, called Martyr-street and Royal-street, which are said to have communicated with the beach. The remains of the causeway are, in some places, sufficiently perfect; but, in others, they have, like the removeable stones of the buildings, been carried off by the inhabitants for the erection of cottages

and enclosures. A current story says that there were, at one time, 360 crosses on the island, and that, after the Reformation, the synod of Argyle ordered 60 of them to be thrown into the sea. Whatever may have been the real number, traces now exist of only 4. Pennant says that the cross of Campbelltown was one of the Iona crosses; but he is believed to have been mistaken. As to the 296 which remain to be accounted for, and even as to the 60 which are alleged to have been submerged, they very probably had never an existence. Had the synod of Argyle been such zealous exterminators of the relics of exterior Romanism as is pretended, they would most likely have ordered the destruction of *all* the crosses, and might likewise have tried to heat down the cruciform cathedral, and would almost certainly have stripped its interior of some of its unequivocally popish garniture. Of the crosses which remain, one is beautifully carved, this and another are very perfect, a third has been broken off at the height of about 10 feet, and a fourth exhibits only its stump in a little earthen mound. Various fragments, converted into grave-stones, appear, from the devices and inscriptions which they bear, to have certainly been votive. Among the ruins of the abbey were certain black stones, no longer to be found, and fondly believed by many persons to lie concealed somewhere on the island, which are proverbial for the solemnity of oaths sworn upon them, and are spoken of as if they possessed a talismanic power of giving a conscience to an assassin or a traitor. Those who ascribe all knowledge to the Druids, and so regard it as no romance that Iona was once of nearly as great fame with them as afterwards with the Culdees, make small scruple to put foul insult upon both the followers of Columba and those of the Pope, and suppose the stones to have been a relic of Druidical superstition, and the original oath with which they were associated to have been taken on the sacred stone of a temple. If asked authority for their conjecture, they will perhaps find it quite as easily as they can find the stones themselves. Another stone in Iona is romanced to have had such properties, that whatever helmsman stretched his arm three times over it, in the name of the Blessed Trinity, would never err in his steerage. Could this also have been Druidical? Numerous spots on the island, slightly marked in some cases by natural and in others by artificial features, are identified in various ways with Columba, and, for the most part, pointed out, as scenes of prodigies and saintly exploits. Even Columba’s own successors, Cumin and Adamnan, men who wrote within about a century after his death, and were at the head of the Iona establishment at the period of its greatest glory, betrayed, to a very surprising degree, the weakness of magnifying the remarkable events of his life, and even such an ordinary matter as his sowing grain on the island, and seeing it in due season become a crop of barley, into occurrences superhuman, and miraculous. The cowed dotards of Rome who succeeded them belonged to a fraternity who are noted for their covering nearly all the parchment, and even many rescripts of the Middle ages, with dreaming legends of saints, quite as wild as the most absurd romances; and, set down amid such gorgeous materials as those of Iona, with the example before them of the well-meaning but mistaking Culdee biographers of Columba, they could scarcely fail to be carried round in such a whirl of creativeness, as would prevent their getting a steady or correct view of any one matter which they related to visitors or sent down the current of tradition. The destruction or irrecoverable dispersion of an alleged great library of Iona, ascribed to the execution of an act

of the Convention of Estates in 1561, and usually spoken of with mingled lugubriousness and indignation, as if it occasioned the irretrievable loss of valuable books, and was an act more Gothic than any ever perpetrated by Goths, has probably done little else than relieve sober inquirers into facts from a thousand perplexities additional to those of the traditions current on the island, and almost certainly made away with no book worth possessing which was not elsewhere preserved. Population of the island, in 1808, 386; in 1831, 350.

**IRONGRAY.** See **KIRKPATRICK-IRONGRAY.**

**IRVINE (THE)**, a river in Ayrshire, forming, from a short distance beneath its source, to its entrance into the frith of Clyde, the boundary-line between the districts of Cunningham and Kyle. What, in the region earliest drained, bears the name of the Irvine, rises in two head-waters, the one in a moss at Meadow-head, on the eastern boundary of the parish of Loudon or of Ayrshire, and the other a mile eastward in the parish of Avondale in Lanarkshire, near the battle-field of Drumclog. The rills making a junction a mile below their respective sources, the united stream traces the boundary of Ayrshire a mile southward, and then turns westward, enters the interior of the county, and thence, till very near its embouchure, pursues a course which—with the exception of very numerous but brief and beautiful sinuosities—is uniformly due west. About  $2\frac{3}{4}$  miles from the point of its entering the county, it is joined from the north by Glen water. This, in strict propriety, is the parent-stream, on account both of its length of course and its volume of water; for the stream of the Glen rises at Crosshill in Renfrewshire, a mile north of the Ayrshire frontier, and runs 6 miles southward, drinking up five rills in its progress, to the point of confluence with the Irvine. Swollen by this large tributary, the Irvine immediately passes the village of Derval on the right,— $1\frac{3}{4}$  mile onward, the village of Newmills,—at  $2\frac{1}{2}$  miles farther on, the village of Galston, on the left. A mile and a quarter below Galston it receives from the north Polhaith burn;  $\frac{2}{3}$  of a mile lower down, it is joined from the south by Cessnock water; and 3 miles westward in a straight line—though probably double the distance along its channel, the course here being almost emulative of the lesser windings of the Forth—it passes Kilmarnock and Riccarton on opposite sides, and receives on its right bank the tributary of Kilmarnock water. Nearly  $2\frac{3}{4}$  miles onward, measured in a straight line, but 4 miles or upwards along its bed, it is joined on the same bank by Carmel water; and  $2\frac{1}{2}$  miles farther on, it receives still on the same bank, the tribute of the Annack. The river now runs  $1\frac{1}{2}$  mile in a direction west of north, passing through the town of Irvine at about mid-distance; it then suddenly bends round in a fine sweep till it assumes a southerly direction; and opposite the town of Irvine—at 3 furlongs' distance from its channel—when running northward, abruptly expands into a basin  $\frac{3}{4}$  of a mile broad, which receives Garnock river at its north-west extremity, and communicates by a narrow mouth or strait with the frith of Clyde. The parishes which come down on the river's south bank are Galston, Riccarton, and Dundonald; and those which it washes on its north side are Loudon, Kilmarnock, Kilmaurs, Dregghorn, and Irvine. If the heauty of the stream, gliding slowly on its pebbled bed, the richness and verdure of its haughs, the openness of its course, the quality of the adjacent soil, the progress of agriculture along its banks, the array of noblemen's and gentlemen's seats looking down upon its meanderings, the crowded population and the displays of industry and wealth which salute it in its

progress, are taken into view, the Irvine will be pronounced, if not one of the thrillingly attractive rivers of Scotland, at least one of the most pleasing, and one on whose scenery combined patriotism and taste will fix a more satisfied eye than on that of streams which have drawn music from an hundred harps, and poetry from clusters of men gifted with the powers of description and literary painting. The mansions of note situated near the river demand notice in crowds, and must be disposed of in simple enumeration. Loudon-castle and Cessnock-house, both the residence of noble owners, Lanfine, Holms, Kilmarnock-house, Peel-house, Caprington, Fairly-house, Craig-house, Newfield, Auchens, Shewalton, some of them the homes of men distinguished by title or important influence in their country,—these mansions and others, besides many handsome villages, overlook the river. On the banks of its tributaries, too, are similar adornings,—such as Crawfordland and Dean-castle on the Kilmarnock, Rowallan, Kilmaurs, and Bushy castles on the Carmel, and Lainshaw, Annack, Lodge, and Bourtrechill on the Annack.

**IRVINE**, a parish in the south part of the district of Cunningham, Ayrshire. It is bounded on the north-west and north by Kilwinning; on the north-east by Stewarton; on the east and south-east by Dregghorn; on the south by Dundonald; and on the west by Stevenston. On all sides, except the north-east, its boundary is traced by rivers,—on the east and south-east by the Annack,—on the south by the Irvine,—on the south-west by the Garnock,—and on the north-west and north by the Lugton. Its greatest length, from the Garnock on the south-west, to the boundary with Stewarton on the north-east, is about  $4\frac{1}{2}$  miles; and its greatest breadth, between a bend in the Annack on the east and the confluence of the Garnock and the Lugton on the west, is  $3\frac{1}{2}$  miles; but its average breadth is only about 2 miles. A small district on the left bank of the river Irvine, on which stands the large suburb of the hurgh called Halfway, was formerly viewed as belonging to the parish; but in 1824 it was decided by the court-of-session to be comprehended in Dundonald. The south-western division of the parish is low and sandy; but in some parts it consists of a light loam; and—with the exception of a sandy common of about 300 acres north-west of the town—it all produces heavy crops of all sorts of corn and grass. The north-eastern division, especially toward the extremity, is more elevated, though not strictly hilly, and has a soil of stiffish clay. In this district, the hurgh possesses a considerable tract of land which, half-a-century ago, yielded a revenue of about £500 a-year. The face of the country is greatly beautified by circular clumps of plantation on most of the eminences. Most of the farm-houses are large, neat, and indicative, both in their own aspect and in that of the offices and the extensive farms which surround them, of prosperity and opulence. Bourtrechill, on the Annack, about  $1\frac{1}{2}$  mile from the town, is the only gentleman's seat. But the beautiful and finely-wooded policy of EGLINTON CASTLE [which see] stretches far into the interior, and comes down into conterminousness with the townlands of the hurgh. From some of the rising grounds toward the north-east, fascinating views are obtained of the rich carpeting of the lower part of the parish and of adjacent districts on the foreground, and of the brilliant scenery of the frith of Clyde and the far-expanding bay of Ayr in the distance.—Near Bourtrechill, on the Annack, is an old castellated structure, called Stone-castle, belonging to the Earl of Eglinton, which is said to be the remains of an ancient nunnery, where there were a chapel, a cemetery, and a small village. The parish is traversed

for about a mile between the Garnock and the Irvine south-west the parallel of the town by the Glasgow and Ayr railway; and it is cut northward, north-eastward, and eastward, by great lines of road from the town respectively to Kilwinning, Glasgow, and Kilmarnock. Population, in 1801, 4,584; in 1831, 5,200. Houses 673. Assessed property, in 1815, £8,690.—Irvine is the seat of a presbytery in the synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend £280 9s. 3d.; glebe £25. Unappropriated tithes £137 5s. 8d. The parish-church and other places of worship are all situated in the town. The dissenting chapels are United Secession, Relief, and Baptist, one each. There was formerly one belonging to the United Brethren; but though still called 'the Moravian kirk,' it was converted some years ago into a weaver's workshop. There are 9 schools, conducted by 13 teachers, and attended by a maximum of 695 scholars. One of the schools is a classical and English academy, conducted by three teachers, each of whom has £30 salary, besides fees; two are boarding schools, and one is a private classical academy.—The church of Irvine anciently belonged to the monks of Kilwinning, and was served by a vicar. In 1516, the produce, or value of its property, was annually 39 bolls of meal, 9 holls and 2 firlots of bear, "4 huggates of wine," and £17 6s. 8d. for a leased portion of its tithes. Before the Reformation the church had several altars, one of which appears to have been dedicated to St. Peter.—On the bank of the river, near the church, stood a chapel, dedicated to the Virgin Mary; and in 1451, Alicia Campbell, Lady Loudon, granted four tenements in the town, and an annual rent of 5 merks from another tenement, to maintain a chaplain for its altar. To a chapel in the town—but whether this or another does not appear—the provost of the collegiate church of Corstorphine granted, in 1540, extensive possessions within the burgh, such as yield a considerable revenue.—At the south corner of the present church-yard stood a convent of Carmelite or White friars, founded in the 14th century by Fullarton of Fullarton. In 1399, Reynald Fullarton of Crosby and Dreghorn, granted to the friars an annual rent of 6 merks and 10 shillings from his lands. In 1572, the houses and revenues of the friars, with the property of all chapels, altarges, prebends or colleges within the royalty, were granted by James VI. to the burgh, to be applied to a foundation bearing the name of "The king's foundation of the school of Irvine."—The parish was the birth-place of the extinct but remarkable fanatical sect called Buchanites. Its principal tenets were, that there should be a community of goods and bodies, and that true believers had no occasion to die, but might all pass into heaven, as Elijah did, in an embodied state. Its founder was a woman of the name of Simpson, or Mrs. Buchan, who, having been captivated by the preaching of Mr. Whyte, the Relief minister of Irvine, at a sacrament in the vicinity of Glasgow, insinuated herself into favour with himself and some influential members of his congregation, and soon began to draw rivetted and wondering attention in the burgh. She possessed a most persuasive eloquence, and, among her converts, or enthusiastic adherents, numbered a lieutenant of marines, an old lawyer, and Mr. Whyte the minister. But her ravings became so wild as to arouse popular indignation, and draw down upon the place of her nocturnal assemblies, mobbings and assaults which only magisterial interference was able to quell. In May 1784, the magistrates thought it prudent to dismiss her from the town, and, in order to protect her from insult, accompanied her about a mile beyond the royalty; yet they could not prevent

the mob from pushing her into ditches, and otherwise inflicting upon her contempt and maltreatment. She lodged for the night with some of her followers at Kilmarnock; and being joined in the morning by Mr. Whyte and others from Irvine, the whole company, about forty in number, marched onward to Mauchline and Cumnock, and thence to Closeburn in Dumfries-shire, singing as they went, and saying that they were going to the New Jerusalem. But though the hubbub soon burst, it occasioned a great sensation for several years, and even yet is talked of by elderly persons in the districts whence it arose, and on which it fell as a display of human folly, in mixing its own vagaries with the solemn religious truths, surpassingly strange in the airiness of its flight and the insubstantiality of its character.—The Rev. George Hutchison, the author of an Exposition of Job and some of the minor prophets,—the Rev. Mr. Dickson, the author of several well-known works,—and the Rev. Mr. Nisbet, the author of Expositions on Ecclesiastes and the Epistles of Peter,—were all ministers of Irvine. "There were many learned, grave, and pious ministers," says Mr. Warner, in his preface to one of Nisbet's Expositions, "who, in suffering times, being put from their own charges, came and resided in this place, especially during the times of Messrs. Hutchison's and Stirling's ministry here."

IRVINE, a royal burgh and a sea-port, is pleasantly situated on the right bank of the river Irvine,  $\frac{3}{4}$  of a mile east from the basin, but 2 miles from it along the channel of the river, and a mile in a direct line north-east of the nearest point of the frith of Clyde. The town is 11 miles north of Ayr; 25 south-south-west of Glasgow; 34 south of Greenock; 3 south of Kilwinning; 7 south-east of Saltcoats;  $6\frac{1}{2}$  west of Kilmarnock; and 67 distant from Edinburgh. The site of the main body of the town is a rising ground, of a sandy soil, stretching parallel with the river. At a point  $\frac{1}{2}$  of a mile north of Annack water, and the same distance east of Irvine water, is the Townhead or commencement of the Main-street. This thoroughfare stretches from end to end of the town, running about 600 yards in a direction north of west, and then over a further distance of about 500 yards, assuming a more northerly direction. Over its whole length, excepting a small part in the centre mid-distance, it is spacious and airy, and wears an appearance superior to that of the principal street of most Scottish towns of its size. Expanding southward of it, and partly lying between the first 450 yards of it and Irvine river, are the Golf-fields, traced or studded northward on the western side, or the river's bank, by the minister's glebe, the washing-house, the powder-house, chapel wall, or the site of the quondam chapel of St. Mary, and finally, on a swell of the ground, the parish-church. The last of these objects is an oblong edifice 80 feet by 60, built in 1774, surmounted at the north-west end by a very beautiful spire, commodiously fitted up in the interior, and, in all respects, highly creditable to the town. Three hundred yards from the commencement of the Main-street one thoroughfare of very brief length leads off into the Golf-fields, and another 400 yards long, called Cotton-street, leads off in the opposite direction. At the further extremity of the latter street stand the Gas works, and one of the dissenting meeting-houses. Nearly 200 yards down from the debouch of Cotton-street, the Main-street, having already sent off a briefer thoroughfare to the church, sends off one of 220 yards in length to the river; and immediately after it is itself bisected into two thoroughfares by the town-hall and the jail. These buildings are plain and substantial, bearing a marked resemblance

to the town-hall of Anan; and, owing to the spaciousness of the street, do not offer by any means such an obstruction to the carriage-way as their very obtrusive position would seem to threaten. About 80 yards below them, the Main-street reaches what may be esteemed the centre of the town. From this point a street of great burghal importance goes off, over a distance of 200 yards, to a bridge communicating across Irvine river with the suburbs and the harbour; and another little built upon, yet having on its north side near its exit the office of Ayr bank, goes off in an opposite direction, pointing the way to Glasgow, and at a distance of 530 yards passing the Gas works, and receiving at an acute angle the termination of Cotton-street. Three other streets complete the grouping of the burgh,—one nearly parallel with Main-street on its east side, but very partially edified,—another parallel to it on its west side, but compactly edified over only a brief distance,—and a third, going off from it at a point 200 yards below the centre of the town, diverging at an angle of about 45 degrees, and going down over a distance of 220 yards to the Slaughter-house. All the three dissenting places of worship are neat edifices. A little west of the northern termination of Main-street stands the Academy, built in 1814, at a cost of £2,250, both an honour and an ornament to the town. The town has an excellent news-room and subscription library; branch-offices of the Ayr bank, the Ayrshire bank, and the British Linen company's bank; and several mills whose appearance and machinery surpass those of any others in the county. The bridge which connects the town with its suburbs was built in 1826, and is the most spacious and handsome in Ayrshire. These suburbs consist chiefly of two streets, straight and uniformly edified,—the one, called Halfway, leading right across the isthmus, formed by the elongated horse-shoe bend of the river, to the harbour of the town,—and the other, called Fullarton, running up at a right angle from the bridge, or parallel with the river, and pointing the way to Ayr. These suburbs, though not within the royalty, are comprehended within the parliamentary boundaries; and they were recently erected into a *quoad sacra* parish, and have a neat new church, with between 800 and 1,000 sittings. On a line with the west end of Halfway, where the river, just before expanding into its basin or estuary, suddenly bends from a southerly to a westerly course, is the pier or harbour,—lined, for about 220 yards, with buildings, and sending out a pierhead upwards of 500 yards into the basin. North of the west end of Halfway is a building-yard, where ship-architecture is conducted to a noticeable extent.

The burgh commissioners report very laconically respecting Irvine:—"It has no trade excepting that of coal, which is not increasing. There are many respectable inhabitants in the town, and some villas round it." Yet, so far back as the year 1790, the port had, in strict connection with the town, 51 vessels, aggregately of 3,682 tons, and navigated by 305 sailors, besides other vessels nominally belonging to it, but properly connected with Saltcoats and Largs. In 1837, the vessels had increased in number to 106, aggregately of 11,535 tons. So prosperous, too, have recently been the affairs of the harbour, that though the trustees were empowered to levy additional rates from vessels, and a pontage from vehicles to compensate the costs of repairing the harbour and rebuilding the bridge, they had no need to use their new powers as regarded the harbour, but found the old rates sufficient to defray all expenses. Irvine being the nearest port to Kilmarnock, has shared the results of that town's increase in manufacturing pro-

ductiveness and importance. Besides shipping vast quantities of coals both coastwise and for Ireland, the town, with its dependencies, exports very largely carpeting, tanned leather, rye-grass seed, and tree plants, and also, on a smaller scale, cotton yarn, cotton cloth, herrings, sheep-skins tawed, and other articles; and it imports from Ireland oats, butter, orchard produce, feathers, untanned hides, linen cloth, quilts, limestone, and other articles, and from America timber, staves, and spars, as well as exports to the latter market carpeting, woollen cloth, and articles of leather manufacture. The harbour has a regular custom-house establishment. Across the mouth of the basin—as at the mouth of the river Ayr—is a bar which long very seriously impeded navigation, and which even yet prevents the entrance of vessels of any considerable burden. The depth of water from the quay to the har is generally from 9 to 11 feet at spring tides; and in high storms, with the wind from the south or south-west, it is sometimes 16 feet. Vessels of larger size than 80 or 100 tons are obliged to take in or deliver part of their cargoes on the outer side of the bar. The dues levied at the port during the 5 years preceding 1832, averaged about £450 a-year. The want of a separate police for the harbour is frequently felt as a great inconvenience.

The manufactures of the town are far from being either on the decline or unworthy of notice. About the year 1790, hand-sewing was introduced by a Glasgow manufacturing house, and, at the end of 3 years, employed only about 70 young women; but it has so greatly increased, that of late years one agent alone has repeatedly paid away £8,000 in wages. The weaving of book-muslins, jaconets, and checks, employs many individuals. In 1838, the number of hand-loomers alone was 580. The earnings by hand-sewing vary with the fashion of the goods, from 6d. to 1s. 3d. per day. The average clear wages for weaving is 7s. per week. The best paid work in Irvine is book-muslins; 4 ells of a certain fineness of which, paid at 6½d. per ell, may be worked per day of 14 hours. The weavers of the town, as to their average condition, are on a par with shoemakers and labourers. Many persons are employed in carting coals from the collieries to the harbour; and most of the population of Halfway and Fullarton—amounting, in 1836, to 2,571—are connected with the port either as seamen, as ship-carpenters, or in other capacities. In consequence of a fall in the prices procured for coals in Ireland, a reduction of about 7s. 6d. per month was made, not long ago, on the wages of the seamen. The town has manufactories in rope-making, tanning and dressing leather, constructing anchors and cables, distilling whisky, making magnesia, and fabricating various articles of artisanship.

The affairs of the burgh are managed by a provost, 2 bailies, a dean-of-guild, a treasurer, and 12 councillors. Municipal constituency in 1840, 178. The corporation-property is considerable—including among other items, 422 acres of arable land, the town's mills, the town-house, with its shops, the public meal-market, shambles and washing-houses—and yielded, in 1832, with town's customs and market-dues, a revenue of £1,497 19s. 7d. The ordinary expenditure is, in general, so much less than the amount of revenue, as to admit of extensive repairs upon the burgh-property, and occasionally of the purchase of additions to the common good. The jurisdiction of the magistrates does not extend to the suburbs; and their patronage is limited to the election of their officers, who draw salaries to the aggregate amount of £115 14s. a-year. The burgh court is the only one in which they preside; but, no sheriff court being held in the town, it has very im-

portant jurisdiction. Affairs of police are managed by the magistrates, and maintained at the cost of the burgh fund. The jail is in use, not only for Irvine itself, and for the populous towns of Saltcoats, Ardrossan, Largs, and the adjacent country, but for the large manufacturing town of Kilmarnock,—in fact, for nearly all the district of Cunningham; and it is extremely inconvenient and inconvenient. Though Irvine has both burgesses and guild-brethren, the magistrates are not rigid in compelling strangers to enter, and usually allow them to become domesticated before they demand entry dues. In 1832, there were 225 guild-brethren, and 72 burgesses. There are 6 incorporated trades,—shoemakers, coopers, tailors, weavers, hammermen, and squareren; but they have acknowledged the inutility of their privileges, or demonstrated their impolicy and injurious consequences, more than kindred bodies in most of the towns of Scotland.—Fullarton, or about one-third of the suburban appendage of Irvine, is a burgh-of-barony, and claims a separate jurisdiction of its own, but has no resident magistrate. As the burghal authorities have no power to impose any police-assessment, it is neither lighted, watched, nor cleaned like the rest of the town; and lying in a direct line between the burgh and the harbour, it becomes an easy retreat to delinquents for evading the pursuit or awards of justice.—Irvine unites with Ayr, Rothsay, Inverary, and Campbelltown in returning a member to parliament. Constituency, in 1840, 244. The town has weekly markets on Tuesday and Friday, and annual fairs in January, May, and August. Population, in 1831, 7,034. Of these, 4,518 were within the old royalty, and 2,516 were in Fullarton and Halfway.

Irvine is a very ancient royal burgh. A charter of the supposed date of 1308 is still extant, granted by King Robert Bruce in consequence of the services of the inhabitants in the wars of the succession. Twelve renewals and confirmations of their rights by successive monarchs, evince the importance which the burgh continued to maintain down to 1641, when all their immunities were formally ratified by parliament. From a charter granted by Robert II., it appears to have once had jurisdiction over the whole of Cunningham; but it could not long maintain its ascendancy against encroachments on the part of neighbouring barons. Its armorial bearings are a lion rampant-guardant, having a sword in one of his forepaws, and a sceptre in the other, with the motto, "Tandem bona causa triumphat;" and these are sculptured over the entry to the council-chamber in the town-hall.—In August, 1839, Irvine became temporarily crowded with an influx of strangers, pouring in from sea and highway to witness the fooleries of the Eglington tournament.—The town is distinguished as the birth-place of James Montgomery, the poet, and Galt, the novelist. Montgomery's father long officiated as minister in the little chapel, still known as 'the Moravian kirk;' and the poet was born in a house near it, on the north side of the entrance to an alley, called Braid close. Galt's natal spot was a neat two-story house, on the south side of the Main-street, near its northern termination. Burns' name, too—how different in its moral associations from the odoriferous one of Montgomery!—is connected in a degree with the town; for here—though in what precise locality is disputed—the bard tried to establish himself as a flax-dresser, and suffered a severe reverse in the burning of his shop.—Irvine, at one time, gave the title of Viscount, in the Scottish peerage, to an English family who had no property in its vicinity. The first Viscount Irvine, was Henry, the eldest

surviving son of Sir Arthur Ingram of Temple Newsom, near Leeds, and received the title in 1661. Charles, the 9th and last Viscount, died in 1778.

IRVING, an ancient parish, now comprehended in the parish of Kirkpatrick-Fleming, in Dumfriesshire. It takes its name from a very ancient and respectable family which, in former times, enjoyed large possessions in this part of the country. See KIRKPATRICK-FLEMING.

ISAY, a small island of the Hebrides, in West Loch Tarbert.

ISHOL, a small island of Argyle-shire, in Loch Linnhe.

ISHOL, an island on the south-west coast of Islay. ISLA (THE), a river of Forfarshire and Perthshire, giving the name of Glenisla to a district and parish in the former. It rises among the highest summit-range of the Forfarshire Grampians, near the point where that county and the shires of Perth and Aberdeen meet. Combining,  $2\frac{1}{4}$  miles due east from that point, two head-waters, each of which had flowed 2 miles, it flows due south to the base of Mount Blair, over a distance of  $7\frac{1}{4}$  miles, receiving numerous mountain-torrents in its progress,—the chief of which are the Brighty, the Cally, and the Fergus, giving their names to the glens which they traverse. Driven off the straight line by Mount Blair, the stream runs first  $2\frac{1}{2}$  miles south-eastward, and next 1 mile eastward to the church of Glenisla, and then  $2\frac{1}{4}$  miles south-eastward to Nied, on the boundary between Glenisla and Lintathen. It now, for 3 miles southward, and westward traces that boundary, receives on its right bank a tributary of 4 miles length of course, and, for  $3\frac{1}{2}$  miles eastward divides Lintathen on the north from Alyth on the south. At this point it is joined by a small tributary which had run nearly parallel to it from the west, and, on the opposite bank by the large tributary of Back water,—for a notice of which see LINTATHEN. Flowing  $1\frac{1}{2}$  mile due south between the parishes of Airly and Alyth respectively in Forfarshire and Perthshire, it touches the parish of Ruthven, flows round it  $1\frac{3}{4}$  mile south-westward and south-eastward, dividing it from Alyth, and receiving from the west the tribute of Alyth burn, and then bisects Ruthven  $1\frac{1}{2}$  mile south-eastward, and, after a farther course of  $1\frac{1}{4}$  mile south-westward between Airly and Alyth, takes leave of Forfarshire. At the point of entering Perthshire it is swelled by the confluence with it from the east of Dean water, and 3 miles lower down in a straight line, though about double that distance along its channel, it is greatly increased in volume by Erich river coming in upon it from the north-west. Its course in Perthshire abounds in sinuosities, but uniformly maintains a general south-westerly direction, and extends  $8\frac{3}{4}$  miles geographically, and about 16 or 17 miles along its windings. The parishes here upon its left bank, are Meigle, Cupar-Angus, and Cargill; and those upon its right bank are Alyth, Bendochy, Blairgowrie, and Caputh. The Isla disembogues itself into the Tay nearly opposite Kinclavin, and greatly increases the body of its water. In the upper part of its course it flows along a rocky bed, between bold and steep banks, covered in many places with natural woods, and affording some very romantic scenery. Below the narrow vale of Glenisla, it forms a cascade, called the Reeky linn, a fall of 70 or 80 feet in depth, over several ridges of broken rock. After passing the linn, it forms a pool called the Corral, probably a corruption of Quarry-hole, there appearing to have been at some remote period a quarry on its east side. This pool is deep and broad, but becomes more shallow toward the south, and ends in a broad ford which is famous in the an-

nals of "black fishing." On leaving the ford, the river forks into two branches, forming an islet, called Stanner Island, containing about 6 acres; and afterwards—now careering in rapid currents, and now gently moving in slow meanderings—it flows generally through level and fertile fields till its confluence with the Tay. In winter, the low grounds and rich baughs on its banks, are greatly injured by its shifting its course, carrying away alluvial soil, and making deposits of barren sand and gravel. The river is well-stocked with trout and salmon, and in the months of October and November, when the salmon are "black," or foul, is the scene of many exploits of "black fishing." The black fishers wield spears composed of 5 barbed prongs, fixed upon a strong shaft, sally forth under night, and wade up and down the shallows, preceded by a flambeau, consisting of dried broom, or fir-tops fastened round a pole. By this light, the fish are soon discovered, and, being at the time semi-torpid, are easily transfixed. Both from the unwholesomeness of the condition of the food obtained, and from extreme exposure to cold and damp in procuring it, the practice of black fishing is highly injurious to health; and it often entails upon its perpetrators, in the diseases which it originates, and in the drunkenness and debauch with which it is frequently associated, very ample punishment for their poaching delinquencies. The Isla's whole length of course is about 41 miles.

ISLA (THE), is also the name of a river in Banffshire. See GRANGE.

ISLAY, or ILAY, one of the Hebrides, lying to the west of the peninsula of Kintyre, and belonging to the county of Argyle. It is 25 miles long from north to south; and 20 broad from east to west; and contains about 154,000 acres, of which 22,000 are arable. On the east side the surface is hilly, and in some places wooded to the water's edge; the mountains here attain an elevation of 1,500 feet; but the greater part of the island is flat, and, where uncultivated, covered with a fine green sward. The coast is, in general, bounded by low rocks, or by flat shores and sandy bays. There are some remarkable caves on the north-west side, about Saneg; and at the Mull of Oe, the eastern horn of Lochindaal, the cliffs rise to a great height. At Lochindaal is a harbour for ships of considerable burden, with a quay at the village of Bowmore: see articles BOWMORE and LOCHINDAAL. PORTNAHAVEN [which see] is a good fishing-village, on the point of Islay nearest to Ireland,—the distance being about 7 leagues: see that article. PORT-CHARLOTTE [which see] is a thriving village of 400 inhabitants. At the north-east extremity is PORT-ASKAIG [which see] whence there is a good road to the village of Bridge-end, at the head of Lochindaal on the south-west. From Bridge-end a good road of 14½ miles in length, conducts to Portnahaven. LOCH GRUINART [which see], a prolonged but shallow indentation on the north-west, appears to have been formerly connected with Lochindaal. The land is still encroaching on this loch, and a considerable extent of ground has been reclaimed here by an embankment. There are several small lakes in the island, which is also well-watered by numerous small streams, the principal of which are the Sorn and the Laggan, abounding with trout and salmon. Near the centre of the island is Loch-Finlaggan, about 3 miles in circuit, with an islet of the same name in the middle. Here the Macdonalds, Lords of the Isles, resided in all the pomp of royalty, and the picturesque ruins of their castle still exist here. Near the island of Finlaggan is another little isle, called *Eilan-na-cortle*, or 'the Island of council,' where a body of judges constantly sat to decide differences between the subjects of the Macdonalds,

and received for their trouble the eleventh part of the value of the contested affair. In the first island were buried the wives and children of the lords of the isles, but their own persons were deposited in the more sacred ground of Iona. Besides the castle on this island, these powerful lords had a castle on an island in Loch-Guirm to the west of Lochindaal; and another on Freuch isle in the sound. There are also numerous vestiges of duns or Danish forts, and the ruins of several chapels, scattered over the island. After their expulsion from the isle of Man, in 1304, the Lords of the Isles made this island their chief place of residence. There is a tradition, that even while the isle of Man was part of their domain, the rents and feus were paid to the Lords of the Isles in Islay; and this tradition is rendered probable from the names of two rocks which lie opposite to each other, at the bottom of a harbour on the south side of the island: one rock is still called *Craig-a-neone*, or 'the Rock of the silver rent;' the other, *Craig-a-nairgid*, 'the Rock of the rent in kind.' The names of Macdonald and Maclean are still the most common in this island.

The island of Islay is divided into the parishes of KILCHOMAN, KILARROW or BOWMORE, KILMENEY, and KILDALTON: see these articles. In Islay agricultural improvements have proceeded with astonishing rapidity; the land has been enclosed and drained, a great many roads made and bridges built, and a new system of husbandry adopted. It now produces good crops of barley, oats, peas, flax, some wheat, and excellent crops of potatoes. The shores afford abundance of wreck-ware and shell-sand for manure. Formerly, during winter, the cattle were almost starved; now hay is produced in great abundance, and turnips and other green crops cultivated to a considerable extent, sufficient to support the stock in winter: see article HEBRIDES. A few years ago there were no fewer than fourteen distilleries on this island. The whisky is considered of very superior quality, and is mostly sent to Glasgow. The spinning of yarn was at one period extensively conducted here, and formed a staple of Islay, no less than £10,000 worth has been exported in a year; but this trade has been annihilated by the Glasgow manufactories, and spinning is now limited in Islay to domestic consumption. But the great staple article of exportation is black cattle, of which nearly 3,000 head are sold yearly. The climate is moist; but, upon the whole, it is tolerably healthy, and there are many instances of longevity. The quadrupeds enumerated by Mr. Pennant, besides the domestic animals, are weasels, otters, and hares,—the latter dark-coloured, small, and bad runners. The birds are eagles, peregrine-falcons, moor-fowl, ptarmigans, red-breasted gooseanders, wild geese and ducks, herons, &c. The fish are cod, herrings, plaice, smeadab, large dabs, mullets, ballens, lumpfish, &c. Islay abounds with mines of lead and copper, which are very rich and have been long wrought. There are also vast quantities of that ore of iron called bog-ore, of the concrete kind; and below it, large strata of vitriolic mundic. Near the veins of lead are found specimens of barytes and excellent emery. A small quantity of quicksilver has been obtained in the moors, and it is probable that a careful search would discover more of that valuable mineral. Limestone and marl are abundant.—The inhabitants of Islay are remarkable for their honesty and humanity. Gaelic is the general language of the common people; yet English is well-understood, and taught in all the schools.

History affords few records of the ancient state and of the revolutions of Islay. Before it became the seat of government for the Lords of the Isles, it

appears to have been under the dominion of the Danes and Norwegians, as there are many duns and castles, evidently of Danish origin, besides, many places which have Danish names; as Kennihus, Assibus, Torrisdale, Torriholse, and the like. It continued under the Lords of the Isles till the reign of James III.; and, when their powers were abolished, their descendants, the Macdonalds, were proprietors holding directly of the Crown: see article **HEBRIDES**. James VI. resumed the grant to the Macdonalds made by his predecessors, and transferred the lands of Islay, Jura, Scarha, and Muckkairn, in Argyleshire, to Sir John Campbell of Calder—then a great favourite at court—for an annual feuduty, of which the proportion was £500 sterling for Islay. Calder sold all these lands again to Campbhall of Shawfield for £12,000, which is now little more than the income from them. The islands of Jura and Scarba were afterwards sold for a larger sum than that paid originally for the whole. Islay still continues in the same family. Islay contained, in 1801, 6,821; in 1821, 11,008; and in 1831, 14,982. There is a post four times, and steam-conveyance twice a-week to Islay. The passage from Tarbert to Port-Askaig is usually made in four hours.

**ISLAY SOUND**, the narrow channel betwixt Islay and Jura. It is little more than a mile in width, but its navigation is very dangerous from the rapidity of its tides and the cross and short seas which occur here. The shores are abrupt but not high, rarely exceeding 100 feet.

**ISLE-MARTIN**, a fishing-station in Loch-Broom, on the west coast of Ross-shire, 5 miles north of Ullapool.

**ISLE-TANERA**, a fishing-station and village in Ross-shire, 3 miles north of Isle-Martin.

**ISLE OF WHITHORN**, a village and small seaport in the parish of Whithorn, on the east coast of Wigtonshire; 2 miles north of the promontory of Burgh-head, and 3 miles south-east of the burgh of Whithorn. It stands at the head of a small bay, which is almost land-locked by an islet  $\frac{1}{2}$  a mile long, and  $\frac{1}{4}$  of a mile broad, lying across its mouth. The harbour is, in consequence, well-sheltered and safe, and possesses internal capaciousness and external advantages of position which might apparently be turned to patriotic and lucrative account. A pier, erected about half-a-century ago by the aid of the Convention of Royal Burghs, offers accommodation to the few vessels which the unimportant commerce of the district keeps employed. The Galloway steamer occasionally touches here on her way to and from Liverpool; and small vessels sail weekly hence to Whitehaven, and other English ports, engaged principally in the importation of coals. The little port communicates by good public roads with Whithorn, Wigton, and Garieston. On the shore at the village are vestiges of an ancient chapel or church of small size, which the learned author of Caledonia says is traditionally reported to have been the earliest place of Christian worship in Scotland. Near the village is a weak chalybeate spring, whose waters are sufficiently celebrated to draw to the place invalid visitors. Population, in 1840, about 420.

**ISSURT**, a small island of the Hebrides, near Harris.

**ITHAN**. See **YTHAN**.

## J

**JAMES'S (St.)**, an ancient parish now included in the parish of Kelso. It lies between the rivers Teviot and Tweed. The church was situate near to Roxburgh castle, and on the very spot where the greatest fair in this country, as well as one of the most ancient, called St. James's fair, is now holden on the 5th of August. This church was dedicated in the year 1134. No part of it now remains above ground, but the place where it stood is perfectly visible. The Duke of Roxburgh employed labourers to trace the foundation. While prosecuting their researches they dug up a tomb-stone which, besides some elegant sculpture, had the following inscription in Saxon characters: "Hic jacet Johanna Bullock. quæ obiit anno 1371. Orate pro anima ejus." Historians mention a William Bullock, a favourite with Edward Baliol, and generally styled 'the King's beloved Clerk.' As this name is seldom found in Scotland, it is probable that Johanna Bullock was his daughter, or a near relation, especially as he frequently resided at Roxburgh castle. There was also discovered a considerable quantity of wheat and barley in a charred state, scattered on a tiled pavement, as also several pieces of glass and brick, which showed obvious marks of fire. All these circumstances render it probable that this church was burnt down in some of the Border wars. At a short distance stood a convent of mendicants of the order of St. Francis, on the north bank of the Teviot, a little above its confluence with the Tweed. Within these fifty years a fine arch of their church remained, and other parts of the building, which are now wholly obliterated. This monastery was consecrated by William, Bishop of Glasgow, in 1235. Adam Blunt was superior in 1296: See **KELSO**.

**JAMESTOWN**, a small village pleasantly situated on Meggot water, in the northern part of the parish of Westerkirk, about 9 miles north-west of the town of Langholm, in Dumfries-shire. It was built about the year 1790, to accommodate 40 miners and their families, in consequence of the discovery of a mine of antimony a little to the eastward of its site. This mine, the only one of its class in Britain, produced, from 1793 to 1798, 100 tons of regulus of antimony, valued aggregately at £8,400 sterling, besides a proportionate quantity of sulphurated antimony of less value. A company, one-half of whose shares was retained by Sir James Johnstone of Glendinning, the proprietor of the soil, made very spirited exertions at the commencement of their enterprise. The village was provided with grazing-grounds, a store, and other appliances of convenience and comfort; the miners were expected to work only 6 hours a day, and were provided with a library for their own use, and a school-house for their children; a smelting-house and all requisite apparatus was furnished at the mine; and an excellent road, with 4 bridges in its course, was constructed down the vale of the Meggot to connect the village with the main lines of communication through the country. Yet, from some cause which seems not well-explained, mining operations were suspended about the close of the century, and have not since been resumed. The village, half-abandoned to solitude, still has a school-master during winter to attend to the children of its sequestered population.

**JANETOWN**, a thriving village in the parish of

Lochcarron in Ross-shire, containing a population of about 500. The great parliamentary road from Dingwall to the western coast passes through this village, from which a district road extends about 15 miles to the village and loch of Shildaig.

**JED (THE)**, a beautiful and picturesque river of Roxburghshire. It rises on the south-west side of Curlin-Tooth, one of the Cheviot mountains, in the upper part of the parish of Southdean, at a spot  $1\frac{3}{4}$  mile south of the summit of Peel-fell or the boundary-line with England; and to Chester-church, or the parish-church of Southdean, a distance of 5 miles, it pursues a southerly direction, and receives in its progress the waters of Black-hurn and Carter-hurn. Debouching at Chester-church, it flows  $2\frac{3}{4}$  miles eastward, and then resumes its southward course. Over the last mile, and likewise over  $1\frac{1}{2}$  mile further, it divides Southdean on its left bank from the upper part of Jedburgh on its right. It now runs across a small wing of the latter, and then flowing  $2\frac{1}{2}$  miles south-westward to Groundiesnook, it washes Upper Jedburgh and Southdean on its left bank, and Oxnam and Lower Jedburgh on its right. At Groundiesnook it enters the lower division of Jedburgh, and thence to the Teviot a little below Boonjedward, bisects it lengthwise from south to north through the middle, cutting it into two not very unequal parts, and flowing joyously past the town of Jedburgh. Its entire length of course, exclusive of its numerous little sinuosities, is about 17 miles. Its tributaries, though numerous, are all tiny. The beauties of the Jed fired the poetic musings of Thomson and Burns, and fix the attention of every person of taste who travels up its romantic vale, on the road from Edinburgh to Newcastle, over Carter-fell. To a tourist approaching from the south, who, after being chilled with narrow and pent-up views of heathy and rocky desolation, over a weary and slow ascent of 23 miles, attains the summit of the Fell, and suddenly discries Scotland, the landscape which stretches away from beneath his eye is gorgeous in the tints of heauty beyond the power of a literary painter to depict; and contributions to its detailed attractions and its general effect are made in no niggard style by the mazy and tufted vale of the Jed. When the vale is entered and followed in its windings, it is too narrow, indeed, to exhibit anywhere the brilliance of the Teviot or the magnificence of the Tweed, but it surprises and delights by its constantly changeful and very various displays of attractiveness. At almost every one of its continual turnings, a tourist sees novelty of feature, or new and thrilling combinations of features already exhibited; and within the brief distance of 2 or 3 miles—especially in the parts immediately above the town of Jedburgh—he will survey, though on a small scale, more of the elements of landscape than during a whole day's ride even in the Highlands. The rocky character of the river's bed, the trotting briskness of its current, the crystal pureness of its waters, and, above all, the endless combinations of slope and precipice, of scaur and grassy knoll and mimic haugh, with shrubs and tuftings of oak and heech and weeping hirsch on its richly sylvan banks, produce many a scene of picturesqueness and romance. To its other attractions it adds that of being an excellent trouting-stream.

JEDBURGH, a parish in the southern division of Roxburghshire. It consists of two detached parts, lying a mile asunder, and both stretching lengthwise from south to north. The southern division, though the smaller, is the original Jedburgh; and it is bounded on the north-east and east by Oxnam; on the south by Northumberland; and on the west by Southdean. Its form is nearly a circle of  $3\frac{1}{2}$  miles in diameter, with a projection northward of irregular outline,  $2\frac{1}{2}$  miles long, and about  $\frac{3}{4}$  of a mile in average breadth. Its surface rapidly descends from the summit range or water-shedding line of the Cheviots on its southern boundary to an undulating plain, shooting up occasionally in beautiful, and in some instances high, green conical hills, and ploughed toward the north by the narrow vale of the Jed. The northern and larger division has the outline of an irregular pentagon, with a small oblong figure projecting at a wide angle and from a brief line of attachment on the east; and it is bounded on the north by Ancrum and Crailing; on the north-east by Eckford; on the east by Hounam and Oxnam; on the south by Southdean; and on the west by Bedrule. In extreme length, from north to south, it measures  $6\frac{1}{2}$  miles, and, in average length, about  $5\frac{1}{4}$ ; and, in extreme breadth, exclusive of the eastward projection, it measures  $5\frac{1}{4}$  miles, and in average breadth  $4\frac{1}{4}$ . The projecting part stretches north-west and south-east, and measures  $2\frac{3}{4}$  miles by  $1\frac{1}{2}$ . From the deep, and, in some places, furrow-like vale of the Jed, the surface rises undulating on both sides, in an enchanting variety of form, to the height of about 300 feet above the level of the stream, cut by numerous ravines, and exceedingly varied in the outline of its knolls and hillocks. But on its west side, first along the boundary from the southern end onward, and next in the interior, it rises into the regularly ascending and elongated Dunian, and at the site and in the vicinity of the town sends off the roots of that lofty hill almost from the very edge of the Jed, leaving hardly sufficient space for a convenient street arrangement of the burgh: See the article DUNIAN. Behind the northern part of the hill, or along the southern frontier, the surface is a level and luxuriant laugh, watered by the Teviot, which here forms, for  $3\frac{1}{2}$  miles, the boundary-line, and spreads freely around it the wealth and the mirthfulness of soil and landscape which distinguish the lower and longer part of its course. On the east Oxnam-water, flowing northward to the Teviot, forms for a mile the boundary-line, and, for another mile, runs across the connecting part or neck of the projecting district.—The whole extent of the parish, in both of its sections, and also a large portion of the conterminous country, was anciently wooded with what is known in history as Jed forest. About 100 years ago a large expanse of the forest continued to spread its umbrageous carpeting upon the soil; but during the course of last century it was almost all peddlingly and remorselessly cut down. A few patches of it, consisting principally of birch trees, still exist at Fernihirst, in the vale of the Jed, near the southern extremity of the northern division; and two venerable representatives of it, called 'the King of the wood,' and, 'the Capon-tree,' arrest attention lower down the vale, about a mile from the burgh. One of the trees—the monarch one—has a retinue of younger and less noble trees, and rises to the height of about 100 feet, with a girth near the ground of 14 feet; and the other stands solitarily in a haugh, abounds in the number, fantastic twistings, and far-stretching length of its boughs, and has a girth near the ground of 21 feet. But though the old forest has so generally fallen before the axe, trees which have sprung up from its old stocks, and others which

have been raised by planting, are sufficiently numerous to give the parish a sheltered and ornate appearance.—Iron ore, 3 feet thick in stratum, occurs near the town. White and red sandstone, of excellent quality, abounds, and is wrought in several quarries. Limestone of excellent quality is abundant at Carterfell, on the boundary with England, and occurs at Hunthill 2 miles south-east of the burgh; but, owing to the dearth of fuel, it has not, for some time, been worked. Coal seems in one or two localities to be indicated, and even appears to have been at one time found on the Hunthill property; but it has more than once, in recent times, eluded expensive and laborious search. Two chalybeate springs well up near Jedburgh, and others seem to exist in other localities. One of the former, called Tudhope well, has been successfully tried for scorbutic and rheumatic disorders. Cultivation has been rapidly and remarkably extended, and has achieved results which everywhere impose on the district a rich and smiling aspect. Fifty years ago not more than a fifth or a sixth part of the area was arable ground, while all the rest was pastoral; but now the proportion of lands in tillage, in pasture, and under wood, is nearly in the proportion respectively of 29, 15, and 5. The farm buildings are neat, and, in some instances, almost elegant; the enclosures are tasteful and sheltering; the sides of the Dunian and of other lofty hills are frilled and beautified with enclosure and culture a considerable way up their ascent; and almost all the land which modern methods of improvement could reclaim have been subjected to the plough. The soil, over so extensive and diversified a district, is necessarily various; it is, in some places, a toughish clay,—in others, a mixture of clay with sand or gravel,—and in the lower parts of the vale of the Jed, as well as in the valley of the Teviot, a rich and fertile loam. The prevailing husbandry is a course of two white and three green crops. The higher parts of the Dunian, and especially the uplands along the boundary with England, are the sheep-walk of the famed Cheviot breed,—hrowing here, as in coterminous districts, on their proper or original grounds. The climate of some parts of the parish, especially in the vale of the Jed, at the part where the town stands, is famed for its salubrity. Environed with the high banks of the Jed on the south and east, and with the gigantic bulwark of the Dunian on the west, the town has often a mildness of temperature when the air, at a mile or two's distance, is sharp and cold; and it suffers little from epidemics compared with the neighbouring towns of Kelso and Hawick, and was a stranger to cholera at the period of their bleeding beneath its scourge. Instances of longevity are so frequent that the minister who lived at the date of Sir John Sinclair's Statistical Account, reported "many" to have lived to upwards of 90 years of age during the period of his incumbency. The mansions of the parish are, in the vale of the Jed, Edgerston, Mossburnford, Langlee, Hundalee, Stewartfield, and Boonjedward, and, in other localities, Hunthill, Lintalee, and Glenburnball. There are six corn-mills on the Jed water, two of them at the burgh. Besides the town of Jedburgh and the village of LANTON [which see], there are two hamlets,—Bonjedward, at the intersection of the Newcastle and Edinburgh, and the Berwick and Carlisle roads, 2 miles below Jedburgh,—and Ulsten,  $1\frac{1}{4}$  mile south-east of the former, and  $1\frac{1}{2}$  mile north-east of Jedburgh. The Berwick and Carlisle road runs along the southern part of the parish, in the vale of the Teviot, at a brief distance from the river. The Edinburgh and Newcastle road, for a mile after entering on the north, is identical with the former, as it has to debouch round the north

end of the Dunian; and afterwards, from Bonjedward onward, it runs up the vale of the Jed till within 2½ miles of England, where the vale diverges westward, and leaves the road to climb its unassisted way up the acclivity of the Cheviots. On account of the height of the ascent here, this line of road has hitherto been greatly less frequented than the Coldstream and Berwick lines; but being the shortest, and having recently been much improved, it must soon draw more favour. Nothing but the height and the broad base of the obstructing Cheviots could have permitted a doubt as to the line of this road being incomparably the best for a railway between Edinburgh and Newcastle. Jedburgh claims, either as natives or as residents, a considerable number of eminent men. Various distinguished persons were connected, in ancient times, with its ecclesiastical establishments. Dr. Macknight, the well-known critical commentator, and Dr. Somerville, the historian of Queen Anne, were incumbents in modern times,—the former during 3 years, and the latter during a period of 57 years, from 1773, furnishing, in his own person, an example of the longevity instances of which he had reported in the Statistical Account. John Rutherford, principal of St. Salvator's college, St. Andrews,—Andrew Young, regent of philosophy in the University of Edinburgh,—John Ainslie, the eminent land-surveyor,—and Sir David Brewster, the distinguished living philosopher, are all claimed by the parish as natives. Samuel Rutherford, the pious and eminent principal of St. Mary's college, St. Andrews, and Thomson the poet, whose father was minister of the contemurous parish of Southdean, are believed to have been educated at the grammar-school of the town.

The civil history and the antiquities of this parish are interesting. The name of the river whence the district has its designation, having been anciently written God and Gad, a conjecture is generally entertained that the ancient town, if one existed, was the capital, or that at least the district was the principal seat of the Gadeni, a British tribe who inhabited the whole tract of country lying between Northumberland and the Teviot. Its position on the Borders, its forming often a dechateable territory between conflicting powers, its facilities of fortification and intrenchment, the shelter of its forest and the seclusion of its glens, occasioned it to be the rendezvous of armies, the arena of haronial gatherings and feuds, and the scene of conflicts both national and predatory, from the earliest period of authentic Scottish history down to an epoch immediately succeeding the Reformation.—The last onslaught on its soil, though little else than the hasty squabble of irascible men at a Border tryst, was followed by consequences of pacification which invest it with interest and importance. On the 7th of July, 1575, some Scotsmen, resenting the unprovoked or unjustifiable slaughter of one of their countrymen, made a vengeful attack on the offenders, and were repulsed. But meeting in their flight a body of the men of Jedburgh who joined them, they wheeled round on their pursuers, completely routed them, killed Sir George Heron, an eminent Northumbrian, and carried prisoners to Dalkeith, Sir John Forster, the warden, and some considerable persons, his attendants. Elizabeth of England being enraged at the event, the Earl of Huntington as her envoy, and the Regent Morton on the part of Scotland, met at Foulden in Berwickshire, and arranged a general pacification. The scene of the conflict was the Reid Swire, one of the Cheviot hills on the boundary with England,—the word 'swire' meaning 'a neck,' and being used in the nomenclature of Scottish topography to denote the neck of a hill. The skirmish has supplied the Border minstrels with

a subject for song, entitled 'the Raid of the Red Swire.'—Besides antiquities which occur to be noticed in the description of the town, others, of various classes, challenge attention throughout the parish. At Fernihurst, on the east bank of the Jed, about 2 miles above the hurgh, the gray turrets of Fernihurst castle, look out from the surface of a grove of tall and aged trees which emhoseom it. The present pile was built in 1598, on the site of a predecessor, the stronghold of the ancestors of the Marquis of Lothian. In 1523 the original castle was captured by Surrey; in 1549 it was, after a severe struggle, retaken by the Scots, with the aid of French auxiliaries then stationed at the hurgh; in 1569 it sheltered the Earl of Westmorland from the vengeance of Elizabeth; and, in 1570, in revenge of an incursion which its chief and other Border leaders made into Northumberland, it was captured and demolished by the Earl of Sussex and Sir John Foster.—The parish appears to have been at one time thickly dotted with peels, and towers, and minor strengths,—several of which were massive and formidable; but all, except a tower at the village of Lanton, and the ruins of a stronghold at Timpan, in the vicinity of Lanton, have disappeared. Vestiges of artificial caves exist on the banks of the Jed, particularly of two large ones excavated in rock at Hundalee and Lintalee. They recede in such a manner from the face of precipices as to be now inaccessible; but they were described to Dr. Somerville by aged persons who had entered them when a degree of access existed, as consisting of three apartments, one on each side of the entrance, and another of larger dimensions behind; and they seem, without a doubt, to have been used as hiding-places or strongholds in cases of emergency from invasion.—On the summit of the bank above the Lintalee cave, are the remains of a famous camp, which Douglas formed for the defence of the Borders during Bruce's absence in Ireland, and which is described in Barbour's Bruce. Richmond, the English warden, having crossed the Border at the head of 10,000 men provided with hatchets to destroy Jed forest, fell, in a personal encounter with Douglas, in the vicinity of the camp. Near Monklaw is a Roman camp, which seems to have been about 160 yards square. At Scarshurgh is a well-defined circular camp, about 180 feet in diameter, with ramparts nearly 20 feet in height. At Fernihurst, Howdean, Camptown, and Swinnie, are vestiges of other camps which have been greatly defaced. An ancient military road passes over the Dunian from Ancrum bridge toward the town. The Roman causeway passes along the north-eastern district at the distance of 2 miles from the hurgh, and is here paved with whinstone, and almost entire.—At Old Jedworth, on the Jed, 4 miles above the town, and at the northern extremity of the southern section of the parish, are situated, amidst a little grove, the ruins, or rather vestiges, of a chapel founded by Egred, bishop of Lindisfarn, who died in the year 845. Verdant mounds and carpetings of rank grass respectively indicate the position of the chapel walls, and almost conceal from view the tomb-stones of the cemetery. Flint arrow-heads are sometimes found in various localities. Ancient coins and medals—particularly the former—have been found in almost incredible numbers. At Stewartfield, at Bongate, at Swinnie, and in other localities, but especially at a place on the side of the Jed near the hurgh, where deposits were made of rubbish from the town and its Ahhey, coins have been picked up of the reigns of Canute, Edred, Edwy, Ethelred, Edward I., Edward III., and of later monarchs both Scottish and English.—Population of the parish, in 1801, 3,834; in 1831,

5,647. Houses 752. Assessed property, in 1815, £20,591.

Jedburgh gives name to a presbytery in the synod of Merse and Teviotdale. Patron, the Crown. Stipend £296 17s. 4d.; glebe £48 13s. Unappropriated teinds £2,100 5s. 1d. The present parish comprehends the ancient parishes of Jedburgh, Old Jedburgh, and Upper Crailing. Old Jedburgh is the southern section of the parish, and Upper Crailing is what we have described as the eastern wing of the northern section. Old Jedburgh, containing, in 1836, a population of 283, was recently, with districts in the adjacent parishes of Southdean and Oxnam, erected into a parish *quoad sacra*. The church of the new parish is situated at Rink, and was built in 1838. The incumbent of the *quoad civilia* parish has an assistant, and, with his aid, maintains a preaching-station at Lanton, and extra services in the burgh. The *quoad civilia* parish-church is in the old Ahhey of the burgh, and was fitted about the year 1793, and repaired and enlarged in 1834. Sittings 910. From a calculation of the minister in 1836, founded by a survey of the examinable parishioners, the population was distributed into 2,451 churchmen and 3,196 dissenters. There are in the parish 4 dissenting congregations,—all whose places of worship are situated in the burgh.—The First United Secession congregation was established in 1738, and their present meeting-house built in 1818. Sittings 1,200. Outlay on building and repairing church, manse, offices, and garden wall, from 1790 to 1836, £4,281. Stipend £190 with manse, offices, and garden worth from £25 to £30, and £10 sacramental expenses. The congregation has a library of upwards of 1,000 volumes.—The Second United Secession congregation was established in 1765. Sittings in their meeting-house, 400. Stipend £92, with a manse and garden.—The Relief congregation was established in 1757. Their present place of worship was built, in 1818, at a cost of £2,700. Sittings 1,100. Stipend £190.—The Independent congregation was established in 1840, and assembles in a hall. Sittings about 200.—There are in the parish three parochial schools, conducted by five teachers, and attended by a maximum of 332 scholars and a minimum of 272; and twelve non-parochial schools, conducted by thirteen teachers, and attended by 618 scholars. One of the parochial schools is situated in the burgh, and united to a grammar school. Aggregate salary £42 3s., with about £150 school-fees, and a house and garden worth £15. The other parochial schools are so far private that, while salaried by the heritors, they are kept in repair and otherwise provided for by voluntary subscription; and they are situated respectively at Lanton and at Rink.—The two Jedworths\* are the earliest parishes in Scotland of which there is distinct historical notice. So early as the record of the year 882, they are mentioned by Hoveden; and two centuries later, Eadulfus, a younger son of one of the Earls of Northumberland, is recorded by both Simeon and Hoveden to have been hurried in the church of Jedworth,—a fact which shows how early these powerful Earls had connection with the manor of Jedburgh. As appears from the charters of David I., one of the Earls, amid the darkness which preceded the dawn of record, laid out on and around the site of the present burgh, a manor on which were built a castle, a church, and

a mill. When David I. founded the monastery of Jedburgh, he gave its monks the churches of the two parishes, and also a chapel which then existed at Scarsburgh, in a recess of the forest east of the Jed. In 1147, Gospatrick, the "vicecomes," granted to the same monks the tithes of the church of Upper Crailing.—In 1754, the Relief denomination of dissenters originated in Jedburgh under Mr. Boston. A curious manuscript prepared by the kirk-session of the epoch, and narrating the rise of the new sect, is in the possession of a bookseller in the burgh.

JEDBURGH, a royal burgh, and the county-town of Roxburghshire, occupies a romantic and very beautiful site on the river Jed; 10 miles west of Kelso; 10 east of Hawick; 46 by way of Lauder, south of Edinburgh; and 12 north of the English border. A correct idea of the town cannot be conveyed but through the medium of a previous idea of its site. The Jed, in approaching it, has a due north direction; and after running alongside of it for 230 yards, it bends round, flows 250 yards due east, again bends and flows 800 yards due north and about 660 yards north-east, and, now resuming its northerly course, takes leave of the town and its suburbs. The east or right bank of the river, while traversing this aggregate distance, is remarkably varied and picturesque in appearance; hut, in general, may be described as a glen or narrow vale, with a scoured and richly-wooded hack-ground of rising bank or undulating hill. The west or left bank may be compared to a stupendous wedge, with its hither edge rounded off, laid close along the margin of the early part of the river, the head or thick end being on the south, and the point, or end which subsides into a level, lying about two-third's way down the river's long northerly stretch of 800 yards. What the figure of the wedge illustrates is a spur or projection of the Dumian: hut the main body of this vast though beautiful hill swells up at an average distance of about  $\frac{1}{2}$  of a mile from the river, along the whole extent of the town, and over a considerable distance both above and below it, and forms a gigantic natural screen in its rear, adorned as it recedes with hanging gardens and orchards. A quarter of a mile east of the southern termination of the town or of its suburb, stands the elegant mansion of Stewartfield in the midst of a little grove; and leading up to it north-eastward from a bridge opposite the middle of the town, is a wooded avenue, whose trees, as well as those around the mansion, are of great age and dimensions, and might almost vie with the sylvan constituents of the vast American forest. The disclosures northward and southward of the superb scenery of the winding vale of the Jed, though not extensive, are singularly picturesque. Altogether, the site and the environs of the burgh are as exquisitely attractive as they are singularly peculiar.

At the south end or highest ground of the town, at the distance of only about 110 yards from the river, stands the castle, afterwards to be described, appearing, from its size and its position, like the head of the scorpion-formed streets and hack lanes which stretch away from it down the hill to the plain, and, owing to the elevation of its site, presenting a conspicuous appearance from every point of view whence the burgh is visible. Close to the castle, on the north-west side, comes down the turpiket, from Hawick, after surmounting the Dumian at a point 2 miles distant, and making a rapid slanting descent on its hither side. Immediately in front of the castle commences the town, in the street called Townhead. This street runs almost due north-east down the hill, over a distance of 370 yards to the cross; and has, in general, especially

\* Jedworth, or Gedworth, is the ancient name, and is formed by affixing to the name of the river the Saxon *weorth*, the term for a hamlet, which occurs in the termination of so many names of places in England. Not the plebeian and popular "Jed-dart" of local usage, therefore, but the polite and now authorized "Jedburgh," is the corruption of the original and real name.

in its upper part, a dingy, antique, and plebeian appearance. On its south-east side, or side next the river, stands the meeting-house of the Second United Secession congregation, an edifice differing little in aspect from a barn, except for being holed, on the side fronting the street, with two ungainly goggle-eyed looking windows. At the cross is an open area, extensive enough to give the core of the town an airy and pleasant appearance, and edified both in itself, and in the parts of concentric thoroughfares adjacent to it, with many good houses, some of which have neat shops on the ground story, while others exhibit over their whole form that dowdy tastelessness in architecture for which the older towns of Scotland, and the old parts of modern towns, are remarkable. From the south-east corner of the area at the cross a thoroughfare goes off, running 120 yards south-eastward, and about the same distance southward to a bridge across the Jed, where the river has an easterly direction, and there it points the way up the vale of the parish toward Newcastle. This thoroughfare, over most of the way before reaching the bridge, is only partially edified; but it has on the west side the superb ruin of Jedburgh abbey, and commands in the finest perspective the views along the Jed; and, both in itself and in the walks it offers round the Abbey and down to the river side, it is exquisite lounging-ground for enjoying the mingled delights of landscape, and venerable architecture, and antiquarian reminiscence. From the north-east corner of the area at the cross, a street called Canongate runs down 260 yards eastward to a very ancient and curious bridge of three semicircular ribbed arches, across the Jed. Spanning the roadway of the bridge at its centre, was formerly a gateway which some modern Goths who happened to have authority in the hurch caused to be destroyed. On the north-west side of the area at the cross, at a point directly opposite the commencement of Canongate, a street 110 yards in length files off north-westward leading up to an acclivitous roadway over the Dunian to the village of Lanton. Bisecting this short street nearly at its middle, is a streamlet, called Larkhall burn, which, though only about a mile in length of course, comes down through a wooded vista, and, flowing parallel to the main street line of the town over its whole length, greatly enriches the orchard scenery with which it is flanked. Continuous of Townhead, and nearly on a line with it, the High-street runs down the hill north-eastward over a distance of 360 yards, and, having gained the plain, leads over a few additional yards eastward to the Townfoot-bridge, a new and neat erection pointing the way to Kelso and Edinburgh. A street of 250 yards in length, only partially edified, goes off at right angles from the north side of Canongate, and, running parallel with the Jed, joins the High-street at a very acute angle about 100 yards above its termination. A little above their point of junction, the Relief meeting-house, a handsome and tasteful edifice, stretches between them, presenting its front to the High-street. Nearly opposite, but a little lower down in High-street, stands in a recess the meeting-house of the First United Secession congregation, with its attendant manse and garden, presenting an aspect highly ornamental to the hurch. The entire length of the town, along Townhead and High-street, is almost exactly half-a-mile; and its greatest breadth from Canongate bridge upward is about 380 yards, or something less than  $\frac{1}{4}$  of a mile. The general or aggregate aspect of its streets combines cleanliness and spaciousness with a struggle between dinginess and antiquated loutishness on the one hand, and incipient smartness and modern neat-

ness on the other. Two inconsiderable suburbs stand on the right bank of the Jed; one diverging in three brief lines from near the end of Canongate bridge; and the other called Bongate, straggling upwards of 500 yards alongside of the turnpike to Edinburgh and Kelso, from near the east end of Townfoot-bridge to a point where, by another bridge, the turnpike passes to the left bank of the river. At one end of this suburb is a large stone, sculptured with figures of animals and some indistinct characters, which seems to be part of an ancient obelisk, probably the cross of the suburb.

An air of modernization, and of fraternizing with the British tastes of the 19th century, may be seen even more in the moral than in the physical aspect of Jedburgh. We noticed the Townhead in particular, as antiquated in its architecture; and we quote as a foil to the redeeming features of improvement and neatness which it now at intervals presents, a whimsical and no doubt somewhat caricatured description which the author of the 'Picture of Scotland' gives of its condition at a comparatively very recent appearance. "The same appearance of entire antiquity," says he, "which so strongly marks the Abbey-wynd or close, prevails in a larger district of the town in a situation resembling the castle-hill of Edinburgh, and denominated 'the Town-head.' The Town-head is composed solely of very old houses, which seem to have never either needed or received any of that species of mutilation, called by antiquaries ruin, and by tradesmen repair. The secret is, that the inhabitants of the Town-head all possess their own houses, and being a quiet unambitious kind of people, not overmuch given to tormenting themselves for the sake of comfort, or killing themselves with cleaning and trimming, just suffer their tenements to descend peaceably from father to son, as they are, have been, and will be. The houses, therefore, are venerable enough in all conscience; but it is impossible for them to be more old-fashioned than the people who live in them. The 'Town-head folk,' for such is their common appellation, are in fact a sort of problem even to the other people of Jedburgh. They are a kind of 'knitters in the sun;' a race who exercise, from the morning to the evening of life, a set of humble trades which do not obtain in other parts of the town. For instance, one would not be surprised to find that the Town-head boasts of possessing an ingenious artisan, who can make cuckoo clocks, and mend broken china. And the trades of the Town-head, not less than the houses thereof, are hereditary, even unto the rule of primogeniture. A Town-head tailor, for example, would as soon expect his eldest son to become chancellor of Great Britain, as he would form the ambitious wish of making him a haerhdasher in the lower part of the town. There was once a harher in the Town-head, who lived seventy-one years without ever being more than two miles from Jedburgh on any occasion except one, and that was a call to Oxnam, (three miles,) which he was only induced to attend to because it was a case, not of life and death, but of death itself; being to shave a dead man. There have not been more instances of Town-head folk descending to the lower part of Jedburgh, than of Town-fit folk ascending to the Town-head. The cause is plain. There is never such a thing in the Town-head as a house to be let. The Town-head is a place completely huilt, and completely peopled; no change can ever take place in it; fire alone could diminish the number of its houses, and the gates of life and death are the only avenues by which people can enter or go out of it."

On the site of the present castle stood a very ancient and famous castellated edifice. Jedburgh

castle, built no one knows by whom, and figuring in the earliest records of the country, was occasionally a royal residence, and for centuries a place of great strength, and an object of sharp contest between antagonist kingdoms. In 1165, Malcolm IV., who had adopted it as his favourite home, died within its walls. During the reigns of William the Lion and Alexander II., it was frequently honoured with the royal presence. In 1263, it was the birth-place of a son of Alexander III., and, several years later, the scene of that hereaved monarch's festive rejoicings on occasion of his marriage to Jolande, the daughter of the Count de Dreux. After the battle of Durham, it passed into the possession of the English; and in 1409 it was captured and laboriously demolished by the Scots. Of so great importance did the Scottish court esteem the demolition of a strength which was liable to be seized by the enemy, and powerfully used by them in purposes of mischief, that it proposed, for the complete accomplishment of the object, the imposition of a tax of two pennies upon every hearth in Scotland. Such few and slight vestiges of it as remained till modern times, were all removed, a few years ago, at the erection of the present jail and bridewell. What is now called the castle, owes its name partly to its occupying the site of the ancient stronghold, and partly to its possessing that castellated architectural character which lately has so much prevailed in public buildings. The jail and the bridewell themselves are capacious and neat erections; but they have attached to them spacious courts for ventilation and exercise, and are surrounded by high walls surmounted by chevaux de frise. The massiveness of the encompassing wall, and the air of comfort and of something resembling haronial splendour which, as seen from vantage-ground higher up the Dunian, is possessed by the enclosed area and erections, suggest ideas widely different from the real moral associations of the place; and the contrast is singularly heightened by the magnificence, and the hundred shadings of minute beauty, which enlazon the landscape beheld from the great gateway or place of public execution. The apartments of both jail and bridewell are kept in a superior style of cleanliness and comfort. Though the system of day-rooms, where a number of prisoners are allowed to congregate during the day, and also the arrangement or position of the cells, are not such as, at any period, to insure silence and non-communication among the prisoners; yet the prison appears undoubtedly to be maintained in the best order of which its construction, and the views of discipline which guided the details of its erection, will admit.—The county-hall, a neat modern edifice, occupies a site between the Abbey and the lower end of Townhead, very near the area at the cross.

After the demolition of the ancient castle, the town was defended by six hastel-houses or towers. The Earl of Surrey, writing to his master, Henry VIII., says respecting it: "There was two times more houses therein than Berwick, and well-huild with many honest and fair houses in garrison, and six good towers therein." The towers, however, have all disappeared. Both the ruins of the Ahbots' tower, on the site of which now stands the dispensary, and a tower which was used as the jail, and which stood in the middle of the street near the cross, were destroyed in the course of the last century. The other towers probably were demolished, or at least much injured when, just before writing his account of it to Henry, the Earl of Surrey set fire to the town. A house, however, in which Queen Mary lodged and spent a period of sickness after her visit to Bothwell at Hermitage castle [see

article CASTLETOWN] still stands entire. It is a large building, situated in a hack street, has small windows and very thick walls, with a sort of turret behind, and resembles a mansion-house of the reign of Charles II. The apartment occupied by the Queen is a small two-windowed room on the third story, reached from the second floor by a narrow winding stair, and thither from the ground by a broad stone stair. The house is called, in the record of the privy council, "the house of the Lord Compositor," and, till recently, was in the possession of the family of Scott of Ancrum. Some of the tapestry which anciently adorned its rooms is still preserved. "With its screen of dull trees in front," says the author of the *Picture of Scotland*, "the house has a somewhat lugubrious appearance, as if conscious of connexion with the most melancholy tale that ever occupied the page of history." In an adjoining orchard is a group of pear trees, sprung up from the inhumed branches of a tree which is traditionally reported to have been blown down on the night of James VI.'s entering England to assume the crown.

A *Maison Dieu* anciently existed in the town, but has left no vestiges. A convent of Carmelites was, in 1513, founded in the town by the inhabitants; but it also has utterly disappeared. In this convent, lived and died the writer of a *History of Scotland* from remote antiquity to the year 1535,—Adam Bell, the author of '*Rota Temporum*.' The existence of other ecclesiastical institutions, and the entire ascendancy of ecclesiastical influence, are indicated by the names of various localities in the town. In a garden behind the north-west side of High-street, which is designated in some old documents '*Temple Garden*,' the lower works of ancient buildings have been found at a considerable depth beneath the surface; and here, about 25 years ago, was dug up a stone sarcophagus, containing a large urn, three small urns, and fragments of human skulls and hones.

But the grand antiquity of Jedburgh, and, to the present hour, its prime architectural ornament, is the ruin of its ancient abbey. The description given of this magnificent pile by the Rev. John Purves, the amiable and excellent minister of the parish, in his report in the *New Statistical Account of Scotland*, [No. V. p. 9, Blackwood and Sons, Edinburgh, 1835,] is singularly complete and happy. "This venerable structure," says he, "stands on the south side of the town on the declining bank of the river, which winds past it in front, washing some remnants of its outworks. The chapter-house, cloisters, and other appendages have perished; and nothing remains but the church, which, in the form of a cross, extends from east to west 230 feet. The choir is much dilapidated, bearing marks of great antiquity. The two lower stories consist of massive pillars and semicircular arches, with the diagonal or zigzag mouldings of Saxon architecture, whilst the upper windows and some other parts are Gothic, evidently added at a more recent period. The north transept is entire, presenting traceried Gothic windows, especially one of great size and beauty. The south transept has disappeared. Above the intersection of the transepts, with the nave and choir, a large square tower rises on four pillars to the height of 100 feet, surmounted by a projecting battlement, and crowned with turrets and pinnacles. The nave, measuring 130 feet long, presents on each side three tiers of arches; the first opening into the aisle consists of pointed arches, deeply recessed, and richly moulded; supported by clustered columns, with sculptured capitals; the second, which opened into the galleries, consists of beautifully moulded semicircular arches, with two pointed arches inserted in

each; and the third, of elegant pointed windows. The lofty western gable possesses a Norman door of uncommon beauty, the archway exhibiting a profusion of ornamented mouldings, supported by slender pillars to the depth of  $7\frac{1}{2}$  feet. Above it is a large window, with a semicircular arch flanked by small blank pointed arches, in long slender shafts, and this is surmounted by a beautiful St. Catherine's wheel. On the south side of the choir, there is a chapel which was once appropriated to the use of the grammar-school \* \* But the chief object of architectural interest in this abbey is the Norman door, which formed the southern entrance to the church from the cloisters. This, for the elegance of its workmanship, and the symmetry of its proportions, is unrivalled in Scotland. Its sculptured mouldings springing from slender shafts, with capitals richly wreathed, exhibit the representations of flowers, men, and various animals, executed with surprising minuteness and delicacy. 'This venerable pile,' says the late Archibald Elliot, architect, in his report to the heritors respecting some of its projected repairs, 'in my opinion, is the most perfect and beautiful example of the Saxon and early Gothic in Scotland.' Its grand appearance is imposing, and admirably accords with the scenery of the romantic valley in which it is situated."—St. Kennoch is reported to have been Abbot of Jedburgh in the year 1000, and to have laboriously but effectually exerted his influence, during a considerable period, for the conservation of the international peace. The traditional history respecting him, and the apparently high antiquity of the remains of the choir, would seem to dictate that the abbey had a very early existence. But the Melrose Chronicle, under the year 1174, has the entry, "Obiit Osbertus *primus* abbas de Jeddewrtha;" and, on this and other grounds, the abbey is perhaps regarded correctly, by the author of Caledonia, and other writers, as having been, not rededicated or extended, but originally founded in the year 1147, by David I. Its monks were canonical, brought, in the first instance, from Beauvais. The abbey was endowed, by its royal founder, with the tithes of the two Jedworths of Langton, of Nisbet, and of Crailing, and with other important property; by Malcolm IV., with the churches of Brandon and Grendon in Northamptonshire, and with some lands and a fishery on the Tweed; by Ranulph de Soules, with the church of Dodington, near Brandon, and the church in the vale of the Liddel; and by William the Lion, and various barons, with many other churches and lands. During 20 years from the commencement of the 13th century, the abbot was embroiled with the bishop of Glasgow, fighting a stiffly contested battle for the prerogatives of the mitre and the crosier; and he was eventually compelled to acknowledge more of the bishop's authority than comported with the loftiness of his own pretensions. During the early years of the succession, the abbot and his canons were involved in ruin,—their house becoming so unsafe that they could not inhabit it, and their possessions so wasted that they could not enjoy them; and, at the end of the year 1300, they threw themselves on the bounty of Edward I., and were billeted by him on some religious houses in England. Robert I. tried to restore by his generosity what the hostility of his antagonist had destroyed, and granted to the canons the hospital of St. Mary Magdalene at Rutherford, and apparently also the priories of Restenet in Forfarshire and Canobie in Dumfriesshire. The canons, at all events, possessed these priories during the best days of their prosperity, sent off some of their number to occupy their cells, and used that of Restenet as a place of custody

for their records and other valuable documents against the depredations of the Border marauders. During the long succession of international conflicts which followed the peace of Northampton in 1328, the abbey rocked under the violent rush of invasion and repulse, and underwent many a desolating change. In 1523, it was pillaged and partly burnt by the Earl of Surrey; and, in 1543, it was extensively dilapidated and converted into ruin by the Earl of Hertford. Even in very recent times, portions of it have been demolished by worthies such as those who destroyed the surpassingly fine cross of Edinburgh, or the gateway on the ancient bridge of Jedburgh,—wiseacres who sagaciously calculate the worth and beauty of an old ornate building by the number of shillings which they can procure for its stones. But now a better taste prevails, and, not contented with averting further dilapidations, has busied itself in making such repairs as promise to extend the duration of what remains of the pile. After the Reformation, the abbey became vested in the Crown by annexation. As the Kers of Fernhurst had long been the bailies of Jed Forest, they, after a while, became bailies of the canons of Jedburgh. In March, 1587, Sir Andrew Ker obtained from James VI. a grant of the bailiary of the lands and baronies of the abbey; and—the transition being easy in those times from connexion of any sort with ecclesiastical property to entire possession of it—he afterwards obtained a charter converting the whole into a lordship, by the title of Lord Jedburgh.

The town, proportionately to its size, makes a conspicuous figure in manufacture. Its staple produce is in woollens, akin to that of Hawick and Galashiels, with a trifling addition in linsens. The principal fabrics are checked woollens for trowsers and for shepherds' plaids,—woollen shawls with fringe, coarse and large check pattern,—a fine tartan,—coarse Scotch blankets,—coarse white plaiding for drawers,—carpets,—druggets, and hosiery. There are three large factories, all worked by water-power, and belonging respectively to Messrs. Hillson, Mr. Rutherford, and Mr. Ewing. The number of handlooms, in 1828, was 20; and, in 1833, had increased to 75. The looms are kept in full trim at the expense of the masters. The average nett weekly wages earned by good workmen when fully employed are, for linen, 8s. 7d.,—for blankets, 10s. 6d.,—for plaiding and for trowser-checks, 12s.,—for shepherds' plaids, 13s.,—and for shawls, 16s. Mr. Hope, the inventor and patentee of a particular description of printing-presses, employs about 20 persons in an establishment for producing his useful article. An iron and brass foundry, some business in the dressing of leather, and various artisanships which minister to the every-day wants of society, contribute, with the greater manufactures, to swell the aggregate number of in-door workmen in the burgh to about 550. But bread, which is sent hence in considerable quantities to the north of England, and is in much request for the excellence of its quality, may be viewed as an additional manufacture; and the produce of the orchard, which is raised and sold in greater quantities here than in any district of Scotland except Clydesdale, must be regarded as an important article of commerce. The ecclesiastics of the abbey appear to have been fully aware of the peculiar adaptation of the soil and site of Jedburgh to the growth and luxuriance of fruit-trees, and to have introduced at various periods such species as their deep practical insight into the pleasures of the palate pointed out as most grateful. A peculiarly fine species of apple, and not a few kinds of luscious pears, are plentifully grown in the very numerous private orchards and

gardens of the inhabitants. Many of the existing pear-trees are supposed to be three centuries old; and individuals of them have occasionally produced, in one year, from 50 to 60 imperial bushels.

Connected with literature, Jedburgh has 2 public reading-rooms,—a large and valuable public collection of books, called 'the Company's library,'—2 smaller libraries,—a circulating library,—5 itinerating libraries, of 50 volumes each,—3 congregational libraries,—and a reading-society for the purchase of new publications. Among its religious, charitable, and patriotic institutions, it numbers a society for the promotion of education,—a dispensary, established in 1807, principally by aid from the Marquis of Lothian, and provided, in 1822, by that nobleman with a commodious house and baths for the reception and use of patients,—a savings' bank,—a farmers' club for promoting improvement in agriculture and in the breed of stock,—and the Roxburghshire Horticultural Society, for promoting the cultivation of the orchard and the garden. In mercantile and kindred matters it has branch-offices of the British Linen company's bank, and the National bank of Scotland,—a weekly market on Tuesday, when much grain is sold, and another on Friday,—4 annual fairs for horses and cattle, on the first Tuesday after Whitsunday, on the second Tuesday of August, O. S., on the 25th of September, if not a Saturday, a Sabbath, or a Monday, and, if otherwise, on the first Tuesday after, and, finally, on the first Tuesday of November, O. S.—monthly markets for sheep and cattle on the third Saturday of every month from January till May,—and hiring-markets for servants at Whitsunday and Martinmas. In matters of civil authority it has, in addition to its own burgh-courts, afterwards to be noticed, justice-of-peace courts, held at regular intervals,—the sheriff-courts for Roxburghshire,—and twice a-year, in spring and autumn, the circuit courts of judicatory. The jurisdiction of the last of these, extends over the four counties of Roxburgh, Berwick, Selkirk, and Peebles, and occasions an influx of witnesses, juries, and legal gentlemen from the whole basin of the Tweed and its tributaries; yet—so peaceful and pastoral is the district, and so contrasted in character to the utter lawlessness which once distinguished it—that the judges have sometimes hardly a case to try. The opening of the circuit-court is always an occasion of puff and pomp in the burgh. Certain antiquated observances are maintained in the getting up and conducting of a procession in honour of the judges, which are so quaintly comical as to seem like a tax upon all the acquired self-restraint of these grave gentlemen.

Jedburgh is governed by a provost, 4 bailies, a dean-of-guild, a treasurer, and 18 councillors. Municipal constituency, in 1839, 168. The property of the burgh consists of lands, houses, and principally mills, yielding aggregately £498 18s. a-year. The revenue from other sources arises chiefly from custom and market-dues, and from casualties, and, together with the rental of property, amounted, in 1833, to £650 14s. 9d. The expenditure in the same year was £599 4s. 2½d.; and there was then a debt of £5,223 18s. 4d. The revenue in 1838-9 was £644 1s. 4d. The magistrates have no power to make local assessments. During 30 years preceding 1832, they assessed the inhabitants, by sworn stent-masters, for water and lighting; but resistance being made to the exaction of money for lighting, the assessment was then discontinued. The taxation for poor's-money is comparatively heavy, having, in 1832, amounted to £433 upon a real rental of £3,106, or 14 per cent. The incorporated trades consist of smiths, weavers, shoemakers, masons,

tailors, wrights, fleshers, and glovers. All the corporations are rigid in exacting entrance-dues,—which, in some instances, amount to £10; and they possess, and wield what are called their privileges, with no advantage to themselves, and with much injury to the community. The magistrates, besides exercising the ordinary jurisdiction within burgh, claim the right of exercising it over a tract of ground adjoining their mills. By a singular custom, also, they exercise jurisdiction over the great fair of St. James, held close to Kelso. How this right arose, cannot be ascertained; but it has subsisted from time immemorial, and is said to be tenaciously regarded by the inhabitants, as giving them some influence and respectability. Yet, like many a questionable honour, it occasions cost. While the magistrates hold a court at the fair to take cognizance of petty irregularities, and are accompanied by a full inquest of burghesses, draining usually from £10 to £15 from the funds, the burgh-tacksman draws only £2 of customs. Both haillie and dean-of-guild courts are occasionally held in the burgh. Since the small debt, justice-of-peace, and sheriff-courts, were established, the cases in the burgh-courts have gradually decreased. The magistrates possess no other patronage than the appointing of their officers, and a joint voice with the lordward heritors in making appointments to the grammar school. Jedburgh unites with Haddington, Dunbar, North Berwick, and Lauder, in sending a member to parliament. Parliamentary constituency, in 1840, 226. The parliamentary boundaries exclude some uninhabited fields within the royalty, but include the suburbs on the right bank of the Jed. Population within these boundaries, in 1831, 3,709.

The council-records of Jedburgh, extending back to only 1619, and all the ancient charters having been destroyed during the wars with England, neither the date of the origin of the town, nor that of its erection into a burgh, can be ascertained. All earlier charters were renewed and confirmed by Queen Mary, in 1556. A fac-simile of a charter granted by William the Lion, in 1165, to the abbot and monks of the town, was published at Edinburgh in 1771. The town—in connection with its castle and its ahhey, the courts of the kings of Scotland, and the influence of a very wealthy fraternity of priests—must, so early as the 12th century, have become a place of very great consequence. During the festal scenes which occurred in its castle, in 1285, on occasion of Alexander III.'s second marriage, a masker dressed so as to resemble the skeleton figure of Death, glided among the dancers at the ball, and struck such terror into the queen and the other revellers, that they fled to their retirements. Though this monstrous piece of masquerading foolery was intended by the hlock-head who practised it to be a joke, it excited a sensation throughout the kingdom, and was afterwards—with a wisdom quite akin to that which suggested the getting of it up—gravely regarded as an omen of the king's childlessness and early death, and of the consequent disasters which accrued to the country. After the close of the 15th century, Jedburgh figures prominently in the history of the international wars; and partly after, partly before that date, is said to have been seven times burnt, and to have as often risen like a phoenix from the flames. In 1523, the Earl of Surrey, at the head of 6,000 men, marched against the town, and was so obstinately resisted by the inhabitants in his attempts to take it, that, in hostile guerdon of their bravery, he no sooner got it under his power than he gave it up to plunder and the faggot. In the civil contentions which followed the expulsion of Mary from the throne, the people of Jedburgh espoused the cause of the infant James,

in opposition to their powerful neighbour, Ker of Fairmirst, the ancestor of the Marquis of Lothian, who declared for the captive queen; and when a pursuivant was sent to them to proclaim the nullity of all proceedings against her while she was in Loch-Leven castle, they publicly inflicted on him some acts of contempt scarcely more ignominious and insulting to his person, than outrageously offensive to private modesty and public decency. Ker of Fairmirst, in revenge, captured and hanged ten of the hurghers, and destroyed by fire the whole stock of provisions laid up by the inhabitants for a winter's consumption. During the rebellion of 1745, the Pretender and his army of Highlanders created an alarm in the town, which was remembered and feelingly depicted by some aged inhabitants very recently deceased. Though the town is now eminently prosperous—or prosperous beyond most towns of its class—in the achievements and wealth hearing results of peaceful industry, it threatened, within the recollection of the present generation, to pine away to ruin. After the age of marauding, and of cattle-lifting and forays passed away, the inhabitants availed themselves of the unequal taxation of England and Scotland, to drive a quiet and very advantageous contrahand trade. Into England, they carried salts, skins, and malt, which, till the Union, paid no duties in Scotland; and from England they imported wool, to be shipped, at a great profit, from the frith of Forth to France. But the commingling of the legislatures of the two kingdoms drove the ladder from the feet of the contrahand Border trader, and left him dangling perilously in the air. “The vestiges of 40 malt barns and kilns,” says Dr. Somerville, in the Old Statistical Account, “are now to be seen in the town of Jedburgh, while at present there are only 3 in actual occupation; and the corporation of skimmers and glovers, formerly the most wealthy in the town, have, since the Union, greatly diminished, both in regard to opulence and number.” In 1833, the corporation of glovers had become reduced to two members.

Such renown as expertness in the art of destroying human life, and foiling the efforts of pretended adepts in that art, is fitted to give, belongs in no stinted degree to the inhabitants of Jedburgh during Scotland's fighting period. The proud war-cry of the hurghers, “Jeddart's here!” and their recorded dexterity in wielding a dangerous tool of strife which earned the designation of “the Jeddart staff,” are no mean evidences of their general prowess. Their bravery is believed to have decided in favour of Scotland the last, though comparatively unimportant feat of arms which she tried with England,—the skirmish mentioned in our notice of the parish as hearing the name of ‘the Raid of the Reid Swirc.’ “I assure your grace,” says the Earl of Surrey, in his letter to Henry VIII. respecting his attack on Jedburgh, “that I found the Scots at this time the holdest men and the hottest that ever I saw in any nation, and all the journey. Upon all parts of the army, they kept up with such continued skirmishes, that I never held the like. If they could assemble 40,000 as good men as the 1,500, or 2,000 I saw, it would be hard to encounter them.” The “Jeddart staff,” still proverbial in Teviotdale, is thus described by Mair:—“Ferrum chalybeum quatuor pedes longum in robusti ligni extremo Jeduardiensis.” The corporation of shoemakers still possess a trophy taken from the English at the battle of Newburn; while the weavers, loftier alike in the fame of their own achievements in quiet and useful manufacture, and in the fame of their predecessors in the showy but substantially inglorious achievements of war, possess two trophies, carried off from the celebrated fields of

Bannockburn and Killiecrankie. “Jeddart justice,” a phrase familiar throughout the Lowlands of Scotland, means the summary execution of a criminal previous to his trial, and is supposed to have been originally and solely practised by the reckless and tyrannical Dunbar, in his lording it over the Jedburgh courts of justice. [See ‘Border Minstrelsy,’ vol. i. p. 50.] But the phrase, even legitimately rendered, and seen in the light of equitable modern administration, appears rapidly to be losing all meaning. Scarcely a town in quiet and loyal Scotland is so exemplarily peaceful as Jedburgh, or enviered far and wide with so well-toned and tranquilly industrious a country.

**JOCK'S LODGE, or PIERSHILL,** a beautiful and interesting locality on the southern houndary-line of the parish of South Leith, on the mail-road between Edinburgh and London, 1½ mile east of the Edinburgh post-office, and 1 mile west of the town of Portohello, Edinburghshire. The locality is on the plain immediately beneath the north-east base of Arthur's Seat, scarcely a mile from the shore of the frith of Forth, and, independently of its buildings, is rich in such attractions of scenery as comport well with the near vicinity of the magnificent metropolis of Scotland. The principal architecture of the spot is a neat and spacious military harracks, occupying three sides of a large quadrangle, and presenting a wall, perforated with a high gateway, to the line of the turnpike. This harracks was built in 1793, and called Piershill in honour of Colonel Piers, who occupied a villa on the spot in the reign of George II., and at the same time commanded a regiment of cavalry stationed in Edinburgh. The name Jock's Lodge—which is the popular one—occurs as early as the time of Cromwell, and is of uncertain and debated origin. On the south side of the road toward Portohello are several neat villas. But the whole face of the district lying immediately round the harracks, is studded and dotted with buildings, and has only so far subsided from the urban character of the outskirts of Edinburgh, as to acquire to its edifices, whether villa or cottage, the graceful accompaniments of garden or of hedged enclosure. A stroll from the beautiful city to Piershill, when the musical hands of the harracks are striving to drown the soft and carolling melodies of the little songsters on the hedges and trees at the subsuasion of Arthur's Seat, and when the frith with its many-tinted canopy of clouds, and its picturesque display of islets and steamers, and little sailing boats, on the bosom of its waters, vies with the exulting and luxuriant landscape on its hither shore to win the award due to beauty, is indescribably delightful.

**JOHN O'GROAT'S HOUSE,** a small cottage which existed several ages ago, upon one of the most northerly points of the mainland of Scotland. The accredited site of this famed domicile is still pointed out, on the flat downy shore of the Pentland frith, in the parish of Canishay, about 1½ mile to the west of Duncanshay-head; but not a fragment of the building remains, except a few of the lower stones of the foundation, or, if Dr. Macculloch is to be credited, not even that, unless “a piece of green turf, as flat and as hare as the hack of one's hand, was John O'Groat's house.” John O'Groat's house is said to have been founded under the following circumstances:—During the reign of James IV., a Lowlander of the name of Groat—or, according to some versions of the legend, a Dutchman of the name of John de Groot—along with his brother, arrived in Caithness, hearing a letter from the king, which recommended them to the gentlemen of the county. They procured land at this remote spot, settled, and became the founders of families. When the race of

Groat had increased to the amount of eight different branches, the amity which had hitherto characterized them was unfortunately interrupted. One night, in the course of some festivity, a quarrel arose as to who had the best right to sit at the head of the table next the door; high words ensued, and the ruin of the whole family, by their injudicious dissension, seemed at hand. In this emergency, however, one of them, named John, rose, and having stilled their wrath by soft language, assured them that at their next meeting he would settle the point at issue to the satisfaction of all. Accordingly, he erected upon the extreme point of their territory an octagonal building, having a door and window at every side, and furnished with a table of exactly the same shape; and when the next family festival was held, he desired each of his kin to enter at his own door, and take the corresponding seat at the table. The perfect equality of this arrangement satisfied all, and the former good humour of the fraternity was restored. There are many different versions of the above story, but all bearing a resemblance to the well-known fable of the knights of the round table. One version of the story represents John, the ingenious deviser of the octagonal house, to have been the ferryman from Canishay to Orkney. Perhaps, as Dr. Macculloch suggests, the others were ferry-men also, and Rahelais may have had the story in view when he says, "Tous les chevaliers de la table ronde estoient pauvres gaigne-derniers, tirans la rame pour passer les rivieres de Cocyte, Phlegeton, Styx, Acheron, et Lethe, quand messieurs les diahles se veulent ehattre sur l'eau." John O'Groat's name has been hequeathed to certain small shells which are here found on the beautiful beach, and are called Johnny Groat's huckies.

**JOHN'S CLACHAN** (Str.), the original name, now entirely disused, of the village of Dalry, in the cognominal parish, Kirkcudbrightshire: See DALRY.

**JOHN'S-HAVEN**, a sea-port village in the parish of Benholme, Kincardineshire; 4 miles south by west of Bervie; 9 north by east of Montrose; and 29 south-west of Aberdeen. This was formerly of more importance as a fishing-station than it now is; the fish caught are principally haddocks, cod, ling, and turbot. A few small vessels, averaging 50 tons burthen, belong to the port; but the harbour is a very small one, but capable of being considerably improved to the advantage of John's-haven. The manufacture of linen for the Dundee merchants is now superseding the fishing trade. There is a Seccession meeting-house in the village. The coast in this vicinity is rocky and desolate. The population of John's-haven appears to have been long stationary; in 1793, it was estimated at 1,019; in 1821, at 1,020; and in 1831, at 1,027.

**JOHNSTONE**, a parish in the upper part of the district of Annandale, Dumfriesshire. It is bounded on the north by Kirkpatrick-Juxta; on the east by Wamphray and Applegarth; on the south by Lochmahon; and on the south-west and west by Kirk-michael. The parish approaches in outline the isosceles triangle, the short side being presented to the north and the apex to the south; but it has the former indented to the depth of nearly 2 miles by Kirkpatrick-Juxta, and the latter so cut away as to exhibit a southern termination of fully  $1\frac{1}{2}$  mile in breadth. It is  $7\frac{1}{2}$  miles in extreme length from north to south, and averages 3 in breadth, and contains an area of 20 square miles, or nearly 13,000 imperial acres. Along the whole of its eastern boundary flows the river Annan, rich in yellow and sea trout, common and spotted eels, roches, pears, and salmon of from 30 to 40 pounds' weight, and sometimes coming down in a prodigal wealth and expenditure

of waters which menace the low lands adjoining its banks with the invasions and inflictions of an irresistible tyrant. On the north the two sides of the indentation upon it of Kirkpatrick-Juxta, are traced respectively by the Kinnel on the east, and the Duff-Kinnel on the west; and, the former swallowing up the latter, runs  $2\frac{1}{2}$  miles through the interior, and then, for  $1\frac{1}{2}$  mile, traces the south-western boundary. Along the Annan stretches a belt of level land, carpeted with loam and gravel. Thence the surface gradually rises till it attains a height of 700 or 800 feet, and then it slowly subsides toward the Kinnel, forming a broad-based hilly ridge between the rivers. Westward of the Kinnel are between 2,000 and 3,000 acres, which ascend from its banks till, at Mallin's hill and Deer-edge, on the extremity of the parish, they attain the height of probably 1,300 or 1,400 feet. Across the Kinnel, about a mile after it enters the interior, stretches St. Ann's bridge, commanding nearly as delightful a view of glen and sylvan scenery as any which is exhibited by the profusely rich and endlessly varied landscapes of Scotland. Three quarters of a mile north of this bridge, a little west of the river, stands the magnificent mansion of Raehills, one of the most princely in the kingdom, the seat of J. J. Hope, Esq. of Annandale, the present representative of Dumfriesshire in parliament, exulting in the opulence of the garden-grounds and scenic displays which immediately surround it, and sending off a wide expanse of richly wooded and diversified demesne. Mr. Johnstone counts ancestors who were proprietors of his own estates and of others in Dumfriesshire up to the epoch of record, and who, as the leaders of a horde-clan, waged constant warfare, during the 15th and 16th centuries, with the Douglasses and the Maxwells. The whole parish, with the exception of a small patch, is his property, and partakes kindred results of culture to those which are so conspicuous on the grounds immediately adjoining his seat. Only the general poverty of the soil, or the difficulty of keeping up its fertility when reclaimed, seems to have prevented the district from affording an eminent instance of agricultural improvement. About 1,500 acres are under natural and planted wood; about 700 or 800 are waste lands, chiefly mosses; and the remaining 10,700 or 10,800 acres are very nearly distributed in moieties of arable land and tillage. Much of the wood is oak and ash, very ancient, and exhibiting specimens of great girth and height. The mosses have all a substratum or ramified under-bed of timber, principally oak, and seem to have grown up, like some more notable mosses in the country, from the wreck of the Caledonian forest. The arable grounds, except in a few instances, are not powerful enough to yield a remunerating produce in wheat, and are laid out chiefly for oats and harley. The pastures—with a small exception in favour of the Cheviot breed of sheep—are browsed by probably the finest imported specimen of the Galloway breed of black cattle in Scotland. Considerable and successful attention is paid to the department of hacon, —that article of produce for which, in its best quality, England now looks so interestedly to Dumfriesshire. Sandstone abounds at the southern verge of the parish, but is very scantily worked. A vein of lead ore has been expensively but vainly sought for at the cost of Mr. Johnstone.—Three-quarters of a mile from the northern boundary, and mid-way between the Annan and the Kinnel, at a mile's distance from each, stand the ruins of Lochwood's 'lofty towers, where dwelt the lords of Annandale.' Lochwood castle is said to have been built in the 14th century. It commands a very extensive prospect, especially toward the south, and has a retinue

of ancient forest trees, one of which, an oak, measures 17½ feet in circumference. The castle is immediately environed with almost impassable bogs and marshes; and, both from the nature of its position and the enormous thickness of its walls, must have been a place of great strength. James VI., alluding to its inaccessibility and capacities of resistance, said that "the man who built Lochwood, though outwardly honest, must have been a knave in his heart." About the year 1593 Robert, the natural brother of Lord John Maxwell, fired the castle, exclaiming, when it began to belch aloft the flames, "I'll give Dame Johnstone light enough to show her to set her silken hood." In revenge of the deed the Johnstones inflicted the fearfully sanguinary castigation on the Maxwells at Dryfe sands, which is noticed in our article DRYFESDALE. The castle, having been fully repaired, continued to be inhabited till 1724,—three years after the death of the first Marquis of Annandale. The Glasgow and London mail-road, the Edinburgh and Dumfries turnpike by way of Moffat, and a turnpike between Moffat and Lochmaben, all traverse the parish south and north,—the first and second each 5 miles, and the third 6 miles. These roads, and their bridges, are kept in prime repair. One of the bridges spans the Annan at Johnstone mills, a little above the parish-church, in a single arch 80 feet in width. Dr. Rogerson and Dr. Matthew Halliday, successively first physicians to the Empress Catherine of Russia, were both natives of Johnstone. A large proportion of the inhabitants of the parish are Johnstones by name, and a considerable number are Hallidays. "In this very populous, rural parish," says the minister in the New Statistical Account, "we have neither public house, nor meeting-house, nor resident surgeon, nor village, nor post-office, nor prison, nor lawyer, nor beggar,—specialities, we humbly conceive not to be found united in any parish of similar dimensions in Britain,—and of which, though some may be occasionally felt as parish privations, others are daily prized by us as distinguished blessings." Population, in 1801, 740; in 1831, 1,234. Houses, 196. Assessed property, in 1815, £5,514.—Johnstone is in the presbytery of Lochmaben, and synod of Dumfries. Patron, Johnstone of Annandale. Stipend £165 13s. 2d.; glebe £10. There are 3 schools, attended by a maximum of 170 scholars. Parochial schoolmaster's salary £26, with £21 10s. fees and £5 10s. other emoluments. The ancient parish was a rectory in the deanery of Annandale. The present parish comprehends the whole of the old parish, a large part of the suppressed parish of Dungree, and a small part of the ancient GARVALD: which see. The ruin of the old church of Dungree—anciently Dun-grio, signifying 'a sunny hill'—stands, with its accompanying cemetery, on the southern declivity or sunny side of a round hill or 'dun,' on the west bank of the Kinnel. This church, with its pertinents, anciently belonged to the monks of Kelso,—having been gifted to them in the 12th century by Walter de Carnock, the proprietor of the manor.

JOHNSTONE, a *quoad sacra* parish in Renfrewshire, disjoined from the Abbey parish of Paisley in July, 1835. Its greatest length is about 1 mile, and its greatest breadth less than a quarter of a mile, being chiefly confined to the village of Johnstone, which is situated on the right bank of the river Black Cart, 3½ miles from Paisley, 11 from Glasgow, and 14 from Greenock. The rapid increase of this place is not exceeded, if equalled, in Scottish statistics. Till 1781 it consisted of a small hamlet, with a population of 10 persons, near the bridge over the river, called 'the Brig o' Johnstone,' which is still the popular appellation of the town itself. In that

year a large mill for the spinning of cotton was erected here, and the formation of a town was commenced, and proceeded so rapidly, that in 1792 the inhabitants amounted to 1,434; in 1811, to 3,647; and in 1831, to 5,617. The population is now (1841) upwards of 7,000. The mill was built, and the town planned and fenced out by George Houston, Esq., the superior of the ground on which it stands, who died in 1815, after having held the estate of Johnstone for the long period of 58 years. The town is regularly built, consisting of one main street from east to west, with several other streets branching at right angles from both its sides. There are also two squares, namely, Houston-square in the centre of the town, which is now built up on every side, and another to the southward, partially enclosed with houses, and intended for a market-place. The houses are, for the most part, built of stone, two stories high, with garden ground attached to each. From an eminence on the Paisley road, a quarter of mile eastward, the place has a picturesque appearance. In 1839 there were in Johnstone 15 cotton-mills, employing in all 1,456 persons, exclusive of mills at other places in the immediate vicinity. With two slight exceptions the mills are all propelled by water. There are, besides, 2 brass and 2 iron foundries, on an extensive scale, with 5 machine manufactories, a public gas work, and various minor branches of industry. In the neighbourhood coal is wrought to a great extent. The place has a branch bank, several branches of insurance offices, a town school, 2 news-rooms, a subscription library, and a mechanics' institution and library, with several religious and benevolent societies. Its civil polity is managed by a committee elected annually by the feuars. A justice-of-peace court is held on the first Friday of every month. A fair for cattle is held in July, and another in October; and there is one for horses in December. The canal from Glasgow, intended to have been carried to Ardrossan, terminates at Johnstone; and the railway from Glasgow to Ayr passes the place.—About a mile to the south stands Johnstone castle, the seat of Mr. Houston, an elegant modern mansion surrounded by thriving plantations and pleasure-grounds.—This parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. The right of electing the minister is vested in the congregation. The church was built in 1793, and cost about £1,400. Sittings 995. Stipend £200, without manse or glebe. To this church a light and elegant spire was added in 1823.—The United Secession congregation was established in 1791, when their church was built at the cost of about £900. Sittings 616. Stipend £150, with £8 8s. for sacramental expenses, and £4 4s. for attendance on church courts.—The Relief congregation was established, and built a church, in 1829, which, with a session-house, afterwards erected, cost about £1,500. Sittings 810. Stipend £120, with £8 in name of sacramental expenses.—The United Methodist congregation, established in 1824, assembles in a building erected in that year, at the cost of £150. Sittings 260.

JOPPA, a modern village, on the mail-road between Edinburgh and Berwick, and on the shore of the frith of Forth, within the boundaries of the parliamentary burgh of Portobello, situated a little eastward of that town, and almost compact with it, in the *quoad civilia* parish of Duddingston, Edinburghshire. It runs about 300 yards along the highway, but has buildings on the west both close on the shore and northward of the road. Part of the village consists of very neat villas. A mineral well gives it importance with invalids, and attracts to it a share of the patronage so profusely heaped on

Portobello. Between it and the sea is a freestone quarry. About  $\frac{1}{4}$  of a mile to the east are some salt-works, called Joppa-Pans.

JURA,\* one of the Hebrides, lying opposite to the district of Knapdale, in Argyleshire, to which county it is politically annexed. It is 20 miles in length, from south-west to north-east; its breadth at the southern end is about 8 miles, but tapers gradually to about 2 miles at the northern extremity. Its superficies has been estimated at 58,500 Scots acres, of which only 3,000 are arable. It is the most rugged of the Western isles, being composed chiefly of huge rocks, piled on one another in the utmost disorder, — naked and incapable of cultivation, and presenting “one continued tract of brown and rocky mountain-pasture.” These mountains extend in the form of a ridge from south to north, nearly in the middle of the island. Three of them rising near the south end, of an irregular conoidal form, and termed the Paps of Jura, are conspicuous at a great distance. The southern one is termed *Benachaolais*, ‘the Mountain of the Sound,’ as being near to the sound of Islay; the next and highest, *Benanoir*, ‘the Mountain of Gold;’ the third, *Benshianta*, ‘the Consecrated mountain.’ There are five of these conical peaks, but only three of them are distinguished as the Paps. Corrahhain, or ‘the Steep peak,’ is the most precipitous but lowest of the cluster. See *BENANOIR*. Loch-Tarbet, a long narrow arm of the sea, opening on the west coast, nearly divides the island into two. There are some small lakes in the vicinity of the Paps; and a few streams, descending from these mountains, flow into the sound of Jura. The west side of the island is wild and rugged, and intersected by numerous torrents which come rushing down from the mountains. It presents only rocky and abrupt shores; and has been deemed so inhospitable that no person chooses to fix his habitation in it. All the inhabitants live on the east side. Here, along the margin of the sea, the coast is level; but, at a little distance from the shore, there is a gradual ascent. The whole of this side forms a pleasant scene: the coast, in several places, is indented with bays and harbours, and the arable and pasture grounds spread out on the declivity, and terminate at the base of the huge rocky mountains which form a romantic and awful back-ground. The soil along the shore is thin and stony; higher up it becomes moory, with patches of improvable moss; along the foot of the mountains there are numerous springs which render the ground spouty and unfit for cultivation. The crops are oats, barley, potatoes, and flax; the chief manure is seaweed; the use of lime has not been introduced, nor the practice of sowing artificial grasses, or laying out the lands in fallow or regular rotation. There are two fine harbours on the east coast of the island; that to the south is called the harbour of Small-Isles from the number of islets which shelter it; the other, a few miles to the north, is named

the Lowlandman's bay; there are also some anchoring places on the west coast. At the north end of Jura are the three inhabited islands of *SCARBA*, *LUNGA*, and *BALNAHUAIGH*: see these articles. Between Scarba and Jura is the famous gulf called *CORRIEVREKIN*: which see. Several kinds of red deer exist on the mountains, and there is plenty of grouse and black game. When Pennant visited this island, the number of cattle was much greater than at present; the inhabitants having banished these to make way for the numerous herds of sheep and goats which have been introduced. There is only one small village, called Jura, on the east coast of the island, inhabited by a few fishers. There are several harrows and duns in the island; and on the coast, near the harbour of Small-Isles, are the remains of a very considerable encampment. It has a triple line of defence, with regular bastions towards the land; and near the east end is a pretty large mound, seemingly formed of the earth thrown out in forming the ditches. The mountains are of white or red quartz, some of which is brecciated, or filled with crystalline kernels of an amethystine colour. The other rocks of the island are a bluish coloured slate, veined with red, and so fine as to be used as a whetstone; a micaceous sandstone; and, at the northern extremity, a quarry of micaceous granite. There is great abundance of iron ore, and a vein of the black oxide of manganese. On the west coast there is a fine kind of sand, which is used in the manufacture of glass. The climate of Jura is very healthy, owing to its high situation, and its exposure to the winds. There is a ferry from Kenuachtrach, or Kinuachrach, at the northern point of the island, to Craignish-point on the mainland, a distance of 4 miles, whence a good carriage-road leads to the Kintraw and Kellmelfort roads. Gaelic is spoken in the island. Population, in 1811, 1,157; in 1831, 1,312. Houses, in 1831, 251.

JURA AND COLONSAY, a parish of Argyleshire, composed of nine islands, of which that of Jura is the largest. The islands of Colonsay and Oransay, of Scarba, Lunga, Balnahaigh, and the three small uninhabited isles called the Gravelloch or Mare islands on the north of Jura, form the rest of the district. It was originally called the united parish of Killearnadale and Kilchattan: Jura forming the former, and Colonsay the latter. The islands of Gigha and Cara were disjoined from it about the year 1729. The district of Colonsay and Oransay is under charge of an assistant-minister: see *COLONSAY*. Population, in 1801, 2,007; in 1831, 2,205. Houses 404. Assessed property, in 1815, £3,598. — This parish is in the presbytery of Islay and Jura, and synod of Argyle. Patron, the Duke of Argyle. Stipend £158 6s. 8d.; glebe £12. Church built about 1776; enlarged about 1824; sittings 249. — There are two parochial schools in Jura, the masters of which share a salary of £33 6s. 8d., with a third schoolmaster stationed in Colonsay. Besides this there were, in 1834, five private schools in Jura.

\* This name is said to be, correctly, *Diura*, that is, ‘a Deer.’

East end of L'Isle, Tubiac, and (Cavennet)

## K

**KAIL.** See **KALE**.

**KAILZIE**, a suppressed parish lying on both sides of the Tweed in Peebles-shire. Two-thirds of it lying on the south bank are annexed to Traquair, and one-third lying on the north bank, is annexed to Innerleithen. The parish was suppressed in 1674. The ruins of Kailzie church stand on a streamlet which is called from it Kirkburn, and which falls into the Tweed from the south.

**KAIM.** See **DUFFUS**.

**KAIMES (THE).** See **GREENLAW**.

**KALE, KAIL, or CAYLE (THE)**, a rivulet in Roxburghshire. It rises on the south side of Fairwood-fell, a few yards from the boundary with England, in the south-west extremity of the parish of Oxnam, and, cradled among the most alpine heights of the Cheviots, continues over most of its course to be a brawling but beautiful mountain-stream. It runs first 2 miles north-eastward; and next 11 miles northward, bisecting the parishes of Oxnam, Hounam, and Morebattle; and then it flows 5 miles westward, tracing the southern boundary of Morebattle parish, sweeping past Morebattle village, bisecting the parish of Eckford, and falling into the Teviot about a mile below Eckford village. From near its source till a short way after it takes a westerly direction, it flows through "ferny howms," along a narrow, generally a pleasing, and frequently a romantic, vale, whither come laterally down among the Cheviots delightful dells and picturesque ravines, ploughed by tributary rills. It is an excellent trout-stream, and long gave the name of 'Kail-Water Sheep' to the peculiarly fine breed of Cheviots pastured within view of its banks. Miss Baillie, in supplementing a fine fragment of the Scottish Doric muse, which opens thus,—

"O the ewe-bughting's bonny, baith e'ening and morn,"—  
in the true spirit of the original sings:—

O the sheep-herding's lightsome among the green braes  
Where Cayle wimpls clear 'neath the white-blossomed slaes,—  
Where the wild-thyme and meadow-queen scent the soft gale,—  
And the cushat croods leesomey down in the dale!  
There the lintwhite and mavis sing sweet frae the thorn,  
And blithe lills the laverock aboon the green corn,  
And a' their hearts rejoice in the simmer's glad prime—  
But my heart's wi' my love in the far foreign clime!

**KALLIGRAY.** See **CALLIGRAY**.

**KAMES, or KAIMES CASTLE**, an ancient seat of the Banmatynes—but no longer in possession of that family—in the island of Bute, near the mouth of a low and fertile glen which stretches across the island from Kames bay, on which Port-Bannatyne is situated, on the east to Etterick bay on the west side of the island. In the neighbourhood may still be traced the ruins of Wester Kames castle, formerly belonging to the Spences. From an eminence in the middle of this glen, a fine view of the sea on both sides of Bute is obtained.—An extension church, called North Bute church, was erected in this valley in 1836; sittings 700; at the expense of the Marquis of Bute. A *quoad sacra* district has been attached to it. Stipend £150; glebe £10.

**KANNOR.** See **CANNOR**.

**KATRINE\* (LOCH)**, a well-known and often-

visited lake, in the Highland district of the county of Perth, beyond the great mountain-chain or barrier which separates the Highlands from the Lowlands. It is distant about 10 miles from Callander, 21 from Dumblane, and 48 from Glasgow. It is about 10 miles in length, and 2 in breadth. In its whole extent it is surrounded by lofty mountains; and it forms a receptacle for the hundreds of streams which, after rain, foam down their rugged sides, "white as the snowy charger's tail." It discharges its waters by a stream at its eastern extremity, which runs into Loch-Achray, afterwards into Loch-Vennachor, and ultimately into the Forth, about 3 miles above the bridge of Stirling. The scenery of Loch-Katrine was, comparatively speaking, but little known, notwithstanding its magnificence, till the publication of 'The Lady of the Lake;' but the splendid descriptions of that fine poem soon spread its fame as far as the English language is understood, and it is now visited by almost every stranger who makes the tour of Scotland. It may be approached in different directions; but the principal road, and that by which it is oftenest visited, is from the east, by the way of Callander. There is here a carriage-road which enters upon the eastern extremity of the lake, where its finest scenery is situated, and where we find the principal localities of Sir Walter's poem. As has been the case with every poem or tale from the graphic pen of this gifted man, the world has given almost a reality to the characters and incidents of 'The Lady of the Lake;' and the Higblanders now point out the scenery of this poem to strangers, as if it had formed one of the ancient traditions of their romantic father-land.

"Oh! who would think, in cheerless solitude,  
Who o'er these twilight waters glided slow,  
That genius, with a time-surviving glow,  
These wild lone scenes so proudly hath embued!  
Or that from 'hum of men' so far remote,  
Where blue waves gleam, and mountains darken round,  
And trees with broad boughs shed a gloom profound,  
A poet here should from his trackless thought  
Elysian prospects conjure up, and sing  
Of bright achievements in the older days,  
When chieftain valour sued for Beauty's praise,  
And magic virtues charmed St. Eilan's spring;  
Until in worlds, where Chilian mountains raise  
Their cloud-capt heads, admiring souls should wing  
Hither their flight to wilds, whereon I gaze."

The **TROSACHS**—[which see]—form a main point of attraction with strangers visiting Loch-Katrine. The road from Callander passes through the Trosachs; and they are first entered upon by the traveller, about half-a-mile west of Loch-Achray: which see. The access to the lake is through a narrow pass of half-a-mile in length, where the rocks are of a stupendous height, in some places seeming to close above the traveller's head, in others, ready to fall down and bury him in their ruins. The sides of the heights are in many places covered with aged weeping birches, which hang down their venerable locks in waving ringlets, as if to cover the bare and naked rocks out of which they seem to grow. Before the present road was formed, the lake could only be approached in this direction by what was generally termed 'the Lad-

lands, the appearance of which is wild and savage. Thus in Inverness-shire, we have *Loch-Urn*, or *Loch-Urrin*, which signifies 'the Lake of Hell;' and in Cowal, *Glenurrin*, or 'Hell's glen.' In the map by Sir Robert Gordon of Straloch, published in Bleau's Atlas, 1653, the name is spelt *Kennerin*; and in the map prefixed to the 'Itinerarium' of Alexander Gordon, published in 1727, it is spelt in the same manner.

\* It is usually called Loch-Katrine by the inhabitants of the Lowlands, who have adopted this spelling on the authority of Sir Walter Scott, the Minstrel of the lake; but it is pronounced *Keturn* or *Ketturrin* by the natives of the district. The latter portion of the name, when thus pronounced, bears a near resemblance to that of many other places on the High-

ders.' These consisted of steps very imperfectly cut out of a precipitous rocky bank, by means of which, and with the aid of ropes suspended from trees to be grasped by the hand, the adventurous and intrepid natives of this romantic land were accustomed to pass—often laden with considerable burdens—from the lower district of the Trosachs to its more elevated parts. The road has now been formed with incredible labour, partly by encroaching on the eastern end of the lake, and partly by hasting the solid rock, which rises to a great height, particularly in one place, where it shoots up perpendicularly from the water to a height of scarcely less than 150 feet. The traveller approaching from Callander, passes through the narrow defile of the Trosachs, where Fitz-James's

"Gallant horse exhausted fell ;"

and will mark the "narrow and broken plain" where Sir Walter represents the Scottish troops under the Earls of Mar and Moray to have paused ere they entered

"The dangerous glen ;"

nor will the vivid description of the scene which took place when the archers entered the defile be forgotten. No trace of a foe could at first be seen ; hut

"At once there rose so wild a yell  
Within that dark and narrow dell,  
As all the fiends, from heaven that fell,  
Had peal'd the banner-cry of hell !  
Forth from the pass in tumult driven,  
Like chaff before the wind of heaven,  
The archery appear ;  
For life ! for life ! their flight they ply—  
And shriek, and shout, and battle-cry,  
And plaids and bonnets waving high,  
And broadswords flashing in the sky,  
Are maddening in the rear.  
Onwards they drive in dreadful race,  
Pursuers and pursued."

Although this is merely the description of an imaginary fight between the Scottish troops and the men of Clan-Alpine, yet it has become so familiar to every reading mind as almost to be considered the account of a real transaction ; and we believe few now pass through the Trosachs without thinking of Roderic Dhu and his Macgregors, and those days when their cliffs oft-echoed to "dying moan and dirge's wail." The first appearance of the lake at this extremity gives little promise of the wide and varied expanse to which it stretches out as the traveller proceeds. Sir Walter has indeed well-described it here as

"A narrow inlet still and deep,  
Affording scarce such breadth of brim,  
As served the wild duck's brood to swim."

In advancing onwards, the lake is lost for a few minutes, hut it again opens with increasing grandeur, and presents new and picturesque views at almost every step as we advance. Helen's isle will immediately arrest attention. It was from this "islet rock" that, at the blast of the Knight of Snowden's hugh, started forth the little skiff which brought Helen Douglas to the "beach of pebbles bright as snow ;" and on the island was the rustic retreat where Fitz-James spent the night. It was to the same island that the women and children of the Clan-Alpine are represented to have fled for refuge :—

Moray pointed with his lance,  
And cried—' Behold yon isle !—  
See ! none are left to guard its strand  
But women weak that wring the hand,  
'Tis there of yore the rubber-hand  
Their booty went to pile ;—  
My purse, with bonnet-peeses store,  
To him will swim a bow-shot o'er  
And loose a shallop from the shore.  
Lightly we'll trace the war-wolf then,  
Lords of his mate, and brood and den !"

Forth from the ranks a spearman sprung,  
On earth his casque and corslet rung,  
He plunged into the wave.

\* \* \* \* \*  
He hears the isle—and lo !  
His hand is on a shallop's bow.  
I marked Duneraggan's widowed dame.  
Behind an oak I saw her stand  
A naked dirk gleamed in her hand ;  
It darkened ; but amid the moan  
Of waves I heard a dying groan."

In the graphic narrative which we have here quoted from the poem of Sir Walter, we have indeed but the fictions of the poet ; yet when we recollect who were the ancient inhabitants of this district, we can feel little doubt that such scenes were formerly not unfrequent during that period,

"When tooming faults, or sweeping of a glen,  
Had still been held the deeds of gallant men."

When the Clan-Gregor, or, as they were called, the Clan-Alpine, held this district, there can be no question that on this island their wives and children often sought shelter from the numerous enemies of their name ; and it is said that during Cromwell's usurpation, one of his soldiers who had swam to the island, and was about to seize one of the boats, met his doom from the hand of a woman in the manner described in the poem. But, whatever be the truth of the legends connected with it, "the mighty minstrel" has "waved his visioned wand," and they have now obtained an absolute and permanent existence in the imagination ; the island is visited by almost every stranger who makes Loch-Katrine a part of his tour ; and the wild den of Coiran-Uriskin is usually taken in the same water-excursion. A rustic hut has been erected on the island by the proprietor, in imitation of that described in the poem.

Having now fairly opened up the lake, we have more than 6 miles of water in length under the eye ; Benvenue rises high over head to the left ; and the mountains of Aroquhar terminate the prospect to the west. Gazing from some of the heights or promontories which here surround him, the stranger must, like Fitz-James, feel "raptured and amazed," and with him, may well exclaim,—

"What a scene were here  
For princely pomp or churchman's pride !  
On this bold brow a lordly tower,  
In that soft vale a lady's bower,  
On yonder meadow far away,  
The turrets of a cloister grey.  
How blithely might the bugle-horn  
Chide, on the lake, the lingering morn !  
How sweet at eve, the lover's lute  
Chime, when the groves were still and mute !  
And when the midnight-moon should lave  
Her forehead on the silver wave,  
How solemn on the ear would come  
The holy matin's distant hum ;  
While the deep peal's commanding tone  
Should wake in yonder islet lone,  
A sainted hermit from his cell,  
To drop a bead with every knell,—  
And bugle, lute, and bell, and all,  
Should the bewildered stranger call  
To friendly feast, and lighted hall !"

Whether the stranger pursues his route by the road along the northern shore of the loch, or, hiring a boat, emarks upon its placid bosom, he will continue to be delighted. Now he will behold bluff headlands, where the black rocks dip down into unfathomable water ; and now deep retiring bays, their beaches covered with white sand and gravel which has been leached for ages by the waters ; rugged and stupendous cliffs rise on every hand, waving with wood which seems to grow from the solid rock,—every crevice or cavern returns its echo,—every grove is filled with the melody of birds,—and from the far heights or distant valleys is heard the melancholy bleating of the sheep, the cry of the careful shepherd,

or the barking of his dog. The eagle at one time might be seen sitting in lonely majesty on some lofty rock, or sailing slowly high in the air, but he is now banished from the district; the heron, however, still stalks among the reeds in search of his prey, and the wild duck may be frequently seen gamboling on the water, or diving beneath its surface.—Benvenue, the highest mountain which rises from the lake, is situated on the southern shore near the east end. Its name signifies 'the Small mountain;' but this could only be applied in comparison with the loftier Benlomon and Benledi. Its height is said to be 3,009 feet. This is probably one of the most picturesque mountains in Great Britain. On its northern side it presents those immense masses of rocks which appear, on this as well as on all other mountains, to have been torn by some convulsion of nature from its summit, and hurled hellow. At one time it was finely covered for about two-thirds of its height, with alders, hitches, and mountain-ashes of ancient growth, but much of these and of the wooding of the Trosachs was cut down about 26 years ago,—a most lamentable outrage on the scenery of this fairy and classic region.—The celebrated Coir-nan-Uriskin, or 'Cave of the Gohlins,' which has been rendered venerable from Highland tradition and superstition, is situated at the base of Benvenue, where it overhangs the lake in solemn grandeur. It is a deep circular amphitheatre or hollow in the mountain, about 600 yards in diameter at the top, but narrowing towards the bottom, surrounded on all sides with stupendous rocks, and overshadowed with hirsch trees, which render it impenetrable to the rays of the sun. On the south and west, it is hounded by the precipitous shoulder of the mountain, to the height of 500 feet; and towards the east the rock appears to have tumbled down, strewing the whole slope with immense fragments, which now give shelter to foxes, wild cats, and badgers. The Urisks, from whom this cave derives its name, were supposed to be dispersed over the Highlands, each in his own wild recess; but the solemn stated meetings of the order were regularly held in this cave or den. These heings were, according to Dr. Graham, "a sort of ludicrously supernatural, who, like the Brownies, could be gained over, by kind attention, to perform the drudgery of the farm, and it was believed that many of the families in the Highlands had one of the order attached to it." The name literally means 'the Den of the wild or shaggy men;' and Mr. Alexander Campbell conjectures that it may have originally only implied its being the haunt of ferocious handitti, at one time too common in the Highlands. "But," says Sir Walter Scott, "tradition has ascribed to the Urisks a figure between a goat and a man; in short, however much the classical reader may be startled, precisely that of the Grecian satyr." Farther up the mountain than Coir-nan-Uriskin is BEALOGH-NAM-BO: which see.

As already mentioned, the only carriage-road to Loch-Katrine is by Callander, and through the Trosachs, to the east end of the lake. Pedestrians, however, often visit it by a different route. Leaving Loch-Lomond at Inversnaid, and passing the old fort of that name, they approach Loch-Katrine near its western extremity; they then cross the loch, and walk down its northern shore or take a boat, till they arrive at the east end, where they enter the Trosachs. The first sight of the lake is obtained by the traveller, who comes by this road from Loch-Lomond, at a place called Colharn, and sometimes the Garrow of Stronalachar, 2 or 3 miles from the head of the lake. From this point of view, Loch-Katrine does not present the picturesque or romantic

interest which attaches to the scenery towards its eastern end;—but there is a rude grandeur,—a lonely sublimity about it,—which at least inspires awe, and fills the mind with pleasing melancholy, though it may fail to realize the images associated with its name in our fancy. When we look upon the utter desolateness which spreads around,—the bluff headlands which project their weather-beaten fronts into the water,—the noble outline of the lofty mountains,—the bare and rugged rocks with which they are covered,—the deep ravines that form the beds of the innumerable streams which flow down their sides,—the heath-covered muirs that intervene,—and the contrasted stillness and purity of the transparent lake,—we feel that it is altogether highly characteristic Highland scenery. This upper end of the loch is within that extensive district which was anciently the country of the Macgregors; but from the greater portion of which they were, from time to time, dispossessed by their more crafty neighbours. In the fastnesses at the head of Loch-Katrine they often sought refuge from oppression; and to these they usually retired after those predatory excursions into the lowlands, to which they were prompted alike by necessity and the desire of vengeance. The well-known Roh Roy, about the year 1708, confined Graham of Killearn for three days on an island near the head of Loch-Katrine. The Duke of Montrose had, by the forfeiture of a wadset, obtained a right to dispossess Rob Roy of his property of Inversnaid and Craigrostan. In this it does not appear that there was any harshness on the part of his Grace; but Killearn, his chamberlain, had recourse to a mode of expulsion inconsistent with the rights of humanity, and had grossly insulted Macgregor's wife in her husband's absence. Roh Roy, on his return, being informed of what had occurred, withdrew from the scene of the outrage, and vowed revenge. In order to make up for the loss of his property, he regularly seized a portion of his Grace's rent; but on Killearn he took a personal satisfaction, which certainly shows the mildness of his character when we consider the habits and mode of thinking of the Highlanders of his day. The chamberlain was collecting rents at Cappeleroch, a place in Stirlingshire, when Roh Roy came upon him with an armed force, and demanded his share of the rents. For this he gave the chamberlain a receipt: and afterwards carried the unwilling gentleman to Loch-Katrine, where he kept him in durance for three days, and then set him at liberty.—Glengyle, a lonely tract of country among the hills at the upper extremity of the loch, belonged to a family of Macgregor's, who, during the time when the name was prohibited, changed theirs to Graham. Roh Roy was of this family. He was the second son of Donald Macgregor, brother to the laird of Glengyle, and a lieutenant-colonel in the king's service,—most probably in one of the independent companies raised for the internal defence of the Highlands. The family of Glengyle were descended from a fifth son of the laird of Macgregor about the year 1430. He was named *Dugald Ciar*, or 'Dugald of the mouse colour.' Dugald had two sons, of whom the youngest, Gregor Dhu, or Black Gregor, was the founder of the family of Glengyle. Roh Roy originally possessed no patrimonial estate. His father lived on Glengyle as a tenant, and latterly was tutor to his nephew, Gregor Macgregor of Glengyle, styled, in the language of the Highlands, *Gregor-Gluine-dhu*, or 'the Black knee'd Gregor,' from a black spot on his knee. The lands of Craigrostan and Inversnaid were afterwards acquired by Roh Roy; and we find him sometimes styled Robert Macgregor of Craigrostan, and sometimes Baron of Inversnaid. The name of Mac-

gregor being proscribed, Rob Roy assumed that of Campbell, from respect to the Duke of Argyre who had often protected him.

**KATRINE.** See **CATHERINE.**

**KATTERLINE, or CATTERLINE,** a suppressed parish in Kincardineshire, now united to **KINNEFF**: which see.

**KEACLOCH,** a magnificent mountain in Ross-shire, separating Loch-Gruinard from Little Loch-Broom. Macculloch says: "From this mountain there descends a torrent of great size, with a length of almost continuous cascades which I am afraid to name, lest you should think that I am saying the thing which is not. I will only call it two miles; for fear that if I said it was more, you would not believe me. This stream may indeed be considered an epitome of cascade landscape: if I were to call it a dictionary, it would be a more apt term. If it does not contain every species of waterfall, it at least possesses a type of every genus—to use the language of naturalists; and to describe it all, would be to write a general history of cascades. The forms of the rocks which accompany its course are bold, broad, and various; while the wild trees, the fantastical fir, with the aspen, alder, hirsch, oak, and ash, add variety to ornament; sometimes closing over to conceal it, at others springing solitary from the crevices of the rocks, or, hanging over the deep ravine, or else, broken by the winter storms, extending their aged trunks to form fearful bridges across the fathomless abyss. So deep is its course in some places, in the ravine which it has cut for itself, that the water is invisible; and it is only by a distant and sullen roaring that we can conjecture its presence. Pursuing the channel, a glimpse of light is sometimes seen amid the blackness of the abyss, where some unusual obstruction impedes its career; till, struggling at length towards the light, it is seen foaming and boiling among the huge fragments below, whence once more emerging into day, it resumes the more common characters of a cascade or a broken torrent. \* \* \*

In continuing the ascent, the river was soon found running along its channel, shaded with hirsch and alder, the sweetest of pastoral streams; and I almost forgot that I was three thousand feet above the sea, so tranquil and rural did every thing appear. But the change of scene was sudden indeed, when, taking a new course through a lateral valley, we found ourselves in the region of snow, on a brilliant frozen plain. As this snow could not have dissolved before the winter, it is probably here permanent from year to year. The summit of the mountain, extending to five or six hundred perpendicular feet above this point, is a rocky and narrow ridge, serrated into peaks, and of a very marked and picturesque character. Though formed of sandstone, as is the whole mountain from the very base, it has the general aspect of granite; resembling the summits of the Arran hills. Over-topping all the neighbouring land, it commands a wide extent of the interior country, displaying all the details of Loch-Broom and Loch-Greinnord, and losing itself eastward, in a series of deep valleys, ridges, and ravines, of bare white rock, characterized by an aspect of desolation not easily exceeded. The great hut desert lake, Loch-Fannich, was also hence visible; bright glittering among the rocky mountains and moors of this terrible country. Seaward, it commands the extensive group of the Summer islands; but all beyond is the boundless ocean. The effect of the valley on the west side, which separates it from Loch-Greinnord, is more striking from its vacuity than if it had displayed the utmost intricacy of form. On each side it rises in one dead and flat surface; its bottom invisible from above, and pro-

longed without apparent beginning or termination. The sense of emptiness which was produced on looking down into it, was absolutely painful: it seemed like standing on the brink of eternity. I proceeded for some distance along the giddy ridge, in hopes of seeing its termination; but all continued vacant, desolate, silent, dazzling, and boundless. Of the height of Kea Cloch I cannot speak with precision, having forgotten to bring up the barometer. But though it seems to have been completely overlooked by mapmakers and travellers, it must be among the highest mountains of the west coast, if not of Scotland; while, as it rises immediately from the sea by as steep an acclivity as is well possible, and without competitors, its apparent altitude is greater than that of any single mountain in Scotland, excepting perhaps Ben Nevis."—[*'Highlands and Western Isles,'* vol. ii. pp. 312, 315—317.]

**KEARN.** See **FORBES.**

**KEARN.** See **AUCHINDOIR.**

**KEIG, or KEIGH,** a small parish in the district of Alford, county of Aberdeen; bounded on the north by Leslie and Premney; on the east by Oyne and Monymusk; on the south by Tough and Alford; and on the west by Tullynessle and Forhes. It is skirted on the south and south-east by the river Don; on the west by a tributary to that river; and on the east by an elevated range of hills. It is nearly circular in form, and of 3 to 4 miles in diameter, consisting chiefly of hilly ground, partly pastoral and heathy, but containing a large proportion of arable and well-cultivated land, with a considerable extent of natural wood, and some thriving plantations, surrounding Castle-Forhes, the seat of Lord Forhes, which commands a beautiful view of the valley of Alford, the windings of the Don for nearly 20 miles, and the neighbouring seats and plantations. Population, in 1801, 379; in 1831, 592. Houses 126. Assessed property, in 1815, £1,262.—This parish is in the presbytery of Alford, and synod of Aberdeen. Patron, the Crown. Stipend £158 13s. 6d.; glebe £12. Schoolmaster's salary £36; fees £8, besides a share of the Dick bequest. There is a private school in the parish.

**KEILLESAY,** one of the Hebrides, in the shire of Inverness, and parish of Barra.

**KEILLS,** a fishing-village in the parish of North Knapdale, Argyleshire, upon the eastern shore of the sound of Jura. It is joined to the Argyre county road from Crinan, that terminates near it, by a road rather more than a mile in length. This is the landing-place from the Island-roads through Jura and Islay. The breadth of the ferry from Lagg, the northern extremity of Jura road, to Keills, is about 6 miles.

**KEIR,** a parish in the centre of the district of Nithsdale, Dumfries-shire. It forms a slender oblong terminating in an angle, and stretches from north-west to south-west. On the north it is bounded by Penpont; on the north-east by Closeburn and Kirkmahoe; on the south by Dunscore; on the south-west by Glencairn; and on the north-west by Tynron. Its greatest length, from the boundary opposite Penpont village on the north-west to the confluence of the Nith and Allanton burn on the south-east, is 6½ miles; its greatest breadth, from the Nith at its own church on the north-east to an angle a mile distant from Glencairn church on the south-west, is 2½ miles. But, as it dwindles to a point at the south-eastern extremity, and has not an average breadth of quite 2 miles, its superficial area is only about 11 square miles. Shinnel water, coming in from Tynron, forms for 1½ mile the north-western boundary. Scaur water, drinking up the Shinnel, and flowing between picturesque banks, forms for 2½

miles the houndary on the north and north-east. The river Nith, devouring the Scaur, and strong in the attractions of river-beauty, traces the north-eastern houndary over  $4\frac{3}{4}$  miles to the south-eastern extremity. Allanton burn rises in the interior, flows a mile southward, traces over  $2\frac{1}{2}$  miles the southern houndary, and then loses itself in the Nith. Six rills, each about  $1\frac{1}{2}$  mile in length, rise in the interior, and flow almost in parallel lines, and nearly at regular intervals, eastward or north-eastward, to the Nith and the Scaur. All the rills beautify the face of the country, and fling verdure and herbage on their banks; and one of them traverses a romantic and exquisitely wooded ravine, and forms, during its frolicsome course, a remarkably beautiful cascade. Springs are everywhere abundant; and two small lakes, both nearly drained, and converted into luxuriant meadow, spread out their treasures on the opposite side of the parish to that watered by the Nith. Along the south-western verge of the parish stretches, for 4 miles, a height called Keir hill, rising probably 800 or 900 feet above sea-level. A continuation of it, called Capenoch hill, trends a little into the interior on the north. South-east of the southern extremity of Keir hill rise the short parallel ridges of Kilhride and Blackwood hills. Along the banks of the Scaur and the Nith the surface is a rich fertile holm, and thence it ascends in a steep wooded-hank, in a table land, and in a somewhat rapid acclivity to the summit of Capenoch and Keir hills. The table-land over most of the distance is of considerable breadth; and, being all of alluvial soil, appears to have been anciently the bed of a large lake, formed by the Nith before the river ploughed its way through a hilly obstruction on the south; and afterwards it glides up into the gentle slope of Kilhride hill, and finally—along with the holm and the intervening hank—becomes lost in Blackwood hill, which presses close upon the Nith. Most of the parish is thus a variegated and regular descent from a hilly summit over a base of  $2\frac{1}{2}$  miles to the Nith; and seen from the highway between Glasgow and Dumfries, as the road leaves the village of Thornhill, and runs down the parish of Closeburn, it presents a picture of no common beauty; and when the road closes in upon the river, and at last crosses into the parish at its southern extremity along the famed Auldgrith hridge, the scenes of picturesque and profuse attraction presented by Blackwood hill, and the narrowed vale of the river, and the adornings of wood and water, are singularly varied and delightful. But fine as the landscapes are which the parish exhibits, they are very secondary both in power and in expansiveness to those which higher grounds command. Blackwood hill, in particular, lifts the eye along all the brilliant and exulting valley of the Nith from Drumlanrig castle to the Solway, giving to the view all the richest part of both upper and lower Nithsdale, screened at one extremity by the central mountain-chain of the lowlands of Scotland, and, at the other by the mountains of Cumberland. The lower grounds of the parish are abundantly tufted both with natural wood and with plantation. Sandstone and limestone are abundant; and the latter is worked in two localities. Leeches are found in a lochlet near Keir-mill, and are sometimes sold to the apothecary. One-half of the parish is arable; and the other half is distributed into pasture, meadow, and woodlands. The mansions are Capenoch on the north; Blackwood on the Nith, at the base of Blackwood hill; and Barjary,  $2\frac{1}{2}$  miles above the latter, and half-a-mile from the Nith. On the demesne of Barjary are two remarkable trees,—one an oak, supposed to contain upwards of 800 feet of timber,—

and the other a silver fir, 10 feet in girth, upwards of 90 feet in height, and sending off pendulous branches, which form a natural arbour around its stem. Two hamlets, Keirmill and Barjary, stand in the vicinity respectively of the parish-church, and Barjary house. The road from Dumfries to Penpont runs over the whole length of the parish near the Nith and the Scaur; the Glasgow and Dumfries turnpike runs for half-a-mile through its southern extremity; and the road from Penpont to Minnihive runs a mile closely within its western houndary. Population, in 1801, 771; in 1831, 1,804. Houses 183. Assessed property, in 1815, £3,675. —Keir is in the presbytery of Penpont, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £233 1s. 7d.; glebe £18. Unappropriated teinds £87 18s. 5d. The parish-church, a neat edifice, built in 1814, is situated on the Scaur, a mile from the northern houndary. Sittings, about 450. There are two parochial schools, attended by an average of 135 scholars. Salary of each school-master £25 13s. 4d., with, in one case, £21 fees, and £3 15s. other emoluments; and, in the other case, £22 fees, and £2 other emoluments. A non-parochial school, attended by 22 scholars, is taught in the summer months by a female. Keir church appears anciently to have belonged to some monastery. On Kilhride hill once stood a chapel, every vestige of which has disappeared. A rankly luxuriant spot, very distinguishable from the circumjacent ground, is believed to have been the site of the cemetery.

KEISS, a *quoad sacra* parish in Caithness, composed of parts of the parishes of Wick and Canishay, and constituted in 1833 by the General Assembly. It is above  $5\frac{1}{2}$  miles in length, by 5 in breadth.—Population, 1,047. Church built by the Parliamentary commissioners in 1827; sittings 338; cost £1,500; stipend £120, paid by Government. There is a small Baptist congregation in the parish.

KEITH,\* a parish in the county of Banff, bounded on the north by Rathven and Desford; on the east by Grange and Cairney; on the south by Cairney; and on the west by Botriphine and Boharm. The river Isla enters the parish on the south, and runs northwards, between the town of Keith and Fife-Keith, to an artificial cut, through which, partly, it is continued, in a more easterly direction, to its junction with the Altmore burn, which skirts the parish on the east. This parish stands in the fertile district of Strathisla, the greater part of which it comprehends; and, though situated nearly in the centre of the county, it stretches from the eastern to the western houndary, this being one of the narrowest parts of the latter. The form of the parish is elliptical, and its average diameter about 6 miles. It anciently extended from Fordyce to Malloch, comprehending all the fertile lands watered by the Isla. No parish in the north of Scotland contains a more extensive or fertile tract of arable land than is still comprised in Keith. This choice district anciently belonged to the abbots of Kinloss, to whom it was granted by William the Lion; and it yielded them a heavy rental, even in the 16th century, when it was very ill cultivated. The soil is chiefly loam and clay, with some of a lighter quality. It is almost all in a high state of cultivation, chiefly effected since the period of the revolutionary wars. There are fine plantations on the estates of some of the principal pro-

\* The name of this parish is said to be derived from the Gaelic word *ghaith*, 'the wind,' pronounced somewhat similarly to Keith. The locality of the old village and kirk is peculiarly exposed to gusts of wind, and is called Arkeith, "an evident corruption of the Gaelic words *Ard Ghaith*, pronounced *Ard Guit*, and signifying 'high wind.' This etymology is also supported by the ancient manner of spelling the name,—in some old charters it is written *Gith*, which still more resembles the word *ghaith*."

prietors: these were principally laid out by the Earls of Fife and Seafield. Near the old village of Keith the Isla forms a fine cascade, called the 'Linn of Keith.' In this vicinity are the ruins of a castle once the seat of the family of Oliphant. Several Druidical circles have been found within the parish. Near two of these are fountains of excellent water, formerly supposed to be possessed of sanative properties, and to one of which, in the memory of individuals living at the date of the Old Statistical Account, the superstitious resorted, and made offerings, for the restoration of health. "At a place called Killiesmont, in this parish," says Chambers, "there is one of those pieces of ground sometimes found in Scotland, variously known by the name of 'the Guidman's craft,' or 'the Gi'en rig,' that is, given or appropriated [on a principle reminding one forcibly of the 'Taboo' among the New Zealand savages] "to the sole use of the Devil, in order to propitiate the good services of that malign being. This piece of land is on the southern declivity of a lofty eminence. At the upper end of the ridge there is a flat circular stone of about 8 feet in diameter, in which there are a number of holes, but for what purpose tradition is silent. Like other crofts of this description in Scotland, the present remained long uncultivated, in spite of the spread of intelligence. The first attempt to reclaim it was made not more than 50 years since, when a farmer endeavoured to improve it; but, by an accidental circumstance, it happened that no sooner had the plough entered the ground than one of the oxen dropped down dead. Taking this as an irrefragable proof of the indignation of its supernatural proprietor, the peasant desisted, and it remained untilled till it came into the possession of the present occupant, who has had the good taste to allow the large flat stone to remain, a memorial of the idle fancies of preceding generations."—There are five distinct villages or towns in this parish, namely, Old Keith, New Keith, and Fife-Keith, described under the following article, and the old and new town of Newmill. In these towns flax-dressing, weaving, bleaching, tanning, distilling, and other manufacturing operations, are carried on. There are several lime-works in the parish, and a grey variety of fluor spar, one of the rarest of our Scottish minerals, has been found associated with green antimony in calcareous spars. Population of the parish, in 1801, 3,284; in 1831, 4,464. Houses 890. Assessed property, in 1815, £6,641.—Keith is in the presbytery of Strathgogie, and synod of Moray. Patron, the Earl of Fife. Stipend £221 17s. 11d.; glebe £20. Unappropriated tithes £574 5s. 11d. Church built in 1819; sittings 1,650. There are also in the parish an Episcopalian congregation; chapel built in 1807; sittings 150; and two congregations of the United Secession; chapels built respectively in 1780 and 1801; sittings 450 and 480: the stipend of the first is £80, and of the last £90 per annum. There is also a Roman Catholic congregation.—Schoolmaster's salary £34; fees and other emoluments £90; besides £16 14s. derived from a school-endowment founded in 1648, and now conjoined with the parochial school; and the interest of a sum of £500, recently bequeathed by the late Dr. Simpson of Worcester. There are 21 schools not parochial. The celebrated natural philosopher James Ferguson was a native of this parish.

KEITH, a town in the above parish, divided into the three distinct villages of Old Keith, New Keith, and Fife-Keith, all situated on the banks of the Isla, surrounded by hills, and 8 miles east by south of Fochabers, 12 south of Cullen, 17 east-south-east of Elgin, and 20 south-west of Banff. Keith is one of the principal towns in the county. Old Keith is at

least 500 years old; but its origin is unknown. By its trade and jurisdiction of regality, it was, at one period, superior in consequence to Banff, Cullen, and Fordyce, then the only other towns in the county. The court-of-regality sat in the church, and judged of pleas in general, civil or criminal, even including the four Crown pleas. Some of the regality harons generally assisted the haille, as his assessors. The panels were put for trial into a window still called 'the Boss window,' and were committed, on conviction, to the steeple, as a jail. In capital convictions they were executed on the hill where New Keith has since been built. The old town appears to have corresponded in magnitude to the extent of its judicial authority, stretching along the Isla to a considerable length. Early in last century it was celebrated for 'the Summer-eve fair,' still held, but then one of the greatest fairs in Scotland, lasting a week in the middle of September, and resorted to by multitudes so great, "that the place was by no means fit to contain them, and they lay by dozens, male and female together, for miles round the whole country." Being built in a very irregular and inconvenient manner, the old town was gradually abandoned; dwindling, latterly, into a mean hamlet. During the civil wars of 1645 and 1745, Old Keith was the scene of events meriting some notice. On the 30th June, 1645, the army of Baillie occupied an advantageous position near the old church, which then stood at the south-western extremity of the town. Montrose endeavoured to draw him from this position by offering to fight 'on fair ground,' but the Covenanter declined the proposal. In 1745 Captain Glasgow, an Irishman in the French service, encountered a Government party stationed here, defeated them, and carried off 150 prisoners. The only other skirmish recorded by tradition to have occurred in this vicinity, was about a century before this period, when Peter Roy Macgregor, a Highland free-hooter who infested this part of the country with an organized gang of robbers, was taken by Gordon of Glengerack, after a desperate resistance, and executed at Edinburgh.

NEW KEITH was begun to be built about the year 1750, on the eastern declivity of a gentle eminence south-east of Old Keith, on the same side of the Isla, and then forming part of a barren moor. It is built on a regular plan, consisting of five principal streets, intersected by lanes, with the market-place, a spacious square near the centre of the town. Houses, with Old Keith, 371. The court-house, situated in the market-place, was out of repair at the period of the municipal inquiry,—it is a plain building. In 1823 the Earl of Seafield, superior of the barony of Keith, erected a commodious inn, containing a large hall for the courts. The parish-church is an elegant edifice, with a tower 100 feet and upwards in height, and a clock and bell. The Episcopal chapel, the two Secession meeting-houses, and the Roman Catholic chapel, noticed above, are all in the town of New Keith,—there is also a Methodist chapel, but no minister. The Roman Catholic chapel is an elegant and much admired edifice, in the Roman Doric style of architecture, after the beautiful model of St. Maria-de-Vittoria, at Rome,—the interior is tastefully ornamented, and contains a splendid altar-piece,—subject, The Incredulity of St. Thomas,—presented, in 1828, by Charles X. of France, by whose principal artist it was painted on purpose. A subscription-library, containing an excellent and extensive collection of miscellaneous works, was established in 1810. The parochial school, situated in New Keith, is of considerable repute, having long been celebrated as an initiative seminary for youths intended for the university.

Though not a burgh, Keith was visited by the municipal commissioners, who reported that "the inhabitants are generally extremely desirous to have a constitution, and a regular system of magistracy and police, which they state is the more necessary from the distance and little intercourse between Keith and the county town of Banff." The streets were not lighted, nor was water conveyed into them, and the side-streets and bye-lanes were neglected. The fears of that part of the town situated within the barony of Keith, or Ogilvie, property of the Earl of Seafield, were hound, by their feu charters, to assist the Earl's bailie, or chamberlain, in maintaining a few simple police regulations, and to obey all the bailie-court decrees, and "keep their houses and gardens in decent repair, conform to the regulations of the royal burghs of Scotland," &c. Besides some manufactories of woollen, and others above noticed, there are also two establishments, in New Keith, for the manufacture of tobacco, and a snuff-mill,—the only one north of Aberdeen, except one at Inverness. A considerable trade in yarn and linen manufactures was carried on here, till the general introduction of the cotton manufacture. There are three branch-banks in the town, viz., the Aberdeen Commercial, the Aberdeen town and county, and the National. There is also a Savings' bank. A weekly market is held on Friday for grain and other agricultural produce; and there are four annual fairs, two of which are important cattle-markets. Summer-eve fair is still by far the greatest fair in the North for cattle and horses.\*

FIFE-KEITH has risen since 1816. It is situated on the northern bank of the Isla, opposite Old Keith, and consists of a principal street, on the high road from Aberdeen to Inverness; three other streets running parallel, north and south; a neat square in the centre of the town; and a handsome crescent

\* Keith is the point whence cattle-dealers calculate the commencement of the journey of their cattle from the North to Barnett fair, the great metropolitan market, on the Great North road, in the vicinity of London, this point being in a manner a key to the Highlands of the north of Scotland and the fertile plains of Morayshire. The journey from Keith to Barnett occupies 34 days,—the average number of miles travelled each day being 16. The cattle and horses are collected in the north of England and in Scotland, in the early part of the season. Upwards of 45,000 head of cattle, and 10,000 horses change owners at this fair. Since the introduction of steam-vessels to the northern parts of Scotland, especially the Moray firth, the transit of cattle to the metropolis has become a matter of easy accomplishment, but it will be a long period before journeys by land be superseded. It is a question if the old system be ever totally done away with, as the following description of the route and method of accomplishing it will show: besides, many of the cattle are purchased at markets in the interior of the country, and the easy progress of the animals in their journey southward improves their condition previous to their being submitted at the London market. The majority of the dealers who attend Barnett fair reside in some of the rich and fertile counties on the borders of England and Scotland, and when the opening spring and genial April showers supply a store of provision. These enterprising men proceed northwards, in some instances as far as the Kyle of Sutherland, before they commence operations. As their progress southward they visit the Muir of Ord, and collect as they proceed through the eastern parts of Inverness and Nairn, Moray, Banff, and Aberdeen shires, the small but beautiful Highland breed of cattle purchased during the previous season by the agriculturists of these districts. The markets are so excellently arranged throughout Scotland, that by the time the dealers meet at Falkirk they have generally collected a very large stock. The cattle are then formed into lots of about 1,000 each, and intrusted to a number of Scottish drovers, and the dealer sees no more of them until he meets the whole at Barnett. The pay of a drover is 2s. per day, and the expense of his bed. When he crosses the Tweed he is allowed what is termed night-wages, to the amount of 1s. extra from the owner, and 1s. from the grazier who supplies food for the cattle. The amount realized by a drover, for the whole journey, is about £8, and from 10s. to 15s. for return money. The majority of the drovers return by land, in parties of 20, and accomplish the distance in 13 days, at an average expense of 1s. per day, including food and lodging. And yet one of these men, whose whole wardrobe would not fetch 4d. in Rosemary-lane, is intrusted with from £700 to £800 to pay the expenses of the food required by the cattle, and the tolls to be passed during the journey. The number of Scottish drovers visiting Barnett fair annually is about 1,500.

facing the Isla, over which there are here two bridges connecting Fife-Keith with Old Keith. The number of houses in Fife-Keith, in 1831, was 110. The number contained in the united villages of Keith and Fife-Keith was 481,—at the period of the municipal inquiry about 509; the number of inhabitants about 2,500. The number of persons then registered as voters in the county, in respect of feu tenements, was about 40, and nearly 20 more were qualified. There were about 30 tenants of houses at £10 and upwards of rent.

KEITH-HALL AND KINKELL, two united parishes in the district of Garioch, county of Aberdeen, on the north-eastern banks of the Don, and its tributary the Urie, at their junction, and bounded on the north by Bourtie and Udny; on the east by New Machar and Fintray; on the south by Fintray; and on the west by Kintore and Inverury. The parish is of an oblong form, about 6 miles in length from north to south, by 5 in breadth.† The district is hilly, though not mountainous, and the soil is various; being generally fertile on the western side, towards the rivers, but inferior towards the east. There are several extensive mosses; but some parts otherwise unfruitful are now under thriving plantations, and agriculture is in an improved state,—good crops of oats, harley, pease, turnips, and potatoes, being raised. The district has been much benefited by its vicinity to the canal between Inverury and Aberdeen. Keith-hall, the seat of the Earl of Kintore, and Balhithan, are adorned with plantations of considerable extent and containing some fine old trees. There are remains of Druidical temples at Balhithan, and elsewhere in the parish. Numerous cairns have been found scattered over Kinnuck-moor, and localities are still pointed out where warlike operations have occurred between the Scots and Danes, the field of battle, on one occasion, having extended over the whole parish. "The famous Johnston, next to Buchanan the best Latin poet of modern times," says the author of the Old Statistical Account, "was born at Caskiebean, which he celebrates. He mentions a curious fact, viz., that the shadow of the high mountain of Ben-ochie, distant about 6 English miles, extends to the house of Caskiebean, at the equinox. The High Constable of Dundee, Scrimgeour, who fell at Harlaw, was buried at Kinkell, and has a Latin inscription on his monument, ill preserved. Many others, who fell in this battle, are said to have been buried at Kinkell, which was the principal church in that part of the county. Tradition also speaks of an eminent woman, 'The Lass of Patie's mill.' Her maiden name was Anderson. A great-grandson of hers, aged 89, and a number of her descendants, reside in this district, and in the parishes of Kinnellar and Dyce. Her father was proprietor of Patie's mill in Keith-hall; of Tulliekearie in Fintray; and Standing-stones in the parish of Dyce. From her beauty, or fortune, or from both causes, she had many admirers; and she was an only child. One Sangster, laird of Boddum, in New Machar parish, wished to carry her off, but was discovered by his dog, and very roughly handled by her father, who was called 'black John Anderson.' In revenge he

† The ancient name of one of the parishes was Montkeggie,—origin and etymology unknown. Kinkell retains its old name, derived from the Gaelic, and signifying 'the head or principal church,' a name appropriated from the circumstance of six inferior parishes having originally belonged to the parsonage of Kinkell. The authority for the modern name was derived from the Lords Commissioners for the plantation of kirks, who, in 1754, disjoined about one-third of the parish of Kinkell, and annexed it to Kintore. The other two-thirds they annexed to Keith-hall or Montkeggie; and they appointed that these parishes should henceforth be called the united parishes of Keith-hall and Kinkell.

wrote an ill-natured song, of which her great-grand-son remembers these words :

Ye'll tell the gowk that gets her,  
He gets but my auld sheen.

She was twice married; first, to a namesake of her own, who came from the south country, and is said to have composed the song, to her praise, that is so generally admired, and partakes much of the music which, at that time, abounded between the Tay and the Tweed. Her second husband was one James George,—and she had children by both. Like most other beauties, she was unfortunate. Her father killed a man in the burgh of Inverury; and was obliged to fly to Caithness, or Orkney, where his uncle was bishop. His flight, and the expense of procuring a pardon, ruined his estate." This is the tradition.—"But, perhaps," adds the same writer, "the Lass of Patie's mill may be claimed by as many parishes of Scotland as Homer's birth-place was by the cities of Greece." It is only certain that, in this district, there was a young woman, heiress of Patie's mill, who was lampooned by a disappointed lover, and praised by a successful one." The parish of Galston in Ayrshire also claims the Lass of Patie's mill.—This parish is in the synod of Aberdeen, and presbytery of Garioch. Patron, the Earl of Kintore. Minister's stipend £216 17s. 11d.; glebe £30. Unappropriated teinds £42 14s. 11d.—Schoolmaster's salary £30; fees and other emoluments £40. There is a private school in the parish. Population, in 1801, 853; in 1831, 877. Houses 172. Assessed property, in 1815, £2,019.

**KEITH-HUNDEBY.** See **HUMBIE.**

**KEITH-INCH**, a promontory in the parish of Peterhead, county of Aberdeen, constituting the most eastern point of land in Scotland, and bounding the bay of Peterhead on the north. The name is given to the whole of the small island which divides the town of Peterhead from the sea; and the town itself, in the charter-of-erection by George Earl Marischall, in 1593, is named Keith-Inch, alias Peterhead.

**KEITH-MARSHALL.** See **HUMBIE.**

**KELLO WATER**, a rivulet of Dumfries-shire. It rises on the north side of Torryburnrig on the boundary with Ayrshire, traces that boundary  $1\frac{1}{2}$  mile northward, and then runs  $4\frac{1}{2}$  miles eastward, and  $1\frac{1}{2}$  north-eastward, between the parishes of Kirkconnel and Sanguhar, and falls into the Nith  $1\frac{1}{2}$  mile below the village of Kirkconnel. Over its whole course it is strictly a mountain-stream.

**KELLS**, a parish—the south-western one in the district of Glenkens—in the northern division of Kirkcudbrightshire. Its form is not dissimilar to that of a flying kite, the triangular part elongated and pointing its terminating angle to the south-east. Its greatest length, from the boundary a little above Craig-Nilder on the north-west, to the confluence of the Dee and the Ken on the south-east, is  $16\frac{1}{2}$  miles; and its greatest breadth, from the confluence of the Ken and the Carsphairn on the north-east, to the confluence of the Dee and Cooran-Lane on the south-west, is  $9\frac{1}{2}$  miles. Five miles before its confluence with the Dee the Ken begins to expand to a width of from  $\frac{1}{4}$  to  $\frac{3}{4}$  of a mile, which it maintains till it leaves the parish, and is continued southward under the name of the Dee. The expanded part of the river is called **LOCH-KEN**: which see. In the northern division of the parish are three lakes—Loch-Harrow, Loch-Minnick, and Loch-Dungeon, the last and largest  $\frac{3}{4}$  of a mile in length—which greatly abound in trout. In the south are Stroan-loch, formed by the expansion of the Dee on the boundary and Black-loch, midway between this and Loch-Ken, which, besides being stored with trout, perch, cel, and sal-

mon, produce pike of very large size. The head of a pike caught with the rod, and weighing 57 pounds, was long preserved at Kenmuir castle; and frequently some are taken of from 20 to 30 pounds weight. "There is a fishing in this parish," says the Old Statistical Account, "claimed as no man's property, that cannot be easily estimated. I mean a pearl fishery. In dry summers great numbers of pearls are fished here; some of great size and fine water, and are sold from 1s. to £1 1s. according to their size and beauty." The flat expanse of land at the head of Loch-Ken, enriched by the overflowings of the river—which here diffuses its alluvial wealth in the manner of a mimic Nile—is probably unsurpassed in its fertility by any 'perpetual soil' in Scotland. So late as 50 years ago, when it owed comparatively little to the dressings of modern improvements in agriculture, some of it had been cropped 25 years successively without other manure than the Ken's deposits. The whole vale of the Ken, in its screen or back-ground of flanking hills, in the undulations and ravines of its slopes, in the verdant carpeting and sylvan adorning of its plain, and in the sumptuousness of its mansions and demesnes and the beautiful meanderings of its river, affords a series of scenic views abundantly rich enough to vindicate the fame which the district of Glenkens has acquired for its landscapes. Over 5 miles from the southern extremity is the fine scenery which overhangs **LOCH-KEN**; and over another mile northward are the attractive groupings around **KENMORE-CASTLE**, and the burgh of **NEW GALLOWAY**: See these articles. Two miles to the north a richly cultivated tract opens to the view, enclosed in the form of an amphitheatre by the circumjacent hills. On the east side of the river, in the continuous parish, the widely expanded village of Dalry, with its verdant crofts, and its tracery of hedges and rows of trees, looking in the perspective like a town of villas sprinkled among gardens, looks down from the brow of a rising ground; and on the west side, or within Kells, are the house of Waterside, the wooded vale of Combe burn coming down to the Ken, the neat farm-stead of Glenlee seated amidst a fantastic sprinkling of trees, the picturesquely situated mill of Glenlee, and, at a small distance below, the house and ornamented grounds of Glenlee-park. Even before Sir Thomas Miller of Glenlee, lord-president of the court-of-session in the latter part of last century, improved and decorated his grounds, they possessed many delightful dashes of natural wild beauty; and, after passing beneath the tasteful touches of his hand, and acquiring additional feature from the enlargement of his mansion, they became one of the finest spots in the south of Scotland. These grounds rise with a very gentle slope from the Ken, waving in varied inequalities of surface, and bearing aloft crowns and wreathings of plantation on the summits or round the brows of their knolly heights. Their northern boundary is a burn of two headwaters, each 3 or 4 miles in length of course, which, in two places within the grounds, falls in fine cascades over ledges of rock. When the stream is swollen by rains the appearance of the cascades so amazes the eye, and the noise of their fall so stuns the ear, as to raise emotions of sublimity and terror. A pool which receives one of them is fancifully called by the neighbouring peasants Hell's hole, and, on account of its great depth, is fabled by them to be bottomless. The banks of the stream abruptly rise, in some places, to a considerable height, and hang out umbrageous coverings of trees and underwood over the current. Three miles north of Glenlee another range of interesting scenery opens before the tourist up the Ken. The houses of Barskeech, Stran-

fasket, Knoeknalling, and Earlston, with their green parks and beltings of wood, lie under the eye, all very nearly from one point; Pollharrow burn, the largest of the minor streams of the parish, comes down with wooded banks between two of these seats; the Ken, rippling along its narrow plain, has put on the attractions which draw favour upon it as it advances; and the hack-ground of upland scenery recedes in the north-west into the cloud-cleaving Rhinns of Kells, the highest mountains in Galloway. North-west of this spot, but south of the Rhinns, and in the interior of the parish, are stunted remains of an ancient and very large forest, supposed to have been originally a hunting-ground of the lords of Galloway, and adopted as a royal forest by the dynasty of Bruce. Two large farms on the locality have the names of the Upper and the Nether Forest; and remaining patches of wood, and a large expanse of meadow, are still called respectively the King's forest and the King's holm. Deer anciently abounded in the forest, and were remembered to have been seen scouring the moors in flocks by persons alive toward the close of last century, but were exterminated about the year 1786.—All the surface of this extensive parish, except in the parts we have noticed, is wildly upland, and at intervals repulsively dreary in aspect,—presenting none but tawny prospects to the eye, morasses, wide tracts of heath, pervading congeries of craggy hills, here and there a rivulet, and, few and far between, chilled and desolate-looking farm-houses. On the south-west side, from the old bridge of Dee, 5 miles south-eastward to a point opposite the head of Loch-Ken, stretches a range of high hills, which press close upon the Dee, and have a breadth or base of 3 miles inland. These hills are one solid mass of granite, almost naked, but occasionally patched with heath; and on their slopes, as well as on the flat grounds at their base, for about a mile on the south-west, are detached blocks of granite, many of them 10 tons in weight, and all lying so thickly that a pedestrian might almost make his way along the surface by stepping from stone to stone. On the north-west and north sides of the parish extend for about 9 miles the Rhinns of Kells, visible at 40 miles' distance, capped with snow during eight and sometimes nine months in the year, carpeted on their lower acclivities with coarse grass, and stretching at mid-distance between the western and eastern seas of Scotland. On the side of one of these hills is a rocking-stone 8 or 10 tons in weight, so poised that the pressure of a finger may move it, and so positioned that the united force of a considerable number of men could not hurl it from its place. The stone resembles the famous one at Stonehenge, and others of less celebrity in Perthshire. Whether it is a natural curiosity formed by the scooping away of a soft stratum beneath through the attritions of the elements, or an instrument of priestcraft laboriously chiselled and elevated on its position in an age of darkness for overawing devotees, is a question which men have keenly debated.—To effect the agricultural improvement of various districts, but chiefly of Kells, in the latter part of last century, Mr. Gordon of Greenlaw, the sheriff of the county, not only encouraged the draining of Castledouglas-loch, which lies  $7\frac{1}{2}$  miles distant from the confluence of the Ken and the Dee, and was surpassingly rich in its store of shell marl, but at his own expense cut a canal of 3 miles in length to the Dee, and constructed a number of flat-bottomed boats for the portation of the valuable manure. Nearly the whole improveable part of the parish began suddenly to wear a totally renovated aspect; and when marl could no longer be obtained, so aroused were the population from the slothful prac-

tices of a former age to the enterprising habits of keen improvers, that they found means, in the form of lime and other aids, to maintain a luxuriance in the arable stripes among their wild hills, which may almost compare with the fertility of the most favoured and best cultivated districts of Scotland. The great body of the parish, however, necessarily either lies waste, or affords pasture to large flocks of sheep, and to numerous herds of the celebrated Galloway breed of black cattle.—In a rocky hill near the southern extremity is abundance of iron ore; but, owing to the dearth of fuel, it is not worked. Near the northern extremity, in the hill-screen of the Ken, was formerly a quarry of excellent slate. On the Glenlee and Kenmore estates is lead ore; and near a mine which was commenced on the former, but never extensively wrought, are appearances of copper.—The turnpike from Kirkcudbright to Ayrshire traverses the whole length of the parish up the vale of the Ken, and that from Dumfries to Newton-Stewart traverses  $6\frac{1}{2}$  miles from east to west,—the roads intersecting each other at the hurgh of New Galloway. Population of the parish, in 1801, 778; in 1831, 1,728. Houses 190. Assessed property, in 1815, £4,496.—Kells is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, the Crown. Stipend £299 9s. 8d.; glebe £12. Schoolmaster's salary £34, with £30 fees. The ancient church or rectory of Kells, situated in the archdeaconry of Galloway, was given in free alms by Robert Bruce to Gilbert of Galloway, the archdeacon, and appended to the archdeaconry; but, early in the 16th century, it was transferred by James IV. to the chapel-royal of Stirling; and it continued to be one of its prebends till the Reformation. In 1640 a large section of the ancient parish on the north was detached, and, along with a section from Dalry, erected into the parish of Carsphairn. New Galloway in Kells was the birth-place of Robert Heron, the editor of Sir John Sinclair's Statistical Account of Scotland, and the author of numerous works, carelessly written but indicative of high genius, who makes an unenviable figure in D'Israeli's Calamities of Authors. Heron was for some time a parochial schoolmaster of the neighbouring parish of Kelton.

KELLY-BURN, a small rivulet on the north-east extremity of Ayrshire, the boundary, in that quarter, betwixt it and Renfrewshire.

KELSO, a parish in the north-east division of Roxburghshire; bounded on the north by Nenthorn in Berwickshire; on the north-east by Ednam; on the east by Sprouston; on the south-east by Eckford; on the south-west by Roxburgh; and on the west by Makerston and Smallholm. Its extreme length, from a point where it is touched by Eden water on the north, to an angle a little south of West Softlaw on the south, is  $4\frac{3}{4}$  miles; and its extreme breadth, from an angle on the Tweed below Sharpitlaw on the east, to an angle beyond Wester Moordean on the west, is  $4\frac{1}{4}$  miles. But it is extremely irregular in outline, contracts to a point on the south, has an average breadth of not more than  $2\frac{1}{2}$  miles, and measures, in superficial area, only about 4,400 imperial acres. The Tweed comes in on the west, forms for a mile the boundary with Roxburgh, makes large bends for 2 miles till it passes the town, and then goes away  $1\frac{1}{2}$  mile north-eastward to the point of its leaving the parish. The Teviot, after tracing for  $\frac{3}{4}$  of a mile the western boundary, comes in at a point only  $\frac{1}{4}$  of a mile south of the Tweed, and, vying with it in the curving beauty of its course, and the sumptuous richness of its scenery, so coyly approaches as not to make a confluence till opposite the town, a mile below the point of entering. At

the average distance of  $1\frac{3}{4}$  or 2 miles from the Tweed, and nearly parallel with it, runs the Eden; hut it merely touches a projecting angle, and passes on, serving chiefly to give the northern division of the parish a peninsular character. The Tweed, in its transit, averages about 440 or 450 feet in width, and the Teviot about 200. The two rivers are sometimes simultaneously flooded, and run together in headlong and riotous confluence, combining the might of their swollen and careering waters to introduce to the generally tranquil and smiling scene the elements of sublimity and terror. Immediately below their point of junction was recently an opulently wooded islet, which lay like an emerald gem on their bosom, and contributed a feature of striking interest to a sumptuously clothed landscape; and this, in spite of the efforts of the town's people to bulwark it by rude masonry, they have at various periods torn up and discovered, till only some tiny fragments remain, soon probably to follow the main body of the islet as trophies of the rivers' prowess. The Teviot—more subject to floods than the Tweed, and nearer the mountain-land where its waters are gathered, and occasionally liable to rise with a suddenness which in 10 or 15 minutes will increase fourfold its volume—frequently comes down in red wrath upon the quiet Tweed, drives up its pellucid waters against the north side of their common channel, and for some distance pursues a distinct course along the south side before a commingling of waters is effected. The point of confluence, with its intervening peninsula, is one of the loveliest in Scotland; hut is marred in its beauty by a mill-lead carrying off from the Teviot a considerable body of its wealth, just where all its opulence is most needed, to make a suitable approach to the magnificent monarch-river to which it pays tribute. Half-a-mile south of the town, the Woodens, a rill of about a mile in length of course, joins the Tweed from the south, making at one point a tiny but very beautiful cascade, and flowing along a wooded and romantic ravine. Seen from the heights of Stichel 3 miles to the north, the whole parish appears to be part of an extensive and picturesque strath,—a plain intersected by two rivers, and richly adorned with woods; but seen from the low grounds close upon the Tweed, near the town, it is a diversified basin,—a gently receding amphitheatre,—low where it is cut by the rivers, and cinctured in the distance by a boundary of sylvan heights. On the north side of the Tweed it slowly rises in successive wavy ridges, tier behind tier, till an inconsiderable summit-level is attained; and on the south side, while it generally makes a gradual rise, it is cut down on the west into a diverging stripe of lowland by the Teviot, ascends, in some places, in an almost acclivitous way from the banks, and sends up in the distance hilly and hard-featured elevations, which, though subject to the plough, are naturally pastoral. The whole district is surpassingly rich in the features of landscape which strictly constitute the beautiful,—unmixed with the grand, or, except in rare touches, with the romantic. The views presented from the knolly height of Roxburgh castle, and from the immediate vicinity of the Ducal mansion of Fleurs, are so luscious, so full and minute in feature, that they must be seen in order to be appreciated. The view from the bridge, a little below the confluence of the rivers, though greatly too rich to be depicted in words, and demanding consummate skill in order to be pencilled in colours, admits at least an easy enumeration of its leading features. Immediately on the north lies the town, with the majestic ruins of its ancient abbey, and the handsome fabric of Ednam-house;  $1\frac{1}{4}$  mile to the north-west, rises the magnificent pile of Fleurs

castle, amidst a profusion and an expanse coming down to the Tweed of wooded decorations; in front are two islets in the Tweed, and between that river and the Teviot the beautiful peninsula of Friar's or St. James' Green, with the fair green in its foreground, and the venerable and tufted ruins of Roxburgh castle,  $1\frac{1}{4}$  mile distant; on the south-west, within a fine bend of the Teviot, are the mansion and demesne of Springwood, and away behind them, in far perspective, looking down the exulting vale of the Tweed, the Eildon hills lift up their triple summit; a little to the east, close upon the view, rises the fine form of Pinnacle-hill; away in the distance behind the town, rise the conspicuous ruin of Home castle, and the hills of Stichel and Mellerstain, and, in addition, are the curvings and rippling currents of the rivers,—beltings and clumps and lines of plantation,—the steep precipices of Maxwell and Chalkheugh,—exuberant displays of agricultural wealth and social comfort,—and reminiscences, suggestible to even a tyro in history, of events in olden times which mingle delightfully in the thoughts with a contemplation of the landscape. Sir Walter Scott—who often revelled amidst this scenery in the latter years of his boyhood,—ascribes to its influence upon his mind the awakening within him of that "insatiable love of natural scenery, more especially when combined with ancient ruins or remains of our fathers' piety or splendour," which at once characterized and distinguished him as a writer, and imparted such a warmth and munificence of colouring to all his literary pictures. Leyden, too—who had around him in the vale of the Teviot, and the "dens" of its tributary rills in the immediate vicinity of his home at Denholm, quite enough to exhaust the efforts of a lesser poet—sung impassionedly the beauties of Kelso:—

"Bosom'd in woods where mighty rivers run,  
Kelso's fair vale expands before the sun;  
Its rising downs in vernal beauty swell,  
And, fringed with hazle, winds each flowery dell;  
Green spangled plains to dimpling lawns succeed,  
And Tempe rises on the banks of Tweed:  
Blue o'er the river Kelso's shadow lies,  
And cope-clad isles amid the water rise."

SCENES OF INFANCY.

About 19 parts in 22 of the parish are arable ground; and the rest of the surface is disposed in plantation, pasture, and the site of the town. On the banks of the rivers is a rich deep loam, on a subsoil of gravel; in the north-western division, it is a wet clay; and in the south, it is thin and wet, upon a red aluminous subsoil. Before the general manurial use of lime and marl, the district was remarkably poor, scarcely yielding to the farmer—especially on the wet soils—a compensation for his labour. So grossly was the land neglected, too, and so sluttishly were all the present meadows allowed to exist as marshes and stagnant pools, luxuriant only in reeds and flags, and the resort of the wild duck and the sea-mew, that the very climate was rendered pestilential, and laden with the fame of insalubriousness. But nowhere in Scotland does the practice of agriculture now exist in more skill, or achieve higher results proportionately to the capabilities of the soil. Farms are in general large,—a great proportion being upwards of 500 acres in extent. The cattle-stock is chiefly the short-horned or Teeswater breed.—The only village in the parish is MAXWELLHEUGH: which see. Besides the mansions incidentally noticed, are Pinnacle-hill on the south bank of the Tweed, seated, opposite the east end of Kelso, on the summit of the precipitous eminence from which it derives its name, and sending down its attendant woods to the edge of the river,—Wooden, within whose grounds is the exquisite scenery of Wooden-burn,—and Rosbank, on the

north side of the Tweed, opposite Wooden. Turnpikes radiate in various directions from the town toward Edinburgh, Greenlaw, Leitholm, Coldstream, Sprouston, Yetholm, and Hawick,—two of these lines being part of the great road from Berwick up the Tweed and the Teviot leading onward to Carlisle. The bridges are substantial, and, in two instances, elegant. Twenty-three years ago, an act of parliament was obtained for a Kelso and Berwick railway; but, for some unexplained reason, it continues to this hour a dead letter. Among the various plans for completing a railway communication between London and Edinburgh, is Mr. Remington's inland line from Newcastle, by Morpeth, Wooler, Kelso, and Dalkeith, an actual distance to Dalkeith of 104 miles 10 chains; the equivalent being 110 miles 18 chains. This line would enter Scotland at a point 59 miles distant from Newcastle; and cross the Tweed at Kelso between the 65th and 66th mile.—Population, in 1801, 4,196; in 1831, 4,939. Houses 618. Assessed property, in 1815, £15,619.

Kelso is the seat of a presbytery in the synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend £320 13s. 6d.; glebe £54 15s. According to an ecclesiastical survey in November, 1835, the population then consisted of 2,670 churchmen, 2,042 dissenters, and 376 persons not known to belong to any religious denomination,—in all 5,088. The parish-church was built in 1773, altered in 1823, and enlarged in 1833. Sittings 1,314. A new church in connexion with the Establishment was begun in 1836, and finished in 1838, at a cost of upwards of £3,000, defrayed by subscription. Sittings 800.—There are in the parish—their places of worship all situated in the town—5 dissenting congregations. The United Secession congregation was established in 1752. Their meeting-house was built in 1787–8, and, with its pertinents, is estimated in value at not less than £2,500. Sittings 955. Stipend £200, with a manse and garden worth £30.—The Relief congregation was established in 1792. Their place of worship was built in 1793, and is supposed to be now worth £1,050. Sittings 768. Stipend £160, with a manse and garden worth £45.—The Episcopalian congregation was regularly formed in 1757, but claims to have been continued from 1688. Their former chapel was built in 1763. Sittings 218; but a new and handsome chapel has recently been erected. Stipend fluctuating with the state of the funds.—The Reformed Presbyterian congregation has existed for more than 55 years. Their place of worship was built about 55 years ago, and is supposed to have cost about £300. Sittings 320. Stipend £84, with a house and garden worth £16.—The Original Seceder congregation was established and their meeting-house built in 1772. Sittings between 600 and 700. Stipend variable, with a manse and garden worth £10 to £12.—There are in the parish 12 schools, conducted by 15 teachers, and attended by a maximum of 765 scholars. One is a classical school, whose teacher employs an assistant, and has £34 4s. 9d. of salary, with £80 fees, and £10 other emoluments; one is an English school, ranked, jointly with the former, as parochial, whose teacher has £5 11s. 6d. of salary with fees; two are boarding-schools for young ladies; one is the Friendly school, whose teacher is guaranteed £40 a-year by a voluntary association, and whose scholars, all boys and 113 in number, pay each 1d. per week; and two are schools whose teachers are provided with school-rooms and dwelling-houses, but have no other emolument than fees.—The present parish comprehends the ancient parishes of Kelso or St. Mary's, Maxwell, and St. James. The first of these lay on the north side of the Tweed, and was within the diocese

of St. Andrews, and the second and third lay on the south side, and were within that of Glasgow,—the river being here the boundary. David I., at his accession to the throne, witnessed the existence of St. Mary's church of Kelso; and, in 1128, with the consent of the bishop of St. Andrews, he transplanted to it the monks of Selkirk. The church became now identified with the monastery, and was henceforth called the church of St. Mary and St. John,—the Tyronensian monks being accustomed to dedicate their sacred edifices to the Virgin and the Evangelist. In the church were anciently several altars dedicated to various saints and endowed for the support of chaplains. When the Scto-Saxon period began, the ancient parish of St. James, or of Old Roxburgh, was provided with two churches,—the one dedicated to St. James for the use of the town, and the other dedicated to St. John for the use of the castle. Malcolm IV. granted both churches and their appurtenances to Herbert, bishop of Glasgow. But the monks of Kelso—to whom David I. made mention of it in their charter—considered that of St. James as part of their property, and drew from it a considerable revenue; and, being little attentive to it except for its ministrations to their avarice, they, in 1433, received a mandate from the abbot of Dryburgh, as delegate of the Pope, commanding them to provide it with a chaplain. The parish of Maxwell, or according to its ancient orthography, Maccuswell, derived its name from the proprietor of the manor, Maccus, the son of Unwein, who witnessed many charters of David I. Herbert de Maccuswell gave the church to the monks of Kelso; and he built a chapel at Harlaw, about a mile from it, dedicated it to St. Thomas the martyr, and gave it also to the monks.—On the left bank of the Teviot stood anciently a Franciscan convent, consecrated by William, bishop of Glasgow, in the year 1235. Till near the end of last century, a fine arch of the church of the convent, and other parts of the building, were in preservation. On the right bank of the Teviot, nearly opposite to Roxburgh castle, stood a Maison Dieu, an asylum for pilgrims, and for the infirm and the aged. On the estate of Wooden were, till lately, vestiges of a Roman tumulus, consisting of vast layers of stone and moss, both of a different species from any now found in the parish; and near Wooden-burn stone-coffins were dug up which enclosed human skeletons. ROXBURGH CASTLE will be noticed in a separate article. The Castle of FLOORS or FLEURS has already been separately noticed. The Abbey occurs to be described in our account of the town.

KELSO, a burgh-of-barony, the largest town in the eastern border counties of Scotland, and, both in itself and in its environs, one of the most beautiful of its size in Europe, stands in 55° 36' north latitude, and 1° 20' west longitude from Greenwich; 42 miles south by east of Edinburgh; 23 miles west from Berwick-upon-Tweed; 10 miles north-east from Jedburgh; 9 miles south-west from Coldstream; and 4½ miles west from the boundary-line with England. It is delightfully situated at the confluence of the Tweed and the Teviot, on the left bank of the former; and stretches along a plain in the centre of the gently rising and magnificent amphitheatre formed by the basin-configuration of its parish, commanding from every opening of its streets bird's-eye views of exquisitely lovely scenery, and constituting in the tracery of its own burghal landscape an object of high interest in the midst of its beautiful environs. The sumptuous architectural character of its venerable abbey,—the air of pretension worn by its public buildings,—the light-coloured stone and the blue slate roofs of its dwelling-houses,—

the graceful sweep and the tidy cleanliness with which it winds along the river,—and the airiness and generally pleasing aspect of its streets,—all impress upon it, as seen either from without or from within, a city-like character, and combine with the teeming beauty of its encincturing landscapes to vindicate, in a degree, the enthusiasm of tasteful natives who exhaust their stock of superlatives in its praise. Patten, so far back as the reign of Edward VI., described it as “a pretty market-town,”—an eulogium of no mean measure in an age when most British towns were characterizeable only by their various degrees of meanness, lumpishness, and filth.

The town, in the style of German and Dutch towns—though the comparison, but for topographical accuracy, does it high discredit—consists of a central square or market-place, and divergent streets and alleys. The square is spacious and airy, very large to exist in a provincial town, presided over on the east side by the elegant Townhouse, and edified with neat modern houses of three stories, some of which have on the ground-floor good and even elegant shops. From the square issue four thoroughfares—Roxburgh-street, Bridge-street, Mill-wynd, and the Horse and Wood markets. Roxburgh-street goes off from the end of the Townhouse, and runs sinuously parallel with the river, sending down its back-tenements on one side to the edge of the stream. Though irregular, and not anywhere elegant in its buildings, it has a pleasing appearance, and bears the palm of both healthiness and general favour. At present, it is upwards of  $\frac{1}{4}$  of a mile in length; but formerly it reached to what is now the middle of the Duke of Roxburgh's garden, having been curtailed and demolished at the farther end to make way for improvements on the pleasure-grounds. Bridge-street goes off from the square opposite to the exit of Roxburgh-street; and though inferior to it in length, is superior in general appearance, and contains many elegant houses. This street sends off Ovan-wynd, leading to Ednam-house, and the Abbey-close, anciently the thoroughfare to the old hridge. Mill-wynd leaves the square, and pursues a course parallel with Bridge-street. The street called the Horse and Wood markets goes off in a direction at right angles with the other thoroughfares, and points the way to Coldstream and Berwick. At one time it was, over part of its extent, very narrow and inconvenient; but about twenty years ago it was widened, and made to assume an appearance in keeping with the general airiness of the town.

The Townhouse is a large edifice of two stories; the ground-floor open in piazzas; the front adorned with a pediment supported by four Ionic pillars; the summit displaying a handsome balustrade, and sending aloft a conspicuous lantern and cupola, surmounted by a vane.—The hridge, leading off from the end of Bridge-street to the small suburb of Maxwellhugh, and carrying across the Tweed the Berwick and Carlisle highway, was commenced in 1800, and finished in 1803, at a cost of about £18,000. Its length, including the approaches, is 494 feet; its width between the parapets is 25 feet; and its height above the bed of the river 42 feet. It consists of 5 elliptical arches, each 72 feet in span, with intervening piers each 14 feet. The hridge is built of beautiful light-coloured polished stone, exhibits on each side six sets of handsome double columns, as well as ornamented parapets, and, for general elegance and effect, whether in itself or grouped with the rich picture in the core of which it stands, is unsurpassed by any structure of its class in Scotland. The design was furnished by the late Mr. Rennie, and was afterwards repeated or adopted by that distinguished artist as the design for Water-

loo-hridge at London.—The dispensary occupies a healthy and airy site near the Tweed at the upper end of the town. It was founded in 1789, enlarged and provided with baths in 1818, and annually admits from 600 to 800 patients.—The parish-church is a large octagonal edifice nearly 90 feet in diameter within the walls, and built originally with a concave or cupola roof, for the accommodation of about 3,000 persons.—The new church in connexion with the Establishment stands in an open space on the north side of the town, and surmounted by an elegant Gothic tower, is a conspicuous and pleasing object in the hurgical landscape. The ground-floor is laid out in large airy school-rooms; and a circumjacent piece of ground is disposed in shrubberies and play-ground.—The United Secession chapel is a piece of architectural patchwork; yet, with the accompaniments of its neat large manse, and a fine open area, it makes an agreeable impression.—The Episcopalian chapel, though small, is a tasteful Gothic building, snugly ensconced on the skirt of the pleasure-grounds of Ednam-house, overlooking the Tweed.—The Relief and the Reformed Presbyterian chapels are simply stone-boxes hored with holes, huddled up in near vicinity to keep each other in countenance. The Original Seceder chapel is of the same class, and, if possible, still more plain.

The grand architectural attraction of Kelso, and one which would be strongly felt and highly prized in any city, is the ruinous abbey. Viewed either as a single object or as a feature in the general landscape, the simply elegant, unique, tall, massive pile, presents an aspect too imposing and too untiringly interesting to be adequately depicted in description. Though built under the same auspices, and nearly about the same period as the abbeys of Melrose and Jedburgh, it totally differs from them in form and character, being in the shape of a Greek cross. “The architecture is Saxon or early Norman, with the exception of four magnificent central arches, which are decidedly Gothic; and is a beautiful specimen of this particular style, being regular and uniform in its structure. \* \* The nave and choir are wholly demolished. The north and south aisles remain, and are each nearly 20 paces in length. False circular arches intersecting each other, ornament the walls round about. The ruins of the eastern end present part of a fine open gallery: the pillars are clustered, and the arches circular. Two sides of the central tower are still standing, to the height of about 70 feet; but they must have been originally much higher. There is an uniformity in the north and south ends each bearing two round towers, the centres of which sharpen towards the roof. The great doorway is formed by a circular arch, with several members falling in the rear of each other, and supported on fine pilasters. It is not certain when this abbey was first used as a parish-church after the Reformation; but the record informs us that it was repaired for the purpose in the year 1648, and that it is very little more than half-a-century since, on account of its dangerous state, public worship was discontinued in it.\* The buildings of the abbey must at one time have occu-

\* Sir Walter Scott, speaking of Thomas the Rhymer, says: “Another memorable prophecy bore that the old kirk at Kelso, constructed out of the ruins of the abbey, should fall ‘when at the fullest.’ At a very crowded sermon about thirty years ago, a piece of lime fell from the roof of the church. The alarm for the fulfilment of the words of the seer became universal; and happy were they who were nearest the door of the predestined edifice. The church was in consequence deserted, and has never since had an opportunity of tumbling upon a full congregation. I hope, for the sake of a beautiful piece of Saxo-Gothic architecture, that the accomplishment of this prophecy is far distant.”—*Minstrelsy of the Scottish Border*, vol. ii. p. 275. Edit. 1802.

pied a very considerable space of ground, as not many years ago they extended as far east as the present parish-school; and, from appearance, they must originally have reached a considerable way towards the banks of the Tweed, near which it is situated. In three upper windows were hung the same number of bells, which are now removed; and when the old Townhouse was taken down, the clock was put up in another window of this building, where it remained for several years; but is now also removed, and placed on the front of the new Townhouse. The ruins of the abbey were, till lately, greatly disfigured by several modern additions; but of these, part were removed by order of the late Duke William, in 1805, and the remainder were taken down by the last Duke, James, in 1816, by which the ruins were restored to their original simplicity. By the removal of these excrescences, the noble transept, together with several windows and side-arches, which were by them hid, are now restored to view." [Haig's 'Account of the Town of Kelso.' Edin. 1825.]—The establishment was originally settled in Selkirk for monks of the order of Tyrone; but after a few years, was, in 1128, removed by David I. to its site at Kelso, in the vicinity of the royal residence of Roxburg-castle. David, and all his successors on the throne till James V., lavished upon it royal favours. Whether in wealth, in political influence, or in ecclesiastical status, it maintained an eminence of grandeur which dazzles and bewilders a student of history and of human nature. The convent of Lesmahago, with its valuable dependencies, —33 parish-churches, with their tithes and other pertinents, in nearly every district, except Galloway and East-Lothian, south of the Clyde and the Forth, —the parish-church of Culter in Aberdeenshire,—all the forfeitures within the town and county of Berwick,—several manors and vast numbers of farms, granges, mills, fishings, and miscellaneous property athwart the Lowlands,—so swelled the revenue as to raise it above that of all the bishops in Scotland. The abbots were superiors of the regality of Kelso, Bolden, and Reverden, frequent ambassadors and special commissioners of the royal court, and the first ecclesiastics on the roll of parliament, taking precedence of all the other abbots in the kingdom. Herbert, the first abbot, was celebrated for his learning and talent, filled the office of chamberlain of Scotland, and in 1147 was removed to the see of Glasgow. Ernold or Arnold succeeded him; and in 1160, was made bishop of St. Andrews, and the following year the legate of the Pope in Scotland. In 1152, Henry, the only son of David, and the heir-apparent of the throne, died at Roxburgh-castle, and was, with pompous obsequies, interred in the abbey. In 1160, John, a canon of the monastery, was elected abbot, and, arriving in 1165 mitred from Rome, held the abbacy till his death in 1178 or 1180. Osbert, who succeeded him, and was in repute for his eloquence, was despatched at the head of several influential ecclesiastics and other parties, to negotiate with the Pope in a quarrel between him and William the Lion, and succeeded in obtaining the removal of an excommunication which had been laid on the kingdom, and in procuring for the king expressions of papal favour. In 1208, a dispute between the abbey of Kelso and Melrose respecting property, having excited sensations throughout the country, and drawn attention to the papal court, was by injunction of the Pope formally investigated and decided by the king. In 1215, the abbot Henry was summoned to Rome, along with the Scottish bishops, to attend a council held on the affairs of Scotland. In 1236, Herbert, who, a short time before, had succeeded to the abbacy, per-

formed an act of abdication more rare by far among the wealthy wearers of mitres than among the harassed owners of diadem; and solemnly placing the insignia of his office on the great altar, he passed away into retirement. In 1253, the body of David of Bernham, bishop of St. Andrews, and lord-chancellor of Scotland, a man remarkable for his vices, was, in spite of the refusal and resistance of the monks, interred in the abbey. Edward I. of England having seized all ecclesiastical property in Scotland, received in 1296 the submission of the abbot of Kelso, and gave him letters ordering full restitution. In consequence of a treaty between Robert Bruce and Edward III., Kelso abbey shared, in 1328, mutual restitutions with the English monasteries of property which had changed owners during the international wars. In 1420, the abbots, having their right of superiority over all the other abbots of Scotland, which they had hitherto uniformly possessed, now contested by the abbots of St. Andrews, and brought to a formal adjudication before the King, were compelled to resign it, on the ground of the abbey of St. Andrews being the first established in the kingdom. In 1493, the abbot Robert was appointed by parliament one of the auditors of causes and complaints. On the night after the battle of Flodden, in 1513, an emissary of the Lord of Hume expelled the abbot, and took possession of the abbey. In 1517 and 1521, the abbot, Thomas, was plenipotentiary to the court of England; and in 1526, he was commissioned to exchange with Henry or his commissioners ratifications of the peace of the previous year. In 1522, the English demolished the vaults of the abbey and its chapel or church of St. Mary, fired all the cells and dormitories, and unroofed all the other parts of the edifice. Other inroads of the national foe, preventing immediate repair or re-edification, the abbey, for a time, crumbled toward total decay, and the monks, reduced to comparative poverty, skulked among the neighbouring villages. From 1537 till his death in 1558, James Stuart, the illegitimate son of James V., nominally filled the office of abbot, and was the last who bore the title. The abbey of Melrose, Holyrood, St. Andrews, and Coldingham, were at the same date as the abbey of Kelso, bestowed on James' illegitimate offspring, and, jointly with it, they brought the royal family an amount of revenue little inferior to that yielded by all the possessions and resources of the Crown. In 1542, under the Duke of Norfolk, and again in 1545, under the Earl of Hertford, the English renewed their spoliations on the abbey, and almost entirely destroyed it by fire. On the latter occasion, it was resolutely defended by about 300 men who had posted themselves in its interior, and was entered only after the corpses of a large proportion of them formed a rampart before its gates. In 1560, the monks were expelled in consequence of the Reformation; and both then and in 1580, the abbey was despoiled of many of its architectural decorations, and carried far down the decline of ruin. Its enormous possessions becoming now the property of the Crown, were, in 1594, distributed among the King's favourites.

Kelso is as poor in the aggregate productiveness of its manufactures, as it is showily rich in their variety and extensiveness of range. The dressing of skins, the tanning of hides, the currying of leather, the weaving of flannel, woollen cloth, and linen, the making of hats and of stockings, the distillation of whisky, and the manufacture of candles, shoes, tobacco, and other produce, all have a place in the town; but they do not jointly employ 200 workmen, and are all, with the exception of currying, stationary or declining. The number of looms in

1828 was 70, and in 1838, it had become reduced to 41. Yet the place has a very important trade in corn, and cured pork. A weekly market, crowdedly attended from Roxburghshire and parts of Berwickshire, and Northumberland, is held on Friday for the sale of corn by sample. Twelve "high markets" are annually held on the day of the weekly market, for the hiring of servants and hinds, and for the sale or exchange of horses. A monthly market is held for cattle and sheep. Fairs are held on the second Friday of May, the second Friday in July, the 5th of August, and the 2d of November. That on the 5th of August is called St. James' fair, and is the greatest in the Border-counties except that of St. Boswell's. Originally it belonged to Roxburgh, but owing to the extinction of the burgh, it counts as a fair of Kelso. It is held on the site of the old town of Roxburgh, on the beautiful tongue of the peninsula below the ruined castle, about 2 miles south of Kelso, and, for some unascertainable reason, is presided over by the magistrates of the county-town: See JEDBURGH. A great show is made of cattle and horses, for feeding on after-grass and turnips; large transactions are effected in woollen and linen manufactures; and swarms of reapers are engaged for the approaching harvest. The town has three principal inns, and branch-offices of the Bank of Scotland, the Commercial bank of Scotland, the British Linen Company's bank, and the National Bank of Scotland. Stage coaches run daily to Edinburgh, three times a-week to Berwick, and twice a-week to Jedburgh and Hawick; and a transit coach communicates daily with Edinburgh and Newcastle.

Kelso is distinguished much more by properties of quiet aristocracy, and snug contented competency, and tastes for literature and social refinement, than by any of the qualities which could impress upon it a commercial character. Proportionately to the bulk of its population, it is hence not a little wealthy in literary, social, patriotic, philanthropic, and religious institutions or societies. Kelso library, instituted in 1750, and comprising about 5,000 volumes, employs a salaried librarian, and occupies a handsome building on Chalk-heugh. The New library, and the Modern library, instituted respectively in 1778 and 1800, and jointly comprising about 3,500 volumes, belongs, as does also Kelso library, to limited bodies of subscribers. One news-room is enjoyed by a select society, and another by all persons who chose to subscribe. A school of arts was commenced in 1825, and during three years gave rise to interesting courses of lectures; but it eventually became inefficient and defunct. The Kelso physical and antiquarian society was instituted three or four years ago for the formation of a museum, and may probably widen its range of action, and exert its very respectable influence in some practical direction. The Kelso Mail newspaper, which originated in 1797, and the Kelso Chronicle, which originated in 1832, are published, the former twice a-week, and the latter once. A former Kelso Chronicle, started in 1783, was the earliest newspaper in the Border counties. From 1808 to 1829, existed the Kelso Weekly Journal. Kelso was the birth-place of the famous Ballantyne press, and the scene on which was printed the first edition of the *Minstrelsy of the Scottish Border*; and, at various periods, it has displayed an energy and an amount of literary enterprise altogether beyond the proportion either of its population or of the advantageousness of its position. Kelso is the meeting-place and exhibition-scene of several associations for the encouragement of industry, and, in particular, of the Union Agricultural society, for the incitement and direction, by means of premiums and exhibitions, of improve-

ments in tillage, cropping, and stock. The Dispensary—a very valuable philanthropic institution—has been already incidentally noticed. A Savings' bank was established in 1815.

Kelso is, for some months in the year, the resort of the lovers of field-sports from a wide extent of country around it, including a portion of England. Races are run in spring and autumn on a course about a mile from the town, accommodated with a stand similar to that at Doncaster; and, for a long period, they were of great celebrity, and prompted much attention to the rearing of the most approved breeds of horses; but, during several years past, they have materially lost both their fame and their attractions. The country and rivers in the neighbourhood of the town offer plentiful facilities respectively for fox-hunting and angling, and are excitedly plied both by the Kelsonians themselves, and by temporary visitors. A pack of fox-hounds is maintained by the Duke of Roxburgh; and a coursing club devotes its attention to the turf. The Royal Caledonian Hunt occasionally excites revelry among the upper classes of a week's continuance; and, once a-year the whipmen of the border, gaily attired, make sport for the population of youngsters and rustics. Games at foot-ball are a favourite amusement. A cricket-club meets once a-fortnight during summer; and a skating-club and parties of curlers avail themselves in winter of the freezing of the rivers. The society of the Bowmen of the Border, instituted in 1788, by a diploma from the royal company of archers of Scotland, hold eight meetings in the year. A small theatre was fitted up, at considerable expense, by the French prisoners during the last war, and, while they stayed, was conducted gratuitously by some of their own number; and, at their departure, it was left with all its appliances as an expression of delight with the Kelsonians on account of the facility with which many of them had imbibed the spirit of French levity and dissipation. But, in the aggregate, the town has of late assumed a more sedate character than belonged to it during years when it incurred some hazard of being distinguished chiefly by fashionable follies.

By a charter of James VI., dated 2d July, 1607, the abhacy of Kelso was erected into a temporal lordship and barony, called 'the lordship and barony of Halidean,' comprehending the town and lands of Kelso. The governing charter is considered to be one dated 8th November, 1634, by which the town is specially erected into a free burgh-of-barony, and the power of incorporating it is conferred on Robert, Earl of Roxburgh, and his heirs. The present government is in terms of regulations made on 3d December, 1757; and consists of a bailie named by the superior, and 15 stent-masters, popularly called the town-council, 8 of whom are nominated by the bailie, and 7 by the incorporated trades. The eight were formerly for life; but, according to the present practice, the senior one of the number annually retires. The bailie holds his office during the pleasure of the superior, and receives from him a salary of £50. A town-clerk, a procurator-fiscal, and a town-officer, are appointed by the bailie during pleasure. The office of the first yielding emoluments not exceeding £4 a-year, and that of the second no emoluments whatever, both are usually filled by one of the bailie's own clerks. The jurisdiction is that of an ordinary haron-bailie. There is no deputy; and the bailie holds a weekly court, before which both civil and criminal cases are tried. There has likewise been a practice of judging in possessory cases within burgh, and, until very lately, in sequestrations for rents owing to the vassals of the harou. The number of civil cases is annually about 52, and of criminal cases

about 26. The stent-masters, under the approving warrant of the haillie, assess the inhabitants according to the rentals, and the supposed profits of their trades and occupations. The amount of stent varies considerably from year to year, but averages about £263. The property of the burgh consists of tenements, a reservoir, a field, and an interest in the stock of the Tweed hridge-trustees. The customs and market-dues belong to the superior. The revenue of the burgh, including stent, was, in 1833, £562 9s. 8d.; and the expenditure, £670 19s. 0½d. In 1839-40, it was £574 4s. 3d., besides £301 9s. 6d., arising from shares of Kelso hridge disposed of, and old debts, and a sum of miscellaneous receipts, amounting to £14 3s. 5d.; making in all with arrears £1,015 13s. 11d. The expenditure for the same year amounted to £1,060 2s. 4d., of which £312 was paid in reduction of old debts, and £107 9s. consisted of arrears. There is no local police statute. The cleaning, lighting, paving, and supply of water, are provided for by assessment, and managed by the stent-masters. No attempt has been made toward the introduction of regular watching. During the last few years, the town has been watched one night in the week, or on particular occasions. A person, to acquire the title of acting as either a merchant or a craftsman, must pay £1 16s. 8d. for the freedom of the town, and certain dues to the corporation of his craft. The corporations, with their numbers in 1833, and the aggregate amount of the dues levied by them during forty years preceding that year, are, merchants 305, £182 15s. 4d.; shoemakers 85, £104 9s.; tailors 28, £61 14s. 8d.; hammermen 158, £245 19s.; skippers 34, £47 1s. 11; weavers 54, £79 16s. 8d.; feshers 19, £22. A justice-of-peace court is held once a-month. The number of proprietors and tenants in 1833, whose rents were £10 or upwards, was 256,—44 of the former class being non-resident; and the number whose rents were between £5 and £10 was 81. The increase of the town in extent and population has been slow. Population, in 1833, 4,700.

Kelso was originally called, or rather had its modernized name originally written, Calchow,—a word identical in meaning with Chalkheugh, the existing designation of one of the most remarkable natural objects in its landscape. In its ancient history it figures as a rendezvous of armies, as a place of international negotiation, as a scene of frequent conflict and havoc of war, and as a spot smiled upon by kings and other personages of note. Of events not identified with the history of its abbey, the earliest noticeable one on record occurred in 1209, when, on account of a Papal interdict being imposed on England, the Bishop of Rochester left his see, and took refuge in Kelso. Ten years later, William de Valoines, Lord-chamberlain of Scotland, died in the town. In 1255, Henry III. of England and his queen, during the visit which they made to their son-in-law and daughter, Alexander III. and his royal consort, at Roxburgh-castle, were introduced with great processional pomp to Kelso and its abbey, and entertained, with the chief nobility of both kingdoms, at a sumptuous royal banquet. In 1297, Edward I., at the head of his vast army of invasion, having entered Scotland, and relieved the siege of Roxburgh, passed the Tweed at Kelso, on his way to seize Berwick. Truces, in the years 1380 and 1391, were made at Kelso between the Scottish and the English kings. On the death of James II. by the hursting of a cannon at the siege of Roxburgh-castle, his infant son, James III., being then with his mother in the camp, was carried by the nobles, in presence of the assembled army, to the abbey, and there pompously crowned, and treated with royal honours. In 1487, commissioners met at Kelso to prolong a truce for

the conservation of peace along the unsettled territory of the Borders, and to concoct measures preliminary to a treaty of marriage between the eldest son of James III. and the eldest daughter of Edward IV. The disastrous results of the battle of Flodden, in 1513, seem—in consequence of James IV.'s death, and of the loss of the protection which his authority and presence had given—to have, in some way, temporarily enthralled the town to the Lord of Hume, and occasioned, as we have already seen, the expulsion of the abbot from his monastery,—the first of a series of events which terminated in the ruin of the pile. In 1515, the Duke of Albany, acting as regent, visited Kelso in the course of a progress of civil pacification, and received onerous depositions respecting the oppressive conduct of Lord Hume, the Earl of Angus, and other barons. In 1520, Sir James Hamilton, marching with 400 men from the Merse, to the assistance of Andrew Kerr, haron of Fernihirst, in a dispute with the Earl of Angus, was overtaken at Kelso by the baron of Cessford, then warden of the marches, and defeated and broken in a brief and ill-contested battle. In 1522, Kelso and the country between it and the German ocean, received the first lashings of the scourge of war in the angry and powerful invasion of Scotland by the army of Henry VIII. One portion of the English forces having marched into the interior from their fleet in the Forth, and having formed a junction with another portion which hung on the Border under Lord Daeres, the united forces, among other devastations, destroyed one moiety of Kelso by fire, laid bare the other moiety by plundering, and inflicted merciless havoc upon not a few parts of the ahhey. So nervidly arousing were their deeds, that the men of Merse and Teviotdale came headlong on them in a mass, and showed such inclination, accompanied with not a little power, to make reprisals, that the devastators prudently retreated within their own frontier. After the rupture between James V. and Henry VIII., the Earl of Huntley, who had been appointed guardian of the marches, garrisoned Kelso and Jedburgh, and, in August 1542, set out from these towns in search of an invading force of 3,000 men, under Sir Robert Bowes, fell in with them at Haldon-Rigg, and, after a hard contest, broke down their power and captured their chief officers. A more numerous army being sent northward by Henry, under the Duke of Norfolk, and James stationing himself with a main army of defence on Fala-moor, the Earl of Huntley, received detachments which augmented his force to 10,000 men, and so checked the invaders along the marches, as to preserve the open country from devastation. In spite of his strenuous efforts, Kelso, and some villages in its vicinity, were entered, plundered, and given up to the flames; and they were eventually delivered from an exterminating rage of spoliation, only by the foe being compelled by want of provision, and the inclemency of the season, to retreat into their own territory. When Henry VIII.'s fury against Scotland became rekindled about the affair of the proposed marriage of the infant Queen Mary and Prince Edward of England, an English army, in 1544, entered Scotland by the eastern marches, plundered and destroyed Kelso and Jedburgh, and ravaged and hurned the villages and houses in their neighbourhood. This army having been dispersed, another, 12,000 strong, specially selected for their enterprise, and led on by the Earl of Hertford, next year trod the same path as the former invaders, and inflicted fearful devastation on Merse and Teviotdale. They plundered anew the towns of Kelso and Jedburgh, wasted their abbeys, and also those of Melrose and Jedburgh, and burnt 100 towns and villages. While Kelso was suffering the inflictions

tion of their rage, 300 men, as was mentioned in our notice of the ahhey, made hold but vain resistance within the precincts of that pile. The Scottish army shortly after came up, and took post at Maxwell-heugh, the suhurb of Kelso, intending to retaliate; but they were spared the horrors of inflicting or enduring further bloodshed, by the retreat of the invaders. In 1553, a resolution was suggested by the Queen Regent, adopted by parliament, and hacked by the appointment of a tax of £20,000, leviable in equal parts from the spiritual and the temporal state, to build a fort at Kelso for the defence of the Borders; but it appears to have been soon dropped, or not even incipiently to have been carried into effect. In 1557, the Queen-Regent having wantonly, at the instigation of the King of France, provoked a war with Elizabeth, collected a numerous army for aggression and defence on the Border. Under the Earl of Arran, the army, joined by an auxiliary force from France, marched to Kelso, and encamped at Maxwell-heugh; but, having made some vain efforts to act efficiently on the offensive, was all withdrawn, except a detachment left in garrison at Kelso and Roxburgh to defend the Borders. Hostilities continuing sharp between the kingdoms, Lord James Stuart, the illegitimate son of James V., built a house of defence at Kelso, and threw up some fortifications around the town. In 1557, the Lords Eure, Wharton, Hmtley, Morton, and Argyle, resolving to disperse the army, met the Queen Dowager and the French general at Kelso; "and there the Dowager raged, and reprevied them of their promises, whiche was to invade and annoy England. Theyre deternnacions to departe, and the considerations they tolde hir; and thereupon arguments grew great hetwene them, wherewith she sorrowed, and wepp openly; Doyce\* in gret hevynes; and with high words amongst them to thes effects, they departed. Doyce wished himself in Fraunce. The duke, wyth the others, passed to Jedworthe; and kepithe the chosen men on their borders. The others of their great nombre passed to their countreyes." In 1558, the Scottish army stationed at Kelso, marched out to chastise an incursion, in the course of which the town of Dunse was hurnt, came up with the English at Swinton, and were defeated. In 1561, Lord James Stuart was appointed by Queen Mary her lieutenant and judge for the suppression of banditti on the Borders, and brought upwards of 20 of the most daring freebooters to trial and execution; and, about the same time, he held a meeting at Kelso with Lord Gray of England, for pacificating the affairs of the Borders. In 1566, in the course of executing the magnanimous purpose of putting down by her personal presence the Border maraudings, from which she was wiled by her romantic and nearly fatal expedition to the Earl of Bothwell at Hermitage-castle, Queen Mary visited Kelso on her way from Jedburgh to Berwick, spent two nights in the town, and held a council for the settlement of some dispute. In 1569, the Earl of Murray spent five or six weeks in Kelso, in attempts to pacificate the Borders, and in the course of that period, had a meeting with Lord Hunsdon and Sir John Foster, on the part of England, and made concurrently with them arrangements for the attainment of his object. In 1570 an English army entered Scotland in revenge of an incursion of the Lords of Fairmihirst and Buclench into England, divided itself into two co-operating sections, scoured the whole of Teviotdale, levelled fifty castles and strengths, and upwards of 300 villages, and rendezvoused at Kelso preparatory to its retreat. The Earl of Bothwell, grandson to James V., and com-

\* M. D'Oysel, the French general.

mandator of Kelso, made the town his home during the concocting of his foul and numerous treasons, and during 10 years succeeding 1584, deeply embroiled it in the marchings and military manœuvres of the forces with which first his partisans, and next himself, personally attempted to damage the kingdom; and he eventually ceased to be a pest and a torment to it, only when, in guerdon of his crimes, he was denuded of his vast possessions, and driven an exile from gifts which only provoked his ingratitude, and from a fatherland on which he could look with only the feelings of a patricide.

Kelso, in 1639, made a prominent figure in one of the most interesting events in Scottish history,—the repulse of the armed attempt of Charles I. to force Episcopacy upon Scotland by the army of the Covenanters under General Lesley. This army, amounting to 17,000 or 18,000 men, rendezvoused at Dunse, and marching thence, established their quarters at Kelso. The king, personally at the head of his army of prelacy, got intelligence at Birks, near Berwick, of the position of the Covenanters, and despatched the Earl of Holland, with 1,000 cavalry and 3,000 infantry, to try their mettle. A letter from Sir Henry, who was with the king, to the Marquis of Hamilton, who had, as his majesty's high commissioner for Scotland, made a vain attempt to effect a compromise between the Liturgy and the Covenant, will show the result:—

"My LORD,—By the dispatch Sir James Hamilton brought your lordship from his majesty's sacred pen, you were left at your liberty to commit any act of hostility upon the rebels when your lordship should find it most opportune. Since which, my Lord Holland, with 1,000 horse and 3,000 foot, marched towards Kelsey; himself advanced towards them with the horse (leaving the foot 3 miles behind), to a place called Maxwell-heugh, a height above Kelsey; which, when the rebels discovered, they instantly marched out with 150 horse, and (as my Lord Holland says) eight or ten thousand foot; five or six thousand there might have been. He thereupon sent a trumpet, commanding them to retreat, according to what they had promised by the proclamation. They asked, whose trumpet he was. He said, my Lord Hollands. Their answer was, He were best begone. And so my Lord Holland made his retreat, and waited on his majesty this night to give him this account.

"This morning advertisement is brought his majesty, that Lesley, with 12,000 men, is at Cockburnspath, that 5,000 men will be this night or to-morrow at Dunse, 6,000 at Kelsey; so his majesty's opinion is, with many of his council, to keep himself upon a defensive, and make himself here as fast as he can; for his majesty doth now clearly see, and is fully satisfied in his own judgment, that what passed in the gallery betwix his majesty, your lordship, and myself, hath bin but too much verified on this occasion;\* and therefore his majesty would not have you to begin with them, but to settle things with you in a safe and good posture, and yourself to come hither in person to consult what counsels are fit to be taken, as the affairs now hold. And so, wishing your lordship a speedy passage, I rest,

"Your lordship's

"most humble servant,

"and faithful friend,

"H. VANE."

"From the camp at Huntley-field,  
this 4th of June, 1639."

Discordantly with the intelligence which this letter shows the king's scouts to have brought him, General Lesley concentrated his whole forces, and next day, to the surprise of the royal camp, took up his station on Dunse-hill, interposing his arms between the king and the capital, and exhibiting his strength and his menaces in full view of the English forces. The king, now fully convinced of the impracticability of his attempt on the public conscience of Scotland, held a consultation two days after with the leaders of the Covenanters, made them such concessions as effected a reconciliation, and procuring the dispersion of their army, returned peacefully to England.—The Covenanters of Scotland and the Parliamentarians of England having made common

\* "What passed in the gallery" was an opinion unfavourable to the invasion of Scotland by English forces, to impose a hated form of worship, at the expense of provoking antipathies and warfare.

cause against Charles I., Kelso was made, in 1644, the depot of troops for re-inforcing General Lesley's army in England. Next year the detachment under the Marquis of Douglas and Lord Ogilvie, sent by Montrose to oppose the operations of Lesley in the Merse, marched to Kelso, on their way to the battle-field at Selkirk, where they were cut down and broken by the Covenanters. Two years later, the town was the place of rendezvous to the whole Scottish army after their successes in England, and witnessed the disbandment of six regiments of cavalry after an oath having been exacted of continued fidelity to the covenant.

In 1645, Kelso was visited and ravaged by the plague intermediately between its appearance in Newcastle and in Edinburgh. In 1648, an hundred English officers arrived at Kelso and Peebles, in the expectation—which happily proved a vain one—of finding employment by the breaking out of another civil war. In 1684, the town was totally consumed by an accidental fire; and sixty years later it suffered in the same way to nearly the same extent. On the former occasion, a proclamation called upon the whole kingdom to make contributions to alleviate the sufferings of the unhoused inhabitants, and to aid the rebuilding of the town. However severe and awful the calamities were at the moment, they were the main, perhaps the sole, occasion of Kelso wearing that uniformly modern and neat aspect which so singularly distinguishes it from all other Scottish towns of its class. In 1715, the whole of the rebel forces of the Pretender, the Highlanders from the north, the Northumbrians from the south, and the men of Nithsdale and Galloway under Lord Kenmore, rendezvoused in Kelso, took full possession of the town, formally proclaimed James VIII., and remained several days making idle demonstrations till the approach of the royal troops under General Carpenter incited them to march on to Preston. In 1718, a general commission of Oyer and Terminer sat at Kelso, as in Perth, Cupar, and Dundee, for the trial of persons concerned in the rebellion; but here they had only one case; and even it they found irrelevant. So attached were the Kelsonians to the principles of the Revolution, that, though unable to make a show of resistance to the rebel occupation of their town, they, previous to that event, assembled in their church, unanimously subscribed a declaration of fidelity to the existing government, and offered themselves in such numbers, as military volunteers, that a sufficient quantity of arms could not be found for their equipment. In 1745, the left of the three columns of Charles Edward's army, on their march from Edinburgh into England,—that column of nearly 4,000 men, which was headed by the Chevalier in person, spent two nights in Kelso, and, while here, suffered numerous desertions. In 1797, a flood, extraordinary both in hulk and duration, came down the Tweed and the Teviot, rose to so great a height as considerably to ascend the trees on the islet at the confluence of the rivers, and, in the view of a concourse of spectators who were attracted to gaze on its sublime movements, slowly undermined and then suddenly moved down the predecessor of the present bridge. From November, 1810, till June, 1814, Kelso was the abode of a body, never more than 230 in number, of French prisoners on parole, who, to a very noticeable degree, inoculated the place with their fashionable follies, and even, in some instances, tainted it with their laxity of morals.—Kelso counts, either as natives or as residents, very few eminent men. One of its monks called James, who lived in the 15th century, was one of the most celebrated Scottish writers of his very ineffectual

age. Its prior Henry, who flourished about 1493, was the translator into Scottish verse of Palladius Rutilius on Rural Affairs, and the author of some literary performances. The chief names which have graced the town in modern times are those of Dr. Andrew Wilson, a distinguished physician, and the author of a Treatise on Morbid Sympathy, and the Rev. John Pitcairn, the Relief minister, celebrated for his eloquence, and for the arousing effects of his example in creating a general taste for some better modes of pulpit-oratory than the sing-song and mass-chanting methods which, half-a-century ago, were so universal in Scotland.

**KELTIE (THE)**, a romantic stream in the parish of Callander, Perthshire. It rises on the west side of the mountain Stue-a-chroin, and flows first 6 miles south-eastward through the eastern division of the parish; and then 2 miles southward along the boundary with Kilmadoek; and falls into the Teith  $2\frac{3}{4}$  miles below the village of Callander. In its progress it is swollen by several tributary torrents. Flowing for 5 miles among wild hills, it emerges through the romantic glen and down the singular waterfall of BRACKLIN, [which see,] and afterwards skirts the demesne of Camhusmere, and makes its confluence with the Teith in front of Camhusmere mansion.

**KELTON**, a parish nearly in the centre of the southern division of Kirkcubrightshire; bounded on the north by Crossmichael; on the east by Buittle; on the south by Rerwick and Kirkcubright; and on the west, or rather north-west, by Tongueland and Balmaghie. The Dee, here an important stream, and navigable for commercial purposes by flat-bottomed boats, divides the parish  $5\frac{1}{2}$  miles from Balmaghie and Tongueland, forms immediately after contact two considerable islets, one of which belongs to Kelton, and the other to Balmaghie, and offers, among other fish, the dark-coloured salmon which abound in its waters. Doach-hurn rises on the eastern boundary a little north-east of Kelton-hill, and traces that boundary over a distance of  $3\frac{3}{4}$  miles. Carlinwark or Castle-Douglas loch,  $\frac{3}{4}$  of a mile in length, expands its waters near the northern extremity; and has yielded up, at the expense of diminishing its own hulk, an opulently large mass of shell marl, the aspersions of which over the face of various parishes formed an era in the history of Galloway agricultural improvements: See articles **CASTLE-DOUGLAS** and **KELLS**. North-westward, over a distance of  $1\frac{1}{2}$  mile to the Dec, extends a canal, traced most part of the way along the boundary with Crossmichael; and though formed for the special, perhaps sole, purpose of offering transit to the marl of the lake, it is now of considerable consequence as a navigable line of communication with the not unimportant burgh of Castle-Douglas, situated at the lake's northern extremity. Five or six rills, all except one of local origin, traverse the parish in various directions, and at once drain and enrich its soil. Toward the southern and south-eastern extremities of the parish, steep and rocky hills, chiefly clad in heath, exhibit an aspect of desolation,—the highest of them rising 1,100 feet above the level of the sea. Elsewhere the surface displays a singularly knobbed or knolly appearance, sending up tumours, or abounding in little round hills. But over this oddly rolling surface, as well on the rising grounds as in the hollows, the parish, though not luxuriant, is arable. The soil is generally thin; in some places, is a fine loam; and in others, especially on the little hills, is a deep watery till; but it has everywhere been greatly enriched both by the marl from Loch-Carlinwark and by other manurial appliances. In the parish are the burgh of **CASTLE-**

DOUGLAS, [which see,] and the village of Kelton-hill. The latter, situated  $2\frac{1}{2}$  miles south of Castle-Douglas, was, till of late, a place of not a little consequence. Here was annually held, on the first Tuesday after the 17th of June, O.S., probably the largest horse-fair in Scotland, frequented by horse-dealers from England, Ireland, and the Lowlands of Scotland, and attracting so large a concourse, that tents for the sale of provisions and liquors were erected by persons from Dumfries, Kirkcudbright, Gatehouse-of-Fleet, and other towns. This fair, however, with all its advantages, has been transferred to Castle-Douglas. The parish is traversed by the great turnpike between Dumfries and Port-Patrick, and is otherwise well-provided with roads. Population, in 1801, 1,905; in 1831, 2,877. Houses 479. Assessed property, in 1815, £9,627.—Kelton is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, the Crown. Stipend £246 18s. 2d.; glebe £20. Unappropriated teinds £211 17s. 4d. There are three parochial schools, conducted by four teachers, and attended by a maximum of 434 scholars; and six non-parochial schools, conducted by six teachers, and attended by a maximum of 150 scholars. One of the teachers of the parochial schools is an assistant; and the other three have each £17 2s. 2d. salary, with collectively £130 fees. Five of the non-parochial schools are taught by females; and one of these five is a boarding-school.—The present parish comprehends the three old parishes of Kelton, Gelston, and Kirkcormack. Of the united parish, Kelton forms the north corner, Kirkcormack the south-west, and Gelston the south-east corner. The churches of Kelton and Kirkcormack belonged first to the monks of Icolmkill, and next to those of Holyrood; and, at the establishment of Episcopacy by Charles I., they were given to the bishop of Edinburgh. The church of Gelston belonged to the prior and canons of Whithorn, and, in 1606, was given to the bishop of Galloway. Vestiges both of it and of the church of Kirkcormack still exist; and their cemeteries continue to be used.

KELTON, a small village and port on the east side of the Nith;  $3\frac{1}{2}$  miles south of Dumfries; and  $1\frac{1}{2}$  north of Glencaple, on the boundary of the parishes of Dumfries and Caerlaverock, Dumfries-shire. As a port, it is strictly identified with Dumfries, being visited only by vessels employed in the trade of that burgh, and unable to proceed further up the Nith. The new quay between it and the town, Glencaple to the south, and Kelton in the centre, are simply a chain of posts to accommodate the difficult navigation of the river. Ship-building is to a small extent carried on at Kelton.

KELTY, a hamlet in Kinross-shire, in the parish of Cleish, 5 miles south of Kinross, and 10 north of Queensferry.

KELVIN (THE), a river which takes its rise in the parish of Kilsyth, in Stirlingshire, and, after a circuitous course, falls into the Clyde, 2 miles below Glasgow. Near its source it formerly winded in a serpentine manner through a fine valley, which it often overflowed; but it is now confined in a straight channel, with high embankments, to the great benefit of the adjacent grounds. In passing through the parish of East Kilpatrick it flows under the aqueduct-bridge of the Great canal, which is 350 feet in length, 57 feet broad, and 57 feet from the top of the parapet to the surface of the water of the river. It stands upon four arches, each 50 feet wide, and 37 high. This beautiful hridge was planned by Mr. Whitworth, and executed by Mr. Gibb, betwixt June 1787 and June 1790. The Kelvin has numerous water-falls, and drives a great deal of machinery, besides affording water to several large bleachfields.

Its banks exhibit a variety of beautiful landscapes; and, in some places, are entirely covered with wood on both sides.

KEMBACK,\* a parish in Fifeshire, on the south bank of the Eden. It is scarcely 3 miles in length from east to west; and in breadth, from north to south, it varies from 1 to 2 miles. It is bounded on the south by the parish of Ceres; on the east by that parish and St. Andrews; on the north by Leuchars and Dairsie; and on the west by Cupar. At the west end the surface of the parish is level, with a gentle inclination towards the Eden; but near the east end it is varied and picturesque in a high degree. Here it is intersected by Dura-den, a romantic little glen, through which flows Ceres burn to join the Eden. East of this, the surface rises into a beautifully formed and now finely wooded hill, formerly called Nydie hill, but now more generally Kemback hill. This hill runs from north to south, or at right angles to the range of hills which bound the How of Fife, and thus terminates this valley on the east. The parish contains about 1,850 Scots acres, of which the greater portion is arable, and the rest in wood. The soil exhibits every variety, clay, black loam, light sandy soil with a dry bottom, and thin gravel; and is upon the whole very fertile. The valued rent of the parish is £2,312 13s. 4d. Scots; the annual value of real property, for which it was assessed for the property tax, in 1815, was £3,441 sterling. There is, properly speaking, no village in the parish; but there are one or two hamlets, and one has been recently built in Dura-den, by David Yool, Esq., in connection with his large spinning-mill. The post and nearest market-town is Cupar, which is distant about 4 miles from the church. Population, in 1801, 626; in 1831, 651. In consequence of the erection of Mr. Yool's mill, it must have lately received a considerable increase. Houses, in 1831, 141. There are two spinning-mills in the parish: Yool-field spinning-mill, belonging to David Yool, Esq., has a water-wheel, impelled by Ceres burn, of 39 feet in diameter, 10 feet wide, and equal to between 40 and 50 horse power. Bleho mill, possessed by Messrs. Walker, is moved by a water-wheel of 14 horse power, assisted in summer by a steam-engine of 10 horse power. Kemback mills consist of a meal mill, a hone mill, and a saw mill. On the lands of Myreton, in this parish, a quantity of metallic ore, which on analysis was discovered to be rich lead ore, was discovered in 1722. A copartnership was entered into between the proprietor, John Bethune, Esq. of Bleho, and some other gentlemen, for the purpose of working the mine if proper veins should be found; and an overseer and workmen were employed, who after some labour came upon a vein which gave rich indications of lead; but, from the hardness of the rock, and expense of blasting and working, it was ultimately given up. After this a large nest of the purest lead ore was accidentally discovered, about half-a-mile to the west of that first discovered. It contained large lumps of ore, one of 24 stones weight, and several others weighing 10 and 12 stones weight; and below this a vein was found, containing a rib of metal 3 inches thick, which afterwards widened to 7 inches. In prosecuting this vein much annoyance was occasioned by water, and Mr. Bethune's partners getting tired of the expense, it was given up. The pro-

\* The name of this parish—which is obviously Celtic—is probably derived from *Kempach*, 'the Field of battle;' although there is certainly no tradition to give support to the conjecture. *Kemp*, as signifying 'a battle,' or 'a warrior,' is found in both the ancient Celtic and Teutonic languages. It is the origin of our words *camp*, *champion*, and *campaign*. In some parts of Scotland the striving of reapers in the harvest-field is still called *kemping*.

prietor, in 1748, let the mine to a Captain Thync, who began the work, and both he and his workmen considered it as exceedingly promising; but he was obliged to leave Scotland for the West Indies, and the work has never since been resumed.—This parish is in the presbytery of St. Andrews, and synod of Fife. It was formerly a rectory belonging to the archbishopric, and was gifted to the College of St. Salvator on its institution by Bishop Kennedy. The United College are now the titulars of the tithes, and patrons of the church. The church of Kemback, which is an old building, is pleasantly situated on the western slope of Kemback hill. Stipend £157 7s.; glebe £24. The parish-teacher has the maximum salary, with a free house and school-house.

**KEMNAY**, a parish in the district of Garioch, Aberdeenshire, bounded on the north by Inverury; on the east by Kintore; on the south by Cluny; and on the west by Monymusk and Chapel-Garioch. It is divided from Inverury, Monymusk, and Chapel-Garioch by the river Don; and the ridge called the Kembs intersects it from south-east to north-west. It is between 4 and 5 miles in length from north to south, by 3 in breadth. On the banks of the Don there are rich, beautiful, and fertile haughs, but the soil is elsewhere a very stony light mould on sand. The low grounds, in general, are arable. There are two mineral springs, the Kemb well and the Spa well, at the foot of the Kembs. Kemnay-house is beautifully situated amongst plantations, parks, and tasteful pleasure-grounds, on the banks of the Don near the middle of the parish. Thomas Burnett, Esq., ancestor of the Burnetts of Kemnay, relation and intimate friend of Dr. Gilbert Burnett, Bishop of Sarum, and also friend and correspondent of the celebrated Leibnitz and other learned men of his time, resided and was buried in this parish.—Population, in 1801, 583; in 1831, 616. Houses 145. Assessed property, in 1815, £1,200.—The parish is in the synod of Aberdeen, and presbytery of Garioch. Patron, the Earl of Kintore. Stipend £158 19s. 2d.; glebe £10. Schoolmaster's salary £25 13s. 4d.; fees £40, besides a share of the Dick bequest. The parochial school of Kemnay, from an article which recently appeared in that extensively diffused and powerful engine of instruction, 'Chambers's Journal,' appears to be an admirably managed seminary. A visitor thus describes it: "Our way was for some time alongside the Don. We then left the river, and passed for some miles through a country generally barren, till at length we descended upon Kemnay, which appeared to me quite as a green spot in the wilderness. I could imagine no simple rural scene possessed of greater beauty than what was presented by the little group of cottages constituting the parish-school establishment, planted as they are upon somewhat irregular ground, which for some distance around has been laid out with good taste, and exhibits a variety of fine green shrubs. A few years ago, the school and school-house were, as usual in Scotland, merely a couple of cottages in juxtaposition. Mr. Stevenson, the present teacher, has added one new building after another, till it is now a considerable place. His last addition was a pretty large school-room, which is constructed of timber, pitched on the top. One must not wonder at the new buildings not being of a very lasting kind, for not only has the teacher had to do all at his own expense, but he has done it with the certainty that all will become public property when he dies or leaves his situation. The place, nevertheless, seems sufficiently comfortable. The new erections have been made as the views of the teacher, respecting the duties of his charge, expanded, and as his hoarding pupils became more

numerous. After all, these are as yet only nineteen. Generally, if there is a little garden for common vegetables near a Scottish parish-school, it is all that is to be expected. Here there is a remarkably neat garden, situated on a piece of undulating ground, comprising a pretty piece of water in a serpentine form; while the ground immediately round the new school-room is laid out in shrubbery and flower-borders, with seats and arbours, the whole being in a style which might not shame a gentleman's mansion. I have never seen finer vegetables, or eaten more delicious fruit, than I did here. Judge my surprise when I was told that the whole is the result of the labours of the children, who are thus taught an useful and tasteful art, and at the same time indulged in a physical recreation highly conducive to their health. My curiosity was excited to know how their labours were conducted. The garden and ground, I understood, are divided into compartments, and so many boys are attached to each. These companies, as they are called, have each a separate set of tools, all of which are kept in the nicest order and arrangement in a small wooden house erected for the purpose. It was singular, you will allow, at a time when industrial education is only beginning to be thought of in England, to find it practised on a large scale, and under the best regulations, in a remote and barren part of the northern county of Aberdeen. I was taken from the garden to a carpentry workshop, where the boys every day exercise themselves in the ingenious trade of the joiner. They make part of the school furniture, seats for the garden and shrubbery, and many other useful articles. We were now conducted into the school-room, which I found to be a spacious apartment, fitted up with all the conveniences of black boards, &c., as in the most improved schools in Edinburgh, with the addition of something which I had never seen in any similar place, namely, a variety of musical instruments hung upon the walls. I found only the boarders present, for the day was the last of the week, and all the native pupils had been dismissed, at the usual early hour, to their homes. Mr. Stevenson, nevertheless, gave us a small specimen of a concert. Some boys took flutes, other violins, and one or two violas or violoncellos. Mr. Stevenson also took his instrument, and assumed the office of leader. I then heard several pieces of music, amongst which were some sacred pieces, performed in a manner really astonishing, when the ages of the musicians were considered. I may mention that Mr. Stevenson is himself a good musician, and even a composer. The boys are of all ages from six to nineteen, and several of them are from distant parts of the world. Many have made considerable progress in drawing, and in the copying of maps."

**KEMPOCH-POINT.** See **GOUROCK.**

**KEN (THE)**, a river of the district of Glenkens, Kirkcudbrightshire. It rises between Blacklarg hill and Longrigg hill on the boundary with Ayrshire, and, after a course of 1½ mile south-eastward, and of 2 miles south-westward through the northern extremity of Dalry, begins to be, over all its extent, the boundary-line between Carsphairn and Kells on the west; and Dalry, Balmaclellan, and Parton on the east, cutting the district of Glenkens, formed by all these parishes except the last, into two not very unequal parts. Its length of course, while dividing the parishes, is 21 miles; and over this distance it describes the figure of the segment of a circle, running, in its upper part, toward the south-west, and, in its lower part, toward the south-east. At the southern extremity of the parish of Kells, it is joined from the west by the Dec, and from that point to the sea, passes under the name of that

usurping tributary: see the **DEE**. The streams which flow into the Ken are very numerous; but, in general, are individually inconsiderable. But one of them, Deugh or Carsphairn water, which joins it at the point of its first touching the parish of Kells, is of longer course than itself, rising in three head-waters in Ayrshire, and draining in two main basins nearly the whole of the extensive parish of Carsphairn. The Ken, over most of its length, is singularly rich in the landscape-features, both of its immediate banks, and of its mountain-basin. See articles **CARSPHAIRN**, **GLENKENS**, and **KELLS**.

**KEN (LOCH)**, an expansion of the river Ken, immediately above the point where it is joined by the Dee. It is about 5 miles long, and from  $\frac{1}{2}$  to  $\frac{3}{4}$  of a mile broad. On its west side a range of hills comes down from the interior, terminates abruptly at its southern corner in a huge rock called Ben-in-hill, and over the central and northern part of the lake presses almost close upon its edge. Loch-Ken, approached from the south by a road leading up from Kirkcudbright along its left bank into the interior of the Glenkens, offers delightful scenery to the view. Some islets, wholly or partially covered with wood, are sprinkled on its surface. Its shores are occasionally fringed and tufted with plantation. At its head, a little westward of the river, appear Kenmure-castle, in a most picturesque situation,—and the small burgh of New Galloway,—with an intervening grove of stately elms, heeches, and pines. Between these objects and the river stretches a level tract of fine meadow and of fertile arable ground,—the holm of Kenmure. Close upon the eastern edge of the lake, embowered in wood, and finely seated, appears the ruinous house of Shermours. A re-expansion of the stream, over a length of  $4\frac{1}{2}$  miles, after the confluence of the Dee, is called Loch-Dee,—a name applied also to a lake of  $1\frac{1}{2}$  mile by  $\frac{3}{4}$ , in the parish of Muirgaff, whence issues one of the Dee's head-waters.

**KENDAR (LOCH)**, a beautiful sequestered sheet of water in the parish of Newabbey, Kirkcudbrightshire, fed by springs, and the mists and rains that ooze through the fissures of the gigantic Criffel. It is sometimes visited by wild swans.

**KENEDAR**, or **KEN-EDGAR**. See **KING-EDWARD**.

**KENLOWIE (THE)**, a small river in Fifeshire, which, after a course of about 6 miles from near Cupar, dividing the parishes of Kingsbarns and St. Andrews, falls into St. Andrews bay a little below Burrells. It abounds with excellent trout.

**KENMORE**, a parish in the district of Breadalbane, Perthshire. To convey an idea of its topographical figure and position, is not easy. In a general point of view, its main body may be regarded as forming the frame-work of the beautiful mirror of Loch-Tay, and as bounded on the north by Fortingall; on the east by Dull, and by detached parts of various parishes; on the south by Comrie; and on the west by Killin. But this idea of even its main body must be modified; for compact stripes of Weem and Killin, all but entirely detach a district of  $6\frac{1}{2}$  miles by 3 on the west; a detached part of Weem, 3 miles by  $1\frac{1}{4}$ , lies embosomed in the north; and parts of other parishes, either compactly or intersectingly, occupy the banks of Loch-Tay over half its extent on the south. An entirely detached part of Kenmore,  $8\frac{1}{2}$  miles by 6, lies between Fortingall and Killin, on the boundary with Argyleshire. Another entirely detached part,  $3\frac{1}{2}$  miles by  $2\frac{1}{2}$ , lies  $1\frac{3}{4}$  mile eastward of the nearest point of the main body. The greatest length of the whole parish, exclusive of intervening territories, is about 20 miles; its greatest length, measured across these territories so

as to include them, is 30 miles; its greatest breadth is 7 miles; and its superficial area is 62 square miles. The main body of the parish takes its tone and configuration from the river which intersects it, and which here expands into the long and surpassingly beautiful stripe of waters forming Loch-Tay. The features of its scenery are well known to fame, and attract crowds of tasteful visitors during the months of warmth and verdure. But nearly all the objects which please and delight are either identified or scenically grouped with **LOCH-TAY**, the river **TAY**, and the princely mansion and demesne of **TAYMOUTH-CASTLE**, and properly occur to be noticed under these heads,—which see. The Lochy rises in several head-streams in the western detached portion of the parish, and afterwards intersects a small part of the main body before uniting with the more impetuous Dochart in the baughs of Killin, at the head of Loch-Tay. That lake stretching from south-west to north-east, runs through the centre of the main body; but, at the lower end, is subtended by three or four times more breadth of surface on its south-east than on its north-west side. Tay river, emerging from Loch-Tay, a few yards above the pleasant little village of Kenmore, has a course of 2 miles within the parish, and at the point of leaving it, is joined by the Lyon, after the latter having run  $1\frac{1}{2}$  mile along the north-east boundary. Numerous rills or streamlets come down on both sides of the intersecting thread or stripe of water—whether lake or river—but they are all of brief course, and in no instance come from beyond the boundary. The parish is thus, with some exceptions, an elongated basin, sending up, either at or within its lateral boundaries, a water-shedding line of heights, and draining off the produce of its own springs by one central and continuous channel. At the upper end of Loch-Tay, where the still flowing waters of the Lochy come down to aid those of the Dochart in forming it, is some rich meadowland, constituting a patch of verdant holm in the centre of the glen. At the lower extremity of the lake, from the narrow efflux of Tay river, the surface gradually expands into a beautiful plain, about a mile wide, occupied by the princely mansion and domains of Taymouth-castle. At the points where the larger lateral streamlets enter Loch-Tay, are deltas or little plains, rich in their soil, and lovely in their aspect, but inconsiderable in extent. With these exceptions, the surface of the main body of the parish rises in a not very gentle ascent from both sides of the long belt of water. In most parts, it is all, for nearly a mile, either subjected to the plough, or laid out in verdant pasture or covered with plantation. Behind this green zone—this fringe-work of varied and picturesque cultivation round the lake—the surface puts on a russet-dress of heath, tartan and chequered and striped with verdure, and undulates away upward in the curving lines of beauty, till it assumes an utterly Alpine aspect, and in one place on the north sends aloft the sublime and far-seeing summit of Benlawers 3,944 or 4,015 feet above the level of the sea: see **BENLAWERS**. The western detached part of the parish, besides being cut with the head-streams of the Lochy, is bounded for  $5\frac{1}{2}$  miles by Loch-Lyon and the main stream which it receives and disgorges, and is traversed on its north-west side by three rills tributary to the Lyon; and, being throughout a mountainous district, it exhibits a congeries of heights cloven and dis severed in very various directions by ravines and glens. The eastern detached part forms the basin of the chief and lower part of the Quaich, before its entrance into Loch-Freuchie; and, consisting of the wider portion of Glenquaich, with its screen of flanking heights, considerably resembles in the configuration of

its surface, the main body of the parish; but for upwards of a mile at its lower extremity, it exhibits, on the haiks of the Quaich, a dull flat face of swamp and morass, which seems to offer defiance to the agriculturist's arts of improvement. A wide aggregate expanse of the surface of the parish, comprehending 4,500 or 5,000 acres, is covered with wood, chiefly Scotch fir, but composed also of oak, larch, lime, beech, sycamore, and perhaps 9 or 10 other species. The soil and climate seem peculiarly adapted to arboriculture; and, in positions where no invasion could be made by the plough—as on the precipitous sides, for example, of Drummond hill, and some parts of 'the Braes of Kenmore'—they produce groves of trees remarkable for their thrivingness and hulk. Agriculture, though zealously plied, is pent up within narrow limits, and claims, as the arena of its exploits, not more than one-eighth of the whole superficies. The valleys and the water-carried soils of the glens produce good crops of excellent grasses. The belt of arable land along the sides of Loch-Tay, consisting of a loamy soil washed down by the rains from the higher grounds, is well-adapted to cropping, and not a little productive of oats, heer, pulse, potatoes, and other esculents. The hilly land, carpeted chiefly with a light mossy kind of soil, is naturally not unfriendly to vegetation, but luxuriates principally in heath, bent, and coarse grasses. Agriculture can never apparently make a much farther inroad upon the district than it has already done; but must, even with the aid of the sister arts of horticulture and arboriculture, leave three-fourths of it in undisturbed possession of the cloud-piercing hirs, or of browsing flocks of sheep and cattle. The parish is richly indebted to the Highland society, and the spirited efforts of the Marquis of Breadalhane, for directing the expansion of its productive capabilities, and arousing attention to the improvement and care of stock. Upwards of 12,000 sheep, chiefly the black-faced sort, and about 3,000 black cattle, principally the West Highland kind, are maintained on its pastures.—Limestone abounds, and is wrought in various quarries. Several building-stones of remarkable beauty are worked in quarries, and exhibit specimens in some of the most interesting local erections. Quartz of a pure and brilliant whiteness may be seen in the walls of Taymouth dairy, and strewn plentifully, by way of ornament, in front of the neatly white-washed cottages of Kenmore. A stone which combines the characteristics of chlorite and of tale slate, and which assumes a smooth surface from the arts of the mason, has been used in the construction of the modern or principal part of Taymouth-castle, and contributes not a little, by its texture and tints, to the magnificence of aspect worn by that superb pile. In a quarry not far from the village of Kenmore, this stone is worked in a very wide variety of ways, from the production of the massive rude block, to that of the delicately carved architectural ornament. Appearances exist among the mountains of lead and iron and other ores. With a very unimportant exception, the whole parish belongs to the Marquis of Breadalhane; and it enjoys the felicity of his personal residence, a great part of the year, at Taymouth-castle, and of his active personal promptings of its wellbeing.

The only antiquity worth notice are the ruins of a priory, founded in 1122 by Alexander I., and situated on a picturesque little fairy-looking, tree-clothed islet at the north-east end of Loch-Tay, a few yards above the bridge. "The ruins on the isle," says Sir Walter Scott, "now almost shapeless, being overgrown with wood, rose at one time into the towers and pinnacles of a priory, where slumbered the remains of Sibilla, daughter of Henry I. of England, and con-

sort of Alexander I. of Scotland. It was founded by Alexander, and the care of it committed to a small body of monks." But these monks appear to have been expelled, or to have found occasion for heating a retreat; for the last residents of the place, according to Sir Walter, were three nuns, distinguished by a very singular species of recluse habits. Shutting themselves professionally out from society, they periodically rushed into its embrace; and then they "seemed determined to enjoy it in its most complicated and noisy state; for they came out only once a-year, and that to a market at Kenmore. Hence that fair is still called, *Feill nam ban naomha*, 'the Market of the Holy women.' There are no precise data by which to determine the time of the existence of these nuns. It must have been subsequent to the year 1565, for that was the year when a market was for the first time held at Kenmore." [Fair Maid of Perth.] In after times this island wore another face. When the bravery of Montrose carried every thing before him in defence of the royal cause, which was nearly in its wane in England; a numerous body of Campbells, against whom the rigour of Montrose was chiefly directed, took possession of this island, where they fortified themselves among the ruins. Montrose took, and garrisoned it; and it continued in the hands of the loyalists till 1654, when Monk retook it.

The villages are three,—Sronfernan, Acharn, and Kenmore.—Sronfernan stands on the north bank of Loch-Tay, 2½ miles above the efflux of the river Tay; and has a population of about 150. Acharn, a neat quiet-looking, tree-shadowed village, stands on the south bank of Loch-Tay, 1½ mile above the efflux of the river; and has a population of about 90. It is celebrated for its falls, which are formed by a small burn in its course through the overhanging woods above the village, and which are, we think, quite equal to those of the Bran in the neighbourhood of Dunkeld.—Kenmore, though the least populous village of the three, possesses an hundred times the importance of the other two united. It occupies a charming site on a peninsula projecting into the north-eastern extremity of Loch-Tay, on the south side of the river, at the point of its efflux, 16 miles east-north-east of Killin, and 23 miles west-north-west of Dunkeld. The village, with its neat white cottages, its commodious inn, its parish-church, its handsome bridge of 5 arches across the new-horn or at least new-named river Tay, and its close proximity to the gorgeousness of Taymouth pleasure-grounds, and the finest scenery of Loch-Tay, is well-known to tourists as one of the most beautiful in Scotland; and as going far—especially with the aid of its magnificent adjuncts—to redeem the character of our country from the scorn which our villages generally and too justly draw down from the Southron. Excepting, perhaps, the joyous Amhleside, and the gay and elegant Keswick, no village in England may be fairly pronounced to surpass Kenmore in the aggregate beauties of its aspect, as seen in the foils and adornings of lake and valley and mountain encincturing landscape; and even these, while, on the whole, they claim decided superiority, are marred by defects which have no counterpart in Kenmore. Half-way between Taymouth-castle and the village, on the north bank of the river, stands an elegant monumental erection called the Cross, exhibiting very nice and rich architectural chiselings in the beautiful species of building-stone which is quarried in the vicinity. In the neighbourhood of the village are a saw-mill driven by water-power, and a small woollen manufactory,—the latter employing about 12 persons. Kenmore has 6 annual fairs; one on the first Tuesday of March, O.S., for

horses and merchandisc; one on the 28th of June, for general business; one on the 26th of July, for horses and wool; one on the 17th of September, for cattle and agricultural produce; one on the Friday before the last Doune tryst, for cattle and general business; and one on the 22d of December, for agricultural produce. Population, about 80. From the village diverge, either immediately or at a brief distance, 6 lines of communication. Three lead out from its centre,—one, the west entrance to Taymouth-castle,—another, the road along the bridge northward,—and the third, a thoroughfare of communication with the south of Scotland. The north road branches a little beyond the bridge, into a line toward the fords of Lyon, and a well-kept turnpike along the north side of Loch-Tay to Killin. The south road, soon after leaving the village, forks into three branches,—one leading up the south side of Loch-Tay to Killin,—another leading over the hills to Glenquich, and Glenalmond,—and the third, a finely maintained turnpike, pointing the way to Aherfeldy, Logierait, and Dunkeld. Population of the parish, in 1801, 3,346; in 1831, 3,126. Houses 616. Assessed property, in 1815, £21,181.

Kenmore is in the presbytery of Weem, and synod of Perth and Stirling. Patron, the Marquis of Breadalbane. Stipend £253 14s. 9d.; glebe £20. According to an ecclesiastical survey in 1836, the population then consisted of 3,087 churchmen, 70 dissenters, and 1 no-religionist,—in all, 3,158. The parish-church was built in 1761–2. Sittings 686. Certain portions of the parish, though not disjoined *quoad sacra* from the parish-church, have, by authority of the presbytery, been put under the superintendence of missionaries stationed at Lawers for the north-western part of the main body of the parish,—at Ardeonaig for the south-western part of the main body,—and at Amulree for the eastern detached portion, or Glenquich district, as well as for portions of other parishes. The western detached portion, also, or Glenloch district, is *quoad sacra* under the superintendence of the minister of the parish of Killin. The proportion of the population under the minister of Kenmore is 1,148; under the missionary of Amulree, 149; under the missionary of Ardeonaig, 279; under the missionary of Lawers, 848; and under the minister of Killin, 734.—A small Baptist congregation, yielding an average attendance of from 30 to 40, was established in the parish in 1804. Their place of worship is a building rented from the tenant of the farm on which it is situated. Sittings 150. No stipend.—There are 10 schools,—one parochial, attended by a maximum of 76 scholars,—and 9 non-parochial, attended by a maximum of 605. Parochial schoolmaster's salary £34 4s. 4½d., with £19 12s. 10d. fees, and at least £13 10s. other emoluments. Of the non-parochial schools, 3 are endowed by the society in Scotland for Propagating Christian Knowledge, 1 is under the patronage of the Dowager-marchioness of Breadalbane, and 5 are conducted by young men entirely at their own adventure.

**KENMURE-CASTLE**, the seat of Viscount Kenmure, occupies a delightful site at the head of Loch-Ken, about half-a-mile south of the hurgh of New Galloway, in the parish of Kells, Kirkcudbrightshire. It stands on an insulated circular mound, which, previous to observing the rocky texture of one of its sides, an observer would suppose to be artificial; and it appears to have been anciently surrounded by a fosse, supplied with water from the Ken. The castle is approached by a beautiful avenue, and has around it a fine plantation, and forms a conspicuous and superb feature in one of the most picturesque landscapes in the south of Scotland: See articles

**KEN and KELLS.** The edifice is a conglomeration of several buildings of different ages: the older parts exhibiting the turreted character which distinguished the 15th century, and all of it having a castellated form and imposing aspect. In the interior are spacious and elegant rooms, handsomely furnished; a large and well-selected library; and a gallery which does honour to the taste of the collectors, and contains, among other remarkable pictures, one of the few extant genuine portraits of Queen Mary. When or by whom the original portion of the present pile, or rather the whole of a previous one which it must have supplanted, was built, is a matter not known. In early times, and even at a comparatively modern date, it suffered much from the ravages of war, having been burnt both in the reign of Mary and during the administration of Cromwell. Originally, it is said to have been a seat or stronghold of the Lords of Galloway. John Baliol, who succeeded to a great part of the estates of those feudal princes, is reported to have often made it his residence; and omitting to reserve it when he resigned his Scottish possessions to the English king, he had it restored to him by a special deed. Kenmure, after the triumph of the dynasty of Bruce, passed into the possession of the Douglasses; upon their forfeiture, it was granted by the Crown to the Maxwells of Caerlaverock; and in the end of the 14th century, or the beginning of the 16th, it was purchased, along with the lands of Lochinvar, by a younger brother of Sir Alexander de Gordon of Berwickshire, the ancestor of the Dukes of Gordon, and it has ever since remained in his family. The Gordons of Lochinvar or of Kenmure claim strictly the same stock as the Gordons of the north, and were originally from Normandy; and after sitting down at Kenmure, they gradually acquired, by grant, purchase, or marriage, the greater part of the lands in Kirkcudbrightshire. They were distinguished by the confidence of their sovereigns, and by such extreme hereditary attachment to their persons and fortunes, as eventually involved their house in prolonged ruin; and they, at the same time, sought to be the friends of the people, and were steady professors of the Presbyterian religion. Sir John Gordon of Lochinvar was an unwavering follower of Mary, and ran serious hazards in her cause. His son and successor was one of the most distinguished Scotsmen in the court of James VI. In May 1633, Sir John Gordon, the contemporary of Charles I., was raised by that monarch to the dignity of the peerage, by the title of Viscount Kenmure. This excellent nobleman singularly combined attachment to the house of Stuart with unflinching fidelity in the profession of religion; and, much as he is known for the honours conferred upon him by Charles—among the rest, the curious one of chartering a royal hurgh within limits on his estate, whereas yet not a human dwelling existed [see **NEW GALLOWAY**]  
—he is greatly better known for his intimacy with John Welsh and Samuel Rutherford, for the important services he did the latter, and for the tone of deep religiousness which flung its melody over the closing scenes of his life. His amiable lady, too—the third daughter of Archibald, 7th Earl of Argyle, and the sister of Lord Lorn—is intimately known to a numerous class in Scotland as the correspondent of the quaint hut unctuous Rutherford. In 1715, William, the 6th Viscount, took an active part in the rebellion, and next year was beheaded on Towerhill in London, entailing upon his family the forfeiture of their title. It is said he was urged to engage in the unfortunate enterprise by the importunities of his lady; and the tradition of the Glenkens still records, that, on the ominous morning when he left Kenmure-castle, his charger—

one of the finest animals of its kind, and remarkable for its docility—thrice refused its master. The matter in itself was of no moment, and, but for what followed, would have been since forgotten. For some days, we believe, he threatened Dumfries; and he kept a body of the rebel troops on Anisfield-moor, ready for action, to the dismay of the loyal burgesses, who expected their town to be sacked, and such of their male population as were capable of bearing arms to be forthwith draughted into the Pretender's army. His descendants, inheriting his estates—which by prudent management were purchased from the Crown—endeavoured by serving in the army to make amends for their ancestor's error, and distinguished themselves by patriotic concern for the interests of their tenants, and for the general welfare; and, in 1824, they were, in the person of the forfeited Viscount's grandson, restored, by act of parliament, to their ancient honours. He who thus became the 7th Viscount, was born in 1750, and continued to enjoy his title and estates till his 91st year. His lordship is succeeded by his nephew, Adam Gordon, Esq., a lieutenant in the royal navy, now Viscount Kenmore, a brave officer, who displayed great gallantry in many severe actions on the American lakes during the late war.

**KENNETHMONT**, or **KINNETHMONT**, a parish in Aberdeenshire, bounded on the north by Gartly; on the east by Insch; on the south by Leslie and Clatt; and on the west by Rhynie. It is 6 miles long from east to west, and 3 in breadth. The surface is diversified by planted eminences and hills, and the parish is watered by several streamlets. Greater part of the land is arable and productive. Annexed to this parish is Christ's-kirk, formerly a parish, the church of which is in ruins. Here, on the green sward encircling the kirk, a fair was at one time held in the night, and by the people hence called Sleepy-market. It is contended, from these curious circumstances, that this was the scene of 'Christ's-kirk on the Green,' ascribed to James I. of Scotland. There are some Druidical remains in the parish. Population, in 1801, 784; in 1831, 1,131. Houses 224. Assessed property, in 1815, £1,451.—Kennethmont is in the synod of Aberdeen, and presbytery of Alford. Patron, Hay of Rannes and Leith-Hall. Stipend £195 2s. 1d.; glebe £15. Schoolmaster's salary £25 13s. 4d.; fees and other emoluments £12 10s. 2d. There are four private schools in the parish.

**KENNET-PANS**, a village 2 miles south of the town of Clackmannan, and  $1\frac{1}{2}$  west of the town of Kincardine, Clackmannanshire. It stands on the shore of the frith of Forth. Kennet, or New Kennet, is a modern village,  $1\frac{1}{2}$  mile from Kennet-Pans, and half-a-mile from Clackmannan, neatly edificed, and situated on the estate and near the mansion of Bruce of Kennet. There is a railroad, about a mile in length, from this harbour to Kilbagie distillery.

**KENNOWAY**, a parish in Fifeshire. It forms an irregular parallelogram,  $3\frac{1}{2}$  miles in length from east to west, and rather more than 2 miles in breadth from north to south; ascending gradually from the south towards the north. The prospect from almost every part of the parish is extensive and beautiful; commanding a distinct view of the island of May, the Bass rock, Inchkeith, the shipping on the Forth, and the coast south of the Forth, from Dunbar to the west of Edinburgh, including the Lammermoor hills. From the northern or elevated part of the parish, the view embraces not only the prospect to the south just described, but almost all Fifeshire, and a great part of the counties of Angus, Perth, and Stirling, and of the Grampian mountains. The parish is bounded on the south by the parishes of Scoonie, Wemyss, and Markinch; on the east by

Scoonie; on the north by the parish of Kettle; and on the west by Markinch. Of 3,750 imperial acres, being the superficies of this parish, 3,470 are arable. Coal, freestone, and whinstone, are wrought in the parish, and a considerable number of the population are employed in linen-weaving. There are three villages in the parish: 1st, Kennoway, which has a sub-post-office attached to that of Levcn, and a population of 862; 2d, Star, having a population of 232; and 3d, Baneton, with a population of 125. The population of the parish, in 1801, was 1,466; in 1831, 1,721. Houses 378. Assessed property, in 1815, £5,251. Valued rent £4,131 Scots. Real rent £5,000.—On the farm of Duniace, in the southern part of this parish, is a round hill called the Maiden-castle, which seems to have been the site in ancient times of a British fort. Tradition points it out as having been a castle belonging to Macduff, Earl of Fife; but this does not appear to be probable, nor is there the slightest evidence of the fact. In the village of Kennoway is an old house in which it is said Archbishop Sharp passed the night previous to his being murdered; and in the first Statistical Account the minister says that about fourteen years ago—he wrote in 1793—a woman had died, who remembered to have seen the Archbishop on that occasion, she having lived to an extreme old age.—The parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Crown. Stipend £242 17s.; glebe £20. Unappropriated teinds £9 13s. The parish-church anciently belonged to the priory of St. Andrews. It is obviously a building of great antiquity, but the period of its erection is not known. It was thoroughly repaired in 1832; sittings 463. There is a chapel in the village of Kennoway connected with the United Associate Synod; and another chapel connected with the Original Burgher Synod.—The parochial teacher has the maximum salary, and the legal accommodation. Average number of pupils 120. There are besides two unendowed schools in the parish, one of which is a female school.

**KERERA**, or **KERRERA**, an island of Argyleshire, situated in the sound of Mull, about 5 miles from the island of Mull, and 1 mile from the mainland of the district of Lorn, where it contributes to form the excellent and romantic harbour of Oban. It is 4 miles in length, and 2 in breadth, and is included in the parish of Kilmore. Its surface is very hilly, and many of the rocks have a volcanic appearance. Kerera possesses two good harbours, called the Ardintraive and Horse-shoe bay. There is a ferry from this island to Achnacraig in Mull. "Kerera," says an intelligent tourist, "excepting on its shores, has no features of any kind to attract attention, unless it be the inequality and confusion of the surface, which is extreme. Not only is there nothing like level ground, but the hilly parts are so steep and frequent, the valleys so deep, and the whole so intermixed, that the toil of walking over it is incredible. Its want of beauty is, however, much recompensed by the noble prospects which it affords of the bay of Oban, and of that magnificent range of mountains which encloses the Linnhe-loch, with all the islands that are scattered about its variegated sea. The southern shore of the island affords one very wild and picturesque scene, of which Gylen-castle proves the chief object. On the margin of a high cliff impending over the sea, is perched this tall grey tower; the whole bay, rude with rocks and cliffs, presenting no traces of land or of verdure,—appearing as if it had, for uncounted ages, braved the fury of the waves that break in from over the whole breadth of the inlet and far out to sea. A scene more savage and desolate, and more in character with the desert-

ed and melancholy air of this solitary dwelling that seems to shun all the haunts of man, is not easily conceived. This castle must have belonged to the Macdougalls, as it is of a date at least equal to Dunolly, and to the times when this family were lords of Lorn. It was in Kerera that Alexander II. died (July 8, 1249), when preparing to invade the Western islands, then under the supreme dominion of Norway and of Haco. The tale has something of the superstition of the times, when there was a solution for every dream in its being a warning from the land of shadows. As his majesty lay in his bed, there appeared to him three men; one of them dressed in royal garments, with a red face, squinting eyes, and a terrible aspect,—the second being very young and beautiful with a costly dress,—and a third of a larger stature than either, and of a still fiercer countenance than the first. The last personage demanded of him whether he meant to subdue the islands, and on receiving his assent, advised him to return home; which warning he neglected. The three persons were supposed to be St. Olave, St. Magnus, and St. Columba; although what interest the latter could have in taking part with the two Norwegian saints, does not appear; as the piratical invaders of that country had been early and bitter enemies to his monastery.”

**KERLOACK**, one of the Grampian mountains in Kincardineshire, near the river Dee, rising 1,890 feet above the level of the sea.

**KERNIGERG**, two small islands of the Hebrides, united at low water, lying between the islands of Coll and Tiree.

**KERSHOPE (THE)**, a rivulet in the southern extremity of Roxburghshire, or on the south-east side of the parish of Castletown, or district of Liddesdale, and belonging almost equally to Scotland and England. It rises on the east side of Whiteknowe, within a few yards of one of the chief head-waters of the English Tyne, within the limits of Liddesdale; and, after flowing half-a-mile eastward, it forms over its whole remaining course of 8 miles, during which it generally runs south-westward, the boundary-line between Liddesdale on its right, and Northumberland and Cumberland on its left. It falls into the Liddel  $2\frac{3}{4}$  miles below the village of Castletown, and the same distance above the point where the river leaves Roxburghshire. Like the other streams of Liddesdale, it abounds in excellent trout.—On the top of Kershope hill, in the parish of Yarrow, about 9 miles west-south-west of Selkirk, there stood a monumental stone called Tait's cross. Chalmers informs us, from a manuscript description of the shire of Selkirk by John Hodge, in 1722, “that there was then to be seen, at Tait's cross, hought\* and milked, upwards of 12,000 ewes, in the month of June, about eight o'clock at night, at one view.”

**KESOCK (WESTER)**, a ferry over Loch-Beauly to Inverness. It is in the parish of Knockhain, and is accommodated with a pier and inn.

**KET (THE)**, a streamlet of  $5\frac{1}{2}$  miles length of course, in Wigtonshire. It describes the figure of a semicircle, having a point a little north of Burrowhead for its centre. Rising near the sea in the parish of Glasserton, it flows through the burgh of Whithorn, and, driving a corn-mill near its mouth, enters the sea at the little bay called Port-Yarrook.

**KETTINS**, a parish in the south-west extremity of Forfarshire; bounded on the north-east by New-

tyle; on the east by Lundie; on a small part of the west by the Forfarshire portion of Cupar-Angus; and on all other sides by Perthshire. It has nearly the figure of a hexagon, its south-east side considerably indented, two sides ragged or irregular, and each of the six measuring on the average about  $2\frac{1}{2}$  miles. But a detached portion, 1 mile long and  $\frac{3}{4}$  of a mile broad, lies 6 miles south-west from the nearest point of the main body, surrounded by Col-lace, Kinnaird, Kilspindie, and St. Martins in Perthshire. The east side of the main body being bounded by the water-shedding line of the Sidlaw hills, the surface first descends the slope of these hills, and then glides gently down into the plain of Strathmore. The greater or western part is nearly level, and well cultivated and thoroughly enclosed. The lesser or upland part is partly heathy, partly covered with plantation, but chiefly disposed in pasturage. The soil, throughout the lowlands, is in general fertile; but in the uplands it is thin and light. Two rivulets—one of 6 miles length of course, which comes in from Perthshire and flows partly on the boundary and partly in the interior, and one of 4 miles length of course, which issues from a lochlet in the south-east extremity of the parish, and cuts it north-westward into two nearly equal parts—unite a few hundred yards above Cupar-Angus, or the point of their passing into Perthshire, and, in their progress, drive a considerable number of mills. A proportion of the population are employed in the weaving of linen fabrics, subordinatedly to the manufacturers of Dundee, and in conducting the operations of some bleach-fields. Close on the western verge of the parish, but beyond its limits, and half-a-mile east of a bend of the river Isla, stands the Forfarshire portion of the town of Cupar-Angus. A mile south-east of that town, at mid-distance between the northern and the southern extremities of the parish, stands the village of Kettins, the site of the church, and the metropolis of a parish which boasts no fewer than seven villages. All the villages except Kettins, however, are at present inconsiderable hamlets; though anciently they seem to have been of more importance, and, with one exception, were the seats of chaplainries. Half-a-mile east of Kettins stands the modern mansion of Haliburton-house, situated in a plain, surrounded with stately plantations, and formerly the ordinary residence of the family whose name it bears, but now the property of the Earl of Aboyne. The family of Haliburton are well known in connection with the distinguished figure which they made in the scenes of the Scottish Reformation; and, in the 17th century, were owners of extensive lands adjacent to their mansion. A quarter of a mile south of the hamlet of Pitcur, and near 2 miles south-east of the village of Kettins, are the ruins of the castle—that of Pitcur—whence the chief branch of the family derived their title. A mile south-west of Kettins, environed by fine plantations and fertile fields, is Lintrose-house, formerly called Todderance, and once the seat of a lateral branch of the Haliburton family, one of whose offshoots had a seat in the college-of-justice, under the title of Lord Todderance. In the detached part of the parish and county are the mansion and manor of Bandirran. At the hamlet of Camp-muir, three-quarters of a mile north of Kettins, and close on the boundary with Cupar-Angus, are vestiges of a camp supposed to have been Roman. On the summit of a hill at the southern extremity of the parish stood the castle of Dores, traditionally reported to have been the residence of Macbeth. At Baldowrie, near the northern extremity, is an erect Danish monument, six feet high. The parish is traversed by the turnpike between Cupar-Angus and Dundee, by the road between Perth and Newtyle,

\* *Bought* is a verb, from the substantive *bought* or *bught*, which in the speech of shepherds means “a fold for ewes,” while they are milked. Every one knows the old song,—

“Will ye go to the ewe buchts, Marion,  
And wear in the sheep w' me?”

and by not a few cross-roads; and recently, it has received a rich accession to its facilities of communication by the near vicinity to it of the Dundee and Newtyle railway. Population, in 1801, 1,207; in 1831, 1,193. Houses 250. Assessed property, in 1815, £5,560.—Kettins is in the presbytery of Meikle, and synod of Angus and Mearns. Patron, the Crown. Stipend £225 13s. 5d.; glebe £10 1s. 4d. The church had anciently six subordinate or dependent chapels; situated respectively at Peatie, South Coston, Pitcur, Muiryfaulds, Denhead, and Kettins, and most of them surrounded with cemeteries. Parochial schoolmaster's salary £30, with £32 fees, from £10 10s. to £12 12s. other emoluments, and a dwelling-house and small piece of ground. Private schools are occasionally open.

KETTLE,\* a parish in Fifeshire, occupying a portion of the valley of the Eden, on the south side of that stream, and ascending partly over the range of hills which form the southern boundary of the strath. Its extreme length from east to west is about 6½ miles; its breadth varied; and its form irregular. At the east end its breadth is nearly 2 miles; about the middle it is nearly 3 miles; and at the west end for about 2 miles it is little more than half-a-mile in breadth. It is bounded on the south by the parishes of Markinch and Kennoway; on the east by Scoonie or Leven, Ceres, and Cults; on the north by Cults and Collesie; and on the west by the parish of Falkland.—There are five villages in the parish; the largest of which is Kettle, situated on the low ground on the south side of the Eden, and north of the turnpike-road from Cupar to Kirkcaldy, by New-Inn. Population, 527 in 1831. One of the two conflicting lines of projected railway through Fifeshire, namely that called the Eastern line, crosses in its progress this village on two high bridges. The other villages are: Holekettle or Burnside, on the public road, a short way to the south-west. Population 202. Bankton-park, to the north-west, and near the river. Population 146. Balmalcolm, about half-a-mile south-east, also on the public road. Population 115; and Coalton-of-Burnturk, about a mile south-east of Balmalcolm on the high ground. Population 71. Kettle is a post-town, and the nearest market-town is Cupar. Population, in 1801, 1,889; in 1831, 2,071. Houses, in 1831, 431. Assessed property, in 1815, £7,047. Valued rent £6,965 3s. 4d. Scots. A considerable proportion of the population is employed in linen-weaving.—At the south-eastern extremity of the parish, where it borders with Scoonie and Ceres, is Clatto, the property of John Balfour, Esq. of Balbirnie. Here there are the remains of an old tower which is said to have anciently belonged to a family of the name of Seaton, of whom the tradition still is that they were very notorious robbers and murderers. The old road from Cupar to Kinghorn passed through Clatto-den, and in the face of the hill, which forms its boundary, there is alleged to be a cave, which communicated with the tower of Clatto and had another opening to the road, from which the bandits rushed out upon the unsuspecting passengers, and, dragging them into the cave, robbed and murdered them. The following is the traditional account of the discovery and punishment of these

assassins. One of the Scottish kings—said to have been James IV.—happening to pass that way alone, was attacked by a son of the laird of Clatto; but the king, with one blow of his sword, cut off the right hand of the robber, with which he had seized hold of the bridle of his horse. The assailant instantly fled, and the king having taken up the severed hand, rode off with it. Next day, attended by a proper retinue, his majesty visited the tower of Clatto, and demanded to see Seaton and his sons, who were noted as hardy, enterprising men. The old man, affecting to be gratified by the king's request, conducted his family into the presence, but it was observed that one of the sons was absent; and, on inquiry being made after him, it was alleged he had been hurt by an accident, and was at the moment confined to bed. The king, however, insisted on seeing him; and, being led to his apartment, desired to feel his pulse. Whereupon the young man held out his left hand, but his majesty requesting to have the right, after many excuses, the poor wretch was obliged to confess that he had lost his right hand. The king then told him that he had a hand which was at his service if it fitted him; and the gory hand of the robber being produced, the king explained how it came into his possession, and the whole family were thereupon apprehended, tried, and executed, for the various robberies and murders they had committed. Such is the tradition as to the castle and den of Clatto; but it is necessary to mention that there is now no appearance of the cave, all trace of it having been obliterated by the breaking down of the banks of the den at this place.—West of Clatto, and on the other side of Clatto hill, is Dovan, belonging at one time to a family of the name of Boswell, cadets of Boswell of Balmuto, and now to Mr. Balfour of Balbirnie.—This parish is in the presbytery of Cupar, and synod of Fife. Patron, the Crown. Stipend £223; glebe £3. The church, which was a vicarage belonging to the priory of St. Andrews, originally stood at Lathrisk; besides which there two chapels in the parish,—one at Chapel, and the other at Clatto. In 1636, the chapels having been suppressed after the Reformation, the church was removed to the village of Kettle, as more in the centre of the parish than where it had hitherto stood. The present church was built about the year 1830; sittings 1,200; cost, with the price of the ground, £3,000. It is in the pointed style of architecture, with a handsome tower, containing a clock, and terminated by ornamental pinnacles. It forms a rather fine object in the landscape of this part of the valley of the Eden. There is a chapel in the village of Kettle connected with the Relief synod.—An excellent school-house, fitted to hold 150 scholars, has been erected within the last few years, and a good dwelling-house and garden for the teacher. His salary is the maximum, and with the session and heritors' clerkship, and the school-fees, which are low, may amount to between £60 and £70 per annum.

KIL, or KILL, an adjunct of very frequent occurrence in Scottish topography. Some antiquaries derive it from the Saxon *King*; others, from the Latin *cella*; others, from the Gaelic *cill*—pronounced *keel*—which means 'a circle,' and in which some etymologists have found the radix of the Latin *cœlum*. According to the latter, all places in this country having the prefix *cill* or *kill*, originally derived their names from the proximity of a Druidical circle. It is, however, an historical fact, that when names of places begin with this adjunct, it is generally found that the place was originally the cell or hermitage of a saint, whose name usually forms the second half of the appellation; and the presumption

\* The name of this parish was anciently Lathrisk, or, as it is sometimes spelt in old charters, Lorresk, from the circumstance of the parish-church being formerly situated on the lands of that name at the west end of the parish. The church, manse, and glebe, having been removed about 1636 to the village of Kettle, the parish has from that time received the name of the village. In old deeds the name of the village is sometimes written *Catal*, sometimes *Katul*. From that portion of the lands of Kettle on which the village is situated belonging anciently to the Crown, the village as well as the parish is often called King's Kettle.

is that the word was borrowed by the Gaels from the old Monkish Latin, *cella*. In the Highland districts, *Kil* often implies 'a Burial-place,' probably from there having been originally a cell or chapel, or station of an early Christian missionary, in the neighbourhood.

KILBARCHAN, a parish in Renfrewshire, bounded by Kilmalcolm on the north-west, and in all other directions by streams or rivulets, namely, the Locher and Bride's burn on the south-west, the Black Cart on the south and east,\* and the Gryfe on the north. Its extent is about  $18\frac{3}{4}$  square miles, taking the medium length from west to east at  $7\frac{1}{2}$ , and the breadth at  $2\frac{1}{2}$  miles, containing about 9,200 English acres. It is of a triangular form, narrowing to a point at the north-east, where the Gryfe and the Cart unite, and where these streams form the only separation between this parish and those of Paisley, Renfrew, Inchinnan, Erskine, and Houston, all of which here closely approximate to each other. The lower district of Kilbarchan parish, towards the east, is flat, partly fertile land, and partly unreclaimed moss. Towards the west the surface becomes diversified with gentle risings, of which a great portion is cultivated. The whole abounds in beautiful scenery, and is much embellished with plantations. There are several pretty cascades on the rivulet Locher, which, after hounding the parish for a short distance, as already stated, enters it and runs nearly its whole length, finally falling into the Gryfe. Coal and limestone are wrought at several places. The low part of the parish contains excellent freestone, and the north-west *osmond stone*, which is in great request for ovens. The principal freestone quarry is one of great depth on the western declivity of an eminence called the Bar-hill or hrae, adjacent to the town of Kilbarchan, on the east, and from it the houses in the town were mostly huilt. The stratification of the rocks in this quarry has attracted much attention, being scarcely in accordance with the prevailing theories. Over the freestone there is a stratum of coal, and above this, next the surface, there is whinstone.—On the north side of this hill there is a precipice of perpendicular trap rocks, nearly basaltic, incumbent on coal.

This parish contains some remains of antiquity, the most remarkable of which is a huge fragment of rock called 'the Clochodrick stone,' situate on an elevated plain about 2 miles west of the town. It is supposed to have formed part of a Druidical temple, and the supposition is countenanced by the name, which is apparently a corruption of the British words *Cloch-y-Drywd*, the 'Stone of the Druids,' and by the situation, which commands an extensive prospect, and is such as they usually selected for the performance of their rites. This fragment is of the same species of whinstone as the neighbouring hills, and appears to have been hewn from a rock a little to the east. It is about 22 feet long, 17 broad, and 12 high, and of a rude oval figure, extending east and west. At some distance around are seen a few large grey stones; hut as the land is in tillage, it cannot be ascertained whether they once made part of a sacred enclosure, or are merely accidental. On the westward is the rivulet Bride's burn. This stone gave its name to the adjacent hamlet and lands, which are mentioned by the name of *Clochodric*, so far back as the year 1202, in a charter by Alan, son of Walter, the Steward.\*—On the top of Bar-hill

are the remains of an encampment, supposed from its form to be Danish, consisting of a semicircular parapet of loose stones towards the south, and defended on the north by the precipice already mentioned.—In the north-east of the parish are the ruins of a narrow castle, called Ranfurly, or Ramphorlie, anciently the residence of the Knoxes. About 120 yards south-east of this, on an elevated rock, overtopping the castle, is a green mound, all of forced earth, named Castle-hill. It is of a quadrangular form, the sides facing the four cardinal points. A trench, dug out of the solid rock, surrounds its base on the east and part of the north and south sides; the west side rests on the edge of this steep rock. This mound is 330 feet in circumference at the base, 70 feet in diameter at the summit, and 20 feet high. The top is hollow. There has been an entrance into it on the eastern side. This may have been an outpost of the Roman camp at Paisley, distant 6 miles, of the site of which it commands a full view. The church of Kilbarchan was dedicated to St. Barchan,† and was a dependency of the monastery of Paisley. Of the ancient structure there are not any remains. In 1401, King Robert III. conferred an endowment made by Thomas Crawford of Auchinames for the support of a chaplain to officiate at the Virgin Mary's altar in the parish-church of Kilbarchan, and also in a chapel dedicated to St. Catherine, which had been erected by Crawford within the churchyard. On a farm, still called Prieston, a little to the east of the castle of Ranfurly, there was another chapel which was founded by the proprietor of the estate. It was dedicated to the Virgin, and the property called Kirklands was annexed to it.

Some ancient families have belonged to this parish. From the Knoxes of Ranfurly were descended John Knox, the Reformer, and Andrew Knox, who was appointed Bishop of the Isles on the restoration of Episcopacy, in 1606, and was transferred to the see of Raphoe in Ireland, in 1622. From them are also sprung the Irish family of Knox, Viscounts Northland, who, although not possessed of any property here, took from this place their British title of Baron Ranfurly, and their Irish one of Earl, conferred, respectively, in 1826 and 1831. The estate of Ranfurly remained in possession of the Knoxes till 1665, when it was sold to the Earl of Dundonald, from whose family it was not long afterwards acquired by the Hamiltons of Aitkenhead, now Holmhead.—Auchinames belonged to a branch of the Crawfords from the 14th century till the 18th, when it was sold in portions to different persons. The superiority was, however, retained, in virtue of which the family—who are proprietors in Ayrshire—continue to style themselves as "of Auchinames." The old castle has been completely demolished since 1762, when it and great part of the estate were sold to John Barbour, merchant in Kilbarchan.—The lands of Waterston, anciently the property of a family of the same surname, were sold by William Waterston "of that ilk" to Sir William Cunningham of Kilmars in 1384. They now form part of the Milliken estate. The surname of Waterston, though not common, still occurs in Renfrewshire.—Another small inheritance that gave name to a family was Bruntchells (a corruption of Burntshields), which was sold by John Bruntchells, the last of his race, to Lord Sempill, in 1547.—It is usual to represent as belonging to this parish the Sem-

\* In the map of Renfrewshire given in the New Statistical Account, the parish of Kilbarchan is, by an error in the colouring, represented as crossing the Black Cart, and as containing the town of Johnstone, which is in the Abbey parish of Paisley, and a strip of land, about 4 miles in length, which belongs to that parish and to those of Neilston and Lochwinnoch.

† Chartulary of the Monastery of Paisley, p. 14.

‡ The name of the parish is obviously derived from this saint, with the Celtic word *eil*, signifying a church or chapel, prefixed. St. Barchan's Feast is mentioned in the poem on Habbie Simpson, written about the beginning of the 17th century. Identical with this is a fair, still held here annually, called Barchan's day.

pills of Beltrees, in whom poetical talent was hereditary for three successive generations; but Beltrees is in the neighbouring parish of Lochwinnoch, and it was not till 1677, towards the end of the life of Francis Sempill, the last of these rhyming lairds, that the family removed from Beltrees which he sold, retaining the superiority, to a property in the parish of Kilbarchan, called Thirdpart, which he purchased. About 1758, Thirdpart was sold by Robert Sempill, grandson of Francis. Robert died at Kilbarchan in 1789, aged 102.\* He was appointed a justice-of-the-peace in 1708, and at his death was probably the oldest judicial functionary of that or any other rank in the empire. Another mistake fallen into by some writers is to represent these Sempills as the "superiors" of the town of Kilbarchan; whereas they never held any such relation to the place. The principal proprietor in this parish is Sir William Milliken Napier, Baronet, direct male representative of the family of Napier. The mansion-house of Milliken, a handsome structure in the Grecian style, situate near the left bank of the Black Cart, was built in 1829. The chief part of this estate formed a barony called Johnstone, belonging to a branch of the family of Houstoun, from whom it was purchased in 1733, by the present proprietor's ancestor, who gave to it his own name of Milliken, while the name of Johnstone was transferred by the Houstouns to their estate of Easter Cochrane, on the opposite side of the river.—Blackston, with a modern mansion-house, on the left bank of the river, belongs to another branch of the family of Napier. These lands anciently belonged to the monastery of Paisley, and here the abbots had a summer-dwelling.—The estate of Craighs has belonged, for nearly four centuries, to a family named Cunningham, cadets of the noble House of Glencairn, having been granted by Alexander, Lord Kilmaurs, afterwards 1st Earl of Glencairn, to William Cunningham, one of his younger sons, in the year 1477. The mansion-house is pleasantly situated in a peninsula formed by the confluence of the Locher with the Gryfe.—South-east of this is the small estate of Clippens, long the property of a family named Cochran. Peter Cochran of Clippens, who had been head of the Hon. East India Company's Medical Board at Bengal, died in 1831, leaving an immense fortune.—The population of this parish, in 1801, was 3,751; in 1831, 4,806. Houses, in 1831, 462. Assessed property, in 1815, £11,941.—The parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Sir William Milliken Napier, Baronet. The church was built in 1724, and has not been altered since. Sittings 670. Stipend £294 10s. 8d.; glebe £32. Unappropriated teinds £ 1,414 17s. 8d.—At Burntshields, about a mile south-west of the town, a church was built by the Original Burghers, in 1743, being one of the earliest belonging to the seceders from the Establishment. In 1826, the congregation built and removed to a church at Bridge-of-Weir in this parish; and in 1839 they returned to the Establishment: See WEIR, BRIDGE OF.†—A

\* Sir John Sinclair, in his 'Code of Health and Longevity,' makes Robert Sempill's age 105; and in the Old Statistical Account of Kilbarchan it is made 108. We prefer the authority of William Sempill, the Continuator of Crawford's History of Renfrewshire, who expressly states (Part II., p. 163.), that the old gentleman was "born January 1687," adding that, "on March 21st, 1782, I was in company with him, his daughter, his grand-daughter, and his great grandson, all in good health." We may here observe that William Sempill, who in that work accumulated much valuable information, though expressed in a homely manner, was himself a native of this parish, having been the son of a farmer, and born on 10th May, 1747, as he has taken care to leave on record, p. 128, *note*. In the New Statistical Account of Paisley, (p. 165.) he is erroneously called "a native" of that town.

† The Rev. Alexander Brown, minister of the church at

congregation of the Relief synod was established at Kilbarchan in 1786, and a church was finished two years afterwards, at the cost of upwards of £1,000. Sittings 906. Stipend, in 1838, £140, with a house and garden valued at £15.—There is a congregation of Scottish Baptists, which was established in 1810, and which meets in a flat of a house rented from year to year. Sittings 136. No stipend or emolument is received by the pastors.—The salary of the parochial schoolmaster is £34 4s. 4½d., with about £15 10s. school-fees; also £9 1s. 6d. arising from the office of session-clerk, and £10 for house and garden. There are seven other schools, with one instructor in each. In regard to the quality of the education given at the parochial school, it may be observed, that it has enabled several persons to bring themselves forward advantageously in after life. Of these, we may notice Mr. Cochran of Clippens, who has been already alluded to; and Robert John Hume, Esq., a distinguished medical officer in the service of the Duke of Wellington, both natives of this parish.

The town of KILBARCHAN is pleasantly situated in the south-east of the parish, upon a declivity which terminates on a plain towards the south, through which runs a clear brook of the same name. It is sheltered on three sides by eminences finely wooded, and rising in some parts to the height of nearly 200 feet. It is distant 1 mile and 3 furlongs from Johnstone, 5½ miles from Paisley, and 13 from Glasgow. Kilbarchan was made a burgh-of-barony shortly before the year 1710, but it had no trade till 1739, when a linen-manufactory was established, and three years afterwards the manufacture of lawns, cambrics, &c., for the Dublin market, was introduced. The principal occupation of the inhabitants is now the weaving by hand-loom, of silk and cotton goods. In March, 1838, the population of the town was 2,333, of which 800 were hand-loom weavers. In 1740, the place contained only 40 families, or about 200 souls. In the centre of the town is a steeple, erected in 1755, with a school-house of later date. In a niche of the steeple there was placed, in 1822, a statue of Habbie Simpson, piper of Kilbarchan, who died about the beginning of the 17th century, and on whom Robert Sempill, of Beltrees, wrote a well-known poem. The statue was cut by Mr. Archibald Rohertson, of Greenock. The Piper's tombstone, much decayed, is pointed out in Kilbarchan churchyard. It bears the initials of his name, and a figure resembling, as some say, the remains of a bagpipe, or, as others think, a knife for chopping meat; tradition having handed down that he was a butcher as well as a musician. The inhabitants are imbued with a taste for literature, as is shown by their having two public libraries, one established in 1808, and another in 1823.‡ The affairs of the town are managed by a committee. In Kilbarchan there are several Friendly societies, a Masons' lodge, bearing the name of St. Barchan, instituted 1784, an Agricultural society, and a Curlers' society. Two annual fairs are held here; one on Lillia's day, the third Tuesday of July, old style; and the other on Barchan's day, the first Tuesday of December, old style. At the last, which was formerly a famous fair for lint and tow, there is a con-

Burntshields, who died some years before 1826, left instructions that his body should be buried within that edifice, which was accordingly done. The church was afterwards sold, and converted into a byre and a barn—an act of desecration which the good man could not have contemplated.

‡ Robert Allan, weaver in Kilbarchan, wrote a number of songs, and other poetical pieces of merit, which have been published. After living to an advanced age in his native place, he proceeded to New York, to join a son who had emigrated, but he unhappily died in that city, on 5th June, 1811, only four days after his arrival.

siderable horse-market.—Cotton-spinning is carried on at LINWOOD and BRIDGE-OF-WEIR. See our accounts of these places.

KILBERRY. See KILCALMONELL.

KILBIRNIE, a parish in the north-west part of the district of Cunningham, Ayrshire; bounded on the north and north-east by Renfrewshire; on the east by Beith; on the south and south-west by Dalry; and on the north and north-west by Largs. The parish stretches in length from north-west to south-east, and is bisected lengthways through the middle by Garnock-water. Routen-burn comes in from Renfrewshire, traces the north-eastern boundary over a distance of  $3\frac{1}{2}$  miles, and falls into Kilbirnie-loch. Several rills rise in the western division, and flow eastward or southward to join the Garnock. Kilbirnie-loch, a beautiful sheet of water  $1\frac{1}{2}$  mile long and half-a-mile broad, stored with pike, perch, trout, and eel; and offering valuable facilities for the transport of coal, stretches from south-west to north-east on the boundary with BERTH: which see. Upwards of 250 acres of excellent land have been reclaimed from this ancient lake. More than a third of the parish on the north and north-west is wildly pastoral, running up to the water-shedding line of division with Renfrewshire, coming down thence in a congeries of heathy hills, separated from one another by moorland and moss, and altogether fit only for the purposes of the sportsman and the rearer of stock. About a third declines gently from the hills with a southern exposure, and presents soils of sand, clay, and earth, which are far from being infertile, and admit of transmutation into rich loam. The remaining part of the surface—considerably less than one-third—lies low along the Garnock, and is carpeted with some of the finest and most fructiferous deep moulds of earth and clay in Scotland. Except near the southern extremity, there is little or no plantation. The climate is very salubrious, and seems to resist epidemics. Coal is worked.—Kilbirnie-castle, situated toward the south, about  $\frac{3}{4}$  of a mile west of the Garnock, and once pleasantly situated among fine gardens and beautiful policies, was built by the Crawford family nearly 350 years ago, and long inhabited by them as Viscounts of Garnock; but, along with a modern adjoining mansion erected about 150 years ago, and soon after being repaired and beautified by the Earl of Crawford, it was destroyed by fire, and became a roofless ruin.—The parish is traversed by the turnpike between Saltcoats and Glasgow, and enjoys the rich accession to facility of communication lately furnished by the opening of the Glasgow and Ayr railway. Population, in 1801, 959; in 1831, 1,541. Houses 207. Assessed property, in 1815, £5,133.—The village of Kilbirnie stands on the Garnock,  $\frac{3}{4}$  of a mile west from Kilbirnie-loch; 62 miles from Edinburgh; 20 from Glasgow; 3 from Beith; and  $3\frac{1}{2}$  from Dalry. About 90 years ago it had only three houses; but before the close of the century, it counted 300 inhabitants, and in 1821 it had 800. Its progress since, though prosperous, has not been proportionally rapid. A large cotton-mill, a considerable flax-mill, and a thread-manufactory, attest its importance. In 1838 it had 80 looms, employed on cotton, silk, and woollen fabrics. In the village is a place of worship belonging to the Reformed Presbyterians; and half-a-mile south of it stands the parish-church.—Kilbirnie is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend £192 12s. 10d.; glebe £18. Parochial schoolmaster's salary £25 13s. 4d., with fees. There is a non-parochial school. The St. Birnie or Birinar, to whom the church was dedicated, and from whom it had its name, is said

to have been a bishop and confessor, who was the instrument of converting the West Saxons, and who died in the year 650. Other churches or chapels in Scotland seem to have been dedicated to him,—Kilbirnie having existed in the Boyne district of Banffshire, and in the Aird of Inverness-shire. The church of Kilbirnie belonged anciently to the monks of Kilwinning, and was served by a vicar. Long before a village or even a hamlet grew up here, the Earls of Eglinton, to whom the manor passed after the Reformation, procured for it the privileges of a free burgh-of-barony.

KILBRANDON, a parish in Argyleshire, to which that of Kilchattan is united. The united parishes consist of five farms on the mainland of Lorn, opposite Mull, and bounded by the Atlantic ocean on the west, and the sound of Mull on the north; and five islands, viz. LUING, SEIL, SHUNA, FORSA, and EASDALE: see these articles. The extent of the parish, including the narrow sounds which intersect the islands, is about  $10\frac{1}{2}$  miles, and its breadth nearly 6; superficial area about 11,500 Scots acres. The surface, hilly and mountainous, is best adapted for pasture, but there are many arable fields, which produce tolerable crops of barley and oats. The coast possesses several excellent harbours, and abounds with fish. Besides the valuable slate-quarries of Easdale and Luing, there are veins of silver and lead ore, and of iron, zinc, and copper. Population, in 1801, 2,278; in 1831, 2,833. The population of the old parish of Kilchattan, including the islands of Luing, Forsa, and Shuna, amounted, in 1831, to 1,100. A census of the united parishes, in 1836, gave the total population at 2,738, whereof 2,528 were churchmen. Houses 593. Assessed property, in 1815, £13,251.—This parish is in the presbytery of Lorn, and synod of Argyle. Patrons, the Duke of Argyle, and the Marquis of Breadalbane. Stipend £173 7s. 1d.; glebe £14 10s. The church is about a century old; but was repaired about 25 years ago; sittings 585. A catechist officiates in the parish, which also enjoys the ministrations of Independent missionaries.—There are two parochial schools. The salary of one master is £34, with £26 fees, and a house and garden; of the other, £25, with £25 fees, but no other emolument. There were 4 private schools in the parish in 1834; and a school in the island of Easdale, supported by the Society for propagating Christian knowledge.

KILBRANDON SOUND, a narrow arm of the sea, which runs between Carradale in the peninsula of Kintyre and the isle of Arran. This is usually a good herring-fishing station.

KILBRIDE, a parish in Argyleshire, united to KILMORE: which see.

KILBRIDE, a parish in the county of Bute, and isle of Arran, extending 14 miles in length, and 7 in breadth; and comprehending the east and north-east parts of the island, from Drippin on the south to the Cock on the north. A ridge of mountains separates it on the west from the parish of Kilmorie. It varies in breadth from 2 to  $4\frac{1}{2}$  miles; and has a superficial area of about 42,000 imperial acres, of which about 4,000 are under cultivation. The soil is hard and stony, but, upon the whole, tolerably productive. There are two safe harbours in this district, viz. LOCH-RANZA and LAMLASH: see these articles, and the general article ARRAN. In the mountain of Goatfield, or Goatfell [see ARRAN], in this parish, are found topazes or cairngorms of a dark brown colour, beryls, and other precious stones. There are several quarries of freestone and limestone, and many places strongly indicate coal. Freestone, slate, and blind-coal, are found at the northern extremity. Barytes is quarried in GLENSANNOX:

see that article. The whole parish, with the exception of the farm of Kilmichael, belongs to the Duke of Hamilton. Population, in 1801, 2,183; in 1831, 2,656. Houses 408. Assessed property, in 1815, £3,459.—This parish is in the presbytery of Kintyre, and synod of Argyle. Patron, the Duke of Hamilton. Stipend £259 3s. 4d.; glebe £20. The parish-church is in the village of Lamash. It was built in 1773; sittings 560.—A neat extension church was opened at the village of Brodick in December 1839.—There is an unordained assistant to the two ministers of Arran at Loch-Ranza, salary £41, from mortified money, to endure as long as there are only two parish-ministers in the island.—There is an Independent chapel at Glensannox; sittings 260.—There are 4 parochial schools. The schoolmaster at Lamash receives £19; at Brodick £16; at Currie £4; and at Loch-Ranza £6 per annum. There is an Assembly's school at Whiting bay, the teacher of which has £25 of salary. There is also a private school at Lamash.—For general details relative to this parish see our article ARRAN.

KILBRIDE (EAST), a large parish in the Middle ward of Lanarkshire; bounded on the north by the parishes of Carmunnock and Cambuslang; on the east by Blantyre, Glassford, and Avondale; on the south by Loudon and Avondale; and on the west by Loudon, Eaglesham, and Carmunnock. The parish is termed East Kilbride to distinguish it from West Kilbride in Ayrshire; and comprehends the old parish of Torrans, or Torrance, which was annexed to it as an appendage before the Reformation, and afterwards legally incorporated with it in 1589, by the presbytery of Glasgow. The outline of the parish bears a partial resemblance to a sand-glass. In length it is nearly 10 miles from north to south; and from east to west it varies from 2 to 5 miles in breadth. In general it is a high-lying district. Crossbasket, the least elevated ground in the parish, is about 200 feet above the level of the sea; and the summit of Eldrig, nearly 7 miles south of Crossbasket, is computed to be, at least, 1,600 feet in height. From Crossbasket to Eldrig there is a gradual ascent, formed by a regular succession of little hills, with very little expanse of level ground between them. The moorland part of the parish commences about 2 miles to the north of Eldrig, and continues a considerable way down the south side of the ridge, where Kilbride borders with Loudon. From the extensive tracts of pasture here, great attention has all along been paid to the breed and management of milk cows; and this perseverance has been amply rewarded, for it is stated in the New Statistical Account, "that the dairy-produce, in particular, is at least four times as great as it was 40 years ago." Vast quantities of butter, butter-milk, and cheese, are supplied from it to Rutherglen and Glasgow. Excepting upon the estates of Calderwood and Torrance, planting has not proceeded to any great extent in this parish, probably from the great number of small possessions into which it is subdivided. That the soil will produce timber is readily evidenced by the number of splendid trees, which even on very exposed situations surround the dwellings of landlord and tenant; but Mr. Ure, in his history of East Kilbride, tells us that considerable attention was paid to the rearing of these ornaments of the landscape. The preparative process, which was an unusual one, and may probably be copied with advantage elsewhere, was as follows:—"The soil was prepared by draining off the water. A handful of oats was thrown into the bottom of the hole, dug for the young tree; over these about an inch of good earth was laid; upon this the roots of the plant were carefully spread, covered up with the best mould that could be got,

and the plant secured from the cattle. The oats having come to a state of vegetation, raised a proper degree of heat, and thereby made the plant set forth with vigour."—[Ure's History of East Kilbride.] Notwithstanding the proximity of this parish to the great coal-fields of Hamilton, Bothwell, and the Monklands, this important mineral exists only to a limited extent in East Kilbride, and the quality is very indifferent, so much so that a great portion of the coal used by the inhabitants is brought from other districts. Limestone and freestone, however, both of excellent quality, abound in the parish, and are carried in large quantities to other places. The principal lime-works are at Thornton, Thornton-hall, Braehead, and Limekilns; and there are extensive freestone quarries at Lawmuir, Bogton, Bentball, and Torrance. There is an ironstone mine at Basket, and tile-works at Springbank and Millhouse. Roman cement is extensively found and worked in the parish. The post-office is situated in the village of Kilbride, and there are three turnpike-roads which lead through the parish. One of these is the Glasgow road to Strathaven, which passes through the village of Kilbride, and traverses the parish for 5 miles; another extends from Kilbride to Eaglesham; and a third leads between Kilbride, Busby, and Carmunnock. The parish-roads are well kept.—The village of Kilbride was erected into a burgh-of-barony in the reign of Queen Anne, and the burghers were authorized to hold a weekly-market and four fairs in the year. The market was discontinued half-a-century ago; three of the fairs have fallen into desuetude, and the fourth, which is held in June, is not regarded as of much importance to the district. In addition to the town or village of Kilbride, the parish contains six other small villages, viz., Maxwellton, Aldhouse, including Crosshill, Jackton, Braehead, Kittochside, and Nerston. Population, in 1801, 2,330; in 1831, 3,789. From an enumeration taken in 1836, it would appear that of the total population nearly 1,000 resided in the town of Kilbride, and nearly 300 in Maxwellton. Assessed property, in 1815, £16,363.—Kilbride is situated in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £280 8s. 5d.; glebe £18. Unappropriated teinds £1,240 19s. 9d. Hamilton of Wishaw informs us that "the tiends of Kilbride did anciently belong to the chanter of Glasgow; they are now all mortified to the college of Glasgow, except twelf chalders of victuall reserved to the minister for his maintenance, which he yet enjoys, with both the glebes of Kilbride and Torrance." The parish-church was built in 1744, and was extensively repaired in 1833; sittings 900. At the rebuilding of the church, that part of the old edifice which supported the belfry was allowed to remain, and now answers the purpose of a steeple. An inscription on the bell records that it was cast in 1590, by one of the most celebrated founders in Europe. It was rent, however, in 1689, from a violent ringing on a day of public rejoicing, caused by the receipt of the news of the defeat and death of Lord Dundee, or 'Clavers,' at the battle of Killierankie. It is scarcely necessary to detail, that Lord Dundee was regarded as a most ungodly persecutor by the great mass of the people in the west of Scotland, and his fall was considered to afford good cause for a national jubilee.—A Relief congregation was established in 1791, and, in the same year, a church was built, calculated to accommodate 913 sitters. The stipend of the minister is £120 per annum, with a manse, but no glebe. A Methodist church has also been recently established.—The principal parochial school is situated at the village of Kilbride, and the salary is £34 per annum, besides the ordinary school-fees. There are

two auxiliary or side-schools, one at Jackton and the other at Aldhouse. Salary of each £8 10s. per annum, besides the school-fees. An excellent school is supported in Maxwellton by the liberality of Sir William Maxwell of Calderwood, and there is also an unendowed school at Kilbride.

Previous to the reign of Robert the Bruce the greater part of this parish belonged to the powerful family of the Cummins, and the whole was forfeited at the time of the death of John Cummin, who was killed by Bruce at Dumfries. Hamilton of Wishaw says, that "this heronie and paroch was given by king Robert Bruce as ane part of the mariage portion of his daughter Marjorie, to Walter, the Great Stewart of Scotland; and heth ben always reckoned since as a part of the Principalitie; and the severall families therein are said to be old, yett I hear not of any writts older among them than from John Earle of Carrick, grand-child to King Robert, thereafter called Robert the third." These lands afterwards passed into the possession of Lindsay of Dunrod, whose predecessor assisted the king at the killing of the Red Cummin at Dumfries. This family, once a potent one in the district, has been for long entirely extinct, and they have left a very unenviable reputation behind them. "This family preferring the Mains to Dunrod, their ancient family-seat near Gourick, took up their residence in Kilbride. They flourished in great wealth and splendour till little more than a century ago, when the estate was sold to pay the debt which the extravagance of its owner forced him to contract. It is reported that the last proprietor in the Dunrod family greatly exceeded all his predecessors in haughtiness, oppression, and vice of every kind. He seldom went from home unless attended by 12 vassals well-mounted on white steeds. Among the instances of his cruelty it is told that, when playing on the ice, he ordered a hole to be made in it, and one of his vassals, who had inadvertently disoblged him in some trifling circumstance, immediately to be drowned. The place hath ever since been called Crawford's hole, from the name of the man who perished in it. Tradition mentions this cruel action as a cause, in the just judgment of God, that gave rise to his downfall. It is told that, having worn out the remains of a wretched life, he died in one of the tenants' barns. Such was the miserable end of one of the greatest and most opulent families in this country." [Ure's History of East Kilbride.]—The ruins of Mains castle, once the splendid residence of the Cummins and Lindsay, are still seen about a mile distant from the church.—The family of which Sir William A. Maxwell of Calderwood is the representative is a very ancient one, and has been connected with the parish since the reign of Alexander III. The mansion-house of Calderwood, which has recently received extensive additions, is a very splendid erection, and in describing it as it appeared in his own time, more than 40 years ago, the usually sedate Mr. Ure appears to have been beguiled into the regions of poetry. He says, "It is surrounded with hanks through which the Calder, in a variety of beautiful meanders, takes its course. A delightful cascade formed by nature fronts the house, at the distance of about 200 yards. The fall, which is interrupted by small breaks, renders the landscape extremely agreeable. The scene, in general, being a mixture of the grand, the romantic, and the beautiful, would, in ancient poetry, have been celebrated as the enchanted abodes of the rural deities."—The family represented by Miss Stuart of Torrance, the principal proprietor in the parish, is one of the oldest in the country, and it has long also possessed the property of Mains. The oldest part of Torrance house

is 500 years old, and about 100 years ago Colonel Stuart placed over the entrance a beautiful stone, having the arms of Scotland carved upon it, and which for centuries had adorned the arched gate at the chief or drawbridge entry to Mains castle.—The celebrated Mrs. Jean Cameron resided for several years previous to her death in East Kilbride. She was of an ancient and distinguished family, and her enthusiastic attachment to the cause of the exiled royal house of Stuart, with the efforts which she made to sustain its fortunes in 1745, made her name well known in Britain. She kept the farms of Blacklaw and Roddenhead in her possession, and died in 1773, and was buried amid a clump of trees, near the solitary house of Blacklaw at which she resided. The place has since been called Mount Cameron.—A peculiar interest also attaches to this parish as being the birth-place of the celebrated Hunters,—Dr. William Hunter, eminent as a physician and a scientific inquirer, and Dr. John Hunter, eminent for his medical investigations, and his munificent bequests to aid the cause of science. They were born at Long-Calderwood, a place about a mile-and-a-half north of the village of Kilbride.—In the southern division of this parish is a place called Flakefield, which gave rise to a surname which is intimately associated with the rise and progress of a branch of manufactures which contribute materially to the advancement and prosperity of the city of Glasgow.\*

\* The particulars of the incident alluded to in the text are as follow:—Previous to the commencement of the last century two young men of the name of Wilson, the one from Flakefield and the other from the neighbourhood, proceeded to Glasgow, and there commenced business as merchants. The similarity of the name having occasioned frequent mistakes in the way of business, one of them for the sake of distinguishing him from the other was designated by the cognomen of Flakefield, the place of his birth, and the real name soon became obsolete, both the man and his posterity being known by the surname of Flakefield, instead of Wilson. The original bearer of the new name put one of his sons to the weaving trade; but the lad, after having learned the business, enlisted about the year 1670, in the regiment of the Cameronians, and was afterwards draughted into the Scottish guards. During the wars he was sent to the Continent, where he procured a blue and white checked handkerchief, that had been woven in Germany; and at the time a thought struck Flakefield that should it be his good fortune to return to Glasgow, he would make the attempt to manufacture cloth of the same kind. He accordingly preserved with great care a fragment sufficient for his purpose; and being discharged in 1700, he returned to his native city, with a fixed resolution to accomplish his laudable design. A few spindles of yarn, fit for his purpose, was all that William Flakefield could at that time collect; the white was ill-bleached, and the blue not very dark, but they were nevertheless the best that could be found in Glasgow. About two dozen of handkerchiefs composed the first web, and when the half was woven he cut out the cloth, and took it to the merchants, who at that time traded in saloon, Scottish plaiding, Hollands, and other thick linens. They were pleased with the novelty of the blue and white stripes, and especially with the delicate texture of the cloth, which was *thin set* in comparison of the Hollands. The new adventurer asked no more for his web than the net price of the materials used, and the ordinary wages for his work; and as this was readily paid him he went home rejoicing that his attempt had not been unsuccessful. This dozen of handkerchiefs—the first of the kind ever made in Britain—was disposed of in a few hours; and fresh demands poured so rapidly in upon the exulting artist that the remaining half of his little web was bespoken before it was woven. More yarn was procured with all speed; several looms were immediately filled with handkerchiefs of the same pattern; and the demand increased in proportion to the quantity of cloth that was manufactured. The English merchants who resorted to Glasgow for thick linens were highly pleased with the new manufacture, and as they carried a few with them, these rapidly sold, and the goods met with universal approbation. The number of looms daily increased, and in a few years Glasgow became celebrated for this branch of the linen trade. Variety in patterns and colours was soon introduced; the weavers in Paisley and the adjoining towns engaged in the business, and it soon became both lucrative and extensive. Manufactures having once obtained a footing in Glasgow, others of a more important kind were attracted to the spot. Checks were followed by the *blanks* or linceu cloth for printing; to these were added the muslin, and finally the cotton trade, &c. which have elevated Glasgow to one of the proudest commercial and manufacturing positions in the world. It is painful to record, however, that neither William Flakefield, nor any of his descendants, ever received any reward or mark of approbation for the good ser

KILBRIDE (WEST), a parish on the coast of the district of Cunningbarn, Ayrshire; bounded on the north by Largs; on the east by Dalry; on the south-east by Ardrossan; and on all other sides by the frith of Clyde. It occupies the angle formed by the recession of the coast-line on the opening or commencement of the expansive bay of Ayr on the north; and presenting one side to that bay, another to the strait or sound between the coast and the Cumbrays, and a third to the interior, is nearly of a triangular figure. Its extreme length from north to south is about 6 miles; and its extreme breadth from the promontory of Portincross eastward is about  $3\frac{1}{2}$  miles. The island of Little Cumbray is attached to the parish; but, having been separately noticed in the article CUMBRAYS, it needs not here be kept in view. A continuation of the rolling surface of hill and upland which commences at Greenock, and forms a sea-screen down the coast of Renfrewshire, comes boldly in upon the parish, especially on its eastern verge, and undulates over its whole area, softening in character as it approaches the south. Along the eastern frontier, the hills run so regularly and loftily in a ridge as to form a natural boundary, and send up one summit—that of Kame—nearly 1,000 feet above sea-level. In the interior, as they deflect to the west, they are in some instances concatenated, and in others insulated; and, in general, they decline in height as they approach the frith. The hills are, in many instances, green to their summits; and, regarded as a field of heights, are ploughed by various romantic little vales, bringing down their watery tributaries to the sea, and are occasionally made the screen or protecting framework of luxuriantly tinted haughs. From the summits of many of them views are obtained, in peculiarly advantageous grouping, of that magnificent landscape of far-stretching lowland-coast, luscious in the beauties of cultivation, and long expanse of bright blue sea, romantic in its islands and its land-locking boundaries, and background scenery of Highland heights, of soaring and pinnacled mountain elevations, which is described from great multitudes of the rising grounds of Ayrshire, and the stirring and arousing appeals of which might have been expected to produce more than one ‘Ayrshire bard,’ and to have provoked that one to the breathing of more warmth of colouring over his efforts at description. “At one view,” says the sufficiently unexcited writer in the Old Statistical Account, “the eye takes in the broken land and small sounds formed by the islands of Arran, Bute, the two Cumbrays, and the coasts of Cowal and Cantire; the extensive coast of Carrick, from Ayr to Ballentrac; a wide expanded frith, with the rock of Ailsa rising majestic in its very bosom; the stupendous rocks and peak of Goatfield in Arran; while the distant cliffs of Jura are seen just peeping over the whole, in the back ground. Such a landscape is exceedingly rare, and has always been particularly pleasing to strangers.” Five rills or burns, with their tiny tributaries, all begin and end their course within the limits of the parish, and are the only streams by which it is watered, but, in rainy weather, they sometimes come down in a hulk of volume and power of current which invest them with importance. Kilbride-burn, the largest of them, rises on the west side of Glenton-hill, flows past the village of West Kilbride, and enters the frith at Sea-Mill. South Annan-burn, near the northern boundary, pursues its course through a

romantic glen, and forms a series of beautiful cataracts, diminishing in depth of leap as the brook approaches the sea. At the highest and principal fall, the burn, emerging with a rapid current from between two high hills, leaps right over a rocky precipice 50 feet in height, into a deep and awful chasm, the bottom of which is a capacious sphere, smooth and regular as if hollowed out with the chisel. Over the abyss project the beetling and menacing rocks of the precipice; and around it are a zone and tuftings of natural wood, in which the oak, the hazel, and the birch vie for the pre-eminence of shade and verdure. The coast-line of the parish, owing to the advantage gained by peninsularity of form, is about 7 miles in extent. At the angle, or south-west extremity, projects the promontory of Portincross, terminating in a perpendicular wall of rock 300 feet high, called Ardnail bank, or Gold-berry-head, separated from the margin of the sea only by a very narrow belt of verdant land, and extending in a straight line of about a mile in length. Natural wood, consisting of oak, hazel, ash, and hawthorn, runs in thick tuftings along the base of the precipice, and ivy, with gray and golden coloured lichens, impresses a beautiful tracery of tint and of aspect athwart its bold front. To approach the terrific summit makes even a man of firm nerve giddy; but to view it from below is to enjoy a rich feasting of the taste and the fancy. Everywhere, except at this remarkable headland, the coast of the parish is low and shelving. From the northern boundary to a point about two miles south, stretch the sands of South Annan, of half-moon form, sheltered by a curving recess in the land, measuring at their centre, when the tide is out, about a mile in breadth, rich in their beds of mussels, cockles, and other shell-fish, and offering a favourite retreat to vast flocks of various kinds of wild fowl. Limestone occurs at Ardnail, and in some other localities, but too scantily and of too poor a quality to be profitably worked. On a conspicuous hill, called the Law, are quarried millstones of a coarse sort of granite. The soil over nearly four-fifths of the whole area, or up the sides and over the summits of its almost incessant heights, is poor, mossy, and moorland, on a subsoil of coarse till, yet admitting, around the bases and on the lower sides of the heights, not a few patches of loamy and calcareous land of kindly and fertile character. About two-thirds, or a little more, of the entire area is regularly or occasionally subjected to the plough; and nearly one-third is naturally and exclusively pastoral. The district is characteristically devoted to the dairy, the arable pastures being used and esteemed for their produce in Dunlop cheese. The parish is, in general, sufficiently enclosed; but, with some small exceptions, it is destitute of plantation, and has a naked and chilled appearance. At Portincross is a small quay, offering accommodation at high water to vessels of 40 or 50 tons burden, and used in making shipments for the Clyde. The road from Greenock to Ardrossan runs along the parish, and, along with subordinate roads, gives it an aggregate length of 22 miles broad,—preserved in good repair, and suitably provided with bridges. Population, in 1801, 795; in 1831, 1,685. Houses 215. Assessed property, in 1815, £7,006.

On a ledge of rock, close upon the sea, under the bold promontory of Ardnail bank, stand the ruinous yet tolerably complete walls of the very ancient castle of Portincross. The promontory being, with the exception of the Rhinns of Galloway, the extreme western point of the Lowlands of Scotland, and lying conveniently between Edinburgh and Icolmkill, and also between Dundonald and Rothsay, the castle was probably a halting-place of the Scot-

vices rendered by him, not only to Glasgow, but to the kingdom at large. Flakefield, however, having, during his service in the army, learned to beat the drum, was in his old age promoted to the office of town-drummer, in which situation he continued till his death.

fish kings on embarking either for Bute or for the burying-place of their early ancestors. Some charters of the first and the second Stuarts purport to have received the sign-manual at "Arnel," and may possibly evince this castle—however small and incommodious—to have worn, in a limited degree, similar honours to those of the homogeneous castle of Dundonald: see DUNDONALD. A brief distance seaward from the promontory, at a spot where the depth of water is 10 fathoms, sunk a principal ship of the famous Spanish armada. Of several pieces of ordnance which, about a century ago, were brought up from her by means of a diving machine, one lies in a corroded state on the shore beside the old castle.—The most remarkable of the hills of the parish, especially those called Tarbet-hill, the Law, Auld-hill, and the Comb, or Caimb, or Kaim, were all used as signal-posts, or the arena of beacon-fires, during the period of the Danish invasions. On Auld-hill, are remains of a circular building, which probably was occupied as a watch-tower. On the Law, overlooking the village, are the ruinous walls of Law-castle, a stately and very ancient tower, formerly one of the seats of the Earls of Kilmarnock.—Near the fine cascade of South Annan-burn, stand the ruins of a very elegant mansion, formerly the residence of the family of Semple, and now the property of the Earl of Eglington. The house was built in the reign of James VI. by a Lord Semple, who brought the model of it from Italy. A beautiful green hill, secondary to the Kaim, but attached to it, rises with a bold and sudden swell behind the house. Standing on its summit, a spectator looks down upon the dismantled fabric of the once-elegant mansion, hiding, as it were, the scathings of its beauty among a number of very fine old elms, beeches, and ashes, whose venerable houghs now hending to the earth indicate their age; and over the tops of the trees and the ruin, he looks abroad on an expanded sheet of water which, at full sea, seems to come in contact with them, and on an abundantly charming and finely diversified grouping of that vast and gorgeous landscape, which is seen from most of the heights of the parish,—but nowhere with more advantage of fore-ground and of general effect than from this eminence. Immediately adjoining the ruin of the Semple mansion, stands a neat modern cottage ornée. Near the coast, about 1 or  $1\frac{1}{2}$  mile south of Southennan, in a position which originally was a narrow and small peninsula running into a morass, stands the ancient mansion of Hunterston, now occupied as a farm-house, and sending up a square tower of apparently high antiquity. The modern mansion, a handsome new edifice, is nearer the sea.—Dr. Robert Simson, the well-known professor of mathematics in the university of Glasgow and the translator and editor of Euclid, and General Robert Boyd, Lieutenant-governor of Gibraltar during the notable siege of that great fort in 1782, were natives of the parish.

The village of West Kilbride is situated in a well-sheltered hollow,  $\frac{3}{4}$  of a mile from the sea;  $1\frac{1}{4}$  mile from Portincross-castle;  $4\frac{1}{2}$  miles north-west from Ardrossan; and  $7\frac{1}{4}$  miles south from Largs. On the streamlet which runs through it are two mills for grinding oats, a flax-mill, a mill for grinding tanners' bark, and a mill for pulverizing charcoal. A tannery employs 8 or 10 persons. The chief employments are weaving and hand-sewing in subordination to the manufacturers of Glasgow and Paisley. In 1838, 85 harness-looms and 5 plain looms were employed on fabrics in all the three departments of cotton, silk, and woollen. The condition of the weavers, as in most other places, is painfully depressed. Near the centre of the village, on a gentle

rising ground, stands the parish-church, a long narrow mean-looking edifice, low in the walls and deep-roofed. A meeting-house belonging to the United Secession, is a neat and commodious structure. In the village are three schools, one of them parochial, and the others private, and unendowed; a library, containing upwards of 400 volumes; and three Friendly societies,—one of them of considerably long standing. Population of the village, about 1,020.—West Kilbride is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglington. Stipend £202 12s. 7d.; glebe £13 12s. 7d. Unappropriated teinds £383 18s. 2d. Parochial schoolmaster's salary £27 17s. 8d., with £37 6s. 9d. fees.—The saint from whom the parish, like the other Kilbrides of Scotland, has its name, is the well-known Bridget, familiarly called Bride. The church anciently belonged to the monks of Kilwinning, and was served by a vicar. In the parish there were, previous to the Reformation, several chapels. One stood on the coast,  $1\frac{1}{4}$  mile south of the church, at a place to which it gave the name of Chapelton. Another stood at Southennan, in the immediate vicinity of the ancient mansion of the family of Semple; and was built by John, Lord Sempil, in the reign of James IV., and dedicated to Saint Inan,—reported to have been a confessor at Irvine, and to have died in the year 839. A third, subordinate like the others to the parish-church, was dedicated to Saint Bege or Veg, said to have been a Scottish virgin and confessor, who died in 896, and situated in Little Cumbay. See article CUMBRAYS.

KILBUCHO, a parish on the western verge of Peebles-shire, now consolidated with BROUGHTON and GLENHOLM: See these articles. It has a triangular form, with its apex pointing to the south; and is bounded on the north by Lanarkshire, Skirling, and Broughton; on the south-east by Glenholm; and on the south-west by Lanarkshire. Its north and north-east sides are each  $4\frac{1}{2}$  miles, and its south-west side  $3\frac{3}{4}$  miles in extent. Toward its north-west angle its boundary runs for  $1\frac{1}{4}$  mile parallel with the course of the river Clyde, here a considerable stream at only about a mile's distance. Biggar-water, coming in from the north-west, traces nearly the whole of the northern boundary. Kilbucho rises on the side of Cardon-hill at the southern angle, or extremity, runs  $1\frac{1}{4}$  mile due north, and thence flows north-eastward parallel with the south-east boundary, till it falls into Biggar-water. Cardon hill rises 1,400 feet above the level of the Tweed, at 3 miles' distance, still on the high ground or mountain-land of its origin. From this hill a chain runs north-eastward till it strikes Biggar-water; and over the whole distance it forms a water-shedding line, constitutes the boundary, and consists of heights whose sides and summits are covered with heath and grass. At the base of this ridge is a narrow and pleasant vale watered by the Kilbucho. Sreening this vale on the north-west side, and parallel with the first ridge, is a broader and less strongly featured stretch of heights, also clothed in mingled russet and green. Beyond this ridge, a beautiful valley, comparatively broader and finely decorated with wood on the west, somewhat contracted as it advances eastward, and again expanding as it forms an angular junction with the former valley, stretches along Biggar-water.—In the north-east angle stands the church of the united parishes; and  $1\frac{1}{2}$  mile inward, from the southern angle is the site of the ancient church of Kilbucho. The saint from whom the parish has its name was either a female called Bega, of whom nothing is known, or, more probably, by a corruption of the orthography, the celebrated Bede. Tradition reports that a number of monks of Bede's

order settled in the parish, and that they raised some beautiful banks which still exist. A well of excellent water, also, bears the name of St. Bede's well. The parish was anciently a rectory in the deanery of Peebles. The barony of Kilbueho belonged, at the accession of Robert I., to the Grahames of Dalkeith and Abercorn; it passed, in the reign of David II., to the Douglasses; it afterwards passed successively to Lord Fleming and the Earl of Morton; and acquired, during the reign of Charles I., by John Dickson, it continues to be possessed by that gentleman's descendants.

**KILCALMONELL**, a parish in Argyleshire, forming the northern extremity of the peninsula of Kintyre. It is bounded on the north by the isthmus of Tarbert. For a short distance, it comprehends the whole breadth of the peninsula, from Loch-Tarbert on the west to Loch-Fyne on the east, till separated from the latter by the narrow hut long parish of Skipness, whose northern extremity once formed a part of Kilcalmonell. The western side extends the whole length of West-Tarbert-loch, which is about 12 miles, and stretches 4 miles beyond it, along the coast of the Atlantic ocean. The breadth of Kilcalmonell is from 3 to 5 miles.—The district of Kilberry is of a triangular form, measuring about 7 miles on each side; bounded on the south by Loch-Tarbert, on the west by the Atlantic ocean, and on the north-east by South Knapdale. Its population, in 1831, was 993. The surface exhibits great variety of hill and vale, plains, woods, and lakes; and the soil is no less various in its qualities, consisting of sand, clay, loam, moss, and moor, which last occupies at least one-half of the parish. The arable soil is fertile, but the climate is changeable, and liable to sudden transitions. The principal crops are oats, barley, and potatoes. The parish abounds with limestone and shell marl, and the coast furnishes sea-ware in abundance. There are several harbours with fishing-villages, from which husses are sent out to the herring fishery. The entrance to Kintyre was formerly defended by a chain of forts, one at each side of the isthmus of Tarbert, and one in the centre. The principal of them, the castle of Tarbert, is a fine old ruin, surmounting the rocks at the entrance of the harbour. It is said that it was supplied with water by a submarine passage, in pipes, across the harbour. Tarbert was in the last century the seat of a sheriffdom of the same name. There are the remains of many other old forts in the parish, particularly one with vitrified walls, and another with a very thick wall of dry stones, both built on the hill of Dunskeig, which commands the opening of Loch-Tarbert. There are also numerous cairns in the parish. Partly situated in the Kilherry division of this parish is Sliabh Gaoil; or, 'the Hill of Love,' celebrated in ancient story as the scene of the death of Diarmid, the Achilles of the Fingalian heroes, and the great progenitor of the family of Campbell, who are known to this day by the name of Clann Dhiarmaid, 'the Children of Diarmid.' Population, in 1801, 2,952; in 1831, 3,488. Houses 456. Assessed property, £9,250.—This parish is in the presbytery of Kintyre, and synod of Argyle. Patron, the Duke of Argyle. Stipend £218 5s. 11d.; glebe £17 10s. There are two parish-churches, and service is performed in them alternately. Kilcalmonell church was enlarged in 1828; sittings 600. Kilherry church was built in 1821; sittings 700.—There is a mission at Tarbert; chapel built in 1775; sittings 400. Stipend £60, with £20 for manse and glebe.—There is an Independent church in the parish.—There are two parochial schools, and 7 private schools in the parish; but the minister reported, in

1834, that there were about 300 persons in the parish, above 15 years, who could not read.

**KILCHOAN.** See **ARDNAMURCHAN.**

**KILCHOMAN**, a parish in Argyleshire, in the island of Islay; so named, it is said, from a St. Chomanus, who was sent hither by Columba to preach the gospel. It is 14 miles long and 6 broad; and is mainly of a peninsular form, extending between Loch-Gruinard and Loch-Indaal. Around the coast the land is arable, producing good crops of corn, barley, flax, and potatoes. There is one lake which covers 100 acres of land. On it is a small island, which has been once strongly fortified. Population, in 1801, 2,050; in 1831, 4,822. Assessed property, in 1815, £1,735. Houses, in 1831, 812.—This parish is in the presbytery of Islay and Jura, and synod of Argyle. Patron, the Crown. Stipend £158 6s. 8d.; glebe £12. Church built in 1825; sittings 608. An Independent chapel was built at Port-Charlotte in 1830; sittings 200.—Parochial schoolmaster's salary £25 13s. 4d. There is a General Assembly's school at Gruinard, in the north part of the parish, and a Gaelic Society's school near Port-Charlotte; besides several private schools. See articles **ISLAY**, **GRUINARD**, and **PORT-CHARLOTTE.**

**KILCHRENAN AND DALAVICH**, a parish in Argyleshire. It extends 16 miles in length, and 8 in breadth; comprehending about 96 square miles, or 49,000 Scots acres, lying on both sides of **LOCH-AWE**: which see. The surface is diversified, and intersected by numerous streams descending from the hills. Heath is the general covering; but, since the introduction of sheep-farming, the pasture is more luxuriant, and the hills have assumed a greener hue. On the shores of the lake there is excellent arable land, natural pasturage, and much valuable wood. That part of the parish which lies on the south-east side of Loch-Awe, comprises the estate of Sonachan. Population, in 1801, 1,052; in 1831, 1,466. Assessed property in Dalavich £1,286; in Kilchrenan £1,114. Houses, in 1831, 189.—This parish is in the presbytery of Lorn, and synod of Argyle. Patron, the Duke of Argyle. Stipend £170 15s.; glebe £11. There are two parish-churches, about 9 miles distant from each other, and service is performed in them on alternate Sabbaths.—There are parish-schools at Kilchrenan, Dalavieh, and Ardehonnal.

**KILCHRIST.** See **CILLIECHRIST.**

**KILCHURN-CASTLE**, a noble relic of feudal ages, near the head of Loch-Awe, under the impending gloom of the majestic Beneruachan, which rises in rocky masses abruptly from the opposite shore of the lake. Amid the grandeur and variety which that fine lake derives from its great expanse, and the lofty mountains with which it is surrounded, it cannot be denied that Kilchurn-castle forms its leading and most picturesque object,—

"Is paramount, and rules  
Over the pomp and beauty of a scene  
Where mountains, torrents, lakes, and woods unite  
To pay it homage."

There is no other ancient castle in the Western Highlands that can compete with it in point of magnitude; and none, even throughout Scotland at large, can be compared with it for the picturesque arrangement of its buildings, the beauty and fine effect of its varied and broken outline, or its happy appropriateness to its situation. It stands upon a projecting rocky elevation at the head of the lake, where the water of Oreah flows into it, and which is occasionally converted into an island when the river

and loch are flooded by rains. Although now connected with the shore by an extended plain, obviously of alluvial origin, and consequently forming a peninsula, it seems certain that the rocky site of the castle must have been at one time an island; and that the change has been produced partly by alluvial deposit, and partly by the lowering of the waters of the lake. Anciently it must have been a place of great strength; and its unusual size and extent attest the feudal splendour and magnificence which the knights of Glenorchy were accustomed to gather around them. But this fine relic of baronial dignity is now a ruin,—“wild yet stately,—not dismantled of turrets, nor the walls broken down, though obviously a ruin,” and hastening to decay. The exterior walls are yet entire, but the mountain-blasts sweep through its roofless halls, and the thistle waves its bead in the now silent court-yard.—Kilchurn, or as it ought to be written, Coalchurn castle, is said to have been first erected by the lady of Sir Colin Campbell of Glenorchy, the ancestor of the Ducal family of Argyle. Sir Colin, who was a Knight-Templar, was absent on a crusade at the time, and for seven years the principal portion of the rents of his lands are said to have been expended in its erection by his lady. The great tower was five stories in height, the second story being entirely occupied by the baronial hall. That necessary appendage of a feudal castle, the dungeon, is on the ground-floor, and appears to have been sufficiently dark, damp, and wretched to render utterly miserable the unfortunate beings who, from time to time, were forced to tenant it. The remaining portions of the castle, which form a square enclosing the court-yard, though of considerable antiquity, are certainly not so ancient as the tower, and doubtless have been added at some more recent period. The second Sir Colin of Glenorchy, surnamed *Dubb*, or Black, son of the Knight-Templar, was proprietor of seven different castles,—a sufficient evidence of the great wealth which must have been possessed, even at that early period, by the ancestors of the now powerful family of Breadalbane. So late as 1745, Kilchurn-castle was garrisoned by the king's troops, and at a much more recent period, it was fit to be inhabited. One of the factors or overseers of the Breadalbane estates, caused the roof to be taken off, merely to obtain an easy supply of wood, to the irreparable injury of the castle, and the unavailing regret of its noble proprietor, who was then absent. The greatest care is now taken of its preservation; but open and exposed as it now is, time and the winter-storms will soon work its decay. There is a legend connected with this castle, which has its counterpart in more than one legend of feudal times, as well as in the pages of Homer; and may be worth relating here. During the long absence of Sir Colin, the Knight-Templar, he is said to have visited Rome, where he had a very singular dream. He applied to a monk for his advice, who recommended his instant return home, as a very serious domestic calamity, which could only be averted by his presence, was portended by his dream. Sir Colin immediately took his departure for Scotland, and, after much difficulty and danger, reached a place called Succoth, the residence of an old woman who had been his nurse. In the disguise of a mendicant, he craved food and shelter for the night; and was admitted to the poor woman's fireside. From a scar on his arm she recognised him as the laird; and instantly informed him of what was about to happen at the castle. It appeared that for a long period, no information had been received with regard to Sir Colin, nor had any communication from him reached his lady. On the contrary, it had been industriously

circulated that he had fallen in battle in the Holy Land. Sir Colin perceived treachery on the part of some one; for he had repeatedly despatched clansmen with intelligence to his lady, and surely all of them could not have perished before reaching Scotland. His suspicions were well-founded. Baron MacCorquadale, a neighbouring laird, who had been the most busy in propagating the report of Sir Colin's death, had intercepted and murdered all the messengers. He had thus succeeded in convincing the lady of the death of her husband; and had finally won her affections, and the next day had been fixed for the marriage. Incensed at what he had just heard from the faithful nurse, Sir Colin set out early next morning for his castle of Kilchurn, where he was told his lady then resided; and, as he followed the romantic windings of the Orchy, the sound of the bagpipe, and the acclamations of his clansmen who had assembled to join the approaching festivity, were wafted to his ears. He crossed the drawbridge, and entered the gates of the castle—at this happy season open to all—undiscovered and unregarded. While he stood silently gazing on the scene of riot which now met his view, he was asked what he wanted. “To have my hunger satisfied, and my thirst quenched,” said he. Food and liquor were plentifully put before him; he eat, but refused to drink, except from the hands of the lady herself. Informed of the strange request of the apparent mendicant, the lady, always charitable and benevolent, came at once and handed him a cup. Sir Colin drank to her health, and dropping a ring into the empty cup returned it to her. The lady, observant of the action, retired and examined the ring. It was her own gift to her husband when he departed on his distant expedition; it had been his talisman in the field, and had been kept sacred by him. “My husband! My husband!” she exclaimed, and rushing in, threw herself into his arms. A shout of joy from the clansmen rent the air; and the pipers made the court-yard resound with the pibroch of the Campbells. The Baron MacCorquadale was allowed to depart in safety; but Sir Colin Dubh, the son and successor of the Templar, after his father's death attacked the Baron, and overcoming him in battle, took possession of his castle and his lands.

Wordsworth has addressed some fine lines to Kilchurn-castle, concluding thus:—

“Shade of departed power,  
Skeleton of unfleshed humanity,  
The chronicle were welcome that should call  
Into the compass of distinct regard  
The toils and struggles of thy infancy!  
Yon foaming flood seems motionless as ice;  
Its dizzy turbulence eludes the eye,  
Frozen by distance; so, majestic pile,  
To the perception of this Age appear,  
Thy fierce beginnings, softened and subdued,  
And quieted in character—the strife,  
The pride, the fury uncontrollable  
Lost on the aerial heights of the Crusades!”

KILCONQUHAR, a parish in Fifeshire, extending from the shores of the frith of Forth, towards the north, about 9 miles in length. Its breadth at the south is 3 miles; about the middle 2; but towards the north only from 1 to  $\frac{1}{2}$  mile. It is bounded on the south partly by the frith of Forth, and partly by the parish of Elie; on the east by the parishes of St. Monan's and Carnbee; on the north by Cameron and Ceres; and on the west by the parishes of Newburn, Largo, and in part by Largo-bay. The surface is highly diversified. Immediately from the heath at the south-west end of the parish, Kinraig hill rises to the height of about 200 feet above the level of the sea. Its southern front presents a perpendicular rugged wall of trap rock, of picturesque

appearance.\* From the summit of this hill the ground gradually descends towards the north, till it becomes nearly level, and then gently ascends to Reres and Kilbrackmout, where it is 600 feet above the level of the sea. North of this it descends into a deep ravine, and from thence it again rises for two miles till it reaches its greatest elevation, about 750 feet, at Dumkeir-law. From thence it again declines for two miles, and then again ascends to Bruntshields, at the northern extremity of the parish. COLINSBURGH [which see], situated in the level portion of the southern part of the parish, is a well-built, thriving, little town. It was originally built by Colin, 3d Earl of Balcarres, who died in 1722, and is named after him. The village of Kilconquhar is situated near the church. EARLSFERRY [which see] on the sea-coast, inhabited principally by weavers and colliers, is a very ancient royal burgh. The estate of Kinraig, in the south-west extremity of the parish, belonging to Miss Gourlay, has for nearly 600 years been the property of a family of that name, previous to which it belonged to a family of the name of Bickerton. Anciently it formed a barony, and included many other lands in various counties. The original of the family was Ingelramus de Gourlay, who came from England, and settled in Scotland, during the reign of William the Lyon. Immediately east of the church and village of Kilconquhar, is Kilconquhar bouse, the property of Sir Henry Lindsay Bethune, Bart. It is a handsome edifice, surrounded with extensive enclosures finely wooded. Kilconquhar formerly belonged to a family of the name of Carstairs, from whom it came to the ancestors of the present proprietor. Sir Henry is descended from the ancient family of the Lords Lindsay of the Byres, he was created a baronet for his distinguished services in Persia. Immediately north of Colinsburgh is BALCARRES: which see. Population, in 1801, 2,005; in 1831, 2,540. Houses 482. Assessed property £10,357. The average amount of raw agricultural produce has been estimated at £24,632; the produce of mines, in coal and lime, at £6,000. The average rent of land is £2 per acre. The valued rent of the parish is £9,546 3s. 4d. Scots. About 235 persons residing in the villages are employed in weaving linen for the manufacturers of Dundee, Kirkcaldy, and Leven; and a few of the men residing on the coast, go in July and August to the herring-fishing in the north—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the Earl of Balcarres. Stipend £255 4s. 6d.; glebe £27 10s. Unappropriated tithes £396 2s. 10d. The parish-church was built in 1821. It is an exceedingly handsome building in the pointed style of architecture, with a fine tower 80 feet high, situated on a small knoll which forms the churchyard, in the middle of the village of Kilconquhar. In consequence of the great distance of the northern part of the parish from the parish-church, a chapel was erected at Largoward in 1835; sittings 400. Stipend £75. There are three dissenting meeting-houses in the parish: 1st, One in connection with the Relief Synod at Colinsburgh, built about 1800; sittings 300. Another at the village of Kilconquhar, in connection with the United Associate Synod, built in 1795; sittings 270. Stipend £70; and 3d, An Independent meeting-house on the borders of the parish, near Elie, built in 1831; sittings 196. Stipend £63. There are six schools in the parish. The parochial teacher has the maximum salary, with dwelling-house, school-house, and garden.

\* In these rocks are several caves, called Macduff's-cave, the Hall-cave, the Devil's-cave. Macduff is said to have lain concealed in the cave which bears his name, when flying from the jealous rage of Macbeth.

KILDA (ST.), or HIRTA, the most remote of the Scottish Western isles,

“ Whose lonely race  
Resign the setting sun to Indian worlds.”

The nearest land to it is Harris, on which the Batt of Lewis bears 82 miles east of it. The Flammen islands are 37 miles distant from it. It is about 3 miles long from east to west; 2 broad from north to south; and  $9\frac{1}{2}$  in circumference. The whole island is fenced about with one continued perpendicular face of rock, of prodigious height, except a part of the bay or landing-place on the south-east; and even there the rocks are of great height, and the narrow passage to the top is so steep, that a few men armed only with stones could prevent any hostile multitude from landing on the island. The bay is also of difficult access, as the tides and waves are so impetuous, that, except in a calm, it is extremely dangerous of approach. The surface of the island is rocky, rising into four distinct summits. The highest of these, called Conachan, † was estimated by Dr. Macculloch to be 1,380 feet above the sea-level; and presents on one side a precipice of nearly this elevation. “It is a dizzy altitude,” says Macculloch, “to the spectator who looks from above on the inaudible waves dashing below. There are some rocky points near the bottom of this precipice,—one of them presenting a magnificent natural arch, which, in any other situation, would be striking, but are here lost in the overpowering vicinity of the cliffs that tower above them. In proceeding, these soon become low; but at the north-western extremity, the island again rises into a hill nearly as high as Conachan, terminating all round towards the sea by formidable precipices, which are continued nearly to the south-eastern point of the bay. Here a rock, separated by a fissure from the island, displays the remains of an ancient work; whence it has derived the name of Dune.”

The surface of the island is generally covered to the depth of six or eight inches with a blackish loam, on which rests a thick verdant turf, except on the tops of the hills where it is three feet deep of moss. The soil is well-adapted for corn; but the violence of the west winds restricts agricultural operations, and the natives prefer the rearing of sheep and goats, and catching of wild fowl, to the more toilsome business of husbandry, and raise only a small quantity of corn on the south-east declivity near the village. The soil, though naturally poor, is rendered extremely fertile by the singular industry of the inhabitants, who manure their fields so as to convert them into a sort of garden. The instruments of agriculture which they require are merely a spade, a mallet, and a rake or harrow. After turning up the ground with the spade, they rake it carefully, removing every small stone, noxious root, or weed that falls in their way; and then, with the mallet, pound down the stiff clods to dust; they then manure it with a rich compost, prepared in the manner afterwards described. The inhabitants of St. Kilda sow and reap much earlier than others in the same latitude. The heat of the sun, reflected from the high hills upon the cultivated land towards the south-east, is very great; and the climate being rainy, the corn grows fast and ripens early. Harvest is commonly over before September; and, when it unfortunately happens otherwise, the whole crop is liable to be destroyed by the equinoctial storms, which, in this island, are attended with dreadful hurricanes and excessive rains. Barley and oats are sown. Of the former, about 50 bolls are generally brought every year to Harris, and the grain

† The Rev. John L. Buchanan, in his ‘Travels in the Western Hebrides, from 1782 to 1794,’ calls it Congara.

is said to be of superior quality. Potatoes have been introduced, and cabbages and other garden-plants.

There are several springs, which form a small hurn that runs close by the village: this is situated about a quarter of a mile from the bay on the south-east, and all the inhabitants of the island live in it. The number of inhabitants, in 1764, was only 88; but they were formerly more numerous; and, under proper regulations, the island might easily support 300. Martin, who visited it in 1690, and who gives a very interesting account of its inhabitants, found, at that time, 180 persons; but, in 1730, one of the St. Kildans coming to Harris, was attacked with the small-pox, and died. Unluckily his clothes were carried to the island next year, by one of his relations, and thus, it is supposed, was the infection communicated, which made such havoc, that only four grown persons were left alive. The houses are built in two pretty regular rows, facing one another, with a street running in the middle. They are nearly flat in the roof, like those of the Oriental nations; for, as the island is subject to hurricanes, if the houses were raised in the roof, the first winter-storm would infallibly blow them down. The walls are built of coarse freestone, without lime or mortar, but made solid by alternate layers of turf. In the middle of the walls are the beds—formed also of stone, and overlaid with large flag-stones—each capable of containing three persons, and having a small opening towards the house. All their houses are divided into two apartments, the interior of which is the habitation of the family; the other, nearest the door, receives the cattle during the winter-season. The walls are raised to a greater height than is usual in the other Western islands. This is done to allow them to prepare the manure for their fields, which they do in the following manner. After having burnt a considerable quantity of dried turf, they spread the ashes over the apartment in which they eat and sleep; these ashes they cover with a rich vegetable mould or black earth; and over this bed of earth they scatter a quantity of peat-dust: this done, they water, tread, and heat the compost into a hard flour, on which they immediately kindle large fires, which they never extinguish, till they have a sufficient stock of new ashes on hand. The same operations are punctually repeated till they are ready to sow their harley, by which time the walls of their houses are sunk down, or rather their floors have risen, about four or five feet. The manure thus produced is excellent, and, scattered every year over their fields, causes the land to yield large crops. Though cleanliness is most necessary to health and longevity, yet, in spite of the practice now related, and some other equally filthy habits, the St. Kildans are as long-lived as other men. Their total want of those articles of luxury which destroy and enervate the constitution, and their moderate labours, keep the balance of life equal between them and those of a more civilized country. And though to most landmen

“ Weary, O weary! it is to gaze  
For years on the blue main,  
Round bounded but by the bright heavens  
For which we pine in vain.”

yet none are more attached to their ‘natale solum’ than the primitive inhabitants of this remote islet.

Besides the habitations we have mentioned, there are a number of cells, or storehouses, scattered over the whole island. These are composed entirely of stones, and are from 12 to 18 feet in length, and little more than 7 in breadth and height. Every stone hangs above that immediately below it, not perpendicularly, but inclining towards the opposite

side, so that the two upper courses are near enough to be covered with a flat stone, giving the whole the appearance of an arch. To hinder the rain from penetrating this cell, the outward part is covered with turf, which continues green and verdant for a considerable time. In these the inhabitants secure their peats, eggs, and wild fowl,—of which every St. Kildan has his share, in proportion to the rent he pays, or the extent of land he possesses. In this, as well as their ancient customs, they regard with jealousy any innovation.—The St. Kilda method of catching wild fowl is curious. The men divide themselves into fowling-parties, each of which generally consists of four persons distinguished for their agility and skill. Each party must have at least one rope about 30 fathoms long, made out of a strong raw cow-hide, salted for the purpose, and cut circularly into three thongs of equal length. These thongs, being closely twisted together, form a threefold cord, able to sustain a great weight, and durable enough to last two generations. To prevent its receiving injuries from the sharp edges of the rocks, it is covered with sheepskins dressed in the same manner. This rope is the most valuable piece of furniture a St. Kilda man can be possessed of; it makes the first article in the testament of a father; and, if it fall to a daughter’s share, she is esteemed one of the best matches in the island. By the help of these ropes, they examine the fronts of the rocks. Linked together in couples, each having the end of the cord fastened about his waist, they go down and ascend the most dreadful precipices. When one is in motion, the other plants himself on a strong shelf, and takes care to have so sure a footing that, if his fellow-adventurer should make a false step, and tumble over, he may be able to save him. When one has arrived at a safe landing-place, he seats himself firmly, while the other endeavours to follow. Mr. Buchanan says: “A man from St. Kilda told in a company where I was present, that he was one of the four men that caught four *itts*, or *pens*, being 300 each, in the whole 1,200 solan-geese, in one night. That bird, after the hard toil of the day at fishing without intermission, rising high in the air to get a full sight of the fish that he marks out for his prey before he pounces upon it, and each time devouring it before he rises above the surface, he comes so fatigued at night, that he sleeps quite sound, in company with some hundreds, who mark out some particular spot in the face of the rocks, to which they repair at night, and think themselves secure under the protection of a sentinel, who stands awake to watch their lives, and give the alarm, by *bir! bir!* in time of danger, to awaken those under his guard. The St. Kildians watch with great care on what part of the island these birds are most likely to light at night: and this they know by marking out on which side of the island the play of fish are, among which the geese are at work the whole day; because in that quarter they are ready to betake themselves to sleep at night. And when they are fairly alighted, the fowlers repair to the place with their panniers, and ropes of thirty fathoms in length, to let them down with profound silence in their neighbourhood—to try their fortunes among the unwary throng. The fowler, thus let down by one or more men, who hold the rope lest he should fall over the impending rocks into the sea, with a white towel about his breast, calmly slides over the face of the rocks till he has a full view of the sentinel; then he gently moves along on his hands and feet, creeping very silently to the spot where the sentinel stands on guard. If he cries *bir! bir!* the sign of an alarm, he stands hack; but if he cries *grog! grog!* that of confidence, he advances without fear of giving an alarm, because the goose takes the fowler for one of

the straggling geese coming into the camp, and snuffers him to advance. Then the fowler very gently tickles one of his legs, which he lifts and places on the palm of his hand; he then as gently tickles the other, which in like manner is lifted and placed on the hand. He then no less artfully than insensibly moves the sentinel near the first sleeping goose, which he pushes with his fingers; on which he awakes, and finding the sentinel standing above him, he immediately falls a-fighting him for his supposed insolence. This alarms the whole camp, and instead of flying off they all begin to fight through the whole company; while in the mean time the common enemy, unsuspected, begins in good earnest to twist their necks, and never gives up till the whole are left dead on the spot. This goose is almost as large as a land goose, of a white colour, except the tops of the wings, which are black, and the top of the head, which is yellow. The bill is long and sharp-pointed, extremely hard, and pierces an inch deep into wood. There is an act of parliament against the cruel manner of fastening herring on planks far out at sea, to catch these darling geese, and a severe penalty against transgressors of this inhuman act. A well-supported fact concerning the strength of this fowl, is told by one of the tacksmen of this island. Once when sailing towards St. Kilda, and entering upon a field of sea where the geese were busy darting among the fish, from on high, on each side of the large harge in which he sat, and sailing fast before the wind, the barge passed over a fish so quickly that a goose who had marked it out, and rushing so violently through the air, instead of the fish, on account of the unforeseen accident, darted his strong bill quite through the barge, and was actually carried back to Harris dead, with his bill through the plank, as a testimony of the fact." [*Travels in the Western Hebrides*, pp. 122—126.]—"Swift," says Dr. Macculloch, "in his '*Tale of a Tub*,' describes a land of feathers, and perhaps he drew the hint from St. Kilda. The air here is full of feathered animals, the sea is covered with them, the houses are ornamented by them, the ground is speckled by them like a flowery meadow in May. The town is paved with feathers, the very dunghills are made of feathers, the ploughed land seems as if it had been sown with feathers, and the inhabitants look as if they had been all tarred and feathered, for their hair is full of feathers, and their clothes are covered with feathers. The women look like feathered Mercuries, for their shoes are made of a gannet's skin; every thing smells of feathers; and the smell pursued us over all the islands, for the captain had a sackful in the cabin."

The laird of Macleod is the proprietor of St. Kilda; and the island is visited annually by his steward, to collect the rents, which are paid in sheep, butter, and wild fowl, particularly solan-geese. The island is surrounded with several small insulated rocks, of which the principal are Soa and Borera. Spars and rock-crystals are found on the north side of the island.

"Of St. Kilda, who communicated his name to the island," says Dr. Macculloch, "nothing seems to be ascertained. At least I have searched the Irish hagiology for him in vain. In Martin's time (1690) it appears to have been known by the name of Hirt or Hirta,—a term derived from the parent of Terra, by the same inversion as our own earth. It is a remarkable instance of the zeal or influence of the early clergy, that in a spot like this three chapels should have existed. They were extant in Martin's time, and the traces of two still remain." Buchanan, the historian, writes, that in his time the inhabitants of Hirta were totally ignorant; but that the proprietor sent a priest along with his procurator yearly

to baptize their children, and in the absence of the priest every one baptized his own child. In this state they continued for a hundred years after, until an ignorant fanatic impostor grossly imposed on the people, by claiming tithes; but a part of them refused to pay that tribute, alleging he was unqualified for the profession, as he could not repeat the Lord's prayer. Fifty years after his time, another dangerous impostor formed a design of raising a little spiritual empire among them; his name was Rore, and he had penetration enough to find out that ignorance was the mother of devotion. This native of Hirta, though ignorant of letters, had great natural parts, and conceived a design of enslaving the whole community, and making himself lord of their consciences, freedom, and fortunes. He pretended to have had sundry conferences with John the Baptist, and the Virgin Mary. He taught his followers that each of them had titular saints in heaven to intercede for them, whose anniversary behoved to be kept by a splendid feast, of which of course Rore himself was always participant. Private confession was his great engine, and the greatest secrecy was enjoined on all novitiates, under the pain of hell-fire. But he was at last enticed on board a vessel, and carried to Skye, where he made public confession of his crimes, and was never allowed to return to St. Kilda.—St. Kilda is generally understood to be ecclesiastically annexed to the parish of South Uist.

KILDALTON, a parish in Argyleshire, forming the south-east end of the island of Islay. It is 14 miles in length, and about 6 in breadth. There are several harbours, particularly Loch-Knock, on which is situated the small village of Kildalton, containing about 100 inhabitants. The name of Knock is taken from a high hill which rises in the figure of a sugar-loaf near the head of the bay. About 2 square miles are covered with natural wood. There are the remains of several Danish encampments, and many of the places bear Danish names. Population, in 1801, 1,990; in 1831, 3,065; in 1836, 2,222.—This parish, formerly a vicarage, is in the presbytery of Kintyre, and synod of Argyle. Patron, the Crown. Stipend £158 6s. 8d.; glebe £25. The island of Texa with one family, and the inhabited islands of Ardmore and Ardelister, are attached to it. The parish-church was built about 1816; sittings 600. There are parliamentary churches at Kilneny, Oa, and Portnabaven.—Schoolmaster's salary £25, with about £20 fees. There are 3 other schools, one of which is a General Assembly's school, on the north-west boundary of the parish.

KILDEAN, the spot where the English army crossed the Forth to the fatal battle of Stirling; about half-a-mile above the present bridge of Stirling. Here probably stood one of those numerous cells or chapels which existed throughout Scotland before the Reformation, but of which the name alone has survived to the present day.

KILDONAN, a parish in the county of Sutherland, bounded on the north by Farr and Reay; on the east by Latheron in Caithness; on the south by Loth; and on the west by Clyne and Farr. It extends about 24 miles in length, and is about 5 miles broad at the south end, and from 12 to 17 miles at the other. It lies on each side of the river HELMSDALE [which see], and the strath of Helmsdale, or the strath of Kildonan, as it is sometimes called, compose the principal arable portion of the parish. Into the head of this strath a number of minor straths run down from the high grounds, giving to the whole parish a configuration somewhat resembling the form of a tree, of which Strath-Helmsdale forms the trunk, and the minor diverging straths the branches. The general appearance is mountainous; but on the

haughs, or low grounds, the soil is light, fertile, and productive of tolerable crops. The most elevated mountain, Bengriammore, has an altitude of nearly 2,000 feet. In the upper part of the parish are several small lakes, all abounding with trout, and some of them with char. The principal of these are Lochnacuen, Lochleamnacavan, Lochbadanloch, and Loch-inruar. Red deer, grouse, ptarmigan, and black-cocks, are plentiful on the moors. The district contains numerous Pictish castles or towers; and there are said to be three subterranean passages under the Helmsdale, from fortifications on one side to fortifications on the opposite side of the river. The parish is subject to inundations from the sudden risings of the river, and has been occasionally inundated by water-spouts, one of which carried off a whole shealing or grazing, with the family and cattle. Population, in 1801, 1,440; in 1831, 257. The decrease in the population has been occasioned by converting the whole parish into six large sheep-farms. Houses, in 1831, 33. Assessed property, in 1815, £1,244.—The parish is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend £158 5s. 2d.; glebe £40.—Schoolmaster's salary £27 13s. 4d. There are three private schools.

KILDRUMMIE,\* a parish in the district of Alford, Aberdeenshire; bounded on the north by Cabrach and Auchindore; on the east by Kearn and Cushnie, with Leocheil; on the south by Towie; and on the west by Cabrach. It is situated on the Don, about 20 miles from its sources, and is surrounded on all sides by hills, but consists, in itself, of a level valley, between 2 and 3 miles square, with a narrow strip stretching between the north side of Auchindoir and the mountains, in an easterly direction, for 3 or 4 miles, "suggesting by its form, to a fanciful imagination,"—such as that of the author of the Statistical Account of it himself, it would appear,—"the idea of the pasteboard kite which Dr. Franklin first raised into the thunder-cloud." The soil is for the most part a rich deep gravelly loam, supposed to be amongst the most fertile in the county, and well cultivated. The hills around afford excellent pasturage. There are plantations of forest and fir trees at Clova, Brux, &c., and a considerable extent of natural birch-wood covers a bank overhanging a rivulet winding near Kildrummie-castle.—This parish is in the synod of Aberdeen, and presbytery of Alford. Patron, the Crown. Stipend £158 19s. 11d.; glebe £10.—Schoolmaster's salary £25 13s. 4d.; fees, &c., £11 6s. 4d. There is a private school in the parish.—Population, in 1801, 430; in 1831, 678. Houses 110. Assessed property, in 1815, £840.

Kildrummie-castle stands on an eminence rising out of a level about 3 miles in length. The venerable ruins,—at first hidden by a rising ground,—as you approach them, hurst at once on the view, so as to produce the finest effect. The plain, through which the Don seeks its winding course, is here dotted with knolls, some of which are covered with wood; while on every side, lofty mountains form such a barrier that the eye can discover no passage out of

the strath. The ground in the vicinity is moorish and barren. There are two small defiles, denominated the north and the south glen. The brook, which issues from the latter, washes the walls of the eminence on which the castle stands. The northern side was secured by the steep banks of the brook, which had been carried round the hill, on the east and south, by artificial moats, the remains of which are still to be seen. On the western side, on the face of the eminence, the entrance to a subterranean passage, which communicated with the interior of the fortress, is still visible, although now obstructed by rubbish. Old people in the neighbourhood, however, affirm that they have entered it; and state that it leads to apartments under the castle, so large and lofty as to admit of a man sitting upright on horse-back within them. Although this passage is much above the present bed of the rivulet, it is believed that its channel was then level with the exterior opening. According to local tradition, these vaults were used as stables, cellars, and prisons. The castle covers about a Scotch acre; although three acres, supplied by a draw-well, appear to have been included within the fortification. It originally consisted, it is said, but of one great circular tower, of five stories or floors, distinguished by the appellation of 'the Snow tower,' in the western corner of the present fabric. The only tower now standing is that to the north-west. Of the Snow tower, which was situated on the south-west, the foundation only remains. The walls of the building are from 10 to 12 feet in thickness. "Among bleak hills," says Gough, "stand the magnificent ruins of Kildrummie-castle, commanding a deep glen." According to his intelligence, "the Snow tower is near 50 yards high, of seven stones [stories], each 30 feet high. In the middle story a stone bench ranges round, with doors opening to it from the wall, whence it is called the court-house. The walls," he adds, are "18 [eight?] feet thick, now fallen in. On the north side is a magnificent hall, 60 paces by 15, called Barnet's hall." The chapel stood in the centre of the fortress, 60 feet in length, and in breadth 24. Three of the windows are still entire. This, if we may credit the tradition of the country, was occupied as a magazine of forage during the noted siege by the forces of Edward I., in the year 1306. It is said that the besiegers despaired of success until a piece of red-hot iron, thrown through one of the windows of the chapel into the forage, occasioned such distraction by the conflagration, that the castle was won by surprise and storm. The remains of a burying-ground may be yet seen, on the north side of the castle, immediately under the windows of the chapel. Great quantities of hones have at different times been dug up in the neighbourhood, but scarcely any more valuable remnant of former ages. This castle at an early period was the property of the royal family. David, the brother of William the Lion, and grandson of David I., was at the same time Earl of Huntington in England, and of Garvach or Garioch in the north of Scotland.

This Dawy Erle was of lauch  
Of Huntintown, and Garvach.  
Til Kyng Williame he wes brodry.  
WYNTON'S *Cron.* viii. 6. 235.

The venerable prior of St. Serfs says, that David was "of lauch," or legally, heir of this earldom; and the magnificent castle of Kildrummie, during his time, was the capital mansion of the earldom of Garioch. With the daughter of David, it went to the family of Bruce; and from them, with the sister of Robert I., to the family of Marr, when it became the capital of Marr, as well as of Garioch. It must have been part of the royal demesnes during the reign of

\* The name *Kildrummie*, it has been said, is purely Celtic, signifying 'the Little Burial mound.' It seems, indeed, to correspond with the situation, as the castle stands on a small eminence. It may be doubted, however, whether *Kildrummie* has not originally been a vulgar modification of *Kydrumny*; which might seem to have been its most ancient form, being that in which it appears, not only in the *Rotuli*, but in the *Chartulary of Aberbrothock*. According to this orthography, it might be traced to the Gaelic *ceann, cinn*, 'head,' and *druinn*, in genitive *droma*, 'the ridge of a hill,' and might thus signify 'the head,' or 'summit of the ridge,' which had been the site of the most ancient tower erected here. In the map of the counties of Aberdeen and Banff, by Gordon of Stratoch, the name of the fortress is by mistake given as *Kurdrummie*, which was probably written *Kindrummie*.

Alexander II. For this prince having appointed St. Gilbert, Bishop of Cathness, to be his treasurer in the north of Scotland, the latter, "dureing the space he had this office, huilt the castle and fortresse of Kildrumme, in Marr, with seaven tours within the precinct of the said castle." What is here said can only be understood of the great additions made, by this hishop, to the original tower. The next mention we find made of this fortress refers to the period of the usurpation of Edward I. In his progress through Scotland, A. D. 1303, he was at Kyndromyn,\* Oct. 8 and 9. Our accurate annalist, Lord Hailes, has remarked that, after the unfortunate slaughter of Comyn at Dumfries, Bruce "had not a single fortress at his command but the castle of Kildrummie; and that," he justly subjoins, "was at too great a distance to be serviceable." From this circumstance he infers, with great appearance of truth, that Bruce had no premeditated intention to take away the life of Comyn; and that he had formed no plans, and concerted no measures, for making his claim to the Scottish crown effectual. The writer of the Old Statistical Account has fallen into a mistake here, in supposing that Bruce himself, as well as his queen, escaped from Kildrummie during its siege by the English, A. D. 1306; for our illustrious prince did not himself seek refuge here after his defeat in the battle of Methven, but wandered among the mountains of Perthshire, with a very few adherents, among whom was his brother Edward. As winter was approaching, he sent a younger brother, Nigel, with the Earl of Athole, to conduct the Queen, and ladies in her suite, to Kildrummie, as they could neither hear the fatigue of travelling nor find sufficient sustenance. Our good old Barbour accordingly gives us the following account:—

—Thai war ay in sa hard trawail,  
Till the ladyis began to fayle,  
That mycht the trawail dreyn na mar.—  
With that in hy to him callyt he  
Thaim, that till him war mast prync;  
Then among thaim that thocht it best,—  
That the queyne, and the erle alsua,  
And the ladyis, in hy suld ga,  
With Nele the Bruce, till Kildromy.  
For thaim thocht thai mycht sekryll  
Dnell thar, quhill thai war wietallit weile:  
For swa sidwart wes the castill,  
That it with strenth war hard to get,  
Quhill that thar in war men and mete.  
As thai ordanyt thai did in hy.  
THE BRUCE, B. II. V. 697, &c. *Edit.* 1820.

The Queen, and Lady Marjory, the daughter of Bruce by a former marriage, afterwards dreading to be besieged here, fled to the sanctuary of St. Duthac, at Tain, in Ross-shire; but the Earl of Ross violated the sanctuary, and delivered them to the English. The castle was afterwards besieged by the Earls of Lancaster and Hereford. The magazine being treacherously burnt, the garrison, deprived of provisions, surrendered at discretion. The young and handsome Nigel was condemned and executed at Berwick by the English; Christopher Seton, who had married Bruce's sister, and his brother Alexander, met with the same fate at Newcastle. The Earl of Athole received the death of a traitor at London. The King did not learn the mournful tidings till he had resided for some time in Carrick. He had his information from a lady, who was a near relation of his own.

—Scho him tauld, sichand full ear,  
How that his brothyr takyn war  
In the castell of Kyldromy,  
And destroyt sa welausly;

\* There can be no doubt that Kildrummie is here meant, as he proceeded to Kyndros, in Moray, on the 10th, and to Elgin on the 11th of the same month. This, in the 'Scots Chronicon,' is denominated Kyndromyn.

And the Erle of Athall alsua:  
And how the queyne, and othyr ma,  
That till his party war heldand,  
War tane, and led in Ingland,  
And put in felow presonce, &c.  
THE BRUCE, B. IV. P. 93.

As Perth had been taken by Edward Baliol, after the fatal battle of Dupplin, he intrusted the keeping of it to the Earl of Fife. Being retaken, a few months after by the loyalists, Fife, with his lady and children, was sent to Kildrummie, to be imprisoned there. David Comyn, Earl of Athol, having, A. D. 1335, renounced his allegiance to David Bruce, and joined himself to Edward Baliol, was, by the English faction, made governor of Scotland. He acted very insolently and tyrannically towards all the adherents of the family of Bruce; in consequence of which William, Earl of Sutherland, with the rest of the loyal nobility, appeared in arms against him. He, "understanding that the lords were assembled against him, left the siege of Kildrummie, in Mar, which then he had in hand, and with thrie thousand men he gave them battell in the forest of Kilblane. After a sharp and cruell fight, Earle David wes overthrowne" and slain. The castle of Kildrummy was at this time under the charge of Lady Christian Bruce, who was married, first, to Gratney, Earl of Marr; secondly, to Sir Christopher Seton; and thirdly, to Sir Andrew Moray of Bothwell. Boethius mentions her as *præfect* of the castle of *Kildrummæ*. Abercromby designs her "an heroick lady;" and Lord Hailes, in reference to the time of this siege, says that "the castle of Kildrummy" had been "hitherto the asylum of the loyalists." We find it in possession of the family of Marr, A. D. 1403. During the next year, Alexander Stewart, a natural son of the Earl of Buchan, having cast his eyes on the Countess, stormed her castle of Kildrummie, and either by violence, or by persuasion, obtained her in marriage. On the 12th of August, 1304, she made over her carldom of Marr and Garioch, with all her other lands, to the said Alexander Stewart, "and the heirs to be procreated between him and her, whom failing, to his heirs and assignees whatever." In succeeding times this castle was still considered as royal property. For, in the reign of James II., A. D. 1437, an act of Parliament having been passed, that no lands nor possessions belonging to the king he given to any man without consent of the three estates, till the king should be twenty-one years of age, it was agreed, in the year 1440, "for the good and quiet of the land, that the king should deliver up to Robert, Lord Erskine, calling himself Earl of Marr, the castle of Kildrummie, to be kept by him till the king's majority, when the said lord should come before the king, and the three estates, and show his rights and claims as far as law will. A. D. 1442, Earl Robert took a protest at Stirling, in presence of the king and council, complaining against the chancellor for refusing to retourn him to the lordship of Garioch, and put him in possession of the castle of Kildrummie. He afterwards besieged and took this castle. In 1448, in consequence of a new indenture, Lord Erskine obliged himself to deliver it up." A. D. 1485-6, Alexander, 3d son of James III., had a charter, granting to him all the lands and earldoms of Marr and Garvloch, with the castle of Kildrummie. The earldom of Marr was restored to John, Lord Erskine, A. D. 1565, after the family had been deprived of it for 130 years. Kildrummie castle, we learn, "was hurnt in Cromwell's wars; and the new house, huilt by the lords of Elphinston on the south side, by the Highlanders at the Revolution. It continued the seat of the Marr family."

Before leaving this interesting ground, it may be

proper to observe, that it exhibits some remains of antiquity, obviously far more ancient than those of the castle. About a mile to the north-east of it, in a level moor of considerable extent, a number of subterraneous habitations have from time to time been discovered, of the same kind with those, in the Orkney islands, denominated Picts' Houses. They are spread over the space of a mile or two in diameter. Between forty and fifty have already been opened. They are on a perfect level with the surrounding ground, so as to be most frequently discovered by the plough striking against some of the large stones which form the roof. The only opening to them seems to have been between two large stones, placed in a sloping direction at one end, and about 18 inches asunder, rising perhaps only a few inches above the plain, so as to be scarcely perceptible. By sliding down obliquely through this narrow opening, to the depth of 5 or 6 feet, one reaches a large vault, generally about the same height, upwards of 30 feet long, and from 8 to 9 feet wide. The walls are built of rude uncut stones, without any cement, but so closely wedged together, that the smallest of them cannot be moved from its place by the strength of the hand. They form a curve, bending inwards, so as to approach very nearly to a complete arch; large stones, 5 or 6 feet in length, being laid over the opposite walls, by way of roof. They are covered by a thin layer of earth; and are so level with the ground, that one passes over them without any suspicion that he is walking over the habitations of his ancestors. What affords a strong indication that these were inhabited only during winter, is, that, in many instances, adjoining to each of these caverns, there is a small square enclosure, of 10 or 15 paces each way, dug a foot or two deep, with the earth thrown outwards.\*

**KILFINAN**, a parish in Argyleshire, in the district of Cowal, about 17 miles north of the island of Arran. It is nearly 17 miles in greatest length, and from 6 to 7 in greatest breadth. The surface and coast are very rugged, and the soil thin and poorly cultivated. Loch-Fyne bounds the parish on the west and north-west; on the north and north-east it is bounded by Strachur and Kilmodan parishes. The southern division is called Kerriff or Kerry, which is from a Gaelic word which signifies a quarter or fourth-part of any thing. As it is by far the most extensive division, and the parish-church is within it, the whole parish often goes by the name of Kerry. The northern division is called Otter, which is also a Gaelic word, descriptive of a shallow place over which runs a gentle current. This division of the parish is so called from a beautiful sand bank, which juts out into Loch-Fyne, in a serpentine form, near the seat of Campbell of Otter. This bank is 1,800 yards long, from water-mark to its remotest extremity at low water; and forms, with the land on the south side, an oblique, and on the north an obtuse angle. In time of spring-tides, it is entirely covered at high-water; but about three hours after the turn of the tide, the whole appears to within a few yards of its extremity. On the north side of the bank the water is very deep; on the south side—where, according to conjecture, the surface has been peeled off by the united force of storms and a strong current—it is very shallow, and ebbs a great way out in spring-tides. There are several small lakes, which abound with trout; and the district is beautified by a considerable extent of

natural wood, particularly ash, of which last there is a thriving plantation around the mansion-house of Otter. Cairns and duns, or rude circular ranges of stones on the tops of eminences, are of frequent occurrence in the parish.—Population, in 1801, 1,432; in 1831, 2,004. Houses, in 1831, 342. Assessed property, in 1815, £5,013.—This parish is in the presbytery of Dumoon, and synod of Argyle. Patron, Lamont of Lamont. Stipend £182 3s. 4d.; glebe £8. The church is old, and was repaired in 1759; sittings 450. A missionary alternates between this parish and Toward in Dunoon parish; and a small chapel has been erected near Ascog bay.—There are two parochial, and five private schools in the parish.

**KILFINICHEN AND KILVICEUEN**,† a parish in Argyleshire, in the island of Mull, of which it forms the south-west part. It is bounded on the east and north-east by a ridge of mountains which separates it from the parish of Torosay; on the south an arm of the Atlantic, which runs up to Lochaber, separates it from the islands of Colonsay, Jura, and Islay, and the mainland of Argyleshire; on the west, it is washed by the Atlantic; on the north, an arm of the sea called Lochrankeal, separates it from the parish of Kilninian. In Lochrankeal lie the islands of Innis, Inchkeneth and Eorsa, belonging to this parish, and the islands of Ulva and Staffa, belonging to the parish of Kilninian. From the parish of Torosay to the sound of Icolmkill—which is its greatest length—it will measure about 22 miles in a straight line, exclusive of the island of Iona, or Icolmkill. Its greatest breadth, when it meets the parish of Torosay, is about 15 measured miles. The parish is divided into four districts, viz., the island of Iona, Ross, Brolass, and Ardmeanach. The first three lie to the south of Loch-Scridain—an arm of the sea which runs 12 miles, from west to east, into this parish; the fourth district, Ardmeanach, lies north of Loch-Scridain, and parallel to Ross and Brolass. The island of Iona lies in the Atlantic, and is separated from the west point of Ross by a narrower channel called the sound of I: See article IONA. The districts of Ross and Brolass are nearly of equal extent, and separated from one another by a ridge of hills of no great height. They stretch in a line from the sound of I to the parish of Torosay, 22 miles, which, as already mentioned, is the greatest length of the parish. Their breadth is from 3 to 6 miles. Ardmeanach joins Brolass at the head of Loch-Scridain, and is about 12 miles in length, and from 3 to 6 miles in breadth. The parish, in general, presents a very barren aspect. Part of it is flat, but the greater part of it is hilly, and only calculated for grazing. Ross is flat, except where it marches with Brolass; and the greater part of the surface is moss and heath. Brolass has a northern exposure, rising in a gentle ascent from Loch-Scridain. The soil is light and dry, and the greater part of the surface consists of heath and rocks. Ardmeanach faces the south, rising to a considerable height from Loch-Scridain. Its soil and surface are similar to Brolass. A part of this district, called Grihun, presents some good

† Pronounced Kilviceen.—The several parishes into which the island of Mull was divided in the times of Popery, were all united at the Reformation, and called the parish of Mull. It was then a part of the presbytery of Lorn. About the time of the Revolution, all that part of Mull north of the Tarbert or isthmus at Aros, was erected into a parish, called the parish of Kilninian. The rest of the island of Mull continued to be one parish for upwards of forty years after this period, and was called the parish of Ross. But being too extensive a charge, a new parish was erected, called the parish of Torosay. What remained was in writings called the parish of Kilfinichen and Kilviceuen, from two places of worship, the one in Ardmeanach, called Kilfinichen; and the other in Ross, called Kilviceuen; but in the country it is only known by the name of Ross, from a large district of it so called.—*Old Statistical Account*.

\* See Stat. Acc. xviii. 419, 420; also a very particular and accurate account of those subterraneous dwellings, communicated to the Society of the Antiquaries of Scotland, by John Stuart, Esq., Professor of Greek, Marischal college, Aberdeen; and published, in the Society's Transactions, vol. II. Part. I. p. 53—55.

arable land. Adjacent to Grihn is the fertile little island of INCUKENNETH: which see. There are three considerable lakes in Ross. The largest of them is not above a mile and a half in length, and about half-a-mile in breadth. There are six streams in Brolass and Ardmeanach; but they are not considerable except in time of rain. In times of rain a thousand streams fall down the rocks of Burg, and the rocks at Inimore and Carsaig. These rocks being in some places perpendicular, and in all places nearly so, and some hundreds of feet in height, the streams rushing down them form very magnificent cascades; and when a high wind blows against them, the water is raised up in columns like smoke to the skies. The shores may be called hold and rocky throughout almost their whole extent. Upon the south side of the parish there is only one creek in Ross, called Portuisgen, where a vessel of about 30 tons may anchor, but not in safety if the weather be stormy. Upon the Ross side of the sound of I there are two creeks,—one called the Barachan, and the other Polltarve, or the Bull-pond,—where vessels of considerable burden may anchor in safety, with proper pilots. Loch-Lahich lies east of the sound of I, at the distance of about 3 miles. This loch runs about 2 miles from north to south into Ross, and is one of the safest anchorages about the island of Mull. A small arm of it running west, and called Loch-Coal, is too shallow for any vessel to anchor in. The whole of Loch-Scridain may be called a road, but the best anchoring-ground is at Kilfinichen, and another place at the head of the loch, called the Narrows, where vessels may ride in safety from all storms. The only mountains are those that divide the parish from that of Torosay. The most remarkable of these is BENMORE: which see. Population, in 1801, not returned; in 1811, 3,205; in 1831, 3,819. Assessed property, in 1815, £1,381. Houses, in 1831, 679.—The parish is in the presbytery of Mull, and synod of Argyle. Patron, the Duke of Argyle. Stipend £180 10s. 3d.; glebe £15. There is a church in each of the united parishes. Both were built in 1804, and repaired in 1828. The church of Kilviceuen is at Bonessan, and contains 350 sittings; that of Kilfinichen has 300 sittings. There are two catechists employed in the parish. There is a small Baptist church in Kilviceuen.—There are 2 parish-schools, and 6 private schools. The salary of the 1st parish-schoolmaster is £30; of the 2d, £21 6s. 8d. Each has about £S of fees.

**KILGOUR.** See FALKLAND.

**KILL, COILA, or COYL (THE),** a rivulet of the district of Kyle, Ayrshire. It rises in the parish of Dalmellington, flows 2 or 3 miles northward and north-westward, till it touches the parish of Coystoun, and thence, over a direct distance of 8 miles, first north-westward, and next westward, divides that parish on the left from the parishes of Ochiltree and Stair on the right, and then falls into the river Ayr. It receives hardly a tributary, except in the early part of its course, and is in general considerably sinuous in its movements.

**KILLACHONAN.** See FORTINGAL.

**KILLALLAN,** a parish in Renfrewshire, united with Houston in 1760. See HOUSTON and KILLALLAN.

**KILLARROW,** a parish in Argyshire, in the island of Islay, frequently termed Bowmore, from the name of the village in which the church is situated: See BOWMORE. It is about 15 miles long, and 8 broad. Superficial area about 49,920 imperial acres. The surface is partly low, partly hilly, and covered with heath. The parish is watered by the river Luggan, which empties itself into a bay of the same name. In this parish is the elegant residence of Mr.

Camphell, of Shawfield, the proprietor of the island. Population, in 1801, 2,781; in 1831, 4,898. Houses, in 1831, 824. Assessed property, including Kilmenny, in 1815, £15,935.—This parish is in the presbytery of Isla and Jura. Patron, the Crown. It was separated from Kilchoman about 75 years ago, by authority of the court-of-teinds. Kilmenny was attached to it at the same time, and continued attached till lately, when it was erected into a separate parish by government. Stipend £158 6s. 8d.; glebe £10. Church built in 1767, and gallery erected in 1828; sittings 831.—There is a small Independent church, and also a Baptist church, in this parish.—There are two parochial schools, and twelve private schools in the parish.

**KILLASAY,** one of the small Hebrides, on the west coast of Lewis.

**KILLEAN AND KILCHENZIE,** an united parish in Argyshire, in the district of Kintyre, about 18 miles in length, and 3½ in breadth; containing 26,250 Scots acres. The soil along the coast of the Atlantic ocean is sandy and sharp, but, when well manured, produces good crops of barley, oats, and potatoes; higher up, it becomes mossy; in the hills there is little green pasture, being mostly covered with heath. There are several Danish forts, some rude obelisks, and the remains of a vitrified tower in this district. One of the obelisks measures 16 feet above ground, and is 4 feet broad, and 2½ thick.—Population of the united parish, in 1801, 2,520; in 1831, 2,866. Houses 453. Assessed property, in 1815, £17,449.—The parish is in the presbytery of Kintyre, and synod of Argyle. Patron, the Duke of Argyll. Stipend £178 9s.; glebe £10. There are two churches,—one in Killean, and the other in Kilchenzie, in which service is performed alternately once a fortnight in each.—There are two parochial schools. One of the teachers has a salary of £31 6s. 6½d.; the other has £20. There are five private schools.

**KILLEAN,** a beautiful secluded vale on the river Foyers, in Inverness-shire. It is encompassed on all sides by steep mountains; hut at the north end there is a small lake about 1½ mile in length, and half-a-mile in breadth, from which the river sweeps to the northward, through richly birch-clad hills. The remainder of the glen is a perfectly level tract, of the same width with the lake, and about 2½ miles in length, covered with rich herbage, and traversed by a small meandering river which flows into the lake. See FOYERS.

**KILLEARN,** a parish in the western division of Stirlingshire, but originally belonging to the Lemnox, or Dumbartonshire. Were the parish of Strathblane incorporated with it, the two would form nearly a regular rectangle; but Strathblane, which is much the smaller of the two, and is itself somewhat rectangular, being all indented within the area on the south-east, Killearn consists of a main body stretching east and west, and of a stripe or projection running out southward from the south-west angle. The main body measures in extreme length, from east to west along the line of Endrick-water, excluding the bends and windings of the stream, 6½ miles; and, in extreme breadth from the boundary opposite the village of Balfron on the north, to the boundary a brief distance beyond Easterton on the south, 3¼ miles; and the projection southward measures 3¼ miles in extreme length by 1¼ or 1½ in average breadth. The parish is bounded on the north by Drymen and Balfron; on the east by Fintry; on the south by Strathblane and Dumbartonshire; and on the west by Drymen. Endrick-water comes in from the west, and—not reckoning its numerous bends and meanderings—forms, for nearly 5 miles,

the northern boundary-line, flows  $1\frac{1}{2}$  mile south-westward through the north-west corner of the parish, traces for  $1\frac{1}{2}$  the western boundary, and then, being joined by the Blane, looks westward and leaves the district. Blane-water comes in from the inner angle of Strathblane, and flows 2 miles north-westward to its point of confluence with the Endrick. Both these streams abound in salmon, pike, and eels, and, at a certain season of the year, with roaches. Several minor streamlets, particularly Carnock-hurn, which comes northward along the western boundary to join the Blane a little above the junction with the Endrick, and 5 burns which rise in the interior, or near the southern boundary, and flow northward to the Endrick, also abound with trout, and combine with the two master-streams, supplied as they all are with little shoals coming up from Loch-Lomond, to render the parish one of the finest trouting districts in Scotland. Along the eastern and southern boundaries of the main body of the parish, and flanking somewhat into the interior, runs a hilly and moorland ridge of pastoral, and, in some instances, picturesque surface,—the continuation of the upland chain which commences near Stirling, and over two-thirds of the projecting part of the parish, from the southern extremity northwards, stretches a tract of similar character. Commencing on the south-west between the ends of these ranges, a valley stretches along the course of the Blane till it touches the Endrick, and thence runs up the course of the latter stream to the north-east extremity of the parish, thus possessing a semicircular form, and blending the vales of the Endrick and the Blane into a continuous semi-zone. This valley is broadest on the Blane and the lower part of the Endrick, averaging, with the gentle slopes at the base of the hills, about  $1\frac{1}{2}$  mile, and becomes very considerably contracted as it ascends to the eastern boundary. Everywhere it is beautiful, and finely cultivated and wooded; and, in not a few places, it is delightfully picturesque. Seen from the heights and slopes round which it semicircularly bends, it exhibits a foreground of fertile pastures and luxuriant fields, beautified by the meanderings of a limpid stream, and the intersecting frill-work of green enclosures, and foiled by a slowly receding and very diversified hack-ground in the districts westward, perpetuating in one direction its own soft and luscious character, sending up in another the bold forms of the Lomond hills, and over a various expanse carrying the eye away to where the distant mountains of Argyle and Perthshire mingle their azure-coloured summits with the clouds. On one hand, within the parish, come into view vast masses of basaltic pillars or natural colonnades running in numerous directions; and on the other, is seen a crystal stream leaping glitteringly down a delightful cascade. Here a verdant wood, in variegated windings, skirts the sides of the hills; and there a deep glen, hollowed out by the work of many ages, lays open to the view not a small part of the bowels of the earth. On Endrick-water, where it traces the western boundary, is the Pot of Gartness, a deep linn shaped like a pot or caldron, into which the river makes a tumbling and very picturesque descent over a rock of three or four times alternated precipice and ledge. On the estate of Croy, south of the Blane, and on the western verge of the parish, are two attractive objects, Duallt glen, and the waterfall of Ashdow.\* The sides of the glen are very steep, and, for a long course, exhibit a great variety of trees and shrubs grouped in almost every conceivable form; and they are at last connected by a breastwork of freestone rock, which rises per-

pendicularly up between them to the height of 60 feet, and closes the glen, and over which the rivulet Duallt makes an unbroken leap, and forms a cascade finely in keeping with the grand and solemn beauty of the scene. Half-a-mile from the glen is Ashdow, a high rock over which the water of Carnock makes a precipitate fall, and a deep and winding passage for the stream among the rocks. The projecting or overhanging rocky banks, are wild beyond description, nearly meeting in some places at the top, widening below into beautiful and variform curvatures, and everywhere romantically adorned with a profusion of shrubs and trees overhanging the clefts.—The soil, in the lowlands, or arable grounds of the parish, is chiefly a stiff clay, which a drought bakes into great hardness, and which, for the most part, is superincumbent on a wet cold till; but, in some districts, it is a good loam, and, in all, it has been much ameliorated by georgical operations. The hilly district contains several extensive moors and mosses, and is chiefly occupied, the higher grounds in sheep-walks, and the lower declivities in the pasturage of black cattle. Much attention has been given to the improvement of stock; and sheep and black cattle of various breeds, the former about 30,000 in number, are maintained on the pastures. On the various streams are corn-mills, always well-supplied with water-power. Limestone of two kinds occurs, but not in circumstances to be largely worked. An extensive stratum of an excellent millstone grit enriches the estate of Balglass, and supplies the country to a great distance with millstones. Sandstone occurs, but of coarse grain, and not of the best quality for building. Several laborious but vain searches have been made for coal. On the banks of the Endrick have been found very numerous jaspers, brown, red, and green, intermixed in the form of blotches and ramifications, and susceptible of a fine polish and of being used as ornamental gems. Some nodules resemble the bloodstone; and others contain a considerable portion of the zoned agate.—A little south of the village stands Killearn house, anciently the seat of a cadet of the Montrose family, built in 1688, surrounded with numerous plantations, disposed in helts, clumps, and wildernesses. A mile south-west on the Blane is Croy, embosomed in plantation, and enriched with the picturesque scenery already noticed. On the Endrick stands the elegant and commodious mansion of Ballikinrain, on an estate which belonged for centuries to the family of Napier. Not far from it, and also on the Endrick, are the mansions of Boquban and Carbeth, both embellished with encincturing plantations. On the estate of Balglass, in the north-east corner of the parish, is an antiquated castle, or large dwelling-house, said to have anciently been well-fortified, and to have, on one occasion, offered Sir William Wallace a safe retreat from danger. This place is noted for the vicinity to it of the Corries or Curries of Balglass,—natural semicircular excavations on the western extremity of the Campsie and Strathblane fells, some of them more than a mile in diameter, and in several places beautifully exhibiting the various mineral strata of which the mountains are composed.—In the immediate vicinity of the Pot of Gartness, already noticed, are the remains of a house in which John Napier of Merchiston, the inventor of logarithms, resided during a considerable part of the period of his being employed in his calculations. The incessant sound of the cascade, it is said, never annoyed him, while the clattering noise of a mill in the immediate neighbourhood so tore and shattered his thoughts that he was frequently obliged to request the miller to stop its movements. Accustomed frequently to walk out in the evening in his night-gown and cap, and

\* A corruption probably of *Uisk-dhu*, that is, 'the Black water.'

wearing an aspect of deep abstraction, he earned the reputation among the papistiated hobnails in his vicinity of being a warlock. At a small farm-house on the banks of the Blane, about a mile south from the church of Killearn, was born, in 1506, the illustrious George Buchanan. The farm, consisting of a plough of land, was the property of his father, and holds of the family of Drummikill from which his ancestors descended, and was sufficient, with the aids of industry and economy, to yield a competent support. In the village of Killearn, and commanding an extensive prospect, stands a monument to his memory, erected by the gentlemen of the parish and neighbourhood in 1788. It is a well-proportioned obelisk, 19 feet square at the base, 103 feet high, having a cavity which diminishes from 6 feet square at the ground to a point at the height of 54 feet, whence a Norway pole is continued to the top. The material is a white millstone grit found in the vicinity. In the foundation-stone was deposited a silver medal, enclosed in a hermetically sealed bottle, bearing the inscription :

In memoriam,  
 GEORGI BUCHANANI,  
 Poeta et Historici celeberrimi,  
 Accolis hujus loci, ultra conferentibus,  
 Hæc columna posita est, 1788.  
 Jacobus Craig, architect, Edinburgen.

At Blaressan Spout-head, a little north of the village, tradition reports a sanguinary battle to have been fought between the Romans and the Scots. So late as 1743, the parish was subjected to the incursions of Highland freebooters, and paid exactions of black mail.—The village of Killearn stands not far from the base of the hilly district, at nearly equal distances from the Blane on the south and the Endrick on the west and on the north,  $2\frac{1}{2}$  miles from Balfron,  $16\frac{3}{4}$  from Glasgow, and 20 from Stirling. Its population in 1769 was 74; in 1831, 388. At its south end stands the parish-church. A cotton-mill and a printfield, both situated on the Endrick, were established in 1792; but are no longer in existence; there is, however, a small woollen factory. But the manufactures of the parish are connected less with Killearn, than with the village of Balfron, which stands only  $\frac{1}{4}$  of a mile north of the Endrick, and in the immediate vicinity of the factories. See BALFRON. Population of the parish, in 1801, 1,039; in 1831, 1,206. Houses 182. Assessed property, in 1815, £6,731.—Killearn is in the presbytery of Dumharton, and synod of Glasgow and Ayr. Patron, the Duke of Montrose. Stipend £152 4s. 9d.; glebe £12. Church built in 1826; sittings 500; cost £1,050. The parish-school is attended by a maximum of 66 scholars. Schoolmaster's salary £31, with fees, and £14 other emoluments. Three non-parochial schools are attended by a maximum of 133 scholars. The church was anciently a parsonage, and was erected, in 1429, into a prebend of the cathedral of Glasgow. Its saint was Alders or Arns, a name corrupted into Earn.

KILLEARNAN, a parish in Ross-shire, extending 5 miles in length, and 2 in breadth; bounded on the north by Urquhart; on the east by Kilmuir-wester and Suddy; on the south by the Beauly frith; and on the west by Urray. The soil is in general favourable for cultivation. There are 2,500 acres under cultivation, and about an equal number under wood, and 2,000 in pasture. The value of property assessed, in 1815, was £2,520. There are numerous cairns and tumuli, some of which are of uncommon magnitude, in this district. The mansion-house of Redeastle has been recently repaired; but Killooy-castle is now a ruin. Population, in 1801, 1,131; in 1831, 1,479. Houses 293.—This parish is in the presbytery of Chanonry, and synod

of Ross. Patron, MacKenzie of Cromarty. Stipend £199 16s. 7d.; glebe £9.—Schoolmaster's salary £27 11s. 5½d. There is a school supported by the Society for Propagating Christian Knowledge.

KILLIECRANKIE,\* a celebrated mountain-pass on the river Garry;  $1\frac{1}{2}$  mile above the point of its confluence with the Tummel; 15 miles north of the town of Dunkeld; and on the western verge of the parish of Moulin, in the district of Athole, Perthshire. The dark lofty hills which fall abruptly and precipitously down on both sides of the narrow vale of the Garry, approach here so close that the shadow of the one range flings a perpetual night over the face of the other. From the present road, which is carried along a sloping part of the ridge on the left side of the river, the traveller looks up, on the one hand, to the bare acclivitous ascent of the hills toward their summit, and listens, on the other, to the hoarse and tumultuous roar of the Garry storming its angry way along the bottom of the deep gorge below. But the wildly romantic pass is so tufted and overhung with a profusion of birch-trees tenaciously clinging to the clefts of the rocks, that the river is, in most places, invisible, and makes its presence known only by its deafening noise; and, when it does come into view, it appears rolling headlong over a precipice, and lashing the waters of a deep pool into a little sea of foam, and expending its gigantic energies in throwing up amid the romance around it a scene of awful magnificence. The pass is between two and three miles in length, and, previous to the era of laying open the Highlands by the construction of military roads, was the most wild and perilous of all the inlets to that vast fortress of mountains, or to any of its interior retreats. A footpath, hanging over a tremendous precipice, and threatening destruction to the pedestrian as the result of the least false step, was then the only facility which it offered; but now an excellent road is carried along in such safety as to occasion no uneasy emotion to persons acquainted with even the turnpikes of Wales and of the Southern Highlands of Scotland, and sends off, at the south end of the defile, another road, by a picturesque arch across the Garry, to run up the glen of the Tummel.

On some rough ground on the left bank of the river, at the north-western extremity of this pass, was fought, on the 27th July, 1689, the celebrated battle of Killiecrankie. It was on the 26th of July, 1689, that Mackay began his fatal march from Perth at the head of an army of 4,500 men. Of this force, a fair proportion consisted of cavalry. At night he encamped opposite to Dunkeld, so celebrated for the romantic grandeur of its scenery. Here, at midnight, he received an express from Lord Murray announcing that Dundee had entered Athole, in consequence of which event he informed him that he had retreated from before the castle of Blair, which he had for some time partially blockaded; and that although he had left the strait and difficult pass of Killiecrankie between him and Dundee, he had posted a guard at the further extremity to secure a free passage to Mackay's troops through the pass which he supposed Dundee had already reached. Mackay seems to have doubted the latter part of this statement, and his suspicions were in some degree confirmed by the fact, that Lieutenant-colonel Lauder, whom he despatched with a party immediately on receipt of Murray's letter, to secure the entrance into the pass from the vale of Blair, did not see a single man on his arrival there. Discouraging as this intelligence was, Mackay still determined to persevere in his march, and having despatched orders to Perth to hasten the arrival of the six troops of cavalry he had

\* Perhaps *Cotte-croitnachich*, or 'the Wood of Trembling.'

left behind, he put his army in motion next morning at day-break, and proceeded in the direction of the pass, the mouth of which he reached at ten o'clock in the morning. Here he halted, and allowed his men two hours to rest and refresh themselves before they entered upon the bold and hazardous enterprise of plunging themselves into a frightful chasm, out of which they might probably never return. Having received notice that the pass was clear, and that there was no appearance of Dundee, Mackay put his army again in motion, and entered the pass. The idea that no opposition would be offered to their passage through this terrific defile, which seemed to forbid approach, and to warn the unhappy soldier of the dangers which awaited him should he precipitate himself into its recesses, may have afforded some consolation to the feelings of Mackay's troops as they entered this den of desolation; but when they found themselves fairly within its gorge, their imaginations must have been appalled as they gazed, at every successive step, on the wild and terrific objects which encompassed them on every side. But unlike the Hessians who, in 1745, refused even to enter the pass, from an apprehension that it was the utmost verge of the globe, they proceeded at the command of their general, on their devious course, and finally cleared it, with the loss of a single horseman only, who, according to an Athole tradition, was shot by an intrepid adventurer, named Ian Ban Beg Mac-Ran, who had posted himself on a hill, whence with murderous aim he fired across the rivulet of the Garry and brought down his victim. A well, called in Gaelic, *Fuaran u trupar*.—*Anglicè*, 'the Horse-man's well,'—is shown as the place where he fell.

As soon as the five battalions and the troop of horse which preceded the baggage had debouched from the further extremity of the pass, they halted, by command of the general, upon a corn-field, along the side of the river to await the arrival of the baggage, and of Hastings's regiment and the other troop of horse. Mackay then ordered Lieutenant-colonel Lauder to advance with his 200 fusileers and a troop of horse in the direction he supposed Dundee might be expected to appear. This conjecture was too well-founded, for Lauder had not advanced far when he discovered some parties of Dundee's forces between him and Blair. Being apprized of this, Mackay galloped off to observe the enemy's motions before making choice of the field of battle; but on arriving at the advanced post, he observed several small parties of troops, scarcely a mile distant, marching slowly along the foot of a hill in the direction of Blair, and advancing towards him. Mackay, thereupon, sent orders to Balfour to advance immediately with the foot. But these orders were no sooner despatched than he observed some bodies of Dundee's forces marching down a high hill within a quarter of a mile from the place where he stood, in consequence of which movement, he immediately galloped back to his men to countermand the order he had just issued, and to put his army in order of battle.

Dundee, who had been duly advertised of Mackay's motions, had descended from the higher district of Badenoch into Athole on the previous day, with a force of about 2,500 men, of whom about one-fifth part consisted of the Irish who had lately landed at Inverlochry under Brigadier Cannan. Some of the clans which were expected had not yet joined, as the day appointed for the general rendezvous had not then arrived; but as Dundee considered it of paramount importance to prevent Mackay from establishing himself in Athole, he did not hesitate to meet him with such an inferior force, amounting to little more than the half of that under Mackay. On his arrival at the castle of Blair, intelligence was

brought Dundee that Mackay had reached the pass of Killiecrankie, which he was preparing to enter. At a council of war which was held in the castle, Dundee was strongly advised by the most of his officers to dispute the passage of the pass, as they did not consider it safe, from the great numerical disparity of the two armies, to allow Mackay to enter the Blair till the arrival of the reinforcements, which might be expected to join in two or three days. Dundee, however, was of quite a different opinion, and after appealing to the feelings of the Highlanders, whose ancestors, he said, acting upon their national maxim never to attack a foe who could not defend himself on equal terms, would have disdained to adopt the course proposed, he proceeded to give his reasons for rejecting the advice offered him, and which at once convinced them that he was right. One principal reason stated by Dundee for allowing Mackay to advance through the pass unmolested, was the great advantage they would gain by engaging him on open ground before he should be joined by his dragoons, who, from their being so formidable to the Highlanders, would, if allowed by him to come up, more than compensate any accession of force which Dundee might receive. Another reason not less important was, that in the event of Mackay sustaining a defeat, his army would probably be ruined, as he could not retreat back through the pass without the risk of evident destruction, whereas should the Highlanders suffer a defeat, they could easily retreat to the mountains. Immediately above the ground on which Mackay had halted his troops is an eminence, the access to which is steep and difficult, and covered with trees and shrubs. Alarmed lest Dundee should obtain possession of this eminence, which being within a carabine-shot from the place on which Mackay stood, would give him such a command of the ground as would enable him, by means of his fire, to force Mackay to cross the river in confusion; he immediately took possession of the eminence. Within a musket-shot of this ground is another eminence immediately above the house of Urrard, which Dundee had reached before Mackay had completed his ascent, and on which he halted. At this conjuncture, neither Hastings's regiment nor Annandale's troop of horse had yet come out of the pass, but Mackay, nevertheless, at once proceeded to arrange his men in fighting order on a plain between the edge of the eminence and the foot or commencement of the ascent to Dundee's position, which, from its extent, enabled him to form his men in one line along the eminence. In making his dispositions, Mackay divided every battalion into two parts, and, as he meant to fight three deep, he left a small distance between each of these sub-battalions. In the centre of his line, however, he left a greater interval of space behind which he placed the two troops of horse, with the design, when the Highlanders, after the fire of the line had been spent, should approach, to draw them off by this larger interval, and flank the Highlanders on either side, as occasion should offer. Mackay assigns as his reason for placing his cavalry in his rear till the fire should be exhausted on both sides, a dread he entertained of exposing them to Dundee's horse, which consisted altogether of gentlemen, reformed officers, or such as had deserted, from Dundee's regiment when in England, and with whom it could not be supposed that these newly-raised levies could cope. Hastings's regiment, which arrived after Mackay had taken up his ground, was placed, on the right, and to which, for greater security, was added a detachment of firelocks from each battalion; and on the extreme left, on a hillock covered with trees, Lieutenant-colonel Lauder was posted, with his party of 200 men, composed of the

*elite* of the army. Mackay having been recognised by Dundee's men busily employed riding along his line, from battalion to battalion, giving orders, was selected by some of them for a little ball practice; but although "their popping shot," which wounded some of his men, fell around him wherever he moved, he escaped unhurt. After his line had been fully formed, Mackay rode along the front, from the left wing, which he committed to the charge of Brigadier Balfour, to the right, and having ascertained that every thing was in readiness to receive the enemy, he addressed the battalions nearest him in a short speech. Whilst Mackay was thus occupied on the lower platform, his gallant rival was equally busy flying about on the eminence above, ranging his men in battle array. He was particularly distinguished amongst his officers by a favourite dun-coloured horse which he rode, and by his plated armour, which glittered in the sunbeams. Dundee, who had arrived upon the higher platform about the same time that Mackay had gained the ground he now occupied, ranged his men in one line in the following order:—On the right, he placed Sir John Maclean, with his regiment divided into two battalions. On the left, he posted the regiment of Sir Donald Macdonald, commanded by the young chief and Sir George Berkeley, and a battalion under Sir Alexander Maclean. In the centre were placed four battalions, consisting of the Camerons, the Macdonells of Glengarry and Clanranald, and the Irish regiment, with a troop of horse under the command of Sir William Wallace, who had early that morning produced a commission, to the great displeasure of the Earl of Dunfermline and other officers, appointing him colonel of a horse-regiment. It may be observed, that neither Mackay nor Dundee placed any body of reserve behind their lines. Mackay himself, though an old and experienced officer, and a brave man, was not without his misgivings; and as the evening advanced without any appearance on the part of Dundee of a desire to commence the action, his uneasiness increased. Nor were his apprehensions likely to be allayed by the reply made by the second son of Lochiel, who held a commission in his own regiment of Scots fusileers, in answer to a question put to him by Mackay. "Here is your father with his wild savages," said Mackay to the young man, on seeing the standard of the Camerons, putting on at the same moment an air of confidence, "how would you like to be with him?" "It signifies little," answered the son of the chief, "what I would like, but I recommend to you to be prepared; or perhaps my father and his wild savages may be nearer to you before night than you would like." The apparent irresolution of the Highlanders to begin the battle was considered by Mackay as intentional, and he supposed that their design was to wait till nightfall, when, by descending suddenly from their position, and setting up a loud shout, according to their usual custom, they expected to frighten his men, unaccustomed to an enemy, and put them in disorder. As Mackay could not, without the utmost danger, advance up the hill and commence the action, and as the risk was equally great should he attempt to retreat down the hill and cross the river, he resolved, at all hazards, to remain in his position, "though with impatience," as he observes, till Dundee should either attack him or retire, which he had better opportunities of doing than Mackay had. To provoke the Highlanders, and to induce them to engage, he ordered three small leather field-pieces to be discharged, but they proved of little use, and the carriages being much too high, for the greater convenience of carriage, broke after the third firing.

Towards the close of the evening, some of Dundee's sharpshooters, who had kept up, during the day, an occasional fire in the direction in which they observed Mackay to move, by which they had wounded some of his men, as already stated, took possession of some houses upon the ascent which lay between the two armies, for the purpose of directing their aim with surer effect. But they were immediately dislodged by a party of musketeers despatched by Mackay's brother, who commanded the general's regiment, and chased back to their main body with some loss. This skirmish Mackay supposed would soon draw on a general engagement, and his expectations were accordingly speedily realized. It was within half-an-hour of sunset, and the moment was at hand, when, at the word of command, the Highlanders and their allies were to march down the hill, and, with sword in hand, fall upon the trembling and devoted host below, whom, like the eagle viewing his destined prey from his lofty eyry, they had so long surveyed. Having determined, as much to please his men as to gratify his own inclination, to lead the charge in person, at the head of the horse, Dundee exchanged his red coat, which he had worn during the day, and by which he had been recognised by Mackay's troops, for another of a darker colour, to conceal his rank, and thereby avoid the risk of being singled out by the enemy—a precaution justifiable by the rules of sound prudence, and quite consistent with the highest moral courage. That nothing might be wanting on his part to work up the feelings of his men to the highest pitch of heroism, he haranged them in an enthusiastic strain. A pause now ensued, and a death-like silence prevailed along the line, when, on a sudden, it appeared in motion, marching slowly down the hill. The Highlanders, who stripped themselves to their shirts and douglts, and whose appearance resembled more a body of wild savages than a race of men, who, although they could not boast of the civilization of the inhabitants of the south, were nevertheless superior to them in many of the virtues which adorn humanity; advanced, according to their usual practice, with their bodies bent forward, so as to present as small a surface as possible to the fire of the enemy, the upper part of their bodies being covered by their targets. To discourage the Highlanders in their advance by keeping up a continual fire, Mackay had given instructions to his officers commanding battalions, to commence firing by platoons, at the distance of a hundred paces. This order was not attended to, as Balfour's regiment, and the half of Ramsay's, did not fire a single shot, and the other half fired very little. The Highlanders, however, met with a very brisk fire from Mackay's right, and particularly from his own battalion, in which no less than sixteen gentlemen of the Macdonells of Glengarry fell; but, undismayed by danger, they kept steadily advancing in the face of the enemy's fire, of which they received three rounds. Having now come close up to the enemy, they halted for a moment, and having levelled and discharged their pistols, which did little execution, they set up a loud shout and rushed in upon the enemy sword in hand, before they had time to screw on their bayonets to the end of their muskets.\* The shock was too impetuous to be long resisted by men who, according to their own general, "behaved, with the exception of Hastings's and Leven's regiments, like the vilest cowards in nature." But even had these men been brave, as they were pusillanimous, their courage would not have availed them, as their arms were insufficient to parry off the tremendous strokes of the axes, and the broad and double-

\* From this circumstance Mackay invented the present plan of fixing the bayonet.

edged swords of the Highlanders, who with a single blow, either felled their opponents to the earth or struck off a member from their bodies, and at once disabled them. While the work of death was thus going on towards the right, Dundee, at the head of the horse, made a furious charge on Mackay's own battalion, and broke through it, on which the English horse, which were stationed behind, fled without firing a single shot. Dundee, thereupon, rode off to attack the enemy's cannon, but the officer who had that morning produced his commission as colonel of the horse, did not keep pace with Dundee, who, on arriving near the enemy's cannon, found himself alone. He, therefore, gave the horse a signal to advance quickly, on which the Earl of Dunfermline, who then served only as a volunteer, overlooking the affront which had been put upon him, rode out of the ranks, followed by sixteen gentlemen, attacked the party who guarded the cannon and captured them. As soon as Mackay perceived that Dundee's grand point of attack was near the centre of his line, he immediately resolved to attack the Highlanders in flank with the two troops of horse which he had placed in the rear of his line, for which purpose he ordered Lord Belhaven to proceed round the left wing with his own troop, and attack them on their right flank, and he ordered, at the same time, the other troop to proceed in the contrary direction, and assail them on their left. Mackay himself led round Belhaven's troop, but it had scarcely got in front of the line when it got into disorder, and instead of obeying the orders to wheel for the flank of the enemy, after some confused firing it turned upon the right wing of Lord Kenmure's battalion, which it threw into disorder, and which thereupon began to give way. At this critical moment Mackay, who was instantly surrounded by a crowd of Highlanders, anxious to disentangle his cavalry, so as to enable him to get them forward, called aloud to them to follow him, and putting spurs to his horse galloped through the enemy, but, with the exception of one servant, whose horse was shot under him, not a single horseman attempted to follow their general. When he had gone sufficiently far to be out of the reach of immediate danger, he turned round to observe the state of matters, and to his infinite surprise he found that both armies had disappeared. To use his own expression, "in the twinkling of an eye in a manner," his own men as well as the enemy were out of sight, having gone down pell-mell to the river where his haggage stood. The flight of his men must have been rapid indeed, for although the left wing, which had never been attacked, had begun to flee before he rode off, the right wing and centre still kept their ground. Mackay now stood in one of the most extraordinary predicaments in which the commander of an army was ever placed. His whole men had, as if by some supernatural cause, disappeared almost in an instant of time, and he found himself standing a solitary being on the mountain-side, not knowing what to do, or whither to direct his course. Whether, had they had the courage to follow him, the timid troop would have turned the tide of victory in his favour, may indeed he well doubted; but it is obvious that he adopted the only alternative which could render success probable. Judging from the ease with which he galloped through the Highlanders, who made way for him, he thinks that if he had had but fifty resolute horse such as Colchester's, he "had certainly," as he says, "by all human appearance recovered all," for although his whole line had begun to give way when he ordered the horse to follow him, the right of the enemy had not then moved from their ground. The plunder which the haggage offered was too tempting a lure for the Highlanders, whose destruc-

tive progress it at once arrested. It was in fact solely to this thirst for spoil that Mackay and the few of his men who escaped owed their safety, for had the Highlanders continued the pursuit, it is very probable that not a single individual of Mackay's army would have been left alive to relate their sad disaster.\* Mackay retired across the Garry without molestation, and made a short halt to ascertain whether he was pursued. Seeing no disposition on the part of the Highlanders to follow him, he began to think of the best way of retiring out of Athole. All his officers advised him to return to Perth, through the pass of Killiecrankie, but he saw proper to reject this advice, and resolved to march several miles up Athole and cross over the hills to Stirling. It was represented to him, that if pursued by the Highlanders, his men could make no effectual resistance, and he himself admitted that the objection was well-founded; but he still adhered to his resolution, because, as he apprehended more danger from Dundee's horse than from the Highlanders, who would be too busy securing their plunder to think of pursuing him, his risk would be less by keeping upon ground inaccessible to the operations of cavalry, than by exposing himself in the open country beyond the pass. Besides, he had no certainty that the pass was not already secured, for the purpose of cutting off his retreat, and to have entered it, if seized upon, would have been throwing himself into the jaws of instant destruction. Giving orders, therefore, to his men to march, he proceeded to the west along the bank of the river, and had the satisfaction, when about 2 miles from the field of battle, to come up with a party of about 150 fugitives almost without arms, under the command of Colonel Ramsay, who was quite at a loss what direction to take. Mackay then continued his march along the edge of a rivulet which falls into the Garry, till he came to some little houses. Here he obtained, from one of the inhabitants, information as to the route he meant to follow, and having made himself acquainted, as far as he could, by an examination of his map, with the situation of the country through which he had to pass, he crossed the stream and proceeded across the hills towards Weem castle, the seat of the chief of the clan Menzies, whose son had been in the action with a company of Highlanders he had raised for the service of the Government. He reached the castle before morning after a most fatiguing journey, where he obtained some sleep and refreshment, of which he stood greatly in need, having since his departure before Dunkeld, on the morning preceding, marched about 40 miles through a tract of country, the greater part of which was beset with quagmires and precipices.

The news of Mackay's defeat had preceded his retreat; and on his march, during the following day, he found the country through which he passed in an uproar, and every person arming in favour of King James. The people of Strathday alarmed at the approach of Mackay's men, whom they took to be Highlanders, and considering their houses and cattle in danger, set up a dreadful shout, which so frightened Mackay's men that they began to flee back to the hills under an apprehension that the Highlanders were at hand. Mackay and some of his officers on horseback, by presenting their pistols and threaten-

\* In a conversation respecting the battle between General Wade and an old Highlander, who had fought at Killiecrankie, the latter is reported to have spoken lightly of Mackay as a commander, calling him a great fool, because he did not put his baggage in front of his army at Killiecrankie. Wade dissented, of course, but the old man insisted that the baggage should have been placed before the line, in which case Mackay, he observed, would have gained the battle, as the Highlanders would have first attacked the baggage, and would have thus fallen an easy prey to Mackay's army.

ing the fugitives, succeeded in rallying them, but owing to the thickness of the morning more than a hundred escaped, all of whom were killed, stripped, or taken prisoners by the country people. Mackay continued his march with very little halting all that day, being Sunday the 28th of July, and arrived late at night at Drummond castle, in which he had a garrison. Next day he reached Stirling with about 400 men. On the morning after the battle—for night had thrown its sable curtain over the horrors of the scene, before the extent of the carnage could be ascertained—the field of battle and the ground between it and the river, extending as far as the pass, presented an appalling spectacle in the vast numbers of the dead which strewed the field, and whose mutilated bodies attested the savage and unrelenting ferocity with which Mackay's men had been hewn down by the Highlanders. Here might be seen a skull which had been struck off above the ears by a stroke from a broad-sword—there a head lying near the trunk from which it had been severed—here an arm or a limb—there a corpse laid open from the head to the brisquet; while interspersed among these lifeless trunks, *dejectaque membra*, were to be seen broken pikes, small-swords, and muskets, which had been snapt asunder by the athletic blows of the Lochaber axe and broad-sword.\* If the importance of a victory is to be reckoned by the comparative numbers of the slain, and the brilliant achievements of the victors, the battle of Killiecrankie may well stand high in the list of military exploits. Considering the shortness of the combat, the loss on the part of Mackay was prodigious. No less than 2,000 of his men fell under the swords and axes of Dundee's Highlanders, and about 500 were made prisoners. Among the slain were Lieutenant-Colonel Mackay, brother of the general, Brigadier Balfour, and several other officers. Highland tradition reports that Balfour was cut down by the Reverend Robert Stewart, a Catholic clergyman, nephew to Stewart of Ballechen, for having contemptuously refused to receive quarter when offered him by the priest. The same tradition relates that Stewart, who was a powerful muscular man, followed the enemy in their flight down to the river, and towards the pass, wielding a tremendous broad-sword, with which he cut down numbers of the fugitives, and so much did he exert himself in the use of his fatal weapon, that, at the conclusion of the carnage, his hand had swollen to such an extent, that it could only be extricated from the hasket-hilt of his sword, by cutting away the network. But as the importance of a victory, however splendid in itself, or distinguished by acts of individual prowess, can only be appreciated by its results, the battle of Killiecrankie, instead of being advantageous to the cause of King James, was, by the death of the brave Dundee, the precursor of its ruin. After he had charged at the head of his horse, and driven the enemy from their cannon, he was about to proceed up the hill to bring down Sir Donald Macdonald's regiment, which appeared rather tardy in its motions, when he received a musket-shot in his right side, immediately below his armour. He attempted to ride a little, but was unable, and fell from his horse mortally wounded, and almost imme-

\* In allusion to this battle, the author of the memoirs of Viscount Dundee, says, "Then the Highlanders fired, threw down their tusils, rushed in upon the enemy with sword, target, and pistol, who did not maintain their ground two minutes after the Highlanders were amongst them; and I dare be bold to say, that were scarce ever such strokes given in Europe as were given that day by the Highlanders. Many of General Mackay's officers and soldiers were cut down through the skull and neck to the very breast; others had skulls cut off above their ears like night-caps; some soldiers had both their bodies and cross-belts cut through at one blow; pikes and small swords were cut like willows; and whoever doubts of this, may consult the witnesses of the tragedy."

diately expired. In the Viscount Dundee, King James lost the only man in Scotland possessed of all the qualifications necessary for conducting to a successful issue the great and important charge which had been committed to him by his sovereign. Educated in the strictest principles of torism, he could never divest his mind of the abstract ideas of passive obedience and hereditary right, and to him, therefore, any attempt to resist the authority of the sovereign, no matter how far abused, appeared highly treasonable. Hence the unrelenting perseverance with which he hunted down the field conventicles, which made him the terror of the unfortunate whigs, and earned for him the unfortunate designation of the 'Bloody Clavers.' Though a thorough-paced, and, in some degree, a bigotted Protestant Episcopalian, the heresy of the successor of Charles II. as the religion of James must have appeared to him, in no respect altered his ideas of implicit fidelity to the sovereign, nor did his views undergo any change when the arbitrary and unconstitutional proceedings of James seemed, to the leading men of the nation, to have solved the great political problem, when resistance should commence and obedience end. In his eyes, therefore, the revolution which drove the unfortunate James from his throne, was a great national sin, which could only be atoned for by restoring to him his crown, an object, in the accomplishment of which, he conceived all good men were bound to lend a helping hand. These ideas ingrafted upon a temperament peculiarly sanguine, made him an enthusiast in favour of hereditary right, and his appointment by the fallen monarch as the chosen one by whose instrumentality his restoration was to be effected, imparted a charm to his enthusiasm which dispelled every difficulty which appeared to obstruct the grand object of his ambition and his hopes. With an inflexibility of purpose, which no temptation could overcome, he steadily pursued the course which the duty he conceived he owed to his sovereign, and the natural inclination of his own mind directed him to follow. But Dundee had not merely the will, but what was of no less importance, the ability, had he lived, to have executed the commission intrusted to him. While as a military commander he had few equals, he stood unrivalled among his cotemporaries in the art of gaining the affections of his troops, and communicating to them a full measure of the spirit which animated himself. His death, therefore, was a fatal blow to James's prospects, and with him the cause of the Stuarts may be said to have perished. Dundee, and his friend Pitcair, who also fell in the engagement, were interred in the church of Blair-of-Athole.

KILLIGRAY. See CALLIGRAY.

KILLIN,† a large parish in the district of Breadalbane, Perthshire. It consists of a large main body and two detached portions. One of the latter, measuring  $3\frac{1}{2}$  miles by 4, stretches southward from Loch-Tay at the distance of  $3\frac{1}{2}$  miles from the eastern extremity of the main body; and is bounded on the east and west by portions of Kenmore; and on the south by Comrie. This district partakes uniquely and strictly of the beautiful and romantic character of the parts of Kenmore which contribute to form the basin of Loch-Tay; possessing at the edge of the lake a broad belt of gently rising arable ground, sheltered and embellished with plantation, and rising up as it recedes toward the southern boundary in

† The Rev. Patrick Stuart, the minister of the parish at the close of last century, doubted whether the word *Cill-Phina*, signifying 'the Burying-place of Fingal,' or *Cill-Luan*, meaning 'the Burying-place of the Pool,' and pointing to the ruins of a chapel and cemetery on the banks of the Lochy, were the original of the modern name Killin; yet he seemed to give his vote in favour of *Cill-tinn*.

grand mountainous elevations: see KENMORE. The other detached portion, a square of  $1\frac{1}{2}$  mile deep, lies on the north side of the river Lochy,  $2\frac{1}{2}$  miles north of the nearest point of the main body, has Fortingall on the north; Kenmore on the east; and a part of Weem on the south and west, and partakes the general character of Glenlochy. The main body of the parish extends, in a stripe averaging about 7 miles in breadth, from the head or south-western end of Loch-Tay to the boundary of the county with Argyshire,—a distance or extreme length of 22 miles. It is bounded on the north by detached parts of Kenmore and Weem; on the east by the main body of Kenmore, by Loch-Tay, and by a part of Weem; on the south by Comrie and Balquidder; and on the south-west, west, and north-west by Argyshire. The district, strictly Highland in its topographical appearances, takes its configuration mainly from the course, through its centre of the chief head-water of the Tay. This stream—which rises on the extreme western boundary, bears for 8 miles the name of the Fillan, expands for 3 miles into a series of lochlets which assume the general name of Loch-Dochart,\* and then runs  $10\frac{1}{2}$  miles farther under the name of Dochart river—bisects the district though nearly the middle over its whole length, and gives it the aspect of a long glen, bearing the designation first of Strathfillan, and next of Glen-Dochart, and flanked by lofty hills, covered with grass and heath, and running up on both sides to a water-shedding line along the boundaries. But from a point  $1\frac{1}{2}$  mile south-west of the head of Loch-Dochart, a glen  $4\frac{1}{2}$  miles in length, and watered by the romantic, rock-strewn Falloch, descends south-westward toward the head of Loch-Lomond; and—with the exception of a brief part at its lower end—this, with its flanking hills, and two or three tiny later glens, also lies within the district. See articles STRATHFILLAN, DOCHART, and FALLOCH. Over a distance of 3 miles above the confluence of the Lochy and the Dochart, just before the united stream enters Loch-Tay, the district includes likewise the glen of the former river; though here it has embosomed within it a small detached part of Kenmore, stretching from the side of the Lochy to near the Dochart. Numerous rills or mountain-torrents, all, from the nature of the ground, brief in length, rise near the northern and southern boundaries, and run down to swell the bisecting central stream. Salmon and trout are the kinds of fish that abound most in the larger waters,—lake and river. High hills, few or none of them rocky, and almost all available for pasturage, run in ridges on nearly all the boundaries except the eastern, and roll down in congeries or in insulated heights as they approach the central glen. The highest is the well-known Benmore—not, of course, the Benmore of Mull, with which identity of name and similarity of interest are in risk of occasioning it to be identified. This noble-looking mountain is of a fine conical form, and, according to Stobie's map of the county of Perth, rises 3,903 feet above the level of the sea. It ascends from the pass between Glendochart and Strathfillan, on the south side of Loch-Dochart, and was, in former times, a deer-forest, but is now occupied as a sheep-walk. A considerable aggregate extent of wood, both natural and planted, decorates the parish, and, in most instances, thrives and is luxuriant. Game, of numerous kinds, abounds. The soil, at the west end of Loch-Tay, and in the bottoms of Glenlochy and Glendochart, where it suffers from frequent overflowings of the rivers, is wet and marshy; but, in other parts it is in general light

and dry, and, in favourable seasons, abundantly fertile. The bottoms of the valleys are disposed chiefly in meadows and arable grounds; the hills rise with a gentle slope, and are cultivated and inhabited to a considerable height; and the summits of the hills and the heights of the mountains, in places where grass gives place to rank heath, have been extensively improved into available sheep-walks. More than half of the whole territory is the property of the Marquis of Breadalbane. Limestone abounds. Lead is worked in the vicinity of the village of Clifton. Repeated but vain search has been made for coal. Some interesting antiquarian and historical recollections are connected with STRATHFILLAN: which see. Leading lines of road traverse all the great glens of the parish. The villages are CLIFTON [which see], and Killin. The latter is beautifully and romantically situated about half-a-mile from the head of Loch-Tay, within the peninsula formed by the confluent rivers Dochart and Lochy,  $15\frac{3}{4}$  miles from Kenmore,  $21\frac{3}{4}$  from Callander,  $20\frac{3}{4}$  from Inverarnan inn at the entrance of Glenfalloch,  $18\frac{3}{4}$  from Tyndrum, 27 from Crieff, and 40 from Stirling. The windings of the rivers in the plain around it,—the precipitate advance of the Dochart, over a ledgy and declivitous bed in a profusion of little cascades,—the calm and gliding movement of the gentler Lochy,—the aspect of the surrounding hills, frilled and gemmed in many places with wood,—and the long expanse of the exulting Loch-Tay, with its gently ascending and tufted and ultimately magnificent heights of flanking hills,—serve to render the site and neighbourhood of this village grandly picturesque. So pleased was Mr. Pennant with the majestic joyousness of the scenery around it, that he gave a view of it in his tour. "Killin," says Dr. M'Culloch, "is the most extraordinary collection of extraordinary scenery in Scotland,—unlike everything else in the country, and perhaps on earth, and a perfect picture-gallery in itself, since you cannot move three yards without meeting a new landscape. A busy artist might here draw a month and not exhaust it. \* \* Fir-trees, rocks, torrents, mills, bridges, houses, these produce the great bulk of the middle landscape, under endless combinations; while the distances more constantly are found in the surrounding hills, in their varied woods, in the bright expanse of the lake, and the minute ornaments of the distant valley, in the rocks and bold summit of Craig-Caillich, and in the lofty vision of Ben-Lawers, which towers like a huge giant in the clouds,—the monarch of the scene." A bridge which bestrides the Dochart, with five unequal arches, offers good vantage-ground for surveying some of the most striking features and groupings of the landscape. Immediately below the bridge, is a picturesque island formed by the Dochart, covered with a fine verdant sward, and richly clothed with pine-trees, in the dim centre of which is the burial-place of the Macnabs, once the potent chieftains of this district, but whose lineal representative emigrated to Canada, with a number of his clansmen. The village, though straggling and small, is a place of considerable importance; and has an excellent inn, and four annual fairs, and is the seat of the baron-baillie-courts of the family of Breadalbane. The fairs are held on the 3d Tuesday of January, the 12th day of May, the 27th day of October, and the first Tuesday, O.S., of November. Most of the villagers are tradesmen, who pay rent to the Marquis of Breadalbane for a house, a garden, and an acre of ground. In the neighbourhood of the village is a small rising ground which tradition points out as the grave of Fingal, but which on perforation half-a-century ago, afforded no evidence of having been a tomb. Population, in 1801, 2,048; in 1831, 2,002. Houses 365. Assessed property, in 1815,

\* A little north of Loch-Dochart are the lochlets Essan and Maragan; and near the western boundary is Loch-Yoss,—all three of inconsiderable extent.

£3,770. — Killin is in the presbytery of Weem, and synod of Perth and Stirling. Patron, the Marquis of Breadalbane. Stipend £240 19s. 5d.; glebe £13 10s. Unappropriated teinds £566 19s. 6d. The church was built in 1744, and repaired and considerably enlarged in 1832. It is situated at the village, and has 905 sittings. The district of Strathfillan was disjoined in 1836 by the presbytery, and annexed to the new *quoad sacra* parish of STRATHFILLAN. Another portion of the parish is included in the mission of LOCH-TAY-SIDE. See these articles. But on the other hand, parts of the parishes of Weem and Kenmore have, by private arrangement, been placed under the care of the ministers of Killin. The *quoad sacra* population, corresponding with these distributions, amounted, in 1836, to 1,982,—1,082 of whom were in Killin; and 900, including 55 dissenters, were in Weem and Kenmore. The population of Killin, *quoad civilia*, was stated by the minister, in the same year, to consist of 1,952 churchmen, and 50 dissenters.—A Baptist congregation in the village was established about the year 1810, yields an attendance of from 8 to 30, and meets in a rented schoolhouse.—An Independent congregation, also in the village, was established upwards of 25 years ago, yields an attendance of from 40 to 80, and assembles in a schoolroom.—The parish-school is attended by a maximum of 80 scholars, and 9 non-parochial schools by a maximum of 351. Parochial schoolmaster's salary £34, with £9 fees, and £10 other emoluments. Three of the non-parochial schools are supported by the Society for propagating Christian knowledge, and two by the Marbioness of Breadalbane.

KILMADAN,\* or KILMODAN, a parish in Argyleshire, 12 miles long, and not half-a-mile broad, being chiefly a long narrow glen surrounded by high bills. It is bounded by Kilmann, Inverbaolain, Dunoon, and Strachan parishes. The extent of sea-coast is about 3 miles, and the shore is flat and sandy, with sunk rocks. The river Ruel falls into the head of Loch-Ridan. The tide ebbs at the head of this loch about 2 miles. The soil is deep and fertile, excellently adapted for the culture of flax; but good crops of oats, barley, potatoes, &c., are also raised. The surrounding hills are covered with heath, and their sides are occupied by small copses of natural wood. Limestone is abundant. The celebrated mathematician, Colin Maclaurin, professor of mathematics in the university of Edinburgh, was born in this parish.—Population, in 1801, 502; in 1831, 648. Houses 105. Assessed property £4,512.—The parish is in the presbytery of Dunoon, and synod of Argyle. Patron, the Duke of Argyle. Stipend £173 18s. 5d.—Schoolmaster's salary £23, with £12 fees. There are 2 private schools.

KILMADOCK—frequently named, after its kirk-town and principal village, DOUNE—a parish near the middle of the southern verge of Perthshire. It is bounded on the north by a detached part of Strowan; on the east by Dunblane and Leropt; on the south-east by Kincardine; on the south by Stirlingshire; and on the west by a detached part of Kincardine, and by Port-of-Monteith and Callander. In extreme length, from the Bridge of Frew on the

south, to the hill Ualug on the north, it measures 10 miles; but it has an average breadth over  $\frac{3}{4}$  of a mile of this distance, from the southern extremity, of only half-a-mile; and over  $2\frac{1}{2}$  miles further, of 2 or  $2\frac{1}{4}$  miles; it now suddenly expands to an extreme breadth of 8 miles, but again rapidly contracts, and, over a distance of 4 miles from the northern extremity, has an average breadth of only  $3\frac{1}{2}$  miles. Its entire area is computed to be 64 square miles. The Forth runs in serpentine folds along the southern boundary, making a distance of 3 miles in a straight line from the point of touching to that of leaving, but probably 6 miles along its channel. The Teith runs diagonally from north-west to south-east, through nearly its broadest part, tracing the boundary  $\frac{5}{8}$  of a mile before entering, and  $2\frac{1}{4}$  miles before leaving, flowing 5 miles in a direct line within the boundaries, and bisecting the parish into nearly equal parts. Goodie water comes in from the west near the southern extremity, and runs  $2\frac{1}{2}$  miles eastward to the Forth. Keltie water comes down from the north, and runs  $1\frac{3}{4}$  mile along the western boundary to the Teith. A stream rises in the northern extremity, flows 4 miles in the parish, makes a detour of  $3\frac{3}{4}$  miles into Dunblane, and then flowing 2 miles, chiefly westward, falls into the Teith in the vicinity of Doune. Four other considerable streamlets, one of them about 6 miles in length of course, rise in the north, and discharge themselves into the Teith. The smaller streams, as well as the larger, not only beautify the district, but enrich it, abounding in trouts, and furnishing valuable water-power for the driving of machinery. Springs are numerous and good; and one in the side of Uaigmor in the north, leaps out from the solid rock in the manner of a jet or spout. Three lochlets also make their contribution to the general wealth of waters.—Lochanagbaig, or 'the Lake of the level field,' in the centre of the northern division; Loch of Watstown, on the boundary,  $1\frac{1}{4}$  mile south-west of Doune; and Loch-Daldurn, near the south bank of the Teith,  $1\frac{1}{2}$  mile after it receives the Keltie. Nearly the whole of the district, which is immediately washed by the streams, or contributes to form their banks, is beautiful and picturesque in its scenery. The Forth is here opulent in the lusciousness of carse-landscape through which it sinuously winds, and in the views of Stirling-castle, and of the rejoicing scenes with which it is grouped toward the east. The Teith is all the way fine, and where it rolls past the ancient castle of Doune, near the village, and through the beautiful pleasure-grounds of Newton on its left bank, and along the picturesque groves of Blair-Drummond, pressing in from the parish of Kincardine, it wears a delightful and exulting dress. The Keltie, too, vies with the larger rivers, and flows most of its way, where it touches the parish, through the fine lawns of Cambusmore and Ballachallan. Both Newton and Cambusmore were the residences during some of his earlier years of Sir Walter Scott, and must have contributed, along with the general scenery of the parish, and contiguous districts, especially that of Callander, to form and sharpen his exquisite and impassioned relish for the tints and tracery of nature's depictings. Cambuswallace, Gartinchaher, Coldoeb, Craigh, Argaty, and other mansions, with their pleasure-grounds and their groves, add studdings of beauty to the district additional to those of the mansions already named. From almost every eminence in the parish, are seen superb views of the rich valley of the Forth, the varied aspect of a well-cultivated, well-sheltered, and extensive tract of country, Stirling-castle, and the bold grand encincturing of the Lomond and other bills. The surface, for a considerable way upward from the Forth,

\* The most ancient name of this parish is said to have been *Glenduisik*, signifying 'the Glen of the Blackwater.' Afterwards a battle was here fought between Meckan, son of Magnus, King of Norway, and the Gaels, wherein it is said the Norwegians were defeated and slaughtered on each side of the stream which runs through the middle of the glen; and their bodies being thrown into the river, gave the colour of blood to it. Hence the river got the name of *Ruail*, and the parish that of *Glendruail*, or *Glendervell*, which signifies 'the Glen of Red Blood.' After the introduction of Christianity into the country, a place of worship was here consecrated to St. Modan, and called *Celta Modani*, or Kilmadan.

is level. From a point 2 miles west of Doune, and  $2\frac{1}{2}$  north of the Forth, a gentle hilly ridge runs parallel with the Teith, 4 miles north-westward to the extreme western point of the parish. Parallel to this ridge, at a distance from it of 3 miles, runs another and similar ridge, quite across the parish,—the two ridges forming in their interior sides the basin of the Teith. Up the whole north corner of the parish rise the Braes of Doune, till at the boundary they send up considerable elevations. The soil exhibits every variety, from the richest carse clay on the plains of the Forth, to the poorest heath-clad moor on the hills of the north. The whole vale of the Teith, the carse-grounds on the south, and much of the other sections, are well-enclosed and highly cultivated. Various roads, ramifying and intersecting one another, traverse the southern division of the parish; two run up the vale of the Teith, one on each side of the river, leading the way from Stirling to the gorgeous scenery of the Trosachs and Loch-Katrine on the one hand, and to that of Loch-Earn and Loch-Tay on the other; but no road invites the access of a wheeled vehicle beyond the second ridge of the parish, or toward the Braes of Doune. A bridge of two arches was thrown across the Teith at Doune in 1535, by the patriotic Robert Spittal, tailor to James V. The old castle and the village of Doune are noticed in a separate article: See DOUNE. Three-fourths of a mile north-west of Doune are the continuous hamlets of Buchany and Burn-of-Cambus. Still nearer Doune, but on the opposite bank of the Teith, and communicating with it by a bridge, is Deanston. Here, for a long period, have been extensive cotton-works, which, half-a-century ago, employed between 200 and 300 persons, and which now give employment or support to about one-third of the large population of the parish. At Deanston has been established, also, a large iron-foundry.—Population of the parish, in 1801, 3,044; in 1831, 3,752. Houses 426. Assessed property, in 1815, £15,465.—Kilmadock is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, Lady Willoughby de Eresby. Stipend £288 7s. 1d.; glebe £7. Unappropriated tithes £625 2s. 9d. The parish-church is situated at the village of Doune. Its predecessor, however, or that which was in use till the year 1756, stood in a different locality,—once the residence of St. Madoc, or Madocus, and afterwards the site of the monastery of St. Madoc, which had six dependent chapels. This Madoc is the saint who gives name to the parish. In Doune are two meeting-houses, one belonging to the United Secession, and the other to the Original Burghers. The parish has a parochial school, and six unenclosed schools, aggregately attended by at least 590 scholars, and has been, and still is, eminent for having well-qualified and successful teachers. Parish school-master's salary not stated.

**KILMAHOG**, a hamlet in the parish of Callander, Perthshire, situated on the left bank of the northern head-stream of the river Teith, immediately above its point of confluence with the southern head-stream. A mile east of the hamlet is the village of Callander: and  $\frac{3}{4}$  of a mile north-west of it, is the celebrated pass of Leny.

**KILMALCOLM**,\* a parish in Renfrewshire, bounded on the north by Port-Glasgow and the river Clyde; on the east by Erskine, Houston, and Kilmarchan; on the south by Lochwinnoch; and on the west by Greenock, Innerkip, and Largs. This is the largest parish in Renfrewshire, being about 6 miles square, and containing 19,800 English acres.

\* This name is derived from King Malcolm III., who was commemorated as a saint, and to whom the church was dedicated.

A great part, particularly on the south and west sides, is moorish land, rising to a considerable height, and very bleak and barren. On the south side of the parish is the extensive moss of Kilmalcolm.† The greatest expanse of country, of a uniform feature, is a hollow plain, shelving both from south and north, towards the Gryfe and its tributary streamlets in the centre. This is thickly scattered over with farm-hamlets; whilst the soil, which is incumbent on rotten rock, is naturally fine pasture-land. Much of it, indeed, is in cultivation, and produces good crops of grain and potatoes, besides some clover and turnips. More than 6,000 acres of this description of soil are situated in one unbroken expanse in the heart of the valley of the Gryfe. Here and there, throughout the parish, are clumps of planting, which give variety to the scenery. The parish abounds with excellent water, the principal streams being the Gryfe and the Duchal.—The extensive barony of Duchal, in this parish, was, for many ages, the chief property and place of residence of the ancient family of Lyle, Lord Lyle, which became extinct about 1556. Twelve years before that date, most part of it was sold by Lord Lyle to John Porterfield of that ilk. It now belongs to James Corbett Porterfield, Esq. The remains of the strong and romantic castle of this barony stand upon the confluence of the Duchal with another rivulet. In 1710, a mansion-house was built about a mile east from this. The present mansion was built in 1768. It stands on the right bank of the Gryfe, and is well-sheltered with wood.—The barony of Dennistoun originally belonged to a family of the same name, from whom it passed, about the end of the 14th century, to Sir William Cunningham of Kilmaurs, ancestor of the Earls of Glencairn, by marriage with Margaret, eldest daughter and co-heiress of Sir Robert Dennistoun. Finlayston, surrounded by extensive woods and plantations, on the banks of the Clyde, is the mansion-house of this estate, and was long the chief residence of the noble family of Glencairn. On the death of John, the 15th Earl, in 1796, it and the barony of Dennistoun (long better known by the name of Finlayston), devolved on Robert Graham, Esq., of Gartmore, who was son of Margaret, eldest daughter of William, the 12th Earl. In the time of that Earl of Glencairn, who was among the first of the nobility that made profession of the Protestant religion, his house of Finlayston was a place of refuge for those of that faith, and there John Knox dispensed the sacrament of the Lord's Supper. The cups used upon this occasion were two candlesticks of the finest silver. The lower part or sole formed the cup, which was screwed into the upper. These cups were used in the parish-church at the dispensation of the sacrament so long as the family of Glencairn continued to reside here. They were then replaced by four copper cups, gilt, furnished by the Countess of Glencairn, who, it is said, carried along with her the venerated silver cups, which, it is also reported, are still in the possession of the relations of that family.—The greater part of the barony of Newark is in this parish, but the ancient castle is in that of Port-Glasgow. Newark also belonged to the Dennistouns. On the death of Sir Robert Dennistoun, it devolved on Sir Robert Maxwell, of Calderwood, who had married his 2d daughter, Elizabeth. It long afterwards passed to a family named Cochran, and then to the Hamiltons. It now belongs to Lady Shaw Stewart, whose father, the late Robert Farquhar, Esq., purchased it from Lord Belhaven.—Cairncurran, which anciently form-

† In this district, when moss wants consistency, if dug in the usual way, it is formed into convenient pieces for fuel, and spread abroad to dry. Thus prepared, it is locally called *grule*, the *u* having the sound of the French letter.

ed part of the possessions of the noble family of Lyle, was purchased from John, Lord Lyle, in 1544, by Giles Campbell, wife of William Cunningham, of Craighends, in Kilbarchan parish, and by her disposed to their 2d son, William, to whose descendants it has since belonged.—North of this, on the right bank of the Gryfe, is Craighet, the property of Mr. Graham.—On the side of the parish adjacent to the Clyde, are some pleasant villas.—Kilmalcolm, on the east side of the parish, is the only village it contains. It is distant about 4 miles from Port-Glasgow, which is the nearest market and post-town.—Population of the parish, in 1801, 1,100; in 1831, 1,613, of whom 367 were in the village. Houses, in 1831, 227. Assessed property, in 1815, £9,384.—Kilmalcolm is in the presbytery of Greenock, and synod of Glasgow and Ayr. Patrons, the heirs of Dr. Anderson. The church was built in 1833, and can accommodate about 1,000 persons. Stipend £246 3s. 2d.; glebe £16. Unappropriated teinds £634 8s. 11d.—Salary of parochial schoolmaster £34 2s. 8d. (out of which £3 is given yearly to the schools not parochial), and about £10 arising from school-fees. The schools not parochial are six in number, with one instructor in each.

**KILMALIE**, a very extensive parish in the counties of Argyle and Inverness. It is of an irregular figure, and intersected by three arms of the sea. The extreme points from north-west to south-east are 60 miles distant from each other; and its breadth from north-east to south-west is not less than 30 miles. Its superficies has been estimated at 589 square miles, or nearly 376,960 acres, measured in straight lines; but, adding the surface of hills and valleys, the extent will be at least one-third more. The greater part of the parish consists of high mountains and hills, covered with heath, but affording excellent pasture for numerous flocks of sheep. Amongst the mountains is **BENNEVIS**: which see. In the valleys upon the banks of the Lochy and Nevis, and in several other places, there is a good deal of arable ground of different qualities; but in general the soil is shallow and sandy. On the coast the soil is fertile and early. The climate is rainy and moist, but healthy. In several of the valleys are extensive lakes, of which **LOCH-ARCHLAG** and **LOCH-LOCHY** are the chief: which see. From these two lakes issue the rivers **Archaig** and **Lochy**, which, with the **Nevis**, are the principal streams in the parish. The rivers and lakes abound with salmon; and the creeks of the coast afford herring and other fish in the greatest abundance. In former times, the greater part of this parish was overgrown with wood; at present about 14,000 acres are covered with plantations. **FORT-WILLIAM**, and the adjoining village of **MARYBURGH**, are situated in this parish: See these articles. There are several extensive caves, particularly one about 8 miles up the river **Nevis**, known by the name of 'Samuel's Cave.' It is of difficult access. In 1746, this cave afforded a safe retreat to some Highlanders who had been engaged in the Rebellion. Immediately opposite to it is a beautiful cascade, formed by a small rivulet, which, falling down the side of **Bennevis**, forms an uninterrupted torrent for half-a-mile, before it joins its waters to the **Nevis** in the bottom of the valley.—Upon the banks of the **Lochy**, on the top of a dreadful precipice, are the remains of an ancient castle, around which are the distinct traces of fortifications.—On the summit of a green hill, 1,200 feet in height, are the remains of a vitrified castle, long forgotten in the annals of fame, and of which even tradition has preserved nothing but its name. It is supposed to have been a sort of out-work for strengthening **Inverlochy**-castle, when that ancient edifice was a royal seat.—In the parish are

several veins of lead ore, very rich in silver; one in particular, in the mountain of **Bennevis**. There are also quarries of marble, of beautiful colours; and limestone abounds. Most of the mountains are composed of porphyry; according to **Williams** the mineralogist, the red granite of **Bennevis** is the most beautiful of any in the world. There is an excellent slate-quarry on the borders of **Lochiel**, at the village of **Ballachulish**, partly in this parish, and partly in the district of **Appin**. Population, in 1801, 4,520; in 1831, 5,566. Assessed property £9,707. Houses 457.—This parish is in the presbytery of **Abertarff**, and synod of **Glenelg**. Patron, **Cameron** of **Lochiel**. Stipend £287 15s. 8d.; glebe £68. **Kilmalie** and **Kilmanivaig** were anciently united, under the name of the parish of **Lochaber**, but were disjoined about two centuries ago. A portion of the parish was recently erected into the *quoad sacra* parish of **BALLACHULISH**: which see. The districts of **Fort-William** and **Locharchaig**, are under the charge of missionaries. Parish-church built in 1783; sittings 666.

**KILMANIVAIG**, a parish in **Inverness-shire**, about 60 miles in length, its greatest breadth being 25. Superficies 300,000 acres. Its surface is much diversified with ranges of lofty mountains, intersected by extensive glens and rapid rivers, most of which empty themselves into the **Lochy**: which see. Owing to the dampness of the climate, and the irregular surface, very little corn is raised throughout this vast extent of country. In this district is the ancient castle of **INVERLOCHY**, and the famous parallel road of **GLENROY**: See these articles. Population, in 1801, 2,541; in 1831, 2,869. Assessed property, in 1815, £15,465. Houses, in 1831, 510.—This parish is in the presbytery of **Abertarff**, and synod of **Glenelg**. Stipend £288 10s. 8d.; glebe £35. Unappropriated teinds £291 2s. 2d. Church built about 1812; sittings 300. The parish was formerly united to **Kilmalie**, under the name of **Lochaber**. It comprises three ancient parishes,—**Kilmanivaig Proper**, **Killichoonile**, and **Kilfinan** or **Glangarry**. **Brae-lochaber** and **Glangarry** are now mission-districts. Of a population estimated by census in 1836 at 2,889, 1,464 were Roman Catholics; a Roman Catholic congregation has existed in the **Braes** of **Lochaber** from a remote period. Their present chapel was built about 1826; sittings 400. Stipend £25.—Schoolmaster's salary £29 18s. 10d., with about £20 fees. There are eight private schools in the parish.

**KILMANY**, a parish in **Fifeshire**. Its extreme length from west to east is about 6 miles; but from the irregularity of its form, its breadth is very varied. Towards the west it is about 3 miles broad; but it suddenly contracts towards the east, and for about nearly two-thirds of its length it is seldom more than a mile, and in some places not above half-a-mile broad. It is bounded on the south by the parishes of **Cupar** and **Logie**; on the east—where it is scarcely a quarter of a mile broad—by that of **Forgan**; on the north by those of **Forgan** and **Balmerino**; and on the west by **Creich** and **Moonzie**. Few localities present more features of quiet rural beauty than this parish. In the west, where it is broadest, it is a succession of softly swelling hill and pleasant valley; and towards the east, where it contracts in breadth, it occupies the southern slope of a range of hills, and a portion of the bottom of a valley through which the water of **Motray** seeks its way to the sea.

There are two hamlets in the parish. The one, named **Kilmany**, is near the parish-church, towards the east of the parish; the other, **Rathillet**, is farther west, and not far from the house of **Rathillet**. **Rathillet**-house is situated upon the water of **Motray**, the grounds of which are well-enclosed. The lands

of Rathillet were the property of the Crown till the reign of Malcolm IV., when, on the marriage of Duncan, Earl of Fife, sixth in descent from Macduff, with Ada, niece of Malcolm, the crown-lands of Strathmiglo, Falkland, Kettle, and Rathillet in Fife, and of Strathran in Perthshire, were conferred upon him by a charter, which is quoted by Sibbald. The lands of Rathillet formed a portion of the lands belonging to the Earldom at the time of the forfeiture, when of course they again reverted to the Crown. They afterwards became the property of a family of the name of Hackston or Halkerston. One of this family, David Hackston, proprietor of Rathillet, was a leading man among the Covenanters during the latter part of the 17th century; and has, in consequence of various transactions in which he was engaged, obtained a rather questionable notoriety.\*

Immediately to the north of the village of Kilmanny, there is a romantic den, called Goules-den, through which a stream finds its way to the Motray. This ravine seems to have been occasioned by a disruption of the trap-hills which bound the valley to the north, and has been further worn down by the stream which flows through it. Its banks have been planted with trees, and walks made through it, which render it of easy access; and assuredly, though on a small scale, it is eminently picturesque, and its little waterfalls and overhanging rocks present a variety of scenes of great interest.—North of Rathillet, and on the face of a range of hills which form the north boundary of the valley, with a fine southern exposure, is Montquhany,† the residence of David Gil-

\* Little appears to be known concerning him, till he is found among the party who murdered Archbishop Sharp at Magis-moor, on the 3d of May, 1679. Hackston did not personally assail the Archbishop, but he certainly approved of the deed; and only objected to taking the command of the assassins on the ground of his having a private quarrel with their unhappy victim; fearing it might be said that private revenge, rather than the vindication of public justice, had led them to the commission of the deed. Being obliged to conceal himself in consequence of this murder, he retired for a time to the north, but afterwards joined the main body of the Covenanters in Lanarkshire, where a declaration was drawn up, which Hackston assisted in proclaiming at the market-cross of Rutherglen, on the anniversary of the restoration of Charles II. He fought at Drumclog, and afterwards on the 22d of June at Bothwell-bridge, where he commanded a troop of horse, and was the last to leave the field of battle; indeed, had his advice been followed on that day, the result might have been very different from what it was. He was now proclaimed a rebel, and a reward of 10,000 merks offered for his apprehension. For a time he lurked about in concealment with the remains of the party; but was finally taken prisoner at Airdross by Bruce of Earlsbail. He was subsequently tried at Edinburgh, condemned, and executed, with all the horrid circumstances forming the punishment of treason. His head was fixed on the Netherbow; and different portions of his dismembered body were fixed up at St. Andrews, Magis-moor, Cupar, Burntisland, Leith, and Glasgow. "Thus," says John Howie, of Lochgoon, the biographer of the 'Spots Worthies,' "fell this champion for the cause of Christ, a sacrifice to prelate fury, to gratify the lust and ambition of wicked and bloody men. Whether his courage, constancy, or faithfulness had the pre-eminence, it is hard to determine." Hackston certainly appears to have been a man of determination and courage, and much superior to the generality of the party with which he had associated himself; but he was obviously strongly infected with their erroneous views, or he never could have allowed himself to believe that he was doing God's work—as it was impiously styled,—by sanctioning the commission of murder. His heirs continued in possession of the estate of Rathillet till towards the close of last century, when it was sold by Mr. Hackston to Mr. Sweet, by whom again it was sold to the late Mr. David Caldwell, the father of the present proprietor.

† Montquhany anciently formed a part of the estates of the Earldom of Fife, and we find Duncan, the last Earl of Fife of the line of Macduff, giving the whole lands of Moulhany to Michael Balfour, his relation, in exchange for the lands of Pittentreich, which grant was confirmed by David II. in 1333. Of this branch of the family of Balfour, Knox says, it was a house in which there was "neither fear of God nor love of virtue, farther than the present commodity persuaded them." David Balfour, son of the laird of Montquhany, was one of the murderers of Cardinal Beaton; and his elder brother, Sir James Balfour, subsequently of Pittendreich and Montquhany, joined the assassins shortly afterwards, and was taken by the French, when the castle of St. Andrews was surrendered to them in July 1547, was sent to France, and confined in the same galley

lespie, Esq.—The population of this parish has been for several years decreasing, owing to the enlargement of the farms, and the consequent want of employment for more than a limited number of the

with Knox. But they were not steady to their party, which is obviously the cause of Knox's dislike to the house, which they were descended. Sir James returned to Scotland in 1549, and was appointed official of Lothian. On the breaking out of hostilities between the Queen-regent and the Lords of the congregation in 1559, he at first joined the former, but latterly came over to the Lords, though only apparently for the purpose of betraying them, as a hoy of his was taken with a writ, which "did open the most secret thing that was devised in the council, yea, those very things which were thought to have been known but to very few." He escaped the search of the reformers of Fife in February 1560, when the Lords of Wemyss, Seafield, and others were taken prisoners, and he was about the same time appointed to the rectory of Flisk. Shortly after the return of Queen Mary from France, he was appointed an extraordinary Lord of session, under the title of Lord Pittendreich, and about two years after (1563) he was made an ordinary lord. At the constitution of the commissary court of Edinburgh in 1561, he was named to the first place, with a salary of 400 marks, and was sworn a privy councillor in July 1565. The marks of royal favour excited the malice of his enemies, and it was intended to have hanged him on the night of Bizzio's murder, but he made his escape. He was afterwards knighted by the Queen, and appointed Clerk-register in place of Mr. James Macgill, who was supposed to have been concerned in that murder. In 1566 he was one of the commissioners for revising and publishing the old laws, called Regiam Majestatem, &c., and the acts of parliament. But now a black page appears in the history of his life, as he is said to have been the original deviser of the murder of Darnley, to have framed the bond for mutual support entered into by the conspirators, and to have prepared the house of the Kirk-of-field, which belonged to his brother, for the reception of the intended victim, although he was not present at the murder. He was openly accused of having been accessory to it, however; and a paper of the following tenor was affixed to the door of the tolbooth of Edinburgh on the night of the 16th of February, a few days after the deed had been committed:—"I, according to the proclamation, have made inquisition for the slaughter of the king, and do find the Earl of Bothwell, Mr. James Balfour, parson of Flisk, Mr. David Chambers, and black Mr. John Spence, the principal devisers thereof, and if this be not true, spit at Gilbert Balfour." He now became an active coadjutor for a time, with the enemies of the unfortunate Queen who had so honoured him; although professedly he had not joined them. Early in 1567, he was appointed deputy-governor of Edinburgh-castle under the Earl of Bothwell; and, according to the enemies of Mary, it was to him that Bothwell, after the surrender of the Queen at Carberry, sent for the easket said to contain the letters which formed the alleged evidence of her guilt. Shortly after these transactions, he surrendered the castle of Edinburgh to the Regent Murray, while the Queen was a prisoner at Lochleven; and he did so under such terms as no honest man would have been connected with. These were, 1st, a pardon for his share in the king's murder; 2d, a gift of the priory of Pittenweem, then held by the Regent in commendation; 3d, an heritable annuity to his son out of the rents of the Priory of St. Andrews; 4th, a gift of £500 to himself; and 5th, the delivery of the castle into the hands of his friend, Kirkaldy of Grange. These terms being fulfilled, he resigned his office of Clerk-register to please the Regent, who re-appointed Sir James Macgill; and Sir James Balfour was afterwards gratified by a pension of £500, and promoted to be President of the court of session on 6th December, 1567. He was present at the battle of Langside, and was instrumental in obtaining that decisive victory against his former benefactor. In 1568 and 1569, he was engaged busily in intrigues for Mary; and after the death of the Regent he openly joined the party of the Queen. At the time Maitland, and Kirkaldy of Grange maintained Edinburgh-castle for the Queen, he joined them, and was in consequence forfeited in August 1571. By the latter end of the following year, however, he deserted their party, made his peace with Morton, and was a chief instrument in bringing about the pacification of Perth, which left Maitland and Kirkaldy to the tender mercies of their ruthless enemy. As if to fill up the measure of his treachery to his former friends, he now informed the Regent Morton, that Kirkaldy's brother was about to land at Blackness with a supply of money from France, in consequence of which measures were taken for intercepting it. In 1573 he was obliged to make his escape into France to avoid a trial for his share in the murder of Darnley; but after James VI. had assumed the reins of government, he returned to organize a plan for the destruction of Morton, which he effected by producing, it is said, the celebrated bond signed by that nobleman and others for the support of Bothwell, and other written evidence of his guilt. The precise date of his death is not known, but it is supposed to have been about 1583. He married Margaret, daughter of Michael Balfour of Burreigh and Balgarvie, by whom he acquired these lands, and from him the Lords Balfour of Burreigh were descended. He is the reputed author of the well-known collection of decisions called 'Balfour's Practices,' though this is questionable, as appears from the observations of Lord Hailes, Mr. Thomson, and Mr. Tytler; but at any rate they must have been subsequently much interpolated and added to after his time. Dr. Robertson stigmatises Sir James as "the most corrupt man of his age."—a

labouring class. In 1801, the population was 787; in 1821, 751; and in 1831, 707. It is now understood to have still further decreased. The cultivated land in the parish extends to about 3,550 acres, of which the soil varies very much in different situations. Assessed property, in 1815, £6,805. Total yearly value of raw produce raised, in 1835, £20,240. The average rental of arable land is about £2 5s. per acre; and the gross amount about £8,500 or £9,000. The valued rent of the parish is £5,332 10s. Scots. Houses, in 1831, 148.—This parish is in the presbytery of Cupar, and synod of Fife. Patron, the United College of St. Andrews. Stipend £225 7s. 11d.; glebe £30. The church stands on a rising ground near the village. The late Rev. Dr. John Cook, who was for sixteen years professor of divinity at St. Andrews, was for nine years minister of this parish. Dr. Cook was succeeded in Kilmany by the Rev. Dr. Thomas Chalmers, now professor of divinity in the university of Edinburgh; and in this retired parish that singular genius began first to appear, which has since shone forth in him with so much brilliance.—There is a chapel at the village of Rathillet, connected with the United Associate Synod.—The parish-school is situated at Rathillet. The teacher has the maximum salary. Besides the parish-school, there are two female schools, one at Kilmany, the other at Hazelton-wells, at the north-western extremity of the parish.

**KILMARIE.** See ARDNAMURCHAN.

**KILMARNOCK (THE)**, a considerable rivulet of the district of Cunningham, Ayrshire. Over most part of its course it is a double stream, or flows in two head-waters. Both of these rise in the south-east corner of Renfrewshire,  $1\frac{1}{2}$  mile beyond the limits of Ayrshire, and at points  $\frac{3}{4}$  miles asunder; and they pursue a course respectively of 9 and 10 miles, in a direction west of south, gradually approaching each other as they advance, till they unite at Dean-castle. The western or shorter branch flows past Kingswell inn, and the village of Fenwick, and very generally is called Fenwick-water; and the eastern branch, after having received from the east a tributary nearly equal in length and bulk to itself, is overlooked by the fine mansion and demesne of Craufurdland. The united stream has a course of only 2 miles, flows past the town of Kilmarnock, and falls into the Irvine 3 furlongs below Riccarton.

**KILMARNOCK**, a parish in the district of Cunningham, Ayrshire; bounded on the north by Fenwick; on the east by Londoun; on the south by the river Irvine, which divides it from Galston and Riccarton in Kyle; and on the west by Kilmaurs. It measures, in extreme length, about 9 miles; in extreme breadth, about 5 miles; and, in superficial area, about 5,900 Scottish acres. The parish is traversed in its western division by Kilmarnock water. The surface is in general flat, with a very gentle declivity to the south. The soil is deep, strong, and fertile; but runs a little into a kind of moss toward the north-east. All the area, with some trivial exceptions, is arable. Nowhere, perhaps, in Scotland, has agricultural improvement been conducted with more enterprise, or carried out into happier results. Oats, wheat, and barley, are raised nearly in the

proportions to each other of 23, 5 and 1. Five or six large corn-mills are worked by the water-power of the streams of the parish, and prepare large supplies of oat-meal, both from local produce and from Irish importations for the markets of the west of Scotland. But great attention, as in other parts of Ayrshire, is paid to the dairy,—the produce in cheese alone being about equal in value to that in oats, and double the value of produce in wheat. The whole district is remarkably rich in its agricultural aspects, and has been constantly plied with the skilful assiduities of a local agricultural society, which was formed so early as 1792. Plantations occur around the mansion of Craufurdland, and in some places in the east and north-east; but, in the other and aggregately large districts, they are tamely and coldly represented by nothing better than the hedge-enclosure. The climate is very moist, but is far from being unhealthy. Coal is very extensively worked; nearly three times more being exported than what is consumed in the factories and dwellings of the very populous town and parish. A firm and beautiful white sandstone has long been wrought, and furnishes excellent building material. Fire bricks are to some extent made.—The principal land-proprietors are the Duke of Portland, the Marquis of Hastings, Craufurd of Craufurdland, Blane of Grougar, Dunlop of Annanhill, and Parker of Assloss. Dean-castle, the residence of the noble but unfortunate family of Kilmarnock, stands about  $\frac{1}{2}$  a mile north-east of the town. It is of great hut unascertained antiquity. In 1735, it was accidentally reduced to bare walls and ruin by fire; and, since that period, it has been gradually crumbling toward a total fall. The growth of an ash tree on the top of an arch, and in the centre of the dining-room, was regarded by superstitious credulity as the fulfilment of some random or alleged prediction uttered during the period of the last persecution. The ruin, as seen from the south-west, has still a magnificent appearance, and suggests the melancholy idea of fallen grandeur.—Soulis' cross, which gives name to a quarter of the town, is a stone pillar 8 or 9 feet high, placed at the south entrance of the High church, and erected in memory of Lord Soulis, an English nobleman, who is said to have been killed on the spot in 1444, by an arrow from one of the family of Kilmarnock. As it was mouldering to pieces in the latter part of last century, the inhabitants re-edified it by subscription, and placed a small vane upon its top with the inscription "L. Soulis, 1444."—Rowallan-castle, situated on the north-west verge of the parish, about  $2\frac{1}{2}$  miles from the town, consists of a very ancient tower, in which Elizabeth More, the first wife of Robert II., is believed to have been born, and of large and ornamental additions erected about the middle of the 16th century; but, in all its parts, it is hastening to decay.—Craufurdland-castle,  $1\frac{1}{2}$  mile north-east of Dean-castle, exhibits a tower of high antiquity, and of great thickness of wall, and a central structure of quite modern erection and of fine Gothic architecture. Besides the large town of Kilmarnock, with its numerous inhabitants, the parish has several collier villages and hamlets, containing aggregately a population of about 1,000. From the town roads, which are kept in excellent repair, radiate in every direction,—amongst others the continuation of the great line of turnpike between Glasgow and Dumfries. The Kilmarnock and Troon railway, which runs off westward from the west side of the town, is of great value for the exportation of coal, and the importation of lime, slates, timber, grain, and other commodities. The railway has a double line, each constructed of flat rails resting on blocks of hard stone,

sentence which infers no little degree of guilt in an acre wherein all were so corrupt. It is confirmed, however, by Bannatyne, who says that "whenever he saw tyne he could wag as the buss wagged, and tak the way that might mak him advancement, howbeit that the same were to the destruction of all honest and godlie men, and of his native country also." In the 17th century Montquhany was acquired by Mr. James Craufurd, a cadet of a family of that name in the west country. About the beginning of the present century it was purchased by the late David Gillespie, Esq., of Kirkton, father of the present proprietor.

and was completed in 1812 at a cost of more than £50,000. The difference of elevation between the depots at Troon and at Kilmarnock is only 80 feet. A discouraging attempt having been made so early as 1816 to place upon it the locomotive engine, horse-power alone continues to be employed. The annual aggregate of portage is about 200,000 tons. Great disappointment was felt at the inability of the directors of the Glasgow and Ayr railway to find a traversable level for conducting their highly important means of communication through the parish. Yet advantage to a considerable degree is obtained from it by the establishment of frequent and facile conveyance to the transit depot at Irvine. Population, in 1801, 8,079; in 1831, 18,093. Houses 1,578. Assessed property in 1815, £20,175.

Kilmarnock is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron of the *quoad civilia* parish, or of the Laigh kirk, the Duchess of Portland. There are three places of worship connected with the Establishment, two of them *quoad sacra*; and there are eight belonging to various bodies of dissenters,—all situated in the town.—The Laigh kirk was built in 1802, and altered and enlarged between 1827 and 1830. Sittings 1,457. The charge is collegiate. Stipend of the first minister, £145 3s. 7d.; glebe £20. Stipend of the second minister £148 7s. 9d.; glebe £11.—St. Marnock's church was built in 1836, at a cost of about £5,000. Sittings 1,736. "It is intended," says the Commissioners' Report, "to apply to the presbytery to assign a parochial district to it, when an endowment is got for a minister."—The High church was built by subscription in 1732, at a cost of £1,000. Sittings 902. Stipend £150. An assistant minister has a salary of £80. This church has attached to it a *quoad sacra* urban parish,  $\frac{1}{4}$  of a mile in its greatest length, less than  $\frac{1}{2}$  of a mile in its greatest breadth, and containing, in 1836, according to ecclesiastical survey, a population of 1,677 churchmen, 1,325 dissenters, and 212 no-religionists,—in all 3,214 persons. Deducting these from the population of the entire *quoad civilia* parish, there remained, in 1836, according to a survey of the ecclesiastical authorities of the Laigh kirk, 8,957 churchmen, 6,119 dissenters, and 174 no-religionists,—in all 15,250 persons; making a grand total in the parish of 18,464.—A regular town-missionary preaches on the forenoon of Sabbath in the free-school, which accommodates about 150 persons; and in the afternoon in another school-room, which accommodates about 200. Salary £55.—A licentiate, very inadequately supported by subscription, preaches in an old chapel in the village of Crookedholm,  $1\frac{1}{2}$  mile from the town.—The first United Secession congregation was established in 1771; and their place of worship was built in 1772. Sittings 725. Stipend £140, with a house and garden worth upwards of £20, and £7 sacramental expenses.—The second United Secession congregation was established in 1774. Their present place of worship was built in 1807. Sittings 751. Stipend £120, with a house, and at each sacrament and each meeting of synod £5.—The Relief congregation was established in 1814. Their meeting-house was built in 1832, at a cost of £4,047 12s. 7d. Sittings 1,493. Stipend £210, with £21 in lieu of a manse.—The Original Burgher congregation was established in 1772, and was connected with the Associate Synod till 1814, when it joined the Original Burgher synod. Place of worship built in 1818, at an expense of upwards of £1,000. Sittings 813. Stipend £130, with a house and garden.—The Independent congregation was established in 1824. Sittings in their chapel, 600. Stipend not stated, and a house.—The Reformed Presbyterian congrega-

tion was established in 1774. Their meeting-house was built in 1824, at a cost of £1,150. Sittings 730. Stipend about £100, with a house and small piece of ground, and also £10 as the rent of a former manse.—Respecting the congregation of Original Seceders, and the Wesleyan congregation, the Commissioners of Religious Instruction obtained no information.—The academy of the town is conducted by 3 teachers, and attended by a maximum of 303 scholars. The classical teacher is the parish school-master, and has £34 4s. 4d. salary, with £94 15s. fees, and a house and garden. The English teacher and the teacher of writing and arithmetic have each £15 salary, with respectively about £140, and from £192 to £200 fees. Twenty-two non-parochial schools are conducted by 28 teachers, and attended by a maximum of 2,150 scholars.—The saint from whom the parish has its name was St. Marnock, said to have been a bishop or confessor in Scotland, and to have died in 322, and probably been interred in this parish. Yet, though he was the patron-saint of several other Scottish parishes, he is known only by vague tradition, and cannot be referred to either in evidence of the very early evangelization of the country, or as a waymark in the path of its ecclesiastical history. The church anciently belonged to the monks of Kilwinning, and was served by a curate. In 1619, the patronage, then held by Archbishop Spottiswood, was transferred to Robert Boyd, the ancestor of the Earls of Kilmarnock; in the 18th century, it passed to the Earl of Glencairn; and about the year 1790, it was purchased from him by Miss Scott, who afterwards became Duchess of Portland. In 1641, the northern division of the old parish was detached, and erected into the separate parish of FENWICK: which see.

KILMARNOCK, a parliamentary burgh, and the most important town in the west of Scotland south of Paisley, occupies a low site, amidst flat and tame though agriculturally rich scenery, on both sides of Kilmarnock water immediately above its point of confluence with the Irvine;  $9\frac{1}{2}$  miles from Mauchline;  $6\frac{1}{2}$  from Irvine; 12 from Ayr; 21 from Maybole; 32 from Girvan; 28 from Largs;  $21\frac{1}{2}$  from Glasgow; and  $63\frac{1}{2}$  by way of Glasgow from Edinburgh. In the reign of James VI., it was a mere hamlet, dependent upon the neighbouring baronial mansion, Dean-castle; and when, through the wealth of the coal-mines in the vicinity and the enterprising pursuits which they suggested and facilitated, it rose to the stature of a town, it had all the ruggedness of aspect and the filthiness of dress indicative of the vocation of a collier. At the close of last century it consisted solely of narrow and irregular streets, and was extensively edified with mean thatched houses. But two events concurred with the influence of the improvement-spirit of the age, to effect a rapid and beautifying change on its appearance. In 1800, a desolating fire broke out in the lower part of the town called Nethertonholm, and, aided by drought and a stiff breeze, ran rapidly along both sides of the street, and made short and full work of demolishing a long array of thatched roofs; and it cleared the way and afforded occasion for a spirited effort, by subscription, both in the town and among patriotic persons at a distance, to replace the old roofs with improved ones of slate. About the same period, commissioners appointed by an act of parliament which had been obtained by the magistrates for improving the town, unsparingly removed nuisances, planned new streets, and speedily flung over the place a renovated, airy, and neat aspect. Yet the town is still remarkable for the utter disproportion of its breadth to its length, for the shortness, numerousness, and irregularity of

the thoroughfares at its nucleus, and for the straggling and dispersed position of several of its outskirts.

At the south end of the town, on the left bank of the river Irvine, communicating with Kilmarnock by a bridge which carries over the Ayr and Glasgow turnpike, stands the small suburb of **RICCARTON**: which see. From the north end of the bridge, 700 yards above the confluence of Kilmarnock water with the Irvine, a street, bearing the names successively of Glencairn-street and King-street, runs due north, and in a straight line over a distance of 1,500 yards, or more than  $\frac{3}{4}$  of a mile, gradually approaching Kilmarnock water over 1,100 yards, running alongside of it for 320 yards, and then, as the river makes a sudden bend, passing over it, and opening into an open and irregular area, the cross, market-place, or centre of the town. Nearly 400 yards from its southern end, this street expands into Glencairn-square, from the sides of which East Shaw-street and West Shaw-street, each about 200 yards in length, run off at right angles with Glencairn-street respectively to the rivers Irvine and Kilmarnock. Two hundred yards north of Glencairn-square, two very brief streets go off eastward and westward, the former sending off at a short distance unedified thoroughfares to Richarland hrewery, situated on the Irvine to Wellbeck-street, 320 yards eastward, and to the slaughter-house 120 yards to the north. Opposite the last of these objects, Glencairn-street sends off Douglas-street 120 yards to Kilmarnock water. A little more than 400 yards farther north, the same street, or rather the continuation of it now bearing the name of King-street, sends off a long zigzag but otherwise regular street-line 120 yards eastward, 120 southward, 320 south-eastward, and again 200 southward to Irvine water, hearing as it approaches the river the name of Wellbeck-street. All the section of the town which consists of these streets, with the exception of the north end of King-street, is quite modern, and has a neat appearance, its houses presenting fronts of polished ashler, and a building material of fine freestone; yet it is entirely destitute of the attribute of compactness which is generally associated with the idea of a town, and exhibits mainly an elongated and slightly intersected street-line running nakedly down the peninsula formed by the two rivers, and a subtending zigzag street-line drawn across the peninsula. Portland-street, 380 yards long, Wellington-street 280, and Dean-street 450, are continuations nearly due northward of the Glencairn-street and King-street line, and, with these streets, make the extreme length of the town about 2,610 yards, or very nearly  $1\frac{1}{2}$  mile. The line, however, from King-street northward is but partially edified, and, for some distance, is heading and rather narrow. Nowhere, too, is the town broader than 700 yards; and over a very considerable part of its length it has but a single street. From the north side of the central area, at a point eastward of the commencement of Portland-street, and slightly radiating from that thoroughfare, High-street runs along 600 yards, till it is pent up by a small bend of the river. A brief street intersects it 150 yards from its south end, and sends off northward a thoroughfare parallel with Portland-street and High-street, and running between them. From the south side of the central area go off two brief thoroughfares respectively north-eastward and south-eastward, the latter leading down to the academy situated within a curve of the river. From the north side of the area also two streets dehouc. The more southerly of these runs past the Laigh kirk 220 yards, to a point near Kilmarnock house, and the depot of the Kilmarnock and Troon railway, and forms the longest side of a

nearly pentagonal district of buildings which has five exterior streets, and two intersecting ones, all brief and more or less irregular, and on whose outskirts are the cattle-market and the gas-works.

The town, as a whole, has a pleasing and airy aspect, abounds in good and even elegant shops, and exhibits a fair display of public buildings. At the north end of King-street is a very broad bridge over Kilmarnock water, which not only carries across a spacious roadway, but also bears aloft on its east side the town-house and the butcher-market. The town-house, built in 1805, is a neat structure of two stories, surmounted by a helfry; and contains a court-room and public offices. The Exchange buildings, erected in 1814, are of pleasing architecture, and have a large hall, which serves both as a well-furnished news-room, and as a place of mercantile resort. A very handsome and commodious inn, erected by the merchants' society, is not a little ornamental to the town. The Ayrshire banking company's office, immediately opposite to it, is likewise a very fine edifice. The academy, the work-house, the free-school, and five bridges over Kilmarnock water, and one over the Irvine, if not elegant structures, are at least agreeable for their utility. Kilmarnock-house arrests attention and excites musing thoughts, from its having been the mansion whence the last Earl of Kilmarnock issued to take part in the enterprise which cost him his life and the forfeiture of his title and estates. The Laigh kirk is remarkable for having spacious square stair-cases at the angles leading to the galleries, and still more so for the event which occasioned their peculiar conformation, as well as the re-edification of the entire structure. In 1801, while a crowded congregation were assembling on a Lord's day for public worship, the falling of a piece of plaster from the ceiling of the former church, excited a general and sudden fear in the masses who were already seated in the galleries that the roof was about to come down, and prompted a universal pell-mell rush to the stairs. A stream of persons who were in the act of ascending were met by the headlong torrent of the mass moving downward, precipitated to the bottom, and made the lowest stratum of a broad high pile of human beings vainly struggling to move off from the rush in the rear, and too numerous to be speedily extricated by the efforts of parties clearing the passages below. About 30 persons died from suffocation on the spot; and numbers more received serious and permanent damage to their health. The place of worship being now very wisely and philanthropically condemned by the heritors, its successor, the present edifice, was constructed more on the principle of securing confidence in its strength and facilities, than with a view to contribute an architectural decoration to the town. The High church aspires to be, in some degree, a counterpart of the conspicuous and very elegant church of St. Martin's-in-the-Fields, at Charing-cross, London; and, though it wants the portico, that very important part of the original, and is destitute of many of the ornaments of its model, and sends aloft a tower of only 80 feet in height, and, in general, is much curtailed in its proportions, it will pass as a decidedly fine piece of ecclesiastical architecture, and has been regarded as the most successful production of the Scottish architect, Gibb. Its roof, as to its interior ceiling, displays much taste, and is supported by two rows of very beautiful composite pillars. St. Marnoch's church is a Gothic edifice, with an imposing front and a sumptuous tower. The Relief church is probably the most pretending and the neatest of the numerous places of worship belonging to the religious denomination with which it is connected; and,

being surmounted by a lofty spire, is a conspicuous and arresting object in the scenic groupings of the town. The Independent chapel possesses neatness in the exterior, and some novelty and pleasing arrangement in the interior. Other edifices in the town, whether civil or ecclesiastical, suggest ideas rather of direct adaptation to their respective uses, than of accidental or ornate properties.

Kilmarnock is the well-known seat of very important manufactures,—chiefly in the departments of carpets, shawls, hoots and shoes, bonnets and leather. Its advantages, as to position and facilities, are abundance of coal, the circumjacency of a rich agricultural district to supply it amply and cheaply with provisions, healthiness of climate, populousness of neighbourhood, and the current through it, or at its side, of two considerable streams; and these are so rich as very fully to compensate its only disadvantage, the necessity of land-carriage over a distance of 6 or 7 miles to a port, and were speedily seen in much, if not all, of their value by the clear eye of the improvement-spirit which, during last century, peregrinated athwart Scotland. Though the incorporations of the town are of long standing—the bonnet-makers having been incorporated in 1647, and the skimmers in 1656, and the other bodies possessing documents which, while of later date, are ratifications of former grants—yet during many years and several generations, the manufactures were very limited as to both variety and amount. ‘Kilmarnock bonnets,’ and ‘Kilmarnock cowls,’ or those broad flat bonnets which are extensively worn by the peasantry of the Lowlands, and those red and blue striped nightcaps which still figure grotesquely on venerable or hoary heads, and have often provoked the flash of wit and the scathing of satire, were, for a long period, the only productions by which the town’s manufacturing character was known or maintained an existence. About 100 years ago, three or four individuals conducted the principal trade, buying serges and other woollen articles from private manufacturers, and exporting them to Holland. The demand for woollen goods afterwards increasing, a company was formed, and laid the foundation of the modern and hitherto uniformly flourishing productiveness of the place, by the erection of a woollen factory. About the same time was introduced the trade for which Kilmarnock, Ayr, and Irvine, continue to be noted,—the making of shoes and boots. Some fifteen years before the close of the century, spinning-jennies for cotton, and a carding and spinning machine for coarse wool, were erected. In 1791, when the Old Statistical Account of the parish was written, there were annually manufactured, as to value, £21,400 carpets, £21,216 shoes and boots, £15,500 leather, £6,500 printed calicoes, £3,700 snuff and tobacco, £3,500 leather-gloves, £2,251 cotton-cloth, £2,000 cabinet-work, £1,200 milled caps and mitts, and £7,800 bonnets, coverlets, blankets, plaidings, serges, mancoes, saddlers’ cloth, saddlery, knit stockings, iron, and dyers’ work. Since that date the town has boldly and rapidly advanced in all the ancient departments of its manufacture, and has made very important additions in the articles of printed shawls, gauzes, and muslins of the finest texture, and some small addition likewise in the department of silk fabrics. Almost a characteristic property of the town is boldness and blitheness of enterprise, issuing uniformly in success, or, at worst, in encouragement. In 1824, at a time when muslin-weaving was the work of an ill-fed drudge, the manufacture of worsted printed shawls was introduced to the Greenholm printfield of this town, and to Scotland, by an inventive and spirited calico-printer, Mr. William Hall, and, not

only at the moment greatly relieved the muslin-weavers, by providing them with remunerating employment, but almost instantaneously grew to be one of the most important manufactures of Kilmarnock. So early as from 31st May, 1830, to 1st June, 1831, only four years after its introduction, it employed about 1,200 weavers and 200 printers, and produced no fewer than 1,128,814 shawls, aggregately worth about £200,000. In 1837, the annual aggregate value was estimated at £230,000.—The carpet-manufacture may, amidst conflicting claims, be regarded as now the staple of Kilmarnock. Even 20 or 25 years ago, it rivalled that of Kidderminster in England, and had no competitor in Scotland; and about that time, or a little later, it was greatly improved by the mechanical inventions of Mr. Thomas Morton, a citizen who gives name to a locality in the vicinity of the Gas-works, who taught his townsmen at once to save time and labour, and to achieve accuracy and an extensive variety in their patterns, and who, so early as 1826, received public demonstrations from the manufacturers of the town of the debt of obligation which they felt his genius had imposed. During the year 1830-1, upwards of 1,000 weavers were employed in producing Brussels, Venetian, and Scottish carpets and rugs, the quality and patterns of which were not surpassed by any in the country. Three chief classes of carpets are manufactured, all of which are woven with harness,—Brussels carpets, of the kinds called “points” and “comhers,”—Wilton carpets, woven exactly like the former except that the brass wires\* are grooved, and that the rib is cut open with a sharp knife after it has been fastened,—and Scotch carpets of three qualities, 9 porters, 10½, and 13½. With the Wilton carpets Buckingham palace was furnished. Another very beautiful fabric called Persians, is woven in the town for fire-screens, the web being tied into perpendicular warps by the hand, after the manner of making rugs. The designs are beautifully executed from patterns procured from Berlin, prepared there for ladies’ work, and found to be well-adapted to this fabric, and better executed than any which can be obtained at home. The wages of the carpet and rug weavers run from 12s. to 14s. per week nett, and occasionally higher. The yearly value of the carpet manufacture was estimated, in 1837, at £150,000. The total number of hand-loom in the town, in the various departments of woollen, cotton, and silk, was, in 1828, 1,150, and, in 1838, 1,892; and in the latter year, 1,800 of the number were harness-loom. The carpet-factories are six in number, and recently have all been either rebuilt or very much enlarged. Six mills, five of them on Kilmarnock water, and the 6th and the largest on the Irvine, are employed principally in spinning woollen or worsted yarn for the carpet factories and bonnet-makers. The annual manufacture of bonnets now exceeds 18,000 dozens in number, and amounts to about £12,000 in value. The manufacture of boots and shoes was estimated, as to the annual worth of the produce, in 1831, about £32,000, and, in 1837, about £50,000. The manufacture of leather, in the latter of these years, was set down in value at £45,000. Mr. Thomas Morton, the same ingenious mechanist to whom the carpet manufacturers acknowledge so much obligation, introduced the rather novel manufacture of telescopes, constructed at his private expense a valuable observatory with suitable apparatus, and mounted there some telescopes of such

\* The ribbed appearance on a Brussels carpet is produced by the insertion of long brass wires between the shots of the woollen web, so as to raise the warps, the wires being drawn out afterwards in succession. The selling price to the wholesale merchant of Scotch carpets, in 1839, was 2s. 10d. per yard; of Brussels carpets, 4s. 3d.

power and superior construction that he was invited to furnish copies or duplicates of them to other observatories. Of miscellaneous manufactures, including linens, cottons, silks, hose, telescopes, machinery, saddlery, hats, tobacco and candles, the value of annual produce may range between £70,000 and £100,000. The gas-works of Kilmarnock were erected in 1823, by a joint-stock company holding £10 shares, and managed by a committee of twelve. The town has branch-offices of the Bank of Scotland, the Ayr Bank, the Commercial Bank of Scotland, and the Ayrshire Banking company. The weekly markets are held on Tuesday and Friday; and the annual fairs on Shrove Tuesday, the 2d Tuesday of May, the 3d Wednesday of July, and the 3d Wednesday of October, O. S. The institutions, additional to those already incidentally noticed, are a Reservoir company, a Building company, a dispensary, an Agricultural society, a Merchants' society, a Society of procurators, a Male and a Female Benevolent society, a Female society for religious purposes, a Parochial association in aid of the missions of the General Assembly and other bodies, a public library, a parochial library, some circulating libraries, and a Philosophical institution. The town has a weekly newspaper, the 'Kilmarnock Journal,' and is noted for having been the birth-place of the first edition of Burns' poems.

Kilmarnock was made a burgh-of-barony in 1591, by a charter of *novo damus* in favour of Thomas, Lord Boyd, holding of the Prince and Steward of Scotland. According to this and subsequent charters, ratified by a charter from the Crown in 1702, power was given to the inhabitants to act as in other free burghs-of-barony, and to the magistrates to present annually a leet of five persons to the superior, from which he should choose two bailies for the succeeding year. In 1700, the magistrates purchased from the superior the whole customs and common good of the burgh. After the passing of the act 3 and 4 William IV., cap. 77, on the 9th August, 1831, an invitation was given by the magistrates and town-council to the burghesses to elect annually eight persons, each rated at £12 rent and upwards in the police books for their dwelling-houses, from among whom the council should choose by ballot four new councillors, and no opposition being made by the superior, the invitation was acted on, and passed into a law. The governing body are a provost, four bailies, a treasurer, and eleven councillors. Constituency, both municipal and parliamentary, in 1839-40, 630. The property of the burgh was valued to the Commissioners on Municipal corporations at £3,675 5s. 9d.; and the debts due to it stated at £989 16s. 11½d. The revenue during the year preceding their inquiry was £380 11s. 6½d.; and the expenditure £256 14s. 9d. In 1839-40 it amounted to £644 18s. 10d. The magistrates exercise the jurisdiction reserved by the jurisdiction act to burghs-of-barony then independent of the superior; they entertain civil causes to any pecuniary amount in the baillie-court, and are assisted by the town-clerk as assessor; they exercise, in the baillie-court, the functions of the dean-of-guild's jurisdiction; they exercise a criminal jurisdiction in cases of assault, but remit other cases to the sheriff; they hold in turn what is called the convenue court, which exercises a summary jurisdiction, upon a verbal citation in cases not exceeding 6s. 8d. sterling, and proceeds by pointing and arrestment; and they appoint the town-officers, and five of the fifteen directors of the academy, with whom lies the appointment of the masters. The fee payable by a stranger entering burgh is £4 4s. The incorporated trades, with their respective numbers

in 1833, and the entry-fee they severally exact from a stranger, are, the skinners, 25, £3 6s. 8d.,—the tailors, 33, £6 6s.,—the weavers, 49, £1 11s. 6d.,—the bonnet-makers, 23, £7.,—and the shoemakers, 74, £6 13s. 4d. None of them has more than £300 of funds, and two of them have less than £100. The police of the town is regulated by an act of parliament passed in 1810, and is excelled by that of no town in Scotland for its vigour and utility. Kilmarnock unites with Dumharton, Port-Glasgow, Renfrew, and Rutherglen, in sending a member to parliament. Population, in 1831, 16,072; in 1841, 17,844.

The noble family of Boyd, the Earls of Kilmarnock, were descendants of Simon, brother of Walter, first Lord High Steward of Scotland. In 1661 William, 9th Lord Boyd, was created Earl of Kilmarnock. In 1745 William, the 4th Earl, took part in the rebellion under Prince Charles Edward, and on the 18th August, 1746, was beheaded, along with Lord Balmerino, on Tower-hill. The eldest of his three sons became, in right of his mother, Lady Ann Livingstone, Earl of Errol; and in 1831, his grandson, William, Earl of Errol, was created Earl of Kilmarnock in the peerage of Great Britain.

KILMARNOCK, a parish at the foot or south end of Loch-Lomond, Dumbartonshire. It is bounded on the north-east and east by Stirlingshire; on the south by Dumharton; on the south-west by Bonhill; and on the north-west by Loch-Lomond. In shape, it is a slender oval of 7¼ miles from east to west, by 3 miles from north to south; with a parallelogram projecting from the south side 2¼ miles from north to south, and 1½ mile from east to west, and a stripe not ¼ of a mile of average breadth running up 1½ mile north-westward from the middle of its north side. Loch-Lomond forms the boundary over a distance of about 7 miles: all its curved south end except for ⅔ of a mile, and also upwards of a mile of its east side, being continuous with the parish. The river Endrick runs along the north-east boundary 5 miles in a direct line, and nearly double that distance along the sinuosities of its channel: it has a sluggish motion,—is navigable for flat-bottomed craft,—contains pike, braize, perch, and eel,—threads its mazy way along a large tract of level and very opulent land,—and occasionally comes down in such floods as convert some hundreds of acres into a lake isletted with clumps of trees. Gallangadd burn comes in on the extreme south, 1½ mile from its source in the parish of Dumbarton, flows 2 miles northward into the interior, and then runs 3¾ miles eastward to the Endrick, forming, for 2¾ miles of that distance, the boundary-line with Stirlingshire. Two rills rise in the parish and run north-eastward, the one to Loch-Lomond, and the other to the Endrick. The plain on the Endrick is upwards of 3,000 acres in extent; and is carpeted with a deep rich loam, very favourable for either meadow-ground or tillage. The southern projection of the parish is moorish upland, sending up summits about 1,000 feet above sea-level; but it contains some excellent limestone, has patches of arable ground, and affords considerable pasturage. Where it is ploughed by Gallangadd burn, it sinks into a fine glen, and is beautified by a rather large and fine waterfall on the stream. North of this hilly district, at 1¼ mile's distance, rises slowly, on the south-east, from the bosom of an opulent plain, the green and sylvan clad hill of Duncruin, to the height of about 450 feet; and pinnacled aloft into nearly a pointed summit, it breaks abruptly down on the west and north sides into the plain. This hill occupies a central position in the parish, forms a conspicuous and romantic feature in its landscape, and commands from its summit

fine groupings of the magnificent scenery of the county.—On the extreme west, running from Balloch in the neighbouring parish of Bonhill, along the shore of Lochlomond to Ross, is a hilly ridge, called Mount-Misery,  $2\frac{1}{2}$  miles long, and about  $1\frac{1}{4}$  broad. At the north end, and on its declivity toward the lake, it is richly planted. Sending up summits 800 or 900 feet above sea-level, and standing in the centre of scenes which description and song and limning have laboured unsuccessfully to depict, it commands— notwithstanding its most lugubrious and forbidding appellation—prospects of surpassing loveliness and power of attraction. Away from its base, on the north, flaunting far onward in a contracting stripe of waters, stretches Loch-Lomond, gemmed with its wooded islands, and screened with a bold and romantic and apparently continuous range of mountains, Benlomond lifting his towering summit in the north, and the lofty Benledi breaking the sky-line in the distant north-east. On the east, and toward the south, is spread the richly tinted carpeting of the parish's own luxuriant plains, foiled in the centre by the remarkable but interesting form of Duncruin; and farther off is seen the most part of Strathendrick, with a varied and rich hack-ground of hilly outline, from the far-away Ochils on the one hand, to the neighbouring Kilpatrick hills on the other. On the south, the vale of Leven, with its thickly sprinkled objects of interest, lies expanded with the distinctness of a vast map; at its further end are seen the town and the castle of Dumharton; and, in not very distant perspective, some of the delightful beauties of the Clyde, and of the soft hills and wooded slopes of Renfrewshire. On the west, the eye is carried in easy and pleasing transition from the lusciousness of opulent Lowland scenery, to the savage wildness of the heath-clad scenery of the Highlands; resting for a moment on the sylvan slopes which there gird Loch-Lomond, and passing over the hills of Cardross and Row, away to the bold mountainous distant elevations of Cowal. A very large proportion of the parish is arable, and well-enclosed. Nearly 670 acres are under wood. The moorland districts maintain about 500 sheep, of the black-faced breed, and some Highland black cattle.—Between Mount-Misery and Loch-Lomond, on a rising ground about half-a-mile from the lake, stands Batturich-castle, built about seven years ago, on part of the ruin of an ancient castle of the same name, which seemed to have been once a magnificent edifice. Two miles north of it is Ross-house, immediately on the banks of the lake. On a rising ground in the vale of the Endrick,  $2\frac{3}{4}$  miles east of the nearest part of the lake, is Catter-house, a fine old mansion, commanding a full view of the lawn and wooded pleasure-grounds around Buchanan house, the seat of the Duke of Montrose, on the Stirlingshire side of the river. The other mansions are Ardoch, a little south of Ross, and Caldervin, a little west of Duncruin hill. At Catter is a large artificial earthen-mound, anciently the seat of courts-of-justice. Near it the Duke of Lennox had a place of residence, no vestige of which now remains. Kilmarnock-castle, a ruin on the property of Robert Macgoune, Esq. of Mains, seems the remnant of a massive and important pile.—The Dumharton and Drymen road traverses the whole length of the parish, nearly through its centre; and the Glasgow and Drymen turnpike intersects its east wing. An annual fair for horses is held at Craftammie, on the second Tuesday of February; and another, principally for milk-cows, is held at the farm of Ardoch, on the last Thursday of April. Population, in 1801, 897; in 1831, 999. Houses, 151. Assessed property, in 1815, £4,288.—Kilmarnock is in the presbytery of Dumharton, and synod of Glasgow and Ayr.

Patron, the Duke of Montrose. Stipend £137 9s. 8d.; glebe £11. Unappropriated teinds £45 15s. 2d. The majority of the population are dissenters, and chiefly attend a meeting-house in the parish belonging to the Relief. Parochial schoolmaster's salary £31, with £26 fees, and £5 10s. other emoluments. There are two non-parochial schools. The saint from whom the parish has its name is the same as he who gives name to the parish and town of Kilmarnock. A powerful spring in the vicinity of the church still bears the name of St. Marnoch's well. The church was given, in 1325, by Robert I. to the monks of Cambuskenneth; and continued to be their property, and to be served by a vicar, till the Reformation. The parish had anciently two chapels, vestiges of which still exist.

KILMARTIN, a parish in Argyleshire, of an oblong figure, 12 miles in length, and about 3 in breadth; containing 18,000 acres; lying on the west coast of Argyleshire; bounded on the east for 6 miles by Loch-Awe [which see], which separates it from the parish of Glassry; and on the west by that arm of the sea called Loch-Craignish. The extent of sea-coast is about 8 miles. In the south-west corner of this district the surface is rather hilly than mountainous, with arable and pasture grounds intermixed. In the north-east the surface is more rugged, but in the valleys there are extensive fields of arable land. The valued rent is £3,643 Scots. Assessed property, in 1815, £8,304. The valley in which the church and village of Kilmartin are situated is one of the most beautiful in the Highlands. Through this vale runs the line of road from Kintyre to Fort-William. Loch-Crinan is the principal harbour, not only in this parish, but also on the western coast of Argyleshire. It was this circumstance which induced it to be preferred for the canal across the isthmus, though longer by 3 or 4 miles than the isthmus of Tarbert: see article CRINAN CANAL. Limestone is abundant. Population, in 1801, 1,501; in 1831, 1,475. Houses, in 1831, 275.—This parish is in the presbytery of Inverary, and synod of Argyle. Patron, the Duke of Argyle. Stipend £189 3s. 2d.; glebe £15.—Schoolmaster's salary £30. There were 4 private schools in the parish in 1834.

KILMAURS, a parish in the district of Cunningham, Ayrshire, stretching north-eastward from Irvine water, which divides it from Dundonald in Kyle, in a belt or stripe between the parish of Kilmarnock on the east, and that of Dreghorn on the west. Its greatest length is 6 miles; its greatest breadth  $2\frac{1}{4}$  miles; and its area about 5,000 acres. The streamlet Garrier is its boundary on the west. Carmel water—here very generally called Kilmaurs water—cuts it lengthways into two nearly equal parts; but makes a debouch to the west, and runs upwards of a mile in that direction, receiving the Garrier in its way, before falling into the Irvine. This stream is of much value for its water-power in driving machinery; yet during a drought or a frost, it becomes almost dry. The Irvine runs on the boundary for nearly 2 miles, contains some salmon, trout, and eel, and offers valuable advantages in its water-power. The surface of the parish is a plain, undulated at various intervals, and in various forms, with knolls and rising grounds. Its little heights are generally tufted with plantation, and give it a pleasant and beautified appearance; and, in many instances, they command delightful prospects of the garden-like expanse of Kyle and Cunningham,—the gorgeous sea-view of the Clyde,—and the fine, and, at intervals, magnificent perspective of far-away hills and mountains on the horizon. About twenty or thirty years before the date of the Old Statistical Account, the parish was naked and unenclosed, utterly destitute of

roads, and dotted over with mean, paltry, inconvenient, filthied houses. But so early as the publication of that Account, or several years before the close of last century, all was completely subdivided by ditches and thorn-hedges; and new, regular, and convenient houses, pleasantly situated, and looking snugly out upon a smiling landscape, everywhere gladdened the eye, and suggested ideas of activity, neatness, and wealth. Prime attention—as in most other parts of Cunningham—is here given to the dairy. Coal abounds, and is extensively worked. Craig-house is delightfully situated on the Irvine. Carmelbank stands a mile north-east of the former, on the left bank of the Carmel. Near it is one of those tumuli called Motes, which are believed to have been seats of courts-of-justice. Bushy-castle, unroofed and ruinous, stands  $\frac{3}{4}$  of a mile north-eastward, on the right bank of the Carmel. The parish is traversed by the Kilmarnock and Irvine turnpike, by turpikes which diverge from the town of Kilmaurs, and by some other roads. Population, in 1801, 1,288; in 1831, 2,130. Houses 319. Assessed property, in 1815, £11,617.—Kilmaurs is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patroness, Lady M. Montgomery. Stipend £261 1s. 3d.; glebe £10. Unappropriated tithes £699 6s. 10d. The parish-church is said to have been built in 1404, and was repaired and reseat in 1804. Sittings 550. At Gatehead colliery, where there is a population of 167, a home missionary, a licentiate of the Church of Scotland, attends to the religious interests of the parishioners, and preaches in a school-room on the border with Dundonald parish. A United Secession congregation in the town was established in 1738. Their present place of worship was built in 1789. Sittings 450. The minister has a manse and garden.—The parochial school is attended by a maximum of 85 scholars; and three non-parochial schools by a maximum of 140. Parochial schoolmaster's salary £25 13s., with £33 fees, and £13 other emoluments. The master of one of the other schools—which is situated at Crosshouse—has, besides his fees, £6 from the heritors, and a house and school-house by subscription.—The saint from whom the parish has its name is variously stated to have been the Virgin Mary, or *Marie*, and a Scottish saint called *Maure*, who is said to have died in the year 899. The name of the original kirk-hamlet was Cunningham; and this, too, became, from it, the name of the family who held the manor. By the forfeitures of the heir of the Morvilles, the Cunninghams became tenants in capite under Robert I. About the year 1450, they acquired the dignity of Lords Kilmaurs; and in 1488 they rose to be Earls of Glencairn. Their cemetery occupies a place near the church, was erected in 1600 by Earl James, and contains a beautiful but defaced piece of monumental ancient sculpture, to the memory of the 9th Earl, the Lord-high-chancellor of Scotland. The name Kilmaurs superseded the ancient one in the 13th century. The church was given, during the reign of William, by Robert, the son of Wernehal, the progenitor of the Glencairn family, to the monks of Kelso; and was held by them till the Reformation, and served by a vicar. In 1633, when Charles I. erected the bishopric of Edinburgh, he granted to the dean of St. Giles the church of Kilmaurs, with all its tithes and revenues. In 1403 Sir William Cunningham founded at Kilmaurs, and endowed with lands, revenues, and a mill in the vicinity, a collegiate church for a provost, six prebendaries, and two singing boys. After the Reformation the Earl of Glencairn took possession of the property. A chapel, with an appropriate endowment for its chaplain, anciently stood at Busby.

KILMAURS, the capital of the above parish, a burgh-of-barony, and a considerable village, stands on the right bank of Carmel water, 2 miles from Kilmarnock, and 6 from Irvine. It is pleasantly situated on a gentle ascent, looking towards the south; and consists chiefly of one street, decorated at its middle with a small town-house and a steeple, and flanked by some by-lanes and back-houses. Its inhabitants are principally shoemakers, colliers, and subordinates to the manufacturers of Glasgow and Paisley. At one time about thirty cutlers, and a good many tinkers, gave the town its character and tone. The work of the cutlers was excellent. The breakfast-knives of their manufacture were alleged to be superior to the produce of even Sheffield or Birmingham; and were of the best metal, neatly shaped, finely polished, and set in a haft of tortoise-shell, or stained horn, girt with silver virets.\* On the left bank of the river stands an old mansion called the Place. This was the property of the Earls of Glencairn; but is only a fraction of the edifice which was intended to be erected. The 9th Earl, the chancellor, laid the foundation of a very extensive building; but, owing to pecuniary embarrassments—which he incurred in the service of Government, and from which he vainly hoped to obtain relief—he never was able to execute his plan. The Place was occupied in the latter part of last century by Lady Eglinton. A little north of it, on the farm called Jock's Thorn, are some vestiges of the original or more ancient residence of the Glencairn family. Kilmaurs had formerly a weekly market, which was swamped by the neighbouring one of Kilmarnock; and it still has annual fairs in June, August, and November. It was erected on the 2d June, 1527, into a burgh-of-barony, by James V., at the instance of Cuthbert, Earl of Glencairn, and William, his son, Lord Kilmaurs. The charter contained powers to create burghesses, and elect bailies, and other officers. In November of the same year, the Earl of Glencairn granted a charter of the lands erected, consisting of 240 acres, to forty persons in equal portions, “for buildings and policy to be kept up and maintained by them and their heirs,” and to he held “in feu farm and heritage and free burghage in barony for ever.” This charter—so unusual in its main provisions—contains several curious particulars, especially a clause that “no woman succeeding to an inheritance in the said hurgh, shall marry without our special license.” The effect of granting to each of the original settlers so large a patch of rich land as 6 acres, though intended to make the place the seat of manufacture, was to convert the next generation into a race of petty landholders, averse to sedentary employments, and contented with producing kail-plants for markets throughout Ayrshire, Clydesdale, Nithsdale, and Galloway. In 1793, the practice required by the original charter that the burghesses should be resident, and should, in no instance, possess more than one tenement, began to fall into abeyance. The hurgh, therefore, no longer exhibits the curious aspect impressed by the peculiar character of its tenures, and has suffered a great reduction in the number of its burghesses. From the sale, division, and particularly the union of tenements, the number of

“The keen edge,” says the Old Statistical reporter, “which they,” the cutlers, “put on instruments requiring it, gave rise to a mode of speech which is yet in use through the country. A man of acute understanding, and quickness in action, is said to be as sharp as a Kilmaurs whittle. An old Presbyterian clergyman, in addressing himself to his audience, upon rising to speak after a young divine, who had delivered a discourse in flowery language and English pronunciation, said, ‘My friends, We have had great deal of fine English ware among us the day, but ah! my Kilmaurs whittle will cut as sharply as any English blade;’ meaning that the language of his own country would be better understood, and do more good.”

persons entitled, in 1832, to be burgesses was only 18 or 19; and even that number was, by instances of non-residence, minority, and succession of females, reduced to 12. The burgesses are all councillors, and have the exclusive power of electing two bailies, a treasurer, a fiscal, and a clerk. The property of the burgh is very trifling. The revenue amounts to about £11 or £12, and is expended in keeping up the market-place, and the town-house with its spire and clock. Population, in 1831, about 1,200.

**KILMAVEONAIG**, a suppressed parish comprehended in Blair-Athole, Perthshire. The old parish-church was re-edified by a community of Episcopalians in 1791, and continues to be used by them as a chapel. Here also is a small Baptist chapel built in 1836: See **BLAIR-ATHOLE**. Kilmaveonaig means the church or chapel of St. Eonaig.

**KILMELFORT**, or **KIL-NA-MAOL-FHORT**,—i. e. 'The Church of the round Bays,'—an ancient parish in the district of Lorn, and shire of Argyre, now united to the parish of Kilninver. It is 12 miles south of Oban, at the head of Loch-Melfort. An excellent line of road has been made from hence to the inn of Kintraw, a distance of 8½ miles, under the auspices of the Parliamentary Commissioners; which completes the line of road from Lochgilphead, by the west end of the Crinan canal, to Oban; and thence branching-off to the northward by the ferries of Connel, Shean, and Ballachulish, to Fort-William. The population of this district, in 1811, was 372: See **KILNINVER**.

**KILMENY**, a parish in Argyshire, in the island of Islay, formerly united to Killarrow, but erected in 1826 into a government-parish. Its greatest length is from 11 to 12 miles; greatest breadth 8 to 9. Population, in 1833, 2,100. Patron, the Crown. Stipend £120; glebe £3 10s.—The Gaelic school society support a school in this district, which has an average attendance of about 80 pupils.

**KILMICHAEL-GLASSRY**. See **GLASSARY**.

**KILMICHAEL**. See **ARRAN** and **KILBRIDE**.

**KILMODAN**. See **KILMADAN**.

**KILMORACK**, a parish in Inverness-shire, extending about 65 miles in length from east to west, and from 10 to 15 miles in breadth, and exhibiting every variety of surface, scenery, and soil. It is bounded on the north and east by Urray and Killearnan parishes; on the south by the river Beaully and the parishes of Kirkhill and Kiltarlity; and on the west by Kintail. The population is chiefly scattered along the northern bank of the Beaully, in a district about 30 miles in length, by 1½ in breadth. The village of **BEAULY** [which see], has a population of about 500. The total population of the parish was, in 1801, 2,366; in 1831, 2,709. Houses 581. Assessed property, in 1815, £7,581.—The lower falls of Kilmorack are formed by the Beaully, about 2 miles west of the village of Beaully. Here the river, emerging from a narrow channel into which it has been confined by lofty rocky banks, suddenly expands into a fine semicircular basin, over the lower edge of which it is precipitated in a series of small cataracts. It is said that one of the wonders which the Frasers of Lovat—who were lords of the manor—used to show their guests, was a voluntarily cooked salmon at the falls of Kilmorack. For this purpose, a kettle was placed on the flat rock on the south side of the fall, close by the edge of the water, and kept full and boiling. There is a considerable extent of the rock where tents were erected, and the whole was under a canopy of overshadowing trees; and here the company are said to have waited until a salmon fell into the kettle, and was boiled in their presence. Below these falls the stream flows on through a rich plain. Above them, and for a space of about 3 miles

to the next group of waterfalls, the scenery is exquisitely beautiful. This spot is called the Drhuim, and is thus described by the Messrs. Anderson:—"This is the most completely Highland and beautiful part of the course of the Beaully: on either hand the mountain-acclivities are rather steep and rocky, and the valley between them is not a quarter of a mile broad; but woods of birch and fir encompass the whole scene, especially on the north side; and the edges of the river are fringed all along with rows of oak, weeping birches, and alders. In one part, half up the strath, near the cottage of Teanassie, the waters plunge through a rocky passage encircling high pyramids of stone, standing up in the midst of the stream, gigantic witnesses of its ceaseless and consuming power. Immediately below, the turmoil ceases, and the quieted element repose in smooth dark linn; while the rocks at the same time recede, and give place to soft daisied banks and sweet patches of corn land. On the southern shore, on a high conical mound rising above a perpendicular sheet of rock, is Dunfion, a vitrified structure, which has recently been laid open for the inspection of the curious by order of Mr. Fraser of Lovat. The same gentleman has also formed a drive along the whole of his side of the river, which thus comprehends, as a part of his policies, this interesting piece of scenery. At the further end of the Drhuim, the road begins to ascend towards the interior of the country; and here the river is seen pouring down on each side of a high rounded hill, covered with oak and birch, at the lower extremity of which it forms the second set of small hut beautiful cataracts. This wooded hill is the island of Aigas—for the river parts into two, and encircles it." The small picturesque island of Aigash is bounded on the north by lofty crags which overhang one branch of the river, which flows through the deep gorge on that side; and on the east by similar eminences but of less height, where a bridge which communicates with the mainland is placed. On the south and west, the sides slope to the river, which, from a rock above the bridge, called Craig-Dhonnaich, forms a deep still sheet of water, with scarcely any current as far as Erchless-castle, the seat of the Chisholm, about 5 miles distant. This calm flow of the stream forms a fine contrast with the succession of broken falls and rapids which continue, without intermission, from the island to Kilmorack. The island is wooded with hirc and oak, and, at one period, was covered with very fine oaks, some of which measured 20 feet in circumference. These were all exchanged with the laird of Struy for some houses in Inverness, and cut down about 40 years since. On a small point of land at the western extremity of the island is a green knoll, surrounded by the ruins of a wall, which marks the spot where the Lairds of Lovat had a sheiling from a very early period; and here Alexander, the 6th lord (who was of a retired and studious character, and infirm constitution), spent his last days, and died in 1557. When the well-known Simon, Lord Fraser, after marrying the Dowager-lady Lovat, was apprehensive of an attack from her brother, the Earl of Tullibardine, he retired with the lady into this retreat. In the pursuit which was raised at the instance of the Athole family, a herald was sent from Edinburgh to summon Lord Simon to appear in court; but such was the dread of the officer for the still remaining feudal power of a Highland chief, that he dared not enter the island to deliver the charge, but left it exposed in a cleft stick, on the north bank of the river, in sight of the house! Some fine walks have been cut amongst the young oak and ash trees, and the beautiful birches which form the finest and most graceful accompaniment to our Highland scenery;

and these winding pathways conduct the visiter to the most picturesque points, where the river is seen dashing away between piles of grey rock and masses of foliage, which in summer present every combination of form and colour. The spot is altogether a fairy island,—a nest of romance; and its present inhabitants, with their flowing Highland costume, may not unaptly be denominated Island-kings; for they are in some degree “monarchs of all they survey,” and trace their descent from a long line of princes, being the sole surviving descendants of Prince Charles Edward Stuart.—The western division of the parish is very wild and alpine in character, and branches into three distinct glens, namely, Strathglass, Glenstrathfarrar, and Glencannich, from which respectively the Glass, Farrar, and Cannich descend, to compose by the waters of their streams, in front of Erchless-castle, above 5 miles above the upper falls, the river Beaully.—The ruins of Beaully priory, founded in 1230, by John Bisset of Lovat, are interesting, though destitute of architectural beauty. The Frasers, Chisholms, and Mackenzies, have burial-places here.—On the Muir of Ord, a little to the east of Beaully, is held the most important cattle fair in the north of Scotland: See **Muir of Ord**.—This parish is in the presbytery of Dingwall, and synod of Ross. Patron, Lord Lovat. Stipend £244 3s. 4d.; glebe £8. Parish-church built in 1786; sittings 506. It is 2½ miles west of Beaully, and the same distance east of Aigash. There is a mission in Strathglass; where there is also a Roman Catholic congregation.—Schoolmaster’s salary £25 13s. 3d.; fees £24.

**KILMORE**,\* a parish in Argyshire, to which that of Kilbride is united. The united parish is situated in the district of Lorn, and comprehends the island of Kerera. The form of the continental part is nearly circular, about 6½ miles in diameter. The hills are low, and covered with heath; the valleys are almost all arable, but, like most parts of Argyshire, little of them is cultivated. There is a lake in the parish called Loch-Nell, about 2 miles in length, and half-a-mile in breadth, from which a small rivulet discharges itself into Loch-Feachan, an arm of the sea. The coast is of a semicircular figure, and, including creeks and bays, is nearly 20 miles in extent. In general, it is high and rocky, possessing, however, two excellent harbours,—one at the village of Ohan, and another at Dunstaffnage, besides two in the island of Kerera. There are three ferries, viz., Connel-ferry, over Loch-Etive; Port-Kerera, between the mainland and that island; and Mull-ferry, between the latter and the island of Mull.—Population, in 1801, 1,854; in 1831, 2,109. Houses 138. Assessed property £6,741.—This parish is in the presbytery of Lorn, and synod of Argyle. Patron, the Duke of Argyle. Stipend £249 8s. 6d.; glebe £40.—There are two parochial schools; the master of one of which has a salary of £25; of the other £21. There are six private schools.—See articles **DUNSTAFNAGE**, **KERERA**, and **OBAN**.

**KILMORE**. See **KILNINIAN**.

**KILMORICH**, a parish in Argyshire, now united to that of Lochgoilhead. It is situated at the northern extremity of Loch-Fyne: See **LOCHGOILHEAD**.

**KILMORY**, a parish in the county of Bute, and isle of Arran, extending 24 miles in length, in a semi-

circular form, from Largyheg-point to Loch-Rauza, and comprehending the south-west and north-west sides of the island. It is separated from Kintyre on the mainland by Kilbraudon sound. The sea-coast is rugged and bold, and the surface is heath-clad and mountainous. Beinbharfhion, or Benvarian, the highest hill, has its top covered with snow the greater part of the year. The soil produces only light crops of oats, barley, &c., and small quantities of flax. The most fertile tract is the vale of Shisken. Considerable numbers of black cattle, however, are annually exported to Ayrshire. Loch-Iorsa, or Earsay, nearly in the centre of the island, is about a mile in length. Loch-Tanna is nearly 2 miles in length. Both these lakes are of inconsiderable breadth. There is a small harbour at the Blackwater-foot, whence communication is kept up with Camphelton by means of a packet-boat. In this parish are several natural caves, of great extent, particularly one called the King’s Cove, on the west coast, which is said to have given shelter to Robert Bruce when in distress, previous to his ascending the throne. There are numerous cairns and tumuli in the parish, and several rude upright stones or obelisks, which are usually attributed by the natives to Fingal and his brother heroes. The ruins of the convent of St. Bride, at Loch-Ranza, have entirely disappeared.—Population, in 1801, 2,996; in 1831, 3,771. Houses 700. Assessed property £4,447.—This parish is in the presbytery of Kintyre, and synod of Argyle. Patron, the Duke of Hamilton. Stipend £237 0s. 1d.; glebe £13. Unappropriated tithes £142 1s. 4d. Church built in 1785; enlarged in 1824; sittings 832. A church was built at Clachan in 1805, at which service is performed by the parish-minister every third Sunday. There is another church at Loch-Ranza.—There are 12 schools in the parish, 4 of which are parochial.—See articles **ARRAN** and **LOCH-RANZA**.

**KILMUIR**, a parish of Inverness-shire, forming the northern extremity of the isle of Skye. It is 16 miles in length, and 8 in breadth; and is bounded on the north by Shizart parish. The inhabited part of the country, along the coast, is flat with gently rising eminences; but the interior is mountainous, and covered with heath. The extent of sea-coast is upwards of 30 miles, possessing many safe harbours. The shores are in general high and rocky, and, towards the north point, terminate in a lofty promontory called Hunish, near which is a dangerous and rapid current.—The harbour of Duntulm is the safest in the island, near which, on a lofty perpendicular rock, are the ruins of the superb castle of the same name, the ancient residence of the Macdonald family. There are several small islands on the coast, some of which are inhabited by a family to look after the sheep which pasture on them: their names are Trodda, Tulm, Fladdachuain, Altivaig, and Fladda. In the mountains, at an altitude of nearly 1,000 feet, there is a singular secluded piece of ground, called Quiraing, surrounded on all sides by high rocks, and accessible only in three or four places. This valley appears to have been a place of concealment for the natives, when obliged to leave their houses on account of invasion, and is so capacious as to hold conveniently 4,000 head of black cattle. There is a pool of beautifully limped water, called Loch-Shiant, or Sianta,—‘the Sacred lake,’ long famed as a cure for many ailments; and near the church is a weak chalybeate. There are five other small lakes.—Population, in 1801, 2,555; in 1831, 3,415; in 1837, 4,011. Houses, in 1831, 652. Assessed property, in 1815, £13.—This parish is in the presbytery of Skye, and synod of Glenelg. Patron, the Crown. Stipend £158 6s. 8d.; glebe £8. Church built in 1810; sittings 700. Previous to the

\* “The oldest etymology of Kilmore is *Kil-moire*: *Oy*, or *Oigh*, signifying, in ancient Gaelic, ‘the Church of the blessed Virgin.’ It was also called *Kilbeannach*, or ‘the Middle burial-place,’ from being in the centre of the country. Lately it has been called *Kilmar*, that is, ‘the Great burying-place,’—*mor* signifying ‘great’ or ‘large,’—because the burial-ground around this church was formerly of greater extent than any other in this part of the country. Kilbride is also derived from the same root, *Kil*, and signifies ‘a burial-place,’ or ‘a place of worship, dedicated to St. Bridget.’”—*Old Statistical Account*.

Reformation, it consisted of three parishes, Kilmuir, Kilmaluag, and Kilmartin, which latter has been assigned as a district to a government church at Stenschell.—There are 3 schools in the parish. Salary of parish-schoolmaster £30. Another of the schools is supported by the Society for propagating Christian knowledge; salary £15. The third is an itinerating Gaelic school in the southern district of the parish.—The celebrated Flora Macdonald is buried in the churchyard of this parish. The following account of this heroine is taken from the 'New Statistical Account':—"The story of the heroic conduct of Miss Flora Macdonald, in conducting the unfortunate Charles, in the disguise of a maid-servant, from the Long-Island to Monkstadt in this parish, is so well-known, that any detail of it here is unnecessary. Many were the trials, and severe the hardships, which fell to the lot of the gallant Miss Flora subsequent to this adventure. She was soon seized and brought prisoner to London, where she was, with Kingsburgh and many others, confined in the Tower. All admired the dauntless part which she had acted, and her ease excited so much interest that she was visited by the great and noble of the land. Among the rest, she had the honour of a visit from Prince Frederick of Wales, great-grandfather of her present majesty, Queen Victoria. This generous prince was so much struck with the simplicity and dignity of the fair prisoner's character, that he interested himself to procure her liberation. When she had obtained her freedom, she found refuge in the house of Lady Primrose of Dunipace, where she was visited and loaded with honours by distinguished personages of all ranks and shades of politics. Returning to her native isle, she was married, in the month of November, 1750, to Allan, son of Mr. Alexander Macdonald, of Kingsburgh, who resided at the time of his marriage at Flodigarry, in this parish. Upon the death of her husband's father, his son Allan succeeded him, and Flora, then Mrs. Allan Macdonald, became lady of the mansion of Kingsburgh. She afterwards went to North Carolina with her husband, where he took part in the civil war which then disturbed the peace of that country. After undergoing many hardships in that quarter, they deemed it prudent to return to Skye. The vessel in which they sailed from America was met by a French privateer, and an action took place, in which Flora appeared on deck, where, with her wonted magnanimity, she inspired the seamen with courage, and assured them of success. Although her arm was broken in the engagement, yet her native spirit of heroism was not in the least degree damped. She never more left Skye. She had seven children, five sons and two daughters, besides some who died in infancy; all her sons were officers, who distinguished themselves in the service of their king and country. Her daughters, on the other hand, became officers' wives. Ann was the lady of Major Alexander McLeod, and died at Stein, in this island, about six years ago. Her second daughter, Francis, was married to Lieutenant Donald McDonald, of Cuide-rach. Of this interesting family none are now alive. The celebrated Flora lived to an advanced period of life, and retained to the last that vivacity of character, and that amiableness of disposition, by which she was always distinguished. On the 5th day of March, 1790, she departed this life, little more than two years before the death of her husband. Her remains were interred in the burying-ground of this parish, within a square piece of coarse wall, which was erected about the year 1766 to enclose the tombs of the Kingsburgh family. Her funeral, it is said, was attended by no fewer than 3,000 individuals of every rank and class, and all were liberally served with

refreshment.\* Now that the spirit of Jacobitism is gone, and the world at large has ceased to regard the claims of the House of Stuart, it is a matter of regret that the dust of the memorable Flora,—in whose bosom that spirit, so lofty and chivalrous, hurned with such unexampled fervour,—should be allowed to moulder without a monument of the meaneast description to mark her tomb."

**KILMUIR EASTER**, a parish situated partly in the county of Ross, and partly in that of Cromarty; about 10 miles long, and on an average 4 miles broad; bounded on the north by Edderton and Kincardine; on the east by Loggie-Easter; on the south by the frith of Cromarty; and on the west by Rosskeen. It is situated on the frith of Cromarty, and commands a finely variegated prospect of the peninsula and bay of Cromarty. The shore is flat, and the soil sandy, but tolerably fertile. Farther from the coast, the soil becomes black and mossy, retentive of moisture, and unfavourable for vegetation. The back-grounds reach into the barren moory district of Ardmearach. Balnagown-castle is an elegant mansion, partly ancient and partly modern, surrounded by extensive plantations; Tarbat-house is also a fine modern building. New Tarbat, once the beautiful residence of the Earls of Cromarty, has fallen to decay; and Delyn, once the seat of the Earls of Ross, is also in ruins. There are three villages in the parish, viz., Milntown, Bartarville, and Portlich. Of these Milntown is the principal, and has a population of about 200.—Population, in 1801, 1,703; in 1831, 1,551. Houses, in 1831, 339. Assessed property, in 1815, in Ross, £6,211; in Cromarty, £5,331. The real rental is about £3,800.—This parish is in the presbytery of Tain, and synod of Ross. Patron, Mackenzie of Cromarty. Stipend £211 13s. 3d.; glebe £8 10s. Church built in 1798; sittings 900.—Schoolmaster's salary £32 2s. 9½d. There are 3 private schools.

**KILMUIR WESTER AND SUDDY**, a united parish in Ross-shire, now more generally termed Knockhain: See **KNOCKHAIN**.

**KILMUIR**. See **DURNIE**.

**KILMUN**, a pleasing little village at the head of the Holy Loch, in the district of Cowal, and parish of Dunoon, Argyshire. The district of Kilmun, or that portion of the parish of Dunoon which formed the original parish of Kilmun, had a population, in 1837, of 833. There is a church at the village; sittings 299. The minister of Dunoon officiates here alternately with an assistant. We learn from Spotswood, that "Kilmun was founded as a collegiate church," in honorem Sancti Mundi Ahhatis, by Sir Duncan Campbell of Lochow, ancestor to the Duke

\* "In the same burying place various members of the Kingsburgh family were interred, as may be seen from the following inscription on a marble slab, which was procured many years ago by Lieutenant-Colonel John Macdonald, of Exeter, to be placed over his mother's (Flora's) grave. The slab was, however, broken in conveying it to this place from the south; and no fragment of it is now left by tourists, who have carried it off in pieces as curiosities. The inscription was as follows:—  
'In the family mausoleum at Kilmun, lie interred the remains of the following members of the Kingsburgh family, viz., Alexander Macdonald, of Kingsburgh; his son Allan, his sons Charles and James, his son John, and two daughters; and of Flora Macdonald, who died in March, 1790, aged sixty-eight—a name that will be mentioned in history, and if courage and fidelity be virtues, mentioned with honour.' "She was a woman of middle stature, soft features, gentle manners, and elegant appearance." So wrote Johnson. The remains of Flora's last surviving daughter, Mrs. Major Macleod, were consigned to their kindred dust about six years since. She said Mrs. Major Macleod has left only one daughter, Miss Mary Macleod, still alive at Stein.—So great was Flora's enthusiasm for the Prince and his success, that she carried with her a part of the sheet in which he slept at Kingsburgh, intending that, when or where she might die, it might be used for her shroud. She brought it back from America, and it is said that according to her own request, it was the shroud in which she was lowered into the grave."—*New Statistical Account*.

of Argyle, for a provost and several prebendaries, with two singing boys, August 4, 1442. The charter, respecting his donations to this foundation, was confirmed by James II. at Perth, May 12, 1450. Camerarius gives to St. Mundus Abbot a very high character; asserting that, by the sanctity of his life, and the number of his miracles, he was celebrated to his time in the province of Argyle; where, he adds, apparently in the language of exaggeration, many churches may be found dedicated to him, as well as monasteries erected by him. He died A. D. 962. Dr. Smith mentions, as one of the most eminent disciples of St. Columba, St. Munna, son of Fulchan, abbot of Teachmhunna. Archdall says, that "St. Munna, the son of Fulcan, founded an abbey" at Tachmon, or Teacmhunna, near Wexford in Ireland. "This saint," he adds, "had one hundred and fifty-two holy disciples, and was zealously attached to the ancient custom of celebrating the feast of Easter;" which proves that he was a Culdee. He assigns his death, however, to the year 634. Notwithstanding the slight difference in orthography, and the greater one as to the date, this is undoubtedly the same person who acquired such celebrity in the western part of our country. In the western aisle of the little church of Kilmun is the sepulchre of the Argyle family; an inner wall secluding it from the other portions of the church, and a large door opening into it at the farther extremity. Two small Gothic windows light the interior. On entering, there appears on either hand a broad dais, covered with large stone slabs, and about three feet in height, which extends the whole length of the sepulchre, and on which are laid the coffins, five in number, and containing the ashes of four Dukes and one Duchess. Upon a lower and narrower dais, formed by a niche in the wall that runs across between the sepulchre and church, repose side by side the statues of a lady and a warrior. The warrior lies armed cap a-pee, with a huge sword by his side; while above him is a boar's head divided into two parts, and also a number of old pieces of rusty armour, such as iron beavers, war-gloves, swords, &c. Within the churchyard of Kilmun, and immediately contiguous to the church, stands an old dilapidated tower, probably once a residence of the Argyle family. Decay has been busy with its walls, and Nature, as if to avert their total overthrow, has closely festooned them with ivy. From this tower a fine avenue of old trees extends a short way towards the upper extremity of the loch, and throws over the place a solitary air of baronial stateliness with which the paltry clachan in the back-ground very poorly harmonizes. On both shores of the loch, a number of tastefully built modern residences impart liveliness to the scene, and, farther down, the Lazaretto, where vessels loaded with cotton discharge their cargoes and perform quarantine, gives a fine termination to the marginal prospect.

**KILNINIAN AND KILMORE**, a parish in Argyleshire, in the island of Mull. It forms a peninsula in the north-west extremity of the island; extending 12 miles in length, and nearly of the same breadth, and containing about 55,000 acres. To it belong the inhabited isles of **ULVA**, **GOMETRA**, **LITTLE COLONSAY**, and **STAFFA**; and the small uninhabited cluster called the **TREISHNISH ISLES**: see these articles. The general appearance is hilly; but the arable land, on the coast, has a good soil and is tolerably fertile. There is an excellent harbour at Tobermory, where a village of the same name was erected by the British Society for improving the coasts and encouraging the fisheries: see **TOBERMORY**. At Aros, on the sound of Mull, there is also a harbour: see **AROS**. There are five lakes in the parish, all of

which abound with excellent trout. Population, in 1801, 3,601; in 1831, 4,830. Houses, in 1831, 817. Assessed property, in 1815, £11,810.—This parish, formerly a vicarage with the parish of Kilmore, united after the Reformation, is in the presbytery of Mull, and synod of Argyle. Patron, the Duke of Argyle. Stipend £230 19s. 3d.; glebe £20. Tobermory and Ulva have been erected into distinct *quoad sacra* parishes; and a portion has been attached to the *quoad sacra* parish of Salen. Both Kilmore and Kilnininian church were built in 1754; the former seats 350; the latter 300. Worship is performed alternately in each church both in Gaelic and in English.—Schoolmaster's salary £25. There are four private schools, one of which is a female school-of-industry in Kilnininian village.

**KILNINVER**, a parish in Lorn, in Argyleshire, united with the parish of Kilmelfort, and forming together nearly a square of 12 miles. It is bounded on the west by the sound of Mull, and has a considerable extent of sea-coast along Loch-Feachan and Loch-Melfort, two arms of the sea which intersect it. The lower parts of the parish are smooth, with a gentle declivity to the sea; and consist of a light loamy soil, yielding good crops of oats, barley, and potatoes. The upper district is mountainous, and covered with extensive natural forests and plantations. In this hilly district lie two considerable lakes,—Loch Seammadale and Loch Tralig,—whence issue the rivulets Euchar and Oude, which discharge themselves into the sound of Mull. Population, in 1801, 1,175; in 1831, 1,072. Houses 126. Assessed property, in 1815, £1,933.—This parish is in the presbytery of Lorn, and synod of Argyle. Patron, the Duke of Argyle. Stipend £165 17s. 4d.; glebe £20 10s. The two parish-churches are about 8 miles apart. Kilmelfort church is a very ancient building, seating about 300. Kilniver church was built about 60 years ago, and seats 300. Worship is performed in each of the two churches alternately.—There are two parochial-schoolmasters. The salary of the one is £34 4s., with about £20 fees; of the other £20, with £15 fees. There is also a private school.

**KILPATRICK (EAST OR NEW)**, a parish partly in Dumbartonshire and partly in Stirlingshire; bounded on the north by Killearn and Strathblane; on the east by Strathblane and Baldernock; on the south by Lanarkshire and Renfrewshire; and on the west by Old Kilpatrick. It measures in extreme length from north to south,  $7\frac{1}{2}$  miles; in average length, 6 miles; in extreme breadth,  $5\frac{1}{2}$  miles; in average breadth,  $3\frac{1}{2}$  miles; and in superficial area, 13,440 imperial acres. Kelvin water forms the boundary 3 miles in a straight line, or about 5 miles along its channel on the south or south-east; and, though an uninteresting stream for a little way after first touching the parish, it afterwards quickens its currents, sinuously wends between wooded, bold, and romantic banks, and at last makes its exit in the deep and highly picturesque glen beneath the Kelvin aqueduct. The Allander—a streamlet of  $10\frac{1}{2}$  miles length of course, which brings down from a reservoir in West Kilpatrick supplies of water-power in dry weather for the mills in the Kelvin, and which drives extensive machinery at Cloher bleachfield and other localities in East Kilpatrick—comes in from the west 3 miles from its source, flows along the boundary  $1\frac{1}{2}$  mile on the north, and  $2\frac{1}{2}$  miles on the east, and then, after running  $2\frac{3}{4}$  miles south-eastward in the interior, proceeds eastward along the boundary, to its confluence with the Kelvin. Dugaldstone loch, an artificial lake of about 29 acres, lies on the eastern boundary, within the beautiful but neglected pleasure-grounds of the cognominal mansion. Two other lochlets are in the parish, one in

the demesne of Kilmordunny, and the other, called St. German's loch, supposed to have its name from the fellow-labourer of St. Patrick in the mission to Ireland, and profuse in the variety of the plants around its margin. The Forth and Clyde canal traverses the parish near its southern boundary, from the Kelvin bridge 4 miles westward. The northern corner of the parish, comprising an area of about 4 square miles, is occupied by part of the range of heights called the Kilpatrick hills or braes, which run from Stratblane westward to Dumbuck. The loftiest of them here rises about 1,200 feet above sea-level. From these heights the surface slopes rollingly and in hold undulations down toward the Kelvin and the Allander; almost everywhere arable, yet presenting steep and stiff work to the plough, exhibiting a very variegated and attractive landscape, and only wanting more decoration from wood to be pleasingly picturesque. The proportions of the whole surface regularly or occasionally in tillage, and either waste or strictly pastoral, are as 12 to 5. Freestone, of a very beautiful colour, and much in request, is worked at Netberton of Garscube. Coal, on the extremity of the Lanarkshire coalfield, is mined at Lawmuir, Garscube, and Castlehill. Limestone is burned at Culloch. Clay iron-ore was worked a short time in the coal district, but proved not to be remunerating. An expensive but vain search was, at one time, made in the Kilpatrick hills for lead. Much of the importance of the parish is connected with the large manufacturing village of MILNGAVIE: which see. Of several hamlets, the only noticeable one is New Kirk, or New Kilpatrick,  $5\frac{1}{2}$  miles north-west of Glasgow, and 2 miles south-west of Milngavie. It consists of only a few houses, but is the site of the parish-church, and has an annual though inconsiderable fair for milk-cows on the 1st of May, O. S. In the parish, chiefly at Milngavie, and other places, on Allander water, are a cotton factory, two bleachfields, three printfields, a distillery, a paper-mill, a snuff-mill, and several corn-mills,—employing aggregately about 900 persons. Killermont-house, the seat of John Campbell Colquhoun, Esq., a spacious and not inelegant mansion, stands on the Kelvin,  $1\frac{1}{2}$  mile below the mouth of the Allander. Garscube-house, the seat of Sir Archibald Campbell, Bart., a modern mansion in the form of the Old English manor-houses, stands a mile lower down the river. Clober-house, similar in character to the latter, stands on the Allanton,  $\frac{3}{4}$  of a mile above Milngavie. The portions of the wall of Antoninus which intersects this parish, remain nearly in the same distinct state as when described by Gordon in his 'Itinerarium Septentrionale.' The parish is traversed lengthways by two lines of turnpike, and across its breadth by three, and has a profusion of subordinate and connecting roads. Population, in 1801, 2,112; in 1831, 3,090. Houses 274. Assessed property, in 1825, £9,372.—New Kilpatrick is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Duke of Montrose. Stipend £270 3s. 10d.; glebe £11 13s. 4d. Unappropriated teinds £24 1s. 8d. The parish-church was built in 1807-8. Sittings 704.—A Relief meeting-house in Milngavie was built in 1799, at a cost of about £500. Sittings 517. Stipend £100, with a house and garden worth £24 or £25.—The parish has a very respectable subscription-library; five Sabbath schools, aggregately attended by an average of 190 scholars; a parochial school, attended by a maximum of 78; and five private schools, attended by a maximum of 226. Parochial schoolmaster's salary £34 4s. 4½d., with £10 fees, and £26 13s. 4d. other emoluments.—Till the year 1649, when

New Kilpatrick was detached, made independent, and provided with a separate church, it and Old Kilpatrick were one parish, and strictly identical in history. St. Patrick, the famous tutelary saint of Ireland, is claimed as a native, and, at all events, had the ancient church dedicated to him, and lent it his name. The church, before the end of the 12th century, was, in honour of St. Patrick, very richly endowed with lands by Alwin, Earl of Lennox; and soon after it was, with all its property, given by Maldowen, Earl of Lennox, to the monks of Paisley, and, till the Reformation, was served by a vicar. In the reign of James V., Lawrence Crawford of Kilmirnie founded a chapel at Drumry, within the limits of the modern New Kilpatrick, and dedicated it to the Virgin Mary, endowing it with the five-pound lands of Jordan-bill in Renfrewshire. Some ruins remain on the spot; but they appear to be, not those of the chapel, but the ruins of a tower or strength.

KILPATRICK (WEST or OLD), a parish in Dumbartonshire; bounded on the north by Stirlingshire; on the east by East Kilpatrick and Lanarkshire; on the south or south-west by the Clyde, which divides it from Renfrewshire; and on the north-west by the parish of Dumbarton. Its figure is nearly a triangle, the base resting on the Clyde, and the apex cut away to the depth of about  $1\frac{1}{4}$  mile. On the side along the Clyde it measures  $7\frac{3}{4}$  miles; on the side coterminous with Dumbarton  $6\frac{1}{4}$  miles; on the east side 6 miles; and in superficial area about 18 or 20 square miles. Allander water, coming in from a lochlet a few hundred yards distant in Dumbarton, runs  $2\frac{3}{8}$  miles north-eastward, expanding into an elongated lake, the reservoir of the mills on the Kelvin, and traces for a brief way the northern boundary. A stream of great value in the parish, and the object of litigation and much dispute, in consequence of its great water-power for the driving of machinery, issues from two lochlets near the boundary with Dumbarton, runs 4 miles south-eastward to the village of Duntocher, and then  $1\frac{3}{4}$  southward and south-westward to the Clyde at Dalmuir. One-half or rather more of the area of the parish, from the northern boundary downwards, is occupied by the range of beautiful and very variegated heights, called the Kilpatrick bills or braes. The range at the eastern boundary is upwards of 2 miles broad; and it runs almost due west in undulating and parallel lines of elevation till near the western extremity; and there it converges very nearly to a point, and breaks suddenly down in the bold, beautiful, stooping brow of Dumbuck hill, which commands Dumbarton-castle. A good idea is formed of the face of the parish, and delightful views obtained of its scenery, from the level of the Clyde. For some little distance from the eastern boundary, half-a-mile below Renfrew ferry, nearly the whole breadth of the parish stretches away before the eye, a flat and well-cultivated country on the fore-ground, a gently-ascending inclined plane in the centre, and tame and not very interesting heights in the distance. About  $2\frac{1}{2}$  miles from the eastern boundary, a rolling, beautifully undulated surface, comes down to about a mile from the river, sinuously ploughed by the picturesque little vale of the principal stream of the parish, and exhibiting, through openings among its verdant and frilled rising grounds, commanding evidences, in the form of partially seen large factories, of embosoming large villages, and a crowded and industrious population. Two miles lower down, the Kilpatrick hills begin to press close upon the river, at first leaving only a small corner of level ground, and afterwards for  $2\frac{1}{2}$  or  $2\frac{3}{4}$  miles, when they terminate in Dumhuck, coming down in a rapid declivity almost to the very edge of the river,

or making a curving recess to admit a semicircular little valley. While in the vicinity of the river, they overlook portions of Renfrewshire,—chiefly the policies and manor of Erskine-house,—which are luscious in their scenery of lawn and grove, and graceful varieties of richly-cultivated surface; and they present on their own sides, running up 1,200 feet above the level of the sea, the singularly blended aspects of enclosed arable fields,—sweeping and regular grassy ascents,—broken and variform acclivities, here the naked rocky precipice, or the dark-coloured scur, and there the green expanse of copsewood and plantation,—now almost the wild outline of a Highland hill, and then the gentle and luxuriant slopes and curvings of lowland knolls. The scene at Erskine-ferry, or a little above the point where the hills begin to press close upon the river, and where the village of Old Kilpatrick lies immediately on the right, partially hiding its white houses among trees, and lifting the fine form of its church and square-pinnacled little tower modestly into view, has always been admired as a suitable proflibation to a tourist from the east of what awaits him on the lower Clyde, and on the banks of the Leven and Loch-Lomond. From Dalnotter-hill, west of the village of Old Kilpatrick, a view of very rich groupings of this scene is obtained, and one so exciting as to have been the subject of a chief-d'œuvre of at least one eminent limner. From the heights immediately behind the village, and after an easy walk from it of not many minutes, a spectator sees before him the whole extent of Renfrewshire; and, ascending a little higher, he commands a prospect of Lanarkshire eastward to Tintoc,—all Strathclyde stretching exultingly away before him, till pent up by that curious mountainous cone. From Duncomb, a hill  $3\frac{1}{2}$  miles due north from the village, and rising at the further side of the range of the Kilpatrick braes, on the boundary with Dumbarton, a tourist sees, through openings or over depressions of the southern part of the range, much of the same extensive and magnificent landscape southward, eastward, and westward, as from the southern heights; and he, at the same time, looks north-westward over the gorgeous expanse of Loch-Lomond, screened with the sublime forms of the Lomond hills.

The soil, in portions of the plain along the Clyde, is a deep clayey loam; in other arable parts, it is generally thin and sandy, or gravelly; and over a considerable portion of the uplands, it is heathy and moorland. The arable grounds, the pastures, and the woodlands, are respectively in the proportions to each other of about 177, 161, and 19. Black cattle fattened on the grazing-grounds are generally of the Highland breed; and the sheep which walk the moors are almost all of the black-faced species. Provisions, of all sorts of home-produce, are as high-priced as in Glasgow; and those of foreign produce must pay additional charges for carriage. Whinstone for road-metal, and freestone of excellent quality as building material, are wrought in several quarries. Mines of ironstone, limestone, and coal—the last resembling the Newcastle coal in quality—are wrought in the vicinity of Duntocher. Besides the castle of DUNGLASS, noticed in a separate article, and vestiges of hill-forts on several heights of the parish, there are some interesting antiquities, almost all Roman. Antoninus' wall, which came in from the east and terminated at Dunglass, can now be identified only in a few places, and even there is traceable only in its fossa, and with the aid of writings which described it before agricultural improvement levelled its last vestiges with the ground. A Roman fort on a hill at Duntocher has nearly shared

the fate of the wall, but not without yielding memorials to modern research. In 1775, were discovered under-ground on the side of the hill, several rows of pillars, constructed of curious reddish-coloured tyles, and forming a labyrinth of passages of about 18 inches square, and floored over with larger homogeneous tyles, the whole surrounded by a stone wall, and conjectured to have been a sudorium or hot-bath for the use of the neighbouring garrison. In a field in the vicinity was found a Roman altar. Querns, vases, and coins, all Roman, have also been discovered. Over the stream at Duntocher is a very ancient bridge, frequently repaired, and asserted by a current tradition to have been of Roman erection. The principal landowners are Lord Blantyre, William Dunn, Esq. of Duntocher, Andrew Buchanan, Esq. of Auchentorlie, and Robert Glasgow, Esq. of Glenarhuck. The demesnes of the third and the fourth of these greatly enrich the scenery in the lower part of the parish. The second, Mr. Dunn, while an extensive landed proprietor, owns the principal manufactories of the parish, and is a remarkable instance of how productive mere mechanical skill and prudence may be of wealth and eminence to the possessor, and of comfortable employment to multitudes of industrious operatives.

The parish is remarkable for the number of its villages, and the extent and variety of its manufactures, existing in the absence of anything which can with propriety be called a town. The villages are no fewer than 12:—Old Kilpatrick, Duntocher, Faifley, Miltonfield, Hardgate, Yoker, Dalmuir-shore, Dalmuir, Bowling, Little-Mill, Dumbuck, and Milton; and contain, with the exception of a mere fraction, the whole of its large population. Duntocher, Faifley, Miltonfield, and Hardgate, all situated within the range of a mile on the average, 9 miles west of Glasgow, and from  $\frac{3}{4}$  to  $1\frac{1}{2}$  mile west of the eastern boundary of the parish, contain upwards of 3,000 inhabitants. Some of the other villages are mere hamlets as to population, yet possess either importance as seats of manufacture, or attraction as fine features in a beautiful landscape.—The village of Old Kilpatrick,  $1\frac{3}{4}$  or 2 miles west of the populous cluster, is a tidy, tranquil, and smiling place, sitting like an aristocrat in the vicinity of the other villages,—nearly vieing with the best of them in population, yet a stranger to the smoke or the stir of their busy occupations. The seat of the parish-church and a Relief meeting-house, of the parochial school and two private schools, and of more than one-third of the inns and dram-shops in the whole parish, it is also legally a burgh-of-barony, had a charter of erection in 1679, empowering the creation of burgesses and the election of bailies, and possesses an unused jail, with its strong door and its iron-railed windows, yet, for some unexplained reason, has let all its privileges run to seed, and seems as reckless of burgh-honours as of those of manufactures.—Duntocher, and the three villages we named along with it, have each a large factory for the spinning and weaving of cotton. The four mills are all the property of Mr. Dunn, and employ about 1,400 persons, and produce annually about a million of pounds weight of cotton yarn, and two millions of yards of cotton cloth. At Faifley is a manufacture of shovels and spades, which employs about 30 persons. At Hardgate are a dye-work and some small nail-making establishments. At Miltonfield is a large establishment for the bleaching and printing of calicoes, which employs about 450 persons. Duntocher has a *quoad sacra* parish-church, a United Secession meeting-house, two schools, three libraries, and a friendly society. Faifley has a United Seces-

sion meeting-house,\* a school, and a joint-interest in the friendly society of Duntocher. At Cockney-field, a little north of Faifey, are dye-works which employ about 140 persons.—Dalmuir, and Dalmuir-shore, are situated farther down the main stream of the parish than the villages now noticed; the latter at the point of its falling into the Clyde, and the former a little inland. At Dalmuir-shore is an old and somewhat crazy quay for the use of small river craft. This village has a dingy and almost dismal aspect, and presents to the Clyde a low, blackened range of buildings, occupied as a soda-work, which foully stains the face of the general landscape. The work employs nearly 100 persons, and produces soda, chloride of lime, and oil of vitriol. At Dalmuir is an extensive paper-manufactory, which employs about 180 persons, and pays annually £10,000 or £11,000 of government duty. This village has a school.—Bowling, Little Mill, and Dumbuck, are small, but very cheerful hamlets, situated on the Clyde, from 1 mile to 2½ miles below the village of Old Kilpatrick. Bowling has all the stir and interest connected with the entrance into the Clyde of the FORTH and CLYDE CANAL [see that article], and possesses a yard of long standing for building vessels of small burden. Little Mill has a ship-building yard for the construction of large vessels, which employs nearly 100 persons; and a distillery, which annually produces nearly 50,000 gallons. The village is the site of a school.—Yoker and Milton stand in the extreme eastern and western corners of the parish, and contain a population respectively of about 80 and 160. The latter, snugly nestled in a recess of the Kilpatrick hills, just before they terminate in the hill of Dumbuck, and looking out over a verdant, and wooded, and gentle slope of half-a-mile to the Clyde, has a very pleasing appearance.—The various villages, as well as the landward parts of the parish, are richly provided with facilities of communication. All the smaller steamers which ply on the Clyde are at their service, offering conveyance almost every hour of the day, and sometimes at intervals of only half-an-hour, and easily accessible at Brick-house, a little above Dalmuir, at Old Kilpatrick or Erskine-ferry, at Bowling, and at Dunglass. Two ferries convey carriages, carts, and cattle, across the Clyde, serving in all respects as bridges, of easy access, and abundantly safe; one called Erskine-ferry at Old Kilpatrick, and the other immediately beyond the eastern limit of the parish, between Yoker-toll and Renfrew. The Forth and Clyde canal, from the point of its commencement at Bowling to that of its leaving the parish, traverses a distance of 4½ miles, and offers important advantages in the transmission of coal and manure. The Glasgow and Dumharton road traverses the parish at its greatest length near the Clyde; and another turnpike communicates between Old Kilpatrick and Glasgow, through Duntocher. A stage-coach runs daily between Duntocher and Glasgow; and carriers travel daily in connexion with the several villages.—Population, in 1801, 2,844; in 1831, 5,879. Houses 524. Assessed property, in 1815, £12,825.—Old Kilpatrick is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, Lord Blantyre. Stipend £250 5s. 2d.; glebe £32 10s. The parish-church was built in 1812. Sittings 810.—The Relief congregation in the village of Old Kilpatrick was established in 1793. Meeting-house built in 1794, at a cost of £527 13s. Sittings 587. Stipend £95, with a house and garden.—Duntocher, and the villages and territory in its vicinity, were erected into

\* This, till a few months ago, when minister and congregation changed their denominational connexion, was an Original Burgher meeting-house.

a *quoad sacra* parish in 1830: see DUNTOCHER. The population of the *quoad sacra* parish of Old Kilpatrick, immediately after this disjunction, was 2,774; of whom 1,745 were churchmen, and 1,029 were dissenters. For a notice of the name, and ancient state of the parish, see the article KILPATRICK, NEW.—Parochial schoolmaster's salary £34 4s. 4d., with £10 fees, and £7 other emoluments. There are 11 non-parochial schools, each conducted by one teacher.

KILRENNY,† a parish in Fifeshire, upon the coast of the frith of Forth, which bounds it on the south; and bounded by the parish of Crail on the east; by Crail and Caruhee on the north; and by Carnbee, West Anstruther, and East Anstruther parishes, on the west. A ridge of high rocks rises from the beach, and the surface gradually ascends towards the north. The valued rent of the parish is £8,470 Scots; the real rent, in 1790, was £2,195 sterling; the annual value of real property, in 1815, including that of the burgh, £6,805 sterling. Houses, in 1831, 276. Population, in 1801, 1,043; in 1831, 1,705.—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Sir W. C. Anstruther, Bart. Stipend £251 17s. 11d.; glebe £27 10s. Unappropriated teinds £204 12s. 2d. The church, which originally formed a vicarage belonging to the abbey of Dryburgh, is centrally situated in the village which bears its name.—Schoolmaster's salary £34 4s. 4d., with about £40 fees. Besides the parish-school, which is at Upper Kilrenny, there are two boys' schools at Cellardykes, a female school, and an infant-school.

The burgh of KILRENNY consists of two villages: Nether-Kilrenny or Cellardykes, which is on the sea-coast, divided from Anstruther-Easter only by a small burn, and forming with it and Anstruther Wester apparently one long town; and Upper Kilrenny, situated about half-a-mile inland, which contains the church, manse, two gentlemen's seats, and a few cottages. Kilrenny is not, properly speaking, a royal burgh, as so far as is known it never had a royal charter; and it holds feu of a subject superior, Bethune of Ballour. It appears, however, to have sent a member to the Scottish parliament; and, in 1672, the magistrates presented a supplication to parliament, setting forth that it never was a royal burgh, and praying that it might no longer be considered as such, but continue a burgh-of-regality. This supplication was submitted to the privy council, and it was afterwards, as appears from the minutes of parliament, "expunged from the rolls, the same being now no royal burgh by act of parliament." Notwithstanding this, however, it continued after a time to send a member to parliament, without any objection, till the Union, when it was classed with four other burghs in sending a member to the British parliament, and by the reform bill it was conjoined with Cupar, St. Andrews, Crail, Anstruther-Easter and Wester, and Pittenweem, for the same purpose. It is governed by a chief magistrate, 2 bailies, and 12 other councillors. The parliamentary and municipal constituency, in 1840, was 51. Corporation revenue £44 4s. 6d. Population, in 1831, 1,705.—Nether-Kilrenny, or Cellardykes, is a fishing-station of considerable importance. It has a small harbour, which is not safe during gales from the east or south-east, when the fishermen are obliged to have recourse

† The name of this parish is said to have been derived from St. Irenaeus, Bishop of Lyons, to whom the church was originally dedicated. This saint, however, is not mentioned in Keith's Calendar of Scottish saints; and it is more probable that the church here was dedicated to St. Ninian, a bishop of the 5th century, who had various churches and chapels dedicated to him in Scotland. Ninian is still popularized into Ringan, and Kilringan could easily be corrupted into Kilrenny.

to the harbour of Easter Anstruther, which labours under the disadvantage that it can neither be left nor entered except at certain states of the tide. In these circumstances, it has been proposed to construct a new harbour for both places at Craignoon,—an advantageous situation, lying between the two burghs, and equally convenient for both: see CELLARDYKES.

**KILSPINDIE**, a parish in the lowland and eastern part of Perthshire. Its form is nearly a square 3 or  $3\frac{1}{2}$  miles deep, and presenting angles to the four cardinal points of the compass. It is bounded on the north-west by Scone, St. Martins, and two detached portions of Kinnoul; on the north-east by detached portions of Forfarshire and Caputh, and by Kinnaird; on the south-east by Errol; and on the south-west by Kinfauns, and the main body of Kinnoul. A narrow belt on the south-east side lies in the Carse of Gowrie, and is carpeted with a deep rich soil of mixed clay and moss, which produces luxuriant crops. All the other parts of the parish are hilly and moorish; but the slopes of the hills, toward the Carse, are cultivated to the summit, and are covered with a very fertile soil. Among the hills, too, are many pleasant little spots in hollows and glens, where the soil is eminently good and fructiferous. The summits and sides of the hills in the interior, and away to the northern extremity, are generally barren, and, in many places, are covered with a wet heathy sward, thickly sprinkled with those whitish or grey whinstone which indicate a poor, unkindly, bleak soil. The streams which touch or traverse the parish are all tiny rills, six in number. A considerable number of the population are linen-weavers, in the employ of the manufacturers of Dundee. Half-a-mile from the eastern angle is the little village of Rait, on the old road between Perth and Dundee, and once reckoned a sort of half-way-house. Half-a-mile north of it stands Fingask-castle, the elegant mansion of Sir P. Murray, Trierplead, Bart. Immediately south of the village is the mansion of Gaston-hall; and  $\frac{3}{4}$  of a mile south is the hamlet or kirk-town of Kilspindie. Two roads run eastward and westward through the parish; and one runs southward from Rait. Population, in 1801, 762; in 1831, 760. Houses 146. Assessed property, in 1815, £6,473.—Kilspindie is in the presbytery of Perth, and synod of Perth and Stirling. Patron, Robertson of Tullibeltoun. Stipend £224 17s. 3d.; glebe £20. Unappropriated tithes £67 11s. 5d. Schoolmaster's salary £34 4s. 4 $\frac{1}{2}$ d., with £10 fees, and a house and garden. There is a non-parochial school. The present parish comprehends the ancient parishes of Kilspindie and Rait, which were united prior to 1634. Vestiges of the church of Rait still exist.

**KILSYTH**, a parish in Stirlingshire; bounded on the north by Fintry and St. Ninians; on the east by Denny; on the south by Cumhernauld and Kirkin-tulloch in Dumbartonshire; and on the west by Campsie. It measures, in extreme length along its southern boundary,  $7\frac{1}{4}$  miles; in mean length, about 5 or  $5\frac{1}{4}$  miles; in extreme breadth, from the point where it is first touched by Carron-water on the north, to a small bend in the Kelvin opposite the parish-church on the south,  $4\frac{3}{4}$  miles; and, in superficial area, 24 square miles, or about 15,000 acres. Carron-water, coming in from the west, traces the northern boundary over a distance of  $3\frac{1}{2}$  miles, flowing in short and frequent sinuosities through a broad meadow, remarkable for its luxuriance, and for the joyousness of the scenes which it exhibits during the season of haymaking. Kelvin-water rises on the southern boundary near Gateside, and flows along that boundary, through a plain of small declivity and of a soft loamy soil, in a deep artificial channel  $5\frac{1}{2}$  miles to the point of its leaving the parish. It for-

merly straggled in many directions over the plain, in a very shallow channel, gorged up into a pool at every turn, overgrown with aquatic vegetables, diffusing, wide and far around it, a little sea at every flood, often ruining the hay and corn harvests, and rendering several fields, naturally rich in soil, incapable of cultivation; but in 1793 and 1794, a deep cut was made, capacious enough to contain the whole of its waters in the highest flood, flanked by low embankments admitting of being heightened, and all completed at the cost of about £600. Several streamlets which rise in the interior, and flow southward, are remarkable for the great numerousness and variety of the cascades and cataracts which they form, and for the vast aggregate amount of machinery which they drive. Bush-burn flows on the eastern boundary, and is a tributary or head-stream of Bonny-water. A mile, on the average, westward of it, flows another head-stream of that water, Auchincloch-hurn. Next are Shawend-burn and Garrel-hurn, both natural tributaries of the Kelvin, but now collected into a large artificial lake lying about a mile east of the town of Kilsyth, covering upwards of 70 acres, shut up within romantic banks, and serving as a reservoir to the Forth and Clyde canal. Further west are Quinnie-burn and Inchwood-burn, the latter flowing for about a mile on the boundary, and then running into the interior. Though none of the streams have more than 4 miles length of course, they all enrich the district by their water-power, and beautify it by their cascades, more than many considerable rivers do their far-stretching basins. Garrel-burn is the most noticeable, and—like all the streams in Scotland which bear the name of GARVALD [which see]—is rough, rapid, and turbulent. Within the distance of  $1\frac{1}{2}$  mile it falls 1,000 feet, and it necessarily forms many cataracts and waterfalls. Yet though its falls are very romantic, and in time of a great flood even awful, they are in no single instance deeper than 50 feet, and are not much distinguished by sentimental tourists. The southern district of the parish, or nearly one-half of the whole area, is the highest part of that strath which runs far westward from the Carse of Falkirk, and which is traversed by the Forth and Clyde canal. The surface, for a little way northward from the boundary, is nearly a dead level, little more than 160 feet above the level of the Forth at Grangemouth; and farther north it makes an undulating, broken, and rough ascent. Though very bare of trees, this district, in consequence of being well-cultivated and enclosed, presents a pleasing aspect. Between it and the belt of meadow-land along the northern boundary, the whole area swells boldly and variedly up in wild pastoral heights, a continuation of the Campsie fells, called the Kilsyth hills, lifting their summits from 1,000 to 1,368 feet above the level of the sea. The loftiest of these hills commands a prospect which, if less beautiful and variegated than that from the top of Benlomond, is richer and more extensive. Part of at least fourteen, if not sixteen counties, is under the eye at one glance. Scotland is seen from sea to sea, and over a still more extensive area from south to north. The contrast between the Lowland and the Highland part of the vast scene, strongly arrest the attention. "If you turn your eye southward from the frib of Forth to Clyde, and from Pentland and Galloway to the Ochils and Kilpatrick bills, the whole seems one extended fertile plain, or rather like a beautiful garden sheltered on all bands by the surrounding mountains, and divided into numberless beautiful enclosures, like the compactments of a flower garden. Nothing can possibly be a more striking contrast to this than the prospect to the north. For 70 or 80 miles it appears to be an end-

less succession of hill upon hill, overtopping one another till they are lost in the distance of the prospect, and blended with the blue clouds or azure sky. In a foggy day, or frosty morning, the prospect is truly picturesque. Being raised entirely above the fog, the whole plain to the south appears like the sea in a calm; while the hills on the north seem to rise like islands out of the main, or like the tumultuous waves of the ocean in a storm." The soil of the parish in that part of the southern plain which is skirted by the Kelvin, is a rich fertile loam, from 2 to 2½ feet deep; in the smaller part of that plain whose waters run eastward, it is thin, channelly, and siliceous; and in the upland districts it is in general sandy, or gravelly and light, and, in some places, almost wholly yields to a carpeting of small stones of from four ounces to two or three pounds weight. The climate, though moist, is salubrious. The agriculture of the parish probably exhibits no peculiarity except the historical one, that it introduced to Scotland the open cultivation of the potato. In 1728, when that esculent was known and treated only as a tender exotic, Thomas Prentice, a day-labourer here, set the example of raising it in the open field;\* and eleven years later, Robert Graham, Esq. of Tamraver, had here brought the practice to such perfection, that he rented lands near Edinburgh, Glasgow, Dundee, Perth, and Renfrew, for supplying the public.

The parish is singularly rich in both the number and the utility of its minerals. Coal is very abundant, stretching in thick seams from 4 to 16 fathoms beneath the surface, and probably existing in other and equally rich seams at a greater depth. That wrought in the western district is of prime quality; and that of the eastern district is a blind coal in great request, and exported along the canal to England, Ireland, and formerly to Russia. Limestone, consisting of a conglomeration of small shells of all sizes,

from an inch in diameter till they become invisible to the naked eye, and containing the greatest proportion of calcareous earth and the least proportion of sand of probably any limestone in Scotland, is extensively worked, and in great request. Freestone of a beautiful white colour, sometimes tinged with various shades of brown and yellow, easily chiselled when fresh from the quarry, and hardening on exposure to the air, offers an abundant supply to demands at a distance for the materials of ornamental masonry. Ironstone has, for three-fourths of a century, been worked here by the Carron company, and occurs in a variety of forms. Balls or round masses, uniform in shape, and having the outline of a flat-topped loaf or apple-pudding, were long considered the richest form in which it occurred. A very large vein of blackband ironstone has recently been discovered. A seam of stone, from 20 to 30 feet in thickness, has furnished an annual supply of many thousand tons for paving the streets of Glasgow. A vein of copper was wrought during last century by the York Building company. Large masses of grey and variegated dull-coloured flint, and specimens of yellow and red jasper, were discovered in 1791, or rather were then brought into notice; for the jasper possessing a very fine grain, had even at that date found its way to the lapidaries and seal-engravers of Edinburgh and London.

The parish all lies immediately on the Caledonian side of Antoninus' wall, and possesses, or has yielded up antiquities in keeping with its position. At Westerwood and Barhill, beyond the limits of the parish, are two distinct Roman forts; and corresponding to these, within the limits, are two Pictish forts, respectively at Cunny-park and at Balcastle. That at Balcastle is perhaps the most beautiful, regular, and entire of all the Pictish forts in Scotland: situated in a peninsula formed by two rills, rising on all sides at an angle of 45 degrees, 300 feet in diameter at its base, and 150 feet on its flat summit, and traditionally reported to be hollow in the interior. Several circular fortifications called 'Chesters,' the Gaelic name for camps, have a strong mutual resemblance, and bear such marks of high antiquity as to have been supposed coeval with the Roman forts, or of earlier construction than Antoninus' wall. Various tumuli once existed; but have been levelled in the course of agricultural improvement. Besides earlier monuments, there are some of the feudal times, and not a few of the eventful period of strife between the tyrannical Stuarts, and the martyry Preshyterians of Scotland. In the Barwood is an eminence, still called the Court-hill, where the haughty barons of the dark ages were accustomed to sit in judgment. Near Quinzie-burn is another eminence called the Gallow-hill, where their unrelenting sentences were put in execution. But by far the most interesting antiquities, or antiquarian reminiscences, are those connected with the battle of Kilsyth, the most disastrous in which the Covenanters acted a part, and at once the most sanguinary and the most victorious, whence the gallant but utterly mistaken Montrose plucked wreaths of blood-soaked garments in lieu of green laurel. This battle was fought on the 15th of August, 1645. The scene of action was the district immediately around the hollow which now contains the artificial lake or reservoir of the Forth and Clyde canal, a field so broken and irregular, that, did not tradition and history concur in identifying it, few persons could believe it to have been the arena of any military operation. Montrose and his men had hitherto been on the losing side,—for they could scarcely regard their victories over tumultuary armies at Tippermuir, Aberdeen, and Inverlochy, as having been serious

\* "The potatoe plant seems first to have been introduced into Britain by Sir Walter Raleigh, in the reign of Queen Elizabeth; but, for more than a century, its cultivation was exceedingly confined, owing probably to erroneous modes of cultivation, and to an improper manner of preparing it for food. In the reign of James I., this root was considered a great rarity, and sold so dear as 2s. per pound; and even so late as the beginning of last century, it seems not to have entered into the lists of agricultural produce. Bradley, who wrote about the year 1720, and who treated expressly of new improvements in horticulture, says of potatoes,—'They are of less note than horse-radish, radish, scorzonera, beets, and skerrit; but as they are not without their admirers, I will not pass them by in silence.' The district of England where the potatoe was first generally cultivated seems to have been Lancashire; and, about the same time, it was introduced to general use in Scotland. In 1728,"—as mentioned above,—"a day-labourer, living near Kilsyth, successfully raised a crop of potatoes on a little plot of ground attached to his cottage, and was fortunate enough to call the attention of his neighbours to the value of this hitherto neglected vegetable. By the annual sale of his produce he soon realized what was to him a fortune, a sum of £200; and meanwhile, the public attention being called to the plant, it gradually made its way. It was not, however, till after the year 1743, which was remarkable as a season of scarcity, that it came to be generally cultivated as a regular branch of field husbandry. I very well remember a near relative of mine mentioning an anecdote which showed that, so late as the year 1755, the potatoe was still a rarity in Wigtowshire. This incident was, that a lady had brought some potatoes in her pocket to church on Sunday, to present to a friend, as something quite new; but the string of her pocket breaking as she was in the act of going out on the dismissal of the congregation, she lost her burthen in the passage, which created considerable speculation. In England, with the exception of Lancashire, the progress of this esculent into a general cultivation was still lower. It was known in Yorkshire only as a garden-plant down to 1760; and in Somersetshire we must date its introduction as an article of farm produce, at least ten years later. After this period, however, the value of the potatoes came to be very generally appreciated; and, in the year 1796, in the county of Essex alone, no fewer than 1,700 acres were planted with this root, for the supply of the London market. Potatoes seem to have found their way into the Continent of Europe at a considerably later period than into England, but they came more rapidly into common use, and we may date their general cultivation there from about the middle of last century."—*Duncan's 'Philosophy of the Seasons.'*

achievements; and they took up their ground in Kilsyth to their own liking, to abide the onset of forces specially deputed against them by the Scottish council under the command of Baillie, an officer of reputation. But when Baillie arrived to make the attack, he found his authority all but entirely superseded by a committee, headed by Argyle, and shorn of power to exert subordinating influence on the portion of the army placed specifically under his control. Montrose's army consisted of only 4,400 foot, with 500 horse, while that of his antagonist amounted to 6,000 foot and 1,000 horse; but he had the high advantages of having chosen his ground, of possessing the supreme and the sole command, and of having arranged his troops in the best possible manner for confronting and overpowering his opponents. The weather being very hot, Montrose bade his fellows doff their outer garments,—a circumstance which gave rise to a tradition that they fought naked; and, making a general assault, he almost instantly—aided or rather led by the impetuosity of his Highlanders—threw his antagonists, reserve and all, into such confusion, that prodigies of valour, on the part of their nominal commander, utterly failed to rally even a portion of them, and incite them to withstand the foe. A total rout taking place, Montrose's forces cut down or captured almost the whole of the infantry, and even coolly massacred many of the unarmed inhabitants of the country. Though Baillie's cavalry, for the most part, escaped death from the conqueror, they very numerously met it in fleeing from his pursuit across the then dangerous morass of Dullater bog. Incredible as it may seem, only seven or eight persons in Montrose's army were slain. "It belongs not to me," says the Rev. Robert Rennie, in the Old Statistical Account, "to give any detail of that engagement, in this place. Suffice it only to say, that every little hill and valley hears the name, or records the deeds of that day; so that the situation of each army can be distinctly traced. Such as the Bullet and Baggage-know, the Drum-burn, the Slaughter-hog or hollow, Kill-e-many butts, &c. &c. In the Bullet-know and neighbourhood, bullets are found every year; and in some places so thick, that you may lift three or four without moving a step. In the Slaughter-hog, and a variety of other places, bones and skeletons may be dug up everywhere; and in every little hog or marsh for 3 miles, especially in the Dullater bog, they have been discovered in almost every ditch. The places where the bodies lie in any number, may be easily known; as the grass is always of a more luxuriant growth in summer, and of a yellowish tinge in spring and harvest."—In 1769-70, when the Forth and Clyde canal was cut through Dullater hog, myriads of small toads, each about the size of a nut or turkey hean, issued from the morass, hopped over all the adjacent fields northward to the extent of several miles, and were so numerous as to resemble in motion the rebound of hail-stones in a heavy shower, and to count 10, or even 20 or 30, in the space of a square yard. They all went directly north, yet were never seen beyond the summit of the hill, nor anywhere in considerable number the following spring.—The parish is traversed near its southern boundary, and in its extreme length, by the Glasgow and Stirling turnpike by way of Kilsyth; and along the whole of that boundary, it is nowhere more than half-a-mile, and generally not more than 200 or 300 yards distant from the Forth and Clyde canal. Sir William Livingstone, who became a senator of the college of justice in 1609, and the Rev. John Livingstone, a man of letters and piety, who held pastoral charges successively in Ireland, at Stranraer, and at Ancrum,

were natives of Kilsyth. Population, in 1801, 1,762; in 1831, 4,297. Houses 560. Assessed property, in 1815, £9,317.—Kilsyth is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £271 6s. 7d.; glebe £20. Unappropriated teinds £78 12s. 8d. The parish-church was built in 1816. Sittings 850.—A Relief meeting-house, belonging to a congregation established about 70 years ago, cost £1,000. Sittings 559. Stipend £120, with manse and glebe. There are two small Independent and Baptist congregations. A Wesleyan Methodist chapel was built here in 1840. According to ecclesiastical survey in 1836, the population then was 4,460; of whom 2,941 were churchmen, and 1,453 were dissenters.—The parish consists of two haronies, the East and the West, called respectively Monaebrugh and Kilsyth. The latter, till 1649, belonged to Campsie; and did not impose its name on the parish, to the expulsion of the ancient one of Monaebrugh, till the close of the 17th century. In the western harony, at a place still called Chapel-green, there was anciently a chapel. Supposing this to have been dedicated to a Romish saint of the name of Cetae, the word Kilsyth may be derived from that name, with the prefix Cella, a church, chapel, or burying-ground. Or the word may be an abbreviation of the Gaelic *Kil-abhuinnisith*, 'Church of the River of peace,' and the brook in the vicinity of the church may have been considered as haunted by the *Daoine Sith*, or Scottish fairies, called 'men of peace,' for fear of their malign influence. The parish was anciently a parsonage. There are three parochial schools, and two non-parochial, the former situated respectively in the burgh and in the west and east haronies. Salary of the burgh schoolmaster, who employs an assistant, £30, with £38 fees, £9 other emoluments, and a dwelling-house; of the east harony schoolmaster £12 6s. 3d., with £31 fees, £1 1s. other emoluments, and a lodging; of the west harony schoolmaster £9, with £23 fees, £22 other emoluments, and a dwelling-house. Average attendance at all the five schools, 365; and at evening schools, 150. Kilsyth is remarkable as the scene of two religious revivals which occurred respectively in the years 1742 and 1839, and excited great interest throughout the country. Narratives of them were written and published by the Rev. Mr. Rohe and the Rev. Mr. Burns, the incumbents at their respective dates.

KILSYTH, the capital of the above parish, a burgh-of-harony, and a considerable village, stands  $\frac{1}{2}$  of a mile north of the Forth and Clyde canal;  $5\frac{1}{2}$  miles from Cumbernauld;  $12\frac{1}{2}$  from Glasgow; 12 from Falkirk; and 15 from Stirling. Seen from the banks of the canal or from the neighbouring heights, it seems to be bleakly nestled in a hollow, and has a dingy and forlorn appearance. Its street-arrangements are straggling and irregular; and its edifices indicate the pervading poverty, or very narrow competency, of a community of cotton-weavers subordinate to Glasgow. The original village ran along the banks of the Garrel, at a time, of course, when that stream was not diverted toward its present reservoir receptacle; and it then bore the name of Monaebrugh. But about the year 1665, an entirely new town was built on a small rising ground, called Moat-hill, and took the name Kilsyth from the title of the proprietor. Soon after the new erection, the recently-built houses being at an inconvenient distance from the stream, water was conveyed in earthen pipes from a spring about  $\frac{1}{4}$  of a mile distant, and stored in a well or cistern near the centre of the new town, bearing an inscription of the date 1676. Since that period, and especially in 1716, other cisterns were erected. The town very recently began to enjoy the addi-

tional luxury of being lighted at night with gas. The parish-church stands at the southern extremity, and is the only individual feature of the burghal landscape which draws attention. In the town are a library and a savings-bank. Fairs are held in January, March, May, August, and November. Nearly the whole support of the place is weaving. The number of looms, in 1812, was between 400 and 500; in 1828, it was 800; and in 1838, it was 1,020. Only six, in the last of these years, were harness-looms; all the other 1,014 being plain. Kilsyth is a burgh-of-barony, erected by a charter from George IV., dated 7th August, 1826. The magistrates are a bailie, a dean-of-guild, a treasurer, and 4 councillors. There are also a clerk and a procurator-fiscal.—The right of election is in the inhabitants having right by feu or lease of 19 years to a house and garden of the annual value of £5, and who have been admitted burghesses. The dues of the burghess-tickets are 5s.—The bailie and councillors usually remain two years in office; but the election is annual.—The dues of entering burghess, and the fines imposed on delinquents, are applied to defray the expenses of administering justice.—Custom dues were at one time levied, but have been discontinued for a considerable time, in consequence of the burghesses refusing to pay; and strangers also have disputed payment. The burgh has no funds to try its right, which besides is, it is said, rather involved in doubt.—States of the revenue and expenditure are made out annually, and are open to the inspection of the community. The revenue arises at present wholly from burgh entries and fines, and is not adequate to meet the expenditure.—The burgh has no property, and there are no taxes or stents imposed by the magistrates.—The jurisdiction is confined to petty offences. No stated courts are held. Population, in 1835, 2,500.—Three-and-a-half miles north-east of Kilsyth, stands the small village of Banton, the site of the East barony school.—Half-a-mile north of the town are the ruins of Kilsyth-castle, anciently the baronial residence of the Kilsyth, and junior branch of the family of Livingstone. Sir James Livingstone offered to hold out the castle against Cromwell, and otherwise maintained loyalty to the house of Stuart during the period of the interregnum, and at the Restoration was created Viscount Kilsyth, and Lord Campsie. His second son, William, the third Viscount Kilsyth, engaged in the rebellion of 1715, was forfeited, and died in Holland. He married first the widow of Viscount Dundee, who brought him a son, and next Barbara, daughter of Macdougall of Mackerston, who brought him a daughter. The family burying-vault, 16 feet square, having been entered, in 1795, for the purpose of plunder, the embalmed bodies of one of these ladies—most probably the second—and her infant, were found in a state of apparently as complete preservation as immediately after death. The vault is now so closed up as to be inaccessible.

**KILTARLITY**, a very large and mountainous parish in Inverness-shire, formed by the union of the parishes of Kiltarlity and Conveth; bounded on the north-east by Kirkhill; on the east by Durriss; on the south by Urquhart; and on the west by Kilmorack. It is, including the mission of Strathglass, 40 miles in length, and about 8 in breadth, containing 240 square miles. There are three lakes in the parish: viz., Loch-Bruiaeh, Loch-Gorm, and Loch-Neattie; and it is watered by the Beauly, and the three streams which form it. There are several elegant mansion-houses, of which Beaufort, the seat of the Frasers of Lovat, and Belladrom, are the most remarkable. Population, in 1801, 2,588; in 1831, 2,715. Houses 601. Assessed property

£3,837.—This parish is in the presbytery of Inverness, and synod of Moray. Patron, Fraser of Lovat. Stipend £239 3s.; glebe £20. Church built in 1829; sittings 790.—There is a Roman Catholic chapel at Eskiesdale; sittings 500. Stipend £30. Schoolmaster's salary £25 13s. 3d. There are three private schools.

**KILTEARN**, a parish in Ross-shire, on the north side of the frith of Cromarty, extending 6 miles along the shore, and about 20 miles into the hills. It is bounded by Allness on the east; by Contin and Lochbroom on the north; by Dingwall and Fodderty on the west; and by Cromarty-bay on the south. The hilly or mountainous district is, for the most part, wild and uncultivated, consisting of a mass of hills covered with heath, and interspersed with extensive tracts of moor and mossy ground, and valleys covered with coarse grass. Along the coast the parish is arable, and exhibits a rich appearance; the fields are regularly enclosed, and several elegant seats are seen, surrounded with thriving plantations. The total number of cultivated acres in the parish is about 3,000. About five-sixths of the parish belongs to the family of Munro of Fowls, a family long distinguished for the military characters it has produced. Sir Henry Munro, who died in 1781, was said to have been the 22d baron of Fowls who had enjoyed the estate of Kiltearn by regular lineal descent. Benuaish, or Benwyvis, is the most lofty mountain in the parish: see **BENWYVIS**. Besides the **AULTGRAAD** [which see] and the Skiack, which, formed by the union of several mountain-streams, falls into the sea about half-a-mile from the mouth of the Aultgraad, there are several other streamlets, which take their rise from lakes among the mountains. The principal lake is **LOCH-GLASS**: which see. There are flattering indications of coal in the district; but no vein of consequence has yet been discovered. Several of the hills contain lead-ore; and shell-marl of a rich quality is abundant. Near the house of Clyne is a remarkable piece of antiquity, which appears to have been used by the Druids as a place of worship. It is an oval figure, formed with large stones set upright, similar—though on a smaller scale—to Stonchenge in Wiltshire. There are the remains of several ancient chapels. Population, in 1801, 1,525; in 1831, 1,605. Houses 325. Assessed property, in 1815, £3,897. The real rental was estimated, in 1839, at £5,300. The only village is that of Evantoun, which has sprung up within this century, and contains a population of about 500. This parish, formerly a vicarage, is in the presbytery of Dingwall, and synod of Ross. Patron, the Crown. Stipend £249 9s. 6d.; glebe £12. Church built in 1791; sittings 524.—There is a United Secession chapel at Evantoun; sittings 400.—Schoolmaster's salary £30, with about £20 fees. There is a private school at Evantoun.

**KILVICEUEN**, a parish in the island of Mull, united to that of Kilmichen. See **KILFINCHEN**.

**KILWINNING**, a parish in the district of Cunningham, Ayrshire. It is bounded on the north by Dalry; on the east by Stewarton; on the south by Irvine and Stevenstone; and on the west by Ardrossan. Its greatest length is about 7 miles; its greatest breadth about 5 miles; and its superficial area 17½ square miles. Along the east and north-east, the surface is hilly; and thence to the south, south-west, and west, it slopes gently down in knolly or waving curves. Many of its heights and billocks are crowned with plantation, and are agreeable features in a lovely landscape. The southern extremity is beautified by the mansion and part of the pleasure-grounds of **EGLINTON-CASTLE**: see that article. Three mosses, the largest upwards of 200

acres in extent, and from 12 to 16 feet in depth, occupy separate localities, and furnish supplies of excellent peats. Almost all the rest of the parish is fully enclosed, richly cultivated, and sedulously devoted either to the plough, or more specially to the dairy. The soil, over nearly one-half of the whole surface, is a stiff clay; and over the other half it is a light sandy loam. The climate is exceedingly moist, rains being both frequent and severe, yet it seems not unhealthy,—several persons having lived considerably beyond the age of 80, and one to that of 104, during 40 years preceding the date of the Old Statistical Account. Coal abounds, and is mined in several pits, and exported. Limestone, prime in quality, and plentiful in quantity, occurs in almost every district. Freestone is wrought in several quarries, and is in request beyond local limits as a building material. A chalybeate spring wells up in the vicinity of the town, and has been thought an antidote to nervous complaints. A small lake, called Ash-en-yard or Ashgrove-loch, situated at the south-western extremity, abounds in excellent pikes and perch. Garnock and Lugton-waters intersect the parish, the former south-eastward, and the latter south-westward, making a confluence about a mile below Eglinton-castle; and are well-stored with different sorts of very fine trouts, and with salmon. But the GARNOCK [which see] often does damage by its inundations. Dusk water, which also traverses the parish, issues from a lochlet in the extreme north corner of the parish of Beith, flows  $\frac{3}{4}$  of a mile eastward, and  $1\frac{1}{4}$  mile southward, and then, over a remaining course of  $7\frac{1}{2}$  miles, runs south-westward to the Garnock,  $1\frac{3}{4}$  miles above the town of Kilwinning. All the streams furnish an opulent amount of water-power for driving machinery; and they have aggregately on their banks a considerable number of small mills. The parish is cut from north to south by the Glasgow and Ayr railway, and by two turnpikes, and from north-east to south-west by the turnpike from Glasgow to Saltcoats. Population, in 1801, 2,700; in 1831, 3,772. Houses 541. Assessed property, in 1815, £13,786.—Kilwinning is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend £266 12s.; glebe £14 10s. Unappropriated teinds £781 17s. 10d. The parish-church was built in 1771. Sittings 1,030. A parochial missionary, a licentiate of the Establishment, assists in pastoral superintendence, and in preaching, and receives upwards of £40 salary, from the Earl of Eglinton, the minister, and evening collections. In the town are two dissenting places of worship. The United Secession congregation was established in 1825. Their meeting-house is a plain oblong building, occupied for worship only in the upper part; let in the lower flat as a dwelling-house; and built in 1824 at a cost of nearly £300. Sittings 250. Stipend not less than £80. The Original Seceder congregation was established in 1758. Their present chapel was built in 1825, at a cost of more than £600. Sittings between 500 and 600. Stipend £128, with a house and garden. According to a survey made by the parish-minister in 1835, the population then was 4,114; of whom 2,561 were churchmen, 708 were dissenters, and 842 were persons unconnected with any religious body,—the last class including all persons who were not communicants in some church, except the members of families whose heads were communicants.\* There are 7 schools, conducted by 7 teachers, and attended by a maximum of 390 scholars.—Six of the schools are non-parochial; and 2

of that number afford tuition in the classics. Parochial schoolmaster's salary £37, with fees, and £20 other emoluments.—The parish was anciently a vicarage of the monastery of the town, and derived its name from St. Winning, a Scottish saint of the 8th century. Near the manse is a fountain still called Winning's well; and on the 1st of February is held a fair, called Winning's-day fair. Soon after the erection of the abbey, Kilwinning was known, in all the circumjacent country, under the name of Saig-town, thought by some to be a corruption of Saints'-town; and by this name it still is, or very recently was, well known to the inhabitants. Before the Reformation the church of the abbey served as the parish-church; and even when the abbey itself was demolished, the church was allowed to stand, and continued to be used till the erection of the present edifice.

The abbey of Kilwinning was founded in 1140, for a colony of Tyronensian monks from Kelso, by Hugh de Morville, lord of Cunningbam, and Lord High Constable of Scotland, and dedicated, like a church which preceded it, to St. Winning. Robert I., Hugh de Morville, John de Meneleth, the lord of Arran, Sir William Cunningham of Kilmaurs, Sir John Maxwell of Maxwell, and other opulent and powerful personages, endowed it with very extensive possessions. Besides granges and other property, the abbey claimed the proprietorship of the tithes and pertinents of 20 parish-churches,—13 of them in Cunningham, 2 in Arran, 2 in Argyleshire, and 2 in Dumbartonshire. "According to the traditional account of the entire revenue of the monastery," says the statist in the Old Account, "it is asserted that its present annual amount would be at least £20,000 sterling." From Robert II. the monks obtained a charter, erecting all the lands of the barony of Kilwinning into a free regality, with ample jurisdiction; and they received ratifications of this charter from Robert III. and James IV. The monks appear to have been unusually expert in the chicanery of priestcraft, and to have enthralled the judgments and superstitious feelings of men in the dark ages of their influence, fully more than most of their contemporaries. They made so juggling a use of some pretended relics as, on the credulous faith of their virtues, to draw many offerings; and they, at the same time, made such an exhibition to the public eye of shallow austerities, as to win for themselves the credit of being superhuman in character. James IV., when passing their place in 1507, made an offering of 14 shillings to their relics. Hoveden, thoroughly gulled with their base legends, gravely relates, that a fountain in the vicinity of their monastery ran blood for eight days and nights, in the year 1184. The last abbot was Gavin Hamilton, of the family of Rosslock, a hot opponent of John Knox, and a zealous partizan of Queen Mary. In 1538, he succeeded James Bethune, archbishop of Glasgow, as abbot; and in 1571, was killed in a skirmish in the Canongate of Edinburgh. According to tradition, the buildings of the abbey, when entire, covered several acres, and were stately and magnificent. In 1560, Alexander, Earl of Glencairn, one of the most active and distinguished promoters of the Reformation, acting by order of the States-general of Scotland, almost destroyed them, leaving only the church and a steeple, and so totally demolished what was strictly monastic, that all traces of even the foundations of the walls have long ago utterly disappeared. In 1603—after the abbey had been under the commendatorship, first of the family of Glencairn, and next of the family of Raith—its lands and titles, and various pertinents, were erected into a temporal lordship in favour of Hugh, Earl of Eglinton. Towards the close of last

\* A survey made at the same time by some dissenters, stated the population to be 4,135; of whom 3,115 were churchmen, and 1,020 were dissenters.

century, the ruins which remained were repaired, at very considerable expense, by the Earl of Eglinton of the period; and, from a drawing of them, made in 1789, they are exhibited in Grose's Antiquities.

KILWINNING, the capital of the eponymous parish, and a populous manufacturing village, is pleasantly situated on a gentle rising ground on the right bank of the river Garnock; 2½ miles from the nearest part of the firth of Clyde; 3½ miles north-east of Salt-coats; 2¾ miles north-west of Irvine; and 3¾ miles south of Dalry. The town is ancient, and has a dull, antiquated, dingy appearance; yet borrows sufficient splendour from the loveliness of its environs, and from reminiscences of its historical importance, and from the beautiful and partially Gothic form of its parish-church, with an elegant modern spire surmounting the tower of its ancient monastery, to be an object of no little interest. It consists principally of one street, winged by some lanes, and of some rows of modern houses; and stretches westward from the river. The approaches to it are shaded with trees, and flanked by beautiful fields. At its east end is a height, called the Crosshill, on which the monks anciently set up what they reckoned the symbol of Christianity, to receive the initiatory homage of the pilgrims who crowded to their shrines. Part of the town is suburban, consisting of an attached or adjacent village called Byres. The ancient seat of monkish indolence and gilded knavery is now the scene of manufacturing industry; and acquires from the humble toils of its busy inhabitants, and especially from the moral enlightenment of a portion of their number, unutterably higher attractions than it ever possessed in the pompous fooleries and rueful grandeur of the cowed fraternity who drew flocks of victims to their sumptuous ecclesiastical palace. The rattle of the loom, and the humble prattle of Christian intelligence, as substitutes for the choral chaunting of the missal, amply compensate by their intrinsic utility all that they lose in poetical effect. In the various departments of silk, woollen, and cotton, the town had, in 1828, 370 looms, and in 1838, 350. In the latter year, 60 of the looms were harness, and 290 plain. Near the end of last century, an extensive tannery, and 3 small factories, 1 for carding cotton, and 2 for spinning it, were established. With the exception of a few families, the whole population, not only of the town, but of the landward part of the parish, are of the working-classes, principally hand-loom weavers, shopkeepers, labourers, and colliers. The town has a branch-office of the Commercial Bank of Scotland; and it has two annual fairs. Nor is the place deficient, proportionately to its bulk, in charitable or friendly institutions.

A remarkable fact connected with the town—one which occasions its name to figure prominently to the present day in the proceedings of the gaudy and flaunting associations, so extensively popular in our country, who endeavour to make up by parade and by boasted consciousness of importance, what they want in usefulness and meaning—is, that it was the cradle of free-masonry in Scotland, and, till not very many years ago, was regarded with filial feelings, or with those of nurslings, by all the lodges in the kingdom. The community and conservation of a real or supposed secret—especially considering how unreserved and open benevolence, or true goodness, is in its abstract nature—seems the most questionable of all bonds of union, short of such as are positively criminal, for forming and maintaining voluntary associations; yet it appears, with a numerous proportion of men, to have in most ages possessed peculiar attractions, and to have, in some instances, been preferred to other bonds of union, at the risk

even of proscription and suffering. The Eicunian mysteries attained great respectability among the ancient Greeks, and were protected by law. A class of artificers, held together by the Dionysian mysteries, too, possessed at one time the exclusive privilege of erecting temples and theatres, and were numerous in Syria, Persia, and Western Hindostan. These ancient associations, on account of their ceremonies all having connexion with pagan superstitions, were proscribed by the Christian Roman emperors; yet they are believed to have been secretly continued, under the pretence of ordinary assemblies for amusement, and with a diminished amplitude in the observance of pagan rites. Modern masonry—to the uninitiated, at least, and almost certainly to even the initiated—is so obscure in its early history and character, that it neither, on the one hand, can it be distinctly traced to either a connexion with these or other ancient fraternities, or to some comparatively modern outburst of the common tendency of mankind to associate themselves in clubs and select communities; nor, on the other hand, can it be pronounced to have had for its original object what seems mainly to be its modern one—a pompous and ceremonial species of conviviality, or the maintenance of freer notions, *bona fide* on the subject of architecture, than the circumstances of an iron age permitted to be public. All that can fully be affirmed is, that, about the time of the crusades, associations of free-masons, whose members had a formal initiation, and distinguished one another by secret signs, appeared numerous in Europe, and acted a conspicuous part, if not in the introduction of the Saracenic, or, as it is usually called, the Gothic architecture, at least in the superintendence of most of the magnificent erections in which it was exemplified. Sir Christopher Wren, as quoted by Grose—taking quite as high a flight in positiveness of statement as could be at all safe—says, “The Holy war gave the Christians who had been” in the east “an idea of the Saracen works, which were afterwards by them imitated in the west; and they refined upon it every day, as they proceeded in building churches. The Italians (among which were still some Greek refugees), and with them French, Germans, and Flemings, joined into a fraternity of architects; procuring papal bulls for their encouragement, and particular privileges. They styled themselves free-masons, and ranged from one nation to another, as they found churches to be built (for very many in those ages were every where in building through piety or emulation). Their government was regular; and where they fixed near the building in hand, they made a camp of huts. A surveyor governed in chief; every tenth man was called a warden, and overlooked each nine; the gentlemen in the neighbourhood, either out of charity or commutation of penance, gave the materials and carriages.” [Antiquities. Vol. i. Pref. Note in p. 114.] One of these fraternities either voluntarily came, or were invited over from the continent, to take part in building the abbey of Kilwinning; and when on the spot, they seem to have communicated their secret, whatever it was, to some of the more respectable natives who had no practical connexion with the art of masonry, and thus to have formed the earliest lodge of Scottish free-masons. But the fraternities on the continent, by holding their meetings with shut doors, by binding themselves under the sanction of an oath to keep all the uninitiated, no matter how princely or prelatial, unacquainted with their mysteries, and especially by fraternizing with the usurping and dangerous military order of Knights Templars, speedily drew upon themselves such jealousies, anathematizings, proscriptions, and persecutions, as issued in their extinction. The parent

national lodges of Kilwinning in Scotland, and York in England, with whatever offshoots they had throughout the country, doubtless shared in the general odium; and though they survived the shock, they continued for ages in obscurity. During the reign of James I., however, Scottish free-masonry walked abroad with the high bearing which has ever since characterized it. That monarch, not long after his return from England, patronized the mother-lodge of Kilwinning; and presided as grand-master till he settled an annual salary, to be paid by every master-mason of Scotland to a grand-master, who should be chosen by the brethren, and approved by the Crown,—who should be nobly born, or a clergyman of high rank and character,—and who should have his deputies in the different towns and counties of Scotland. James II. conferred the office of grand-master on William St. Clair, Earl of Orkney and Caithness, and made it hereditary in the family of his descendants, the Barons of Roslin. Earl William and his successors held their head-courts, or assembled their grand-lodges, in Kilwinning, as the seat of the earliest fraternity. An uncommon spirit for free-masonry becoming diffused, many lodges were formed throughout the kingdom, receiving their charters of erection from the Kilwinning lodge, and combining its name with their own in their distinctive titles. In 1736, William St. Clair of Roslin, obliged to sell his estates, and destitute of an heir, resigned to an assembly of the lodges of Edinburgh and its vicinity, all claim to the grand-mastership, and empowered them, in common with the other lodges of the country, to declare the office elective. On St. Andrews'-day of that year, the representatives of about 32 lodges received the resignation, elected William St. Clair himself their grand-master, set an example which has ever since been followed, of testifying respect for the part he acted, and constituted themselves into the grand-lodge of Scotland,—an institution whose influence or power has in a great measure shorn the ancient Kilwinning lodge of its peculiar honours, or at least superseded it in its paramount place among the lodges. Yet, whoever takes any interest in free-masonry, still looks with feelings of pride or veneration to the Kilwinning lodge, and no doubt gives a ready response to the remark of the author of the *Beauties of Scotland*, “that the humble village of Kilwinning, considered as the spot where this order was preserved while it was extinguished on the continent of Europe, and from which it was to rise from its ashes, and spread to the rising and the setting sun, enjoys a singular degree of importance, which it could scarcely have obtained from any other circumstance.” “The records of the Kilwinning lodge,” says the *Old Statistical Account*, “contain a succession of grand-masters, charters of erection to other lodges, as daughters of the mother-lodge, &c. The Earls of Eglintoune have successively patronized this lodge. Some years ago, the present earl made a donation to the fraternity of a piece of ground, for building a new and very elegant lodge; and, with many other gentlemen, anxious to preserve the rights of the very ancient and venerable mother-lodge, liberally contributed to its erection. There is a common seal, expressive of the antiquity of the mother-lodge, and of the emblems of the ancient art of masonry, and by which charters, and all other public deeds of the society, are ratified.”

Archery is practised to the present hour at Kilwinning, as an elegant and manly amusement. Though the town, in this particular, exhibits only a taste which is possessed in common with it by Edinburgh, Musselburgh, Kelso, Peebles, St. Andrews, Irvine, and other places, yet it outvies them all in the antiquity of its company of archers, and in the principle

of utility, or of compliance with regal acts for regulating the military system of the state, on which they were originally associated. The company are known, though imperfectly, and only by tradition, to have existed prior to the year 1488; and from that year downward, they are authenticated by documents. Originally enrolled by royal authority, they appear to have been encouraged by the inmates of the abbey; and they, in consequence, instituted customs which easily secured their surviving the discontinuance of archery as the principal art of war. Once a year, generally in the month of June, they make a grand exhibition. The principal shooting is at a parrot, anciently called the papingo, and well known under that name in heraldry, but now called the popinjay. This used to be constructed of wood; but in recent years has consisted of feathers worked up into the semblance of a parrot; and is suspended by a string to the top of a pole, and placed 120 feet high, on the steeple of the monastery. The archer who shoots down this mark is called “the Captain of the popinjay;” he is master of the ceremonies of the succeeding year; he sends cards of invitation to the ladies, and gives them a hall and supper; and he transmits the honours to posterity by attaching to the badge of them, which was temporarily in his possession, a medal with suitable devices. The badge received and transmitted is now, and since 1723 has been, a silver arrow; but from 1488 to 1688, it was a piece of vari-coloured taffeta called a ‘benn,’ and worn as a sash; and from the latter date till 1723, it was a piece of silver-plate. Every person acquainted with the national novels of Scotland, will recognize the Kilwinning festival, though fictioned to be on a different arena, in the opening scene of *Old Mortality*, when young Milnwood achieves the honours of captain of the popinjay, and becomes bound to do the honours of the Howff. Another kind of shooting is practised for prizes at butts, point-blank distance, about 26 yards. The prize, in this case, is some useful or ornamental piece of plate, given annually to the company by the senior surviving archer.—The town is governed by a baron-haillie. Population between 2,000 and 3,000.

KINCARDINE, a hilly parish in the counties of Ross and Cromarty, above 35 miles in length, and from 5 to 20 miles in breadth. It is bounded by Assynt and Criech on the north; by Eddertown, Rosskeen, and Fodderty on the east and south; and by Lochbroom on the west. At its east end it is very narrow; but it gradually widens, till, at the western extremity, where ‘the forest of Balnagown’—which is a group of rude hills of great extent—is situated, it is 20 miles in breadth. It consists of a number of straths or glens, in which run several rivulets, and of mountains covered with fine soft heath, and affording excellent sheep-walks. The coast of the frith of Dornoch, which also bounds the parish on the north and east, is flat and sandy, affording safe harbours for small vessels. There are several salmon-fishings on the frith, and on the waters of the Oyckel and Carron. The village of Kincardine is situated on the coast, with a small harbour, about 14 miles west of Tain. Nigh to the church is a piece of ground walled in, and terminating in a large semicircle appropriated to that ancient military exercise known by the name of ‘Weapon-shawing.’ Knockbirny, a mountain which divides this parish from Assynt, abounds with marble, both white and coloured; and, on Cairnchuinaig, topazes similar to those of Cairngorm have been found. Population, in 1801, 1,863; in 1831, 1,887. Houses 441. Assessed property £1,997. Real rental, in 1840, about £5,000.—This parish is in the presbytery of Tain, and the synod of Ross. Patron, the Crown. Stipend £278 2s. 1

glebe £8 16s. Church built in 1799; sittings 426. Part of the south-west extremity of the parish, running 30 miles west till it meets the parish of Lochbroom, has been annexed *quoad sacra* to the Government church at Croick, about 12 miles from Bonarbridge. The mission of Rosehall extends into this parish and that of Criech.—The schoolmaster has the maximum salary; there are seven private schools in the parish.

In this parish is situated the mountain of Craighonichan, or Craighcaineadhan.—'the Rock of Lamentation,'—where the gallant Marquis of Montrose fought his last battle, and was defeated by Colonel Strachan. It was Saturday, the 27th April, 1650, when Strachan's officers were deliberating whether they should move immediately forward, or wait till Monday, "and so decline the hazard of engaging upon the Lord's day," when notice being brought that Montrose had advanced from Stratboyckel to Carbisdale,—a movement which brought him 6 miles nearer to them,—they made arrangements for attacking him without delay. Strachan advanced without observation as far as Fearn, within about 2 miles of Montrose, where he concealed his men on a muir covered with broom, whence he sent a party of scouts under Captain Munro, to reconnoitre Montrose. Munro soon returned and reported that Montrose had pushed out a body of 40 horse to ascertain their movements. In order to deceive this body, Strachan ordered one troop of horse out of the broom, which being the only force observed by Montrose's scouts, they returned and reported to Montrose what they had seen. This intelligence threw Montrose completely off his guard, who, conceiving that the whole strength of the enemy consisted of a single troop of horse, made no preparations for defending himself. In the meantime, Strachan formed his men into four divisions. The first, which consisted of about 100 horsemen, he commanded himself; the second, amounting to upwards of 80, was given in charge to Hacket; and the third, also horse, to the number of about 40, was led by Captain Hutcheson. The fourth division, which was composed of a body of musketeers belonging to Lawer's regiment, was commanded by Quarter-master Shaw. The deception which had been so well-practised upon Montrose by Strachan, in concealing the real amount of his force, might not have been attended with any serious effect to Montrose, but for another stratagem which Strachan had in reserve, which proved his ruin. Strachan's scheme was first to advance with his own division to make appear as if his whole strength consisted at first of only 100 horse, and, while Montrose was impressed with this false idea, to bring up the other three divisions in rapid succession, and thus create a panic among Montrose's men as if a large army was about to attack them. This contrivance was crowned with the most complete success. Montrose little suspecting the trick, was thrown quite off his guard; alarmed at the sudden appearance of successive bodies of cavalry, he immediately gave orders for a retreat to a wood and craggy hill at a short distance in his rear; but before Montrose's men could reach their intended place of retreat, they were overtaken when almost breathless, as they were about entering the wood, by Strachan's troopers, who charged them violently. The foreign troops received the charge with firmness, and, after discharging a volley upon the horse, flew into the wood; but most of the Orcadians threw down their arms in terror and begged for quarter. The Munros and Rosses followed the Danish troops into the wood and killed many of them. Two hundred of the fugitives in attempting to cross the adjoining river were all drowned. Mon-

rose for some time made an unavailing effort to rally some of his men, and fought with his accustomed bravery; but having his horse shot under him, and seeing it utterly impossible longer to resist the enemy, he mounted the horse of Lord Fren draught, which that young and generous nobleman proffered him, and galloped off the field; and as soon as he got out of the reach of the enemy, he dismounted, and throwing away his cloak, which was decorated with the star of the garter, and his sword, sought his safety on foot. The slaughter of Montrose's men continued about two hours, or until sunset, during which time 10 of his best officers and 386 soldiers were killed. The most conspicuous among the former for bravery was Menzies, younger of Pitfoddes, the bearer of the black standard, who repeatedly refused to receive quarter. Upwards of 400 prisoners were taken, including 31 officers, among whom were Sir John Hurry and Lord Fren draught, the latter of whom was severely wounded. Among the prisoners taken were two ministers. This victory was achieved almost without bloodshed on the part of the victors, who had only two men wounded. One of their troopers was drowned in his eagerness pursuing the party of royalists who perished in the river. After the slaughter, the conquerors returned thanks to God on the open field for the victory they had obtained, and returned to Tain, carrying the prisoners along with them. For several days the people of Ross and Sutherland continued to pursue some unfortunate stragglers, whom they despatched. The result was most calamitous to Orkney, as appears from a petition and memorandum by the gentlemen of Orkney to Lord Morton in 1662, in which it is stated, that there was scarcely a gentleman's house in that country "but lost either a son or a brother." The particulars of Montrose's flight and capture are detailed in our article ASSYNT.

KINCARDINE, a parish in the district of Monteith, about the middle of the southern verge of Perthshire. It consists of two parts, both bounded on the south by the river Forth, and detached from each other, at the average distance of  $2\frac{1}{2}$  miles, by the southern part of the parish of Kilmadock. The main body or eastern section stretches between the Forth and the Teith, from their point of confluence westward, 4 miles in a straight line up the former, and  $4\frac{1}{4}$  up the latter; and measures on its west side, or along the boundary with Kilmadock,  $2\frac{3}{4}$  miles. The lesser or western section stretches northward between Port-of-Monteith on the west, and Kilmadock on the east, to an extended wing of the latter parish on the north, in a stripe of mean length  $3\frac{1}{2}$  miles, and of mean breadth  $1\frac{1}{4}$  mile. The Teith divides the main body from Kilmadock and Lecropt on the north-east; and the Forth divides both sections from Stirlingshire on the south. In consequence of the Forth bending from its general easterly course, and making a sweep  $1\frac{1}{2}$  or  $1\frac{3}{4}$  mile northward to the point of junction with the Teith, the area of the parish is greater than would appear from the measurement we have stated, and is supposed to amount to upwards of 6,000 acres. Goody-water runs  $1\frac{1}{2}$  mile along the western boundary of the smaller section of the parish, and the same distance south-eastward through it, to fall into the Forth, in the intervening projection of the parish of Kilmadock. Both this stream and the Forth are here dark-coloured in their waters, and have a muddy bottom; and both in the bulk of their united volume, and in the beauty of their banks, they are excelled by the Teith. The surface of the parish consists, over two-thirds of its extent which stretch upwards from the Forth, of curse-lands, and over the remaining third on the north of dryfield; and is almost everywhere nearly a dead level, or has at least

a very gentle slope toward the streams. But it presents a series of grounds beautifully cultivated, well-enclosed, and adorned on the Teith side with the affluent and wooded demesne of Blair-Drummond; and lying in the widest part of the strath of Menteith, screened in the distance with the Lomond-hills on the west, Benedi on the north-west, Benvoirlich and Stoontachrone on the north, the Ochils on the east, and the hill-chain of Stirlingshire on the south, it is the centre of a finely-featured and warmly-tinted picture, set in a frame of superhness and grandeur. The soil of the dryfield district is a light loam, formerly studded with numerous nodules of whinstone and a few of plumbcake stone, which greatly obstructed tillage till they were hewn with gunpowder, and removed. The soil of the carse district is a rich blue clay, lying upon a bed of gravel, which comes near the surface at the northern extremity, and thence dips at the rate of one foot in a hundred toward the Forth, allowing a great average depth to the superincumbent clay. At various depths, the carse has many thin beds of shells, particularly of oysters. About 70 years ago, nearly one-half of the whole carse-lands were covered with a deep hog, well-known under the name of the Kincardine-moss, which was of no other value than for its produce in peats; and, owing to the holdness and novelty of the processes by which it was rendered arable and richly luxuriant, has obtained more notoriety than probably any other scene of agricultural improvement. Various methods of improvement were tried, so slow in their progress, so limited in their range, and of so little value in their results, that they raised a doubt whether the arena of them would not have been worth more to the proprietor had it been the bed of a lake. Henry Home, Lord Kames, a senator of the college of justice, and the distinguished author of several learned publications, within whose estate of Blair-Drummond the moss lay, conceived the project of cutting it away piecemeal, and sending it adrift on the Forth, and having commenced operations, was succeeded in the conducting of them by Mr. Home Drummond, his son and heir: see article BLAIR-DRUMMOND. In the western section of the parish are the two contiguous villages of NORRIESTOWN and THORNHILL: which see. The road from Stirling to Invernaid runs through both sections, and is connected with several diverging roads. Population of the parish, in 1801, 2,212; in 1831, 2,456. Houses 470. Assessed property, in 1815, £8,070.—Kincardine is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, Lady Willoughby de Eresby. Stipend £255 8s. 1d.; glebe £14. Unappropriated teinds £401 9s. 7d. The western section of the parish has a separate church, and forms the chief part of the *quoad sacra* parish of NORRIESTOWN.—The parish-school is attended by a maximum of 74 scholars; and 4 non-parochial schools by a maximum of 296. Parish-schoolmaster's salary £30, with about £14 fees, and £12 other emoluments.

KINCARDINE, a considerable village and seaport on the north shore of the frith of Forth, in the parish of Tulliallan, in the southern detached part of Perthshire. It overlooks a contraction of the Forth to a width of 5 furlongs, and has above it no part of the frith wider than a mile. It is distant 5 miles east from Alloa; 4 west from Culross; 22 south from Perth; and 25 north-west by west of Edinburgh. Some salt-pans which originally impressed on it a characteristic feature, and which amounted, in 1780, to fifteen in number, imposed on it the name of West Pans; but these long ago disappeared, and allowed it to assume its present less vulgar, and

somewhat appropriate name.\* The houses of the town, except in the old parts, are, in general, neat and substantial, two and three stories high; but they are, for the most part, collocated into such narrow or irregular street-arrangements, as, in spite of the aid derived from the vicinity of some good villas, and of a fine new parish-church, to exhibit a tout ensemble not very prepossessing. The kirktown or village of Tulliallan, is a suburb of the town, situated on its north or inland side. The port, with the exception of Leith, is one of the most considerable on the Forth. So far back as 1786, it had 91 vessels of aggregately 5,461 tons,—an excess over Alloa, at the same date, of 200 tons. But it afterwards suffered depression; and though it rallied, and has, on the whole thriven, it is far from now exhibiting a fruition corresponding to the fulness of its early promise. The number of shipowners is at least 50; but it is hardly an index to the amount of commercial importance which the place possesses, but rather an indication of a fondness which the principal inhabitants—in common with those of Kirkcaldy and some other second-rate ports—have to possess property in sea-craft. The shipowners constitute among themselves a company for insurance against individual losses at sea; and, in 1839, had a capital in vessels of £70,000. The trade of the port extends to the shores of the Baltic, to those of the Mediterranean, and to the West Indies and America; but it consists chiefly in the exportation of coals to places not far distant, and in the importation of Russian and Swedish produce. The quay or pier, built by the voluntary contributions of the shipowners, is good; and opposite to it is a roadstead capable of accommodating 100 vessels of each 300 tons burden. Two steam-vessels ply across the frith, conveying carriages and cattle, and otherwise serving as a facile succedaneum for a bridge; performing the passage in five minutes, and attaching importance to the town by opening a main line of communication direct between Glasgow and its dependent towns, and the whole district of Fifeshire and Kinross. Ship-building is conducted to a very noticeable extent, so many as 9 or 10 vessels being occasionally at one time on the stocks; but it is confined chiefly to the construction of coasting vessels. In the town are a brewery, and works for making ropes and sails. In the suburb of Tulliallan is a distillery. Weekly markets are held on Wednesday and Saturday; and an annual fair is held on the last Friday of July. The town has branch-offices of the Glasgow Union bank, and the Commercial bank of Scotland. Two meeting-houses, belonging respectively to the United Secession, and to the Original Burghers, are situated here; and the parish-church stands in the suburb. See TULLIALLAN. Kincardine is a hurch-of-harony. Population, about 3,200.

KINCARDINE, a decayed village in the parish of Fordoun, in Kincardineshire, anciently the capital of the county to which it gives its name, till James VI. removed the courts to Stonehaven, which is now the county-town. It contains about 70 inhabitants.

KINCARDINESHIRE,—usually called the MEARNS,—a county on the north-east coast; bounded on the north by Aberdeenshire, from which, in a great measure, it is divided by the river Dee; on the east by the German ocean; and

\* The word *Kincardine* is of Gaelic origin, and is said to mean 'the Head of the shore.' As applied to the parish described in the preceding article, and lying west of Stirling, it countenances the generally received hypothesis, that the upper carse of the Forth was, at one time, the bed of a continuation of the frith. The town we are now noticing, possibly occupies at present a similar relative position to the frith, to that which belonged to the parish-church of Kincardine-of-Menteith when it received its name.

on the south and west by Forfarshire, from which it is divided by the North Esk. The form is triangular, with its most acute angle stretching north-eastward to the city of Aberdeen, and terminating at Girdleness. The coast-boundary extends south-westward for 32 miles, being the greatest length of the county; and its greatest breadth, from east to west, is 24 miles. Square area 380 miles, or 243,444 English acres, of which 1,280 are covered with water; 120,000 consist of cultivated land, woodland, improveable moor, &c.; and the remainder of mountains, hills, and general waste. The county is locally divided into four districts,—the Grampian, the Dee-side, the valley or Howe of the Mearns, and the Coast-side.

The Grampian, or mountain-district, consists of the eastern termination of what is popularly called the lower chain of that mighty rampart of ancient independence, the Grampian range: see GRAMPAINS. This sterile, rugged, dreary, region stretches from west to east, through the whole breadth of the county, softening down almost to the verge of the ocean, and separating the Dee-side district, on the north, from the Howe of the Mearns, on the south. Rising, in the midst of highly cultivated land, about 3 miles from the coast, with a height of 500 to 600 feet—if not rather forming, first of all, the promontory of Girdleness itself—this bleak and solitary, but sublime and grand division of the county rapidly increases in altitude, among a vast congeries of dark brown hills, until, at the western extremity of the district, about 20 miles from the sea, Mount Battock, nearly 3,500 feet above sea-level, towers in height beyond them all. On the top of this mountain the counties of Kincardine, Forfar, and Aberdeen, join their limits. About 6 miles eastward is Clochnaben, or the White stone hill, remarkable for a protuberance of solid rock on its summit, about 100 feet in perpendicular height, appearing, from the sea, like a watch-tower, and forming an excellent land-mark to coasting vessels.

“The four great land-marks on the sea  
Are Mount-Mar, Lochnagar, Clochnaben, and Benochie.”

About 4 miles distant from Clochnaben is Kerlook, from the top of which, at an altitude of 1,900 feet, is commanded a most noble and extensive view over the greater part of Aberdeenshire to the north, and southwards as far even as the Lammermuir hills in East Lothian. Six miles to the north-east is Cairnmanearn, almost covered over its whole surface with great boulders, or blocks of granite. The hill of Fare was the scene of the battle of Corrichie, in 1562, between the Earls of Murray and Huntly, wherein the latter was slain. Cairnmount, in the south front of the Grampians, is about 2,500 feet in height,—over it passes the public road from the Howe to the Dee-side. Strathfinella, also on the south, is remarkable for the manner in which it stands isolated from the main body of the ridge, being cut off by a narrow vale, of very pleasant aspect, but in many places not 100 yards in breadth. In summer the glens and deep hollows between the Grampian mountains are somewhat enlivened by the fringe of green pasture springing up by the sides of the different brooks, which alternately become either dry channels or furious torrents; but there reigns throughout even these a cheerless, gloomy solitude, devoid, except in a very few places, equally of human habitation or of marks of human industry. In some of them, however, there are spots of surpassing natural beauty. In a romantic situation on one of these choice spots stands the shooting-lodge of Glendye. The tract occupied in this county by the Grampians is, on an average, from 16 to 18 miles

in length, by 6 to 8 in breadth. Square area 120 miles, or nearly 80,000 acres.

The Dee-side district extends from the sea westward, along the southern bank of the Dee for about 13 miles, and then along both banks 9 or 10 miles further, comprehending also the valley of the Feugh. In this district, which is peculiarly favourable to the growth of timber, the face of the country is highly embellished by the plantations, which here occupy a greater extent of land than in any other part of the county; the fir-plantations extending, in some places, to the summits of the adjoining hills. At many points, especially in the vicinity of the rising valley of Banchory, the prospect along the Dee is rich and beautiful. That part of the district which lies north of the river, in its narrow valley, and to which the preceding observations more particularly allude, is much diversified in heights and flats, and has a southern exposure. It contains about 26 square miles, or 16,640 acres. The southern portion of this district contains about 54 square miles, or 34,560 acres.

The Howe district is a low, champaign, and highly cultivated country, diversified and ornamented by thriving plantations, gentlemen's seats, and villages. The ground being, in many places, composed of a bright red clay, gives the surface, when newly ploughed, a very peculiar, but rich, warm and pleasing appearance, finely relieved and contrasted as it is, especially in summer, with the green plantations, fields and hedges. This division of the county constitutes the eastern termination of the Great strath or valley of Strathmore, extending south-westwardly from Stonehaven, in this county, with trifling interruptions, to the frith of Clyde. Its length, within the county, is about 16 miles. At the western boundary it is about 5 miles in breadth, but narrows towards the east, till, at the water-shed, 4 miles west of Stonehaven, where it terminates, it is little more than half-a-mile over. It is sheltered from the cold northern blasts by the towering Grampians, which here present a wall rising from 500 to 2,500 feet above the level of the Howe, or plain; while, from the ungenial easterly winds, it is protected by the heights of Garvock and Arbuthnot, forming a range of hills attaining here and there an altitude of 500 feet, and, in most places, displaying a surface cultivated nearly to the summit. By the continuation of the Sidlaw hills, including these ranges, and in this instance particularly by the Garvock-range, the surface on the southern border of the county, more especially along the banks of the North Esk, is much diversified with hill and dale. The great road from Perth to Aberdeen, through Strathmore, traverses this district,—indeed, the Howe of the Mearns constitutes the only proper access to the north of Scotland, owing to the hills and mountains occupying, uninterruptedly, the whole breadth of the country, except at this point; and it has, therefore, been the common passage for armies since the earliest periods of history,—yet it does not appear to have been the scene of any great military achievement, unless, indeed, the grand encounter between Agricola and Galgacus, called ‘the battle of the Grampians,’ occurred here. The term ‘Mearns,’ is probably a word of local meaning, but it is commonly supposed to have been derived from Mernia, the name of a brother of Kenneth II., on whom the district was conferred, while Æneas, another brother, held the neighbouring county of Forfar, hence also corruptly called Angus. The whole county from this district is sometimes, but erroneously, termed Mearns-shire.\* The square

\* The Mearns, nevertheless, and ‘the men o’ the Mearns,’ appear to have been highly and peculiarly estimated, even from ancient times. The expression just quoted is a proverbial one

area of the Howe district is about 50 miles, or 32,000 acres.

The Coast-side district is subdivided. From Stonehaven southwards to the North Esk it extends about 18 or 20 miles in length, by 4 to 5 in breadth, flanked, on the west, by numerous hills not exceeding 500 feet in height, some of which, generally the most barren, cross this part of the district, and terminate close to the sea, particularly between Stonehaven and Bervie. The shore is bold and rocky, rising, in general, from 100 to 300 feet in height, and presenting a perpendicular face of rock, whence the country expands inland into plain and highly cultivated fields, laid out in all directions, according as the rivulets or deep ravines bend their course to the ocean from the conterminous hills. The most conspicuous range of rocks on this part of the coast is Fowlshough, noted as a rendezvous, during summer, of innumerable flocks of sea-fowl of various kinds. In the face of this rock are several caverns with natural arches, galleries, &c. of great extent and magnificence. Notwithstanding the vicinity of the ocean, this part of the county is adorned with some thriving plantations; and almost close to the shore itself there are trees of considerable magnitude, particularly at Brotherton, where a finely-terraced old garden, although within reach of the sea-spray, is remarked as being one of the most luxuriant in this part of country. The road from Montrose to Aberdeen runs through this division. From Stonehaven northward to the Dee the shore is also bold and rocky, but the face of the country is generally of a very inferior description. The general aspect of a great part of this tract is the most wretched and uninviting that can well be conceived. In the vicinity of Stonehaven, and at Aberdeen, however, and in some other parts, the lands display a totally different appearance,—strenuous and extraordinary exertions have been made for the improvement even of its most barren and unpromising localities. The square area of this northern division of the Coast-side district is about 45 miles, or 28,800 acres; that of the southern, 85 miles, or 54,400 acres.

Besides the DEE and the NORTH Esk [which see], although they can scarcely, with propriety, be said to belong to this county, no streams meriting the name of rivers have their course through Kincardineshire. The principal streams falling into the German ocean are the Cowie and the Carron, rising in the parish of Glenhervie, and flowing through Fetteresso to Stonehaven; and the Bervie, rising in Fordoun, and flowing between that parish and those of Glenhervie and Arhuthnot, intersecting the latter in its course to Bervie. Those falling into the Dee are the Sheeoch, intersecting Durris parish, and the Aven, which rises near Mount Battock, and skirts the north-western boundary to near its junction, in the parish of Strachan, with the Dye, also from the Grampians near Battock. Crossing the northern corner of Strachan, the Aven enters the Dee in the parish of Banchoy-Ternan. The only considerable stream falling into the North Esk, within this county, is the Luther, which rises among the Grampians, in the parish of Fordoun, by two principal sources, surrounding Strathfinella-hill: uniting in the parish of Laurencekirk, the Luther falls into the Esk near Ballinqueen. These streams, though of inconsiderable magnitude, abound with trout and par, and their banks and overhanging trees, with knolls and hraes adjoining, are, in many places, highly picturesque and beautiful. No less so are many of the numerous

other smaller streams and mountain-rivulets which polish, soften, and enliven the stern and rugged features of the alpine solitudes down which they flow or trickle; almost of themselves, when swollen or full, dispelling all their solitude and gloom. The Loch-of-Leys is the largest lake in the county, being about 2 miles in circumference, and well-stored with pike. The ruins of an ancient edifice are here supported by piles of oak on an artificial island. There is no other lake of any magnitude. Besides the valuable salmon-fisheries contained in some of the larger streams of this county, there are herring, cod, and other fisheries on the coast. The cod and ling fisheries commence in October and close in July; and the haddock, skate, and turbot fisheries—which are carried on with great activity—begin about the 1st of May, and end about the middle of July. The herring-fishery is said to have declined in consequence of the fish having deserted this part of the coast.

The mineral treasures of the county are of no great value. Over the whole Grampian district granite is the most prevalent stone. The hill of Strathfinella, however—separated, as already noticed, from the Grampian range—is one entire mass of sandstone, perfectly isolated. Sandstone is the chief quarry in the Howe district. Blocks or houlders of granite, both of a whitish colour like the granite of Aberdeen, and of a reddish colour like that of Peterhead, are scattered over all the country round the Grampians, having probably been detached and transported through the instrumentality of such enormous glaciers as those alluded to under the article GLENROY, the ancient existence and effects of which have recently been traced in this and many other districts throughout Scotland. Part of the granite exported from Aberdeen is taken from the hill of Nigg in this county. Besides granite and sandstone, the other prevailing rocks, especially along the coasts, are basalt, whinstone, and plumpudding-stone. Limestone is found at Mathers on the Coast-side, whence considerable quantities are taken for manure and building purposes; it is also found in various other places, as at Tillywhilly, in the Dee-side district, and near Fettercairn, and at Laurencekirk, in the Howe of Mearns; but as no coal has yet been discovered, it is principally on the coast, where that important mineral can be more easily obtained, that limekilns are wrought to any considerable extent. At Stonehaven, and at Laurieston, in the Coast-side district, quarries of sandstone afford excellent and durable materials for building. At Whistleherry, in Kinneff parish, millstones of excellent quality are made from the pudding-rock found on the coast. Native iron has been found in a field at Balnakettle, and indications of iron-ore are met with elsewhere throughout the county. In the vicinity of Cowie pipe-clay is dug for household purposes. Jaspers, porphyry, and specimens of asbestos, have been found in different parts; pebbles of great variety and beauty of colour, and some value, are procured in every brook, particularly in Arhuthnot and St. Cyrus; and the Scottish topaz, or Cairngorm, is sometimes found amongst the Grampian streams. Zeolite is found, and some of the caverns on the coast near Stonehouse abound with stalactites.

The soils are very various. The Grampian district may, in general, be said to be as devoid of soil as of vegetation; but there are considerable exceptions, particularly along the base and lower altitudes of the exterior hills and slopes on the Mearns-side, where a deep rich loam is frequently found. The soil in the Dee-side district, south of the Dee, as in Durris and Maryculter, is, in many parts, stony and thin, on a rocky substratum: there is also, however,

of old date; and there is another still more directly flattering to the men of the Mearns: 'I can dae fat I dow [can]: the men o-the-Mearns can dae nae mair.'

some deep black loam, though, on the river side, in Maryculter, it is naturally thin and sandy. Clay and gravelly soils are also found. North of the Dee the soil consists chiefly of decomposed granite mixed with a portion of moss. It is not naturally very productive, though greatly ameliorated by cultivation. The soil on the southern side of the Grampians, in the Howe district, is pretty uniform in its nature. On the northern side of the Howe, fronting the south, it may be defined as a loam derived from gravel; and on the opposite side, fronting the north, a loam derived from clay. In both it resembles in colour the red or grey sandstone, the chief kind of quarry known in the district. Throughout the whole it is commonly productive, yet with varieties in its fertility. The soil of the Coast-side, south of Stonehaven, is of every description, in the lower parts, from the richest and most productive loam on clay or gravel, to the most worthless sand, clay, or moss. It is oddly intermixed,—entire wastes lying, in some places, contiguous to the most fertile fields. The greater proportion, however, is of the latter description,—some of the lands near the shore containing the most productive soils in the county. North of Stonehaven, as in Fetteresso and Dunottar, the soil is chiefly loam on a hard stony bottom, with a little clay, loam, &c. In Banchory-Davnick it is light, and either mossy or sandy, and in various parts has been much improved.—The climate of this county is different in the different districts. In winter and spring, the weather in the mountainous parts is extremely severe, while in summer, especially in the deep glens amongst the Grampians, the atmosphere at times becomes unsufferably hot. In the low country the climate has been improved of late years by the draining of hogs and mosses, and the spread of plantations, and it is now in no way inferior to the climate of other Scottish districts in the same latitude. The average heat on the east coast, in N. lat.  $56^{\circ} 58'$ , and 150 feet above sea-level, between the years 1805 and 1816, was  $43^{\circ} 8'$ ; the average greatest heat  $64^{\circ} 4'$ . The average number of fair days in the year was 212.

Agriculture, in this county, has made rapid progress during the present century. The writer of the Old Statistical Account of Kinneff remarks,—and the same sentiment is repeated by Sir John Sinclair in his Statistical Analysis,—that “the farmers owe their superior skill and management to Mr. Barclay of Ury:—a gentleman, whose acknowledged merit entitles him to have his name transmitted to posterity as the first, the most extensive, and judicious systematic improver of land in the north of Scotland.” The improvements thus begun about 20 years previous to the date of the Old Statistical Account,—or in the middle of last century,—have been carried on with great spirit and success, down to the present time. Draining, trenching, planting, and enclosing, have been vigorously extended, and are still in progress; and the extraordinary exertions made to reclaim even the most forbidding and hopeless soils already alluded to are said to have been nowhere excelled. Since the construction of new roads, affording easy access to every part of the county, lime has been most extensively used as manure; upwards of 20,000 holls having been imported yearly at Stonehaven alone for that purpose, exclusive of all that might be burnt in the county itself, or elsewhere imported. The most approved systems of husbandry are adopted, and the soil is cultivated in a style equal to any in Scotland. The greater part of the arable land produces wheat, barley, bear, oats, pease, beans, cloves, turnips, mangel-wurzel, and ruta-baga; and there is good evidence that the style of cultivation is such as represented,

even from the fact that, of all the lands in tillage, nearly a seventh part is yearly in turnip. This satisfactory state of matters is, in a great measure, attributable to the example set by the landed proprietors themselves; an example followed out with industry and perseverance by an intelligent and spirited tenantry. The average rent of land, in 1810, was 13s. 2d. an acre: valued rent of the county £74,921 1s. 4d. Scots: the real rent as assessed, in 1815, £94,861, a sum far below the truth: in 1811, it was estimated so high as £159,875. Since then the value of land here has been greatly augmented, and the real rent now approximates to £200,000. In the parish of Nigg, at the period of the Old Statistical Inquiry, land, on the side next Aberdeen, was let at £2 12s. 6d. an acre, downwards, while the medium rent was 20s.: poor ground lower. At present, according to the New Statistical Account, the average rent of all the arable land in the parish, is about £4, or £4 10s. per acre. In Bervie, though the average is lower, being £2 10s., some land brings even £6 an acre. The real rent of the parish of Laurencekirk at the date of the Old Statistical Account, was £2,000 sterling: at the period of the New, £5,775. Both the improvement of land and the breed of stock have been encouraged by premiums given by agricultural societies; and on almost every farm the rearing and feeding of cattle is united with the raising of corn; cattle being sometimes the chief dependence of the farmer. The same species of live-stock are reared as in the adjoining counties of Forfar and Aherdeen. The pure short-horned breed was introduced by Captain Barclay of Urie amongst his celebrated stock of cattle and sheep. The stock of cattle, some years since, was estimated at about 25,000 head, a fourth part of which were milch cows, and nearly as many calves. The sheep, fed principally in the extensive pasturages of the mountain-districts, are generally of the black-faced species. The stock was estimated at about 25,000, exclusive of lambs. Pigs have been found to be a profitable stock. Amongst the wild animals found in the county are the fox, badger, otter, wild cat, weasel, polecat, hedgehog, &c. Hares and rabbits swarm in extraordinary numbers, and roe-deer are often found in the woods. Grouse abounds in the muirs, and black game is not uncommon; there are also partridges, and pheasants are on the increase. Woodcock, snipe, wild-duck, landrail, plover, teal, curlew, and heron, are plentiful; and wild geese, and occasionally swans, frequent the district between autumn and winter. Falcons, sparrow-hawks, &c., are often met with.

There are upwards of 80 separate estates in this county: some of the largest of these have long been in the same families. Two or three of them are valued at a rental of more than £5,000 per annum; nine or ten from £3,000 to £5,000; about twenty from £1,000 to £3,000; twenty-three from £500 to £1,000, and the remainder at less than £500. Cultivated farms are in general about 200 acres in extent, but many are far smaller. On the contrary, pasturage farms in the hilly districts are, as usual, much larger. The rent of a considerable proportion of the tenants amounted to less than £50 per annum at the period of the passing of the parliamentary reform act. Great improvements have of late years been effected on the steadings of the farmers, and their mode of living. The mansions of the proprietors are usually elegant, placed in choice situations, and finely adorned with trees and pleasure-grounds. The principal of these are Inglismaldie, a seat of the Earl of Kintore; Arhuthnot-house, the seat of Viscount Arhuthnot; Fasque, of Mr. Gladston; Durris, Mr. Mactier; Fetteresso-castle, Mr. Duff; Crathes,

Sir Robert Burnet; Fettercairn-house, Sir John Stuart Forbes; Drumtochty-castle, Mr. Gammell; Urie, Captain Barclay; Netherhy, Mr. Silver; Dunottar-house, General Forbes.

There are 18 parishes, and parts of 3 others, in this county. Of the southern parishes, 13 form the presbytery of Fordoun: the others belong to the presbyteries of Aherdeen and Kincardine O'Neil. According to returns published since 1835, the number of "examinable persons" belonging to the established churches was 19,539: to other religious denominations 1,975. The number of its parochial schools is 22, conducted by 22 teachers, and attended by a maximum of 1,230 scholars; and of its non-parochial, 85 conducted by 86 teachers, and attended by a maximum of 2,418 scholars. The poor of this county are supported by voluntary contributions alone. Population, in 1801, 26,349; in 1811, 27,439; in 1821, 29,118; in 1831, 31,431; the number of families in the last census being 7,136, whereof 2,976 were employed in agriculture, 2,281 in trade, handicraft, &c., and 1,879 otherwise occupied. The number of inhabited houses was 6,272. There are 7 or 8 small towns in the county, besides a few inland villages, and 13 or 14 fishing-villages scattered along the coast. The towns are Stonehaven, the county town, Bervie, or Inverhervie, a small burgh—the only royalty in the county—John'shaven, Laurencekirk, Fettercairn, Fordoun, Auchinblae, &c., Drumlithie, Marykirk, and St. Cyrus, are the other principal villages inland. Of the fishing-villages Findon is the most noted. Previous to the Union, this county returned two members to parliament: it now returns one member. Constituency, in 1840, 922. Bervie unites with Montrose, Aherdeen, Brechin, and Aherbrothwick, in also returning one member to parliament.

The manufactures of Kincardineshire are not very extensive. Duck and dowlas linen-weaving is carried on at Bervie for merchants in Aherdeen, Dundee, and Arbroath: there are two flax spinning mills in Bervie. About 230 hands are employed in the linen manufacture in Benholme; and at Auchinblae, flax is spun into yarn, and manufactured into brown linen: about 60 hands are employed at the spinning-mill, and annually turn out 70,000 spynyles of spun yarn, value £10,000. By the weavers at Auchinblae, about 30,000 of these spynyles are annually made into 117,680 yards of linen: value £8,350. The price paid for weaving averages only 1d. to 1½d. a-yard. At Arnhall is a small establishment for carding and manufacturing wool into coarse cloth, employing only females; and at Laurencekirk, a flax-mill employing 32 hands, and a few handloom weavers also engaged in converting it into linen cloth. Caldham is partly employed in the flax trade. There is a distillery of whisky at Nethermill in Fettercairn, and an extensive one at Glenury: porter and ale also have been brewed at Laurencekirk and Stonehaven. At Laurencekirk the well-known snuff-hoxes are still manufactured. Kelp is produced on the coast; and in the dairies, butter and cheese are made to a considerable extent beyond what the home supply requires. On some farms cheese equal to the very best Stilton is made: that of Canterland is well known, and highly valued. The principal exports are grain, potatoes, cattle, pork, butter, eggs, whisky, ale, herrings, &c.: imports,—lime, coals, timber, slates, and salt. Foreign produce is principally supplied through Aherdeen, and grain is chiefly exported through Montrose; but also at Stonehaven and Gourdon.

Kincardineshire has figured very little in history. Such incidents as possess any interest or importance will be found detailed under the special localities

with which they may have more immediately connected. The name of the county was derived from Kincardine, formerly a small town in the parish of Fordoun, where the courts were held till the year 1600, when it was found necessary to remove them to Stonehaven, as "there was neither ane tolbuith, nor any house for parties to lodge into for their entertainment." Kincardine, the ancient capital, has now dwindled into a mere hamlet or farmstead. It was connected with an ancient seat of royalty, called Kincardine-castle, the foundations of which can still be traced. The most interesting antiquities are Dunottar castle, formerly the chief seat of the great Earls Marischal, now an extensive and singular ruin: see DUNOTTAR;—the ruins of the castle of Finella, noted for its curious legend: see FETTERCAIRN;—part of the Kame-of-Mathers, an ancient stronghold, pitched, like an eagle's nest, on the point of a projecting rock, in the parish of St. Cyrus;—Green-castle, Kinneff-castle, the castle of Morphie, Whisteberry-castle, and the Thane of Cowie's-castle, either in their ruins, or at least their sites, are still pointed out. In Fordoun, and near Stonehaven, are the remains of Roman camps; and at Raedykes those of one, either Caledonian or Roman. A chariot wheel of massive iron was dug up some years since. On Garvoch hill is still pointed out the Sheriff's kettle where the Sheriff of the Mearns was hoiled in a caldron: see GARVOCK. In Durris, and at Aquhorthies, are Druidical circles.—Amongst celebrated writers connected with this county were, Dr. Arbuthnot Barclay, author of the Apology, Bishop Burnet, Lord Monhoddoo, Dr. Reid, and Dr. Beattie.

KINCARDINE-O'NEIL, a parish in the district of Kincardine-O'Neil, Aherdeenshire; bounded on the north by Tough and Cluny; on the east by Midmar and Banchory-Ternan; on the south by Birse, from which it is divided by the Dee; and on the west by Lumphanan. It runs northwards from the Dee to a length of about 7 miles, and averages 5 in breadth, tapering to the north: extent 30 square miles. Houses 425. Assessed property, in 1815, £3,091. Population, in 1801, 1,710; in 1831, 1,936. It is partly hilly and pastoral, partly arable and well cultivated, with a considerable extent of thriving plantations. The village of Kincardine-O'Neil is pleasantly situated on the left bank of the Dee, lining the road from Aherdeen to Ballater, and commanding an extensive view along the river's banks, upwards towards the Grampians. This place is deemed an excellent resort for invalids in summer. It is the seat of a presbytery, in the synod of Aherdeen. Patron, Sir J. Forbes, Bart. Stipend £232 4s.; glebe £12. Unappropriated teinds £162 15s. 7d.; The walls of the church are supposed to be about 300 years old. It was burnt down and restored in 1733; repaired in 1799, and again in 1820. Sittings 608.—There are three parochial schools in the parish. Salaries of the three masters conjointly £67 19s. 7½d. per annum, with £118 0s. 3s. fees, and other emoluments.

KINCHARDINE. See ABERNETHY.

KINCLAVEN, a parish in the beautiful and fertile district of Stormont, Perthshire; bounded on the north by Caputh; on the east by Cargill; on the south by Auchtergaven; and on the west by Auchtergaven and Little Dunkeld. It is of nearly an oval form, extending north-eastward and south-westward; and measures 4½ miles in extreme length, and 3 miles in extreme breadth. The Tay circles round more than one-half of its whole frontier, coming in on the north-west, flowing in large and sweeping sinuosities round the north, receiving the Isla on the north-east, and leaving the parish on the south. Including windings, it runs along the boundary over

a distance of at least 10 miles; and almost everywhere wears marks of destructiveness and impetuosity which do not in general characterize its course. Though embankments were early thrown up along its banks, it has at various periods cut them down, and made remorseless and large invasions on the rich corn-fields which they were designed to protect. Three or four desolated tracts which it has abandoned, and several islets in its present channel, are evidences of its power and fury. Just before leaving the parish, it forms a cascade, and falls into a very deep linn, called the Linn of Campsie, containing great quantities of excellent salmon. Nearly in the centre of the parish, is a lake half-a-mile in length, whence a stream, sufficient in water-power to drive machinery, runs eastward to the Tay. The surface rises gently from the Tay, and is diversified with rising grounds all accessible to the plough, and of inconsiderable elevation. Along the north and east it is well cultivated and enclosed, and in some parts wooded; but in the interior, and toward the west, it yields only patches to the plough, and has expanses of unkindly moorland. The soil, in a small part on the south-west, is a rich black loam; but, in most parts, it is light and sharp, intermixed in some districts with large water-worn stones, which obstruct the operations of the plough; and in the moorlands it contains a small proportion of mossy earth. —Kinclaven-castle stands in ruin on the Tay. The following anecdote connected with this locality is related in the Chronicle of Lanercost, lately printed. The esquire by whom the Earl of Leicester was slain, as a reward of this deed, was recommended by Prince Edward, afterwards King Edward I., to his sister Margaret, Queen of Scotland, and found the Queen at Haddington:—"Queen Margaret was walking, after supper, by the banks of the Tay, at Kinclaven-castle, in Perthshire, attended by her maidens and esquires, and also by her confessor, who told the story to the chronicler of Lanercost. The party sat down by the river side, and the pompous esquire who prided himself upon having slain Montfort, descended to the water's edge to wash his hands, which in romping he had soiled with mud. As he stood leaning over the stream, a damsel came softly behind, and pushed him in. He took the joke in good part; 'what do I care,' he exclaimed, 'even though I were further out, I can swim!' But while amid the laughter of the spectators he floundered about in the water, he suddenly found himself sinking, and shouted for assistance, which none present could render: his boy, who was playing near at hand, hearing his master's cries, ran up and plunged into the river to save him, but they were both drowned. 'Thus (solemnly adds the chronicler) the enemy of Simon, and servant of Sathan, who boasted he was the cause of the death of a valiant knight, perished in sight of all.'" — ARNTULLY [which see], situated in the south-west, and an antiquated place, is the only village. Two or three hamlets or clachans, straggle along the public roads. At one of these, in the north-east, and upon the Tay, is a good and commodious inn, the station of a ferry. Three principal roads intersect the parish respectively northward, eastward, and north-eastward, the second and third along the Tay, and the first through the village of Arntully, from Perth to Caputh. Population, in 1801, 1,035; in 1831, 890. Houses 172. Assessed property, in 1815, £2,726.—Kinclaven is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, Richardson of Ballathie. Stipend £276 11s. 5d.; glebe £18. Parochial schoolmaster's salary £34 4s. 4d., with about £24 fees, and about £7 other emoluments. In the village of Arntully is a

subscription school, attended by a maximum of 64 scholars.

KINCRAIG. See KILCONQUHAR.

KINCRAIGIE. See ALFORD.

KINDER (Loch), a lake  $1\frac{1}{4}$  mile south of the village of Newahhey, in the south-east part of Newahhey parish, Kirkeudbrightshire. It is  $1\frac{1}{2}$  mile long from north-west to south-east, and  $\frac{3}{4}$  of a mile broad; it abounds with trouts; it produces hulrushes and reeds, the former gathered by chair-makers, and the latter by weavers; and it receives on the north Glen-hurn, a stream of 3 miles in length of course, and discharges its surplus waters by a stream running 2 miles south-eastward to the Solway frith. Rising six or seven feet above the surface of the lake, is an artificial mount of stones, resting on a frame of large oaks, and supposed to have been constructed as a place of safe stowage for goods from the maraudings of the Borderers. The surrounding manor which anciently constituted the parish, bore the name of the lake, Loch-kinder. Even the whole of the present parish, previous to the erection of the church at Newahhey, was called Loch-kinder, or, by an absurd pleonasm, Loch-kinder-loch. On an islet in the lake stood the original parish-church.

KINEARNY, an ancient parish in the district of Kincardine-O'Neil, Aberdeenshire, now divided between the parishes of Cluny and Mid-Mar. It is 6 miles north-west of Skene.

KINFAUNS, a parish at the western extremity of the carse of Gowrie, Perthshire. On the west, it commences about  $1\frac{1}{2}$  mile below the town of Perth; and it thence stretches eastward in an irregular figure of above 5 miles long, and between 2 and 3 broad. It is bounded on the north by Kinnoul and Kilspindie; on the east by Errol; on the south-east by St. Madoes, and a detached part of Kinnoul; and on the south and west by the river Tay, which divides it from Rhynd and Perth. The Tay touches it over a distance of nearly 4 miles; has here neap-tides of 6 feet, and spring-tides of 9 or 10 $\frac{1}{2}$ ; is navigated by steamers and sailing-craft on their way to Perth; and is stored with excellent salmon, two rare species of sea-trout, and various others of the fishy tribes. Three streamlets rise in the interior, and drain off the humidities of the soil to the Tay. The surface is beautifully, and even romantically varied. The lands on the banks of the river are flat; and at the west end form a narrow belt, but rapidly expand eastward into the carse of Gowrie. At a small distance from the river, on the west, commences the ridge of hills which runs away north-eastward to the extremity of the county, and is continued, under the name of the Sidlaws, through Forfarshire, to the German ocean at Redhead. The commencing part of this ridge, or what forms the screen of the lowlands of the parish, is remarkably fine and varied in the southern declivity, and bears aloft a profusion of wood, and forms a near and striking feature of that brilliant landscape which arrests and transfixes a tourist on his coming within view of Perth on the mail-road from Edinburgh. The most remarkable part is Kinnoul-hill at the west end, the southern part of which is in the parish. The summit projects in rugged cliffs of a seamy texture, and has, at different times, sent down, over a rapidly descending, and almost precipitous declivity, large masses of rock with prodigious momentum, to the plain below. Both the steep front and the bold summit,—the latter rising 632 feet above the level of the Tay,—are picturesquely featured with wood. This hill, and others of the range, afford a variety of delightful prospects. From some places is beheld the course of the Tay, for 18 or 20 miles, enlivened by the sailing craft and fishing-boats which flit along its bosom, and

superbly rich in the dress and garniture of its banks; westward are seen the windings of the Earn along its far-stretching and pleasant strath; and eastward the whole expanse of the carse of Gowrie recedes away from the foreground, screened on the north by a sweep of hills, and foiled on the south by the expanding Tay, and the varied outline of Fifeshire, the prospect terminating with the law and tower of Dundee, and with the subsession of the low grounds heyond into the German ocean. The soil, on the flat grounds along the river, is a strong and very fertile clay; on the grounds rising toward the hills, it is an easy, deep, rich, black mould; and in the level parts of the eastern division inland from the Tay, it is black mould, mixed in some places with clay, and, in others, with sand. Whatever parts refuse subjection to the plough, are almost all covered with plantation, and contribute hoth to picturesqueness and utility. One plantation stretches down from the northern boundary,  $1\frac{1}{2}$  mile southward, and is  $\frac{3}{4}$  of a mile broad.—About 3 miles east from Perth, with the Tay at less than half-a-mile distance in front, and a snug and beautiful enscencement of the rapidly rising hilly ridge in the rear, stands on an elevation sufficiently high to lift it fully into view, from amidst its sylvan demesne, the superb edifice of Kinfauns-castle, the seat of Earl Gray, built in 1822, from a design by Smirke. This very elegant pile arrests the attention of every stranger passing along the Perth and Dundee turnpike, which runs between it and the river; and is universally admired for being tastefully in keeping with the brilliant scenery around it. The principal floor is composed of a magnificent suite of apartments, comprehending, besides a dining-room and two drawing-rooms, a splendid vestibule and gallery full of statuary, &c., a gorgeous library, a billiard-room, and a room which Lord Gray calls his 'workshop,' containing the tools, machines, and philosophical instruments, with which he amuses his leisure. In all of these rooms there are pictures by the first masters, constituting in themselves an attraction of the highest order. One by Guercino, in the principal drawing-room, 'the Denial of Christ by Peter,' is greatly admired. The estate of Kinfauns, before passing, during the last century, by matrimonial alliance into the possession of John, Lord Gray, belonged successively to the families of Charteris, Carnegie, and Blair. In the castle is still preserved a curious relic of the founder of the first of these families, a double-handed sword,  $5\frac{1}{2}$  feet long,  $2\frac{1}{2}$  inches broad at the hilt, proportionately thick, with a round knob at the upper end nearly 8 inches in circumference. Sir Thomas Charteris, commonly called Thomas de Longueville, who is supposed to have wielded this terrible weapon, was, as the record goes, a Frenchman, who killed a peer at the court of Philip le Bel, was refused pardon and escaped; and, after having for several years piratically scoured the seas, under the name of the Red Beaver, was encountered and captured by Sir William Wallace, on the latter's way to France. Pardoned, and even knighted by his king, at the intercession of the Scottish patriot, he followed Wallace to Scotland, and shared his fortunes and exploits. When Wallace was betrayed and carried to England, Sir Thomas attached himself to Robert Bruce, afterwards followed in his wars for obtaining the crown, and, according to some accounts, was the first person who plunged after the king into the water at the taking of Perth. Kinfauns was conferred upon him in guerdon of his bravery. About 90 years ago, on opening the burying vault of the Charteris family under the aisle of the parish-church, there was found a head-piece made of several folds of linen, which seemed to have been the sepulchral helmet of Sir

Thomas,—part of the fictitious armour with which his corpse was enshrouded. Another relic is preserved in the castle of Kinfauns,—an iron flag or vane, two feet long and one broad, turning upon an iron staff eight feet high, bearing the date 1688, and anciently displayed from the top of the castle as a badge of the hereditary power of admiralty, which was annexed to the estate of Kinfauns over the fisheries of the Tay, down to Drumlie sands below Dundee.\* A mile south-east of Kinfauns-castle, stands the mansion of Seggieden, on a site very slightly above the level of the Tay, and almost close to its margin. The family possess as an heir-loom a drinking-horn, upwards of a foot deep, of Bacchalian celebrity, and anciently used in a similar way to that of Rorie-More. Each heir of the family, in order to prove his affinity to his race, had to drink the full of it at a draught, accosted with the cry, "Sook it out, Seggieden! Though it's thin, it's weel pledged." And when he reached the bottom, he blew a whistle to announce the completion of his feat. The parish is traversed lengthways by both the new and the old roads between Perth and Dundee, and enjoys many facilities of communication from its vicinity to the former.—Population, in 1801, 646; in 1831, 732. Houses 140. Assessed property, in 1815, £12,410.—Kinfauns is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend £242 11s. 6d.; glebe £11. Unappropriated teinds £381 18s. 9d. Schoolmaster's salary £34 4s. 4½d., with £13 1s. 6½d. fees. A non-parochial school is situated in a corner of the parish, and draws most of its scholars from Kilsplindie, Kinnoul, and Scone.

#### KINELLAN. See CONTIN.

KINELLAR, a parish in the district of Mar, Aberdeenshire; bounded on the north by Fintray, from which it is divided by the Don; on the east by Dyce and Newhills; on the south by Skene; and on the west by Kintore. It extends about 4 miles south-westward from the Don, but is only about  $1\frac{1}{2}$  mile in breadth, excepting towards the southern part. Area 4,000 acres. Houses 84. Assessed property, in 1815, £2,059. Population, in 1801, 309; in 1831, 449. The Inverury and Aberdeen canal intersects the north end of the parish. The surface is undulating, and much exposed, though the eminences are partly covered with wood. The parish is almost all cultivated, only a few acres being planted, and not more than a few patches consisting of unprofitable moor. There are numerous tumuli on a heathy common between Kinellar and Kintore, indicating the site of a sanguinary conflict in ancient times. In one of several small cairns formerly existing, were found, when opened, three concentric circles of stones, within the innermost of which were bones, still perfect, but white, as if burnt with fire, and black within. On the farm of Upper Auguhorsk, within sight hoth of Drum and Harlaw, there is a large stone called 'Drum stone,' on which, says tradition, Irvine, the redoubted Laird of Drum, made his testament, immediately before he went to the battle of Harlaw. In the wall of the churchyard, there are some great stones, ten feet in length, and four in thickness, resting on their sides;

\* For a number of years, Lord Gray has kept a rain-gauge on the tower of the castle. We subjoin the yearly indications since 1827:—

	In.		In.
1828,	34.40	1831,	23.25
1829,	36.00	1835,	25.75
1830,	36.85	1836,	34.17
1831,	23.95	1837,	27.49

1833,	53.65	1839,	52.71
	196.00		174.90

these appear to be the remains of a circle of large stones that once stood in this situation. Another smaller circle, of the same sort, appears to have been placed on the summit of the adjacent hill of Benacbard. This parish is in the synod and presbytery of Aberdeen. Patron, the Earl of Kintore. Stipend £159 12s. 3d.; glebe £13 15s. Schoolmaster's salary £26; fees, &c., about £16. There are two private schools in the parish.

**KINGARTH**, a parish in the county and island of Bute; forming the southern extremity of the island, and having the parish of Rothesay on the north and north-west, and the frith of Clyde on the east, south, and west. It is  $6\frac{1}{2}$  miles in length, by  $2\frac{1}{2}$  in average breadth. Ascog, Scoulag, and Kilchattan bays, indent the coast; the only headland is the **GARCOCH-HEAD**; which see. The highest elevation is the Suidhe-Chatain, or 'Seat of Catan,' overlooking Kilchattan bay, which attains an altitude of 520 feet. Kerrycrov village, in Scoulag hay, has a population of about 70; Kilchattan village, 160. The soil is light and sandy, but fertile. Of about 8,400 acres, 4,000 are under tillage. The annual rental is about £5,000. Assessed property, in 1815, £3,820. **MOUNT-STEWART** [which see], the seat of the Earl of Bute, is in this parish.—Population, in 1801, 875; in 1831, 746. Houses 132.—This parish is in the presbytery of Dunoon, and synod of Argyle. Patron, the Marquess of Bute. Stipend £196 10s. 11d.; glebe £9. The ancient chapel of **ST. BLANE** [which see] is in this parish.—Schoolmaster's salary £25 13s. 4d., with about £24 fees. There are three private schools.

**KING-EDWARD**, or **KENEDAR**, anciently called Ken-Edgar, a parish in Aherdeenshire; bounded on the north by Gamrie; on the east by Fyvie; on the south by Montquhitter and Turriff; on the west by Alvah, from which it is partly divided by the Deveron; and on the north-west by Banff, which divides a small portion of the parish from the rest. The form of this parish is irregular and oblong. It extends from east to west about 11 miles, by 2 to 5 in breadth, and contains about 28 square miles. Houses 436. Assessed property, in 1815, £3,668. Population, in 1801, 1,723; in 1831, 1,967. The surface, though flat, is diversified with high and low grounds; it is intersected by King-Edward's-burn from east to west, along the valley of that name, and by other rivulets. The soil is in general dry and gravelly, with loam, but various; and on the banks of the Deveron very rich. The land is chiefly arable, but to a considerable extent pastoral, or covered with wood, and in the eastern part abounding with moss. The minerals are red sandstone, and some of the older formations, including greenwacke; iron ore is said to have been found. A proportion of the salmon-fishings in the Deveron belong to this parish. The Earl of Fife is proprietor of the principal part of both sides of the river. The principal seats are Montcoffer-house, with part of Duff-house park, properties of the Earl of Fife; and Eden-house, the residence of James Grant Duff, Esq.; they are all beautifully situated, and command very fine views. On the right bank of King-Edward, or Kenedar-burn, on a rocky eminence, near the post-road from Banff to Turriff, stands the ruin of the ancient castle of Ken-Edgar. It originally belonged to the once powerful family of the Cumines, Earls of Buchan. It appears to have been a place of great strength. Eden-castle is another ruin in this vicinity; but Craigston-castle, built in the 17th century by Urquhart of Cromarty, commonly called 'the Tutor,' is a fine old edifice, in good preservation, and surrounded with pleasure-grounds tastefully laid out. The house of Byth is also an ancient fabric, but it has been

greatly enlarged and improved, and is now surrounded and adorned with thriving plantations. The only village is **NEWBYTH**: which see.—The parish is in the synod of Aberdeen, and presbytery of Turriff. Patron, the Crown. Stipend £204 7s. 10d.; glebe £15. Church built in 1621; repaired about 60 years since. Sittings 550. The eastern district of the parish is under the charge of a missionary, who officiates in a chapel at Newbyth, purchased and fitted up by subscription as a church, upwards of 40 years since. Sittings 412. Stipend £80 per annum, half of which is paid by the Society for propagating Christian knowledge, and the other half from the funds of the chapel.—There is an Independent congregation at Millseat. Church built in 1831; sittings 210. Minister's salary £40; but the minister was never paid less than £50, and afterwards received £60.—Schoolmaster's salary £25 13s. 4d., with £12 10s. 2d. fees, &c. There are four private schools.

**KINGHORN**, a parish in Fifeshire, on the shore of the frith of Forth. It is about  $4\frac{1}{2}$  miles in length from the south-east to the north-west, and very various in breadth. At its southern boundary, it is rather more than 3 miles in breadth; but towards the north-west it is scarcely a mile broad. It is bounded on the south and east by the frith of Forth; on the north by Abbotshall and Auchtertool; and on the west by Burntisland and Aberdour. The surface of the parish is beautifully diversified by rising grounds, and the whole has been brought to a high state of cultivation. Population, in 1801, 2,308; in 1831, 2,579. Assessed property, in 1815, £10,863. Houses, in 1831, 383.—Immediately north of the burgh of Kinghorn, there stood a castle which was at one time a residence of the Scottish kings, but no vestige of it now remains. The castle and lands of Kinghorn were frequently pledged along with others, in security for the jointure of the Scottish queens, till Robert II. disposed them to Sir John Lyon, Lord Glamis, on his marriage with the king's daughter. Patrick, 9th Lord Glamis, was created Earl of Kinghorn by James VI., a title which was afterwards changed to that of Strathmore and Kinghorn, in the reign of James VII. It was in riding from Inverkeithing towards the castle of Kinghorn, that Alexander III. was killed in 1285-6,—an accident which occasioned so much trouble and shedding of blood in Scotland. The road then wound along the top of the rocks which overhang the sea; the night was dark, and the king, contrary to the wishes of his courtiers, was anxious to proceed. His horse stumbled at a place about a mile west of Kinghorn, and the king was thrown over a lofty and rugged precipice and killed. Near the rock thus fatal to Scotland's peace, is a mineral well which was rather famous at an early period. Dr. Anderson, physician to Charles I., and, we believe, inventor of the celebrated Scots pills which still go by his name, wrote a treatise on the nature and properties of this water, with directions for using it.—Grange, formerly belonging to the Kirkaldys of Grange, a family of great antiquity, who held these lands previous to the reign of James II., is in this parish. Sir James Kirkaldy of Grange was Lord-high-treasurer of Scotland during part of the reign of James V., and part of the regency of the Earl of Arran. "He was considered (says Crawford) one of the wisest and worthiest in the nation; but, through the interest of Cardinal Beithune, he lost his office of treasurer." He afterwards engaged in the conspiracy to murder the Cardinal, and though he may not have imbrued his own hands in the prelate's blood, he was present with his eldest son, his two brothers, a nephew, and two other relations. His son, Sir William Kirkaldy of

Grange, was a very conspicuous character during the reign of Queen Mary and the minority of James VI. He was governor of Edinburgh castle when it was taken by the Regent Morton, and, notwithstanding the terms of the capitulation, he was, with his brother Sir James, hanged at the market-cross of Edinburgh. He was one of the ablest, and there is every reason to believe, one of the most honest public characters of the period. Grange afterwards became the property of a family of the name of Skeen, and subsequently, by marriage with the heiress, was the property of Carnegie of Boysack. It is now the property of the representatives of the late William Ferguson, Esq. of Raith. In the centre of the town where the prison now stands, was an old tower, which seems to have formed part of a religious house, dedicated to St. Leonard. There is no account of this institution, however, in Spottiswoode's Religious Houses.—This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Earl of Strathmore. Stipend £245 19s. 7d.; glebe £19. Unappropriated teinds £693 12s. 7d. The parish-church is situated in the burgh. It was built in 1774; sittings 700. A portion of the parish, including Westbridge, has been annexed to the *quoad sacra* parish of Inverteil or Westbridge.—A congregation in connexion with the Relief church was formed here in 1779, and afterwards became connected with the United Secession. Their place of worship has 554 sittings. Stipend £100.—There is a small Baptist church.—Schoolmaster's salary £25, with about £100 fees. Average number of pupils 110. There are two private schools.

KINGHORN,\* an ancient royal burgh, the capital of the above parish, occupying the face of a sloping ground, directly opposite Leith, and at the distance of 3 miles south from Kirkcaldy. The town had risen to some consequence in the 12th century, when it was created a royal burgh. The latest charter is by James VI. in 1611. Till within the last fifty years, Kinghorn was one of the most irregularly and meanly constructed towns in the district, but of late years it has undergone a variety of improvements, and now possesses several substantial and modern edifices; and a new gaol and town-house. A handsome school-house, enclosed within an extensive play-ground at the west end of the town, was built in 1829, and contains an infant-school-room, a female school-room, a common school-room, and a library and museum. Kinghorn possesses a small and not very good harbour, and though nominally enjoying the importance of being the seat of the ferry across the frith of Forth to Leith and Newhaven, all boats engaged in this thoroughfare land at Pettycur, a hamlet, with a more accessible port, lying about half-a-mile to the west. Parliamentary notice has been given of a bill for making a railway through Fifeshire, which will commence at or near the burgh-schoolhouse of Kinghorn, and terminate at Ferry-Port-on-Craig; with branches from the Kinghorn terminus to Burntisland, and to Pettycur, and to Kirkcaldy. The length of the main line betwixt Burntisland and Ferry-Port-on-Craig will be 36½ miles, or, including the inclined plane down to Burntisland, 37¾ miles. The projected line passes over the town of Kinghorn on a viaduct 290 yards in length, and thence, along the cliffs, to Seafield, †

\* Kinghorn derives its name, according to some, from the adjoining promontory of land, styled in Gaelic *cean gorn* or *gorm*,—"the Blue head." In the Old Statistical Account it is suggested that, as the Scottish kings long had a residence in the neighbourhood, the name may have been suggested by the frequent winding of the King's horn when he sallied out for the diversion of the chase in this neighbourhood.

† From Seafield it is carried across the West-burn on a high bridge, and then on a viaduct at Abbotshall church, 170 yards in length; then across the East Den at Kirkcaldy on a high

The trade of Kinghorn is chiefly connected with the spinning and preparation of lint for the linen manufacturers of Fifeshire. The town possesses two large lint-mills and spinning establishments, moved partly by steam-power, and partly by water; hand-weaving is the other chief trade in Kinghorn. A subscription-library was established here in 1826. The civic government is vested in a provost, 2 bailies, a treasurer, town-clerk, and 18 other councillors. The property of the town consists of lands and houses, feu-duties, mills, harbour-dues, anchorage, and petty customs. The whole is valued at £13,114. The debt due by the town at Michaelmas 1832 was £5,836 2s. 5d. The debt of the burgh in 1827, according to a return made to parliament for that year, was £7,220 2s. 5d. The ordinary annual revenue of the burgh is about £670. It appears that 153 acres of burgh-lands have been alienated since the year 1647. The magistrates do not now levy any taxes but those already-mentioned as sources of revenue. They formerly levied 2d. Scots upon each pint of ale brewed or tapped within the town, and a tax upon all horses let for hire. The petty customs are levied over the burgh, and also upon certain lands held feu of the burgh. The parish-church is maintained at the joint expense of the burgh and the landward heritors of the parish. There is also an assessment for the poor. It appears from a minute of the head-court of Kinghorn, dated 14th January, 1582, that in former times the magistrates and burgesses in head court assembled were in the habit of levying a tax exclusively upon the shipowners of the port, called prime gilt, for the maintenance of old infirm poor seafaring men, and that they also fixed the price of bread and ale. The jurisdiction of the magistrates extends over the whole burgh, and the lands of Ross. The magistrates have no patronage, except in the appointment of the town-clerk and other burgh-officers. The town-council have a vote, along with the kirk-session and presbytery of Kirkcaldy, in the presentation to a hursary of £15 per annum to the united college of St. Andrews. There is no guildry in Kinghorn; but there are five incorporated trades in Kinghorn, viz.: hammermen, weavers, shoemakers, tailors, and hakers. The burgh joins with Kirkcaldy, Dysart, and Burntisland, in electing a member of parliament. Parliamentary and municipal constituency, in 1840, 34. Population of the town, in 1821, 1,500; in 1831, 2,579.

KINGGLASSIE, a parish in Fifeshire, in the form of a parallelogram, 5 miles in length, by 2 in average breadth. It is bounded on the north by the river Leven, which separates it from Leslie; on the east by Markinch and Dysart; on the south by Dysart and Auchterderran; and on the west by the last, Ballingry, and Portmoak. It is watered by the Lochty and Orr, two tributary streams of the Leven. On the banks of these rivulets the surface is flat, rising with a gentle ascent, and forming two small ridges. The whole of it is arable, and above

bridge, at which point also an inclined plane goes down to Kirkcaldy inclined at the rate of 1 in 15; then through below Anderson-street at Pathhead, and forward over the town of Dysart on a viaduct 260 yards long; then eastward near to Wemyss, and through the ridge there by a tunnel; then westward over Orr-water on a high bridge 280 yards in length; and through another ridge at Coatton where there is a cut 40 feet deep; then across Leven-water on another high bridge 300 yards in length; and through the ridge between Markinch and New-inn, by means of two tunnels and an open cut already described; merging from thence, it proceeds forward over what might be called the valley of the Eden, on embankments from 25 to 47 feet deep, and more than two miles long, crossing in its progress the village Kettle on two high bridges, each of 220 yards in length; passes near to Cnpar, and crosses the river Eden twice in the parish of Leuchars and St. Andrews within a quarter of a mile, to obviate which the river is to be diverted, and then onwards to Ferry-Port-on-Craig.

5,000 acres are under tillage. The soil is partly a deep clay, and partly a light loam, with some rich pasture meadows. There are several freestone quarries. Population, in 1801, 908; in 1831, 958. Houses 198. Assessed property, in 1815, £6,019. Kinglassie village lies 2 miles south-west of Leslie, 6 north of Kirkcaldy, and 7 from Kinghorn. The small river Lochty runs through it. The population is about 3,801. It has two annual fairs, on the 3d Wednesday in May, O. S., and the Thursday before Michaelmas, O. S. An agricultural association meets here annually in August.—This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Earl of Rothes. Stipend £223 4s. 4d.; glebe £18. Schoolmaster's salary £34 4s. 4½d.

**KINGOLDRUM**, a parish in the south-eastern extremity of the Grampian district of Forfarshire. It is bounded on the north by the upper section of Kirriemuir; on the north-east by Cortachie; on the east by the lower section of Kirriemuir; on the south by Airly; and on the west by Lentrathen. It is of an oblong or rather elongated oval form, stretching north and south with an indentation on its east side; and it measures 6½ miles in extreme length, and very nearly 3 in average breadth. Prosen-water runs 3 miles along the northern and north-eastern boundary, and receives in its course Soho-burn, flowing to it from Catlaw across the whole breadth of the parish. Back-water, a large tributary of the Isla, traces the boundary for about half-a-mile on the south-west. Cromhy-burn, a considerable brook, rises in the interior, and runs very circuitously over a course of about 6 miles to Back-water. Several other streamlets, tributaries of the Prosen or of Cromhy-burn, drain the parish and diversify its appearance. The surface on the north is mountainous, sending up on the northern boundary the towering Catlaw, 2,264 feet above the level of the sea, and other very considerable elevations; and on the south it is hilly, but mildly featured and sloping, and very generally arable. Cut variously and not abruptly asunder by the basins of the streams, the whole parish is rather a loftily rolling region, than a pastoral or continuously upland district. Though there is but little flat land, the slopes, especially in the braes of Kenny and Baldovie in the south, are so fully available for agriculture as even to bear good crops of wheat. The soil in the arable parts, is, in some places, a kind of clay, cold and wet,—in others, a light sand,—but, in general, a rich black mould. From about the year 1770, manurial and other operations have been well plied for accomplishing improvements. Catlaw and the other mountainous uplands, partly green and partly heathy, afford excellent pasture for sheep; and are celebrated for the delicacy and flavour of the mutton raised on their herbage. The air, in most parts, is cold and sharp, yet extremely healthy. The castle of Balfour, situated in the southern district, and superintending the best and most extensive lands in the parish, is a Gothic structure, built probably about the middle of the 16th century, and formerly the seat of the Ogilvies of Balfour, an ancient family descended from that of Airly. On the summit of Catlaw is a very large circular cairn bearing marks of fire. On Shurrach-hill, westward of the church, are three equidistant circles of large stones, locally called 'Druids altars,' a corruption apparently of Druids' altars. In the southern district, on Cromhy-burn, 4 miles west of the town of Kirriemuir, stands the hamlet of Kingoldrum, the site of the parish-church. To be a hilly country, the parish is very abundantly supplied with roads. Population, in 1801, 577; in 1831, 444. Houses 81. Assessed property, in 1815, £2,786. — Kingoldrum is in the presbytery

of Meigle, and synod of Angus and Mearns. Patron, the Crown. Stipend £159 4s. 11d.; glebe £9 6s. 6d. Schoolmaster's salary £23, with £10 fees, and about £3 5s. other emoluments. The church was given about the end of the 12th century by Sir Allan Durward of Lentrathen to the monks of Arbroath, and continued in their possession till the Reformation.

**KINGOODIE**, a village on the north shore of the frith of Tay, near the south-east corner of the parish of Longforan, Perthshire; 3½ miles west of Dundee; and 18½ east of Perth. It owes its origin and chief support to the working of the quarry of Kingoodie in its vicinity. The stone of this quarry is probably the best building material in Scotland, and has long been in request. The tower of Dundee, built of it, in 1189, shows very little appearance of decay; and the house of Castle-Huntly, built of it, in 1452, has scarcely a stone affected by the weather. It is what mineralogists call grain-stone, bluish in colour, very hard, and capable of the finest polish; and it may be had in blocks of any reasonable size, even 50 feet long, 16 broad, and 3 thick. The stone, besides being used in ordinary masonry, has been much in demand for the construction of docks and piers. A small harbour was built at the village to facilitate the export of the stone, and is used also for the importation of coals; but it is accessible, even at spring tides, only by vessels which draw less than 10 feet water. The village, during about 10 years of the present century, when the demand for the stone rose to unusual briskness, was one-third more populous than at present; but it still has a population of about 250, almost all connected with the quarry.

**KINGSBARNs**,\* a parish in Fifeshire, on the east coast of the county; bounded by the parish of Crail on the south; by the German ocean on the east; by St. Andrews on the north; and by St. Leonards and Crail on the west. Towards the east it measures about 2½ miles from north to south; but towards the west it is only 1 to 1½ mile. A short way from the south-boundary of the parish, and surrounded by the parish of Crail, is a small disjointed portion of the parish, which measures 1½ mile in length, and about ½ mile in breadth. There is only one village in the parish, that of Kingsbarns. Here two annual fairs are held, in July and October. At one time these were well-attended, and considerable quantities of sheep and black cattle were disposed of; they have now, however, dwindled away, and are only frequented by hucksters and small dealers. The soil of the east part of the parish towards the shore is light and sandy, but fertile, west of which it is generally a deep black loam, in some parts tending to clay. In the western and higher division of the parish the soil is rather inferior, in many places strong and heavy, and in others thin clay and muirish. There are altogether 3,057 Scots acres in the parish, of which 2,898½ acres are regularly under the plough. Crail, the post-town, is distant about 3 miles. Population, in 1801, 832; in 1831, 1,023. Houses, in 1831, 204. Assessed property £7,065.—Near the northern boundary of the parish is Pitmilny, the residence of David Monypenny, Esq., lately one of the lords of session and of justiciary. The family of Monypenny is of great antiquity in Scotland, and have held the lands of Pitmilny for upwards of 600 years. At the south-east corner of the parish, near the

\* The name is derived from the lands of Kingsbarns, where there is said to have been a regal castle, in the barns attached to which were stored the grain paid to the Crown, as the rest of lands belonging to it in this district. The last remaining portion of the foundation of this structure, consisting of some large stones, was removed only a few years ago.

sea, is the fine old mansion and grounds of Cambo, the residence of Sir David Erskine, Bart.—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the Earl of Glasgow. Stipend £251 18s.; glebe £29 15s. Unappropriated tithes £129 8s. 7d. The church is situated in the village. It was erected in 1631, and repaired and enlarged in 1811, so as to hold 650 sitters. Schoolmaster's salary £34 4s. 4½d., with about £30 fees.

**KING'S INCH**, an eminence in the neighbourhood of the hurgh of Renfrew, sometimes denominated the Castle-hill. It lies on the brink of Clyde; and as this river has often divided its waters here into two branches, the rising ground between them was—as in many other instances—called the Inch or Island. In Bleau's atlas this is designed King's Inch. It appears, for greater security, to have been surrounded by a large and deep fosse. That several of our kings have occasionally resided here, there can be no doubt. As, during the reign of Robert II., our first king of the family of Stewart, the barony of Raynfrev is mentioned in one 'Compotum,' and in another we have an account of the expense paid for carrying two tuns of wine from Blackness to Renfrew, for the use of the king. It is evident, indeed, that this barony had been long in possession of the Stewarts. For, so early as the reign of Malcolm Canmore, Walter, of this name, for his fidelity to his sovereign, got from him the baronies of Strathgrief, Renfrew, and Kyle. His descendant, Rohert, Great Steward, when restoring the authority of David Bruce, during the usurpation of Edward Baliol, was supported by his own heronial vassals of Renfrew. In the year 1316, on Shrove-Tuesday, as the Lady Marjory, the daughter of Robert, was returning from Paisley to the castle of Renfrew, which was the principal residence of the Lord-high-steward her husband, she was thrown from her horse, and died in consequence of the fall. The Cesarian operation was performed, but unskillfully; whence her son, afterwards Rohert II., having received a scar in his eye, was commonly called King Blear-eye. "The cross," says Ahercomby, "which was erected on the place, where this unlucky accident happened, is to this day (but more unreasonably) called Queen Blear-eye's Cross." They still show her tomb in the old abbey of Paisley. It is a proof, among many, of the uncertainty of human greatness, that the site of the residence of our former kings has been latterly occupied as a soap-work. When this was erected, nothing remained of the royal castle save the foundations of the walls; and it appears, from obvious marks, that the stones employed for this work were partly obtained from the ancient building. At the bottom of the Castle-hill, to the westward, is a place still called the Orchard; and a little farther, in the same direction, some low ground is yet known under the denomination of the King's Meadows. It cannot easily be accounted for, that a place, to which the family of Stewart were evidently very partial, should have been alienated from the Crown; especially as His Majesty still retains the hereditary title of Baron of Renfrew. The earliest proof we have met with of this alienation is in 1615, when "the lands of Inche, with the fishing on the water of Clyde, and office of constabulary of Renfrew," are given to James Lord Ross de Halkhed et Melvile, as heir of James Lord Ross, &c., his grandfather, who died A. D. 1581. This manor afterwards came into the hands of the Earl of Abercorn, as in part constituting his lordship of Paisley. At a later period it became the property of the noble family of Dundonald.

**KING'S-KETTLE.** See **KETTLE.**

**KING'S-MUIR**, an extensive tract of wild uncultivated ground in Fifeshire, acknowledged by no parish, *quoad sacra*, but locally situated on the borders of Denino and Crail parishes. It contains about 844 acres, and was originally the property of the Crown; but was given by Charles II. after the Restoration to Colonel Borthwick, who had attended him in his exile. It is now entailed on the family of Hanno. A coal-work was wrought for some years upon it to great advantage. Within this district there is about 153 inhabitants.

**KINGUSSIE\*** AND **INSCH**, an united *quoad civilia* parish in Inverness-shire, in the centre of the district of Badenoch, about 21 miles in length, and 18 in breadth; bounded on the north by Moy and Dalrossie; on the east by Alvie; on the south by Blair in Athole; and on the west by Laggan. It is mostly sheep-pasture; and lying between the Monadhliadh on the north, and the Grampian range on the south, is, perhaps, more elevated above the sea, and farther distant from the coast in every direction, than any parish in the kingdom. The prevailing winds are from the west and north-west. It is intersected by the Spey, which here winds in a number of beautiful curves through a fine meadow sprinkled with alder and birch-trees. The meadow is elevated about 850 feet above sea-level, and is bounded by an elevated slope also covered with trees, and, behind the shaggy and abrupt rocks and mountains, forms a scene truly picturesque. There are several other streams which arise from small lakes in the parish, and empty themselves into the Spey: among these are the Truim, the Tromie, the Gynag, and the Calder. The largest lake is Loch-Inch, from which one of the districts takes its name. Loch-Ericht is partly in this parish. The soil is a light sandy loam, in the lower ground mixed with the slime deposited from the river when it overflows its banks. According to a laborious series of observations made at Kingussie in N. lat. 57° 4', and W. long. 4° 5', at an elevation of 750 feet above the sea, the mean temperature at 8h. 51 m. morning, from 1st Nov., 1833, to 1st Nov., 1839, was 48° 77'. A mine was opened some years ago in this parish, and some specimens of ore, rich in silver, were dug up; but the work was soon discontinued, and has never been resumed. James Macpherson, the celebrated translator of Ossian, was a native of this parish. Population of the united parish, in 1801, 1,306; in 1831, 2,080. Houses, in 1831, 440. Assessed property, in 1815, £4,020.—This parish is in the presbytery of Abernethy, and synod of Moray. Patron, the Duke of Richmond. Stipend £269 18s. 5d.; glebe £40. The district of Insch has been recently erected into a separate *quoad sacra* parish: see **INSCH**. Schoolmaster's salary £34 4s. 4½d. There are 6 private schools.

**KINKEL**, an ancient vicarage, now comprehended in the parish of Trinity-Gask, Perthshire. The church is in ruins. It is 3 miles north of Auchterarder. Near this is a stone bridge over the Earn. See **TRINITY-GASK**.

**KINKELL**, an ancient rectory and prebend, now united to **KEITHBALL**: which see. It is 2½ miles north of Kintore. The rector of Kinkell was parson of the seven churches of Kinkell, Kintore, Kinellar, Skene, Kemnay, Dyce, and Drumhlade. This patronage and parsonage, by the influence of Archbishop Sharp, about the year 1662, were annexed to the Principal of St. Leonard's college, St. Andrews. In 1771, the church was unroofed, and the materials used for the new church at Montkegie. Its architecture appears to have been rather elegant.

\* The Celtic name is *Ceanngiuhhsaiche*, 'the Head of the Fir wood.'

KINLOCH, a parish in Perthshire, now united to LETHENDY: which see.

KINLOCH-AILART, a hamlet in the district of Arisaig. The cattle-market known under the name of 'Arimiskle-Fank' is held here on the 3d Friday of May, and 3d Friday of October.

KINLOCH-BERVIE, a *quoad sacra* parish, divided from the parish of EDDERACHYLIS [which see] in 1834, by authority of the General Assembly. Its greatest length is about 20 miles; greatest breadth, 10 miles. Population, in 1836, 1,040. Church erected in 1828-9; sittings 350. Stipend £120; glebe £2.

KINLOSS, a parish in Morayshire; bounded on the north by the Moray frith; on the east by Alves; on the south by Forres; and on the west by the bay of Findhorn, at the head of which it is situated. It is about 3½ miles square, with a very level and well-cultivated surface. The village of FINDHORN is in the parish: see that article. The kirktown of Kinloss is situated at the south-eastern extremity of the bay or lake, formed by the river Findhorn. Here stands the ruin of Kinloss abbey open to a beautiful view of the Moray frith, and the hills of Ross and Inverness. It was founded by David I., in 1150,\* for monks of the Cistercian order, and confirmed by a Papal bull, in 1174. It must have been of very considerable extent and magnificence, but the materials were taken, in 1650, to aid in the construction of Cromwell's fort at Inverness, and little else than a mere outline of its extent was left. The abbots were mitred and had a seat in parliament. One of the most distinguished was Robert Reid, official of Moray in 1530, bishop of Orkney in 1557, and sometime president of the court-of-session. He may be said to have founded the Edinburgh university, having begun the fund from which it was built, by a legacy of 8,000 merks, bequeathed for the purpose. He was employed in various state-negotiations, and assisted at Queen Mary's marriage with the dauphin of France. At the Reformation, the revenues of Kinloss abbey, according to Shaw, collated with the Registrum Moraviense, amounted to £1,152, besides numerous payments in kind. The whole of the property, including farms in the counties of Nairn, Inverness, Moray, Banff, Aberdeen, and Bervick, besides the lands in its vicinity, was seized, and Edward Bruce, Esq., commissary of Edinburgh, and afterwards a lord of session, was appointed commander of the establishment; and, in 1604, was elevated to the rank and title of Baron Kinloss. In 1633, his son, Thomas, was honoured, by Charles I., with the higher dignity of Earl of Elgin,—a title still enjoyed by his descendants. It was at Kinloss abbey that Edward I., intimidated by the wild hills of Ross and Inverness which he saw before him, was arrested in his conquering career, and, after staying at the abbey twenty days, retraced his steps. This parish is in the synod of Moray, and presbytery of Forres. Patrons, the Earl of Moray and Brodie of Lethen. Stipend £240 4s. 7d.; glebe £5. Schoolmaster's salary £34 4s. 4d.; fees and other emoluments £17. There is a private school in the parish.

\* According to a popular tradition at one time prevalent, King Duffus having, on a particular occasion, preserved his life, by concealing himself beneath a bridge, on the site of this abbey, reared a chapel in grateful commemoration of his escape. The story is thus narrated by Dempster:—"Killos, in Moravia, nomen habet a fluctibus, qui, præter omnia naturam, derepente vicino in campo pullularent, dum Duffi Regis corpus revelaretur. Cœnobium, post duo fere secula quem Duffus occubuit, fundatum in memoriam miraculi quod ibidem contigisse memoratur." The event is similarly described by Boethius. Pursuing the narration he adds: "Nunc ibi cœnobium est, cum amplissimo templo, Divæ Virginis sacro, atque augustissimo, ædibusque insignibus structure piorum cœti Cisterdensis instituti insigne, nulli in Albione religionis observatione secundum."

Population, in 1801, 917; in 1831, 1,121. Houses 224. Assessed property, in 1815, £699.

KINNAIRD, a parish in the district of Gowrie, Perthshire. Its figure is an irregular heptagon, or a square subtended by a triangle, 2 miles deep in the square part, and 1½ mile from the middle of the base to the apex of the triangular part. It is bounded on the north by Abernyte; on the east by Abernyte and Inchture; on the south-east by Errol; on the south-west by Kilspindie; and on the north-west by detached parts of Caputh and of Forfarshire, and by Collace. The south-eastern and considerably smaller section stretches into the Carse of Gowrie; and the rest rises gradually up into what are called the Carse braes. The soil, in the former section, is of the rich and celebrated character common to the carse; on the south side of the braes, it is a mixture in different proportions of black earth and what is called mortar, inferior to the carse soil, yet not a little fertile; and on the north it is light and shallow, producing alternations of heath, bent, and verdure, and fit only for the pasturage of sheep. The arable and the pastoral, or uncultivated districts, are to each other as 31 to 30. Several vantage-grounds in the uplands command extensive and brilliant views, cinctured on some sides by the bold forms of the Grampian ranges, and the gentle outlines of the Fyfe hills. The village of Kinnaird, and especially the castle, situated a little north of it, occupy such vantage-grounds; and may, from this circumstance, have obtained their name,—composed, as it is, of two Celtic words which mean the high end or head. Kinnaird-castle is an imposing ruin, much dilapidated, said to be about 600 years old, and anciently the seat of the noble family of Kinnaird, now unconnected with the parish, and chiefly resident at Rossie in Inchture. The parish lies about midway between Perth and Dundee, and has good facilities of communication. Population, in 1801, 455; in 1831, 461. Houses 89. Assessed property, in 1815, £639.—Kinnaird is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend £183 16s. 2d., and a glebe. Schoolmaster's salary £34 4s. 4½d., with £18 fees, and £4 other emoluments.

KINNAIRD, a parish in Forfarshire, now divided between the parishes of FARNELL and BRECHIN: which see.

KINNAIRD'S-HEAD, a high promontory on the coast of Buchan, Aberdeenshire, supposed to be the 'Promontorium Taixalium' of Ptolemy: see FRASERBURGH. From this point the coast trends due west, on the one hand, and on the other, curves to the south-east, forming the bay of Fraserburgh. On the top of the promontory is the castle of Kinnaird's-head, belonging to Lord Saltoun, and occupied, since December 1787, as a lighthouse: it stands in lat. 57° 42', long. 2° 1' west of London. The lantern is 120 feet above the level of the tide at high water, and is lighted from sunset to sunrise. The light is fixed, and is seen at the distance of 15 nautical miles in clear weather. Cairnbulg bears, by compass, 2 miles south-east, and Troup-head, 9 west-north-west, of this lighthouse.

KINNEDER, an ancient parish, now united to DRAINY in Elgin: which see. The remains of the church are still to be seen here, and of an old palace or castle adjacent to it, where the Bishop of Moray resided before Castle-Spynie was built.

KINNEFF, with CATERLINE or KATERLINE, a parish in Kincardineshire; bounded on the north by Dunnottar; on the east by the sea-coast; on the south by a small part of Bervie, from which it is divided by the water of Bervie; and on the west by Arbuthnot and Glenbervie. Its form is triangular,

with an apex to the south, and it extends in length, northwards, about 5 miles. Acres 6,408. Houses 204. Assessed property, in 1815, £5,490. Population, in 1801, 937; in 1831, 1,006. The coast is bold and rocky, containing only two small creeks for boats, at the fishing-hamlets of Gaphill and **CATERLINE**: which see. The tide reaches the foot of the rocks, which rise abruptly from 20 to 60 yards in perpendicular height. The rock is for the most part of what is called the 'pease-porridge' or 'plum-pudding' kind; and is thought to have the appearance of lava. The soundings all along the coast, at 100 yards or less from the shore, are from 8 to 13 or 14 fathoms. There are no rocks which cannot be seen at low water.—The strata of the rocks dip to the south-west from 30 to 40 degrees.—The bold shore leaving only a small space of the rocky bottom uncovered at low water, but a small quantity of kelp is made. At Craig-David, a fishing-hamlet near Bervie, David II. is said to have landed in a storm. The soil of this parish, particularly along the shore, is a fine rich loam with clay well-cultivated, and yielding abundant crops. The actual rental has been valued at £3,406. Numerous black cattle are reared, with some sheep, horses, &c. There are no quarries in the parish, except the coast rocks. These make a strong, durable, straight wall, but are rather too hard for heaving: they have been used for millstones, being in great repute for such a purpose. There are three old castles on the coast, possessing traces of strong fortification; and two ancient religious houses, chapels, or cells. One of the castellated ruins is named Kinneff-castle, and the old parish with which the abrogated parish of Caterline was incorporated probably took its name from this source.—Kinneff is in the synod of Angus and Mearns, and presbytery of Fordoun. Patron, the Crown. Stipend £232 3s. 6d.; glebe £28. Schoolmaster's salary £34 4s. 4½d.; fees £12. There is a private school in the parish. The celebrated Dr. John Arbuthnot, intimate friend of Pope and Swift, and physician to Queen Anne, lived here for some time. His father, the minister of Arbuthnot, was, at the Revolution, turned out of his living by his chief and patron, Lord Arbuthnot, who was then a very keen partizan; on which, he retired to his own property of Kingorny, where he lived for some time, having his son, the Doctor, a young man, along with him. Mrs. Granger, the spirited wife of a minister of Kinneff, with her servant-girl, succeeded in conveying the regalia of Scotland out of Dunnottar-castle while besieged, and hid them under the pulpit in the church of Kinneff:—see **DUNNOTTAR**.

**KINNEL (THE)**, a considerable rivulet of Anandale, Dumfries-shire. It rises between Auldman-hill and Harestane's-craig, in the extreme north-west of the parish of Kirkpatrick-Juxta, within three furlongs of the source of one of the highest headwaters of the Daer, or more properly, the **CLYDE**: see that article. For 5½ miles it runs south-eastward, along a fine pastoral valley between the lofty Queensberry range of hills on the west side, and a less imposing hilly range on the east side; and receives various tributary rills, the chief of which are Earshag-burn on the left bank, and Lochan-burn on the right bank, each 3 miles in length of course. The stream now runs 2½ miles southward, dividing Kirkpatrick-Juxta on the west from Johnstone on the east; and receives from the west the tribute of the Duff Kinnel, after the latter has flowed 4 miles from its source, chiefly along the boundary of Johnstone. The Kinnel, from the point of touching Johnstone, had become wooded in its banks; and, running 2½ miles southward through the body of

that parish, it sweeps past the splendid mansion and demesne of Raehills, occasionally ploughs its way along a very deep and finely-featured sylvan dell, and altogether wears an aspect of mingled picturesque and romance. Receiving on its right bank a beautiful little tributary of 3 miles length of course, it forms, for 2¾ miles, the boundary-line between Kirkmichael on the west and Johnstone on the east. Running a mile into the parish of Lochmaben, it is joined from the west by the limpid but careering Aë [which see]; and thence south-eastward, 2 miles in a straight line, but at least 4 along its channel, it flows in serpentine foldings to the Annan at Broomhill. In the lower part of its course, it has, in general, a level basin, yet so various and pleasing in aspect, as to be a fine foil to the mirthful trotting of the stream along its pebbly path. The Kinnel's entire length of course is about 19 miles.

**KINNEL**, a parish in the maritime district of Forfarshire, bounded on the north by Farnell; on the east by Craig; on the south-east and south by Inverkeillor; and on the west by Guthrie and a detached part of Kirrden. It measures, in extreme length, from east to west 4 miles; and in extreme breadth from north to south 2¾ miles. Lunan water runs along its southern boundary for 1¾ mile, and a tributary of that stream runs along the eastern-south-eastern boundaries for 3 miles. The Pow rises in the western extremity, and runs 2 miles north-eastward to the point of its exit; and at that point a tributary joins it, after having, for 2 miles, traced the northern boundary. The Lunan afford some good trouting; and at the place where it is overlooked by the parish-church it forms a deep pool, whence the name of the parish, signifying 'the Head of the pool,' is supposed to have been derived. The surface of the parish is, in general, flat, enclosed, and under good cultivation. On the east and north it is sheltered and beautified by plantations. Four or five hundred acres of moor in the north-east corner, which formerly were waste, are now covered with wood. Tradition assigns to the parish the battle-field of an action between the Lindsays and the Ogilvies in the reign of James II., and adds that the spurred boot of a man slain in the pursuit was taken off, and hung up in an ash adjoining to the church, and belonging to the family of Airly. A spur, covered with rust, measuring 8 inches in length and 4½ in breadth, and having a rowel as large as a crown-piece, remained on the wall at the date of the Old Statistical Account. The parish is intersected northward by the turnpike from Arbroath to Brechin, and has a profusion of other roads. Population, in 1801, 783; in 1831, 786. Houses 159. Assessed property, in 1815, £8,492.—Kinnell is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Stipend £229 10s. 10d.; glebe £14, besides 3 acres of cultivated moor. Schoolmaster's salary £31, with £15 fees. There is a small non-parochial school for females.

**KINNELLAR**. See **KINELLAR**.

**KINNESSWOOD**, a sequestered village in Kinross-shire, in the parish of Portmoak, 5 miles east of Kinross, containing about 320 inhabitants. It is noted as having been the birth-place, in 1746, of the youthful poet, Michael Bruce.

**KINNETHMONT**. See **KENNETHMONT**.

**KINNETTLES**, a parish on the frontier-line of the Strathmore and the Sidlaw districts of Forfarshire; bounded on the east by Forfar; on the south by Inverarity; and on the west and north by Glamis. It is nearly a parallelogram, stretching north and south, 2½ miles long, and 1¾ mile broad; but has at the north-west corner a triangular projection 1 mile, or ¾ of a mile deep. The drain of Forfar

loch, or the early course of the sluggish Dean water, flows along the whole of the northern boundary. The Arity, or Kerhit, coming in from the south-east, flows  $3\frac{1}{2}$  miles north-westward by the Dean, partly in the interior, hut chiefly along the western boundary; and, during its whole course here, it is a cheerful and useful stream, enlivening the landscape, driving machinery, and affording abundant sport to the angler. Numerous springs supply the inhabitants with abundance of pure and soft water. One of these, at the village of Kinnettles, is so prolific as to flog up not much short of 40,000 gallons a-day. Several chalybeate springs also exist, but not of any medicinal repute. Through the centre of the parish lengthways runs a hilly ridge, all enclosed, most of it arable, and the rest covered with plantation. The surface gently slopes from both sides, and from the north end of the summit, and subsides into plains. The plain on the west is watered by the Arity, and forms a part of Strathmore. The soil is various; in some parts a brown clay; in others a loam; in others loam mixed with clay or with sand; in others so light as to require rich manuring; but in all exceedingly fertile. Fine enclosures, affluent fields, thriving woods, numerous and neat mansions, and the curving line of heauty over the configuration of the general surface, impart to the district a delightfully attractive aspect. Whinstone for road-metal, sandstone for building material, and the well-known 'Arthroath stone' for pavingment, abound, and are worked in several quarries. Douglastown, a stirring little village, stands on the Arity at the western verge of the parish, on the road between Forfar and Glamis,  $3\frac{1}{2}$  miles south-west of the former town, and  $2\frac{1}{2}$  miles east of the latter; and has a population of about 170. Here is a flax spinning-mill, erected before the last century, and employing about 50 persons. In this village, and in other parts of the parish, nearly 100 persons are employed in weaving osnaburghs, and other linen fabrics, or in spinning and washing yarn, subordinately to the manufacturers of Dundee. Half-a-mile south-east of Douglastown stands the modern and very neat, though small, village of Kinnettles, the site of the parish-church and school. A neat stone-bridge of three arches carries the road across the stream at Douglastown; and four other considerable bridges are within the parish. The Dundee and Forfar turnpike runs along the east. A great accession has been made to facility of communication by the Dundee and Forfar railway. Population, in 1801, 567; in 1831, 547. Houses 106. Assessed property, in 1815, £2,736.—Kinnettles is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, the Crown. Stipend £158 6s. 8d.; glebe £11. Schoolmaster's salary £34 4s. 4d., with fees.—An ancient chapel is supposed to have stood on a rising ground, called Kirkhill, near the present parish-church. A popish chapel was built after the Reformation in the southern district, on the estate of Foffarty, and was destroyed in 1745 by a party of royal dragoons. The parish was less extensive before the Reformation than at present, and till 1812 had a parish-church of apparently very high antiquity.

**KINNIEL.** See **BORROWSTOUNNESS.**

**KINNOUL**, a dispersed hut very heautiful parish adjacent to the town of Perth, hut on the left bank of the river Tay, Perthshire. It consists of five parts, or four entirely detached sections. The principal one, for its populousness, its suburban position, its being the site of the parish-church, and of many interesting edifices, stretches 2 miles up and down the Tay, and immediately opposite the town of Perth, has a breadth of about  $1\frac{1}{2}$  mile, and is bounded on the north and north-east by Scone, and on the

south-east and south by Kinfauns. The larger portion of this district is included within the parliamentary boundaries of Perth. Another section called Balthayock, measuring  $1\frac{1}{2}$  mile by  $1\frac{1}{4}$ , lies a mile to the west; and is slightly connected at its northern extremity with a third section, a square  $\frac{3}{4}$  of a mile deep, presenting angles to the cardinal points, and called Murray's hall. These two sections, viewed as a continuous district, are surrounded by Scone, Kilspindie, and Kinfauns. Another section, called Balheggie, measuring  $1\frac{1}{4}$  mile by  $\frac{3}{4}$ , lies  $1\frac{1}{4}$  north-east of the nearest part of the Murray's hall section, and is bounded on the east by Kilspindie, and on all other sides by St. Martin's. The last section, called Inchyra, stretches along the Tay, 3 miles east of the first section, and 1 mile south of the section of Balthayock, and is bounded on the north-west and north by Kinfauns, and on the east by Kinfauns and St. Madoes. The Inchyra section forms part of the extreme west end of the carse of Gowrie, and possesses the flatness of surface, and the surpassing fertility of soil, which characterize that district. The other sections consist chiefly of the summits and sides, or helts of level land at the base of the commencing part of the far-stretching hilly range which here rises abruptly up near the Tay, and runs away to the coast of the German ocean at Redhead in Forfarshire. The soil is very various; but in most places it is rich, and, at the proper season, laden with crops; and in places where it is too poor, or too disadvantageously situated to admit of tillage, it is richly superincumbent with wood. The hilly part sends up two summits, mutually distant 2 miles, one in the section immediately adjoining Perth, and the other in the Murray's hall section, both of which command uncommonly brilliant prospects. The former, well-known to all lovers of scenic heauty under the name of the Hill of Kinnoul, presents in itself one of the most fascinating objects of its class in Britain, and vies successfully in its attractions with Richmond Hill. Its southern front in the parish of **KINFAUNTS** [which see], does not more strike by the holdness, picturesque features and sylvan dress of its rocky declivity, than the slopes, and curves, and undulations of the other sides, crowned and helted with wood, and profusely emhelled with little expanses of garden and with numerous villas, peeping out from environing shrubberies, excite thrills of pleasure by their rivalries of meek heauty. On the north side a sinuous road, called Montague's walk, in honour of the Duke of Montague, who was in Scotland when it was formed, offers an easy access for a wheeled vehicle to the summit. At the top, the hill is cloven by a steep hollow, called the Windy Gowle, near which, in certain positions, is a nine or ten times repeating echo. In a steep part of the rock, on the face of the hill, is a cave, called the Dragon-hole, which is traditionally reported to have been a hiding-place of Sir William Wallace, and which became, after the Reformation, the scene of some annual superstitious observances, such as occasioned the interference, and incurred the special censures of the Reformers. The hill has yielded up to research vast numbers of fine agates, some oyxn stones, and a few cornelians, and is remarkable for making choice contributions to the herbarium of the hotanist. Half-a-mile west of the Tay stands the Perth Lunatic-asylum. Between it and the river, and on all the lower slope of the hill, or on the helt of lowland at its base, is a thick recurrence of mansions, villas, and neat houses.

Close on the bank of the Tay, stretching chiefly along in one street line, diverging at right angles on both sides, from the end of Perth bridge, stands the village of Bridgend, strictly a suburb of Perth, and containing a population of about 2,000. Before 1771,

when the new bridge was built, Bridgend was a paltry and disagreeable place,—a stained and filthy spot, on the face of an eminently lovely landscape,—a straggling assemblage of mean houses, for the accommodation of about 30 boatmen, who plied the ferry across the river. But its present edifices are all modern and pleasant, and in many instances elegant. Three turnpikes, respectively from Dundee, Cupar-Angus, and Blairgowrie, diverge in it, and debouch through it to the bridge. At its south end, on a slight eminence overhanging the Tay, stands the parish-church, a neat edifice, erected in 1826 from a design by Mr. Burn. Breweries and some other works, though they hardly aid its beauty, give employment to its population. South of the church, along the bank of the Tay, 30 or 40 acres were laid out, so far back as 1767, by Mr. James Dickson of Hassendean-burn, in Roxburghshire, as nursery-grounds; and were characterized by the same taste and prosperity as those, originating in the same quarter, which adorn the environs of Dumfries and Hawick. To the cultivation of these grounds, the whole vicinity of Perth owes, in a prime degree, the wealth and exuberance of plantation and shrubbery which so extensively beautify it. Bridgend lies within the baronies of Kinnoull and Pitcullen, holding of the Earl of Kinnoull, and entitled by charter to a weekly market, and four annual fairs; and, in terms of the charter, the village is to be called the burgh of Kinnoull, and may be the seat of the fairs and market. But the inhabitants are reported by the Commissioners on municipal corporations to have no great reluctance, even despite their fear of police assessment, to be placed in all respects within the municipal jurisdiction of Perth.—Inchyra and Balbeggie are also villages of the parish, respectively situated in the sections whose names they bear: see **INCHYRA**. Balbeggie has 220 inhabitants, is the site of a United Secession meeting-house, and is  $4\frac{1}{2}$  miles north-east of Perth, on the road from that town to Newtyle.—The ruins of the old castle of Kinnoull, situated about  $\frac{1}{4}$  of a mile south of the parish-church, were traceable a few years ago, but have now disappeared. At Balthayock, the seat of an ancient family of the Blairs, are the massive ruins of an old castle, ten feet thick in its walls, and supposed to have belonged to the Knights Templars. Prince Charles Edward is said to have spent a night here in 1745. The ruins occupy a romantic site at the upper end of a deep dell, which is clothed with herbage, and productive of some rare plants.—Population, in 1801, 1,927; in 1831, 2,957. Houses 369. Assessed property, in 1815, £2,172.

Kinnoull is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Earl of Kinnoull. Stipend £269 16s. 9d.; glebe £20. Unappropriated teinds £203 7s. 10d. Sittings in the parish-church 1,000. The inhabitants of Inchyra have a gallery in the church of St. Madoes, containing 65 sittings. The United Secession congregation in Balbeggie was established in 1794. Their meeting-house was erected in 1832, and cost £500. Sittings 400. The parish minister stated the population, in 1838, to be 3,000; of whom 2,060 were churchmen, 780 were dissenters, and 160 were persons not known to belong to any religious denomination. Two parochial schools are conducted by two teachers, and attended by a maximum of 85 scholars; and two non-parochial schools—one of them for females—are attended by a maximum of 136 scholars. Salary of the first parish schoolmaster £34 4s. 4½d., with £19 17s. 5d. fees, and £5 11s. 1d. other emoluments; of the second £15, with £12 fees.—The ancient church of Kinnoull was dedicated to St. Constantine, who was the third Scottish king

of that name, and who assumed the cowl among the Culdees at St. Andrews, and is denominated monk and martyr in the Scottish calendar. The church was given, in the reign of David Bruce, by Sir Robert Erskine, proprietor of the barony of Kinnoull, Lord of Erskine, and great chamberlain of Scotland, to the monks of Camhuskenneth; but, contrary to the usual practice, it was allowed by the cowed fraternity a rectory, and was maintained by the rectorial tithes.

Kinnoull gives the title of Earl, in the Scottish peerage, to a branch of the ancient and noble family of Hay. Sir George Hay, Lord-chancellor of Scotland, was, in 1627, created Viscount Dupplin and Lord Hay, and, in 1633, raised to the dignity of Earl of Kinnoull. He died next year; and, in 1635, had an elegant monument erected to his memory on the north wall of the aisle of the old church. In the middle of it was a statue of his lordship as large as life, dressed in his robes as chancellor, and embellished with escutcheons and armorial bearings. The family-seat is Dupplin-castle, in the parish of **ABERDALGIE**: which see.

**KINNORE**, a suppressed parish in Aherdeenshire, now comprehended in that of Huntly: see **HUNTLY**.

**KINPIRNIE**, one of the Sidlaw hills, on the boundary between the parishes of Newtyle and Nevay, in the extreme east of Forfarshire; 3 miles south-east of the town of Meikle. On its summit, which rises 1,151 feet above the level of the sea, is a tower which serves as a land-mark, and from which St. Abh's Head is seen. The hill seems to have been anciently used as a heacon post.

**KINROSS-SHIRE**, the smallest county in Scotland. It is bounded on the south-east, east, and south by Fifeshire, from which county it was politically disjoined in 1426; and on the west and north-west by Perthshire. The green range of the Ochills separate it from Strathearn on the north; while the Lomond hills, Benarty, and the hills of Cleish, separate it from the surrounding parts of Fifeshire. The Great North road, entering between Benarty and the Cleish hills, intersects it from south to north; and crosses the northern barrier of the Ochills by Glenfarg. It is in length, from Auchmure-bridge over the Leven, to Fossaway-kirk, near the Devon,  $11\frac{1}{2}$  miles; and in breadth  $9\frac{1}{2}$  miles; being about 30 miles in circumference, and containing about 45,000 Imperial acres. The middle part is occupied by the beautiful expanse of **LOCH-LEVEN** [which see], the bed of which is about 360 feet above sea-level; from its banks the ground rises towards the north, with a very gentle acclivity; but, towards the south the rise is more rapid, though by no means abrupt and rugged. The soil on the low grounds is inclined to clay; on the more elevated parts, it is light and sandy; in the hilly district, moorish and barren. The face of the country has a rich and cultivated appearance. At least three-fifths of the surface are under the plough; and about 3,000 acres are in wood. Limestone, coal, and ironstone are met with. The hills are mostly composed of coarse whinstone, in some of the fissures of which occur small veins of lead ore. The valued rent of the county is £20,192 11s. 2d. Scots; the value of assessed property, in 1815, £25,805; the real land rent may be estimated at £36,000 sterling. It contains the town of **KINROSS**, which is the county-town, and the large village of **MILNATHORT** [see these articles]; and is divided into the four parishes of **KINROSS**, **PORTMOAK**, **CLEISH**, and **ORWELL**: which see. Part of the parishes of Fossaway and Tullihole, Arngask, and Fergandenny, are in this county. The population, in 1801, was 6,725; in 1831, 9,072. Houses, in 1831, 1,524. Families employed in agriculture,

in 1831, 440; in trades and handicrafts, 819. Clackmannanshire and Kinross-shire were united into one shieriffdom in 1807. These two shires now unite in returning a member to parliament. Parliamentary constituency of Kinross-shire, in 1840, 528.

**KINROSS**,\* a parish in the above county. It extends about  $3\frac{1}{2}$  miles from north to south, and is nearly of the same extent from east to west, containing 5,600 acres. On the east it is bounded by Loch-Leven; on the north by Orwell; on the south by Portmoak and Cleish, and on the west by Fossaway and Tullihole. The surface is flat; in no quarter rising 100 feet above the surface-level of Loch-Leven. The soil is partly clay, but chiefly a thin blackish loam on a gravelly bottom. It is watered by three small streams: viz. the NORTH and SOUTH QUIECH, and the GAIRNEY, which pour their streams into the lake: see these articles. The small island on which Loch-Leven castle stands is in this parish. Kinross-house is a large and elegant structure, built in 1685 by the celebrated architect, Sir William Bruce, for the residence of the Duke of York, and, it is said, from the fines levied on the Covenanters. It is now the property of Graham Montgomery; hut is not inhabited. The old house, for many generations the residence of the Earls of Morton, was taken down in 1723. There is an excellent trout-fishery on Loch-Leven, which is let at about £200 of yearly rent. Population of the town and parish, in 1801, 2,124; in 1831, 2,927. Houses 454. Assessed property, in 1815, £5,146. Real rental £9,175.—This parish is in the presbytery of Dunfermline, and synod of Fife. Patron, Graham of Kinross. Stipend £184 16s. 4d.; glebe £35. Unappropriated teinds £116 16s. 9d. Church built in 1832; cost £1,537.—The United Secession church has two congregations in the town of Kinross. The stipend of one of the ministers is £120; of the other £80.

The town of **KINROSS**, in the above parish, and the county-town of the shire, is 16 miles south of Perth; 13 north of Inverkeithing; 19 west of Cupar; 23 east-north-east of Stirling; 18 east by north of Alloa; and 27 north-west of Edinburgh. Population, in 1831, 2,200. It is finely situated at the west end of Loch-Leven, and is intersected, throughout its length, by the Great road from Edinburgh to Perth. Kinross was formerly a very mean place, but has been much improved of late years; a great number of new houses have been built in a good style, and the streets much improved and lighted with gas. The county-hall is a handsome building. It was erected in 1826, at an expense of £2,000. A town-hall is now building by subscription, at an estimated cost of £600. The town is governed by a committee of the inhabitants, annually chosen at a public meeting. This place formerly carried on a good trade in cutlery, which is now abandoned. It also manufactured brown linen to the amount of between £4,000 and £5,000 annually, which is also given up; and the people are mostly employed in weaving cotton goods, such as ginghams, pullicates, and checks, for the Glasgow manufacturers. Tartan shawls of a fine quality have lately been manufactured here with considerable success. There is a branch here of the British Linen company's bank. It has four annual cattle-fairs: viz. 3d Wednesday of March, 1st of June, 3d Wednesday of July, and 18th October, all O. S. Its weekly market, on Tuesday, has fallen into desuetude. There are two extensive inns, a

curling-club, two subscription-libraries, and several benevolent and religious societies in the town.

**KINTAIL**,† a parish on the western coast of Ross-shire; 18 miles long, and in general about 6 broad; and comprehending three districts, viz. Croe, Glenelchaig, and Glassletter. The whole is intersected by the two arms of Loch-Alsh [see **LOCH-ALSH**] called Loch-Loung and Loch-Duich; and surrounded by lofty mountains. The principal freshwater lakes are Loch-a-Bhealich and Loch-Glassletter. The principal rivers are the Croe and the Elchaig, flowing through the glens of these names. The fall of the Glomach occurs in this parish: see **GLOMACH**. The surface is wild and mountainous, and the chief attention of the farmer is paid to the rearing of black cattle and sheep. The parish is mostly inhabited by the clan of Macrae. Tullochard, on the north side of Loch-Duich, is elevated to a great height, and is seen at a distance. Near the manse is the tomb of Diarmid, one of the Fingalian heroes, composed of large rough stones. Population, in 1801, 1,038; in 1831, 1,240. Houses 235. Assessed property, in 1815; £18,520. There are two fishing-villages, viz. Dornie and Bundaloch. The uninhabited portion of this district lies between the north-east end of Loch-Loung, and the south-east end of Loch-Duich; the rest being hill-grazings with a few cottages.—This parish is in the presbytery of Lochcarron, and synod of Glenelg. Patron, the Crown. Stipend £177 5s.; glebe £40.—There is a Roman Catholic congregation at Dornie. There are three catechists in the parish; and three schools. Schoolmaster's salary about £27.

**KINTORE**, a parish in Aherdeenshire; bounded on the north by Inverury and Keithhall, with Kinell, from which it is divided by the river Don; on the east by Fintray, from which it is also thus divided, and by Kinellar; on the south by Skene; and on the west by Kemnay. It extends about 6 miles in length from north to south, and averages 3 in breadth, narrowing towards its northern extremity: square area about 7,000 acres, exclusive of the large common between it and Kinellar. Houses 236. Assessed property, in 1815, £2,577. Population, in 1801, 846; in 1831, 1,184. The Tuach hurn rises amongst the hills on the south-western border, and, intersecting the parish north-eastwardly, falls into the Don about  $\frac{1}{4}$  of a mile from the town of Kintore. The parish is also intersected along the course of the Don by the canal between Aherdeen and Inverury, which runs through the town, and has been of great advantage to the district in its agricultural advancement. The surface of the land gradually rises from the banks of the Don, south-westwardly to the hills on its borders, and the soil gradually deteriorates in the same direction. The haugh by the river side is broad, and follows the windings of the river for nearly 3 miles: it is very deep in the soil, having been much enriched by the former overflowings of the river, which in this vicinity runs so slowly that it has more the appearance of a lake than a torrent: in a flood it has been known to spread more than a mile in breadth, threatening the town with inundation, especially when shoals of ice came down, which cut the deep banks. A little to the north-east of the town above Breedshaugh, the river forms the beautiful little island of Balbithan. The lower district is arable, producing tolerably good crops: there are also now several plantations. Anciently this district is said to have formed part of a royal forest; and the word *Kintore* is certainly Gaelic, signifying 'the Head of the wood.' This forest is said to have extended from the west

\* "The town of Kinross, lying at the beginning or head of a point of land that runneth into the west side of Loch-Leven; and this is the reason of its name in the old language."—*Irvine's Historic Scotiæ Nomenclatura*.

† From *Ceann-da-skail*, 'the Head of the two Seas.'

part of the parish eastward to the church of Dyce, a space of 5 or 6 miles. Part of this forest, with a hunting-seat or castle called Hall Forest, were given by Robert Bruce to Robert de Keith, Great marischal of Scotland, after the battle of Bannockburn, and the district still remains in the hands of his descendants, the family of Kintore, having been bestowed, in the 17th century, by the Earl Marischal, on his son Sir John Keith, who was created Earl of Kintore by Charles II., in 1677, on account of his alleged instrumentality in preserving the regalia of Scotland during the troubles of the civil wars—see DUNNOTAR. Numerous cairns and tunuli in this parish are supposed to indicate the scene of the battle between the armies of Robert Bruce and Edward I., after the defeat of Cumine, Earl of Buchan, near Inverury. On the head of the hill of Creechie,\* it is said the Earl of Huntly pitched his camp when marching southward previous to the battle of Correechie; and that having been already warned by a wizard to “beware of Correechie,” and hearing the name of this place, he became alarmed, and immediately decamped, marching forth to the Hill of Fair; in a hollow near which, called the Howe of Correechie, the engagement took place. In the year 1754, or 1755, those parts of Kinkell, west of the Dou, namely, Creechie and Thainstown, were, by decree, annexed to Kintore, and the other part to Mount-kiggie, now called the parish of Kinkell, and Keithhall. The annexation took place in 1760, by the death of the incumbent at Kinkell. This parish formerly belonged to the presbytery of Aberdeen, but by an act of synod, in 1702, it was for a time annexed to Garioch, and has ever since continued in the presbytery of Garioch, and synod of Aberdeen. Patron, the Earl of Kintore. Stipend £184 8s. 10d.; glebe £23. Schoolmaster's salary £30, with fees, &c., £28, besides a share of the Dick bequest. There are two private schools in the parish.

KINTORE, a royal burgh in the above parish, is situated on the road to Aberdeen, near the Dou, 12 miles north-west of Aberdeen, and 4 south-east of Inverury, is a town of small size—containing only 84 houses—but of great antiquity, claiming priority to Aberdeen as a burgh; and indeed,—according to the writer of the Old Statistical Account, and others,—priority, by no less than three centuries, to the very earliest period when such burghal privileges were first known in Scotland, namely, to the 12th century. That it was elevated to the rank of a royal burgh by Kenneth Macalpine is, therefore, by no means probable; but it may have been so in the 12th century. The only old charter it now possesses is one by James IV., in 1506, confirming others of a more ancient date—destroyed, it is alleged, by one of its own provosts in the 17th century. By the governing charter it was appointed to be governed by a provost, two bailies, a treasurer, a dean-of-guild, and eight councillors. The set of the burgh not having required any periodical change in the officials, the head of the Kintore family acted as provost for about 150 years previous to Act 3<sup>d</sup> and 4<sup>o</sup> William IV. c. 76, in Schedule F. of which it stands. At the period of the municipal inquiry, the police was maintained by a town-serjeant, and one or two special

\* The old names of places in this parish are generally Gaelic, as Creechie, Tillibin, Drummaheth, Blairs, Anquiten, Dalwearie, and probably Tavelty, the old road to Aberdeen, called the Rushlach, part of the road called the Skair, the fords of Tillikae and Pitcorn, with the names of many of the fields. On the extremity and top of a hill bordering with Skene, is Wauld-house, an English name, when, though it has no vestige of a camp, nor of a house better than ordinary, has probably had a watch and guard kept on it in perilous times: for this situation well fits it, especially as it stands on ground nearly as high as any in the parish, and has an extensive prospect north and south, and many hills at a distance are seen from it, even the Grampian hills, and to the north, much of the Garioch.

constables: no increase of the establishment was thought necessary. Lord Kintore voluntarily paid the whole expense of the municipal establishment, even to the providing of a jail and town-house, as the funds of the corporation were insufficient to maintain its dignity; the total income of the burgh being £9 6s. Scots!—an additional sum of £1 13s. 4d. sterling consisted of an annual amercement paid by the family of Craigievar, to the poor of Kintore, for the murder, within the burgh, of one of the family of Gordon of Craigmile. The royal burgh of Kintore is thus said to have been “in the most impoverished condition of almost any town in Scotland”—an allegation, the truth of which, to say the least of it, seems very doubtful, since, poor as it was found to be, though there was ‘no property,’ there was also ‘no debt.’ The municipal commissioner reported that “it is thought Kintore ought to be relieved of the burdens incumbent upon a royal burgh, and reunited with the county; provision being made for renewing the investiture of the property within burgh, ‘more burgi.’” It unites with Banff, Cullen, Elgin, and Inverury, in electing a member of parliament. Constituency, in 1840, 35. The population of the town is chiefly agricultural: it scarcely exceeds 400 individuals. The chief export for canal is granite, and the chief import lime. The town consists of one well-built street with a neat town-house, and the parish-church in the vicinity. Kintore gives the title of Earl to the younger branch of the Keith family above alluded to. In 1838, Anthony, the 8th Earl, was created Baron Kintore, in the peerage of the United Kingdom.

KINTRAW, a hamlet at the northern extremity of Loch-Craignish, in the parish of Killmelfort, Argyshire. Here is a good inn, about 8½ miles distant from Killmelfort, to which an excellent line of road has been made, under the auspices of the Parliamentary commissioners.

KINTYRE, or CANTYRE, the southern division of Argyshire. It is a peninsula lying between the frith of Clyde and the Atlantic ocean, and joined to Knapdale by the narrow isthmus of Tarbert. It extends about 40 miles from north to south, and is about 6½ miles in average breadth, consisting partly of low and partly of high land; and embraces the parishes of CAMPBELLTON, GIGHA, CARA, KILBERRY, KILCALMONELL, KILLEAN, KILCHENZIE, SADDLE, SKIPNESS, and SOUTHEND: see these articles. The population, in 1811, was 18,285; in 1831, 20,632. Houses, in 1831, 3,131. Families 4,110. It contains several villages; but the only town of consequence is the royal burgh of CAMPBELLTON: which see. This district has, singularly enough, up to the 17th century, been reckoned among the South Isles; and its history is mixed up with theirs: see article HEBRIDES. The origin of this was a stratagem of Magnus Barefoot, king of Norway, who, having conquered the Isles, made an agreement with Malcolm Canmore, by which the latter was to leave Magnus and his successors in peaceable possession of all the isles which could be circumnavigated. Magnus had himself drawn across the narrow isthmus between Kintyre and Knapdale in a galley by which, it was allowed in these simple times, he had succeeded in adding Kintyre to the possessions accorded him by the treaty.—[See Gregory's History of the Western Highlands, p. 14.]—In former times, when the Lords of the Isles ruled in all the pomp of royalty, Kintyre was reckoned part of their dominions. Bruce bestowed the keeping of Tarbert castle, then the most important position on the Argyre coast, on Robert, the son and heir of Walter, the high-steward. Under David II. the lands of Kintyre reverted to the descendants of

Angus Oig. In 1498, King James held his court at a new castle he had caused to be erected at the head of the bay of Campbellton, and Argyle was appointed keeper of Tarbert castle. The Macdonalds, however, stoutly and often successfully resisted the influence of the Campbells in this quarter, until their last and final suppression in 1615. In 1476, the Earl of Ross was compelled to resign Kintyre and Knapdale to the Crown.

**KINTYRE** (*MULL OF*), the south-west point of the peninsula of Kintyre, in N. lat.  $55^{\circ} 19'$ . W. long.  $5^{\circ} 40'$ . It has a lighthouse, elevated 297 feet above the sea at high water, situated on the rocks called the Merchants. The light is fixed, and is seen at 22 miles distance in clear weather. The point of Corsewall bears S. S. E. from this, 26 miles; Portpatrick light, S. by E. 37 miles; the Maiden rocks, S. by W.  $\frac{3}{4}$  W. distant 20 miles; Copeland light, S. by W.  $\frac{1}{2}$  W. distant 38 miles.

**KIPPEN**, a parish partly in Perthshire, and partly in Stirlingshire; yet quite compact, and all lying on the south side of the Forth. It is bounded on the north by Port-of-Menteith, by the western section of Kincardine and by Kilmadock; on the east by Gargunnoch; on the south by Balfroun; and on the west by Drymen. It measures, in extreme length, from east to west,  $6\frac{3}{4}$  miles; in extreme breadth, 4 miles; and in superficial area, 21 square miles. A parallelogram 4 miles long by  $2\frac{1}{4}$  broad, occupying the centre of the parish, and extending from its northern to its southern boundaries; and a stripe  $\frac{3}{4}$  of a mile east of this, measuring  $2\frac{1}{2}$  miles by  $\frac{1}{2}$  a mile, running up from the southern boundary, and quite surrounded by Stirlingshire;—are the portion of this parish which belongs to Perthshire. Thus, while the parochial boundary-line is uninterrupted, the more important one of the counties suffers absurd and perplexing intersections. The Forth wends stagnantly and sinuously along the whole of the northern boundary, having commenced, a little before touching the parish, that very serpentine course for which it is remarkable. It has here a mean appearance, and is confined within a narrow channel, by banks of from 10 to 20 feet in height. Yet, from vantage-grounds in its vicinity, magnificent views are obtained of the far-stretching strath through which it flows, from Gartmore 4 miles west of the point where it first touches the parish, away to the far-east, where the rocks of Abhey's-craig and Craigforth, and the bold form of Stirling castle appear like islands emerging out of the carse, the whole richly embellished with cultivation, and finely encinctured with ranges of hilly or mountainous elevations. A small brook, called Boquhan-burn, comes in from the south near its source, and flows for  $4\frac{1}{4}$  miles along the south-eastern and eastern boundary to the Forth. Another brook, the Pow of Glinns, which rises within the southern limits of the parish about  $1\frac{1}{4}$  mile west of the former, flows southward to the Endrick, and sends off its waters along with that stream, through Loch-Lomond to the Clyde. A third brook, rising still a little farther west, and flowing  $3\frac{1}{2}$  miles northward to the Forth, has sufficient water-power to drive machinery. Along the Forth stretches a narrow belt of haugh, very fertile, and equally adapted to tillage and to pasture. Behind this extends a belt of carse-ground, generally from half-a-mile to a mile in breadth, but in some places broader. This forms part of the great plain which extends on both sides of the Forth from Gartmore to Borrowstounness; and possesses the same rich clay soil which elsewhere characterizes the carse. About 300 or 400 acres of it were in the same condition of moss from the damming up of waters by the fall of the Caledonian forest, as portions of Kincardine and other parishes.

But operations for removing the moss, and laying open the subjacent clay, were commenced nearly as soon as the celebrated ones on the estate of Blair-Drummond, and did not much differ from them in nature. From the carse the surface of the parish rises at first abruptly, and then very gradually in most places for about a mile, and in others further; and continuing for a considerable space to be flat or to form a table-land, it declines toward the south. Where this upland territory springs from the carse, or on the abrupt skirting at its base, it exhibits the distinctive appearances of a river-bank deserted by its stream. The land on the slow northern slope, above the basement skirting, exhibits a pleasing view of fruitful fields, generally well-enclosed, and occasionally intersected with glens, pouring down their tiny rills. The table-land, and part of the southern slope of the uplands, are over the whole length of the parish a continuous moor, known as the moor of Kippen. The southern slope, altogether little more than half-a-mile, is carpeted with a soil lighter and less fertile than that of the northern slope. The interjacent valley, at its base between this parish and Gargunnoch, where it is traversed by Boquhan-burn, is very narrow. That burn, says General Campbell, "which, descending from the rock of Ballochleam, makes little impression on the strata of limestone or iron, meets at last with the red sandstone, through which it has opened a passage, and wrought its soft materials into a number of curious shapes, such as the wells and caldrons of the Devon. It is yet remembered when it burst through a large projection of the rock, and threw the mill, with all its appendages, on the other side of the bank." Limestone is found on the southern boundary, and has been burned for the improvement of the carse.—On five or six small heights in the parish are oval plains, surrounded by ramparts, averaging 130 yards in circumference, and variously conjectured to be of Roman, or of Pictish, and of feudal origin. A sanguinary affray having occurred respecting the course of the brook which flows through the body of the parish to the Forth, James V., who was at the time in Stirling, ordered the stream to be taken from both the contending parties, and turned into the channel which it still retains. In former times, the district was fearfully infested by marauding parties of the Highland clans; and, in 1691, it suffered special consternation and loss from an irruption of the gillies of Rob Roy. In 1745, when the rebel army passed the Forth at the ford of Frew on their way to Stirling, the inhabitants suffered from their exactions. Population, in 1801, 1,722; in 1831, 2,085. Houses in Perthshire, 146; in Stirlingshire, 314. Assessed property in Perthshire, in 1815, £3,082; in Stirlingshire, £4,652.

Besides the village of **BUCHLYVIE** [which see] on the west, the parish has, in its eastern division, the village of Kippen. This stands on the turnpike between Stirling and Dumbarton through Drymen—a turnpike which traverses the extreme length of the parish—9 $\frac{1}{2}$  miles west of Stirling, and 5 miles east of Buchlyvie. It has a weekly market during a brief period in winter, and has annual fairs on the 1st Wednesday of January, the 2d Wednesday of April, the 26th of May, and the 27th of October. During half-a-century it was the seat of extensive whisky distillation. An old act of parliament permitting a somewhat free manufacture of this article within the Highland line, Kippen took full advantage of, claiming to be on the privileged side of that line, till a new act was passed in 1793. Population of the village, in 1836, 600.

Kippen is in the presbytery of Dunblane, and

synod of Perth and Stirling. Patron, Erskine of Cardross. Stipend £250 6s. 9d.; glebe £12. Unappropriated tithes £511 10s. The parish-church was built in 1825. Sittings 800. In the parish, *quoad civilia*, are two other places of worship; but they are within the bounds of the *quoad sacra* parish of BUCHLYVIE: which see. According to ecclesiastical survey of the *quoad civilia* parish in 1836, the population then consisted of 1,638 churchmen, 491 dissenters, and 21 persons of unknown denominational connexion,—in all, 2,050. Two parochial schools are conducted by 2 teachers, and attended by at most 82 scholars; and 4 non-parochial schools, conducted by 4 teachers, are attended by at most 204 scholars. Salary of the first parochial schoolmaster £27 15s. 6d., with £20 fees; of the second £5 11s. 1d., with £5 10s. fees, and £11 14s. other emoluments. The church, according to one account, belonged anciently to the monks of Cambuskemeth; but, according to another and more probable one, it was, in 1238, erected by an ecclesiastical convention, acting under the authority of the Pope, into a perpetual canonry in the church of Dunblane. A chapel formerly stood near the eastern boundary, and is said to have been erected during the period of post-Reformation Prelacy in Scotland, in consequence of the indulgence granted by King James. The parish is celebrated for the covenanting zeal of its inhabitants during the persecution by the Stuarts. In 1675, the Lord's supper was administered here to a very numerous "conventicle" during the night. At the battle of Bothwell, in 1679, a body of 200 or 300 countrymen, partly from this parish and partly from Galloway, were placed as a guard upon the bridge, and defended it with great gallantry. Various parishioners, in particular James Ure of Shargartoun, underwent, till the Revolution, such severe hardships as were long feelingly remembered in the country, and are pathetically and minutely detailed by Wodrow.

**KIRK-ANDREW'S**, an ancient parish, now comprehended in the parish of BORGUE [which see], 5 miles west by south of Kirkcudbright. It is situated on a bay, to which it gives name, where vessels of light burden anchor occasionally in fine weather.

**KIRKBEAN**, a parish at the south-east extremity of the stewardry of Kirkcudbrightshire, occupying a peninsular place between the estuary of the Nith and the body of the Solway frith. It is bounded on the north by Newalby; on the east by the estuary of the Nith; on the south by the Solway frith; and on the west by Colvend. It is an oblong, 5 miles long from north to south, and  $3\frac{3}{4}$  miles broad; but with an indentation on its west side  $1\frac{1}{2}$  mile deep, and on the average  $1\frac{1}{4}$  mile wide. Southwick water traces, over a distance of 4 miles, the western boundary. Kirkbean-burn rises in the northern boundary, and runs  $4\frac{1}{2}$  miles circuitously through the interior, to the sea at Carse bay; and is joined a mile from its mouth by Preston-burn, after the latter, also of local origin, has performed a semicircular course of 4 miles in the interior. Kirkbean-burn has wooded banks, and forms amid their shades a beautiful cataract, a little above the village of Kirkbean. The coast line is  $9\frac{1}{2}$  miles in length: the estuary of the Nith is on the average 3 miles broad; and the Solway frith is 10 miles broad. Flounders, skate, cod, soles, shrimps, and some other species of fish abound; turbot is rare; herrings come in shoals, at intervals of several years. The tides flow five hours and ebb seven; and, owing to their rapidity, they occasionally upset vessels, and have been known to tumble a ship's anchor a considerable way from its place. The coast is low and slachy, and slowly gains accessions of excellent salt pasture from the

recession of the sea. On Southernness point, the most southerly land, running  $\frac{3}{4}$  of a mile into the sea from a base of 1 mile upon the body of the parish, stands a tower, erected as a landmark for vessels. Vessels often come to anchor here in three or four fathoms at low water, to escape the collision of the flood tide. Carse or Carsethorn bay, near the northern extremity of the parish, and 11 miles south of Dumfries, is a safe anchoring place, and has a rude harbour, and offers shelter to all vessels waiting a spring tide to take them up the Nith, or encountering contrary winds when coming down. On the northern boundary of the parish rises the imposing form of the far-seeing Criffel, sending its summit 1,895 feet above the level of the sea, at a distance of  $1\frac{3}{4}$  mile from the margin of the Nith, the south-eastern termination of a ridge which runs 10 miles inland, and the monarch mountain of all the country, lying south of the southern highlands. Along the western boundary, or a little inward from it, over a distance of  $2\frac{3}{4}$  miles, runs a spur or offshoot of Criffel. From these heights the surface of the parish inclines to the shore, and exhibits a rich, beautiful, and extensive prospect, fields well-enclosed and highly cultivated, and several clumps and belts of plantation. The soil, in general, is fertile; on the north-west and west, it lies on limestone; on the south-east it is a rich and deep clayey loam; and on the south or south-west, over a tract of 1,000 acres, called the Merse, it is a light and sandy conquest from the sea, nearly all arable. The parish claims to have led the van in the south of Scotland in the march of modern agricultural improvement, and owed its eminence, in this particular, to William Craik, Esq., of Arbigland. Limestone abounds, and is worked. Expensive but vain searches have been made for coals. The mansion of Arbigland, with its grounds and sea-views, is a delightful place. The village of Kirkbean, 12 miles south of Dumfries, and the same distance east of Dalbeattie, occupies a pleasant site on the Kirkbean-burn, almost surrounded with little hills and rising grounds covered with wood. The decayed and almost extinct village of Preston, stands on the cognominal estate, once the property of Regent Morton, and is said to have been a burgh-of-regality, with the privilege of holding four annual fairs. An ancient cross, seven feet high, on a base of stone-wall about four feet square, commemorates its former importance. There is another village, SOUTHERNESS: which see. Two ancient castles, Cavens and Weaths, which both belonged to the Regent Morton, and which, with the barony of Preston, were granted, on his forfeiture, to the family of Nithsdale, are yet partially standing. On the farm of Ardie is a Druidical circle. Admiral John Campbell, and the notorious Paul Jones, were natives of Kirkbean; the former the son of the parish minister, and born in 1719,—the latter the son of John Paul, a gardener, and born about the year 1745. An American recently repaired Paul Jones' native cottage. The parish is well-provided on the east and south with roads; but it has only two thoroughfares, one on the south-west, and another on the north, leading out of its own limits. Population, in 1801, 696; in 1831, 802. Houses 142. Assessed property, in 1815, £6,504.—Kirkbean is in the presbytery and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £202 12s. 8d.; glebe £18. Parish schoolmaster's salary £25 13s.  $3\frac{1}{2}$ d., with £28 fees, and upwards of £25 other emoluments. There are two non-parochial schools. The interest of £400 is divided among the teachers of all the three schools, for the gratuitous tuition of the children of the poor. Kirkbean is mistakenly supposed to have been anciently called Caerben, and to have contained the

Caerhen torigum of Ptolemy,—an object which must be sought at what is now called Drummore-castle at the mouth of the Dee. The parish seems to have had its name from the dedication of its 'kirk' to Beau,—either St. Beau, the first bishop of Murtblac, a saint of the 11th century, or more probably one of two Irish saints, who both had the same name. The church belonged of old first to the church, and next to the college of Lincluden.

KIRKBOST, an island of the Hebrides, about a mile long, and very narrow, lying on the west coast of North Uist.

KIRK-BUDDO, an ancient chapelry in the shire of Forfar, and parish of Guthrie, on the northern bank of a rivulet to which it gives name, at the distance of about 6 miles south-south-east of Forfar. Here is a Roman camp called Hare Faulds. See GUTHRIE.

KIRKCALDY,\* a parish situated on the shore of a bay of the frith of Forth, about 18 miles south-west of the county-town of Cupar, and 10 miles directly north of Edinburgh. It is of an oblong shape; about 2 miles in length from north to south, and scarcely in any place more than three-fourths of a mile in breadth from east to west. The sea-beach is low and sandy, and the surface of the parish is flat for a short way inland, when it rises suddenly to a considerable height, and continues afterwards to have a slight ascent to the northern extremity of the parish. It is bounded on the south by the Forth; by the parish of Dysart on the east; by the same parish and Auchinderran on the north; and by the parish of Abbotshall on the west. Originally the greater part of the parish of Abbotshall formed part of the parish of Kirkcaldy, the church of which was a menial church belonging to the monastery of Dunfermline. In 1649, the presbytery, on an application from the heritors, found that a new kirk should be erected in the parish of Kirkcaldy, for the accommodation of the parishioners; and recommended to the commissioners of the parliament for surrenders and tithes, to carry the erection into effect. The next year, the new parish of Kirkcaldy, since called Abbotshall, was erected; and the parish of Kirkcaldy proper, has from that time been confined nearly to the burgh, the burgh-acres, and the common land and moor, comprehending in all an extent of about 890 Scots acres. The population of the parish in 1755, was 2,296; in 1801, 3,248; in 1831, 5,034. The number of families, in 1831, was 1,002; of which 30 were chiefly employed in agriculture; and 532 in trade, manufactures, and handicraft. The number of inhabited houses was 463. Assessed property, in 1815, £9,374.—This parish is the seat of a presbytery, in the synod of Fife. Patron, the Crown. Stipend £172 3s. 7d.; glebe £30. The parish-church stands on the rising ground north of the town. It was rebuilt in 1807, and is rather a handsome structure. There is also a chapel in Cowan-street, formerly belonging to the original Burgher Associate Synod, but now connected with the Established church. There is also an Episcopal chapel in the town; and the United Associate Synod have two chapels here. Besides these different chapels, there is an Independent congregation. Education is well provided for in the burgh, which has two parochial or burgh-schools. One of the schools founded by the late Robert Philip, Esq., of Edinshead, has been erected in the burgh, at which, according to the will of the benevolent donor, 100 children are educated

gratis, each pupil receiving in addition 30s. annually for clothing. There were 20 private schools, including boarding and day-schools, in this parish in 1834.

The town of KIRKCALDY is a populous and thriving sea-port, and also a royal burgh. The first notice we have of this burgh is in 1334, when it was mortified by David II. to the monastery of Dunfermline, with whom it continued till 1450, when the commendator and convent conveyed to the bailies and community, the burgh and harbour, the burgh-acres, the small customs, the right of pasture on the muir, the right to hold courts, &c. Previous to this, it had only been a burgh-of-harony, holding of the abbot and monastery; but it was immediately thereafter erected into a royal burgh, with all the customary privileges. Its original charter, and all the privileges which it contained, were not only specially ratified by a charter of confirmation granted by Charles I. in 1644; but the burgh, for good and gratuitous services performed by it, was erected *de novo* into a free royal burgh and free port, and new and larger immunities granted to it. Nothing is authentically known of the state of Kirkcaldy at the time of its being disjoined from the lordship of Dunfermline; but as the churchmen were among the earliest cultivators of foreign commerce, it seems reasonable to suppose that Kirkcaldy was the port of the monks of that abbey, and that it consequently must have received benefit from the foreign commerce of the period such as it was. At a later period, and before the Union with England, we know that the whole of the burghs on the coast of Fife enjoyed a large share of trade, not only with the Continent, but with England. They were extensively engaged in the fisheries, and exported not only salted fish, but salt and coals. Of the commerce of the period, Kirkcaldy enjoyed a principal share; and tradition relates, that when this charter was renewed by Charles I., it had 100 sail of ships belonging to it. This tradition is supported by the evidence of an authentic account preserved among the records of the burgh, from which it appears that 94 vessels belonging to the port, had been either lost at sea or taken by the enemy, between the year 1644, and the period of the Restoration. These are said to have amounted in value to the sum of £53,791 sterling. This severe loss must have tended greatly to check the prosperity of the town; but other occurrences connected with the unhappy disputes of the period, must have increased this in a great degree. At the time that Dundee was taken by General Monk, the inhabitants of Kirkcaldy lost goods to the value of £5,000 sterling, which they had deposited there as a place of security; and several of the wealthier inhabitants suffered the loss of considerable sums of money which they had lent to the committee of estates for the public service, and which they found it impossible afterwards to receive. During the course of the Civil war, 450 persons belonging to this burgh were slain in battle; of whom 200 were said to have been killed at the battle of Kilsyth alone. All these losses, aggravated by the suspension of the trade with Holland after the Restoration, brought ruin and deep distress upon the burgh. Indeed so much so, that in 1682, an application was made to the Convention of burghs to consider its property, and to take measures for easing it of its public burden. The parish, however, having fallen under the displeasure of the Court, for the part it had taken during the Civil war, was not only refused all relief, but was rather hurried by an addition to its annual assessment of 2,000 merks. In 1687, a new application was made to the Convention, when a visitation of the burgh was ordered. A committee for the purpose met at Kirk-

\* This parish derives its name from the town of Kirkcaldy, where there is said to have been in ancient times a place of worship belonging to the Culdees; whence the name *Kil-caldy*, 'the Cell of the Culdees,' afterwards corrupted into *Kirkcaldy*.

caldy the following year, which, after proper investigation, reported "that the customs payable to his majesty were not the half of what they had been some years before; that this was occasioned by the death of many substantial merchants and skippers, and loss of ships and decay of trade, that many of the inhabitants, some of whom were magistrates of the burgh, had fled from and deserted the same; that so great was the poverty of the inhabitants, that all the taxations imposed on the town could do no more than pay the eight months' cess payable to the King, and that with difficulty." Before the effect of this report could be known, the Revolution took place, into which the inhabitants of Kirkcaldy entered with alacrity; and in consequence of their conduct on the occasion,\* and a representation of their poverty, they obtained an abatement of £1,000 Scots from their annual assessment. This relief, and the security which the country enjoyed after this great event, so had its effect upon this burgh that its languishing commerce began speedily to revive, and wealth again to circulate among its inhabitants. The treaty of the Union, however, again, for a time, put a stop to the prosperity of Kirkcaldy. In consequence of the taxes and customs which were imposed in Scotland, and the numerous restrictions with which the trade of the country was fettered by the English, commerce every where declined; nor did any place suffer more than the various towns on the coast of Fife. The shipping of Kirkcaldy, on which it had hitherto mainly depended, fell rapidly into decay; and the different wars which followed for more than half-a-century, so continued to depress trade, that in 1760, Kirkcaldy employed no more than one coaster of 50 tons, and two ferry-boats of 30 tons each. On the return of peace in 1763, the shipping trade immediately began to revive. In 1772, it had increased to 11 vessels, carrying 515 tons, and 49 men; and although its progress was retarded by the American war, it amounted at the close of that war to 12 vessels, carrying 750 tons, and 59 men. In 1792, its shipping consisted of 26 square-rigged vessels, 1 sloop, and 2 ferry-boats, carrying, by the register, 3,700 tons, and employing 225 men. Some of the larger vessels were employed in the trade to the Mediterranean, the West Indies, and America; but the greater proportion was employed in the trade to Holland and the Baltic. The smaller vessels were employed chiefly as coasters. Since then, its shipping trade has gone on regularly, and progressively increasing. In 1831, Kirkcaldy, with its immediate creeks, possessed 95 vessels, measuring 10,610 tons, and manned by 831 seamen. Kirkcaldy has for a considerable time sent several vessels yearly to the whale-fishery.

The linen trade, which is now the staple manufacture of the town, appears to have been but little attended to, till after the destruction of the foreign trade, in consequence of the Union. At this time, however, the manufacturers wove their own webs, and probably purchased in the surrounding district: little capital was consequently engaged in the trade. In 1733, the whole amount of linen cloth stamped at Kirkcaldy, was no more than 177,740 yards. In

\* They found means to apprehend the Earl of Perth, who was Lord-chancellor, and had managed the affairs of Scotland under James; and who knowing that he was generally obnoxious on account of the cruelties which he had practised on the Presbyterians, withdrew himself as soon as the public mind had declared in favour of the Prince of Orange. After detaining that nobleman in prison five days, under a constant guard of 200 men, they sent him under a convoy of three boats manned with 200 hands, to Alloa, where they delivered him, on receipt, into the custody of the Earl of Mar. The guard of 300 men they found it necessary to keep up for four months, on receiving information that a force was coming from the Highlands to burn the town in revenge for Perth's apprehension.

1743, it had increased to 316,550 yards, the computed value of which was nearly £11,000 sterling. But this included not only the manufacture of Kirkcaldy, but of the parishes of Abbotshall, Dysart, Leslie, &c. The linen trade continued to be diligently prosecuted, and gradually to increase, till about 1755, when it amounted to about the value of £22,000 sterling; but in consequence of the war which then began, interrupting the intercourse with America and the West Indies, the manufacture began to decline, and, in 1773, had fallen to £15,000 sterling, and the following year was still lower. Mr. James Fergus, however, an enterprising manufacturer of the period, succeeded in opening up a new channel for disposing of the manufactures of Kirkcaldy, by introducing them into England, since which time they have gone on rapidly increasing. In 1792, they employed about 810 looms, of which about 250 were in the parish, about 300 in the parish of Abbotshall, about 100 in Dysart, about 60 in Largo, and the rest in other parishes. The total value of the manufacture at that time was supposed to be about £45,000 sterling; and at that time the manufacturers of Kirkcaldy purchased from the neighbouring districts goods to the farther value of about £30,000 sterling. The manufactures of Kirkcaldy consist almost exclusively in weaving coarse linen, and coarse cotton goods; chiefly ticks, dowlas, checks, and sailcloth. These are woven partly by power-looms, and partly by the hand-loom; but the probability is, that ere long the whole of these species of goods will be wrought by the power-loom. The spinning and preparation of flax is also a considerable branch of the manufactures; and in 1831 the merchants of the town possessed ten distinct spinning establishments impelled by steam-power. There are four bleachfields connected with the town for bleaching the yarns; a ropework; a distillery; and two extensive iron founderies and machine-works, at which spinning and other machinery is made. The manufactures of Kirkcaldy, however, may be said to include that of many of the surrounding parishes; the public works in which chiefly belong to capitalists and merchants in that enterprising and thriving burgh. The increase of the trade and manufactures of this town led, in 1825, to the formation of the Kirkcaldy Chamber of commerce, of which the principal merchants and manufacturers of the district are members; and the object of which, as elsewhere, is to attend to the varied interests of the mercantile and manufacturing community. It is managed by a committee of directors, and a chairman. A weekly stock-market for the sale of grain is held every Saturday, at which not only the farmers and corn-factors of a large surrounding district attend, but also corn-merchants from the south side of the Forth. Three cattle-markets are held in the course of the year, viz., in the months of February, July, and October, which are well attended. There are four branches of banking companies in the town, viz., of the Bank of Scotland, the National bank of Scotland, the Commercial bank of Scotland, and the Glasgow and Ship bank. There are a public reading-room, well-furnished with metropolitan and provincial journals; a subscription library; and a mechanics' library. By the steam-boats which cross the Firth from the harbour, from Pettycur, and from Burntisland, there is ample communication with the south; and by the coaches which pass daily from Edinburgh, there is every facility of communication with the north of Scotland.

The burgh is governed by a provost, two bailies, a dean-of-guild, a treasurer, sixteen other councillors, and a town-clerk. The magistrates have all the powers possessed by magistrates of royal burghs, and hold regular courts for the decision of civil

causes and the trial of crimes; the town-clerk acting as assessor. Justice-of-peace courts for the recovery of small debts for the town and several surrounding parishes, are also held here at stated periods; and in terms of a late act of parliament, the sheriff holds circuit courts for the recovery of small debts six times in the year, viz., in the months of January, March, May, July, September, and November. The income of the burgh for the year from October 1838 to October 1839, amounted to £1,942 sterling; and its expenditure for the same period £1,511 sterling. The debt, in 1832, was £8,646. The incorporated trades of the town are seven:—the smiths, wrights, and masons; weavers; shoemakers; tailors; hakers, and feshers. Previous to the Union, Kirkcaldy sent a member to the Scottish parliament, and after that event it sent one to the British parliament in conjunction with the neighbouring burghs of Dysart, Kinghorn, and Burntisland. This arrangement has been continued since the passing of the reform bill, Kirkcaldy being the returning burgh. The parliamentary constituency, in 1840, was 298; the municipal, 277. It is also one of the polling-places for a district of the county. The house rents of the burgh, in 1817, amounted to £6,800 sterling. The annual value of real property for which the burgh was assessed, in 1815, was £5,093 sterling, and the landward part of the parish £4,281 sterling.

The town consists chiefly of one long street running from east to west on the low ground near the sea-shore, about one mile in length; and several cross streets and lanes; partly running from it towards the sea, and partly ascending the high bank to the north, where there is another street partly built, running parallel to the principal one. The principal street is in general narrow, crooked, and inconvenient; but in 1811, an act of parliament was obtained for widening and paving the streets, and lighting and watering the town, since which considerable improvements have been made. The town is well-lighted with gas, first introduced in 1830, and is also well-supplied with water. The main street has been in many places widened; and though many of the houses are still irregularly placed, it has been much improved by the erection of numbers of substantial and elegant buildings. A number of elegant shops of various kinds, especially those of drapers and haberdashers, tend considerably to ornament the town, while they show the wealth and respectability, not only of the occupiers, but also of the consumers, residing in the town and suburbs, and the surrounding district. The principal public building in the town is the town-house and jail, situated in the main street. It is a handsome building in the Norman style, of recent erection, having the town-hall and public offices in front, and the jail behind. The jail is the best in the county. According to the report of Mr. Hill, however, it had required to be but little used, which is certainly much to the credit of the burgh. In 1836, when he visited it, there was not a single criminal confined in it, and the average was not above three in a year; the average of debtors confined was still less.

The principal street, in so far as it is within the burgh, is only about one mile in length, yet it stretches in the same irregular manner into the neighbouring parishes of Abbotshall on the west, and of Dysart on the east, and from its extreme length when taken altogether, has obtained for Kirkcaldy its well-known appellation of the "lang town." This, when its extreme length is taken into consideration with its breadth, is not improperly bestowed, as from the western extremity of the Linktown of Abbotshall, as the western suburb is called, to the eastern extremity of Pathhead, the suburb on the

east, the distance is considerably more than 2 miles, and including Sinclartown and Gallowtown, still farther to the north-east, the traveller landing at Pettycur, and proceeding to the north-east of Fife, is astonished at having to pass along apparently one continued though irregular street of about 3½ miles in length.—The harbour of Kirkcaldy is situated near the east end of the burgh. Though the property of the town, it is under the management of Parliamentary commissioners. It is large, and has good stone piers; but has the disadvantage of being dry at low water, even at the ebb of neap tides, so that large vessels can only enter at or near the stream. A light was placed on the east pier in 1836. It enjoys, however, a considerable coasting trade; and also a trade with the Continent and the Baltic. The Kirkcaldy and London shipping company have two smacks, which sail regularly for London, and return once a fortnight; and the Kirkcaldy and Leith shipping company have four smacks, two of which are in the Leith, and two in the Glasgow trade. The harbour is also visited, when the tide permits, by the steam-vessels plying on the Forth, which land and take on board passengers and goods; but at low water this is done by small boats, or by a small pier which moves upon wheels upon the sands beyond the harbour. The shore-dues and anchorage for the year, from October, 1838, to October, 1839, amounted to £1,460 sterling, and the commuted anchorage for steam-boats to £206 sterling. Kirkcaldy is the seat of a custom-house, the jurisdiction of which extends from St. Andrews on the east, to Aherdour on the west. Anstruther is a sub-port, with the supervision of all the creeks to the east of Largo; while Kirkcaldy has the immediate supervision of the creeks or harbours of Largo, Leven, Buckhaven, East and West Wemyss, Dysart, Kinghorn, Burntisland, and Aherdour. The gross receipts of the custom-house in 1840, were £4,207; but in 1839 were £6,524. The projected Eastern Fifeshire railway line, crosses the East Den at Kirkcaldy on a high bridge, at which point an inclined plane, 646 yards in length, goes down to Kirkcaldy at the rate of 1 in 15½. A deviation of the rival projected western line branches off to Seafield harbour and to Kirkcaldy.

In the neighbourhood of Kirkcaldy, and especially on the high ground to the north, are a number of elegant villas and well-built houses, which with the finely wooded ground surrounding Dummikeir-house, occupying the north part of the parish, and the still more extensive and more magnificently wooded grounds of Raith, in the neighbouring parish of Abbotshall, add much to the appearance of the distant view of the town, when seen from the only point where a really distant view can be obtained, viz., the sea, when entering the bay from the south-east or south-west. In approaching the harbour from either of these directions, and especially the last, the view of the town with the surrounding country is exceedingly fine.—Henry Balnaves of Hallhill, who figured in the latter part of the reign of James V., and during that of his daughter Mary, and the regency of her brother Murray, is said to have been a native of Kirkcaldy. In later times, Kirkcaldy had the honour of giving birth to the celebrated Adam Smith, who successively occupied the chairs of moral philosophy in the universities of Glasgow and Edinburgh. The house in which he was born—which has been but recently taken down—was situated immediately to the west of that now occupied by the Bank of Scotland. The Hon. Mr. Oswald of Dummikeir, an eminent statesman and patriot, who long represented the burgh in parliament, was also a native of this town. He was grandfather of the present proprietor of Dun-

nikcir. The mansion-house of Dunnikeir in which he resided, a large old-fashioned house, still exists in the town.

**KIRKCHRIST**, a suppressed parish, forming the southern part of the present parish of Twineham, Kirkeudbrightshire. The etymology of the name is sufficiently obvious. Its cemetery, and the ruins of its church—the former still in use—are situated on the right bank of the Dee, opposite the town of Kirkeudbright. A nunnery, the site of which cannot now be exactly ascertained, anciently stood in the parish; and is commemorated in the names of two farms and a mill, High Nuntown, Low Nuntown, and Nunmill, near the southern boundary. See **TWINEHAM**.

**KIRKCOLM**, a parish occupying the northern extremity of the Rhinns of Galloway, Wigtonshire; bounded on the south by Leswalt; on the west and north by the sea; and on the east by Loch Ryan. It measures, in extreme length, from Kirkcolm point on the north to Low Saughrie on the south,  $5\frac{1}{2}$  miles; in extreme breadth, from a small headland at the Scar, on the east, to the sea beyond Aires on the west, a little upwards of 5 miles; and in superficial area, about 11,650 imperial acres. A brook, nearly 4 miles in length of course, rises in the interior, flows westward, drives a large corn-mill, and falls into Loch-Ryan at the head of the Scar. A mile west of its mouth is a lake, called Loch-Connel, about a mile in circumference; whence proceeds southward into the parish of Leswalt, a brook which drives two mills. Nine or ten other rills drain the district; but they are all necessarily very tiny. The coast-line along **LOCHRYAN** [which see] is  $5\frac{1}{2}$  miles,—the same distance, in consequence of its slight sinuosities, as that between the extreme points of the parish. Nearly 2 miles from the southern boundary-line a shelving sand-bank,  $\frac{1}{4}$  of a mile broad, runs south-eastward, or obliquely,  $\frac{1}{2}$  mile into Loch-ryan, and is not quite under water, even in the highest spring-tides. It is called the Scar. Between its south-west side and the coast, is a beautiful basin, called the Wig, capacious enough to shelter a large number of small vessels. Beyond a small point of land, called the Star, is a fine bank of prime oysters. Crabs and lobsters, whittings, cod, and herring are taken in the Loch; but, on the west and north coast, where fishing might be productive, it is much neglected. The coast, for  $2\frac{1}{2}$  miles on Lochryan, from the southern boundary, is low and sandy; and thence—excepting at the small bay of Portmore,  $\frac{1}{2}$  mile to the north, which offers good anchorage and shelter to large vessels—it is all the way, round to the southern boundary on the west, a breastwork of bold and ridgy rocks, torn with fissures, and near the entrance of Lochryan deeply perforated with caves. On the north-west is **CORSEWALL POINT** [which see], with its conspicuous lighthouse. The surface of the parish is gently undulating, the rising grounds so easy in ascent as to be ploughed and cultivated to the summit. The soil, on a narrow belt round the shore, is thin and sandy or gravelly; in a few patches, it is mossy or moorland; and, in most places, it is either a rich loam, a deep clay, or a mixture of the two. The proportions of arable land, and land either meadow, moss, pastoral, or waste, are as 17 to 2. As regards plantation, the district is exceedingly bare; but it is rich in the variety of its botanical specimens. The climate is remarkably salubrious. Near the north coast are the ruins of Corsewall-castle, once a place of strength, a tower of great thickness of wall. East of it, overlooking Lochryan, is the modern mansion of Corsewall house. The only village is **STEWARTON**, which see. Owing to the position of the district, the

roads are all strictly parochial; and, as a whole, they are not in a very creditable condition. But great advantage, as to means of communication, are enjoyed from the vicinity of Stranraer,—that town being only  $3\frac{1}{2}$  miles distant from the south-west corner of the parish. Population, in 1801, 1,191; in 1831, 1,896. Houses 349. Assessed property, in 1815, £6,516.—Kirkcolm is in the presbytery of Stranraer, and synod of Galloway. Patron, the Earl of Galloway. Stipend £216 5s. 3d.; glebe £15. Unappropriated tithes £244 0s. 7d. The parochial school is attended by at most 60 scholars; and three non-parochial schools by at most 173. Parish schoolmaster's salary £27, with £18 fees, £5 10s. other emoluments, and a house and garden. The 'Kirk' was anciently dedicated to St. Columba, the name being abbreviated into 'Colm.' The church was a free parsonage till the 13th century; and afterwards, till the Reformation, it was held by the monks of Newabbey, and served by a vicar. The lands of Galdenoch and Barjary, at the south end of the old parish, were detached from it, in the middle of the 17th century, and annexed to Leswalt. In the south-west corner of the parish, on the shore of Lochryan, are vestiges of an ancient chapel dedicated to the Virgin Mary, and called Kilmorie, the church of Mary. Beside it is the Virgin Mary's well, celebrated among victims of Romish folly for alleged miraculous powers of healing, and resorted to so late as the close of the 17th century by the deluded peasantry in the neighbourhood, for the cure of the sick. A belief was entertained that its water would sink away, and leave the well dry, if resorted to for one fated to death, but that it would be abundant for all comers in cases which were curable. So monstrous a pretension is hardly made by the still enthralled Romanists of Ireland on behalf of any one of their ten thousand holy wells.

**KIRKCONNEL**, a parish at the north-west extremity of Dumfries-shire, occupying the northern corner of the district of Nithsdale. It is an irregular and sinuously sided pentagon, bounded on the north by Lanarkshire; on the east and south by Sanquhar; and on the west and north-west by Ayrshire. It measures, in extreme length, from the Glaister hill on the north-east to the point where it is first touched by Kello water on the south-west, 11 miles; in extreme breadth, from the boundary beyond John's Moss on the north-west to a head of the Crawick at Crawick bolm on the south-east, 6 miles; and, in superficial area, about 26,500 imperial acres. The river Nith, coming in from the west, flows eastward  $4\frac{1}{2}$  miles through the interior, and  $1\frac{1}{2}$  mile along the southern boundary-line. Kello water, coming in from the south-west, not far from its source, runs  $5\frac{1}{2}$  miles along the same boundary, and falls into the Nith at the point where the boundary begins to be traced by that river. Crawick water flows  $5\frac{1}{2}$  miles, measuring in a straight line, but between 7 and 8 miles, including its sinuosities, along the south-east boundary. Spango water is formed of two head-streams, which rise respectively near the centre of the parish, and on its north-west verge, and run each about  $1\frac{1}{2}$  mile to a confluence; and it then flows  $4\frac{1}{2}$  miles eastward, to meet Wanlock water coming westward through Sanquhar parish, and to unite its waters with those of that stream in forming the beautiful Crawick. Not fewer than about 50 rills, varying from 5 furlongs to 4 miles in length of course, rise in the interior, and pursue their way, the greater part of them as independent streams, to the Nith, the Kello, the Crawick, and the Spango. Two mineral wells, on the farm of Rigg,  $1\frac{1}{4}$  mile west of the village of Kirkconnel, resemble respectively Merkland spa in Galloway and Hartfell spa near Moffat; but

excel them in the strength of their waters; yet though of tried efficacy, and tested by chemical analysis, they have never acquired much celebrity. The surface of the pasture, in its general features, is pastoral and mountainous. In the south-west a range of lofty elevations, chiefly moss-clad and swampy, or clothed in russet with slight intermixtures of verdure, occupy all the area from the boundaries till within a mile of the Nith. On the north side of that stream, the surface rises from  $1\frac{1}{2}$  to 3 miles by a very slow and gradual ascent; and then sends up parallel with the river a ridge of irregularly formed heights; chiefly covered with verdure, and extending from the towering Corsoncone, on the boundary with Ayrshire, away to the opposite extremity of the parish. North of this range the surface is cold and marshy, and exhibits an irregular congeries of hills covered with heath and grass, and variously intersected with narrow valleys, deep glens, and winding rivulets. Two-thirds of the whole area is hill-pasture; about 6,100 acres are arable; about 180 acres are under wood; and the remainder is principally meadow and low pasture. The soil of the arable part is poor and gravelly. About 12,000 sheep, and considerably upwards of 500 cows of the Ayrshire breed, are maintained on the pastures. Much attention is given to the dairy. Coal abounds, but is not extensively worked; limestone and ironstone occur, but are neglected; and lead is supposed to exist in several hills toward Crawick. The parish is traversed along the vale of the Nith by the turnpike between Glasgow and Carlisle, and farther north by the road from Glasgow, by way of Muirkirk, to a junction with the former line in the parish of Sanquhar. On Crawick water, near its confluence with the Nith, stands the small village of Whitehill, compact with that of CRAWICK-MILL [which see], in the parish of Sanquhar. On the left bank of the Nith,  $3\frac{1}{2}$  miles north-west of the town of Sanquhar, stands the modern and pleasant village of Kirkconnel. The site of Old Kirkconnel, and of the former parish-church, is  $1\frac{1}{2}$  mile to the north. The Duke of Buccleuch is the proprietor of nearly the whole parish. Population, in 1801, 1,096; in 1831, 1,111. Houses 190. Assessed property, in 1815, £3,678.—Kirkconnel is in the presbytery of Penpont, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £220 15s. 10d.; glebe £18. Unappropriated tithes £589 15s. 5d. There are two schools, one of them private. Parish schoolmaster's salary £26, with £3 other emoluments. The church of this parish, as well as several other churches of Dumfries-shire, was dedicated to a saint Connel or Congal, of whom nothing is certainly known. A tradition exists here that the saint was buried on Glenwhurry hill, in the vicinity of Old Kirkconnel; but it is unsupported by any monumental or documentary evidence. A saint Conval, a disciple of the memorable saint Kentigern, is said to have been archdeacon of Glasgow as early as the year 612. He, however, is not likely to have been the saint of the Dumfries-shire churches. The church of this parish was anciently a vicarage under the monks of Holyrood.

KIRKCONNEL, a suppressed parish in the district of Annandale—or, more strictly, intermediate between Annandale and Eskdale.—Dumfries-shire. It forms the north part of the present parish of KIRKPATRICK-FLEMING [which see], and is divided from Middlebie on the west by Kirtle water. Its cemetery, occupying a romantic situation around the site of its ancient church, still exists in a rich holm half surrounded by the river, and contains the ashes of two persons whose story throws an occasional dash of sentimentalism over the conversation of almost

every peasant in lower Dumfries-shire, and has been told in prose and song with nearly every variety of pathetic cadence. The sum is—for we are topographers, and cannot linger upon a spot remarkable only for its associations of pathos—"Fair Helen of Kirkconnel Lee," a lady of the name of Irving, and the daughter of a gentleman of family, was loved by one of the Bells of Blacket-house, in the conterminous parish of Middlebie, but gave undisguised preference to the suit of a youth called Adam Fleming, who clung to her in admiration simply of her beauty. Bell, aware that she and her accepted suitor were accustomed to meet on the banks of the Kirtle, concealed himself in an adjoining wood to seize an opportunity of assassinating his rival; and the fair Helen having observed him levelling his piece, and having suddenly flung herself before it, he lodged in her body the fatal ball which was intended for her lover. Adam Fleming, who wore a sword, pursued the assassin and hewed him to inches; he afterwards served as a soldier on the continent; but, unable to find quiet to his mind, he returned home, threw himself on the grave of his murdered mistress, and there sighed himself into the sleep of death. Both his grave and the fair Helen's are still pointed out in the ancient cemetery; and the spots on which she and Bell were slain, are respectively commemorated by a heap of stones, and by the tradition of the district.\*

KIRK COWAN or KIRKOWAN, a parish in Wigtonshire; bounded on the north by Ayrshire; on the east by Penninghame; on the south by Kirkinner and Mochram; and on the west by Old Luce and New Luce. From Half-Mark on the north, to the extreme limit on the south, it measures 14 miles; but for 3 miles' distance from the southern boundary, it has an average breadth of not more than  $2\frac{1}{2}$  miles, and nowhere is it broader than  $5\frac{1}{2}$  miles. Its area is computed to be about 31,600 imperial acres. Bladenoch water rises near the northern boundary, and tracing, over a distance of  $3\frac{1}{2}$  miles, that boundary with Ayrshire, falls, at the north-east extremity of the parish, into Loch Macbeary. This lake having expanded itself southward over a length of  $1\frac{1}{2}$  mile, by an extreme breadth of half-a-mile, Bladenoch water re-issues from it, and thence, till it leaves the parish, traces the long and sinuous eastern boundary. Tarf water, a mile after its origin in the north-west corner of the parish, appears on the western boundary, and, measuring in a straight line, runs along that boundary 10 miles,—though, measuring along its channel, it runs probably about 14; and it then suddenly debouches, and flows  $3\frac{1}{2}$  miles eastward to the Bladenoch. From Loch Dirry, a tiny lake near the

\* On one of the tomb-stones appears a sword, and a cross; with the following inscription, now scarcely legible: "Hic jacet Adam Fleming." They are without date; but it is probable they have lain there nearly three centuries. The particulars of the story, though transmitted by tradition, have never been doubted: according to these traditions, fair Ellen was of the family of the Bells of Kirkconnel; their residence—which was commonly called Bell's tower, and which formerly stood on the banks of the Kirtle, near the burying-ground—was taken down many years ago; and the materials employed in building the mansion-house of Sprinkell, the residence of Sir John Maxwell, Bart. That the name of the favoured lover was Fleming, appears from the inscription. It is said to have been a family of considerable note in those parts formerly, and the adjoining parish of Kirkpatrick-Fleming, probably derives the addition from their name. That fair Ellen received her death, not from an arrow, but from a carbine, appears not only from report, but is beautifully alluded to in the following stanza of one of the many old songs on the subject:

"Was to the heart that fear'd the thought!  
Curst be the hand that fir'd the shot!  
When in my arms fair Ellen dropp'd,  
And died for love of me."

In another song, but evidently of a much more modern date, her death is described otherwise:

"One morn as she sat at her wheel,  
She sang of fair Ellen's fate,  
Who fell by stern jealousy's steel,  
As on Kirtle's smooth margin she sat."

northern limit, a brook runs sinuously  $3\frac{1}{2}$  or 4 miles eastward to the Bladenoch. From Loch-Clougston, a lake half-a mile by  $\frac{1}{4}$ , near the southern boundary, another brook flows to the same stream. Coming in from Mochrum on the west, a third brook traces eastward to the same receptacle the southern boundary over  $1\frac{1}{2}$  mile's distance. Rising within 3 furlongs of the course of the first brook, a fourth streamlet flows circuitously for 8 miles to discharge itself, like the other running waters, in the Bladenoch. About mid-distance between the northern and the southern boundaries, and stretching south-westward till within half-a-mile of Tarf water, is a chain of three lakes, conjointly  $1\frac{1}{2}$  mile in length. The surface of nearly the whole parish is naturally a series of bleak moors, with poor and thin soil; which, though chiefly adapted to pasture, are not unsusceptible of cultivation. The proportion which the grounds under tillage bear to those which are either pastoral or waste, is as 17 to 5. The Galloway breed of black cattle are here propagated in great numbers for the Dumfries market. Nearly 10,000 black-faced sheep occupy the sheep walks. Less than 300 acres of the whole area of the parish is under wood. Slate of an inferior quality was, for some time, worked. Granite, for door-posts and lintels, and greywacke, for building material, are extensively quarried. Near the southern extremity are the ruins of Mindork-castle. On the Dumfries and Portpatrick railroad, which runs  $4\frac{1}{2}$  miles diagonally across the parish, stands Drumhay house, a low thatched edifice, neat, snug, and even elegant. On the Tarf, where it crosses the parish, and  $1\frac{1}{2}$  mile south of the Dumfries and Portpatrick turnpike, stands the village of Kirkcowan, the site of the parish church. Near it, on the river, is a woolen mill. Population, in 1801, 787; in 1831, 1,374. Houses 265. Assessed property, in 1815, £6,080.—Kirkcowan is in the presbytery of Wigton, and synod of Galloway. Patron, Vans Agnew of Barnbarroch and Sbeuchan. Stipend £292 11s. 8d.; glebe £6. Schoolmaster's salary £25 13s. 3d., with £20 fees, from £8 to £10 other emoluments, and a house and garden. There are three non-parochial schools, two of them conducted by females. The 'Kirk' seems to have been dedicated to St. Keuin, an abbot and a Scot of the western isles, at a time when these isles were scarcely peopled by Scots. The parish, accordingly, was anciently called Kirkuan. The church was granted by James IV. to the chapel-royal of Stirling.

KIRKCUDBRIGHT, a parish at the middle of the southern extremity of Kirkcudbrightshire; bounded on the north by Kelton; on the east by Rerwick; on the south by the Irish sea; and on the west by the Dee, which divides it from Borge, Twineham, and Tongueland. It is a slender oblong, measuring, in extreme length from the boundary beyond Scar-bill, on the north, to Balmoe-head on the south,  $8\frac{3}{4}$  miles; in extreme breadth from the boundary east of Gribdie on the east, to a bend in the Dee, at the burgh on the west,  $3\frac{1}{2}$  miles; in almost uniform breadth over 4 miles from the southern extremity, 1 mile 7 furlongs; and, in superficial area, about  $22\frac{1}{2}$  square miles. The surface is, for the most part, hilly, having but little extended plain. But the hills are neither high nor rocky; they come down in gentle slopes and form very obtuse angles with the plain; and they are generally arable to the summit, or at worst afford excellent pasture. The soil of the parish is, in some places, wet, upon a hard cold till; but in most, it is a light friable earth, with a sharp gravelly subsoil, exceedingly fructiferous; and, in some instances, it is deepest at the summit of the hills. Agriculture and the feeding of sheep

and black cattle are the chief care. The district, naturally fertile, has been industriously cultivated; though not in the style of neatness and decoration so delightfully apparent in many parts of Scotland. Hedges, sylvan helts, and clumps of trees, are infrequent in occurrence; and gave place to the tame and prosaic low stone fence. Yet, in spite of all disadvantages, the country is beautiful in aspect, and rich in its productiveness. On the west side are several hundred acres of forest-trees, including about 18 species. Expensive, tasteful, and almost enthusiastic efforts were made by the Earl of Selkirk, toward the close of last century, to dot the district over with orchards. St. Mary's Isle, a promontory south of the burgh, and the site of the cognominal mansion and demesne, the seat of the Earl of Selkirk, is a charming place: See MARY'S ISLE, ST. No parish in Scotland excels Kirkcudbright in the feeding of cattle,—in the fatness and fine quality of its beef. A chalybeate spring exists near the burgh. Ring-burn traces the eastern boundary for 4 miles, and falls into the sea. Grange-hurn rises near the northern extremity, and runs 5 miles south-westward to the estuary of the Dee. Loch-Fergus, an artificial lake,  $\frac{1}{2}$  a mile long, and lying  $\frac{3}{4}$  of a mile east of the burgh, has two islets called Palace Isle and Stable Isle, both of which bear decided marks of ancient fortification, and appear to have been the sites of castles or strengths of Fergus, lord of Galloway. A brook, 3 miles in length, comes down to this lake from the northern boundary. The streamlets noticed, and some lesser ones, refresh and cheer the aspect of the country, and afford excellent trouting. The DEE [which see], first running along as a river, and next expanding into an estuary, is of great value for its fishery, but chiefly for its navigation. The parish has either vestiges or the almost entire forms of no fewer than 11 camps, 8 of them British, and 3 Roman. One of the nearly entire British camps is situated on the highest part of the farm of Drummore, and commands a very extensive prospect of the Solway frith and the Irish sea. It is large and surrounded with a deep fosse. Judging from its position and extent, the Britons probably assembled at it in considerable force to repel either the Romans, or the plundering Danes and Norwegians. Chalmers, in his *Caledonia*, supposes this to have been the *Cærbant torigum*, 'the fort on the conspicuous height,' mentioned by Ptolmy, and to have been the frontier garrison of the Selgovæ on the western side of their possessions. Near it is a large circular stone-built well, which seems to have supplied it with water. A little south-west of it, at the entrance of Kirkcudbright bay, or the estuary of the Dee, are vestiges of a strong battery erected by William III., when his fleet was wind-bound in the bay on his passage to raise the siege of Londonderry. A little eastward, in a precipice on the coast, is a cave running 60 feet into the rock, of unequal height, narrow at the mouth, widening and rising as it proceeds till it attains the height of 12 feet or upwards, and then contracting toward the end. It was artificially furnished with a lintelled door, and seems from its sequestered situation, and the difficulty of access to it, to have anciently been an important hiding-place. Not far from this cave is a deep fosse, which marks the site of Raeberry-castle, one of the strongholds of the once powerful family of Maclellan of Bombie. This castle overhung a very dreadful precipice on the coast, and was protected on the north side by a deep fosse, a thick wall, and a strong drawbridge. Sir Patrick Maclellan, its proprietor, near the middle of the 15th century, was forcibly carried out of it by the truculent Earl of Douglas to undergo a tragical fate,

which roused the slumbering indignation of the country against the intolerable despotic Douglasses. See article GALLOWAY. Nearly 2 miles east from the burgh are utterly dilapidated vestiges of another castle of the Maclellans,—that of Bombie, whence they took their designative title. Some antiquities of note fall to be noticed in connexion with the burgh. The parish is abundantly segmented by roads. Population, in 1801, 2,381; in 1831, 3,511. Houses 489. Assessed property, in 1815, £14,953.

Kirkcudbright is the seat of a presbytery in the synod of Galloway. Patron, the Crown. Stipend £281 10s. 2d.; glebe £16. Unappropriated teinds £605 5s. 7d. The parish-church was built in 1836. Sittings 1,510; of which 992 are the share belonging to the burgh. A Sabbath school of old standing is attended by 300 scholars, and has a library. There are two dissenting congregations, United Secession and Holy Catholic Apostolic. The latter assemble in a dwelling-house, having about 80 sittings, and rented at £16. Their first angel or minister was ordained in 1834, and has a variable salary. The United Secession congregation was established in 1819. Their meeting-house was completed in 1822, and cost £1,100. Sittings 550. Stipend £85, but variable and increasing. An ecclesiastical survey in 1836 showed the population then to be 3,467; consisting of 3,000 churchmen, 407 dissenters, and 60 not known to belong to any religious denomination. The 'kirk' was dedicated so early as the 8th century to the celebrated Saint Cuthbert,—a name strangely transmuted, in its cognominal place in the appellation of the parish, into "Cudbright," and still more oddly fused, in popular pronunciation, into "Coobry." The site of the ancient church is commemorated by a cemetery  $\frac{1}{4}$  of a mile north of the burgh, still called St. Cuthbert's burghyard, and used as the burying-place of the town's people. In this cemetery are some interesting ancient sepulchral monuments, which the good taste of a burgher of Kirkcudbright has placed in good order and repair; among the rest some, with curious but affecting epitaphs, in memory of worthy covenanters who met a martyr's death in the circumjacent country, famous for its sturdy defences of the covenant. The church was given, in the 12th century, by Uchtred, son of Fergus, lord of Galloway, to the monks of Holyrood, and was a vicarage under them till the Reformation; in 1633, it was given to the bishop of Edinburgh; and when Episcopacy was abolished, it reverted to the Crown. In the town, previous to the Reformation, stood a church dedicated to St. Andrew; the chaplainries, cemetery, and other pertinents of which were conferred on the corporation of the burgh at the overthrow of Popery. In the northern extremity of the parish was a chapel called Kilbride, dedicated to St. Bridget. When post-Reformation Episcopacy was forced on Scotland, the people of Kirkcudbright tumultuously rose to prevent the settlement of an Episcopalian minister in their church. A judicial commission, appointed by the privy council, made inquiry into their conduct, and adjudged some women, as the ringleaders, to the pillory. "Whether the women or the privy council," sardonically remarks the author of *Caledonia*, "were, on that occasion, the most actuated by zeal, it is not easy to decide."—To the ancient parish of Kirkcudbright, which was small compared to the present one, were annexed, a little after the middle of the 17th century, the parishes of Dunrod and Galtway. Dunrod forms the southern part of the united parish. Its cemetery continues to be used, and marks the site of the church at the western base of an oblong hill, which once may have exhibited a red appearance,—the

word Dunrod meaning the reddish hill. The church was given, in 1160, by Fergus, when he assumed the cowl, to the monks of Holyrood; and it afterwards shared a common fortune with the church of Kirkcudbright. The ancient parish of Galtway forms the middle part of the united parish. The name signifies the bank or ascent on the water. The cemetery, still in use, overlooks one of the streamlets which flow into the estuary of the Dee. A place near it is called, by a pleonasm not uncommon in the Scottish topographical nomenclature, Galtway-bank. The church, with its pertinents, being given by Fergus to the monks of Holyrood, was appropriated to the prior and canon of St. Mary's Isle, a dependent cell of Holyrood abbey.—A convent for Franciscans or Grey Friars was founded at Kirkcudbright in the reign of Alexander II.; but, in consequence of the ancient records having been carried off at the Reformation, it is very obscurely known to history. John Carpenter, one of its cowed inmates, in the reign of David II., was distinguished for his mechanical genius; and, by his dexterity in engineering, he so fortified the castle of Dumbarton as to earn from the King an yearly pension of £20 in guerdon of his service. In 1564, the church of the friary was granted by Queen Mary to the magistrates of the town to be used as a parish-church; and when it became unserviceable, it yielded up its site to a successor for the use of the whole modern united parish. The ground occupied by the convent itself, and the adjacent orchards and gardens, were given, in 1539, to Sir Thomas Maclellan of Bombie.—In the town is an excellent burgh academy, conducted by three teachers, attended by 200 scholars, and affording tuition in Latin, Greek, French, mathematics, and all the departments of a liberal English education. Two parochial schools are attended by at most 134 scholars. Salary of each of the masters £25 13s. 2d., with fees, and from £2 to £7 other emoluments. Seven private schools, conducted by seven teachers, are attended by 300 scholars.

KIRKCUDBRIGHT, a sea-port, a royal burgh, and the county-town of Kirkcudbrightshire, is pleasantly seated on the left bank of the Dee; 6 miles north of the point where the river becomes lost in the sea; 21 miles from New Galloway; 28 from Dumfries; 33 from Newton-Stewart; 60 from Portpatrick; and 101 from Edinburgh. It is encircled on the one side by the river, and on the other by the wooded portion of the parish,—sylvan slopes coming unbrageously down from the gentle heights on the back ground, or stretching southward in a broad belt of luxuriance till they become identified, at a mile's distance, with the almost isleted peninsula of St. Mary's Isle, sending out an invasion of forest-scenery on the bosom of the estuary. Seen from a little distance, the town seems gay and almost grand, more resembling a small but proud city, than an inconsiderable and thinly populated town. In the interior, it is regular, neat, clean, and contains a larger proportion of recently built houses than almost any other town in Scotland. A society of rather singular character, consisting of a large number of inhabitants, who build by subscription of all the members a given number of houses annually, and dispose of each among the subscribers by a sort of lottery, has achieved great things, not only in modernizing the town, but in throwing over it an air of taste and pretension which is nearly without a parallel, or even a tolerable imitation among Scottish towns of its size. Capitalists, too, who have enough to live like gentlemen, but not sufficient to purchase estates, and a numerous staff of legal functionaries who possess an easy coun-

petency in connexion with the civil business of the county, have adopted the town, either from choice or from convenience, as their place of residence, and contributed not a little to give it features of elegance or polish. So long ago as 1764, it became supplied with excellent spring-water by conveyance through leaden pipes; it has not failed, of course, to provide itself with the modern luxury of gas-light; and as to other appliances of convenience and comfort, it has them in a style of keeping with these.

The western and southern sides of the town are formed by two streets, at right angles with each other, both of which, very absurdly, bear the name of High-street. From a point on the bank of the Dee, 200 yards west of a sudden debouch of the river from a southerly to a westerly course, High-street runs due south over a distance of 275 yards; and it then, while sending a slight elongation westward, runs due east over a distance of 400 yards. At a distance of about 130 yards from the southward line of High-street, Castle-street runs parallel with it and to the east of it, from nearly the river side to the eastward line of High-street. Union-street connects the parallel thoroughfares nearly at their middle, in the manner of the connecting stroke between the limbs of the letter H. Going off from the north end of Castle-street, at an obtuse angle of about 55 or 60 degrees, Cuthbert-street runs in a direction north-east by east over a distance of 400 yards. Intersecting this street obliquely, about two-thirds way from its commencement at Castle-street, St. Mary's-street stretches a brief space northward, leading the way to Tongue-land-bridge, and sends off an unmediated thoroughfare southward to intersect the eastern High-street, and afterwards fork into roads respectively to St. Mary's Isle and to Dundrennan. Somewhat parallel with this line to the east of it, but bending in the form of a small segment of a circle, runs Millburn-street, extending from the eastern termination of High-street, to a point 650 yards to the north, where, near the entrance of a small brook into the Dee, are a mill and a tannery. All the streets, with the exception of the last and of High-street, possess more or less regularity of aspect, and consist simply of continuous lines of edifices. But Millburn-street has a sort of suburban or village character, and is sometimes spoken of, though incorrectly, as if it were not compact with the town. High-street, on the other hand, wants a strictly modern character, and is winged all the way along both sides of both its lines with "clesses," or narrow brief alleys. Yet, in front, it has many good houses, some handsome shops, and several public buildings; and in the rear it has little gardens, encompassed with neat walls, and sending occasionally up an ornamental tree; so that, altogether, it produces a pleasing effect.

Sixty or seventy yards south of the angle made by the two lines of High-street stands the burgh academy, a capacious and elegant structure, containing, in addition to its proper accommodations, a large room occupied by a public subscription-library. At the west end of the east and west High-street, looking down the north and south High-street, are the old jail and a spire,—the latter a conspicuous object, and the former both a large and a curious one. In front of the old jail stands the market-cross, purporting, from an inscription on it, to have been erected in 1504. On the opposite side of the same line of High-street, but 70 or 80 yards to the east, are the new jail and the county-hall, edifices erected in 1816, and of very creditable appearance. Directly opposite them is — what becomes noticeable in a place like Kirkecudbright—a brewery.

On the bank of the river, at the north end of Castle-street, and looking along that thoroughfare, stands the neat and capacious parish-church. In High-street is the meeting-house belonging to the United Secession,—a building of agreeable aspect.

A little west of the town, very near the river, are some mounds surrounded by a deep fosse, the remains of a very ancient fortified castle. The tide probably flowed round it in former times, and filled the fosse with water. The castle—now vulgarly called Castledykes, but known in ancient writings as Castlemaims—belonged originally to the Lords of Galloway, when they ruled the province as a regality separate from Scotland; and seems to have been built to command the entrance of the harbour. Coming into the possession of John Baliol as successor to the Lords of Galloway, it was, for some time, during the war of 1300, the residence of Edward I. and his queen and court; and passing into the hands of the Douglases, on the forfeiture of Edward Baliol, it remained with them till 1455, when their crimes drew down upon them summary castigation, and in that year was visited by James II. when on his march to crush their malign power. Becoming now the property of the Crown, it offered, in 1461, a retreat to Henry VI. after his defeat at Towton, and was his place of residence while his queen Margaret visited the Scottish queen at Edinburgh. In 1508, it was the temporary residence of James IV., who, while occupying it, was hospitably entertained by the burgh; and, next year, by a charter, dated at Edinburgh, it was gifted, along with some attached lands, to the magistrates for the common good of the inhabitants. The land, though alienated, at some period, by the corporation, and though not within the burgh previous to the grant, continues to be subject to burgage tenure.—Not very many paces west of the parish-church, or between the northern terminations of Castle-street and High-street, stands the ruinous but venerable form of the castle of Kirkecudbright, built in the year 1582 by Thomas Maclellan of Bombie, the ancestor of the Lords Kirkecudbright. It is a strong, massive. Gothic building, lifting its upper work so boldly into view as to give, conjointly with the towers of the jail, distinctiveness and markedness of feature to the burghal landscape; and, at the time when it was reared, it must have been a splendid, as it is still a spacious edifice.—At comparatively very recent date, broad vestiges existed of town fortification. At a time when the town consisted chiefly of a single street running up from the harbour, it appears to have been surrounded by a wall and a deep ditch, the latter filled from the flowing tide; and it had at its two ends, strong gates, which, little more than 50 years ago, were pulled down to make way for new houses. An English party who marched against the town in 1547, in the stupid warfare about the marriage-treaty between Mary and Edward VI., narrate that as they approached "Kirkobrie, they who saw us coming barred their gates, and kept their dikes, for the town is diked on both sides, with a gate to the waterward, and a gate on the over end to the fellward,"—and that, in consequence, English force was repelled by Scotch precaution.

Kirkecudbright has never been the seat of any considerable manufacture or trade. Hector Boece, indeed, describes it as, in his day, "ane rich town, full of merchandise;" but he seems either to have been totally misinformed, or to have, amid the actionless penury of his age, reckoned that "riches" and "merchandise" which, in the present stirring and productive era, would be esteemed only the snug competency and the village trade of a homely huckster. During the disturbed and semi-anarchical pe-

riod when the Dick Hatteraiks of the contraband trade infested the coasts of the Solway frith, the inhabitants had such a connexion with the desperadoes as comported ill with the prosperity of the town, and exerted a malign influence upon the habits of their posterity at the moment when other parts of Scotland were starting in the career of modern productive industry. By a strange infatuation, too, the town, when proposed to be the adopted site of the first and very promising attempt to introduce the cotton manufacture to Galloway, superciliously rejected the offered advantage, and sent away the gentlemen who would have done it a service to build their factories at Gatehouse-of-Fleet. Hardly were the erections on the Fleet completed, when Kirkcudbright saw the suicidal tendency of its conductor, and made a hasty attempt to retrieve its error. Mules and jennies were erected; weavers were brought from a distance to work with the fly-shuttle; and a woollen manufactory was commenced. But so poor has been the result, that, after the lapse of half-a-century, the only monuments of these seemingly promising exertions are 60 looms, all plain, and all for cotton fabrics. A brewery, a tannery, a grinding-mill—all already incidentally noticed—a few stocking-frames, the means in two building-yards of occasionally hudding one or two coasting-vessels, even of as large burden as 250 tons, and the appliances of the requisite number of the various classes of artificers for local service, complete the list of the town's establishments and tools of manufacture. Nor is its commerce on a much larger scale. The aggregate tonnage of all the vessels belonging both to the port and to the district within the range of its custom-house establishment—exclusive of a steamer which maintains a communication with Whitehaven and Liverpool—is probably short of 2,000. Considerable quantities of oats, barley, and potatoes are exported to the Clyde, but chiefly to England. The merchants are obliged to make coal their principal import; yet they occasionally send a small vessel across the Atlantic for West Indian produce, and bring wine and other luxuries from England. Yet the harbour is much the best on the south coast of Scotland; though, owing to the almost complete recess of the peculiar tide of the Solway, it is fully suitable for such vessels only as can take the ground. It is naturally safe, has good anchorage, affords shelter from all winds, and extends from the mouth of the river to the town about 6 miles. An islet called the Little Ross lies across its entrance, allowing a channel on the east  $1\frac{1}{2}$  mile wide, safe and bold on both sides, and having behind it a road, with 16 feet at low water, and 40 feet at high water, where vessels may ride at safety in gales from any point round three-fourths of the compass. Above Little Ross are Balmangan hay, a considerable inlet on the west, and Manxman's lake, a large bay running up the east side of St. Mary's Isle. Off the Isle a bar runs so far across the channel as to impose on vessels the choice of sailing over, in about 20 feet water at ordinary spring tides, or steering along a narrow waterway close in with the rocks. On the shore at the town is a fine shelving beach, offering to vessels the alternative of lying dry on its sands, or of riding at anchor in the channel, with a depth of water 8 feet in the ebb and 28 in the flood. The rise of the tide being 20 feet, vessels of 200 tons have facility for sailing 2 miles beyond the town to Tongueland, where a natural barrier terminates the navigation: See the article DEE. A natural harbour so expansive, so variform, so advantageous, and, amid the impetuous and menacing tides of the south coast of Scotland, so peculiarly sheltered, ought, one would

think, to have long ago rendered Kirkcudbright, not only the entrepot for most of Galloway and Dumfries-shire, but the seat of an extensive general commerce maintained by local manufacture. Nature, however, long remained here almost wholly unthanked by art, and even yet has been acknowledged only to the extent of expending about £1,620 in the excavation of the harbour, and the erection of new piers. "The harbour," summarily report the burgh-commissioners, "has great depth of water; but there is no trade or manufacture worth mentioning; and the town appears stationary." Not even the obvious and highly advantageous facility of a bridge across the Dee, with a drawbridge for the transit of vessels, either exists or seems to have been contemplated. A ferry, by means of a curious sort of boat, or Tongueland bridge 2 miles up the river, serve the town's people, and all the country on the south-east, as a succedaneum. Too little intercourse even is maintained with the interior, either for bringing to the domestic market a choice supply of articles of consumpt from the farmer and the grazier, or for prosecuting a retail trade proportioned in magnitude to the advantageousness of the town's position.

Nearly all the importance of Kirkcudbright arises from its being the adopted home of small capitalists, and the county-town of the stewartry. The seat of the sheriff-court and of the practitioners of the law, it draws from the circumjacent country no inconsiderable annual sums as expenses of lawsuits. The genteel or monied inhabitants do not, as in most places, straggle in the outskirts in suburban villas; but they take up their place firmly and unequivocally as citizens,—form proportionately a very large portion of the population, and so decidedly give the place its tone that, among even the lowest classes, an unusually high degree of liberal intelligence prevails. The richer burghers, too, instead of exhibiting those habits which generally characterize the opulent inhabitants of great manufacturing cities, seem rather to take the tone of their manners from the county gentlemen, and—greatly to their credit—are nearly utter strangers to the fashionable follies and vanity and dissipation which are connected with the flaunting promenade, the ball-room, and the theatre. The town, as a whole, displays a relish rather for the calm enjoyments of mind, than for the tumultuous and chiefly animal pleasures elsewhere in vogue.

Kirkcudbright has a branch-office of the Bank of Scotland; some good inns, the principal of which is the Commercial; a news-room; a Masonic-lodge; a billiard-room; a regatta-club; and some benevolent and patriotic institutions. Anciently it was a burgh-of-regality, and held of the Douglasses, lords of Galloway, as superiors. It was erected into a royal burgh, in 1455, by charter from James II.; and, in 1633, it received another charter from Charles I. The town is governed by a provost, 2 bailies, a treasurer, and 13 ordinary councillors. The burgh property is very considerable, and yields the whole, except about £26 of a revenue, which, in 1832, amounted to £936 9s. 10d. The expenditure for the same year was £864 14s. 4d.; and the debt then due by the burgh £4,343 2s. The magistrates exercise jurisdiction over only the old royalty, and in 1833 had only 6 civil causes; and they have little patronage, except the appointing of the town-officers, and of the teachers of the burgh school. The jail is in a fair condition. Burgesses' fees are, for a merchant and trader, £3 6s. 8d.; for a master tradesman, £2; for a labourer, £1. Burgesses, in 1832, 90. The incorporated trades with their respective numbers, and the entry-money which

they respectively exact from a stranger, are, square-men, 36, £3 10s.; tailors, 12, £5; clothiers, 20, 10s.; hammermen and glovers, 13, £3 5s.; shoemakers, 17, £6; weavers, 22, £3. Kirkcudbright unites with Dumfries, Annan, Sanquhar, and Lochmaben in sending a member to parliament. Enrolled constituency, in 1832, 111; but available constituency, 151. A weekly market is held on Friday; and annual fairs are held on the last Friday of March and September, and on the Friday preceding Castle-Douglas, or Kelton-hill, mid-summer fair. Population, in 1831, 2,690.

Kirkcudbright gave the title of Baron, in the Scottish peerage, to the family of Maclellan of Bombie. This family, once very powerful, the proprietors of several castles, and wielding not a little influence in Galloway, has already been incidentally noticed. Sir Patrick Maclellan, proprietor of the barony of Bombie, situated in the parish, incurred forfeiture in consequence of marauding depredations on the lands of the Douglasses, lords of Galloway. Sir William, his son—incited by a proclamation of James II. offering the forfeited barony to any person who should disperse a menacing band of gypsies who infested the country, and capture the body of their leader, dead or alive, in evidence of success—rushed boldly in search of the proscribed marauders, and earned back his patrimony, by carrying to the King the head of their captain on the point of his sword. To commemorate the manner in which he regained the barony, he adopted as his crest an erect right arm, the hand grasping a dagger, on the point of which was a Moor's head couped, proper; with the motto, 'Think on,—intimating the steadiness of purpose with which he contemplated his enterprise. Sir Robert, the 4th in descent from Sir William, acted as gentleman of the bedchamber to James VI. and Charles I.; and, in 1633, was created by the latter a baron, with the title of Lord Kirkcudbright. John, the 3d Lord, was an eccentric, addle-headed being, who, with all the impetuosity of a roused bull, and with an amount of imprudence which brought down his reason to a level with its instinct, ran right forward in a pell-mell career along the path which first offered, ready to be booted or scared round into a sideward or reverse career of similar character, to the detriment of all who had followed him in the chase. He commenced by being a fierce opponent of Cromwell and the Independents; and being, at the time, the proprietor of greater part of the parish, he compelled his vassals to take arms in the cause of the King, occasioned the ruin of the villages of Dunrod and Galtway, by levying nearly all their male population, sent off his recruits to fatten the soil of Ireland with their carcases, and incurred such enormous expenses as nearly ruined his estates. But at the Restoration, just when any royalist but himself thought everything gained, and ran fleetly to the King in hope of compensation and honours, he shied suddenly round, opposed the royal government,—sanctioned the riot, slightly mentioned in our parochial notice, for preventing the induction of an Episcopalian minister,—and, at the time when the women were sent to the pillory, was captured, along with some other influential persons, sent a prisoner to Edinburgh, and driven to utter temporal ruin. His successors never afterwards regained so much as an acre of their patrimonial property; and, for a considerable period, were conceded their baronial title only by courtesy, and, when they appeared at the election of the representative peers of Scotland, suffered the indignity of having to vote under protest. One of them was the 'Lord Kilcoubrie,' whom Goldsmith, in his sneers at the poverty of the Scottish nobility, mentions as keeping a glove-shop

in Edinburgh. In the reign of George III. they were at last formally and legally reinstated in their honours; but, in 1832, at the death of the 9th Lord, the title—alternately a coronet and a foothall, now glittering on the head, and now tossed in the mire by the foot of every wayfarer—sank quietly into extinction.

KIRKCUDBRIGHTSHIRE, prescriptively called a stewartry, hut, in every practical and real point of view, a sheriffdom, shire, or county, in the western division of the southern border of Scotland, constituting the eastern part, and very nearly two-thirds of the whole extent, of the province of Galloway. It is bounded on the north-west and north by Ayrshire; on the north-east and east by Dumfries-shire; on the south by the Solway frith and the Irish sea; and on the west by Wigtonshire. Its outline is irregular, but approaches the figure of a trapezoid. It lies between  $54^{\circ} 44' 35''$  and  $55^{\circ} 19'$  north latitude, and between  $3^{\circ} 33'$  and  $4^{\circ} 35'$  longitude west from Greenwich; and it measures in extreme length, from north-west to south-east, 44 miles; in extreme breadth 31 miles, in minimum breadth 21 miles; and in superficial area 855 square miles, or 547,200 statute acres. These are the measurements given in Chalmers' 'Caledonia;' but those brought out in a survey by Mr. Ainslie, and adopted in the Rev. Samuel Smith's 'Agricultural View of Galloway,' assign to it a somewhat larger area, comprehending 882.57 square miles, or 449,313 Scottish acres. Its southern half has, as natural boundaries, the river and estuary of the Nith on the east, the sea and the Solway frith on the south, and the river Cree and Wigton bay on the west; but its northern half is traced by natural boundaries only partially and at intervals,—by the Cairn for  $7\frac{3}{4}$  miles above its confluence with the Nith,—by a watershed line of mountain summits for  $11\frac{1}{2}$  miles south-eastward of its north-east angle, and, with trivial exceptions, 15 or 16 miles sinuously westward of that angle,—by Loch-Doon and its tributary Gala-lane for  $8\frac{1}{2}$  miles on the north-west,—and by the river Cree, from the north-west extremity southward to the southern division of the county. Kirkcudbrightshire has no recognised or nominal subdivisions, except that the four most northerly parishes are called GLENKENS [which see]; but it admits, or rather exhibits, a very marked natural subdivision into a highland district, and a champaign country thickly undulated with hills. A straight line drawn from about the centre of Irongray parish to Gatehouse-of-Fleet, or to the middle of Anworth parish, has, with some exceptions, the former on the north-west, and the latter on the south-east.

The highland or north-west district comprehends about two-thirds of the whole area, and is, for the most part, mountainous. Blacklurg, at the point where the stewartry meets with Dumfries-shire, ascends to the height of 2,890 feet above sea-level; and it is nearly equalled, or boldly imitated in its cloud-ward aspirings by numerous other summits. The heights, all along the boundary, and for some way into the interior on the north, are part of what is often termed the southern highlands, or the broad alpine belt which stretches across the middle of the Scottish lowlands; they ascend, in the aggregate, to elevations little inferior to those of any other part of that great belt; and, extending themselves down to the sea on the west, and parallel to Dumfries-shire on the east, they form, in their highest summits, a vast semicircle, whence broad and lessening spurs run off into the interior. The straths spread out by the streams of the region, as they recede from the higher grounds, and accumulate into rivers, form an inconsiderable proportion, probably not one-

tenth, of the whole district. The south-eastern, a comparatively champaign division of the county, when viewed from the northern mountains, appears like a great plain, diversified only by a variety of shades, according to the colour, size, or distance of the heights upon its surface. So gentle, too, is its cumulative ascent from the sea, that the Dee, at the point of entering it, or even a long way up the strath, on the highland side of the dividing line, is only 150 feet above the level of the sea. Yet about one-fourth of its whole area is either roughly hilly, or, in a secondary sense, mountainous; while much the greater proportion of the other three-fourths, though fully under cultivation, is a rolling, broken, hilly surface, and, for the most part, continues its bold undulations down to the very shore of the estuary and the sea. On the south-east the conspicuous Criffel rises up almost from the margin of the Nith to a height of 1,895 feet above sea-level, and sends off a ridge 8 or 9 miles westward in the direction of Dalbeatty, and a second low ridge away south-westward parallel with the coast to the vicinity of Kirkcudbright. These heights, though greatly inferior to the ranges in the north-western division, and seemingly insignificant—owing partly to their distance—when viewed from them, are, in reality, far from being inconsiderable; and lifting their craggy cliffs and dark summits immediately above the margin of the sea, they form scenery highly picturesque, and occasionally approaching the sublime. Over all parts of the county the uplands are, for the most part, broken by abrupt protuberances, steep banks, and rocky knolls, diversified into every possible variety of shape; and even in the multitudinous instances in which they admit of tillage, either on their lower slopes or over all their sides and their summit, they rarely present a smooth and uniform arable surface.

In the neighbourhood of Dumfries, throughout most of Terregles and part of Troqueer and Irongray, where, apart from artificial division, the territory forms a portion of the beautiful and exulting strath of Nithsdale, stretches a smooth and level tract, carpeted with a mixture of sand and loam, and possessing facilities of cultivation and improvement beyond any other part of the county. Along the banks of the Nith, from Maxwelltown downward, and for some distance lying between the former tract and the river, extends a belt of merse land, at first narrow and interspersed with 'flows,' but broader in Newabbey and Kirkbean, and comprehending about 6,000 acres either of carse or of a rich loam, partly on a gravelly bottom, and partly on a bottom of limestone. From Terregles, south-westward to the Dee, extends a broad and large tract, comprising Lochrutton, Kirkgunzeon, and Urr, and part of Kirkpatrick-Durham, Crossmichael, Kelton, Buittle, and Rerwick, which, while hilly, has comparatively an unbroken surface, carpeted with a strong soil, though often upon a retentive subsoil, and peculiarly adapted for tillage. The broken portions of this tract, and the general area of the other parts of the comparatively champaign district, are subject to exceedingly less waste than a stranger to their peculiarities, who should glance at their appearance, would imagine. The knolls conceal, by the perspective of their summits, considerable flat intervals amongst them; and while themselves seeming, from the furze and brushwood which crowns their summits, to be unfit for cultivation, are usually covered with a very kindly soil, of sufficient depth for the plough. Of an extremely broken field, not more than one-half of which would seem to a stranger available for tillage, the proportion really and easily arable often amounts to four-fifths. Except in loamy sand and the merse tracts near Dumfries, the soil of nearly all

the ploughed ground of the stewartry, comprehending not only the great south-east division, but the fine strath of the Ken and the narrower vale of the Cree, is dry loam of a hazel colour, and therefore locally called hazelly loam, but often degenerating, more or less, into gravel. The bed of schistus on which it lies is frequently so near the surface as to form a path to the plough, and probably where the rock is soft, adds by its attrition to the depth of the soil. In the highland division rich meadows, luxuriant pastures, and arable lands of considerable aggregate extent, occur along the banks of the rivers, on the sloping sides of the hills, in vales among the mountains, and along the margins of little streams. A large part of the Glenkens, too, exhibits highland scenery in such green garb as characteristically distinguishes Tweeddale. But with these exceptions, the far-stretching district is in general carpeted with heath and 'flows,' a weary and almost desolate waste, a thin stratum of mossy soil yielding, amidst the prevailing russet, such poor grass that the sheep which feed upon it, and are strongly attached to it, would, were there not intervening expanses or helts of luxuriant verdure, soon perish by emaciation. With large heales, lofty summits, and small intervals of valley, the mountains exhibit aspects of wild bleakness diversified by picturesqueness and romance, and sometimes sending down shelving precipices from near their tops, they are inaccessible to the most adventurous quadruped, and offer their heeling cliffs for an eyrie to the eagle; while far below, among the fragments of fallen rocks, the fox finds a retreat whence he cannot be unkenneled by the huntsman's dogs.

Kirkcudbrightshire sends out a few very trivial rills as head-waters of the Ayrshire or Carrick rivers, and receives some equally unimportant contributions in return; but, with these exceptions, it is a continuation of the great basin of Dumfries-shire, and, as far as the joint-evidence of the disposal of its waters and the configuration of its great mountain-chain could decide, it was naturally adjudged to the place which it long legally held as a component part of that beautiful county. What Eskdale is to Dumfries-shire on the east, Kirkcudbrightshire, in the sweep of its mountain-chain to near the coast beyond the Dee, is on the west; and all the vast intervening territory is a semicircular area, with an arc of highland ridges sweeping round it from one end till nearly the other of the north side of its chord, and pouring down all its waters to the south. The stewartry, unlike Dumfries-shire, has no expanded plain for concentrating its streams before giving them to the sea, and, in consequence, discharges much of the drainings of its surface, in inconsiderable volumes of water. Apart from the Nith, the Cairn and the Cree, which belong only to its boundaries, its chief streams are the URR, the KEN, the DEE, and the FLEET, each of which is separately described in the present work. Lakes are very numerous, and, in some instances, are remarkable for either the rare species, or the great numerousness of their fish; but, excepting DOON on the boundary, and KEN and KINDER in the interior, all of which are noticed in their place, they are individually so inconsiderable both in size and in interest, as to challenge attention only in the sketches of the parishes to which they belong. Perennial springs every where well up in great abundance, and afford an ample supply of excellent water for culinary uses. Of chalybeate springs, which also are numerous, the most celebrated is that of LOCHENBRACK [which see], in the parish of Balmaghic. The Solway frith, becoming identified on the west with the Irish sea, sweeps round, from the head of the estuary of the Nith to the head of Wigton bay, in an

ample semicircular coast-line of 50 miles, exclusive of sinuosities. The coast, on the east, is flat; but elsewhere it is, in general, bold, rocky, here perforated with natural caves, and there sending aloft beetling cliffs, tempting daring adventurers to hazard their lives in gathering the sapphire. Along the whole coast, a permanent recession of the sea has taken place,—not very apparent or productive of any great advantage, indeed, in the high and rocky regions, but very evident and resulting in a bequest of the rich territory of the Merse, in the flat tract along the Nith. Besides the estuary on the east, and the gulf or large bay on the west, the Solway forms, at points where it receives streams, very considerable natural harbours, running up into the country in the form of bays or small estuaries. The principal are Rough frith, at the mouth of the Urr, Heston bay, and Auchencairn bay, at the mouth of rivulets a little eastward, Kirkcudbright bay, at the mouth of the Dee, and Fleet bay, at the mouth of the Fleet. Though all the waters which wash the coast are rich in the finny tribes, they rarely tempt the apathetic inhabitants of the coast to spread the net or cast the line, and have not prompted the erection of a single fishing village, nor, of course, the formation of any community of professed fishermen. Sea-shells and shelly sand, which are thrown up in great profusion, have greatly contributed to fertilize the adjacent grounds; and they are accompanied, for lands to which it is more suitable, by large supplies of seaweed.

The most prevalent rock is what Dr. Hutton calls schistus, including schistus proper and greywacke. Its strata are mixed, various, and dissimilar. Some of them, locally called wbinstone, are of hard and compact grain, blue or greyish brown in colour, for the most part taking an irregular fracture, but frequently splitting into parallel slices fit to be used as coarse slates. The beds vary from half-an-inch to many feet in thickness. With the harder grain is mixed, in all different proportions, a soft, shivering, argillaceous stone, which easily yields to the weather, and locally bears the name of slate-band. The strata are, in general, not far from being perpendicular, though they lie at every dip from an absolutely vertical to a nearly horizontal position; and they are often singularly contorted; and are sometimes intersected with veins or dykes of porphyry. Much of the mountainous part consists entirely of granite. In various spots along the shores of Colvend and Rerwick, a softer species of granite occurs, and is quarried into millstones. Limestone, sandstone, and other secondary strata, occasionally intermixed with plunpudding-stone, appear eastward of Kirkcudbright, but do not extend far into the country. The district in the neighbourhood of Dumfries lies on sandstone. In Kirkcudbright limestone of excellent quality abounds; and in other districts it occurs, but so poor, or in such small quantity, as not to draw attention. From the rocky nature of the stewardry, abundance of suitable material is everywhere found for buildings and fences. Coal has been sought in laborious and expensive searches; but has promised to reward exertion only in Kirkcudbright, and even there has been found in too great paucity to pay the costs of mining. Shell-marl of the finest quality has been everywhere found at intervals, in lakes and mosses, within 12 miles of the sea. The richest supply of it has been furnished by Carlinwork loch: see article KELLS. Ironstone seems to abound in Kells, Urr, Carsphairn, Buittle, Rerwick, Colvend, and other parishes; but owing to the want of skill, of enterprise, of fuel, or of all three united, it has been turned to little account. A copper mine was worked for some time in Colvend, but, seemingly without sufficient

reason, was abandoned. A stratum of lead ore seems to run through the country from Minigaff on the Cree, in a north-east direction, to Wanlockhead and Leadhills, on the boundary between the counties of Dumfries and Lanark. A vein of lead, of a rich ore, exists also in the parish of Anwoth.

In early times, the stewardry appears to have been covered with woods; and at a comparatively recent period it had several extensive forests; but it retains only scanty portions of its natural woodlands, and these chiefly along the banks of the rivers. Agricultural improvement was commenced in the 12th century, principally by the settlement among the rude inhabitants of colonies of monks, and was carried to a greater extent both in tillage and pasturage, than could well be expected in the rough circumstances of the period. From various and very unequivocal intimations, the country appears to have been much more fruitful in grain and other agricultural produce in 1300, than at the beginning of the 18th century. But disastrous wars and desolating feuds swept in rapid and constant succession over cultivated fields, and soon reduced them almost to a wilderness. So ruthlessly was agriculture thrown prostrate and maltreated that, toward the close of the 17th century, small tenants and cottagers, who had neither skill, inclination, nor means to improve the soil, were allowed to wring from it, in the paltry produce of rye, and bear, and oats, any latent energies of "heart" which it still possessed, and on the miserable condition of paying the public hurdens, were permitted to sit rent-free on farms which now let for at least £200 a-year. Modern improvement commenced early in the 18th century, and was not a little remarkable both in the character and in the early history of its first measure. Sir Thomas Gordon of Earlston having erected upon his property a stone fence about 4 miles in extent, several other proprietors sparingly, but firmly, followed his example. But fences seemed to the semi-savage squatters to whom utter mal-administration had given almost entire possession of the soil, not less an innovation, than a signal of war, upon their rights; and, in April and May 1724, they provoked an insurrection, and were all thrown prostrate by the "levellers." The infatuated insurgents, who were instigated by the harangues of a wild preacher who mistook his vocation, having been dispersed and broken by six troops of dragoons, the work of enclosing was resumed with greater vigour than had guided its commencement, and speedily resulted in impressing an impulse on practical and skilful care for the right management of the soil. The discovery, or at least the manorial application, of shell-marl in 1740, formed an important era, and occasioned the conversion into tillage of large tracts which had hitherto been employed exclusively in pasture. The suppression, in 1765, of the contrahand trade with the Isle of Man pointed the way to the exportation of agricultural produce, and occasioned it rapidly to become a considerable trade. The institution, in 1776, of the society for the encouragement of agriculture in Galloway and Dumfries-shire was a still more important event. William Craik, Esq. of Arbigland, the spirited and ingenious chairman of the society, introduced new rotations of crops, new methods of cultivation, new machinery, and new modes of treating cattle, and is justly considered as the father of all the grand agricultural improvements of the stewardry. At the commencement of the present century, Colonel M'Dowal of Logan made great achievements in the reclaiming of mosses. In 1809, the Stewardry of Kirkcudbright Agricultural society arose to urge forward a rivalry with Dumfries-shire and other adjacent counties; and before

being a twelvemonth old, it numbered 130 members, all landholders and practical farmers, with the Lord-lieutenant and the member of parliament at their head. Both before the close of last century and during the course of the present, plantations, especially on the grounds of Lord Daer and the Earl of Selkirk, have risen up to shelter and beautify the country; but, even with the aid of about 3,500 acres of copsewood, remaining from the ancient forests, they are far from being sufficient in extent or dispersion to shield the country from imputations of nakedness of aspect, or prevent it from appearing to a stranger characteristically wild and bleak. Farm-houses exhibit the greatest possible diversity,—continuing, in some instances, in the same wretched state as before agricultural improvement began,—and rising, in others, to a competition in commodiousness and elegance with any buildings of their class in Scotland. Farms, in the highland district, usually vary in size from 6 to 12 square miles; and, in the arable or cultivated grounds, they sometimes extend to 500 or 600 acres, but probably average about 200. The ordinary currency of leases is 19 years. The fences, in far the greater proportion of instances, are the dry stone walls, distinctively known as Galloway dykes; but, in the vicinity of Dumfries, and a few other localities, they consist of various sorts of hedges, all ornamental in the featuring they give the landscape. Agricultural implements are simply the approved ones known in other well-cultivated counties. Systems of cropping are necessarily various, not only throughout the stewartry but very often in the same parish. The cultivation of wheat is confined chiefly to the district adjacent to Dumfries, and to the carse-lands and other strong soils in New-abbey and Kirkhean. Oats are the staple produce, and obtain much attention by changes of seed within the stewartry itself, by importation of seed from the eastern counties of Scotland, and by other measures fitted to stimulate and improve. The cultivation of turnips has a large place in talk, and a considerable one in practice. No crop is, in general, so well managed as that of potatoes. The purple-red potato seems the favourite both with the soil and the people. The cultivation of artificial grasses has been long practised, and for upwards of thirty years has prevailed in all the improved districts. The extent of meadow-grounds in the stewartry, taken jointly with Wigtonshire, is probably not less than one-twentieth of the whole area.

The breeding and rearing of cattle, seems a pursuit naturally suggested by the soil and climate of Kirkcudbrightshire jointly with Wigtonshire, and has long been a favourite object of the farmers. Few countries can boast of pastures whose grass has such a beautiful closeness of pile, and which, after a scourging course of crops, so rapidly return to their natural verdure and fertility. The breed of Galloway cattle—peculiar to the district, though now extensively known by importations from it—are almost universally polled, and rather under than over the medium size,—smaller than the horned breed of Lancashire or the midland counties, and considerably larger than any of the Highland breeds. Their prevailing colour is black or dark-brindled. The following, says the Rev. Samuel Smith, in his 'Agricultural View of Galloway,' "are the characters of a true Galloway hullock. He is straight and broad in the hack, and nearly level from the head to the rump, closely compacted between the shoulder and ribs, and also betwixt the ribs and the loins—broad at the loins, not however with hooked bones or projecting knobs; so that, when viewed above, the whole body appears beautifully rounded like the longitudinal section of a roller. He is long in the quarters,

but not broad in the twist. He is deep in the chest, short in the leg, and moderately fine in the bone.—clean in the chop and in the neck. His head is of a moderate size, with large rough ears, and full but not prominent eyes, or heavy eyebrows, so that he has a calm though determined look. His well-proportioned form is clothed with a loose and mellow skin, adorned with long, soft, glossy hair." The breed has, in some parts of the country, been materially injured by intermixture with the Irish, the Ayrshire, and some English breeds. But the offshoots of foreign crossings or admixtures are recognizable among the native stock even after fifty or sixty years have elapsed to efface their peculiarities; and they are now held in little estimation, and sought to be substituted by the purest and choicest propagation of the native variety. Few of the cattle are fed for home consumption. Excepting fat cows, for the small towns and villages, and about one-fortieth of the prime cattle for the tables of the opulent, the whole stock are sent chiefly, at three and three and a-half years old, to the markets of Dumfries and England. The principal sales are at St. Faiths and other markets in Norfolk; but many are effected on the spot, and many more in the Smithfield of London. Vast numbers of transfers, too—chiefly from inferior or better lands—are made at the weekly or monthly trysts of Castle-Douglas, and Gatehouse in Kirkcudbrightshire, and Glenluce, Stranraer, and Whithorn in Wigtonshire. The number sent annually out of Galloway, previous to the date of the Agricultural Report, was supposed to be 20,000; and the entire stock of Kirkcudbrightshire in 1814, was estimated at 50,000.—In the moor and mountainous districts, sheep-husbandry has long been sedulously plied; but, in other districts, it meets very trivial attention. Long-wooled Lincolnshire sheep—here called mugs—were tried and failed. The Leicestershire merinos, the Herefords, and the Shetlands were also introduced, but secured little favour. The Southdown, the Cheviot, the Morf, and the Mendip breeds, have had more success, and, jointly with varieties previously in the district, tenant the sheep-walks in singular motleyness of character. Smearing or salving is practised. The number of sheep in the stewartry, in 1814, was estimated at 178,000. Some remnants still exist of a breed of horses peculiar to Galloway, and in high estimation for the saddle, small in size, but exceedingly bardy and active. The breed has been, in a great measure, lost by the solicitude of farmers to have horses of greater weight, and better adapted for the draught. The stewartry's number of horses, in 1814, was estimated at 6,000. Great attention here, as in Dumfries-shire, is paid to the produce of pork,—chiefly for the Dumfries market, and, through it, for supplying the demands of England. So far back as 1810, when this object of care was of comparatively recent date, the number of swine in Galloway was supposed to be 10,000, or about one, on the average, for every family of the inhabitants.—Bees are much attended to in Tynholm, Borgue, Tongue-land, and Kirkcudbright, and there produce honey equal, if not superior, to any in the world.—Few districts in Scotland, except the Highlands, are more abundant than Kirkcudbrightshire, both in number and variety of game.

The manufactures and commerce of the stewartry are very inconsiderable. Soap, leather, and paper are manufactured to aggregately a small amount. The woollen manufacture, though seriously attempted, never had success. The cotton manufacture has been tried in most of the towns and villages; but, with rare exceptions, it has either died out, or wears an enaciated appearance. Other manufactures are

too unimportant to challenge separate notice. Commerce is almost wholly confined to the exportation of grain, wool, sheep, and black cattle, and the importation of coals, lime, wood, groceries, and soft goods. The ports of the district, as compared to what they were a century ago, exhibit marvellously little of the progress which elsewhere generally characterizes Scotland.

Kirkcudbrightshire, considering the highland complexion of the greater part of its surface, is not behind any part of Scotland in the important accommodation of roads. Within the parish of Kells are vestiges of an ancient road. Lithgow the traveller praises, in 1628, "the roadway inns," and, at the same time, makes no complaint of the roads,—seemingly to imply, by his silence, that they were not bad. In 1764, a great military road was constructed from Carlisle to Portpatrick, and, of course, traverses the stewardry. Since then, much attention has been paid to roads of all sorts, from the main-line to the ramification of the parish-road leading up to a single farm, as a grand ancillary of agricultural improvement. In consequence of the acts of 1780 and 1797, which converted statute labour into money payment, and then doubled the assessment and authorized tolls, the roads of the stewardry, both in their structure and as to their extent, have been greatly improved. A fair idea of their multitudinous ramifications can be formed only by examining a large travelling map.

During the Roman period in Britain, Kirkcudbrightshire was occupied, along with other extensive territories, by two British tribes,—the Selgovæ, east of the Dee, and the Novantes west of that stream. British strengths line the whole frontier of the two tribes along both sides of the Dee, and occur in considerable numbers both eastward and westward in the interior, interspersed with the sites of Roman garrisons, placed to overawe a people who could not be easily subdued. Caves, subterraneous excavations, and other remarkable hiding-places, resorted to by the inhabitants in barbarous times, perforate the cliffs on the rocky coast, and occur in various inland localities. The most notable is one in the parish of Buittle. Druidical temples, or circles of upright stones, occur in sections, or entire, in the parishes of Kirkbean, Colvend, Kirkgunzeon, Lochrulton, Parton, Keltou, Renwick, Kirkmabreck, and Minnigaff. A remarkable rocking-stone exists in Kells. Cairns and tumuli abound, and, in numerous instances, have yielded up to research some curious antiquities; but they can be noticed only in the articles on the parishes where they occur. Picts' kilns and murder-holes—the former of which abound in Minnigaff and Kirkmabreck—seem to be peculiar to Galloway; and if so, are comparatively modern works rather than strictly ancient. A Roman road, branching off through Glencairn from the great road up Nithsdale, [see article DUMFRIES-SHIRE.] passed through the lands of Altry in Dalry, to the farm of Holm in Carsphairn, proceeded thence across the ridge of Polwhat to the north-west extremity of the parish, and there entered Ayrshire to penetrate by Dalmellington to the frith of Clyde. Vestiges of the part of this road which traversed Kirkcudbrightshire still exist. A very ancient work, probably erected by the Romanized Britons, and intended for defence of the inhabitants on its south side, consists of a strong wall 8 feet broad at the base, built for the most part of stones, but occasionally of stones and earth, and strengthened on the north side by a fosse. Bearing, in most places, the name of the Devil's dyke, but in some those of the Roman dyke and the Auld-Head dyke of Scotland, it has been traced from Lochryan in Wigtownshire to the north-east border of Kirkcudbrightshire on the boundary

with Nithsdale, and seems to have sinuously extended to upwards of 53 miles in length. The principal ecclesiastical antiquities are the abbeys of Dundrennan, Tongueland, and Newabbey, the priory of St. Mary's Isle, and the convent, and afterwards the college, of Lincluden, each of which will be found noticed in its proper place.

The civil history of Kirkcudbrightshire is rapidly sketched in the article GALLOWAY. The Gaelic people of the district, who for so many years retained their own laws and practised their own usages, would not permit the introduction among them of a sheriffdom. Till 1296, what is now the stewardry, was considered as a part of Dumfries-shire. Throughout the 13th century, a violent struggle was maintained between the power of ancient usages, and that of the municipal law of recent introduction. The influence of the Comyns, under the minority of Alexander III., introduced a justiciary,—a beneficial change which was continued after Baliol's dethronement. The forfeiture of the Comyns placed the lordship of Galloway in the possession of the illustrious Bruce, and—Western Galloway being already under the jurisdiction of the sheriff of Wigton—seems to have occasioned the erection of Eastern and Central Galloway into the present stewardry.—In 1369, the audacity of Archibald Douglas the Grim wrenched, for himself and his heirs, from the weakness of David II., the lordship of Galloway, and with it the stewardry to which it gave appointment and power. But in 1455, when, on the forfeiture of the Douglases, the lordship of Galloway reverted to the Crown, the steward of Kirkcudbright became again the steward of the king. Though, for a long time, the territory continued to be nominally viewed as, in some respects, comprehended in Dumfries-shire, the steward was quite as independent as the sheriff, and, within his own territory, regularly executed, in discharge of his office, the writs of the king, and the ordinances of parliament. Before the commencement of the civil wars under Charles I., all trace of jurisdictional connexion in any form whatever with Dumfries-shire had disappeared. But from 1488 till the abolition of heritable jurisdictions in 1747, the stewardry was enthralled by the imposition of a baronial or feudal character upon its supreme office. After the fall of James III. in that year, Patrick, Earl of Bothwell, obtained a grant of the powers of steward till the infant James IV. should attain the age of 21 years. In 1502, Sir John Dunbar of Mochrum got, for himself and his heirs, a grant for 9 years of the offices of steward of Kirkcudbright, and keeper of Thrive-castle, with their revenues, their lands, and their fisheries. Early in the reign of James V., Robert Lord Maxwell obtained a similar grant for 19 years; and in 1526, he received the offices and their pertinents as a regular hereditary possession. At the abolition of heritable jurisdictions, Henrietta, the Countess-dowager of Hopeton, and the legal representative of the Maxwells, was allowed £5,000 in compensation for the stewardship. Various other jurisdictions perplexed and chequered the district. The Stewards of Garlies, who became Earls of Galloway, had a separate jurisdiction over all their estates in Minnigaff and Kirkmabreck, and, in 1747, received for it £154 9s. 10d. The Lords Herries ruled separately over 'the regality of Terregles,' and, in 1747, were allowed for their jurisdiction £123 4s. 1d. The provosts of Lincluden, the abbot of Dundrennan, the abbot of Tongueland, the abbot of Newabbey, and the bishop of Galloway also, had territories independent of the steward. The regality of Almorness, and some eight or nine baronies, were likewise separate jurisdictions. When all the feudalities were

overthrown, the emancipated stewardry was placed under a steward-depute, whose functions were the same as those of the sheriff-depute. The first steward-depute, at a salary of £150 a-year, was Thomas Miller, advocate, who, rising to the top of his profession, became president of the Court-of-session, and left a baronetcy with a fair name to his family. —The district west of the Urr belonged anciently to the bishopric of Galloway, and composed the deanery of Desnes; and the district east of that river belonged to the bishopric of Glasgow, and was comprehended in the deanery of the Nith. A similar ecclesiastical division—simply substituting synods and presbyteries for bishoprics and deaneries—continues to exist. The district east of the Urr belongs to the synod of Galloway, and is distributed into 18 parishes, 16 of which constitute the presbytery of Kirkcudbright, while two are included in that of Wigton; and the district east of the Urr, distributed into 10 parishes, belongs to the synod and the presbytery of Dumfries.

Kirkcudbrightshire has two royal burghs, Kirkcudbright and New Galloway, and several considerable villages,—Maxwelltown, Gatehouse-of-Fleet, Creetown, Dalheattie, Castle-Douglas, and Dalry. It sends one member to parliament. Constituency, in 1839, 1,331. There are few large estates. The valued rent of the whole stewardry, in Scottish money, is £114,571 19s. 3d.; the annual value of the real property, as assessed in 1815, was £213,308. Population, in 1801, 29,211; in 1811, 33,684; in 1821, 38,903; in 1831, 40,590. The population, in 1831, was distributed into 871 occupiers of land employing labourers; 490 occupiers of land not employing labourers; 2,648 agricultural labourers; 1,056 labourers not agricultural; 529 manufacturing operatives; 2,299 persons employed in retail trades and handicrafts; 440 capitalists; 118 male-servants; and 2,378 female servants. The total number of families, in 1831, was 8,283; of inhabited houses, 6,604.—In 1834, there were 49 parochial schools, conducted by 55 teachers, and attended by a minimum of 1,830 scholars, and a maximum of 3,549; and 56 non-parochial schools, conducted by 60 teachers, and attended by a minimum of 888 scholars, and a maximum of 1,839.

KIRKDALE. See KIRKMAEBRECK.

KIRKDEN, a parish in the Sidlaw district of Forfarshire, bounded on the north by Dunnichen, Rescobie, and Guthrie; on the east by Inverkeilor; on the south by Inverkeilor and Carmylie; and on the west by Dunnichen. It measures in extreme length from east to west  $5\frac{3}{4}$  miles; and in extreme breadth from north to south  $2\frac{1}{4}$  miles; but it is nearly bisected by an intersecting part of Dunnichen  $1\frac{3}{4}$  mile by 1, and comprehends only about 4,000 acres. An entirely detached section, measuring  $1\frac{1}{4}$  mile by  $\frac{3}{4}$ , lies a mile north of the north-east part of the main body, is chiefly covered with wood upon natural moorland, and has a population of only 4 families. The surface of the main body of the parish lies at probably 250 or 300 feet above the level of the sea; but it is not in itself hilly, except at the west end, and even there has more an undulating than an upland aspect. About 1,200 acres of the area are dry kindly land, mixed with small stones, and called by the farmers a heachy soil; about 900 acres are deep dry land upon a bed of till; and the rest is naturally wet and spongy, lying upon a bed of cold clay, but has been greatly improved by draining. Nearly the whole parish is adorned and sheltered by a judicious interspersion of wood. The climate is salubrious, and in general clear; but is remarkable for dense dark fogs rolling in from the German ocean, and settling down for several hours in successive even-

ings in spring. Lunan-water, coming in from the west, runs  $2\frac{1}{2}$  miles along the northern boundary; and Finny or Vinny-hurn, coming in from the south-west, flows  $3\frac{3}{4}$  miles along the boundary, and then 2 miles sinuously in the interior, joined in the way by a rill of 4 miles length of course from the south-west, and falling into the Lunan just before it leaves the parish. The streams furnish eels and excellent hurn-trout; and are subordinated to the driving of machinery. Manufactures, in connexion with Dundee, and in the linen staple, engage a large part of the population. Their chief local seat is the modern village of Friockheim, situated in the north-east corner of the parish, on the bank of the Lunan, and near the Arthroath and Forfar railway. The village was commenced by Mr. Andson, is arranged upon a regular plan, maintains itself by the spinning and weaving of coarse linen fabrics, and has a population of about 550. The parish has no peat within itself, and little in its neighbourhood; and gets all its fuel from Arthroath, distant from the nearest point 6 miles. The turnpike between Arthroath and Brechin runs across its east end; and roads send off ramifications over all its surface. On a plain between the Finny and the Lunan stands an obelisk, with nearly effaced sculpturing of horses and other objects, supposed to have been erected upon the defeat of the Danes by Malcolm II. On the baronies respectively of Idvie and Gardyne, are two artificial mounds called Lavs, the scenes, in feudal times, both of judicial trial and of capital punishment. One of them is now covered with plantation. The castle of Gardyne, built in 1568, with a capacious modern addition, occupies a romantic situation on the brink of a precipice overlooking the richly-wooded course of the limp and purling tributary of the Finny, half-a-mile above their point of confluence. Population, in 1801, 674; in 1831, 1,039. Houses 213. Assessed property, in 1815, £2,935.—Kirkden is in the presbytery of Arthroath, and synod of Angus and Mearns. Patron, the Crown. Stipend £157 18s. 5d.; glebe £13. The church was built in 1825. Sittings 525. The village of Friockheim, and a district around it, belong to the *quoad sacra* parish of FRIOCKHEIM: which see. According to ecclesiastical survey, in 1836, the population of the whole parish *quoad civilia*, was then 1,137; of whom 1,087 were churchmen, and 50 were dissenters.—Schoolmaster's salary £25 13s. 10d., with from £11 to £12 fees, and £6 other emoluments. There are two non-parochial schools.

KIRKDOMINÆ, an ancient chapelry within the old parish of Girvan, but included in the modern parish of Barr, in the south of Carrick, Ayrshire. The chapel stood on an eminence on the north bank of the Stincher, and belonged to the monks of Crossraguel. The inhabitants of the circumjacent country petitioned, in 1639, to have it erected into a parish-church, but do not seem to have been heard. When the parish of Barr was erected in 1653, the roof of the chapel was, with singular economy, carried off and placed on the new parish-church. A great annual fair is held at Kirkdominæ. See BARR.

KIRK-FORTHAR, an ancient chapelry in the district of Kirkcaldy, and shire of Fife. About the beginning of the 17th century, it was suppressed and annexed to the parish of Markinch. The chapel is in ruins, but the burying-ground is still in use. It is  $10\frac{1}{2}$  miles north of Kirkcaldy.

KIRKGUNZEON, a parish in the south-east division of Kirkcudbrightshire; bounded on the north by Lochrutton; on the east by New-abbey; on the south by Colvend; and on the west by Urr. It is of an oblong form, stretching north and south, with a small westward projection at its south-west corner; and has an extreme length of 7 miles, and an

extreme breadth of  $4\frac{1}{2}$  miles. A rivulet which issues from Loch-Milton in Urr, and 2 miles south of its point of efflux touches Kirkgunzeon, and which bears successively the names of Milton-burn, Craichtyburn, Culloch-burn, Kirkgunzeon-burn, and Dalbeattie-burn, flows  $7\frac{1}{2}$  miles sinuously along the western boundary, washes the village of Dalbeattie, falls into the Urr about 3 furlongs after leaving the parish, and is for a little way navigable by small craft coming up from the sea. Three or four minor brooks water the interior. The surface of the parish is, in general, hilly; yet contains a considerable proportion of fine flat land. The hills, the greater section of which ranges from north to south along the east, are, in some instances, heathy and fit only for sheep pasturage, but, in other instances, are covered with soil and verdure, and serve either for tillage or for the feeding of black cattle. The lowlands are, for the most part, very fertile; but, till improved by draining and the removing of obstructions, are rendered in a great degree impracticable to the plough by swamps, little stony hills, and large isolated hlocks of stone. Though cultivated and enclosed, and quite lovely enough in the eyes of the mere farmer, even these best parts of the parish have a chilled and naked appearance, nearly destitute of trees, and chequered with thin stripes of stone dyke as a succedaneum for the lively hedge. Prime attention is given to the rearing of black cattle. At Barcolsh, Corrah, and Drumcultran are ancient towers or castles, the first once the seat of the family of Herries, and the second built by Sir John Maxwell, who obtained by marriage the estate and titles of Terregles. There are also a Druidical temple, and several Roman camps. In the south-west projection of the parish stands the village of DALBEATTIE: which see. The parish is bisected lengthways by a turnpike, and has an aggregate of about 13 miles of other roads. Population, in 1801, 545; in 1831, 652. Houses 107. Assessed property, in 1815, £3,921.—Kirkgunzeon is in the presbytery and synod of Dumfries. Patron, Maxwell of Terregles. Stipend £158 6s. 6d.; glebe £12. Salary of the schoolmaster, who employs an assistant, £30, with about £15 fees, and a house and garden. The teacher of a non-parochial school has £4 4s., and fees.—The parish was anciently called Kirkwinmy, and has its name from the same saint as Kilwinning in Ayrshire. The church, with its pertinents, was given by Uchtred, the son of Fergus, Lord of Galloway, to the monks of Holm-Cultram, in Cumberland; and continued with them till they took part in the English wars against David Bruce; and it was then, in 1369, given to Sir John Herries of Terregles, and made a free parsonage. A separate commissariat, independent of that of Dumfries, anciently extended over Kirkgunzeon, and was hereditarily held by the Earls of Nithsdale; but, like other jurisdictions of its class, it was abolished in 1747.

KIRKHILL, a parish in Inverness-shire, consisting of two united parishes, called Wardlaw and Farnua. It extends about 8 miles in length, and from 1 to 3 in breadth. It lies along the Moray frith, having Inverness on the east, Kiltarlity on the south, and Kilmorack on the west; forming a fine plain of 4 miles extent, from which the surface gradually rises to the hilly country. The low grounds are of a rich clay loam, but higher up it becomes more thin and gravelly. It is watered by the Beauly, which falls into the frith at this place. Here are the remains of two Druidical temples, much defaced; and on a moor are a number of tumuli, which are said to point out the place of a desperate engagement between two rival clans.

Population, in 1801, 1,582; in 1831, 1,715. Assessed property, in 1815, £6,494. Houses 374. This parish is in the presbytery of Inverness, and synod of Moray. Patron, Hercules Scott. Stipend £247; glebe £16.—Schoolmaster's salary £30, with about £55 fees. There were two private schools in 1834.

KIRKHILL, a village in the parish of Penicuik, Edinburghshire. It stands on a rising ground on the left bank of the North Esk, half-a-mile north-east of the village of Penicuik; and is inhabited chiefly by papermakers and weavers. Population 500.

KIRKHILL. See KINNETTLES.

KIRKHOPE. See YARROW.

KIRKINNER, a parish in the south-east of Wigtonshire; bounded on the north by Bladenoch-water, which divides it from Penningham and Wigton; on the east by Wigton bay, which divides it from Kirkmahreck in Kirkeudbrightshire; on the south-east by Sorhy and Glasserton; on the south-west and west by Mochrum; and on the north-west by Kirkcowan. It measures in extreme length, from the point where it is first touched by Bladenoch-water on the north, to an angle south-west of Dowalton-loch on the south,  $6\frac{1}{2}$  miles; and in extreme breadth, from the coast due east of the parish-church on the east, to the point where Malzie-water enters on the west,  $5\frac{1}{2}$  miles; but from the line of its greatest length it gradually contracts to  $2\frac{1}{2}$  miles on the east, and to  $5\frac{1}{2}$  on the west; and it has a superficial area of nearly 24 square miles. Wigton hay, over the  $2\frac{1}{2}$  miles of its touching the parish, diminishes in width at high-water from  $4\frac{1}{2}$  to  $2\frac{1}{2}$  miles, and, at low water, from 3 or  $3\frac{1}{2}$  miles to 2 furlongs, leaving at the efflux of the tide a belt of dry sands, on the Kirkinner side, from  $\frac{3}{4}$  to  $1\frac{1}{4}$  of a mile broad. For a mile, and occasionally upwards of a mile, inland, stretches from north to south a belt of carse ground,—flat, deep, and very fertile fields of clay. All the rest of the surface is a congeries of little hills, gentle in their outline, verdant in their clothing, and, in some instances, wearing crowns of plantation on their summits. Except for about half-a-mile inward from the carse, it has, in general, a thin and light soil, and does not seem to have been naturally fertile; but by means of seashell, marl, and lime, it has been affluently improved; and now it everywhere exhibits a well-cultivated and cheerful appearance. Very nearly the whole has been subjected to the plough; even mosses have been reclaimed and made arable; and not an acre can properly be called waste. DOWALTON-LOCH [which see] is on the south-east boundary. Malzie-water, coming in from the west, flows  $1\frac{1}{2}$  mile through the interior to the Bladenoch. Lane-burn rises in five head-waters in the interior, and, measuring from the longest one, flows along a channel of about  $6\frac{1}{2}$  miles; remarkably serpentine on the carse-grounds to the Bladenoch, a brief distance above its emhouchure. The Bladenoch, up which the tide flows for 2 miles, furnishes trout, salmon, and spirings, and has a small harbour at Baldoon. The modern mansion of Barnbaroch-house, the seat of Colonel Vans Agnew, surrounded by an extensive wooded demesne, and almost isolated by three of the ramifications of Lane-burn, adorns the centre of the parish. The ancient castle of Baldoon, situated on the Bladenoch, and once the seat of the Dunbars of Baldoon, from whom it passed by marriage to the Earls of Selkirk, and afterwards by purchase to the Earls of Galloway, was the scene of an incident which is believed to have suggested the plot of Sir Walter Scott's 'Tale of the Bride of Lammermoor.' There are vestiges of two circular camps. The parish is well provided with roads; and being distant, at its nearest point, less than half-a-mile from Wigton, the county-town, it enjoys consider-

ahle facilities of communication. Population, in 1801, 1,160; in 1831, 1,514. Houses 261. Assessed property, in 1815, £16,247.—Kirkinner is in the presbytery of Wigton, and synod of Galloway. Patron, Vans Agnew of Barnharroch and Sheuchan. Stipend £230 2s.; glebe £20. Unappropriated teinds £51 9s. 8d. Schoolmaster's salary £34 4s. 4½d., with £28 fees, £6 other emoluments, and a house and garden. There are three non-parochial schools.—The ancient church was dedicated to St. Kenneir—abbreviated into Kinner in the name of the parish—a virgin said to have suffered martyrdom at Cologne in 450. The church was granted by Edward Bruce, Lord of Galloway, to the monks of Whithorn; but, in 1503, was exchanged by them for that of Kirkandrew in Kirkcudbrightshire, in order that it might be annexed to the chapel-royal of Stirling. As taxed in Bagiment's roll, it was the highest benefice in the county.—The present parish comprehends, as its north-west corner, the small ancient parish of Longcastle, named after an edifice on an islet in Dowalton or Longcastle-loch. The ruins of the church still exist about half-a-mile from the lake. The parish was anciently a rectory, and was annexed to Kirkinner in 1630. Its name is occasionally joined with that of Kirkinner in designating the united parish.

KIRKINTILLOCH, a parish in Dumbartonshire, forming the western half of the detached part of that county, and lying 4½ miles east of the nearest point of its main body. It is bounded on the north by Campsie and Kilsyth, in Stirlingshire; on the east by Cumhernauld; on the south by New Monkland and Cadder, in Lanarkshire; and on the west by Cadder. In extreme length from east to west, it measures 6¾ miles; at its west end it is 2 miles broad, but has an indentation there to the depth of a mile; it slowly and regularly expands till, at its east end, it is nearly 3½ miles broad; and it contains an area of about 10,700 English acres. Kelvin-water comes in from the east, and except over one brief space of ¾ of a mile where the frontier overlaps it, flows along the whole of the northern boundary; but it has not here reached any of its scenes of beauty and romance, and crawls sluggishly along, with the aspect more of a Dutch canal than a Scottish stream. Luggie, or Logic-water comes in also from the east, runs 1¼ mile along the southern boundary, and flows chiefly westward, but partly northward, in the interior to the Kelvin at the town of Kirkintilloch; and though it generally has the same dull, repulsive aspect as the Kelvin, yet, for about a mile from Duntiblae to Oxbang, it moves between high, wooded, and interesting banks. The FORTH and CLYDE CANAL [which see] extends from east to west, a little inward from the northern boundary. The surface of the parish, lying all within the great valley, traversed by that canal, though shielded by the lofty and often abrupt range of Campsie-fells on the north, and screened by considerable undulating elevations on the south, is an almost imperceptibly declining plain, with a northern exposure, everywhere variegated with waving swells, and nowhere, except in one place of small extent, warted with rugged or rocky protuberances. The soil along the Kelvin is of a deep marshy nature, and liable to be overflowed; on a small tract in the north-east corner, it is a light reddish earth, on a whinstone and gravelly bottom; around the town of Kirkintilloch, it is a light black loam, 16 or 18 inches deep, on a reddish tilly bottom; in the southern and eastern districts, it is a strong clay; and in detached little patches in various localities, amounting in the aggregate to about 140 acres, it is black peat moss. Hardly one-half of the area is in

regular tillage; about 300 acres are under wood; about 300 more are waste; and an aggregate number not easily estimated, are very unpicturesquely, though very usefully, occupied by the canal and its banks, by the path of the Edinburgh and Glasgow railway, by the town of Kirkintilloch, by the works and yards of collieries, and by the multitudinous appliances of a busy and multifarious manufacture. Coal abounds, and is extensively mined at Shirva and at Barhill, both near the Kelvin. At the latter, on the summit of the rising ground, are nearly 30 kilns for the conversion of coal into coke, which, in dark nights, diffuse far-seen streamers on the lower clouds, and whence large exportations of coke are made to Glasgow. Limestone, freestone, and ironstone also abound.—Antoninus' wall ran through the parish for 6 miles from east to west, and had here three large forts and watch-towers. Its most easterly post was a fort, still traceable, enclosing an area of 150 square yards on the summit of Barhill, and commanding a view of almost the whole course of the wall from the Forth to the Clyde. The middle post, now nearly effaced from the intersection of it by the canal, and from other causes, was at the village of Auchendowie, and appears to have been a rectangular fort of 150 yards by 70. The westerly post, still in most parts tolerably distinct, was a fort, now called by way of distinction the Peel, on a rising ground at the west end of the town of Kirkintilloch, enclosed an area 90 yards by 80, and had the singular property of being situated on the north side of the wall.—An ancient quadrangular tower, once a strength of the Boyds, Earls of Kilmarnock, exists in a nearly entire but ruinous condition.—The parish is traversed through the town of Kirkintilloch, by the turnpike between Glasgow and Kilsyth, and has, in addition, about 20 miles of excellent roads. The Monkland and Kirkintilloch railway comes in from the south to the canal near the town. The Edinburgh and Glasgow railway will touch the town and run through the whole length of the parish. The canal has been of incalculable advantage for the conveyance both of goods and of passengers. The number of persons who enter the passage-boats at the station here averages about 2,000 per month. Population, in 1801, 3,210; in 1831, 5,888. Houses 615. Assessed property, in 1815, £7,446.—Kirkintilloch is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, the Hon. Admiral Fleming. Stipend £262 1s. 3d.; glebe £10 8s. Unappropriated teinds £643 10s. 3d. The parish-church was built in 1644. Sittings 740.—A part of the parish, comprehending sections of both its town and its landward districts, and containing a population of about 2,700, was recently erected into the *quoad sacra* parish of St. David's. The church was built in 1837. Sittings 1,012.—There are three dissenting places of worship, all situated in the town. The United Secession congregation was established in 1765. Sittings 620. Stipend £137.—The Original Burgher congregation was established in 1801. Their place of worship was built in 1806, and cost £800. Sittings 700. Stipend £105. The Wesleyan Methodist congregation, established in 1817, assemble in a schoolroom. Sittings 170.—An ecclesiastical survey made in 1836, exhibited the population then as consisting of 3,629 churchmen, 2,349 dissenters, and 200 non-descript;—in all 6,178 persons.—Parochial schoolmaster's salary £34 4s. 4½d., with fees, and about £4 other emoluments. Six non-parochial schools,—one of which is endowed, and one is a hoarding-school,—are conducted by 7 teachers, and attended by a maximum of 545 scholars.—Kirkintilloch, anciently written Kirkintulach, and etymologically *Caer-*

*pen-tulach*, 'the Fort at the end of the hill,' thus taking its name from the Roman post at the west end of the town, anciently comprehended both the present parish and that of Cumbernauld; but, at the close of the reign of James IV., it began to be called Lenzie, after the name of the barony. The ancient church was dedicated to St. Ninian, and stood near Oxbang, where its cemetery still exists; and it was given before 1195, to the monks of Cambuskenneth, and continued to be a vicarage under them till the Reformation. In the town stood a chapel dedicated to the Virgin Mary, and endowed with the lands and mill of Duntiblae. This is now the parish-church; and, though inconvenient and very old, withstood a recent sharp litigation for being superseded by a new edifice. In 1649, a decree of the commissioners for planting new churches ordered the division of Lenzie into two parishes, and, a few years afterwards, was carried into execution. The new parishes were for some time called Wester Lenzie and Easter Lenzie; but eventually took their modern names from the sites of their respective churches.

KIRKINTILLOCH, the capital of the parish just described, and a burgh-of-barony, stands on Luggiewater, immediately above its confluence with the Kelvin, 3 miles south-east of Campsie, 5 miles south-west of Kilsyth, 7 miles north of Glasgow, and 49 miles west of Edinburgh. Its site has the singular advantage of being touched by a great line of turnpike, by the Forth and Clyde canal, and by the Edinburgh and Glasgow railway. It is an irregularly built, strangely arranged, confused looking little town, conveying by its aspect the idea of such entire devotedness to trade and manufacture as precludes nearly all attention to the graces of exterior appearance. A steeple surmounting a court-house and jail gives the place a sort of burghal feature. A gas-work, sending aloft its slender stalk, evinces also regard for comfort. But the vast majority of the edifices indicates the mass of the inhabitants to be a community of cotton-weavers. The castle of Kirkintilloch, once a considerable strength, the property first of John Comyn, and next of the ancestor of the Honourable Admiral Fleming, has entirely disappeared. The town has a branch-office of the West Bank of Scotland, a savings' bank, a subscription library, a parochial library, some charitable or friendly institutions, and more than a complement of inns and ale-houses. A small weekly-market is held on Saturday; and annual fairs, chiefly for cattle, are held on the second Tuesday of May, the last Thursday of July, and the 21st day of October. Two distilleries produce upwards of 115,000 gallons a-year; a silk hat-manufactory employs upwards of 20 persons; an iron-foundry is in brisk operation; a calico-printfield has work for about 120 persons; and a variety of handicrafts, common to every town, employs, in the aggregate, about 120 workmen. But the weaving of cotton fabrics—principally lappets with a few purls and victories—yields the mass of the inhabitants what may indifferently or debatedly be called a maintenance and a starvation. The weavers are glad to earn even seven or six shillings a-week; yet they have multiplied in number with a rapidity of increase which, viewed in connexion with the poverty of their vocation, seems quite unaccountable. They amounted, a little before the close of last century, to only 185, but now amount to about 2,000,—only a fourth of whom, however, are heads of families. The number of hand-loom was, in 1828, 1,200; and, in 1838, 1,963. Those of the latter year, with the exception of eight, were all plain.—The town is said to have been erected into a burgh-of-barony by William the Lion. From its

successive superiors, the Comyns, the Flemings, and the Earls of Wigton, it received charters granting and confirming the rights of electing magistrates, holding a weekly-market, and maintaining burgh-courts. From time immemorial the burgh has included two kinds of property,—the Newland mailings, which may be considered the landward part, and the burgh acres, upon which the greater part of the town is built. A Newland mailing is a piece of land rated in the cess-books at £18 Scots. The right of electing the magistrates is in the burghesses; but it is the immemorial practice of the burgh to admit as such only the proprietors of the Newland mailings, to the exclusion of the proprietors of the burgh acres, and all others. The burghess must be feudally vested in at least one-half of one of the Newland mailings. The magistracy consists of 2 bailies, 12 councillors, a treasurer, and a town-clerk, chosen yearly by the burghesses; these are 22 in number, 16 of whom are resident. The inhabitants who are not burghesses have no voice in the election of the magistrates, or in the management of the burgh's affairs. The burgh has no property, except the court-house and gaol. The revenue is wholly derived from casualties of superiority drawn on the entries of vessels in the lands, over which the magistrates are the superior's irrevocable commissioners. The income is about £30 per annum, and is applied to keeping up the public buildings and establishment, and paying the interest of debt. The debt is about £300. There are no taxes levied under authority of the magistrates. The proprietors within burgh are taxed with the landward part of the parish. The boundaries are extensive, the burgh lands extending nearly 3 miles in length, by  $\frac{3}{4}$  of a mile in breadth. The jurisdiction claimed is equally extensive with royal burghs. In civil cases the bailies judge to an unlimited amount; in criminal, they confine themselves to petty offences. The cases of either kind are not numerous. There are no stated courts. The town-clerk acts as assessor; and is paid by court-dues and fees on charters. There are no exclusive privileges or incorporations. Population about 4,400.—When the army of Prince Charles Edward came down upon the town from Stirlingshire, in 1745, one of their number was coolly shot from a lurking-place in one of the streets. The inhabitants were, in consequence, subjected to a heavy fine; and next year, when the army was returning from the south, they fled everywhere in panic, falsely apprehending that their town was destined to the flames. Kirkintilloch was the first place in the west of Scotland scourged by Asiatic cholera.

KIRKLAND, a village in Fifeshire, in the parish of Wemyss, 1 mile west of Leven, and 1 north of Methill. Here is one of the most extensive flax spinning-mills in Scotland, belonging to Nelson and Co. It gives employment to 681 persons, and annually consumes about 1,000 tons of flax. The village is wholly inhabited by the working people at the mills. Population, in 1836, 543. There is a school here, chiefly supported by the Company.

KIRKLAND, or KIRKFIELD BANK, a pretty village in the parish of Lesmahagow, situated about 1 mile west of the town of Lanark. The Clyde, which at this place makes a beautiful sweep, and contains a romantic little wooded island, is here spanned by a substantial bridge of three arches. The inhabitants are chiefly engaged in weaving.

KIRKLAND. See SALINE.

KIRKLISTON, a parish bisected by the river Almond, having the part on the left side of that stream in Linlithgowshire, and the part on the right side in Edinburghshire. It is bounded on the north by Abercorn, Dalnelyne, and Cramond; on the east

by Corstorphine and Ratho; on the south by Kirknewton; and on the west by Uphall, Ecclesmachan, and a detached part of Dalmeny. It is very irregular in outline; but has an extreme length, from east to west, of  $5\frac{1}{2}$  miles, and an extreme breadth of  $4\frac{1}{2}$  miles, and is computed to contain about 12 square miles. The portion in Edinburghshire is about one-fourth of the whole. The Almond has, in the parish, a course of  $4\frac{1}{2}$  miles from south-west to north-east in a straight line, but of about  $6\frac{1}{2}$  or 7 along the sinuosities of its channel; and it runs upon a broad, and, in many places, a rocky bed, occasionally between sloping and high banks, pleasing and cheerful in its appearance, but at times so flooded and impetuous that, to correct its mischievousness, its beauty has, in some parts, been necessarily impaired by high embankments. Brox-hurn, coming in from the south-west, flows  $\frac{3}{4}$  of a mile along the western boundary, and then  $1\frac{1}{2}$  mile through the interior to the Almond. Two or three other streams—tiny brooks—drain the district. Springs are abundant and not a little various, affording ample supplies of pure water, and offering solutions of magnesia, lime, and iron. The Edinburgh Union canal goes  $1\frac{1}{2}$  mile westward through the southern wing, and, having debouched in the parish of Uphall, re-enters the parish, and passes  $1\frac{1}{2}$  mile through it northward. The surface of the whole area is a slightly upland plain diversified with very gentle swells. The soil varies from a strong clay to a rich black mould, the only exceptions being a few haughs of light earth and deep sand. In a few places the clay land is very wet, and demands much labour from the cultivator. But the whole parish, though containing, a century ago, extremely little enclosed ground, partook early the benefits of the agricultural movement in the Lothians, and long before the publication of the Old Statistical Account was all arable. Plantation is more scanty than comports with scenic effect, but yields to the more useful ornaments of the rich and mellow grain. The cultivation of turnips and cabbages in the fields was introduced here by the Earl of Stair. Sandstone, limestone, and whinstone occur, all of kinds suitable to be used in various sorts of masonry. A beautiful and durable building-stone is quarried on the farm of Humble. Numerous but vain searches have been made for coal. A field south-west of the village of Kirkliston is pointed out on which Edward I. encamped, in 1298, on his way to Falkirk. A monumental stone on the right bank of the Almond, less than  $\frac{1}{4}$  of a mile within the limits of the conterminous parish of Cramond, bears the name of the Catstane, supposed to be a corruption of Constantine, and is believed to commemorate the slaughter near the spot of Constantine the usurper, in a pitched battle, in the year 995, with Kenneth the brother of Malcolm, the 2d King of Scotland, and the commander of his army. Some large stones in a field  $2\frac{1}{2}$  miles higher up the river, and immediately adjoining the Edinburgh and Glasgow turnpike, are thought to commemorate the battle, and to indicate the principal scene of the contest. Stone coffins, heads of spears, and other relics of a general engagement, have, at various periods, been found in the vicinity. On the left bank of the Almond,  $\frac{3}{4}$  of a mile after it enters the parish, stands a very ancient baronial pile, called Eliston, and supposed to have been anciently a hunting-castle of the kings of Scotland.—Half-a-mile south of the village of Winchburgh stands the fine old ruin of Niddry castle, once the property of the Earls of Wintoun, and the asylum for a night of Mary of Scotland, when fleeing from Lochleven to join her party at Hamilton.—On the Almond, among some aged trees near Clifton-hall, is a well-preserved monumental stone, dated

1645, over the grave of the proprietor of the adjacent grounds, who, according to one account, was the last victim of plague in Scotland; and whose body, from the unwillingness of every one to attend his funeral, was interred in his garden by a domestic.—Half-a-mile west of the Almond, and the same distance north of the Edinburgh and Glasgow turnpike, stands the interesting mansion of Newliston, once the favourite seat of the Stair family, but now the property of James Maitland Hog, Esq. The pleasure-grounds around it were laid out by the celebrated John Earl of Stair, who inherited the estate from his mother, and resided here twenty years; and are said to have been disposed, in the lines and clumps and other figures of their trees, in exact resemblance of the array of the British troops on the eve of the battle of Dettingen. The Earl of Stair, and his grandmother, Dame Margaret, the 1st Lady Stair, and the original of Lady Ashton in Scott's tale of 'the Bride of Lammermoor,' lie interred—the former without monumental marble or inscription—in the family vault in Kirkliston church. The other mansions, besides Newliston, are Fox-hall,  $\frac{1}{4}$  of a mile east of Kirkliston, and Clifton-hall, Hallyards, and Ingleston, in the Mid-Lothian section of the parish.—Four hamlets, Niddry, Gogar-stane, Clifton, and Newhouses, have aggregated about 180 inhabitants. Two villages, WINCHBURGH and NEWBRIDGE, shall be separately noticed. The village of Kirkliston is pleasantly situated on a rising ground between a bend of the Almond on the south, and the line of the Edinburgh and Falkirk turnpike on the north, 9 miles west of Edinburgh, and  $7\frac{1}{2}$  miles east of Linlithgow. Though possessing some good modern houses, it presents, on the whole, a squalid appearance, more in keeping with the moral features of Munster or Connaught than with the opulence and taste and order of the Lothians, and is a blot on the face of the fair landscape which surrounds it. At its west end is a distillery of upwards of twenty years standing. The place has an inn, and a complement of ale-houses; and on the last Tuesday of July is the scene of a motley gathering misnamed a fair. Population about 600.—Three great turnpikes traverse the parish,—that between Edinburgh and Glasgow by way of Bathgate, that between the same cities by way of Linlithgow and Falkirk, and that branching off from the second at Kirkliston, and running down to Queensferry. Owing to its bisection by these roads and the canal, the parish witnesses in transit the greater part of the vast traffic and intercommunication between the east and the west of Scotland. It is cut also by the line of the Edinburgh and Glasgow railway, and is the scene of the most stupendous, or, at least, the most striking and magnificent object thrown up in the construction of that great national work,—the viaduct of upwards of thirty towering arches, connected by an earthen embankment with another bridge of ten or twelve arches more across the vale of the Almond. An aqueduct of no mean character, for the amount and other qualities of its masonry, carries across the same vale the Edinburgh Union canal. Population, in 1801, 1,647; in 1831, 2,265. Houses 398. Assessed property, in 1815, £14,869.—Kirkliston is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend £285 10s. 2d.; glebe £27. Unappropriated tithes £29 3s. 3d. The church is very ancient, and belonged to the Knights Templars. On its south side is a doorway, not now used, which exhibits a fine specimen of Saxon architecture. Sitings between 700 and 800. From the proprietors of the church the parish was anciently called Temple-liston. But the kirktown acquiring the name of Kirk-liston to

distinguish it from several other places which were, with some prefix, the name of the whole manor, Kirkliston came to be the parochial designation. The manor of Liston was granted to the Knights Templars in the 12th century, and, with some dilapidations, was enjoyed by their successors, the Knights of St. John, till the Reformation. The church, with much of the adjacent lands, was granted—though at what date is uncertain—to the bishop of St. Andrews; and while served by a vicar, was enjoyed by the bishop as a mensal benefice. Parish schoolmaster's salary £34, with fees, £4 2s. other emoluments, and a house and garden. There are 5 non-parochial schools, attended by a maximum of 268 scholars.—An entirely detached portion of the parish, called Liston-Shiels, and usually reckoned to belong to Kirknewton, lies among the Pentlands. See LISTON-SHIELS.

KIRKMABRECK, a parish at the south-west extremity of Kirkcudbrightshire; bounded on the north by Girthon; on the east by Girthon and Anwoth; on the south-west by Wigton hay, which divides it from Wigtonshire; and on the north-west by Minigaff. In extreme length it measures, from Craig Ronal on the north, to an angle on Wigton hay at the boundary with Anwoth on the south, 10 miles; and in breadth it averages, for 3 miles from the north,  $3\frac{1}{2}$  miles,—for  $4\frac{1}{2}$  miles further,  $4\frac{1}{2}$  miles,—and thence to the southern extremity,  $2\frac{1}{2}$  or  $2\frac{1}{2}$  miles. Wigton bay, or more properly the estuary of the Cree, expands, while it touches the parish, from a breadth of  $2\frac{1}{2}$  furlongs to a breadth of  $3\frac{1}{2}$  miles; and offers to the inhabitants the wealth of its fisheries and the advantages of its navigation. Pilnour-water, coming down from the north, runs for  $\frac{2}{3}$  of a mile along the western boundary before falling into the estuary; and, at the point of first touching the parishes, receives on its left bank a streamlet which traces for  $3\frac{1}{2}$  miles the north-west boundary. One of the two chief head-waters of the Flect forms the boundary-line for  $3\frac{1}{2}$  miles on the west. Moneypool-hurn, flowing 6 miles south-westward from the north-east corner, and receiving several tributary rills in its course, falls into Wigton hay at Creetown. Four or five other streamlets drain the parish, and run into the bay. Several mineral springs, particularly one on the lands of Peble, have been found useful in cases of dyspepsy. The country all along the hay has a delightful appearance, chequered and tufted with wood, dotted with gentlemen's seats, carpeted with a rich soil of clay and gravel, and finely featured with enclosures and the tints and depictions of thorough cultivation. But the surface inclines everywhere upward from the bordering belt, and soon becomes a congeries of mountains, partly green and partly clothed in a mottled intermixture of heath and verdure, and of strictly a pastoral character. Yet the mountainous region, except along the north-west frontier, breaks down at intervals into gentle slopes and pleasant valleys and narrow stripes of lowland, watered by the meandering streams, and worked, by means of an exuberant supply of sea-shells and other manurial substances, into finely cultivated lands. Great attention is paid to the pasturing of sheep, and the rearing of black cattle. The parish is famous for a beautiful granite, with which it abounds, and of which some fine edifices have been built; and it contains small veins of coarse limestone, and some lead ore. Along the estuary of the Cree are four quadrangular towers with battlements; and, in various localities are tumuli, one of which, called Cairn-holy, or the Holy Cairn, is an object of much local curiosity, and the subject of conflicting but magniloquent traditions. Of the mansions of the parish the chief and the most interesting is Kirkdale, situated

in the southern corner, on Wigton bay. Approaching it along the coast from the west, the mansion rises to the eye with a sort of magic effect. It is of modern erection, constructed of the fine granite of the parish, stately and spacious, after a very elegant design by Mr. Adams, the granite beautifully polished. The mansion, too, while an attractive object in itself, is one of the most advantageously situated in Scotland for the extent and grandeur of the panorama hung around it; for it commands a noble prospect of the Irish sea,—of the country extending up the western bank of the Cree,—of the town of Wigton and its environs on the opposite side of the bay,—and of the land stretching out, in a sort of promontory, to form the point of Whithorn, the Candida Casa of Bede. On Wigton hay stands the little hurgh of CREETOWN; which see. Half-a-mile north of it is the fine mansion of Barholm, the seat of the superior of the hurgh. The parish is traversed along the coast by the great turnpike between Carlisle and Portpatrick, and westward in the interior by the old military road from Dumfries to Newton-stewart; and it has two or three other lines of road. Population, in 1801, 1,212; in 1831, 1,779. Houses 268. Assessed property, in 1815, £6,325.—Kirkmahreck is in the presbytery of Wigton, and synod of Galloway. Patron, the Crown and Barholm. Stipend £249 6s. 6d.; glebe £16. Unappropriated tithes £85 7s. 3d.—Parish schoolmaster's salary £34 4s. 4d., with £31 fees. There are 5 non-parochial schools, attended by a maximum of 126 scholars.—To the ancient parish was annexed, in 1636, the whole of the old parish of Kirkdale, except a very small part, which was assigned to Anwoth. The church of Kirkdale, dedicated to the archangel Michael, stood in the valley of a small stream which falls into Wigton bay about half-a-mile below Kirkdale-house; and is commemorated by its cemetery, which is still in use. In the reign of James IV. it belonged to the Crown; and it was then given to the monks of Whithorn, and continued with them till the Reformation. The church of the ancient parish of Kirkmahreck belonged, in popish times, to the abbey of Dundrennan; and, in 1621, it was, with all its tithes and pertinents, granted to Sir Robert Gordon of Lochinvar and his heirs. Kirkmahreck and Kirkdale, after this gifting away of the temporalities of the former, were annexed to the parish of Anwoth; but, in 1636, were placed in their present position. The old church of Kirkmahreck—still visible in its ruins, and commemorated by its cemetery,  $1\frac{1}{2}$  miles south-east of Creetown—was now superseded by a new church in that little town,—anciently the site of a chapel. A little south of the old cemetery, at a place now called Kirkhride mills, there was of old a chapel dedicated to St. Bridget, and called Kilhride or Kirkhride.

KIRKMAHOE, a parish in Nithsdale, Dumfriesshire. Its greatest length, from the point where Gonckstane-hurn comes down upon it in the north, to the angle at Fisher's Isle on the south, is  $7\frac{1}{2}$  miles; and its greatest breadth, from the boundary near How Bothom on the east, to an angle near Auld-girth bridge on the west, is  $4\frac{1}{2}$  miles. But from the line of its extreme breadth southward, or over  $4\frac{1}{2}$  miles of its greatest length, it uniformly and almost regularly contracts, till it terminates in a point; so that it comprehends an area of only  $18\frac{1}{2}$  square miles, or  $9,545\frac{1}{2}$  Scottish acres. It is bounded on the north by Closeburn; on the north-east by Kirkmichael; on the east by Tinwald; on the south-east by Dumfries; on the south-west by Holywood and Dunscore; and on the north-west by Keir and Closeburn. The river Nith, excepting over a space of half-a-mile where it first flings one fold into the parish, and next

sends a curve beyond it, runs along the whole south-west boundary,—a distance, in a straight line, of  $6\frac{1}{4}$  miles. Its appearance and properties here are noticed in the articles *DUNSCORE* and *HOLYWOOD*. The water of Ae, coming down from the north, runs along the whole of the north-east boundary,—a distance of  $2\frac{1}{2}$  miles. Gonckstane-burn, coming down from the north-west  $1\frac{1}{2}$  mile from its source, traces the northern boundary for  $\frac{3}{4}$  of a mile, and then runs  $2\frac{3}{4}$  miles south-eastward, through the interior to the Ae. Duncow-burn cuts the parish lengthways into not very unequal parts, and falls into the Nith a little below Millhead. Auchinbeatty-burn, after tracing for  $1\frac{1}{2}$  mile the north-west boundary, runs  $3\frac{1}{2}$  miles south-eastward to Duncow-burn. Lochar water rises in the interior, and, after running  $\frac{3}{4}$  of a mile eastward, flows  $3\frac{3}{4}$  miles along the eastern boundary, receiving from the parish, a little before leaving it, a tributary of  $2\frac{1}{2}$  miles length of course. The waters of the parish thus belong chiefly to Nithsdale; partly, through the Ae, to Annandale; and partly, through the Lochar, to the intermediate district of Lochar Moss. The small streams contribute many features of romance to the aspect of joyous beauty produced by the vicinity of the Nith; now hiding themselves from the tourist in curiously formed caves which they have hollowed out in the rocks, and now bounding fantastically upon his view in the glittering leap and garrulous noise of very fine cascades. The surface, in all the southern division, is nearly level, or hut slenderly diversified; and, in general, rises gently from the Nith, till, in the northern division, it becomes a congeries of heights, some of which rise from 600 to nearly 800 feet above the level of the sea. From some of the summits of its uplands, a brilliant view is obtained of the beautiful vale of the Nith, broadly fringed in the distance by the spray of the Solway tide, and foiled by the hold forms of Criffell and the Cumberland hills, in the far-away back-ground. At the middle of last century, the parish had only two carts, and was almost wholly waste; but now, with the exception of the chief part of its uplands, amounting to about one-third of its whole area, which is unreclaimed and pastoral, it competes in the opulence of its cultivation, and the luxuriance of its crops, with the best districts of Scotland. Along the Nith is a rich holm or haugh of alluvial soil, mixed with clay. About 500 acres, chiefly near the middle of the parish, are under wood. The elegant mansion of *DALSWINTON* [which see] overlooks on one side an islet lake, and on the other a sweep of the Nith, opposite Tower Isle and Ellisland; and—apart from its being the seat of the chief proprietor of the parish—is highly interesting for its historical associations. On the little lake in its pleasure-grounds, were conducted the celebrated experiments of the late Patrick Miller, Esq., in steam navigation. In the vicinity, Allan Cunningham spent his boyhood; and, in a letter to the minister of the parish, from which extracts are made in the *New Statistical Account*, he has preserved some interesting reminiscences of the relics of the Comyn. Part of the walls of Comyn's-castle, burnt by Bruce after Kirkpatrick had the proprietor "sicker" in *DUMFRIES* [which see], are reported by him to have been standing in 1792. "They were, he says, 12, and in one place 14 feet thick; and 'bits of hurnt wood' were still clinging to them. He notices the old cow-house of Dalswinton as a great curiosity; and says that he had seen it entire, with its 'heavy stone vault,' its 'outer door of wrought iron,' and its 'inner door traced with broad iron bars, fastened with iron rivets.'" "The Nith," Mr. Cunningham remarks, "instead of circling the scour of Ellisland, and running nigh the Isle, directed its course by

Bankfoot, and came close to the castle; and he remembers 'a pool near the old house of Dalswinton, called Comyn's pool, which belonged to the old water course, and connected itself with the hack water in the Willow isle, by the way of the Lady's meadow. Here Comyn is alleged to have sunk his treasure-chest before he went to Dumfries, leaving it in charge of the water-sprite. A net, it is said, was fixed in this pool, to which a small bell in the castle was attached, which rang when a salmon was in the snare!' 'The golden pippins and honey pears' which were produced in the orchard, on or near the place once occupied by the notable pool, must not be overlooked. The pippins grew on six remarkable trees: the pears on the same number of trees were no less remarkable, and the fruit, for flavour and sweetness, could not then be 'equalled in any other garden in the district.'" [New Statistical Account of Scotland, No. II. p. 59, 60.]—Millhead and Carnsalloch, both on the Nith, not far from the southern extremity of the parish, are the principal other mansions. In various localities are circular moats, and the vestiges of forts and tumuli. Kirkmahoe village is a small, poor-looking place, 4 miles north of Dumfries, noticeable only for its being the site of the parish-church, a fine Gothic edifice, beautifully screened with trees. Quarrelwood,  $1\frac{1}{2}$  mile farther north, is the site of a Reformed Presbyterian meeting-house, once of some note in the surrounding country, the cradle of Cameronianism, but now almost wholly disused. *DUNCOW* and *DALSWINTON* are separately noticed. The aggregate population of all the villages is only about 500. At Glencarrick, in the north, is a small distillery. The principal road is a turnpike which runs up the vale of the Nith, to join the Dumfries and Glasgow stage-road immediately beyond the limits of the parish at Auldgirth bridge.—Population, in 1801, 1,315; in 1831, 1,601. Houses 321. Assessed property, in 1815, £10,077.—Kirkmahoe is in the presbytery and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £238 8s. 4d.; glebe £14. Unappropriated tithes £341 10s. 6d. Three parochial schools are attended by a maximum of 286 scholars. Collective salaries of the masters £31 6s. 6 $\frac{1}{2}$ d., with £36 fees, and £3 3s. other emoluments. A voluntary school is attended by a maximum of 47 scholars, taught by two masters, and provided with a new school-house built by subscription, and superintended by a few heads of families.—Hagiography nowhere furnishing a St. Maho, Chalmers derives the name of the parish, like the name Mayo in Ireland, from the Irish *mayh*, and makes it mean 'the Church in the plain field.' The church was dedicated to St. Quintin, and, notwithstanding a grant of it by David II. to the monks of Arthroath, continued to be a rectory; and, in 1429, was constituted a prebend of Glasgow, and made a perpetual vicarage. In the northern section of the parish, at a place still called Kilblane, anciently stood a church dedicated to St. Blane.

*KIRKMAIDEN*, a parish occupying the southern part of the Rhinns of Galloway, in Wigtonshire. It is bounded on the north by Stoneykirk, and on all other sides by the sea; and runs southward, in a peninsular stripe, terminating in the Mull of Galloway: see *GALLOWAY (MULL OF)*. Its greatest length, from Chapelrossan bay on the north, to the south side of the Mull on the south, is  $9\frac{3}{4}$  miles; and its greatest breadth, from Killiness point on the east, to the coast-line of Clanyard Fell on the west, is  $4\frac{1}{2}$  miles; hut, having an average breadth of only  $2\frac{1}{2}$  or  $2\frac{3}{4}$  miles, its superficial area is between 23 and 24 square miles. Fresh water and chalybeate springs are abundant and copious. The encincturing sea affords a profusion and a great variety of fish,—

mackerel, mullet, and whiting,—red cod, turbot, sole and skate, large oyster, crabs and lobster, and a number of other species. A large part of the coast-line, especially on the west, is a continuous curve of hay and beadland. The hays of East Tarbet and West Tarbet are mutually opposite, and narrow the connexion of the Mull of Galloway with the body of the parish to an isthmus  $2\frac{1}{2}$  furlongs broad. Portnessock and Clanyard hays, each running a mile inward from the general coast-line, both on the west side, the former  $1\frac{1}{2}$ , and the latter  $3\frac{1}{2}$  miles at its head or centre from the northern boundary, are the deepest indentations made by the sea. Chapelrossan hay at the northern boundary, and Drummore and Killiness bay, respectively  $5\frac{1}{2}$  and  $6\frac{1}{2}$  miles south of it, are the principal hays in the east, but make indentations only two or three furlongs deep. Portnessock and Drummore hays afford good anchorage and shelter, and are provided, respectively at Port-Logan and Drummore, with small quays. The coast, particularly toward the Mull, is rocky and hold; and along the west, it is curiously perforated with caves and caverns, and rent and contorted with fissures. Many of the caves are difficult of access, and small at the mouth, hut of capacious interior. One of them has a hollow worn in its floor, and a stalactite suspended from its roof, in consequence of a perpetual dropping. Sea-weed is abundant on the beach, and samphire plentiful among the precipices. Two-thirds of the surface of the parish consists partly of a broad hut not high mountainous belt, extending from sea to sea, and partly of congeries of heights, many of which, though not lofty, are bleak and wild, while others are slightly tufted with plantation. Even the more level third of the surface is rolling and hillocky. About one-eighth of the whole area is rocky or mossy moorland; considerably more than one-half is disposed in pasture; about 250 acres, chiefly around Logan-house, near the northern boundary, are under wood; and between a fourth and a third of the whole is arable. But agriculture is here sluggish in its movements, and displays none of the enterprise, and docility, and inventiveness, which distinguish it in so many parts of Scotland. A large proportion of the soil is of quality to require much draining, and has not been duly worked into heart by that comparatively easy appliance. Slate-rock was, for some time, extensively worked in several quarries. Freestone and whinstone everywhere abound. The chief proprietor of the parish is Major Macdowall of Logan. Vestiges of ancient strengths, said to be Pictish, and ruins of castles Dunmore and Clanyard, and of the old mansion of Logan, are the principal antiquities. A great curiosity is Logan fish-pond: see article LOGAN. Two villages.—Drummore with 300 inhabitants, and Port-Logan with 180—stand at the heads respectively of the hays of Drummore and Portnessock. Drummore has four or five small sloops, engaged almost solely in exporting agricultural produce, and importing coals and lime. Both villages maintain communication by carrier, with Stranraer. One line of road runs along the whole east coast; and another runs partly on the west coast, and partly in the interior. Owing to the parish being the most southerly land of Scotland, and running out to a latitude south of the town of Durham, its name, reversed into Kirk-maiden, is sometimes coupled with that of John-O'-Groat's-house, to indicate the extremes of the country. Population, in 1801, 1,613; in 1831, 2,051. Houses 392. Assessed property, in 1815, £7,069.—Kirk-maiden is in the presbytery of Stranraer, and synod of Galloway. Patron, the Earl of Stair. Stipend £150 16s. 5d.; glebe £8. The church was built in 1638, and is a crazy, disagreeable edifice, with only 275 sittings. At Drummore is a preaching-station of

the United Secession. The parish-minister stated the population in 1836 to be 2,400; of whom 1,922 were churchmen, 166 were dissenters, and 12 were non-describers.—The ancient church was dedicated to St. Medan, of whom little is known; and stood in the south end of the parish, on the lands of the Mull. In the vicinity of its site are a cave called St. Medan's cave, and a cylindrical hollow in the rock, filled with the overflowing tide, associated with various very modern antics of superstition, and called Chapel well, or the well of the Coe. The church, previous to the Reformation, was a vicarage under the monks of Saulseat. At Maryport-haven, anciently stood a chapel dedicated to the Virgin Mary.

KIRKMICHAEL, a parish in Carrick, Ayrshire; bounded on the north and north-east by Dalrymple; on the east by Straiton; on the south by Dailly; and on the west by Kirkoswald and Mayholc. Its greatest length, from north to south, is 12 miles; its greatest breadth is 5 miles and  $6\frac{2}{3}$  furlongs; and its superficial area is 36 square miles. The river Doon flows for several miles along the northern boundary; and Girvan water, coming in from the east, and taking its leave at the north, flows windingly through the interior. Both rivers are beautiful in their scenery, and valuable in their water-power. Dyrock water, issuing from Shankston loch, runs  $4\frac{1}{2}$  miles south-westward to the Girvan at Kirkmichael village, receiving in its way some large tributary rills. Six lakes, one at Kirkmichael, one a mile north-west of Drummore, three in the north-east corner, and one on the eastern boundary, cover aggregately about 110 acres. The last and largest is Loch-Spulanter, not far from being equal to all the others united. The vale of the Girvan is, in most parts, of considerable breadth; and though not a plain, has numerous patches of level ground, and undulates with a pleasing diversity of gentle outline. All the district west of it is hillocky and swelling, hut has not an upland aspect. A surface now level, and now diversified with heights, lies along the north. The parish, in all these districts, has an arable, enclosed, sheltered, and very cheerful appearance. The whole eastern division is of holder features, rising as it recedes, till it sends up lofty summits,—one of them upwards of 1,600 feet above the level of the sea; yet it is free from naked rock, nearly free from moss and heath, and carpeted all over with fine green pasture. About one-thirteenth of the entire area of the parish is covered with wood, planted and natural, and disposed not in one great forest, hut in such detachments as give out features very pleasingly ornamental. Freestone occurs, and is worked in one quarry. Limestone abounds, and is profusely worked. Shell-marl has been found in small quantities. One hill is supposed to contain lead. Vain searches have been made for coal. On a romantic site overlooking the Doon, and surrounded by large lawns and a wooded demesne, stands **CASSILIS-CASTLE**: which see.—On Girvan-water, a little south-east of Kirkmichael village, stands **Cloncaird-castle**, the property of Henry Ritchie, Esq., once a baronial mansion with a vast quadrangular tower in the style of the 16th century, but now modernized into one of the most elegant seats in Ayrshire, surrounded with pleasure-grounds, and occupying a picturesque site.—Upwards of a mile north-west of it, and on the west side of the village, is the large fine mansion of Kirkmichael-house, the property of Colonel Shaw Kennedy.—A mile and a-half south-east of Cloncaird-castle, on the banks of the Girvan, within the limits of Straiton parish, yet flinging all its attractions, and sending most of its charming pleasure-grounds into Kirkmichael, stands the elegant mansion of Blairquhan, the property of

Sir David Hunter Blair, Bart.—The parish has very considerably a manufacturing character. An extensive tile-work, a hone-mill, a large saw-mill, a flax-mill, and several corn-mills, exist in various localities. Manufactures apart from them are connected almost wholly with the villages of Kirkmichael and Crosshill. Fifty years ago, hardly a house of these villages existed. Both are large, neat, and clean, and present so agreeable an appearance to the eye, that a stranger would be far from suspecting them to be the abode principally of poor half-starved hand-loom weavers. Kirkmichael straggles picturesquely along both sides of the Girvan, between Kirkmichael-house and Cloncaird-castle,  $3\frac{1}{4}$  miles east of Mayhole, and 10 miles south of Ayr. Around it are finely variegated rising grounds, and beautiful little expanses of plantation; and interspersed with its houses are trees and little gardens. At its north end, on Dyrock water, stands the parish-church, with its romantic burying-ground, encircled with large old ash trees. Crosshill is situated  $1\frac{1}{2}$  mile to the south-west, and 3 miles from Mayhole. Its principal part is a long regular street of one-story houses, commencing at the Girvan, running, over most of its length, at right angles with the stream, and then debouching to the north. This street is winged at a little distance with shorter lines of buildings. A brief way from its north side stands its *quoad sacra* parish-church, a small, unpretending, but neat edifice. At the further end of the street, after its debouch, is the large school-house of the village. Various carriers, either connected with the parish, or passing through from Girvan and Newton-Stewart, maintain communication between the villages and Ayr and Glasgow. Numerous females are employed in Ayrshire needle-work. Other females, as well as most of the men, are hand-loom weavers. Crosshill and Kirkmichael are reported by the hand-loom weavers commission to have had, cumulatively with Mayhole, 1,700 hand-loom looms in 1828, and 1,360 in 1838. The fabrics woven are chiefly mulls and jaconets, pullicates, and imitation thibets. The gross average of a weaver's earnings is six shillings a-week. A dark picture of the weavers, and especially of the manufacturers' agents, is sketched in the report of the commission: see MAYHOLE. The population of Kirkmichael, in 1836, was 570; and of Crosshill 989. The roads of the parish are ample, and in excellent condition. Population, in 1801, 1,119; in 1831, 2,758. Houses 414. Assessed property, in 1815, £8,745.—Kirkmichael is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £261 4s.; glebe £17. The church was built in 1787, and is in a very good state of repair. The southern part of the parish, including the larger of the villages, was erected in 1839 into the *quoad sacra* parish of Crosshill. A preaching-station of the United Secession was commenced at that village in 1836; but has since, in a considerable degree, been discontinued. The population, according to the parish minister's survey in 1836, was then 2,856; of whom 2,567 were churchmen, and 289 were dissenters. Of the latter class, 140 were Seceders connected with the congregation of Mayhole. The ancient church was called Kirkmichael of Gemilston, and given to the prior and canons of Whitborn.—Parish schoolmaster's salary £34 4s. 4½d., with about £30 fees, and £4 other emoluments. There are two non-parochial schools, both situated at Crosshill.

KIRKMICHAEL, a parish of an elongated oval form, stretching north and south, in Annandale, Dumfriesshire. It is bounded on the north by Kirkpatrick-juxta; on the north-east and east by Johnstone; on the south-east and south by Loch-

mahen; on the south-west by Tinwald and Kirkmahoe; and on the west by Closeburn. Its greatest length is 9 miles, and its greatest breadth  $4\frac{1}{2}$ ; and its superficial area is  $26\frac{1}{2}$  square miles, or 13,323 Scottish acres. Kinnel-water washes, for  $2\frac{3}{4}$  miles, the eastern boundary. The water of Ae, coming down from the north within a mile from its source, circles along the boundary on the west, south-west, and south, over a distance of  $12\frac{1}{2}$  miles, to a point only  $\frac{1}{2}$  of a mile from its confluence with the Kinnel. Glenkiln and Garvald or Garrel burns, flow southward to the Ae, dividing the parish into three nearly equal parts. [See separate notices of the streams in their respective places.] In the north, on a mountain summit, is a very deep lochlet of small extent, and without fish; and in the south is another lochlet, four or five acres in extent, stored with pike and eel. Between the Ae and Glenkiln-burn, and between Glenkiln-burn and Garrel-burn, two mountain ranges run down from the northern boundary, to points south of the middle of the parish, and send up summits of from 1,000 to 1,500 feet above the level of the sea. The surface in the south and south-east is, in general, level, but diversified with rising grounds. Along the Ae and the Kinnel are helts of beautiful holm. The soil on most of the low grounds is exceedingly fertile, but yields in various localities to patches of moss, aggregating about 500 acres; and in the middle districts it is, for the most part, dry and gravelly, occasionally russeted with heath, but chiefly yielding grain crops or pasture. A little more than one-third of the whole area is arable; somewhat more than one-half is sheep-walk; several little expanses are meadow land; and between 300 and 400 acres are covered with coppicewood and plantation. Veins of ironstone and ochre, and weak chalybeate springs, are numerous. More than half of the parish belongs to the Duke of Buccleuch. The principal mansion is Kirkmichael-house, a beautiful edifice built in 1833, the seat of John S. Lyon, Esq. A branch of the great Roman road which led from Netherby in Cumberlnd to the chain of forts built by Lollius Urbicus between the Forth and the Clyde, can still be traced through a moss in the parish, and seems to have terminated at a castellum, which is now the minister's garden, and two sides of which are still very distinct. A small fort in the Knock wood, occupying the summit of a steep rocky acclivity, and commanding an extensive view to the south, bears the name of Wallace's-house, and is said to have been garrisoned by the Scottish patriot to confront the castle of Lochmahen. Not far from it is a large stone called 'sax corse,' or the six corpses, commemorative of the slaughter on the spot of Sir Hugh of Moreland and five of his men, who chased Wallace from an attempt on Lochmahen-castle. Vestiges of ancient fortifications and British camps are numerous. Not a few ancient coins, and other small antiquities, have been found beneath the soil. The southern district of the parish is traversed southward by the turnpike from Edinburgh to Dumfries, and has other lines of road; but the northern division nearly hides defiance to the entrance of a wheeled vehicle. Population, in 1801, 904; in 1831, 1,226. Houses 201. Assessed property, in 1815, £6,166.—Kirkmichael is in the presbytery of Lochmahen, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £246 8s. 11d.; glebe £18. Unappropriated tithes £61 0s. 8d. Schoolmaster's salary £34 4s. 4½d., with about £20 fees, and a house and garden, and a small piece of land. There is a non-parochial school. The present parish comprehends a large part of the ancient parish of GARVALD: which see.

KIRKMICHAEL, a parish at the north-east ex-

trinity of Perthshire; bounded on the north by Aberdeenshire; on the east by Forfarshire; on the south-east by detached parts of Rattray, Caputh, and Bendochy; on the south by a detached part of Blairgowrie, and by Cluny and Dunkeld; and on the west by Logierait, by a detached part of Dowally, and by Moulain and Blair-Athol. It measures, in extreme length from north to south, 17 miles; in extreme breadth 7 miles; and in superficial area about 100 square miles. Its south-western division, a district of 6 miles by  $4\frac{1}{2}$ , consists of the greater part of Stratbardle, watered by the Arde, and screened on both sides by mountain ranges. Its northern and central division, considerably the larger district, consists of the whole of Glenshee, watered by the Shee, with its broad belts of mountain screens, and the smaller glens which converge into it on the north: see articles STRATHARDLE and GLENSHEE. Its south-east corner is a district nearly circular, somewhat more than 2 miles in diameter, lying on the west side of the river called Black water. The whole parish is of a mountainous and strictly Highland character, more elevated, cold, and unsheltered, than either Athole to the west, or Marr to the north. The military road from Cupar-Angus to Fort-George passes along Glenshee; and another good road runs along Stratbardle. In the midst of a large high moor, is a cairn 270 feet in circumference, and about 25 feet in height; surrounded at a little distance, and at different intervals, with a host of smaller cairns, in groups of 8 or 10. A furlong to the west are distinct vestiges of 2 concentric Druidical circles, respectively 32 and 50 feet in diameter. In other directions round the great cairn are vestiges of 6 or more single circles, from 32 to 36 feet in diameter. About a mile north-east, on a flat-topped eminence, stands a remarkable rocking-stone. In shape, it is nearly a rhombus, the greater diagonal 7 feet, the lesser 5; in weight, it is about 3 tons; and in position, it so rests on the succumbent rock, that by suffering repeated pressure it will rock to the height of a foot, and make 26 or more vibrations before returning to repose. At points, or on small eminences, respectively 60, 100, and 150 yards north of the stone, and 120 yards west of it, are pairs of concentric Druidical circles, in every case 32 and 45 feet in diameter; each pair having adjacent a single circle from 32 to 36 feet in diameter. In the vicinity are other relics of similar character; and on the hills between Stratbardle and Glenderby, are other cairns and circles. Population, in 1801, 1,568; in 1831, 1,568.—Kirkmichael is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, Farquarson of Invercauld. Stipend £158 6s. 7d.; glebe £10. The parish-church was built in 1791, and is situated in Stratbardle. Sittings 596. A chapel in connexion with the Establishment stands in GLENSHEE: which see. A detached part of Caputh, called Craigton of Dalrulzeon, measuring  $1\frac{1}{2}$  mile by  $\frac{3}{4}$ , and lying on the south-eastern boundary, is considered by use and wont as belonging *quoad sacra* to Kirkmichael. The parish minister's survey, in 1836, exhibited the population as then 1,518; of whom 1,479 were churchmen, and 39 were dissenters. Two parochial schools are attended by a maximum of 161 scholars. Salary of the first master £34 4s. 4d., with £19 17s. 5d. fees, and £5 11s. 1d. other emoluments; of the second master £15, with £12 fees. Two non-parochial schools are conducted occasionally by four teachers, afford an extensive range of tuition, and are attended by a maximum of 136 scholars.

KIRKMICHAEL, a large parish in Banffshire, occupying the whole of the inland or south-western extremity of the county, from beyond Cairngorm

mountain to the confluence of the Aven with the Spey, on the north-west, and to the sources of the Livet, in Inveravan parish, on the south-east. It tapers very much to the north and south, but it is bounded on the north and north-east by Inveraven; on the south and south-east by Aberdeenshire; and on the west by the district of Badenoch, Invernesshire. The form, 'to a fanciful imagination,' very much resembles the wings of a bat spread out, with curious symmetry, to the north and south, in a westward flight. The extreme length is about 25 miles; the breadth varies from 1 mile to 6; square area 29,500 acres. Houses 338. Assessed property, in 1815, £2,233. Population, in 1801, 1,332; in 1831, 1,741. The parish consists chiefly of the great wild strath or vale of the Aven, which intersects it from its source in Loch-Aven, near Cairngorm, to its confluence with the Spey. The water of Altnach divides it a considerable length from Inverness-shire; and on the other side its borders are skirted by the heights which separate the counties of Banff and Aberdeen. Indeed it is separated on every side by natural barriers from the surrounding and more open districts.—“from the parish of Strath-don, toward the south, by Leach'-mhic-ghothin, 'the declivity of the smith's son;’—from the parish of Cromdale toward the north by Beinn-Chromdal, 'the Hill of the winding dale;’—these are two long branches of bills, that, running in an easterly direction, project from the northern trunk of the Grampian mountains. From the parish of Abernethy toward the west, it is separated by moors and bills, that connect Cromdale hill with Glenavon;—from the parish of Inveravan, by moors, and hills, and narrow defiles.” In the Gaelic, the vernacular idiom, the district is called Stratbaven, or rather, according to the writer of the Old Statistical Account, Strath-ath-fhin, from 'Strath,' a dale, 'ath,' a ford, and 'Fin,' the hero Fingal.\* The surface of the land is mountainous, but diversified with plains and valleys; its general aspect, however, is bleak and solitary to a high degree. “In crossing the centre of it,” observes the author of the Statistical Account, “few cheering objects attract the eye of the traveller. From detached hills covered with beatb, and destitute of verdure, where here and there a lonely tree marks the depredations of time, he naturally turns with aversion. But, should he happen to pass after a heavy fall of rain, when the numerous brooks that intersect the country pour their troubled streams into the roaring Avon, he must commiserate the condition of the inhabitants, at such a season, precluded from the rest of the world, and even from enjoying the society of each other. Frequently in winter the snow lies so deep, that the communica-

\* It is generally written Strath-avan, *avan* being the appellative for a river. “But the former etymon,” observes the same writer, “approaches much nearer to the provincial pronunciation. It is further confirmed by a stanza, which is still recited by the old people of the country,—

Chaidh mo bheas bhath,  
Ain' uisg ath-fhin, nan clachan cleamhain;  
'S bhlo chaidh mo bheas bhath,  
Eheirmeid ath-fhin, ainm an amhain.

‘On the fimpid water of the slippery stones, has my wife been drowned; and since my wife has there been drowned, henceforth its name shall be the water of Fingal.’ It is the tradition of the country, that in one of Fingal's excursions in pursuit of the deer of the mountains, after having crossed the river he was followed by his wife, who being carried down by the violence of the stream, suuk, and was drowned. To commemorate this melancholy event, in which the hero was tenderly interested, he uttered the above stanza. Since that period, the water, which was formerly called An-uisgeagal, or ‘the White water,’ in allusion to its transparency, assumed by an easy transition the name of the ford or river of Fingal. In Monk's history, the parish derives its ecclesiastical name from St. Michael, to whom the chapel, where now the kirk stands, was anciently dedicated. If this account be true, it may be observed, that the tutelary patron, ever since the period of his election, has paid little regard to the morality of his clients.” This, be it remembered, was not written in the 19th century.

tion between it and other countries becomes almost impracticable. The banks of the Avon, however, are pleasant enough, and in different places tufted with groves of hirsch, mixed with some alder." A beautiful and much more poetical description of this interesting glen, by Professor Wilson, has been already given under article AVEN (ЛОХ): which see. The soil is various; but in general it is a mixture of sand and black earth. On the elevated plains there is a tolerably fertile mould; on the declivities a reddish earth and gravel; and on the tops of the hills gravel and moss. A small proportion only of the soil is arable. Some forests and glens afford pasture for black cattle and sheep. There are few enclosures, and no plantations of note; but although the natural poverty of the country, 40 miles from the nearest sea-port, seems ill-calculated for the advancement of agriculture or manufactures, the general march of improvement has even penetrated to the wilds of Strath-ath-fhin. In the mountains there is abundance of limestone, which is in very general use by the farmers; and also of freestone, ironstone, slate, &c.: precious stones are sometimes found. The small village of TOMANTOUL [which see] is in this parish. Kirkmichael appears to have been a complete stronghold of those superstitious, but poetical and often beautiful fancies, which have so universally prevailed in the contemplative regions of the Scottish Highlands, and which still, to a certain extent, subsist in these romantic glens, in all their preternatural and imaginative forms, at least,—if not in all the more substantial and appalling powers, which unenlightened faith in such creations—unsubstantial and airy though they be, in form—enables them to exercise over the ignorant believer. As a record of these curious psychological phenomena, in form and power, the lengthened detail by the reverend writer of the Old Statistical Account of Kirkmichael is both learned and interesting; and we regret that our limits do not permit us to present our readers even with a brief abridgment of them.

The same author's account of the dress, manners, character, &c., of the inhabitants of this sequestered district, end of last century, is of a very graphic and peculiar description, savouring not a little now and then itself of something like a prevalence of rougher and less delicate ideas, and of less fastidious and freer modes of speech, at Tomantoul, in the 18th century, than, we opine, now prevails among the worthy inhabitants of Kirkmichael. On the subject of dress:—"Since the year '45," says our authority, "there is a considerable change on the dress of the people of this district. By a singular kind of policy—as if rebellious lurked in the shape and colour of a coat—at the above period, the ancient dress was proscribed, and none durst wear it without running the risk of a rigorous prosecution. It was consequently superseded by the Low country dress. To the ancient braccæ, or truisb and helted plaid, succeeded strait breeches, and an awkward coat of a uniform colour,—sometimes a long surlout dangling down to the heels, encumbering the freedom of motion. The barbarous policy of Edward the First did not more effectually destroy the spirit of the indignant Welsh, by the murder of their bards, than the prohibition of their ancient garb, that of the poor Highlanders. In the enthusiasm of patriotism, Mr. Fraser of Lovat got the prohibitory act repealed, in order, according to his own emphatic words, 'to divert the minds of the people from Transatlantic notions.' Let metaphysicians, if they choose, trace the connexion. But, though this respectable gentleman, with the view of making them good subjects, procured liberty to the Highlanders of exposing their naked posteriors to the north wind, on their bleak mountains, few availed

themselves of the privilege. \* \* \* Since 1745, the women too have altered their apparel. Before that period, they sometimes wore white blankets covering their heads, sometimes their shoulders—drawn forward by their hands, surrounded on each side by a fold. These, as fashion varied, were succeeded by harred plaids, or blankets, where different colours blended, crossing each other at right angles, somewhat distant, and hearing a square space in the middle. Wearied of harred plaids, they betook themselves to Stirling ones, and now duffle Cardinals begin to have the ascendant. Formerly, their hair flowed in easy ringlets over their shoulders; not many years ago, it was bound behind into a cue; now it spreads into a protuberance on the forehead, supported by cushions; sometimes, it is plain, and split in the middle. But who can describe the caprice of female ornament—more various than the changes of the moon!"

Of the manners, character, &c., prevalent in this district end of last century the account is by no means flattering: in fact, they are represented to have been unfettered as the winds, by any law, divine or human.—"No monopolies are established here," says he; "no restraints upon the industry of the community. All of them sell whisky, and all of them drink it. When disengaged from this business, the women spin yarn, kiss their innamoratos, or dance to the discordant sounds of an old fiddle. The men, when not participating in the amusements of the women, sell small articles of merchandise, or let themselves occasionally for days' labour, and by these means earn a scanty subsistence for themselves and families. In moulding human nature, the effects of habit are wonderful. This village, to them, has more than the charms of a Thessalian temple. Absent from it, they are seized with the *mal de pais*; and never did a Laplander long more ardently for his snow-clad mountains, than they sicken to revisit the barren moor of their turf-thatched hovels. Here the Roman Catholic priest has got an elegant meeting-house, and the Protestant clergyman the reverse of it; yet, to an expiring mode of worship, it would be illiberal to envy this transient superiority, in a country where a succession of ages has witnessed its absurdities."

This parish is in the synod of Ross, and presbytery of Chanonry. Patron, the Earl of Seafield. Stipend £121 1s. 0d.; glebe £10. Unappropriated teinds £148 13s.—Tomantoul, the upper part of the parish, is one of the new Government districts. It was erected into a *quoad sacra* parish, in 1832, by an act of the General Assembly, and a Government church erected. Kirkmichael has not been divided, however, *quoad civilia*; and an additional parochial school, belonging to the entire parish, has been placed in the *quoad sacra* parish under the Schoolmasters' act of 1803; the original salary of the teacher being divided. The salary of the former is the maximum; fees, &c., £10: of the latter, £17 3s. 4d.; fees, £11 10s.

KIRKMICHAEL, a parish in the counties of Ross and Cromarty, to which were added, about the end of the 17th century, the two parishes of Cullucudden and St. Martins. It is sometimes called Resolis. The united parish lies along the south coast of the frith of Cromarty, between it and the ARDMEANACH [which see], and extends about 8 miles in length, and 3 in breadth. Kirkmichael forms its eastern section; Cullucudden, its western. The soil is various, but a black light loam most prevails. There are a greater number of Danish encampments in this than in any other parish in the north. There are also several old castles; and three modern seats of the proprietors, viz. Braclangwell,

Newball, and Poynterfield, which are surrounded with extensive plantations, Freestone abounds, and there have been found some strata of limestone, interspersed with veins of rich lead ore. Assessed property, in 1815, £3,078. Houses 336. Population, in 1793, 1,234; in 1836, 1,508; of whom 147 were in the village of Jemimairlee, and 42 at Gordon's mills.—This parish is in the presbytery of Chanonry, and synod of Ross. Patron, Mackenzie of Newhall. Stipend £219 6s. 7d.; glebe £12. Unappropriated tithes £209 11s. 11d. There are three schools within the district. Parochial schoolmaster's salary £30.

KIRKNEWTON, a parish in the western part of Edinburghshire; bounded on the north by Kirkliston and Ratho; on the east by Ratho and Currie; on the south and west by Mid-Calder; and on the north-west by Linlithgowshire. In form it is not far from being a parallelogram; and in extent, it measures about 15 square miles, its mean length from north to south being about 5 miles, and its mean breadth about 3. Almond-water, coming in from the south-west, runs 2 miles along the western and north-western boundary, and then passes into Kirkliston. Linhouse-water, coming down from the south, runs along the whole of the western boundary till it falls into the Almond. The Water of Leith, also coming down from the south, runs 3 miles along the eastern boundary, and then debouches into Currie. Gogar-hurn rises in three head-waters in the interior, and with one of them traces for 2 miles the eastern boundary. The southern district, or nearly one-half of the whole area, runs up among the Pentlands, but is not rocky or steeply mountainous, and affords, in its green hills, excellent sheep pasturage. The northern district is level, or but gently diversified in its surface; and is fertile, beautifully cultivated, finely chequered with wood, and sumptuously adorned with some mansions and demesnes. One of the finest seats is Meadowbank, whose proprietor at the close of last century—Lord Meadowbank, a senator of the College-of-justice—was the chief improver and beautifier of the district. The other mansions are Ormiston-hill, Calderhall, Bellfield, Linburn, and Ormiston. The celebrated Dr. Cullen was proprietor of Ormiston-hill, and an active agricultural improver, and lies interred in the parish cemetery. From several vantage-grounds is seen one of the richest and most beautiful prospects in Scotland,—the wide expanse of the Lothians with a picturesque view of Arthur's seat,—the frith of Forth, a great part of Fife, the Ochil hills,—portions, in fact, of 13 counties stretching magnificently away from the eastern termination of the Lammermoors to the mountain-heights in the west of Scotland. The parish is traversed across its whole breadth by the south road between Edinburgh and Glasgow; and, in its southern division, is abundantly provided with other roads. The village of Kirknewton stands a mile south of the main line of road, 11 miles west of Edinburgh. The principal village is EAST CALDER: which see. Population, in 1801, 1,071; in 1831, 1,445. Houses 262. Assessed property, in 1815, £9,830.—Kirknewton, anciently a rectory, is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patrons, the Duke of Buccleuch and the Earl of Morton. Stipend £282 16s. 11d.; glebe £20. The present parish comprehends the ancient parishes of Kirknewton and East Calder. See CALDER (EAST). A detached district called LISTON-SHELS [which see], belongs *quoad sacra* to the parish. At the village of East Calder is a United Secession meeting-house. Schoolmaster's salary £34 4s. 4½d., with from £35 to £40 fees. There are two non-parochial schools.

KIRKOSWALD, a parish in Carrick, Ayrshire; bounded on the north by Mayhole; on the east by Kirkmichael and Dailly; on the south by Dailly and Girvan; and on the west by the frith of Clyde. It measures along the sea-coast 6 miles, and contains nearly 11,000 Scottish acres. The coast is, for the most part, a sand-beach, with a beautiful and rich carpet of grass to the very sea-mark. The northern part is peculiarly favourable for sea-bathing; and even in spite of the absence of a village, or a fair sprinkling of houses to serve as bathing-quarters, attracts to the farm-houses and cottages in its vicinity a considerable number of visitors. The surface inland luxuriates in an utter opulence of beauty, and the panorama seaward, over the vast landlocked frith of Clyde, with Ailsa-Craig so clearly defined in its centre, as to seem not more than 2, while really from 11 to 18 miles distant, is thrilling and magnificent. From many a point in the interior, too, but especially from the summit of Mochrum-hill, most part of Ayrshire, and a sea of heights far beyond its further limits, are added to the prospect. The surface of the parish is surprisingly and very beautifully diversified. To describe it as hilly, though abstractly correct, is morally erroneous; for it suggests ideas of ruggedness or boldness of outline, or of cold and tame gatherings of pastoral heights utterly foreign to the district. Its hills are neither numerous nor very high; and yet, in consequence of the breadth of their bases, they leave little of the area, except along the sea-board, to be smoothed down into level ground; and they are very diversified in form, but generally waving and decidedly beautiful in outline. The most remarkable is Mochrum, an exceedingly flat and broad-based cone, with curved or undulating sides, mantled all over in fine thriving plantations, and explanaded with a spiral carriage-way leading up to its summit. This hill is an imposing and even sumptuous feature in the general landscape of the country, as seen from almost any point in the interior, but particularly as seen from the frith. So powerful, too, is its physical attraction on this humid coast, that it frequently acts completely as an umbrella to the district around its eastern side; and a person who drives round its west side from Mayhole, and returns the same day, may leave the town in a drought, get a thorough drenching during his drive, and, on his return, pass a distinct line, beyond which not a drop of rain has fallen. Between Mochrum and the sea, the forest which comes wavingly down its slow descent, continues to stretch away to the very beach, slightly interrupted with lawn, and artificial lake, and gorgeous castellated mansion and offices,—the seat and demesne of the Marquis of Ailsa: see article COLZEAN-CASTLE. The whole of this division of the parish, the north-west comprehending probably one-fifth of the entire area, is either so regularly set with plantation, or so thickly helted and chequered and patched with trees, as to seem one continuous forest. Along all the south-east, likewise, is a profusion of wood; and in some other districts, is quite enough for the purposes of both shelter and ornament. Nearly all the rest of the parish is regularly or occasionally under the plough; and all is finely enclosed with neat walls or thriving hedges. The soil west of the great post-road between Ayr and Girvan, which bisects the parish lengthways, is, in general, a very rich loam mixed with a considerable quantity of clay; and east of that road, the surface being higher, the soil is more light and humid, intermixed with some clay, and lying on a freestone bottom. Several marl-pits have yielded up large treasures to the farmer. Two large hillocks within 30 yards of sea-mark, and 10 yards apart, and which had existed from time imme-

morial, were accidentally discovered to consist of a substance which resembled coal-ashes, and which was found for some purposes, to be a good manure. "Although above 1,000 cart-loads have been taken," says the statist in the Old Account, "yet there remain in the two hillocks, at a moderate computation, above 3,000 loads more. Tradition does not inform us whence these ashes came in such quantity. There is no vestige of any building whatsoever, nearer than the old farm-house, and the place is 4 English miles distant from any coal-work. It has been supposed they are the effects of barbarous superstition in times of idolatry in this country." Immediately south-east of Mochrum is a lake which covers 24 Scottish acres, and  $1\frac{1}{2}$  mile south of it is another about two-thirds its extent. A stream, formed by head-waters issuing from both, runs  $4\frac{3}{4}$  miles south-westward past the village of Kirkoswald to the sea at Turnberry. Five or six other independent streamlets rise in the interior, or near the eastern boundary, and run to the sea; and these, with their tiny tributaries, welling up from numberless springs out of every hill, supply the parish with abundance of pure water. A valuable mine of coal, consisting of 5 seams, from 6 to 15 feet thick, caught fire about the middle of last century, resisted all attempts to extinguish the combustion except being abandoned, and though wearing toward extinction, continued to burn at the date of the Old Statistical Account, 45 years after it became ignited. The white fishery on the coast is plentiful, and employs a number of boats.—On the coast, 3 miles south of Colzean castle, are vestiges of the ancient castle of TURNBERRY; and close on the post-road,  $2\frac{1}{2}$  miles north of the village of Kirkoswald, are the stately ruins of CROSSRAGUEL ABBEY: see these articles. Half-a-mile south-east of Colzean is the house or castle of Thomaston, traditionally said to have been built in 1335, by a nephew of Robert Bruce, anciently very strong and capacious, inhabited so late as a century ago, and now the property of the Marquis of Ailsa. Within a mile of Turnberry-castle, on the height which swells up between it and the village of Kirkoswald, lies the farm of Shanter, now annexed to another farm, and denuded of its buildings, and the scene no longer of such smuggling and bacchanalian exploits as those of the 'Tam o' Shanter,' the tenant who occupied it in the days of Burns. In other particulars, besides connexion, through this farm, with the horrific tale, whose scenes are laid in Alloway kirk, the parish owes some notoriety to the Ayrshire bard.—The village of Kirkoswald occupies a picturesque site on the west or shore-road between Ayr and Girvan, 4 miles south-west of Maybole, 13 miles from Ayr, and 8 miles north-east of Girvan. It is of considerable size, and neatly edified, the site of the parish-church, of a commodious inn, and of a large fine schoolhouse; the seat on the 5th of August of an annual fair, and its buildings chiefly constructed of sandstone, and covered with slate. Population of the parish, in 1801, 1,679; in 1831, 1,951. Houses, 341. Assessed property, in 1815, £10,544.—Kirkoswald is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £212 15s.; glebe £6. Parish-schoolmaster's salary £30, with £40 school-fees, and £5 and some trifling few other emoluments. The parochial school is attended by about 100 scholars; and three non-parochial schools by about 80.—The saint of the parish was Oswald, a Northumbrian king, who showed great zeal in propagating the form of professed Christianity with which he was acquainted, but was slain at Oswestry on the 5th of August, 642, and canonized after his death. The ancient church, standing within Turnberry manor, was, for several

centuries, called Kirkoswald of Turnberry. Originally it belonged, by gift of Duncan, who became Earl of Carrick, to the monks of Paisley, hut seems to have been granted to them on the condition, which they did not fulfil, of their establishing in Carrick a monastery of their order; and the monastery of Crossraguel being founded by Duncan a little before his death, the church was transferred to the monks of that abbey, and continued to be a vicarage under them till the Reformation. During part of the 17th century, it was held by the bishop of Dunblane. In 1652, about one-fourth of the ancient parish, consisting of a tract on the north-west side of Girvan water, was annexed to the parishes of Dailly and Girvan. The old church, which had served for ages, and seemed to have undergone many alterations, stood on a very low site, a little north of the rising ground which bears aloft the present edifice.

**KIRKOWEN.** See **KIRKOWEN.**

**KIRKPATRICK-DURHAM,** a parish in Kirkcudbrightshire; bounded on the north by Dumfriesshire; on the east by Kirkpatrick-Irongray and Urr; on the south-east by Urr; on the south-west by Crossmichael; and on the west by Parton and Balmacellan. In extreme length, from Blackmark on the north to the point where Urr-water leaves it on the south, it measures  $10\frac{1}{2}$  miles; over  $8\frac{1}{2}$  miles, from the north downwards, it varies in breadth from  $2\frac{3}{4}$  to  $4\frac{1}{2}$  miles; thence to the southern extremity it tapers to a point; and it contains altogether about 38 square miles. Urr-water, coming down from the north, runs along the whole western and south-western boundary, and is tenanted by salmon, sea-trout, burn-trout, and pike. Auchenreach-burn comes down from the north-east, and runs  $3\frac{1}{2}$  miles along the eastern and south-eastern boundary, expanding over  $1\frac{1}{2}$  mile of that distance into Loch-Auchenreach, from a furlong to  $\frac{1}{4}$  of a mile in breadth. Four brooks rise in the interior, and run south-westward to the Urr. Two principal head-streams of Old-water, a tributary of the Cairn or Cluden, rise  $1\frac{1}{2}$  mile within the eastern boundary. Seven lakes, all inconsiderable in size, diversify the landscape; one of them in the north, three near the middle, and three toward the south. The surface of the parish has, in general, a southern exposure, rising slowly till about the middle, and afterwards ascending more boldly, and at last becoming entirely upland. The northern division has few arable patches, and does not excel even in its pasture; but, for the most part, clothed in russet, and stretching away in moorland, it is distinguished chiefly for the abundance of its game. The southern division, though thin and sandy in its soil, is almost entirely arable, and produces rich and luxuriant crops. The climate is peculiarly salubrious. The parish is cut diagonally at its broadest part by the turnpike between Dumfries and Newton-Stewart, and a brief way in the south-east by that between Dumfries and Kirkcudbright; and it is well-provided with other roads. The hamlet of Bridge-of-Urr, with a population of about 50, stands at the southern extremity of the parish. The village of Kirkpatrick-Durham, with a population, in 1836, of 512, stands  $1\frac{1}{2}$  mile north of the Bridge of Urr, 6 miles north of Castle-Douglas, and 13 west of Dumfries. It has a pleasant appearance, and is altogether modern, having been commenced only about the year 1785. Brisk exertions, but vain, were made to render it the seat of cotton and woollen manufactories. Attempts, in worse taste, but, for a time, eminently successful, were made to give it importance, by laying out a race-course in its vicinity, and drawing to it vast concourses of fashionable idlers, and rustic runaways from useful and healthy toils.

An annual fair is held here on the last Thursday of March. The village of Crockelford stretches so far into the parish as to number among its population about 90 of the parishioners. Population of the parish, in 1801, 1,007; in 1831, 1,487. Houses 279. Assessed property, in 1815, £6,978.—Kirkpatrick-Durham is in the presbytery and synod of Dumfries. Patron, the Crown. Stipend £288 19s. 5d.; glebe £10 16s. The parish-church was built in 1748, and enlarged in 1797; sittings 374. A schoolhouse, 5 miles from the church, was enlarged in 1836, to serve as a sort of chapel-of-ease; and a licentiate of the Establishment was to be attached to it, supported by an allowance from a private individual. The parish-minister stated, in 1836, that 190 of the population were dissenters, and all the others churchmen. There are 3 parochial schools, attended by a maximum of 166 scholars; and 1 non-parochial, attended by a maximum of 64. Salary of the first parochial schoolmaster £31 6s. 2½d., with about £30 fees, and the interest of £200 other emoluments; of the second £16 10s., with about £10 fees; of the third £3 6s., with about £24 fees.—The church was anciently a vicarage under the monks of Newahhey. On the bank of the Urr, at a place still called Kirkhride, stood, of old, a church dedicated to St. Bridget.

KIRKPATRICK-FLEMING, a parish in Annandale,—or, more strictly, in the district intermediate between Annandale and Eskdale,—Dumfries-shire. It is bounded on the north by Middlebie; on the east by Half-Morton and Greta; on the south by Greta; and on the west by Dornock, Annan, and Middlebie. Its greatest length, from the point where it begins to be touched by Kirtle-water on the north, to the boundary south-west of Righead on the south, is 6½ miles; and its greatest breadth, from the point where the Black Sark leaves it on the east to the western boundary a little beyond Scotsfield, is 4½ miles. But over four-fifths of its length, from the north downward, it has a varying breadth of from 1½ to 3 miles; and it comprehends altogether an area of 16½ square miles, or 8,535 Scottish acres. Kirtle-water, coming in from Middlebie, runs 5 miles along the northern and western boundary, and 2½ miles south-eastward through the interior; pure and transparent in its waters; rich in the variety, though not in the quantity, of its finny tribes; green and gay in the copsewood clothing of its banks; and exceedingly beautiful—at intervals picturesque and romantic—in the scenery of its basin. The head-water and a principal tributary of the Black Sark rise in the interior, and flow eastward, each about 2 miles before passing the frontier. Numerous perennial springs copiously supply the inhabitants with the purest water. One of these, about ¼ of a mile from the mansion of Springkell, was declared by Mr. Pennant to be the largest spring he had ever seen, except the famous one at Holywell in Flintshire; and it emits a stream which, unaided by any tributary, has sufficient water-power to drive a mill. Four mineral springs—one of them similar to the Moffat spa, and three similar to the celebrated Hartfell spa near Moffat—are resorted to by invalids, and have acquired some fame for their medicinal properties. The surface of the parish slowly rises in a pleasing variety of successive waving swells from south to north; and is furrowed into three sections by the beautiful vale of the Kirtle, where that stream runs across the interior, and by the trough of a brook called Logan-burn, which runs westward to the Kirtle, between 2 and 3 miles from the northern boundary. From several vantage-grounds extensive and brilliant scenery stretches in every direction, except northward, before the eye. The soil of two-thirds of the area is a thin stratum of putrified vegetable matter, inclining to moss, su-

perincumbent on a bed of clay; and over the rest of the area is various, but kindly and fructiferous. About 600 imperial acres are under wood; about 2,000 are in moorland pasture; about 800 or 900 are unreclaimed moss; and two-thirds, or a trifle more, of the whole area are regularly or occasionally in tillage. But the wood is so dispersed along the whole vale of the Kirtle, and in helts in the interior, and the unarable grounds are so disposed in patches, or relieved in their appearance by neighbouring expanses of arable ground, that the surface, frilled with thriving hedges, gemmed with mansions and demesnes, and finely variegated with its own undulations, universally wears a pleasant and smiling aspect. Freestone, red, grey, white, and chocolate-coloured, abounds,—each variety in a district of its own; and is in extensive request, even in places far distant, as a material for public buildings and architectural ornaments. A marble quarry near the northern boundary, yields large blocks of grey marble clouded and tinted with red, capable of a fine polish, and vying with some celebrated varieties in beauty. Limestone occurs on the estate of Sprinkell in beds 30 feet thick, and is burned with coals fetched from Cumberland. The parish seems, in common with the district around it, to have been thickly studded with towers, generally three stories high, battlemented at the top, and used as strongholds during the feudatory wars of the Borders. The old tower of Woodhouse, on the Kirtle, is still partially standing; and is said to have been the first house in Scotland entered by Robert Bruce when fleeing from Edward Longshanks. A little north of it stands the cross of Merkland, an octagonal and slightly tapering stone 9 feet high, upon a socket of 2½ feet; supposed to have been erected, in 1483, in memory of a Master of Maxwell, warden of the marches, who, after a victorious skirmish with the Duke of Albany and the Earl of Douglas, was assassinated on the spot. The tower of Redhall, now extinct, but anciently the chief seat of the Flemings, was, in one of Edward's later incursions into Scotland in favour of Baliol, attacked, when only 30 fighting-men were within its walls, by a whole English army; and so resolute were its defenders that they kept the assailants in play for three days, and then, rather than surrender it, gave both it and themselves to the flames. Modern mansions occur at brief intervals on both banks of the Kirtle; and five of them are on the left bank, or within the limits of the parish. Sprinkell, the most northerly, is a superb Grecian edifice, the seat of Patrick Maxwell, Bart. Alderbeck, belonging to the same proprietor, and Langshaw and Wyeshie are pleasing edifices. Mossknow, the seat of Colonel Graham, attracts attention by the beauty of its own form and of its encircling landscape; and Cove, the seat of Francis Irving, Esq., by the dash of romance which is thrown over its appearance and its site. The parish has no village, yet counts among its population between 100 and 200 cotton-weavers, employed by manufacturers in Carlisle. The mail-road between Carlisle and Glasgow runs diagonally through the parish; and the turnpike between Annan and Edinburgh, by way of Langholm and Selkirk, intersects the former at the western boundary, and runs diagonally to the north-east. Population, in 1801, 1,544; in 1831, 1,666. Houses 302. Assessed property, in 1815, £7,377.—Kirkpatrick-Fleming is in the presbytery of Annan, and synod of Dumfries. Patrons, Miss Muir of Redhall, and Sir Patrick Maxwell, Bart. Stipend £225 15s. 1d.; glebe £25. There are 2 parochial schools. Salary of the first master £25 13s. 3d., with £30 fees, and £4 other emoluments; of the second £25 13s. 3d., with £20 fees, and £2 10s. other emoluments. Three schools reported as

non-parochial, are, an infant school and two Sabbath schools, attended by at most 210 scholars, and conducted by 15 teachers.—The present parish comprehends the ancient parishes of Kirkpatrick, Irvine, and Kirkconnel. Kirkpatrick church was given by Robert Bruce to the monks of Gisehurn. Logan chapel, which belonged to it, stood on Logan-hurn, and is commemorated in the name Chapel-knowe, still applied to its site. The ancient Irvine, small in its dimensions, forms the middle part of the united parish. See article KIRKCONNEL.

**KIRKPATRICK-IRONGRAY**, a parish of irregular outline in the north-east of Kirkcudbrightshire; bounded on the north by Dumfries-shire; on the south-east by Terregles; on the south by Loch-Rutton; on the south-west by Urr; and on the west by Kirkpatrick-Durham. It measures in extreme length from east to west  $8\frac{1}{2}$  miles, and in extreme breadth  $5\frac{3}{4}$  miles; but really consists of a parallelogram  $5\frac{3}{4}$  miles by 4, and three triangles respectively on its east, its north, and its south sides,—the chief of the triangles, that on the east, being about 3 miles deep and very acute in its extreme angle. Gleneland-hurn, not far from its source, strikes the north-west corner of the parish, and then flows 3 miles along its northern boundary. The Cairn, or Cluden, here comes down from the north-west, swallows up the former stream, and succeeds it in tracing the northern boundary,—keeping along the frontier for  $6\frac{1}{2}$  miles. Old-water—or, as it is sometimes called, the Old-water of Cluden—comes in from Kirkpatrick-Durham in two head-streams which soon unite, and flows  $3\frac{3}{4}$  miles eastward, and  $2\frac{1}{2}$  miles northward, through the interior to the Cairn. Very near its mouth a highway descends towards its path, and brings a tourist suddenly into the vicinity of a bridge across its course, to which the roar and hellowing of the water at the place has given the name of the Routing bridge. Spanning the stream from two perpendicular rocks, the bridge stands in such a gorge as to afford a very limited but romantic prospect. Above the level of the spectator's eye, right before him in the rocky chasm, the stream wheels abruptly into view, and instantly commences a tumbling descent over a rugged, rocky declivity of 24 or 30 feet, and then leaps over a precipice 10 or 12 feet deep, so near the bridge as almost to wash it with the spray. Clon, or Cargen-water, drawing one of its head-streams from the interior, is, for 2 miles, the southern boundary-line. The north-west corner of the parish is chiefly occupied by a mountain or considerable hill called Bishop's Forest. This height has a very broad and irregular base; and is fringed on all sides with woods or arable grounds, and ploughed in some parts to the summit. On the side next the Cairn it is closed with plantation for half-a-mile from its base; yet, seen from a distance, it seems patched with heath, and warded with naked rock, and has a pastoral but commanding appearance. The south-west corner of the parish is a cold expanse of moorland sheep-walk, warming, as it proceeds eastward, into tracts of arable but not very fertile land. Along the course of Old-water are belts of level and well-cultivated ground. All eastward of this the surface, first slightly hilly and afterwards a plain, wears a rich and luxuriant appearance, carpeted with a dry kindly mould, sectioned heartfully off with enclosures, and possessing other features which harmonize with its immediate vicinity to the opulent level basin of the lower Nith. In the upland district much attention is given to sheep husbandry, and the rearing of Galloway black cattle. Very large quantities of marl were found in the parish, and usefully expended in the first and stimulating efforts of agricultural improvement. The parish is not touched by any great

line of road, yet has a fair proportion of subordinate roads, and enjoys important advantages from lying, at its nearest point, within  $2\frac{1}{2}$  miles of Dumfries. Population, in 1801, 730; in 1831, 912. Houses 148. Assessed property, in 1815, £6,478.—The parish is in the presbytery and synod of Dumfries. Patron, Oswald of Auchencruive. Stipend £231 6s. 2d.; glebe £25. Unappropriated teinds £284 18s. 2d. There are 2 parochial schools. Salary of the masters £50 16s. 8d., with £29 15s. fees, and £1 14s. other emoluments.—The church was anciently a rectory in the deanery of Nith. William de Herries, the 2d son of Sir Herbert Herries, was rector in 1453. There were anciently two chapels, one near Glenhead, in the south-west corner of the parish, still commemorated by its cemetery, and the other on the north side of the parish, on the bank of the Cairn near Dalwharn.

**KIRKPATRICK-JUXTA**, a large parish in the north of Annandale, Dumfries-shire; bounded on the north-west and north by Moffat; on the east by Moffat and Wamphray; on the south by Johnstone and Kirkmichael; and on the west by Closehurn and Lanarkshire. On its east side, which is tracked the whole way by the river Annan, running nearly in a straight line, it measures  $7\frac{1}{2}$  miles on its south side, it measures from angle to angle  $6\frac{3}{4}$  miles, but receives one triangular indentation, and protrudes another  $1\frac{1}{2}$  mile deep; and it extends on its west side 4 miles, on its north-west side the same distance, and on its north side one mile. Its superficial extent is  $30\frac{1}{2}$  square miles, or 15,430 Scottish acres. A belt of land, partly level and partly hilly, lying along the bank of the Annan, is the most valuable district of the parish. A range of considerable heights, nearly mountainous, screens this belt, and runs the whole length of the parish from north to south. A hasin, spread out at the bottom into a narrow vale, occupies the surface over a breadth of 2 or 3 miles westward, and is drained by the Kinnel. A broad range of mountains, slenderly cut by the Kinnel's head-streams, rises up from this hasin, occupies all the area westward, and sends up on the boundary with Closchurn the towering and grand summit of Queensherry, 2,140 feet above the level of the sea. One-third of the whole parish is in tillage, and two-thirds are pastoral or waste. Wood is not abundant,—covering little more than 200 acres. Everywhere, except along the Annan, the general appearance is bleak. The soil of the arable parts is shallow, but dry and not unfertile. Greywacke or blue stone, and trap rock, are quarried as building material. Besides the Annan and the Kinnel, the parish has the Evan, the Garpel, and the Duff Kinnel. The Evan, coming down from the north, flows for 3 miles nearly parallel with the Annan, at about a mile's distance from it, between low ridges of hill, and then runs eastward to the Annan at a point where Moffat-water disemphogues itself on the opposite bank. The Garpel traces for 2 miles the north-west boundary, and then runs 3 miles south-eastward through the interior to the Evan, forming, half-a-mile above the confluence, a considerable cascade. The Duff Kinnel expends nearly its whole course in tracing part of the southern boundary. Numerous perennial springs not only furnish the inhabitants amply with pure water, but send off supplies by pipes to the village of Moffat. Several chalybeate wells might draw attention, but for the vicinity and well-earned fame of the spas in the co-terminous parish. The Roman road up Annandale [see DUMFRIES-SHIRE] has here distinct vestiges. Cairns are very numerous; and also circular enclosures on hills, supposed to have been used for sheltering cattle from marauders. Of several ruin-

ous towers, which have been surrounded by ditches and walls, the most remarkable is the old castle of Auchincass, within the peninsula formed by the Evan and the Garpel. It is strong in position, surmounting precipices and encinctured by morass, and was 15 feet thick in its walls. The building belonged, at one time, to Randolph, Earl of Murray, regent of Scotland; and at another to the Douglasses of Morton. The tower of Lochwood on the left bank of the Annan, was anciently of considerable strength, the property of the Johnstones. Craigielslands, the seat of Mr. Younger, is the only noticeable mansion. The farm-buildings on the Duke of Buccleuch's property are modern, and in a superior style. The only village is Craigielslands, built by Mr. Younger, neat in its appearance, and regular in its plan, but with fewer than 100 inhabitants. Population of the parish, in 1801, 596; in 1831, 981. Houses 158. Assessed property, in 1815, £5,957.—Kirkpatrick-Juxta is in the presbytery of Lochmahon, and synod of Dumfries. Patron, Johnstone of Annandale. Stipend £195 0s. 1d., besides vicarage teinds; glebe £10. There are two parochial schools, the one permanent and the other temporary, jointly attended by at most 76 scholars. Salary of the first master £34 4s. 4d., with £15 fees, and about £3 10s. other emoluments; of the second £17 2s. 2d., with £15 fees, and about £3 10s. other emoluments. There are 3 non-parochial schools, attended by at most 142 scholars.—The ancient parish was a rectory in the deanery of Annandale. "On the 3d of July, 1489," says the author of Caledonia, "a cause was heard by the lords auditors in parliament, at the instance of Mr. Clement Fairlie, parson of Kirkpatrick-Juxta, and Robert Charteris of Amisfield, his lessee, against several persons for the spoliation of the Pasch-reckoning,\* of the said kirk, and the penny-offerings on St. Patrick's day, amounting to 10 marks; and for the spoliation of 200 lambs, which were valued at £18, and a sack of tithe-wool containing 24 stone, that was valued at £12; and for unjustly possessing and labouring the 40 shilling land belonging to the said kirk. The lords ordained the defenders to make full restitution, and give satisfaction for the damages; and they issued a precept to the steward of Annandale to enforce this judgment." The present parish was huilt at the close of last century. Its predecessor was an instance of the sort of spirit which, for a considerable time, presided over the outward affairs of the Establishment; for, huilt about the year 1676, it continued to be a low house thatched with heath till 1736, when it was raised in the walls and covered over the roof with slate.

KIRKTOUN, a parish in Roxburghshire, consisting of a stripe 8 miles long, and, on the average,  $1\frac{1}{2}$  mile broad, stretching from the north-east to the south-west; and bounded at the two ends by Upper and by Lower Cavers; on the south-east side by Hobbkirk and Upper Cavers; and on the north-west side by Hawick and Lower Cavers. A head-stream of Allan-water touches it for a mile on the south. Slitrig-water runs across it  $2\frac{1}{2}$  miles from its south-west end, but has a course of only  $1\frac{1}{2}$  mile within its limits. Between these streams the surface is rugged and mountainous, and fit only for pasture; and north-eastward of the Slitrig, it chiefly undulates in small green hills suitable as pasturage, but partly with the hollows between them, subjected to the plough. A section of the hold broad form of Ruberslaw lies within the north-east corner. The soil on the arable grounds is poor and shallow, but has felt the power of georgical appliances. The

parish is nearly bare of plantation; and has no antiquities, no remarkable usages, no valuable minerals, no rare botanical specimens, no sporting-grounds, no ale-house, no toll-bar, nothing whatever to interest "the philosopher, the politician, or the moralist," if we believe the writer of the Old Statistical Account, except what he calls "the uncommon fact," that, for ages past, its history is summed up in the impressive, the sublimely pathetic declaration of scripture, "One generation passeth, and another cometh." Dr. Leyden, the celebrated orientalist, was partly educated in Kirktoun school, and lived at the time with his parents in a cottage on the farm of Nether Tofts. The road from Hawick to Newcastle, and that from Hawick to Liddesdale, run at such intervals across the parish as to cut into two nearly equal parts. Population, in 1801, 320; in 1831, 294. Houses 50. Assessed property, in 1815, £3,530.—Kirktoun is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £173 17s.; glebe £11. The church is of unknown date; but was altered about 1760, and repaired in 1775. Sittings about 200. The minister stated the population, in 1836, to be 283,—distributed into 134 churchmen, 144 dissenters, and 5 nondescripts.—Schoolmaster's salary £26, with £15 fees.

KIRKURD, a parish in Peebles-shire;  $5\frac{1}{2}$  miles long from east to west, from 3 to 4 miles broad, and comprehending 6,620 English acres; bounded on the north by Linton; on the north-east by Newlands; on the east by Stobo; on the south by Stobo and Broughton; on the south-west by Skirling; and on the west by Lanarkshire. Tarth-water, a tributary of the Linn, falls upon its north-west angle, and runs 4 miles along the whole of its northern and north-eastern boundary; silent and slow in its movements, multitudinous in its pools, and unusually rich in the size and flavour of its trouts. Deanburn rises close on the southern boundary, and runs northward to the Tarth, cutting the parish into two not very unequal parts. The surface all lies high above sea-level, is beautifully diversified, and, in general, rises gradually from the Tarth to the southern boundary. A water-shedding chain of heights stretches along the whole of the southern and south-western frontier, and sends up, among other summits, that of Pyked Stane or Hell's Cleuch, 2,100 feet above the level of the sea: See PYKED STANE. The soil, toward the Tarth, is chiefly loam; in one large farm it is clay; and, in other parts, it is of a gravelly nature. One-third of the whole area is arable; 600 acres are under plantation; and nearly all the rest is sheep-walk. The woods and enclosed and cultivated grounds being almost all on the north, and phalanxes of plantation pressing down upon the frontier from the conterminous parishes, the vale of the Tarth presents a rich and very beautiful appearance. Castle-craig and Cairnmuir-houses, both elegant modern mansions, the seats respectively of Sir Thomas G. Carmichael, Bart., and John Lawson, Esq., are embosomed in the groves, and contribute the attractions of their pleasure-grounds to the beauties of the landscape. Near Castle-craig is a copious sulphureous spring, similar to those of Moffat and Harrowgate, stronger than the former and weaker than the latter. In the parks of Castle-craig are two artificial mounds, surrounded with an irregularly formed dyke, and supposed to have been used as moats or seats of feudal justice. Respectively eastward and westward of them are two circular fortifications called the Rings and the Chesters, supposed to have been military erections. The parish is traversed along the vale of the Tarth by

\* The offerings at Easter.

the post-road between Glasgow and Peebles, and along the vale of Dean-hurn by that between Edinburgh and Dumfries by way of Moffat; and it enjoys advantages from being distant only 8 miles from Peebles and 5 from Biggar. Population, in 1801, 327; in 1831, 318. Houses 58. Assessed property, in 1815, £1,993.—Kirkurd is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, Sir T. G. Carmichael, Bart. Stipend £158 6s. 8d.; glebe £24. The church was built in 1766. Sittings about 300. Schoolmaster's salary £34 4s. 4d., with £12 fees, and about £2 10s. other emoluments. The ancient church stood half-a-mile east of the modern one, and is commemorated by its cemetery, which continues to be in use. The church, with its pertinents, belonged in the 12th century to the bishop of Glasgow, but was given by him to the hospital of Soutra [see FALA], and, in 1462, was, along with the other property of that hospital, transferred by Mary of Gueldres to the Trinity or College church of Edinburgh.

KIRKWALL AND ST. OLA, two united parishes on the mainland of Orkney. The track of land which stretches around Kirkwall, and which forms the country parish, under the name of St. Ola, was in all probability a parish before the town was built, and derived that name—but at what period, or on what occasion, it is uncertain—from Olaus or Olave, a saint, and also a king of Norway. The mean length and breadth of the parish is about 5 miles. The soil throughout is very various. In some parts, especially towards the hills or high grounds, we meet with a mixture of cold clay and moss; near the shore it is generally of a sandy nature; rich black loam is also to be met with in a few places, especially near Kirkwall; and not only there, but in almost every other parish in the country, the soil is shallow, with a bottom of rock that is soft and mouldering. The shores of the parish are not very high, but rocky. There are now very few trees in this country, if we except a few fruit-trees in Kirkwall. They seem, however, to have grown in considerable numbers formerly; for in the peat-mosses, which are common in many of the islands, they are dug up nearly as frequently as in other parts of the kingdom. Population in 1801, 2,621; in 1831, 3,721. Houses 510. Assessed property, in 1815, £3,973.—This parish is in the presbytery of Kirkwall, and synod of Orkney. Patrons, the magistrates and town-council of Kirkwall. It is a collegiate charge. The stipend of each minister is £158 6s. 7d.; but the glebe of the first charge is valued at £42 4s.; that of the 2d, at £25. The parish-church is the cathedral of St. Magnus; sittings 835.—A new church in connexion with the Establishment, and seating 1,000, has been recently erected, at a cost of £1,400.—There is a United Secession congregation, which was established in 1796. Chapel cost £1,600; sittings 1,411. Stipend £200, with manse and garden, and some extras.—An Original Seceder congregation was established in 1825; chapel built in 1824, at a cost of £700; sittings 400. Stipend £70, with manse.—An Independent church has existed here about 32 years. Chapel built in 1823, at a cost of £515; sittings 410.—The hugh school is the parochial school. Salary of master £38, with about £50 fees. There were 16 private schools within the parish in 1834, attended by about 500 pupils.

Near the centre of the parish stands the ancient hugh of KIRKWALL, built in a narrow strath which extends from the harbour of Kirkwall on the north, to the hay of Scalpa on the south. Its appearance to travellers approaching from Stromness is thus described by Lord Teignmouth: "A town so extensive,

on the northern shore of Orkney, on an isthmus of about three miles in breadth, between tempestuous seas, is an object of much interest: and there is something peculiarly striking and imposing on such a spot, in the appearance of the massy pile and lofty towers of a cathedral, and the more so when it is viewed as almost the only unimpaired specimen of those stately monuments of ecclesiastical grandeur which adorned Scotland previous to the Reformation. On one side of the cathedral, rise the venerable ruins of the ancient castle of the Earls of Orkney, and on the other those of the palace of the bishops; whilst the masts of the vessels, clustered together in the harbour, indicate the present commercial importance of the metropolis of the Northern isles." ['Sketches,' vol. i. p. 245.]—The town is washed on its northern extremity by the sea, which here forms the deep hay of Kirkwall; and on the western side by a pleasant inlet of the sea, called the Oyuce or Piery sea, which flows by the back of the gardens at high water. It is nearly an English mile in length from north to south; its breadth is very inconsiderable; and it has only one principal street, paved with large flags, inconvenient from its narrowness, and having the ends or gables of the houses generally placed towards it. A small rivulet runs through its northern extremity, and falls into the Piery sea. Population of the burgh, in 1831, 3,056. The time when, and the persons by whom, this place was founded, are both of them lost in the darkness of antiquity. The Danes, we are informed, called it Kirkivog. Both Buchanan and Torfaeus are of opinion that this word should have been written *Cracoviaca*; and that it has first been corrupted in *Circua*, and thence to *Kirkwall*. But all these words are said to signify the same thing, namely, *Kirkvaa* or *Kirkwaa*, 'the Great church,' or perhaps 'the Church of St. Magnus.'—The number of houses in the town at the end of last century was about 300; in 1831, they amounted to 400. Many of these houses bear strong marks of old age; the doors and windows are small, the walls uncommonly thick, and almost all the apartments narrow, gloomy, and irregular. To this form, however, there are also many exceptions; for such of them as have been lately repaired or rebuilt, and particularly such new ones as have been erected, may, both for elegance and conveniency, compare with those of any other town of the same extent in Scotland.—The cathedral of St. Magnus, the King's castle, and the Bishops and Earl's palaces, are the only buildings here that are in anywise remarkable. The first of these is the most perfectly preserved cathedral in Scotland, "and looks," says Miss Sinclair, "almost as large as the whole city put together." Rognwald, Count of Orkney, we are told, laid the foundation of it in the year 1138. Bishop Stewart, who lived in the time of James IV., made an addition of three pillars or arches to the east end of it; with a window, which, for grandeur and beauty, is far superior to any others in the fabric. Robert Reid, the last Popish bishop of the see of Orkney, added three pillars to the west end of it, which were never completely finished, but which, in point of elegance, are much inferior to the former. The length of this stately fabric, on the outside, is 226 feet; its breadth 56; the height of the main roof is 71; and, from the level of the floor to the top of the steeple, was 133 feet. Unfortunately the steeple was struck down by lightning several years ago. The roof is quite entire, and supported by a row of 14 pillars on each side, besides 4, the most magnificent of the whole church, that supported the steeple. The circumference of the pillars which support the roof is 15 feet; and that of those on

which the steeple stood 24 feet nearly. In it there was an excellent chime of bells, which, by the inscription upon them, appear to have been founded by Robert Borthwick, in the castle of Edinburgh, in 1528; they were furnished to the cathedral by Bishop Maxwell. The east window of the cathedral is 36 feet high, by 12 broad, including a circular rose-window, at the top, 12 feet in diameter. There is a window in the west end somewhat similar, but much smaller; as also a rose-window on the south gable of the cross, of like form and dimensions with that on the top of the east window. "The effect of the massy and regularly-formed columnus," says Lord Teignmouth, "is imposing. The nave is covered with monumental inscriptions, commemorating magistrates and other principal inhabitants of Orkney, and a few stone coffins are scattered about. The partial gleams of day admitted through the small discoloured windows which line the aisles, half-choked with grass, augment the sepulchral appearance of this portion of the cathedral. The original design of its builder, pushed beyond its scope by the culpable negligence of its present guardians, would incur the censure of those who object to the usual gloomy character of Gothic minsters, designating them rather as mausoleums of dead men than as temples of the living God. But if we regard the nave as the vestibule of the choir, through which we pass from the restless scenes of this world to the peaceful sanctuary of another, assuredly the records of human mortality, and 'the scrolls which teach us to live and to die,' are by no means inappropriate appendages of its hallowed architecture, nor has the epithet 'religious' been ill applied to the 'dim light' by which we peruse them. The choir, the only remnant of choral architecture which has survived the Reformation in Scotland, is kept with much care. It is furnished with stalls, and adorned by a very elegant east window. The service of the kirk is regularly performed in it every Sunday. The expenses of the repairs of the cathedral are defrayed partly by the Exchequer, and partly by a bequest of a pious individual for that particular purpose, called in Scotland a mortification. The present state of the cathedral at Kirkwall confirms the well-authenticated fact, that the tide of devastation which overthrew the ancient establishments of Scotland at the Reformation, spent its fury ere it had reached Orkney; and the prejudice against episcopacy is said to be less violent here than in other parts of Scotland."—Opposite to the cathedral, on the west side of the street, stood the King's castle. Time, and the ravages of war, have long since laid it in ruins. No tradition remains by whom it was founded; though it is probable that it was built by some bishop of Orkney. The walls of it are very thick, the dimensions large; and the stones with which it is constructed are so firmly cemented together that it is more difficult to dig them from the rubbish in which they are buried, than it would be from a quarry. This fortress seems to have been in good repair, and a place of no inconsiderable strength, in the days of Patrick Stewart, Earl of Orkney. This man was son of Robert Stewart, natural son of James V., who, in 1581, was created Earl of Orkney. Earl Patrick was a man of a haughty turn of mind and cruel disposition, and having committed many acts of oppression against the people, and of rebellion against his sovereign, in order to screen himself from the punishment he so justly deserved on that account, was forced to take refuge in this castle, which he maintained with much desperate valour for some time against the king's troops, till it was at last taken and demolished. The same Earl built an extensive and elegant mansion on the east side of the town, known by the name of the Earl's palace. From the date

above the principal door, it appears to have been built in 1607. One very spacious and elegant hall forms the chief part of the mansion. Its dimensions are 58 feet long, 20 broad, and 14 high. There is a large chimney on the side, and a lesser one on the north end of it. A fine Gothic window, 12 feet by 13, lights it from the south; and on the east there are two, not much different in form, and each 12 feet by 12. The building consists of only two stories. The ground floor is divided into a number of vaults or cells, with little slits of windows. Near the door, which is entered from the north, is a beautiful stair, which, by three flights of steps, leads to the hall; below which is a well built of cut freestone, and furnished with water by leaden pipes under ground, from the high land to the east of Kirkwall. Like other fabrics reared at the same period, variety seems to have been more studied here than uniformity. For a long time past it has been unroofed; and no person has dwelt in it since Dr. M'Kenzie, who died in 1688, was bishop of this place.—Almost adjoining to this, stands the ruin denominated the Bishop's palace, of much greater antiquity; for neither record, nor even tradition, has ventured to assert anything respecting either the time or circumstances of its foundation. So long ago as 1263,—the year in which Haco, King of Norway, undertook an expedition against Alexander III., King of Scotland, on account of a dispute that had arisen about the Western Isles,—it would appear to have been a place of consequence. This monarch, on returning from the mouth of the Clyde and the Highlands of Argyleshire—where he had spent the summer in waging war with the Scotch, with little success—resolved to winter in Orkney; and, for this purpose, stationed his ships in the harbours about the mainland, while he himself took up his quarters in Kirkwall. Here he kept court in a hall in the Bishop's palace for some time, till, worn out with disease,—occasioned, perhaps, by disappointment, and the fatigues of his unsuccessful campaign in the south,—he expired, after a lingering illness, and was interred with much pomp in the Cathedral church of Kirkwall, near the steps that lead to the shrine of St. Magnus, Earl of Orkney. Bishop Reid repaired or rebuilt several parts of this ancient mansion, "but it is now," says Miss Sinclair, "worn to rags."

The commerce of this place, though it can by no means be called flourishing, is rather in an improving condition. The principal articles exported are beef, pork, butter, tallow, hides, calf-skins, rabbit-skins, salt fish, oil, feathers, linen-yarn, and coarse linen cloth, kelp, and, in years of fruitfulness, corn in considerable quantity. The manufacture of linen-yarn was introduced 1747; and—as every innovation commonly is among a rude and ignorant people—it was at first very unpopular. It soon, however, triumphed over those difficulties, and was diffused pretty generally among the islands. For the space of 15 or 20 years, while under the management of one or a few men, it flourished much, and produced for export annually near 25,000 spindles of yarn. After that period it began to decline. The manufacture of kelp was for a long series of years more fortunate than that of linen-yarn. About the year 1730, it is said to have been introduced, and, like the yarn, had long to struggle hard against the strong stream of popular prejudice. The writer of the Old Statistical Account says that the lower classes "represented to the proprietors, how hurtful this new business was likely to be, for they could have no doubt of its driving the fish from the coast, and it would therefore ruin the fishing; they were certain it would destroy both the corn and the grass; and they were much afraid that it might even prevent their women

from having children!" From the year 1740 to 1760, the price is reported to have been 45s. per ton, and the money which it is believed to have brought into the country during that period near about £2,000 per annum. The average price for the subsequent ten years amounted to about 84s. per ton, and the whole value to the place to above £6,000 sterling per annum. Of each ton at the market from the year 1770 to 1780, the price rose at a medium to about £5, and the gross sum which the proprietors in that time received for it was not less than £10,000 per annum. For 13 years preceding 1791, the value of a ton was nearest to £6, and the quantity each year to the sum of £17,000 sterling. "Thus," says Dr. Barry, "in the space of fifty years, the proprietors of these islands, where the seasons are very deceitful, and the crops can by no means be depended upon for subsisting the inhabitants, have received, in addition to their estates, the enormous sum of £370,000 sterling." This manufacture, however, has been extinguished here, as elsewhere, by the introduction of foreign harilla.—In a royal charter, to be immediately noticed, mention is made of the "old erection of our burgh and city of Kirkwall in Orkney by our noble progenitors of worthy memory, in one hail burgh royal," and "of the great and old antiquity of our said city." The oldest charter to which the Municipal commissioners had access is one granted by James III., dated 31st March, 1486, ratifying and approving of all previous charters, rights, and privileges conferred upon the burgh, and containing an enumeration of lands and other kinds of property. On the 8th of February, 1536, James V. confirmed the charter of James III. This is deemed the governing charter. It was confirmed by Charles II. on 15th May, 1661, and in the same reign there was passed a statute of ratification in favour of the burgh, viz., 1670, c. 42. The property of the burgh at present consists, first, of a small farm called Walliwall, estimated as worth £450. Secondly, of some small crofts, the aggregate rent of which is between £4 and £5. There are also certain waste lands, for which no rent is paid, and over which the inhabitants of the burgh and neighbourhood exercise a right of pasturage. Thirdly, of the kelp-shores of Quanterness and Cairriness, which were let for nine years, commencing with the season of 1825, for a slump sum of £300. Fourthly, feu-duties arising from a considerable extent of ground parcelled out amongst numerous feuars, and payable in very small sums. The total amount is £37 3s. 11d., which, estimated at 20 years' purchase, will be worth £743 18s. 4d. Fifthly, of the ancient and magnificent cathedral of St. Magnus, the town-house, slaughter-house, and grammar-school. The cathedral and the other public buildings cannot be ranked under available property. The aggregate value, therefore, of the real property is £1,198 18s. 4d. besides the kelp shores. On the 23d of May, 1828, an Act was passed, 9th Geo. IV., c. 58, for maintaining, enlarging, improving, and regulating the harbour of the burgh of Kirkwall. The trustees are the provost and six other members of the town council for the time being, three registered owners of ships trading to and from, and belonging to the burgh, and three land-owners of the county of Orkney. The debts due by the burgh are trifling. The revenue of the burgh consists of three portions—first, feu-duties and rents, amounting annually to £62 13s. 11d.; secondly, customs and market-dues, amounting to £11 12s. 6d.; and, thirdly, of the proceeds of the stent. The amount of the cess payable to Government is only £26 16s. 2d., but about £60 has been the average annual amount levied from 1824 to 1833 inclusive,

under the name of 'stent.' Were the whole revenue available, its total amount would be £107 10s. 2½d. The civil patronage of the burgh is unimportant. The ecclesiastical patronage is more important, as the magistrates and council are—as already stated—patrons of the collegiate church of St. Magnus. The commissioners found that, in the last instance, the patrons consulted all the male communicants, and presented agreeably to the wishes of the majority. The magistrates are also patrons of the grammar-school. No particular regulations have ever been made for its government. The salary paid by the magistrates is £10, and the fees, as regulated by them, are extremely moderate. The average number of scholars for the last 10 years has exceeded 100. There is, under the management of the magistrates and council, the sum of £500 mortgaged by Baron Stuart Moncrieff, for the purpose of annually distributing the interest among a large number of indigent persons. It is vested in heritable security, and the distribution is made according to lists prepared by a committee, and deposited with the town-clerk. No change had been made on the sett of the burgh since the year 1819. The council consists of a provost, 4 bailies, a dean-of-guild, a treasurer, and 16 councillors; in all, 23. The number of persons resident within the parliamentary boundaries, whose rents in property or tenancy amount to £10 per annum, is about 100. There is no police act or police establishment. This is to be regretted in one respect, as the streets of the burgh are in a state of great and dangerous disrepair; but, in other respects, it is comparatively immaterial, as crime is extremely rare in this part of the country. The burgh joins with Wick, Dornoch, Dingwall, and Tain, in electing a member of parliament. The town-hall is a building of a good appearance, forming a piazza in front; the first story is divided into apartments for a common prison; the second contains an assembly-hall, with a large room adjoining for courts of justice; and the highest is set apart as a lodge for freemasons. The sheriff, commissary, and admiralty-courts of Orkney and Zetland are held in Kirkwall. Justice-of-peace courts are held here at short intervals; as also the courts of the burgh. There are branches of the Commercial and National banks here. Kirkwall fair, a market of great antiquity, is held on the first Tuesday after the 11th of August, and continues that week and the following. It is attended by merchants from a very great distance, and into the brief period in which it is held, a great proportion of the commerce of these northern islands is, as it were, concentrated.

KIRK-YETHOLM, remarkable for its moral peculiarities, situated on the right bank of Beaumont-water, opposite the village of Town-Yetholm, near the centre of Yetholm parish, 1¼ mile from the nearest part of the English border, and 8 miles south-east of the town of Kelso, Roxburghshire. It is ruled by a baron-bailie, under the appointment of Mr. Wauchope of Niddrie, the superior; has two annual fairs, one in summer for cattle and cheviot hogs, and one in winter for cattle, ewcs, and widders; is the seat of the parish-church, and an unendowed school; and has, jointly with Town-Yetholm, a population of about 1,000;—its own population, so far back as 1797, having been 305. Yetholm common, a wild moor of considerable extent, on debateable ground between Scotland and England, is claimed by the villagers, and yielded to their possession for the cutting of their turf and the grazing of their cattle. Lodgings of the meanest kind, and at all degrees of low price, are let out to single wanderers who cannot elsewhere get a home; and these, with other characteristics of the place, have crowded

it with a population for whom no employment offers in the vicinity, and who swell the ranks of pauperism, smuggling, and equivocity of pursuit. But what, for a very long period, has been the distinctive feature of the place, is its being the residence of a tribe of gypsies, apparently descendants of the family of the Faas, and probably dating back their occupancy of the village to about the beginning of last century. They cannot be regarded as identical or akin in character to their wild ancestors who were chased into Europe from Egypt or Hindostan; and they have, to a considerable extent, yielded to the influence of civilization, or, more properly, of Christian and literary instruction plied upon them from without; yet they have physical marks in their dusky complexion, their Hindoo features, and their black penetrating eyes, peculiar to themselves, and still broader peculiarities of a moral kind, in their erratic habits, their deep aversion to enlightenment, their attachment to migratory occupations, and their almost thorough seclusion from their neighbours, amounting very nearly to the possession and conservation of the Hindoo caste, which defy all doubt as to their being in a very emphatic sense gypsies,—the most noted, and probably the largest tribe of that singular race in Scotland, and quite a study to the philosopher, and an object of stirring interest to the missionary-spirited Christian. They have a language of their own, which they are chary of speaking when others, than gypsies, are within ear-shot; and they very rarely—or never, perhaps, except when Christianizing influence brings them beyond the pale of their caste—intermarry with persons not belonging to their tribe. Nearly the whole of them are ‘muggers,’ wandering dealers in earthenware; and, except during winter, they circulate in single families, or occasionally in parties of two families, round beaten tracts of country, pitching tiny tents by the way-side, or on unenclosed grounds for their shelter, and sleeping, with slender comforts of blanket or mattress, upon the ground. When on their excursions they steal and plunder, and are believed to live quite as much by acts of dishonesty as by those of their professed calling; but, when at home, they are quiet, or quarrel only among themselves, and pursue a course fitted, in a degree, to win the confidence of their neighbours. Their number, in 1797, was 50, and in 1817, was 109.

**KIRRIEMUIR**—vulgarly pronounced **KILLAMUIR**—a large parish in Forfarshire, consisting of two detached parts,  $2\frac{1}{2}$  miles asunder, and lying respectively among the Grampians and in Strathmore. The northern or Grampian district is 11 miles in extreme length from north-west to south-east, and  $4\frac{1}{4}$  miles in extreme breadth, but tapers to a point at the north-west end, and over most of its length is not more than  $3\frac{1}{4}$  miles broad, and comprehends 18,000 imperial acres. It is bounded on the north and north-east by Clova; on the east by Cortachy; on the south by Kingoldrum; and on the south-west by Lintrathen and Glenisla. The whole district is hilly and mountainous, commencing on the south with Catlaw, the frontier mountain of the Grampians, and the highest ground in the parish, elevated 2,264 feet above the level of the sea, and stretching away north-westward in two screens or series of heights, whose inner sides form the basin of the Prosen, and both of which are ribbed or laterally cloven down by numerous glens and deep ravines, sending along to the Prosen their tributary torrents. Every part of the frontier or boundary of the district, except the gorge through which the Prosen makes its exit, and a line  $2\frac{1}{2}$  miles down to that point from the north traversed by a tributary rill, consists of a water-shedding ridge of summits, dividing the

interior from the basin of the South Esk, and its tributaries on the one side, and from that of the Isla and its head-waters on the other. The hills of the district are, in a few instances, rocky, and, in a few, verdant, except at their summits; but they are, in general, clothed in heath, with stripes and patches of grass along the beds of the little streamlets which trickle down their sides. The soil is partly thin and light, partly mossy, and in general wet. Considerable patches and expanses of natural wood still grace the district,—the remains of an ancient pervading tumultuous sea of trees which have bequeathed to the upper part the name of the Forest of Glenprosen; and, but for the nibblings of the flocks of sheep which now claim the territory as their own, would speedily spread away in a new expanse of hiches and other trees, forming a modern and continuous forest. Excepting about 2,000 acres, partly arable and partly fine pasture and meadow, the whole area is wildly pastoral, or altogether waste.—The southern, or Strathmore district of the parish, measures  $5\frac{3}{4}$  miles in extreme length from north to south, and  $5\frac{1}{2}$  miles in extreme breadth from east to west; and contains about 16,000 imperial acres. It is bounded on the west and north-west by Kingoldrum; on the north by Cortachy and Tannadice; on the east by Oathlaw and Rescobie; on the south by Forfar and Glammis; and on the south-west by Airly. For about a mile from the southern boundary the surface is almost flat; for 2 miles more it rises gently, and forms nearly a continuous sloping bank; and it then, when within a few hundred yards of the town, breaks steeply down, and stretches north and south for nearly a mile in a hollow or den about 100 feet deep. East and west of the town it is nearly all level, or but slightly diversified; and northward it delightfully undulates in dale and rising ground, and sends up, in the north-west corner, hilly heights, called the braes of Inverquharly, laden with plantation, or cultivated to their summits. The soil, in considerable belts along the north and the south, is sandy; but on the central and larger part of the area, is, for the most part, a black mould, on a bottom of what is provincially called mortar. The whole district is cultivated up to apparently its highest capabilities of improvement, and is rich and beautiful in aspect. About 11,000 acres are regularly or occasionally in tillage; about 2,000 are under plantation, about 500 are occupied by houses, roads, and water; and the remaining 2,500 consist, to a small extent, of mosses, but are chiefly disposed in pasture. The plantations are finely arranged in clumps, and little expanses in the north, the east, the west, and the centre; and the southern division, which is now the barest, is traditionally said to have been part of the forest of Platane, extending westward to the hill of Finhaven in the parish of Oathlaw, once the shelter during a winter of the forces of Sir Andrew Murray, the co-patriot of Sir William Wallace, and so dense in the phalanx of its trees, that a wild cat might have leaped upon its boughs from end to end of its limits. The river Prosen rises in the furthest nook of the upper district of the parish, and cuts the whole district, lengthways, into nearly equal parts, swollen in its progress by ten considerable brooks, and by other smaller rills; and after traversing an intermediate territory, it strikes the lower district near Prosen-Haugh, and runs for  $2\frac{1}{2}$  miles along the northern boundary. The South Esk, coming down at an acute angle from the north-west, here swallows up the Prosen, and hence traces the northern boundary for  $1\frac{1}{4}$  mile. The Carity, coming in from Kingoldrum, flows over  $5\frac{1}{2}$  miles in the interior, at a brief distance from the Prosen and the Esk, and falls into the latter stream at Inverquharly. These rivers

swarm with a small red trout of excellent flavour, much coveted by the angler, and preferred by many gourmands to salmon. The GAIRIE [which see] rises in the vicinity of the town, and bisects the southern division of the lower district of the parish: previous to 1740, when the lake of Kennardy was drained, it was a considerable stream; but now, in a dry summer, it has scarcely sufficient water-power to drive a mill. The lake of Kinnordy, a little north-west of the town, is, at present, about a mile long and half-a-mile broad, repulsive in appearance, and exhaling noxious miasmata; but before being drained, for sake of its rich stores of shell-marl, it was a fine sheet of water, and abounded in perch, pike, and the large silver-coloured eel. Limestone is worked to some extent, and burnt with turf in small kilns. Among the primitive formations of Glenprosen, consisting of hornblende slate, mica-schist, and gneiss, are some garnets and rock-crystals. Most of the southern district consists of either the old red sandstone formation, or the red schistose sandstone, occasionally interrupted by trap rocks. Mr. Lyell, in the *Edinburgh Journal of Science*, notices with interest a dike of serpentine on the farm of Balloch, running east and west, nearly vertical, but with a slight northerly inclination; and regards it as finely illustrating the connexion between serpentine and greenstone, and the effects of dikes of serpentine upon contiguous stratified rocks. The mosses of Kinnordy and Balloch are regularly cut for supplies of fuel. A little west of the town is a large semi-globular artificial mound called the Court-billock, and beside it a pond called the Witch-pool; both of which seem to have been in requisition for the purposes of feudal justice and superstitious jurisprudence. In various localities are tumuli and uninscribed monumental stones. On the soil of this parish were fought skirmishes arising out of the feuds of the clan Ogilvie; and, in particular, a sanguinary battle, fought in 1447 between that clan and the Lindsays, and fatal to 500 of the Ogilvies. The sword was often ensanguined also by the rieving expeditions and the incursions for the levying of 'black mail,' made from the fastnesses of the Grampians. A considerable number of querns, arrow-heads, and battle-axes have been found. Two canoes or antique boats were discovered, one in a cave, and the other imbedded in a bog. A little north-west of the hill which overlooks the town, are two rocking-stones, in the immediate vicinity of each other, one consisting of whinstone and the other of porphyry, and both of them large and ponderous blocks.—Near the confluence of the Carity and the South Esk, stands the castle of Inverquharity, a Gothic edifice of cut stone, erected previous to the 15th century, and in a state of good preservation. Three stories consist each of one apartment; and a fourth story is divided into two. The walls are about 9 feet thick, projecting considerably near the top, and terminating in a parapet not more than a foot thick. A path is carried round between the parapet and the roof wide enough to allow three men to walk abreast; and over the gateway, it is perforated through the projecting wall with three square apertures, to admit of missiles being dropped or shot upon persons at the gate. On one side of the front of the edifice, are some vestiges of a wing, reported to have been demolished in 1445 by the Earl of Crawford in a feud between the Lindsays and the Ogilvies. Sir John Ogilvie, the founder of the family of Ogilvies of Inverquharity, 3d son of Walter Ogilvie of Auchterhouse, received in 1420 the lands and harony of Inverquharity from his brother, the heir of Auchterhouse. Alexander, one of his descendants, was cap-

tured at the battle of Philiphaugh, fighting with Montrose, and executed at Glasgow. Another descendant fought with the dethroned James at the battle of the Boyne in Ireland, and eventually fell in an engagement on the Rhine. On the Prosen, in the upper district of the parish, stands Baluaboth, the seat of the Honourable Colonel Ogilvie of Clova, the brother of the Earl of Airlie. Other mansions in the parish are Kinnordy and Shielhill, both the property of Charles Lyell, Esq.; Logie, the seat of John Kinloch, Esq., of Kilry; and Ballandarg, the seat of Francis Graham, Esq., of Morpbin. The two villages of Ellenortown and Marytown have jointly a population of less than 250. Roads diverge in all directions from the town of Kirriemuir, and intricately ramify the lower district of the parish. The higher half of the upper district has no road whatever; and the lower half has roads only up the Prosen, and the vale of one of the tributary streams. Population of the parish, in 1801, 4,421; in 1831, 6,425. Houses 1,099. Assessed property, in 1815, £9,292.

Kirriemuir is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, Lord Douglas. Stipend £246 4s. 8d.; glebe £11. The church was built in 1786. Sittings 1,240. The upper district of the parish is included in a mission on the Royal hounty: See article GLENPROSEN. A portion of the lower district, containing, in 1836, a population of 2,622 persons, 2,155 of whom were churchmen, was erected in 1836 into the *quoad sacra* South parish of Kirriemuir. The church was built in the same year, and cost about £1,340. Sittings 1,021. There are in the *quoad civilia* parish four dissenting congregations, their places of worship all situated in the town. The Scottish Episcopalian congregation has existed since 1561. Their chapel is the private property of Mr. Lyell of Kinnordy, and was built in 1795. Sittings 800. Stipend between £60 and £70.—The United Secession congregation was established in 1772. Sittings in their place of worship 500. Stipend £100, with a manse and garden. The Relief congregation was established in 1829. Their place of worship was originally a town-hall, and was, in 1833, purchased and fitted up with galleries, at a cost of £820. Sittings 604. Stipend £120.—The Original Seceder congregation was established in 1788. Their meeting-house was built in 1807, at a cost of £700. Sittings 400. Stipend £90, with a house and garden, and £6 15s. 6d. for sacramental expenses.—An ecclesiastical survey of the *quoad civilia* parish, in 1836, showed the population then to be 7,193; of whom 5,836 were churchmen, 1,334 were dissenters, and 23 were nondescripts.—The parochial school is conducted by three teachers, classical, commercial, and English, and is attended by at most 209 scholars. Salaries £36 7s. 2d., with £128 fees, and £10 other emoluments. There are 15 non-parochial schools, conducted by 15 teachers, and attended by at most 624 scholars.—Besides the parish-church, there were anciently in the parish five places of worship; one in the town of Kirriemuir, a piece of ground adjoining which is called in old writs the Kirkyard; one in Glenprosen, which continued to be in use till the time when the modern chapel in the district was erected; one at a place called Chapeltown, about 3 miles north of the town; one at Killhill, about the same distance east of the town; and one near Ballinshae, the site of which is still enclosed with a wall, and used as the burying-place of the Fletchers of Ballinshae.

KIRRIEMUIR, a burgh-of-harony, and a town of considerable antiquity and provincial importance, stands partly on level ground and partly on an inclined plain in the centre of the lower district of the

parish, to which it gives name, 5 miles north-west of Forfar; 5 north of Glamis; 16 from Dundee; and 58 from Edinburgh. The lower part is screened and shut in from a view of the circumjacent country by the brow of the den; but the higher part commands a prospect of nearly the whole of Strathmore. The hill on the skirt of which it hangs, ascendingly recedes from it toward the north-west, breaks boldly and precipitously down on the south, has in every other direction a gentle gradient, and exhibits from its broad summit an extent and brilliance of panorama equal to many of the most celebrated landscapes in Scotland. On the east are the picturesquely undulating heights of Finhaven hill, and far beyond them the Grampians of Kincardineshire, helted on the horizon with the German ocean; on the north and west are the shelving ascents and the mysterious vistas, the far-stretching surgy sea of elevations, the mist-gathering mountain-pinnacles, and the dark and frowning and vastly varied forms of the Angus and the Perthshire Grampians; and on the south, away as far as the eye can reach, stretches the many-tinted valley of Strathmore, with its picturesque array of towns, castles, churches, plantations, lakes, and streams, flanked by the soft and luxuriant forms of the long range of Sidlaw hills. The town consists of several streets, arranged and mutually connected in a manner similar to the arms and shaft of an anchor. Though containing numerous mean and ungainly houses, it has an improved and thriving appearance, and gives indications of the presence both of taste and of successful industry. The parish-church is a very handsome edifice, with a neat spire and clock. The Episcopalian chapel also sends aloft a spire, and contributes a fine feature to the burghal landscape. The Relief meeting-house, built as the town-hall in 1815, has been reclaimed from the usage so common in the public buildings of Forfarshire towns, of being laid out in the lower story in shops, and figures pleasingly as an ecclesiastical edifice. The town has many good shops, and is lighted at night with gas.—Since the middle of last century, it has been the seat of an extensive manufacture of brown linen. So early as 1792, the annual value of its produce in osnaburghs and coarse linens was about £30,000. Before the century closed, the number of yards annually stamped was upwards of 1,800,000; and in 1819–20, it was 2,376,711. In 1826, a great fall of wages took place, and a check, the influence of which continues to be felt, was given to the progressive enlargement of the manufacture. The number of looms at present worked is about 2,000, employed on dowlas, sheeting, and osnaburghs, chiefly for exportation. Dundee is almost wholly the immediate market of the weavers, and supplies most of their work. The best workmen earn about 8 shillings nett per week, inferior workmen 6s., and aged persons and boys 4s. The nett weekly average of all the looms may probably be 5s. 6d. The weavers seem poor but not in actual distress; and, as a community, are admitted to be expert and skilful in their vocation. No other trade than that of weaving is carried on.—The town has an excellent news-room, a subscription library, a circulating library, a large Sabbath school library, a Bible society, an auxiliary Missionary society, a Sabbath school society, a Ladies' society in aid of the education of females in India, about a dozen Friendly societies, a Poors' Medical relief fund, two local Education funds apart from the parish school, and jointly upwards of £9,000 in amount, and a branch-office of the British Linen company's bank. A weekly market, equal to any in Forfarshire, is held on Friday; and annual fairs, for sheep, cattle, and horses, are held in June, July, October, and Decem-

ber.—The town is a burgh-of-barony under Lord Douglas; but, as a burgh, has neither property, revenue, nor debt. No taxes are levied, except some customs by the superior at fairs and markets. The streets are kept in repair from the statute labour conversion money of the county, to which the inhabitants contribute. A baron bailie, appointed by the superior, is the only magistrate; and he is not in the practice of exercising any jurisdiction. The burgh is under the charge of the county police, and is watched and protected by a sufficient force; and is the seat of a monthly small debt court held by the county justices-of-peace, and the residence of a procurator-fiscal, who inquires into offences which are prosecuted before the sheriff. About 120 inhabitants pay rents or have property to the amount of £10 a-year, and about the same number to the amount of from £5 to less than £10. Population 4,000.—A feud, similar in character, but inferior in importance, to that between Perth and Dundee, anciently existed between Kirriemuir and Forfar: See article FORFAR. Though the town is ancient, few authentic and no interesting events in its early history are known.

KIRTA, one of the smaller Hebrides, near the west coast of Lewis.

KIRTLE (THE), a beautiful and classic stream of the district intermediate between Annandale and Eskdale in Dumfriesshire. It rises in the extreme north of the parish of Middlebie, within half-a-mile of a head-water of the Milk, a tributary of the Annan on the west, and within 1½ mile of a head-stream of Wauchope-water, a tributary of the Esk on the east. Flowing 3¾ miles due south, and receiving tributary brooks from the hills, it falls upon the parish of Kirkpatrick-Fleming, and for 5 miles divides it from Middlebie, Annan, and a detached part of Dornock. It then runs 2½ miles south-eastward through its interior; and after a further course of 2 miles in the same direction through the parish of Gretna, enters the Solway frith at Kirtle-foot. See articles KIRKPATRICK-FLEMING and GRETNA.

KITTERICK, a mountain overlooking the stream Palmure, and suddenly rising to the height of 1,000 or 1,200 feet, in the parish of Minnigaff, Kirkcubrightshire. At its base, on the bank of the stream, shut out for six weeks in winter from the rays of the sun, are the humble ruins of the hut in which Dr. Alexander Murray, the celebrated linguist, was born; and around is the wild and sterile, the rude and sublime scenery amid which his early genius was cradled.

KLOACHNABANE, a hill in the parish of Strachan, Kincardineshire; elevated 2,370 feet above sea-level. On the summit is a large rock, accessible only at one side, called 'the Stone of Kloachnabane,' an excellent land-mark for ships at sea.

KNAIK (THE), a rivulet of the parish of Muthil, Perthshire. It rises in Glenlich-horn, and flows south-eastward past the steep banks on the west boundary of Ardoch camps to the Allan, a mile below the bridge of Ardoch. Its length of course is 8 miles.

KNAPDALE, an old division of Argyllshire, lying between the isthmus of Crinan and Tarbert, so denominated from the inequality of its surface,—*Cnapdale*, or *Knapdale*, in Gaelic, signifying 'hill and dale.' It is about 20 miles in length, and 16 in breadth; and is bounded on the west by the Atlantic ocean; on the north by Loch-Gilp, Loch-Crinan, and the Crinan canal; on the east by Loch-Fyne which separates it from Cowal, and by the narrow isthmus of Tarbert; and on the south by Kintyre. It is intersected by the lochs of CAOLISPORT and SWEN [which see]; and the interval between these arms of the sea is finely diversified with woods,

rocks, fields, and lakes. The greater part of the district, like the rest of Argyleshire, is rugged and mountainous, with fertile fields interspersed. A cluster of small islands on the west coast belongs to it; on one of which is the ruin of a chapel. This district contains numerous small chapels, which appear from their antiquity to have been founded very soon after the introduction of Christianity into the kingdom.

**KNAPDALE (NORTH)**, a parish in Argyleshire, now in the district of Islay; separated in the year 1734 from the parish of South Knapdale; both parishes being previous to that time known by the name of Kilvick-Charmaig. North Knapdale extends 14 miles in length, and  $8\frac{1}{2}$  in greatest breadth. Towards the north and east the surface becomes rugged, and is elevated into lofty mountains, of which Cruachlussa is the highest. Loch-Swen intersects the parish, dividing it into two nearly equal parts; and there are a few small lakes among the hills. Population, in 1801, 2,401; in 1831, 2,583. Houses 398. Assessed property, in 1815, £4,797. There are two small villages, Ballenach and Targvallich, each containing about 180 inhabitants.—This parish is in the presbytery of Inverary, and synod of Argyle. Patron, the Crown. Stipend £164 6s. 10d.; glebe £22. Unappropriated teinds £20 16s. 3d. There are two parish-churches,—one at Kil-michael, Inverlusay, seating 432; the other at Targvallich, seating 896; the former built in 1819, the latter in 1827. They are on opposite sides of Loch-Swen, and the minister officiates in them alternately.—There are three parish-schools; each master has a salary of £17 2s. 2d. There are also two private schools.

**KNAPDALE (SOUTH)**, a parish in Argyleshire, adjoining to North Knapdale, and extending to Loch-Tarbert. It is 16 miles in length, and  $5\frac{1}{2}$  in breadth. The soil is chiefly of a mossy nature, lying upon a stratum of sand; but in the low grounds it is loamy. Very little of the parish is arable, and that which is ploughed, or dug with the spade, produces so light crops that it is found more advantageous to throw it out into sheep-walks, or pasture-lands for cattle. There is a lead mine on the estate of Campbell of Inverneil, which was wrought some years ago; and in the same neighbourhood are several springs containing metallic impregnation. Ruins of ancient chapels are frequent in this parish. Population, in 1801, 1,716; in 1831, 2,137. Houses 346. Assessed property, in 1815, £2,740.—This parish is in the presbytery of Inverary, and synod of Argyle. Patron, the Crown. Stipend £158 18s. 6d.; glebe £10. There are two parish-churches,—one built at Inverneil, and the other at Achoish, both about the year 1775. The south-east end of the parish lies within Tarbert mission-district. The minister officiates two Sabbaths at Achoish, the third at Inverneil. There are three parish-schools; salary of each master £12 12s. There are also three private schools.

**KNOCK**, a hill in Banffshire, elevated 2,500 feet above the level of the sea, which, on account of its great height, affords an excellent land-mark in navigating the Moray frith. The parishes of Grange, Fordyce, and Ordiquhill, meet in a point at its top.

**KNOCKANDO**, a parish in Morayshire, bounded on the north by Dollas; on the east by Rothes; on the south and south-west by Inveraven, from which it is separated by the river Spey; and on the west by Cromdale and Edenkille. It is about 10 miles in length from west to east, and 2 in breadth. Population, in 1801, 1,432; in 1831, 1,497. Houses 313. Assessed property, in 1815, £1,987. The surface is hilly or mountainous. The soil is various: near the river Spey, it is sandy; on the higher grounds, black

mould with gravel, and nearer the hills, a heavy clay soil, and moss: the alluvial deposits consist of clay, bog, iron-ore, peat, fullers' earth and marl. Multitudes of black cattle, and a number of sheep, are pastured on the hills; and at Wester Elchies are a few of those singular and rare animals, the Thibet sheep. They were sent home from India by Mr. Grant, the proprietor of the estate, but have not thriven well, owing, it is thought, to the damp climate. They have been subject to a disease in the feet—from the moisture of the ground it was thought—and we recollect hearing of a grave proposal to put shoes or boots on their feet. A cross-breed has prospered, but the wool has degenerated, though still of a very soft and decidedly superior texture: the mutton is prime, and the lamb of the most delicate quality. The rocks in this parish are all primitive. Here is the rock of Tomdow, the most dangerous of all the obstacles in the way of the numerous rafts of timber that are floated down the Spey. Near Easter Elchies, at the eastern extremity of the parish, is one of the two celebrated rocks named Craig-El-lachie; the other is in Rothiemurchus, and the district of Strathspey is comprehended between them. Signals by fire to convene the inhabitants on the approach of an enemy were wont to be made in former times, from one of these rocks to the other: hence the motto of the Grants,—'Stand fast, Craig El-lachie.' At this most picturesque and interesting spot a handsome iron bridge, 160 feet in span, was thrown across the Spey: see **ABERLOUR**. There is no river but the Spey in the parish. There are several burns, however, among which are those of Knockando and Aldarder: all the streams here were fearfully swollen during the floods of 1829, and occasioned great damage to the crops, live stock, houses, and inhabitants. The Aldarder, during the floods, undermined a waterfall in its course, 80 feet in height, and left a chasm or ravine, from 290 to 300 ells in breadth, and 60 to 100 feet in height. The Knockando-burn and its flood, are thus graphically described by Sir Thomas Dick Lauder:—"The Knockando-burn, entering from the left, is extremely small; but it was swollen by the flood to a size equal to that of the Spey in its ordinary state. The high promontory, on the neck of which the manse of Knockando stands, shoots forwards towards the steep opposite banks of the burn, interrupting the continuity of its haughs by a narrow pass, leaving room only at the base of the precipice for two cottages, a small garden, and a road. Where the glen opens, a little way above, there stood a carding-mill, a meal-mill, and the houses of their occupants. Of the two cottages at the bottom of the promontory, one was inhabited by the old bellman, his wife, and daughter, and a blind beggar-woman, who had that night sought quarters with them: the other was tenanted by a poor lame woman, who kept a school for girls and young children. After the flood, the prospect here was melancholy: the burn, that formerly wound through the beautiful laugh above the promontory, had cut a channel as broad as that of the Spey from one end of it to the other. The whole wood was gone, the carding-mill had disappeared, the miller's house was in ruins, and the banks below were strewn with pales, gates, bridges, rafts, engines, wool, yarn, and half-woven webs,—all utterly destroyed. A new road had recently been made, and all the burns were substantially bridged; but with the exception of one arch, all yielded to the pressure of the flood. Mr. Grant of Wester Elchies' damage is estimated at £820. The parish of Knockando returned 12 cases of families rendered destitute by this calamity."—The principal mansions in this parish are—Wester Elchies,

a castellated edifice standing on a commanding eminence, and formerly an out-post to Castle Grant in Inverness-shire;—Knockando-house, beautifully situated on the banks of the Spey, surrounded by woods, amidst Highland scenery of a very picturesque description, terminated by the blue and lofty heights of Cairngorm and Ben Avon in the distance;—Glengummary, or the cottage of the Clune,—a sequestered and romantic residence on the bank of the Knockando-burn,—built of wood, in 1827, and thatched with beather, as a hunting-lodge, by the late Charles Grant, Esq. of Wester Elchies; and Easter Elehies, in a wood, near which is the rural and sequestered churelyard of Macallan, with a fragment of the church-wall, still visible hut mouldering away. Several other ancient chapels or religious houses are said to have formerly existed in this parish, and there are remains of a Druidical temple. The only manufactures are those carried on in a number of meal, carding, thrashing, and saw, mills;—weaving and spinning to a small extent,—and the distillation of spirits of excellent quality, at Cardow and Macallan. The only village is Arehiestown, on the moor of Ballintomb, consisting of one principal street, a square, and several bye-lanes; and containing 230 inhabitants. The parish is in the synod of Moray, and presbytery of Aberlour. It includes the whole parish of Macallan or Elehies, which appears to have merged in that of Knockando; there being no legal record of annexation in existence: in 1683 they were under separate pastors, but, in 1712, were under only one. Patron, the Earl of Seafield. Stipend £158 6s. 7d.; glebe £13. Church built in 1757, and repaired and altered, but not enlarged, in 1832. Sittings 477. There is an Independent congregational chapel, built in 1818; sittings 200; minister's salary £40. Here are two parochial schools, one in Macallan, and the other in Knockando-proper. Salary of each £25 18s. 3½d.; fees £8, and £10 respectively; besides a share each of the Dick bequest. There are four private schools.

**KNOCKBAIN**, a parish in Ross-shire, formed by the annexation, in 1756, of the parishes of Kilnair-Wester and Suddy. It is from 6 to 7 miles in length; and from 5 to 6 in breadth; and divided by a branch of the Moray frith, called the hay of Munlochy. The surface is level, rising gradually from the coast towards the north, and the soil is in general tolerably fertile. Population, in 1801, 1,859; in 1831, 2,139. Houses 468.—This parish is in the presbytery of Chanonry, and synod of Ross. Patron, the Crown. Stipend £232 18s. 8d.; glebe £22. Unappropriated teinds £92 14s. 9d.—Schoolmaster's salary £34 4s. 4½d. There are two private schools.

**KNOCDOLIÁN**, a mountain in Ayrshire, in the parish of Colmonell, elevated 1,950 feet above the level of the sea. See **COLMONELL**.

**KNOCKFARRIL**, a small conical eminence, forming the eastern extremity of that ridge of mountains which bounds Loch-Ness on the north-west side. It is situated about a mile to the north of Inverness, and is accessible on two different quarters, viz., the west and south-east; the former affording entrance by a narrow level ridge, joining the hills on Loch-Ness, and the latter from an easy ascent from the high ground above Inverness. On approaching the hill from the west, we meet with a road cut through the rock, from the bottom to the top, in most places 10 feet broad, and nearly as deep, winding for about 70 feet in an easy serpentine direction, by which we gain an ascent over a steep rock, otherwise quite inaccessible from that quarter. This road, in Mr. Fraser Tytler's opinion, is undoubtedly a work of art, and the vitrified matter on the top is the only thing which indicates the effect of fire;

there being no appearance of pumice-stone, lava, nor basaltes about the hill. "But the circumstance," says he, "which, in my apprehension, evinces in the most satisfactory manner, that these appearances of the effect of fire on the summit of the hill, are not the operation of Nature, but of art, is the regular order, and disposition of those materials, the form of the ground, and the various traces of skill and contrivance, which are yet discernible, though considerably defaced, either by external violence or the obliterating hand of Time." On ascending by the road, there appears, towards the middle, on the right hand, a small platform overhanging the passage, and inclining by a very gentle declivity towards the ridge of the rock. A few enormous stones are placed upon the platform, and on the edge, and extremity of it, which have evidently been guided by art into that position, it being impossible that they could have rested there had they been rolled down from the higher parts. The obvious reason for placing them in such a position has been, that on an alarm of danger they might be projected into the path below, which could have been done by the efforts of a very few men; and when this was done the passage would be entirely obstructed, or at least rendered so difficult that it could be defended by a few, against a number of assailants. Some other large stones are placed on an eminence to the left, probably with a view to block up a hollow channel by which an enemy might have attempted to ascend. When we come to the top of the hill, a few feet below the rampart which crowns the whole, there appears an outward wall, approaching on the sides of the hill, so near the upper rampart, as to have only a trench of 10 or 12 feet wide between them. This outward wall is in some places so low, as to be almost level with the rock, though in other places it rises to the height of 2 or 3 feet; hut even where lowest it may be traced by a line of vitrified matter sticking fast to the rock all along, and nearly of the same breadth, which is almost 9 feet. The remains of this wall are strongly vitrified, except in one place on the north side, where, for about 70 yards, the rampart is formed only of dry stones and earth. At the east side, where the hill is more accessible, there is a prodigious mound of vitrified matter, extending itself to the thickness of above 40 feet. At the south-east corner, and adjoining to this immense mound, is an out-work, consisting of two semicircular vitrified walls, with a narrow pass cut through them in the middle, which appears to have been another, and perhaps the principal entrance to the fort. The inner wall surrounding the summit of the hill, encloses an oblong area of about 75 yards long, and 30 broad, rounded at each of the ends like the outward wall; it shows some imperfect traces of having been defended by four turrets or bastions: a number of small tumuli of earth, with a stone in the centre, are more discernible. On the east side, a portion of the internal space appears separated from the rest by two ranges of stones fixed in the earth, forming a right angled parallelogram. This separation is immediately discernible to the eye from the circumstance of the whole of the enclosed summit being carefully cleared from stones; those that form this division, and the single one in the middle of the circle of tumuli, being the only ones to be seen. It is difficult to conjecture the design of this separated space. Perhaps it has marked the residence of those of a higher rank, or served as a temple of devotion. On the east end of the area, on the summit, there is a well, six feet in diameter, now nearly filled up.

**KNOX (JOHN)**. See **NEW ABERDEEN**.

**KNOYDART**. See **GLENELG**.

**KOOMB**, a small island on the north coast of Sutherlandshire, upon which are the remains of a chapel and burial-ground.

**KYLE**, the middle district, anciently the middle bailiwick, of Ayrshire. It is bounded on the north by the river Irvine, which divides it from Cunningham; on the north-east by Lanarkshire; on the east by Dumfries-shire; on the south by Kirkcudbrightshire; on the south-west by the river Doon, which divides it from Carrick; and on the west by the frith of Clyde. The river Ayr rising on its eastern boundary, and traversing it westward to the Clyde, divides it into Kyle-Stewart on the north, and King's-Kyle on the south. Its chief streams, additional to the Ayr, are the Coyl and the Luggar, tributaries of that river,—the Cessnock, a tributary of the Irvine,—and the Nith, which drains its south-east corner, and passes into Dumfries-shire. Its *quoad civilia* parishes are Dundonald, Riccarton, Galston, Craigie, Symington, Mauchline, Sorn, Muirkirk, Monkton, Tarbolton, Newton, St. Quivox, Stair, Auchinleck, Ayr, Coylton, Ochiltree, Old Cumnock, New Cumnock, Dalrymple, and Dalmellington,—all in the presbytery of Ayr. Total population, in 1831, 56,066; inhabited houses 7,554; families 11,435; families employed in agriculture 2,228; families employed in trade, manufactures, and handicrafts 5,353. For other particulars, see article **AYRSHIRE**.

**KYLE-AKIN**. See **LOCH-ALSH**.

**KYLE-RHEA**. See **LOCH-ALSH**.

**KYLES-OF-BUTE**, a narrow and remarkably picturesque arm of the frith of Clyde, which separates the north-west part of the island of Bute from the districts of Kerry and Cowal, on the mainland, in Argyleshire. After passing Port-Bannatyne bay, on the left, and leaving the mouth of Loch-Striven to the right, and passing the delightfully situated mansion of South-hall, which overlooks the whole bay of Rothcay, the Cumhraes, a long sweep of the

Ayrshire coast, and a great part of Bute, we find ourselves sequestered in the Kyles, and rapidly nearing the small ferry of Culintraimh. Here everything assumes a truly Highland aspect. The glen becomes more narrow, the hills more steep; and along their rugged acclivities, as artlessly situated as the rocks with which they are strewn, appears the rudely constructed shieling of the fisherman or shepherd; while at wider intervals is seen the farmer's better-constructed cottage, surrounded, haply, with a few patches of cultivated soil, appropriated to the production of potatoes, oats, and barley. At length the most picturesque part of the Kyles is reached, where the passage narrows into the size of a small river, and where, at a short distance, the eye in vain searches for an opening through which to proceed—the hills being so closely joined, as to appear like one immense barrier surrounding the extremity of an inland lake. Here lie three small rocky islands, exhibiting the appearance of having once been exposed to the action of fire, from which cause they have received the name of the Burnt Islands. On one of them stand the remains of a vitrified fort; and, a short way farther on, at the mouth of Loch-Ridan—which now beautifully opens to the view—there appears the small but celebrated Isle of **EALAN-GHEIRRIG**: which see. Leaving the mouth of this loch on the right, and, while bending suddenly to the left, the farther passage of the Kyles gradually and gracefully evolves itself, until the character of a strait is lost in the wide expanse of water that encircles the solitary Inchmarnock, and is overlooked by the lofty and distant peaks of Arran. At this sudden bend of the Kyles, so picturesque is the scenery, that no one can behold it under a favourable aspect of the heavens, without intense admiration.

**KYPE (THE)**, a small stream in Lanarkshire, which rises on the borders of Lesmahago parish, and, dividing it from Avondale, falls into the Avon, a few miles above its junction with the Clyde.

KILCHURN CASTLE.

## L

**LADY**, a parish forming the north-eastern part of the isle of Sanda, Orkney; comprehending 8 square miles. Population, in 1801, 830; in 1831, 858. Houses 144. Assessed property returned with Sanda.—This parish is in the presbytery of the North Isles, and synod of Orkney. Patron, the Earl of Zetland. Stipend £158 6s. 8d.; glebe £4 8s.—There are 2 private schools within the parish; but no parochial school. See SANDA.

**LADY-ISLE**, an uninhabited rocky islet,  $3\frac{1}{2}$  furlongs in length from north to south, and  $\frac{1}{2}$  of a mile in breadth, 2 miles south-west of Troon point,  $5\frac{1}{2}$  miles north-north-west of Ayr pier, and  $5\frac{1}{2}$  miles south-west by south of the mouth of Irvine-water, in the bay of Ayr. Much importance attaches to it on account of its affording, in the large open bay in which it lies, and along a great extent of coast from Galloway to Fairley roads unprovided with harbour or anchorage for large vessels, the only place of shelter from westerly winds. On the north-west part of it are two towers or stone beacons erected by the magistrates of Glasgow. When a vessel, on the south-east, between the islet and Ayr, has the two towers on a line, she has, within a cable's length of the shore, good anchoring-ground under 5 fathoms water; and thence, for half-a-mile south-eastward, the water gradually deepens to 14 fathoms, and then slowly shallows toward the bar of Ayr. Between the islet and Troon point,  $\frac{2}{3}$  of a mile east of the larger beacon, is a narrow ridge of rock, running north and south, and covered, at the subsession of the tide, by  $3\frac{1}{2}$  fathoms water. From 2 to 4 furlongs north-north-east of the larger beacon lies the half-tide rock, covered at half-flood, and leaving between it and Lady-Isle a channel only 4 feet deep at low-water. At a further distance northward is another rock. See LAPPACH.

**LADYKIRK**, a parish on the eastern verge of the district of Merse, Berwickshire. Its greatest length, from north-east to south-west, is 4 miles; its greatest breadth is  $2\frac{1}{4}$  miles; and its superficial area is 3,100 imperial acres. It is bounded on the north-west by Whitsome; on the north-east by Hutton; on the south-east by the Tweed, which divides it from England; on the south by Coldstream; and on the west by Swinton. The surface gently rises from the Tweed, and is diversified with a few swells, but, in general, is level; and it is everywhere beautiful in appearance, fertile in soil, and well-suited to the dominion of the plough. But about one-fourth is disposed in perennial pasture, surpassingly fine in quality, fitted to rear and fatten oxen of the largest size, and devoted by a deed of entail to the grazing of a peculiar and highly valued breed of short-horned cattle. About 50 or 60 acres are covered with trees. All the rest of the area is cropped in the most approved methods of husbandry. A white micaceous sandstone lies beneath a large part of the surface, and a reddish sandstone occurs in the west; but they are nowhere quarried. The Tweed rolls the full flood of its beauty in a thrice-repeated curve 3 miles along the boundary; and is stationed off in several places for its salmon-fisheries. On its opposite bank stands Norham-castle. Previous to the erection of Berwick bridge, built apparently in the reign of Elizabeth, a ford at this place often gave passage across the river to armies of invasion, and occasionally pointed out spots in the vicinity as convenient

scenes of international conference and negotiation. Holywell haugh, an adjacent field, was the place of meeting between Edward I. and the Scottish nobles to adjust the dispute respecting the succession to the Crown of Scotland. The parish-church, situated near the river, and overawed by Norham-castle, was, in the reign of Mary, the scene of a treaty concluded by commissioners, and supplementary to that of Chateau Camhrensens. James IV., when crossing the ford at the head of his army, was in hazard of being swept away by the swollen current, and vowed, if he should be delivered, to build a church in honour of 'Our Lady.' The erection which sprang up in fulfilment of his vow, was called Ladykirk, and, usurping the place of the more ancient parochial church, imposed its name on the parish. In the fields immediately commanded by Norham-castle many cannon-halls have been turned up. Ladykirk-house, in the south-east corner on the Tweed, is the only mansion. A little north of it is the village of Upsettlington; and in the northern corner of the parish stands that of Horndene. Both are ancient villages, and contain jointly a population of about 240. The north road between Berwick and Kelso touches the parish for  $1\frac{3}{4}$  mile on the north-west; and subordinate roads intersect one another in the interior. Population, in 1801, 516; in 1831, 485. Houses 108. Assessed property, in 1815, £5,407.—Ladykirk is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £170 16s. 2d.; glebe £20. The church—originally a handsome cruciform Gothic edifice, but utterly destroyed in its appearance by modern alterations and additions—was built in 1500. Sittings about 300. At Horndene, is a United Secession meeting-house. Parish schoolmaster's salary £25 13s.  $3\frac{1}{2}$ d., with about £13 fees.—The present parish comprehends the ancient parishes of Upsettlington or Ladykirk on the south, and Horndene on the north. The former was anciently a rectory; and the latter belonged, till the Reformation, to the monks of Kelso. Robert Byset, who obtained, during the 12th century, the manor of Upsettlington, founded, in the reign of David I., an hospital at Horndene, dedicated it to St. Leonard, and gave it, with its pertinents, to the monks of Kelso, obliging them to maintain two paupers on the foundation, and to support an officiate in the hospital chapel. At a place still called Chapel-park, a little north of Upsettlington, are faint traces of an ancient building,—either the hospital, or some other ecclesiastical edifice. In the vicinity are three fountains, graced with modern pillars, inscribed respectively with the names of St. Mary's, the Monk's, and the Nun's well.

**LADYKIRK**, a district in the island of Stronsay. Population, in 1831, 274. See STRONSAY.

**LADYKIRK**, or **NORTH KIRK**, a district in the island of Westray. Population, in 1831, 834. See WESTRAY.

**LADYKIRK**, or **SOUTH KIRK**, a district in the island of South Ronaldshay. Population, in 1831, 637. See SOUTH RONALDSHAY.

**LAG**. See DUNSCORE.

**LAGAN-AULACHY**, an ancient chapelry in the shire of Perth; now united to the parish of Little Dunkeld.

**LAGGAN**, or **LUGGAN**, a parish in Inverness-shire, in the district of Badenoch; about 20 miles in

length. The breadth of the inhabited part is about 3 miles; but, taking its boundaries on the north and south, the average breadth is not less than 18 or 20 miles. It is bounded by Boleskine on the north; by Kingussie on the east; by the mountains of Perthshire on the south; and by Kilmanivaig on the west. It occupies the southern extremity of the county. The surface is mountainous, and intersected by long narrow glens and valleys. The river Spey takes its rise from a small lake of the same name, in the western extremity of the parish; and, running in a north-east direction, intersects it throughout its whole length. It receives the Masie about the middle of the parish, and the Truime at its eastern extremity: both of which rivers descend to it from the Grampians on the south. There are several other lakes, of which LOCH-LAGGAN [see next article] is the chief. Nearly in the middle of the parish is a rock, 300 feet of perpendicular height. The area on the summit, 500 by 250 feet, is of difficult access, exhibiting considerable remains of a fortification; the walls are about 9 feet thick, and built on both sides with flag-stones without mortar. Population, in 1801, 1,333; in 1831, 1,196. Houses 235. Assessed property, in 1815, £4,706.—This parish is in the presbytery of Abertarff, and synod of Glenelg. Patron, the Duke of Richmond. Stipend £158 6s. 7d.; glebe £14. Schoolmaster's salary £34 4s. 4½d.

LAGGAN (Loch), a loch in the above parish; about 9 miles in length, and from 1 to 2 miles in breadth. It is emptied at its western extremity by the Spean, which, flowing through Glenspean, joins the Lochy, near where that stream leaves its parent-lake. Although far inferior in point of picturesque beauty to Loch-Arkeg, Loch-Laggan, among the Inverness-shire lakes, is a beautiful expanse of water; and the surrounding mountains are not deficient either in variety of outline, or in grandeur of form. It was but little known, however, till about twenty years ago, when the opening of the Great Highland road from the east to Fort-William, afforded an easy access to its shores. As tourists, however, now mostly take advantage of the steam-boats on the Caledonian canal in crossing from the east to the western coast, it is likely again to be less visited than its beauty and its traditions deserve. Loch-Laggan is fed by numberless mountain-torrents, the largest of which, the Paettag, or Pattack, brings down with it the drainage of a large tract of country extending as far as the borders of Rannoch in Perthshire. Tradition has been busy with Loch-Laggan and its shores, as it has been with almost every lake or mountain in the Highlands. In early ages its beauty, or the game with which its mountains abounded, attracted royalty. "Fergus, the first of our kings," long prior to the time when the Castle of Inverlochy became a royal residence, made this lake and its mountains the scene of his amusements. A well-known spot on the southern shore of the lake is still called *Ardmherigie*, or 'the Height of Fergus.' Two of the islands in the lake, by their names confirm the tradition. One of them is *Eilan-na-Righ*, or 'the King's island,' and still exhibits remains of rude masonry; the other *Eilan-na-Conn*, or 'the Island of Dogs,' is supposed to have been the place where the king kept those necessary assistants in the chase. The aboriginal natives of this place, however, the red deer, are now almost entirely banished, and sheep have supplanted, in modern times, the objects of King Fergus' pleasure. Still, however, a few straggling individuals of this magnificent animal may be found occasionally venturing upon a stolen visit to their early haunts. Not long ago the remains of no less than six of these creatures were discovered at

the foot of an almost perpendicular precipice near the top of a mountain called Wester Bencan, while a little way from them lay the bones of a dog which had pursued them over the rocks. At the east end of Loch-Laggan stand the remains of an old church dedicated to St. Kenneth. The greater part of the walls of this venerable edifice were still standing at the date of the Old Statistical Account. It is surrounded by a hurrying-ground, which is still more used than any other.

LAGLEY. See FERGUS (St.).

LAIGHWOOD, a harony in the parish of Clunie, Perthshire; the property of the Athol family.

LAIRG, or LARIG, a parish in Sutherlandshire; bounded on the north by Farr; on the east by Rogart; on the south by Criech; and on the west by Assynt and Edderachylis. Loch-Suir intersects the parish throughout nearly its whole extent: see that article. There are several small lakes, and five rapid streams. This district is hilly and barren; and is now almost wholly turned into sheep-walks. There is a good deal of wood, particularly birch. Population, in 1801, 1,209; in 1831, 1,045. Houses, 203. Assessed property £2,891.—This parish is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend £166 13s.; glebe £13. Schoolmaster's salary £34 4s. 4½d.

LAMBA, a small island of Shetland, on the north-east coast of the mainland, in the parish of North-maven.

LAMBERTON, a suppressed parish conterminous with the liberties of Berwick, and now annexed to Mordington, Berwickshire. The church stood on an eminence 3 miles north of Berwick, on the road to Eyemouth and  $\frac{1}{4}$  of a mile east of the road to Edinburgh. The sight is still marked by part of the ruin of the outer walls, and is the hurrying-place of the family of Renton of Lamherton. The marriage treaty of the Princess Margaret of England with James IV. of Scotland stipulated that she should, without any expense to the bridegroom, be delivered to the Scottish king's commissioners at Lamherton church. She is said by tradition to have been married here, but really was espoused at Windsor, and carried to the king at Dalkeith. In 1517 she returned to Lamherton kirk a widowed Queen. In 1573 a convention, which led to the siege of Edinburgh-castle, was made at the church between Lord Ruthven, and Sir William Durie, the marshal of Berwick. The parish of Lamherton was small, and anciently belonged to the monks of Coldingham. After the Reformation it was annexed to Ayton; and in 1650 it was disjoined thence, and united in the kindredly small Mordington. Lamherton toll-harr, for some time, vied in the east with Gretna to the west, as a place of inglorious espousals between runaway couples from England.

LAMBHOLME. See HOLME-SOUND.

LAMERTON. See LAMBERTON.

LAMINGTON, a parish in the upper ward of Lanarkshire, comprehending the two old parishes of Lamington, or Lanhinstoun, and of Wandel or Hart-side. On the north it is bounded by Wisten and Symington; on the west by Crawfordjohn; on the south by Crawford; and on the east by Culter. The parish is situated on the east bank of the Clyde, and bordering on it, and extends nearly 9 miles in length, by about 4 in breadth. Its form resembles a rectangle or oblong figure, whose opposite sides are equal. It contains about 11,000 imperial acres, or 21.75 square miles. There are some holms of fertile land in the parish; but its general characteristics are those of a cold and mountainous, though healthy, district, as may be known from the fact, that some

of it rises to an elevation of 1,400 feet above the level of the sea. The superficies contains every variety of soil, though none of it is remarkable for richness. A post-office was established in the small village of Lamington in 1839; but as the runner only goes between it and Biggar three times a-week, the latter may still be considered the principal post and market town of the district. By a charter obtained from Charles I., by the interest of Sir William Baillie, Lamington was erected into a weekly market-town, with the privilege of holding two fairs in the year; but these soon fell into decay from natural causes; and as they have been long abandoned, the principal business of the inhabitants is now transacted at Biggar. The parish has good facilities of accommodation, the turprike road from Biggar to Dumfries passing through it, and the English mail from Glasgow passing twice a-day at a point only 6 miles distant. The village is distant about 12 miles from Lanark, the county-town, 33 from Edinburgh, and 37 from Glasgow. It is said—though not upon the most accurate grounds—that the farm of Coldchapel in Wandel is equidistant from the sea-ports of Annan, Ayr, Greenock, and Leith; “so that,” as the Old Statistical Account says, “this parish may be reckoned in the centre or heart of the country.” There are ten burns or rivulets in the two baronies, though only worthy of note from the beauty which they lend to the landscape of this otherwise bleak district, and the excellent trout-fishing which they occasionally afford. Population, in 1801, 375; in 1811, 356; in 1821, 359; in 1831, 382; and in 1841, 358; with 79 inhabited houses. The decrease of population, since 1831, is satisfactorily accounted for by the fact, that the small pendicles have been generally thrown into large farms, and of course they do not afford employment to so many persons, as when the principle of subdivision was carried to a great and profitless extent. Assessed property £3,335.—The parish is situated in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patrons, Lord Douglas, and Mr. Baillie of Lamington, who present alternately. Stipend £120 10s. 8d.; glebe £15 10s. The church is situated on the confines of the two old parishes, and though it has been more than once repaired, part of it is of great antiquity. The ‘cutty stool,’ or stool of repentance, remained in this kirk longer, perhaps, than in any other in Scotland, and was only removed in 1828. The ‘Jouggs’ also—which consisted of an iron collar attached by a chain to a staple in the wall, and in which the necks of those who had been guilty of crime were enclosed, while they remained for hours doing penance before the gaze of the people—were but recently removed. The manse was built in 1822. Lamington and Wandel were united into one parish in the 17th century; and it is recorded, that in 1642, when a vacancy of the combined charge took place, a most violent quarrel arose between the Earl of Angus and Baillie of Lamington, as to which of them should enjoy the patronage of the charge. Both presented different persons to it; but after a long litigation before the presbytery and General Assembly, the latter favoured the claims of Mr. Andrew M’Ghie, the presentee of the Earl of Angus, and ordained him to be settled. This was resisted by the Lamington family, and the church record of the time bears, that “when Mr. Andrew M’Ghie offered to preach, he was barred by the Ladie Lamingtone and some other women, who possessed the pulpit in a tumultuous and disorderly way; and she declared that no dog of the house of Douglas should ever bark there.” For this outrage, this said ‘Ladie Lamingtone,’ and other delinquents, were imprisoned in the tolbooth of Edinburgh, and her husband, Sir William Baillie, was fined in 1,000

marks. The right of patronage caused many a strife between these families afterwards, and it was only settled by the court-of-session in 1821, after a vacancy of five years, when Lord Douglas and Mr. Baillie of Lamington were declared to be the joint patrons, with the right to present alternately. There were formerly two schools in the parish;—one in Lamington, and the other in Wandel; but there is now only one, situated in the village of the former name. The salary is £25 per annum, with £10 12s. of school-fees. There is little of historical interest attaching to this parish. During the reign of David II. the barony of Lamington passed into the family of Sir William Baillie, who obtained a charter for it from that king; and his descendants have possessed it up to the present time. In the Appendix to Nisbet’s Heraldry, it is stated in the account of this family, that the celebrated Sir William Wallace acquired the estate of Lamington by marrying an heiress, surnamed Broadfoot; and that Sir William Baillie obtained it by marrying the eldest daughter and heiress of Wallace. This statement, however, is not supported by any authentic authority, and is undoubtedly incorrect. Sir William Wallace left no legitimate offspring, but his natural daughter is said to have married Sir William Baillie of Boprig, the progenitor of the Baillies of Lamington. Female heirs have often held this estate, but the name has always been assumed by the gentlemen whom they have married, and thus it still remains in the family and name of the Baillies. The barony of Wandel belonged originally to a family named Gartlin, or Jardine, the predecessors of the Jardines of Applegurth in Dumfries-shire; but in the reign of Charles I. it passed from them to the family of Douglas, in whom it still remains, being now held by Lord Douglas. Thus there are only two proprietors in the united parishes of Lamington and Wandel.—There is a Roman camp at Whitehill near Culter, at one end of Lamington; and at the other end in Wandel, at Cold chapel, there are two Roman camps. At the foot of a hill in the same neighbourhood, there is a place called Roh’s bog, which obtained its name from the exercise of a stratagem, similar to that which assisted Bruce to achieve the victory of Bannockburn. In the time of the wars between England and Scotland, a part of the English troopers had to pass by this route, and as the bog had previously been covered with rushes by the Scotch, the former, taking it for solid footing, passed in at full speed, and there perished. The stratagem was ascribed to Rob, one of the commanders of the Scottish army; and the place derived its name from him. On one of the hills above Wandel-mill, a place is still pointed out as Wallace’s camp, from the patriot having encamped here at the time he was making the effort to relieve his country from the yoke of England. There are no ruins of any note in the parish. The castle or tower of Lamington—which was a splendid building of the olden time, and of unknown antiquity—remained entire till about 60 years since, when an ignorant factor demolished it for the purpose of erecting farm-houses, byres, and stables, from the wreck of walls which had stood the storm and sunshine of 600 years. It is only fair to state, that Lady Ross Baillie, the then proprietrix, was not aware of the work of demolition, until it had gone too far to be remedied.

LAMLASH, an excellent harbour, on the south-east side of the island of Arran, where vessels of any size, and almost in any number, can safely lie at anchor. It is sheltered from the sea by the Holy Isle, which bears 22 miles south  $\frac{1}{2}$  west from Girvan; 15 south-south-east from Ayr; and 7 north-east  $\frac{2}{3}$  east from Cumbræ light. On each side of the Holy Isle there is a good entrance into the bay.

A rock with only 8 feet water on it at low springs, lies about a fourth of the way across the southern entrance, off Kingscross point. There is a small village of the same name at the bottom of the bay. See articles, ARRAN and KILBRIDE.

**LAMMERMOOR-HILLS**, a broad range of moorish heights, stretching eastward from the vale of Gala-water, in the south-east extremity of Mid-Lothian, to the German ocean at the promontories of Fast-castle, Ernsleuch, and St. Abb's-head, in the parish of Coldingham, Berwickshire. From the middle of the lofty mountain-range which begins at Cheviot in Northumberland, and, passing into Scotland, runs quite across it to Lochryan,—from the most elevated part of it, called the Louthers or the Hartfell heights, at the meeting point of the counties of Dumfries, Lanark, and Peebles, a less lofty and less remarkable range goes off north-eastward, and tumultuously rolls across Peebles-shire to the vale of the Gala, and, hut for being cloven or ploughed through by this vale, would, under the name of the Lammermoor-hills, be continuous to the sea. The Lammermoors all lie within East-Lothian and Berwickshire; commencing at their extreme western limit, forming, for two-thirds of their extent, a southern screen, or belt of uplands to Mid-Lothian, and constituting—if the Lammermoor part of Lauderdale be included—nearly one-half of Berwickshire. The range forms, with the loftier and commanding chain of the Cheviots and the Louthers, whence it diverges, the vast triangular basin of the Tweed,—shuts out from the Ochil-hills a prospect of the Cheviot range,—and overlooks, stretching away from its north base, the grand expanse of the great body of the Scottish Lowlands, till they are pent up by the stupendous and seemingly impenetrable barrier of the far-extending and thousand-summited Grampians. The Lammermoors are, in themselves, an extensive curvature of, for the most part, wild, cheerless, unsightly heights,—nowhere bold and imposing in aspect, and often subsiding into low rolling table-lands, of bleak moor. They were at one period clothed with forest, and must then have been as heaving to the traveller as grandly sylvan in their vast contribution to the landscape. They still have natural woods hanging on some of their steeples, and, in such localities, are warmed out of their chilliness of aspect; but over their summits, and down their higher slopes, they are almost everywhere nakedly dressed in heath. Yet lovers of pastoral seclusion may find pleasure in gazing on the great flocks of sheep which tenant their higher grounds; while stirring agriculturists will look with glee on the considerable ascents which have been made by the plough on their lower declivities. The soil in nearly all the upper parts is a light peat mould; and even in some of the lower parts—as in the parish of Westruther—it is a swampy moss. But elsewhere the prevailing peat is mixed with sand and clay, or gives place to comparatively kindly soil; and in the vales and lower slopes, irrigated by the numerous streams which are collected on the broad ridge, and coming trotingly to the plains, are belts and expanses of fertility, and agricultural, as well as scenic, beauty. Primary micaceous schist composes the entire range, not only of the Lammermoors, but of the heights which continue it through Peeblesshire, till it joins the metalliferous mountains about the sources of the Clyde. Lammerlaw, which rises in the parish of Lauder, and gives name to the whole range, has an altitude of 1,500 feet. Among other chief or remarkable summits, according to the measurements of Blackadder in his survey of Berwickshire, Criblaw has an elevation of 1,615 feet; Clint-hill, 1,544; Tippet-knowes, 1,323; Manslaughter-law, 1,273;

Twinlaw-hill, 1,260; Earlston-hill, 1,200; Great Darrington-law, 1,145; Ayrhouse-hill, 1,054; Bemsides-hill, 1,011; and Cockhurn-law, 912: see BERWICKSHIRE.

**LANARK**, a parish in the Upper Ward of the county of the same name, and situated nearly in the centre of that shire. It lies along the eastern bank of the Clyde, which divides it from Pittenain and Carmichael on the south, and from Lesmahago on the west. Carluke bounds it on the north, and Carstairs on the east. It is of an irregular form, is fully 6 miles in length, and varies from 3 to 5 in breadth. With the exception of the precipitous and highly romantic banks of the Clyde and the Mouse, the land of the parish generally consists of an elevated level, the highest parts being the moors of Lanark and Lee, which are about 760 feet above the sea-level. There are no hills in the parish which deserve the name. The soil, which lies upon a substratum of old red sandstone, of different degrees of thickness, is very variable in quality. The orchard husbandry is practised in this parish, but not extensively; and terms of late years have been so unremunerating, that this branch of industry is more likely to decline in future than to increase. The total amount of produce in the parish has been estimated at about £25,000 per annum. The country is beautifully diversified with timber, consisting both of old natural wood, and of modern plantation; and in the former respect the estates of Lee, Bonnington, and Cleghorn, are richly ornamented. The banks, too, of the Clyde and Mouse, are beautifully fringed with natural wood and plantation. In the vicinity of the mansion of Lee, are two trees, which are celebrated in the district alike for their age and size. The first is a majestic oak, understood to be one of the few remains of the olden Caledonian forest; it is called the *Pease tree*, is 60 feet in height, 30 in circumference, and though it still continues to bourgeon and blossom, the effects of time have carved out such a hollow in the trunk, that ten persons have been able to squeeze themselves into the cavity. The other is a splendid larch, whose branches tower to the height of 100 feet, with a circumference of trunk of 18 feet, and is altogether one of the most gigantic specimens of the kind in the country. Regarding the salubrity of Lanark, the following statement, made half-a-century ago by Mr. William Loekhart of Baronald, in the Old Statistical Account, is still perfectly applicable. He says:—“This parish, from its high, dry, and airy situation, is perhaps as healthy a one as in Scotland. Being situated in the centre of the island, it is equally free from the eastern fogs and the violence of the western rains, so that the air is always pure and clear. The climate, although drier than about Glasgow, or even Hamilton, is certainly somewhat wetter than about Edinburgh, but is more than compensated by the absence of the eastern fogs, so disagreeable in the neighbourhood of that city. Spring droughts frequently retard the crops very considerably, and sometimes spring frosts. Heavy rains in July and August, which are pretty common here, have a similar effect in keeping back the harvest; but in general the crops are earlier than in the neighbouring parishes, and even more so than those lying much lower and further down the Clyde.” Although in the immediate vicinity of the great western coal-field, Lanark may be said to be entirely destitute of the more valuable kind of minerals. There is a post-office situated in the town of Lanark, and the parish enjoys the most ample means of communication, possessing 15 miles of turnpike-road. There are stage-coaches to and from Edinburgh and Glasgow daily in summer, and less frequently in winter. There are here two bridges over the Clyde, one of them called the Old

bridge, about a mile below the town, and a very middling structure, built in the 17th century; the other called the Hyndford bridge, fully 2 miles from the town, is a modern erection of great lightness and elegance. There are five bridges over the Mouse; and one of these, the Cartlane bridge, which was constructed about 18 years ago by the celebrated Telford, is remarkable for its beauty and boldness of design. It has three arches, of 52 feet span each; the height from the channel of the stream to the parapet is 125 feet, and to the spring of the arch it is 84. The parish contains the ancient royal burgh of LANARK, and the large and thriving manufacturing village of NEW-LANARK, which will be found noticed under their respective heads. The gross population of the parish was, in 1801, 4,692; in 1811, 6,067; in 1821, 7,085; in 1831, 7,672; and in 1841, 7,666. Assessed property, £9,715. Houses, in 1831, 824.

This parish contains some of the most beautiful objects of river scenery in the kingdom, viz., the falls of Bonnington, Corra Linn, and Stonehyres, which, when "summer days are prime," court and receive the visits of tourists from many lands; but for a full description of these, the reader is referred to the article CLYDE. Cartland Crags form a very beautiful feature in the natural phenomena of the parish of Lanark, and are nearly as much visited by tourists as the falls themselves: see CARTLAND CRAGS. A few years ago, the elegant bridge already noticed, of three arches, was erected, and spans the chasin at its lower extremity. The architecture is entirely in keeping with the scenery around, and adds the ornament of art to the majesty and beauty of nature. The parish is situated in the presbytery of Lanark, and synd of Glasgow and Ayr. Patron, the Crown. Further particulars regarding its ecclesiastical state will be found in the next article.

There are few historical details connected with the parish which do not more properly belong to the town. The old Roman road passes through it, and the remains of a Roman station are still visible in a park in the neighbourhood of Cleghorn-house. The ingenious General Roy conceives that this camp was the work of Agricola. It extended 600 yards in length, by 420 in breadth, and would afford accommodation for two legions on the Polybian establishment, or 10,500 men. On Lanark moor, on the side of the Mouse opposite to Cleghorn, another small exploratory camp of the Romans is situated. The great Roman road alluded to, and well-known by the name of Watling-street, traverses this moor; from thence it passes the Mouse a little to the east of Cleghorn bridge, then through the enclosures at Cleghorn, leaving Agricola's camp on the right, and from thence by Collylaw, Kildadzow, Coldstream, and Zuilshields, to Balstane, near Carluke. About a mile north of the burgh, and perched upon the very brink of Cartlane Craigs, 200 feet above the bed of the stream, are seen the remains of a curious old stronghold, called by some Castledykes, and by others the castle of the Quaw. Nothing is known of the date of its erection, or of its object. The picturesque ruins of a lofty tower occupy a prominent situation on the banks of the Mouse. It is called Castlehill, and the Lockharts of Camhusnethan take their title from it. The most ancient families in the parish are those of Lee and Cleghorn; but the names of many eminent and remarkable men have been associated with it. Sir William Wallace resided in it, after his marriage with the heiress of Lamington. The Rosses of Lamington are the representatives, in the female line, of this olden family, and in their mansion-house at Bonnington, in the parish of Lanark, are preserved some interesting relics of the patriot, which were brought from the old castle of Lamington. There is a por-

trait of the hero, which is avcrred by tradition to be a very correct likeness. There is also a heavy oaken seat, which has been known for many generations by the name of 'Wallace's chair'; and the large posts which compose its frame-work have a sufficiently ancient appearance so far as to justify the tradition. The third relic is an ancient drinking cup, composed of oak, with a silver hoop round the rim, and one of the oldest known to exist in the country. It is called 'Wallace's quich.'\* Sir William Lockhart of Lee, a great statesman and general under the Protector Cromwell, and under Charles II., and who was at the same time Lord-justice-clerk, was born in the parish, and received the rudiments of his education in Lanark school. Dr. William Smellie, the celebrated accoucheur, and author of the treatise on Midwifery, was born in the neighbouring parish of Lesmahago, hut educated at Lanark; and the learned and ingenious General Roy, who was born in the neighbouring parish of Carluke, was also educated here. Dr. Smellie hequeathed to the school his valuable library, with £200 to provide a room for its accommodation. William Lithgow, the noted traveller, was born in the parish, and set out from it in early life, returning to it after a lapse of many years, frightfully maimed and disfigured in body, and shattered in constitution, the result of cruel treatment in those foreign countries in which he had travelled. He died here, and was buried in Lanark churchyard, hut no vestige of his tomb can now be traced. Robert Macqueen, the late Lord-justice-clerk of Scotland, better remembered for brutality and heartlessness on the bench than for his ability, was born, and received his early education in the parish. He took his senatorial title of Lord Braxfield from his estate of that name in the neighbourhood of Lanark. The estate of Jarviswood, the patrimonial inheritance of Baillie the martyr, is situated here, and it is recorded that he found concealment in a recess in the mansion-house from the ruthless soldiery who pursued him. Sir John Lockhart Ross, so justly distinguished for his naval exploits, was born in Carstairs, but became connected with this parish by his marriage with Lady Ross Baillie, by whom he acquired the charming property of Bonnington. He built the present mansion-house, and frequently resided in it. The pious David Dale, who deserves an honourable niche in the historical annals of the parish, from his having founded the village and cotton manufactory of New-Lanark. He is still spoken of with much affection by the elders of the village. His son-in-law, Robert Owen, the founder of the new code called the "Social System," is also well-known in the parish, from his having been the manager and part proprietor of the New-Lanark works, which he finally left in 1827, not, however, until he had made an abortive attempt to introduce the practice of that system which he promulgated for the renovation of society.

The celebrated *Lee Penny* is deposited at Lee-house, a fine old mansion, modernized within the last few years in the castellated form, and the seat of Sir Norman Macdonald Lockhart, haronet, the representative of a long and illustrious line of ancestors. In the olden time, this stone or penny was held in great repute for the medicinal virtues which were attributed to it, not only for healing the diseases of hestial, hut for its effects in restoring the human species

\* The silver hoop alluded to bears the following inscription:

At Torwood I was cut from that known tree,  
Where Wallace from warres toys took sanctuarie,  
For Mar's sonnes I'm only now made fit,  
When with the sonnes of Baeclus thy shall sit.

Sir Walter Scott mentions having examined the roots of this celebrated tree in early life. They were all that then remained.

from disease and danger. This ancient relic is a small triangularly shaped stone, of what kind lapidaries are unable to determine, and is set in a silver coin, which from the appearance of a cross upon it, is supposed to be a shilling of Edward I. The way of applying the remedy was by drawing the stone once round and dipping it three times in a goblet of water, of which the patient drank, or applied the liquid to the wound. This process was known by the phrase of *three dips and a swail*. This talisman has been in the family of the Lockharts of Lee ever since the days of Robert the Bruce, and according to well-authenticated tradition it came into their possession in the following manner:—Sir Simon Locard of Lee accompanied the good Sir James Douglas in his mission to deposit the heart of the Bruce in the Holy Land; and to defray his expenses, a deed still in existence, dated 1323, shows that he borrowed a sum of money from Sir William de Lindsay, prior of Ayre, to whom he gave an annuity bond for £10 over his lands of Lee. From Sir Simon's services in this mission, the name of Locard was changed to Lockheart or Lockhart, and the armorial bearings of the family show a heart within a lock, and the motto, *Corda serata pando*. Although the good Sir James Douglas was killed fighting with the infidels in Spain, Sir Simon made his way to the Holy Land, and in the course of his encounters there took prisoner a Saracen chief, for whose liberty a large sum of money was offered by his lady. In counting out the amount of the ransom-money, the lady dropped this gem from amongst it, and evincing great eagerness to pick it up, the Scottish knight made inquiry regarding it, and reluctantly these were explained, upon which Sir Simon declared that it must form part of the ransom, otherwise the Saracen chief would remain in his fetters. Her affection for her husband being stronger than her regard for the talisman, the lady yielded it up, and it has ever since remained the property of the Lockhart family. The house of Lee used often to be resorted to by the diseased to be healed by its virtues, and more than once the Lee penny has been lent to individuals or public bodies for the same purpose, but always for a short period, and upon due security being given for its safe return. In the reign of Charles I., when the plague was raging in Newcastle, the corporation obtained the loan of the Lee penny, and gave a bond of £6,000 in security. Its effects seem to have been extremely beneficial, for the corporation were disposed to forfeit the bond, and retain the stone; but the laird of Lee would not agree to this appropriation, and his penny was accordingly returned. On another occasion, about the beginning of last century, it was applied for by the husband of a Lady Baird of Saughtonhill, near Edinburgh, and was exhibited in her case with great efficacy. The lady had been bitten by a rabid dog, and symptoms of hydrophobia are said to have commenced before the magic stone arrived; but by drinking the water in which it had been dipped, and by hating her in it, Lady Baird was completely restored! The coin, to which a small silver chain is attached, is preserved in a gold box, the gift of the Empress Maria Theresa to the father of the celebrated Count Lockhart. The Lee penny has been beautifully introduced by Sir Walter Scott in his novel of 'The Talisman.' Up to a very late period, the supposed virtues of this ancient relic were occasionally called into requisition, especially by the peasantry, and its effects were often those which have been ascribed to it; but it is now well known that where a cure was performed the patient was more indebted for it to his imagination than to the Lee penny.\*

\* The using of the Lee penny was at one time the subject of

LANARK, a royal burgh, and capital of the parish and of the upper ward of the county of the same name, is beautifully situated upon a rising slope of ground, about 300 feet above the level of the Clyde, adjacent to the town, and about 650 feet above the level of the same river at Glasgow. It is situated in 55° 34' of N. latitude, and 3° 5' of W. longitude. It is nearly in the centre of the Lowlands, being 25 miles distant from Glasgow, 31 from Edinburgh, 35 from Stirling, and 47 from Ayr. It is one of the most ancient burghs in Scotland, and was in the days of our fathers a place of much greater importance than at the present time, as may be learned from the fact of which we are informed by Buchanan, that, in 978, Kenneth II. held a parliament or assembly at Lanark, which is the first mentioned in history. At a very early date, but when no record exists to tell, it was accorded the importance of a royal town, and Malcolm IV., in granting a toft in Lanark, mentions it as *in burgo suo*; and his successor, William, speaks of it in the same terms. According to the best authority, however, Lanark was erected into a royal burgh as early as the reign of Robert I., who, in the fourth year of his reign, granted it a charter, which is confirmed by the latest charter in favour of the burgh, granted by Charles I. The burgh had obtained charters from monarchs subsequent to Robert, containing special privileges, and these are also confirmed in the charter of Charles I. In the reign of David II., Lanark had attained such importance that it was enacted by a parliament held at Perth in 1348, that while the burghs of Berwick and Roxburgh continued in the possession of the English, the burghs of Lanark and Lullithgow should be admitted in their place, as members of the court of four burghs. The charter of Charles I. is not now in existence, but the instrument of sasine is among the records of the town. From the precept of sasine the charter appears to have conveyed or confirmed to the burgh large landed property, which is particularly described. A considerable portion of this property is alienated, but a large portion still remains. By the charter—besides the usual privileges of a royal burgh in regard to fairs and customs—there is granted a right of sheriffship within the territory of the burgh. There is also specially renewed a grant of Queen Mary made to the royal burghs, and each of them, "*Pro auxilio suorum burgorum et sustentatione eorum ministrorum, et pauperum,*" of the rents, altars, and chapels within the liberties of the burghs. Further, there are granted to the provost, bailies, councillors, and community of the burgh certain lands, gardens,

inquiry before the church-courts, and the following extract from the minutes of the period may be interesting:—

"Copy of an act of the Synode and Assembly apud Glasgow, the 25th of October, Synode session 2d.

"Quhill daye amongst the referies of the brethern of the ministrie of Lanark, it was propouit to the Synode that Gawen Hammitoune of Raploch had preferit ane complaint before them against Sir Thomas Lockhart of Lee, anent the superstitious using of ane stone, set in silver, for the curing of deseased cattel, quilk the said Gawen affirmed could not be lawfullie used, and that they had deterit to give any desisionie therein till the advise of the Assemlie might be heard concerning the same. The Assemlie having inquerit of the maner of using therof, and particularely understood be examinatioone of the said laird of Lee and otherwise, that the custom is onlie to cast the stone in some water, and give the deseased cattel therof to drink, and yt the same is done wt-out using onie wordes, such as charmers use in their unlawfol prattises—and considering that in nature there are monie things seint to work strange effect, qud no humane witt can give a reason, it having pleasit God to give unto stones and herbes a speciall vertues for the healing of mony infirmities in man and beast,—and advises the brethern to surcease their process, as qu-in they perceive no ground of offence—and admonishes the said Laird of Lee in the using of the said stone, to tak heed it be usit heir after wt the least scandall that possible may be.—Extract out of the bookes of the Assemlie holden at Glasgow, and subscribed by their clerk at their command.—Mr. Robert Young, clerk to the Assemlie at Glasgow."

houses, tofts, &c. within the burgh, which had belonged to the preaching friars, and certain altarages, named and described, with the right and patronage and presentation of the hospital of St. Leonard, for the benefit of the poor within the burgh. Lanark, too, lays claim to having been at one time a royal residence, though it is long since all traces of its site have passed away. Upon a small hill between the town and the river, the royal castle is said to have stood; and that such did exist within the precincts of the town is not to be doubted, from the fact of William the Lion having dated from it, in 1197, the charter to the burgh of Ayr; and further, history informs us that the castle or castelany of Lanark was mortgaged as part of the security for the jointure of the niece of Philip of France in the marriage negotiated between her and the son and heir of John Balliol. We also learn that, in the 13th century, the stronghold of Lanark was in the possession of the English. It is long, however, since Lanark has ceased to be regarded otherwise than as a pretty, quiet, healthful, rural town, attracting, in summer, many tourists, from its proximity to the romantic Falls of Clyde, and whose inhabitants are supported principally by a small share of manufactures, and the trade of the surrounding country population.

It consists principally of one main line of street, bearing respectively the names of the High-street and Westport, with several lanes diverging on either side, and the parish-church occupying a prominent position nearly in the centre of the town, in the niche over the eastern door of which is placed a colossal statue of the patriot Wallace, cut by the sculptor Forrest. Although they may be snug enough within, there are few of the houses which have any pretensions to elegance of appearance without, and many of them are still covered with thatch, according to the custom generally prevalent in the old Scottish towns in the last century. Many of the shops in the principal street, however, have a polished and tasteful appearance; but the most tasteful erections within it are, the Clydesdale hotel, the principal inn, and the property of a company of shareholders; the beautiful building erected a few years ago by the Commercial bank for the accommodation of their branch here; and the county-buildings, containing the county-offices in front, and the jail for the upper ward behind. The latter is a very chaste and graceful structure, built in the Grecian style, the foundation-stone of which was laid in March, 1834, and the erection completed in 1836. Previous to this, the old prison of Lanark excited the derision of every one, from its being such an exact representation of a small Scotch burghal prison of the olden time, where neither criminal nor debtor was found to remain longer within its walls than suited their own convenience. The town is lighted with gas prepared at a work erected in 1832, at a place called Steel's cross in the western outskirts of the town. The principal industrial occupation is handloom weaving, at which about 800 persons are employed within the town, and when this is mentioned, it may be at the same time understood that their circumstances are of the poorest kind, from the recent painful depression of this once flourishing and vigorous, but now wretchedly depressed branch of trade. The writer of the New Statistical Account says: "The misery they have suffered has had the unhappy, but too common effect of plunging some of them [the weavers] into careless and dissipated habits; but the majority are well-behaved and intelligent men, and bear their hardships with commendable patience." As a proof of the downhill course of this unfortunate profession, he adds the following facts: "On Martinmas fair day, 1812, a

general strike took place and continued for nine weeks, because a certain description of work, 1200 pulicates, fell from 8s. to 6s. per yard. For the last three years the same description of work has been, upon an average, at 1½d. Accustomed at the former period to better days, the weaver believed that 6d. was too low a rate to afford him a livelihood, and it is only because it came upon them gradually that they have been able to survive the present depression. Forced by the pressure of immediate wants, they are accustomed to put their children of both sexes upon the loom at the early age of nine or twelve, by which means their numbers are continually augmenting, and the evil is increased." Shoemaking is a much more thriving branch of business, at which about 100 persons are engaged in the town, chiefly for the supply of the Glasgow market, and a few are also made for foreign export. There are three breweries, in which business is done to some extent; and there are also three mills, two of them for grinding flour, chiefly for the supply of the town and neighbourhood. Upwards of 100 females are employed in flowering or embroidering lace, for which the remuneration is very small; but nevertheless it contributes materially to enable the humbler classes to eke out a scanty subsistence. There are none of the other trades sufficiently extensive, or characteristic of the place, to require notice. There are two markets held weekly in the town, on Tuesdays and Saturdays, and there are seven fairs annually, for the sale of black cattle, lambs, and horses. By the census returns of 1841, the population of the burgh of Lanark, exclusive of the parish, is 4,818.

The inhabitants are in general an orderly and most respectable class of people, and from the excellence of the seminaries amongst them, their mental status is much more elevated than their worldly position. Annually, numbers of the younger inhabitants hive off to Glasgow and elsewhere in search of a wider and more remunerative field for their industry, and in their new professions it has been generally found that they exercise all the probity and industry of a semi-rural life. Within the town there is a savings' bank established in 1815, religious societies, benevolent societies, and a library. The amusements of the inhabitants are generally of a very innocent and primitive kind, and in cases where crime has been perpetrated within the town or parish, it most generally happens that the guilty party is not a native. These amusements consist of following the old custom of riding the marches, which is done annually upon the day after Whitsunday fair, by the magistrates, burgesses, and inhabitants generally. It is called here the Lanemar, Landsmark, or Langemark day, probably from the Saxon word *langemark*. At all events the custom is of Saxon origin, and is believed to have been established in Lanark in the reign of, or somewhat posterior to the reign of, Malcolm I. One of the march or boundary stones is placed within the channel of the river Mouse, and for the purpose of impressing the boundaries of the burgh on the minds of those who attend the procession for the first time, it is not unusual to duck them, or at least as many as will submit to the immersion, in the stream. The day is generally observed as a gala, and horse and foot races, with other rustic sports, are held on the moor. Until within these last thirty years, another great annual festivity in the town of Lanark, and which had been observed from time immemorial, was the Candlemas procession of the scholars of the grammar-school. On this occasion the youth who presented the teacher with the largest gratuity or offering was called the king, and upon the Saturday before Palm Sunday, he walked through the town surrounded by his guards

and other school-fellows, bearing large and small branches of a willow kind, ornamented with daffodils, mezerion, and hox tree.

The sheriff-substitute for the upper ward holds his court at Lanark, and here the member of parliament for the county is nominated, and the return made. The town itself, which is governed by a provost and bailies, aided by the council, joins with Falkirk, Hamilton, Airdrie, and Linlithgow, in choosing a hurch representative. According to the recent report of the Parliamentary commissioners, the property of the hurch amounted in gross value to £25,784 1s. 2d., consisting of lands, houses, a mill, feu-duties, a common of 500 acres, an extensive plantation, six shares in the Clydesdale hotel, &c.; and at the same period, in 1831, the yearly revenue amounted to £927 18s. 8½d. In 1839, it had increased to £1,158. At the time of the report the debt amounted to £8,027, and the commissioners do not give much credit to the parties under whose management it was contracted. It has almost all grown into existence since the beginning of the present century.\* Since that period, however, the affairs of the hurch have been placed under a more judicious management, and they have improved accordingly. For more than two centuries, the keeping of the weights and measures for Scotland was committed to the care of the town of Lanark. The old act of the 20th June, 1617, hears, "in respect that the keeping and outgiving of the weights of old to the hurrows and others, &c. was committed to the hurch of Lanark," the "care of the weights" should be again intrusted to it. These old national standards are still preserved, and bear the arms of the hurch, viz. a spread eagle with two heads. They were measured by Professor Rohison in 1790, and again a few years afterwards, for the purpose of adjusting the standards of Edinburgh. The pound weight was then discovered to have lost about 7 grains English troy, giving 7,613 grains instead of 7,620 grains, which it should have contained by the act of parliament. Even with this error, however, the Lanark standard was better ascertained than any in Europe, with the exception of that at Brussels. A new set of standard weights were transmitted from London to Lanark at the time of the Union, and are of very beautiful workmanship, hearing the following date: "Primo Maii Anno Dom. 1707.—A. R.—An. Regni VI." The act of 1826, by legalizing the Imperial standard, has superseded the old national weights committed to the keeping of Lanark, and they are now only retained as relics which the hurch would be sorry to part with.

The early ecclesiastical history of Lanark is not devoid of interest. The ancient parish-church was dedicated to Kentigern, the founder of the episcopate of Glasgow, and the patron saint; but it does not appear at what time, or by whom, it was erected, although it is known to have been in existence at the beginning of the 12th century. The large hell, which swung in it for centuries, and was afterwards removed to the present parochial church, had upon it three several dates, showing the various periods at which it had been refounded, one of them so far

back as 1110. This old church, the ruins of which, now sadly dilapidated, stand about a quarter of a mile south-east from the town, has been an elegant Gothic building of hewn stone, divided in the middle from end to end, by a wall supported upon pillars, forming five or six fine arches, and around it is the burial-ground and cemetery where the "rude forefathers" of the town and parish for many generations repose. From Blind Harry's Metrical history of the exploits of Sir William Wallace, it would appear that in these days this was the only church in the town; for in 1297, he makes his hero pass

"On from the kirk that was without the town."

This church, with its tithes and pertinents, was granted by David I. in 1150 to the monastery which he had previously founded at Dryburgh. At Cleghorn, in the same parish, there existed in the 12th century, a chapel, which the canons of Dryburgh claimed as belonging to the church of St. Kentigern at Lanark, and their right to it was affirmed by ecclesiastical commissioners appointed by the Pope to decide the question. This parish-church, with all its pertinents, &c. was retained by the canons of Dryburgh till the Reformation, and till then they enjoyed the rectorial revenues, a vicarage having been established for serving the cure. Besides the chapel at Cleghorn, there were various others in the parish. The Templars possessed some lands at East Nempflar, and erected a chapel there, the ruins of which recently stood about a mile and half north-west from the hurch. Within the town a chapel was dedicated to St. Nicholas, which at one time contained four different altars. One of these was dedicated to the Virgin, and called 'Our Lady's altar;' another was consecrated to the holy blood of our Saviour, and called the 'Haly hluid altar;' a third was dedicated to St. Catherine; and a fourth to St. Michael. About half-a-mile east from the town stood St. Leonard's hospital, in connexion with which a chapel was also founded, which served not only the hospital, but the people upon the estates which supported it. Several of these chapels were well-endowed; and among others it may be mentioned that Stephen Loekhart of Cleghorn, granted in mortmain the place of Clydesholm, with the profits arising from the passage-boat upon the Clyde, for the support of a chaplain at the altar of St. Catherine, in St. Nicholas chapel, at Lanark, and this grant was confirmed by the king in 1491. The lands attached to St. Leonard's were, after the Reformation, formed into a parish of the same name; but by act of parliament in 1609, St. Leonard's kirk, with the greater portion of the territory belonging to it, was incorporated with the parish of Lanark, and the edifice fell into ruins. Almost all the chapels in the parish having been ruined by the ferment of the Reformation, and the lands and tithes having passed into various hands, the old parish-church of St. Kentigern remained the principal, if not the only place of worship in the parish, after, however, having been stripped of all the relics of its former priests. In February, 1589-90, the presbytery taking this matter into consideration, resolved that "the kirk of Lanark should be removed from the auld place to a situation within the town;" but notwithstanding of this resolution, the kirk, or its ruins at least, still remain in the 'auld place;' and continued to be regarded as the parish-church till 1777, when the present edifice was built in the centre of the town. Before this period, however, the church of St. Kentigern had become ruinous, and the inhabitants of the town attended worship in the chapel of St. Nicholas, which had passed into the hands of the magistrates at the time of the

\* Mr. William Loekhart of Baronald, the compiler of the Old Statistical Account, gives the following curious remarks, and the result would prove, that whatever faults may be chargeable against the Lanark magistrates of former times, that of indebtedness the burgh good was not one of them. "The manners of the inhabitants," says he, "as to diet and drink, are considerably changed within these twenty years, which may be exemplified from the public entertainments of the magistrates. Formerly their debauch was a moderate meal, with a few bottles of ale or porter, and a dram or two; and in gala days a little punch. Now they have superb entertainments, with punch, port, and even claret."

Reformation. From the time of Charles II. till 1750, the patronage of the parish was claimed and exercised by the Lockharts of Lee; but about that time a contest took place concerning the right of patronage, which was now claimed not only by Lockhart of Lee but by the Crown, the town of Lanark, and Lockhart of Cloghorn. Presentees were simultaneously presented by the Crown, and the Laird of Lee, and as the populace favoured the claims of the Crown, some unruly tumults took place, and several of the rioters were tried by the court-of-justiciary, and punished. The question of the right of patronage came before the Court-of-session, which decided it in favour of Lockhart of Lee; but upon being appealed to the House of Lords, the decision of the lower court was reversed, and the patronage has since been exercised by the Crown. The parish-church, as has been stated, was built in 1777, and it underwent an extensive repair in 1834. At the period of its erection it was contracted that it should be seated for 2,300 sitters; that number, however, cannot be accommodated. The stipend, paid by 199 heritors, amounts to £305 8s. 10d.; glebe £15. Unappropriated teinds £585 1s. 2d. Anciently very elegant silver communion-cups were presented to the parish-church by the Laird of Lee; and Lady Ross Baillie also gifted to it a handsome baptismal basin, a clock, a pair of stoves, &c. Previous to the institution of a *quoad sacra* church and parish within the bounds of Lanark, a missionary in connection with the Establishment used generally to officiate at New Lanark.—The United Secession congregation was formed in 1791, in which year the church was built, to accommodate 690 sitters. The minister has £100 per annum, with a manse and garden.—The first Relief congregation was formed in 1794, and in the following year a church, which now accommodates 1,085 sitters, was built at an expense of more than £1,200. It has, however, been since repaired, and is considered to be worth £1,400. Stipend £150 per annum, with an advance of  $7\frac{1}{2}$  per cent. on every £100 of the congregational debt which is paid off.—The second Relief congregation was established in 1836, when a church, to accommodate about 800 persons, was built at an expense of about £1,000. Stipend £120 per annum.—The Original Burgher congregation was established about 1827; and the church, for the accommodation of 275 sitters, was built in 1829, at an expense of nearly £400.—An Old Independent congregation was established at New Lanark more than 50 years since, but the numbers are still, and have always been, inconsiderable.—There are altogether 12 schools in the parish, at which the ordinary branches are taught. Formerly the principal, or grammar-school of Lanark, enjoyed considerable reputation, and attracted scholars from parts far beyond the bounds of the parish, but although it has fallen off somewhat in this respect, it is still a most respectable and well-conducted seminary. The salary of the rector is £40 per annum, with about the same amount accruing from school-fees, and £20 annually arising from the office of session-clerk. The salary of the usher or assistant is £20. There are 28 hursaries connected with this school, of various degrees of value, but after the school-fees are paid, they may generally leave from £2 to £3 each for the benefit and support of the boys who enjoy them. The magistrates are the patrons. Nine of them were founded in 1648, by Mr. John Carmichael, commissary of Lanark, who mortgaged the lands of Batismains for their endowment. The others were endowed at various times by the family of Maudslie, one of the Earls of Hyndford, and a chamberlain named Thouson. A free-school for the education

of 50 poor children was founded in the town some years ago by a lady named Wilson, who mortgaged £1,200 for the purpose.

Lanark is celebrated in Scottish history, especially in the chronicles of Fordun and Blind Harry, as being the scene of the first exploits of the patriot Wallace. The accounts of this early part of his career are somewhat obscure; but the popular belief and tradition is, that the insolence and oppression of the English sheriff of Lanarkshire, William de Heselpe, having become insupportable, Wallace joined or instigated a rising of his countrymen, and, defeating the common enemy, put the obnoxious sheriff to death in the town of Lanark. The time of this occurrence is laid in 1297. Blind Harry, who enters fully into this detail, relates that Wallace having married a lady of the name of Braidfoot, the heiress of Lammington, lived with her privately at Lanark, and that while there a scuffle ensued in the street between Wallace and his friends and a body of Englishmen. The patriot, having been overpowered, fled, first to his own house and then to Cartlane Craigs, upon which the sheriff, Heselpe or Heselrig, seized his wife, and put her to death. In revenge for the deep injury he had sustained Wallace gathered a party of his friends, attacked Heselpe in the night, and killed him with 240 of his band. Tradition informs us that the house in which Wallace resided was at the head of the Castlegate, opposite the church; and that a private vaulted archway led from this house to Cartlane Craigs; but the truth of the latter tradition seems extremely questionable. In 1310 the garrison was delivered up to Robert Bruce, when the town was finally freed from the presence of the English. Lanark is next noticed in history in connection with the Covenanters, who, on 12th January, 1682, entered the town, and affixed a declaration to the market-cross, denouncing the king, Charles II., as perjured, excommunicating him, and renouncing their allegiance. For this bold deed the privy-council fined the town in 6,000 merks, and issued processes against the landed proprietors, for not having seized the insurgents, or prevented the indignity which they had offered to the King. William Hervie and some other persons were soon after executed for their participation in publishing the Lanark declaration, or for having been present at Bothwell brig. Hervie's grave is still pointed out in the churchyard.

Lanark gives the title of Earl to the noble house of Hamilton. William, the 2d Duke, who died of the wounds he received at the battle of Worcester, was created Earl of Lanark in 1639.

LANARK (New), a large and handsome manufacturing village, situated on the right bank of the Clyde, about a mile above the town, and in the parish of Lanark. It is the creation of the late philanthropic and enterprising David Dale, who, in 1784, fenced the site of the mills and the village, and a quantity of ground around them, from the late Lord-justice-clerk, Braxfield. At that time the spot was little more than a morass situated in a shelving dell, but the inventive founder soon saw that the site might be turned to great advantage by diverting the waters of the Clyde into a power for the moving of machinery. The first mill was begun in 1785, and a subterraneous passage of about 300 feet in length was hewn through a rocky mount for the purpose of an aqueduct.\* The height of the fall of water is 28

\* The Old Statistical Account says, "In September, 1785, while digging the open part of this aqueduct, there was found the skeleton of the *Bison scoticus*, or urus, described by Caesar, Eub. VI., which has been extinct in Scotland for above 300 years. The cores or fruts of the horns are still preserved, one in the College of Glasgow, and another in my possession [Mr. Lockhart of Barona]; the last, though not entire, is 2 feet in length, and next the head measures above 15 inches in circumference."

feet. In 1788 a second mill was built, and was nearly roofed in, when the first was totally consumed by an accidental fire, but it speedily rose from its ashes, and was rebuilt and ready for the machinery in 1789. Since then various extensions have been made, until it is now the most extensive cotton manufacturing establishment in the county of Lanark. About 1,400 of the inhabitants are employed directly in the mills, or as auxiliaries to them, and it seems to be a settled rule that no one shall set himself down in the village except he shall be connected with the mills. The factory, or factories, at New Lanark, are, perhaps, the most healthy in the kingdom. There is here none of the confined atmosphere and other disadvantages which belong to establishments of a similar kind erected within the crowded locality of a large manufacturing town; the situation is open and healthful, pleasant, from its beautiful situation on the Clyde, and the utmost attention is paid by the proprietors and managers to the cleanliness of the dwellings, and the well-being of the people. None of the children are allowed to enter the mills until they are ten years of age, and previous to this, and for two or three years after it, a species of compulsory though excellent system of education is enjoined by the proprietors upon the parents. The school, which is thus patronized by the company, is called the institution, and by its means New Lanark has escaped the stigma, which attaches to many other manufacturing communities, of permitting their youth to grow up in immorality and ignorance. The inhabitants, therefore, from this early judicious training, are, in general, an orderly, intelligent, and most creditable class of people, and although originally gathered from many different parts of the kingdom to found the new village, their national characteristics have been merged or amalgamated into a combination which has produced distinctive feelings and habits peculiarly their own. The majority of the present inhabitants are the descendants of the original settlers, collected from various parts of the Highlands. Although the result of founding this manufacturing colony has been very successful, Mr. Dale does not appear to have been at all fastidious in his selection of the early inhabitants, as may be learned from the following account, written in 1794:—"In 1791 a vessel carrying emigrants from the Isle of Skye to North America, was driven by stress of weather into Greenock, and about 200 were put ashore in a very destitute condition. Mr. Dale, whose humanity is ever awake, offered them immediate employment, which the greater hulk of them accepted. And soon after, with a view to prevent further emigration to America, he notified to the people of Argyleshire and the Isles the encouragement given to people at the cotton mills; and undertook to provide houses for 200 families in the course of 1792. These were all finished last summer (1793), and a considerable number of Highlanders have of late come to reside at New Lanark." [Old Statistical Account.]—Mr. Dale, as part proprietor and manager, was succeeded by his son-in-law, Mr. Robert Owen, whose visionary notions and projects for the regeneration of the social system of mankind have made his name too notorious in the kingdom. For a number of years he devoted much attention to the education of the children, and propounded several plans for the amelioration of the inhabitants, which were at first regarded with a kindly eye, but have since been deservedly scouted as incompatible with the well-being of the fabric of social humanity. It is only fair to mention, however, that Mr. Owen's name is still mentioned by the villagers with respect and even attachment, from the personal kindness and generosity which he displayed

towards them. In 1827 this individual ceased to have any connection with these works, which are now managed by Messrs. Walker and Co.—The village is within sight of the falls of Corra-linn and Dundaff.

LANARKSHIRE,\* a large, wealthy, and important county in the western division of the Lowlands, and the most populous in Scotland. It is bounded by the counties of Dumbarton and Stirling on the north; Dumfries-shire on the south; Ayr and Renfrewshire on the west; and Linlithgow, Edinburgh, and Peebles shires on the east. It is situated between  $55^{\circ} 18' 40''$ , and  $55^{\circ} 56'$  of North lat.; and between  $3^{\circ} 24'$ , and  $4^{\circ} 22' 51''$  West long. of Greenwich. The extreme length of the county from south-east to north-west, is about 54 miles; and the greatest breadth in the centre is 33 miles; but at the extremities it becomes narrowed to the extent of little more than 10 miles. It contains an area of 926 square miles, or 471,278 Scots statute acres, equal to 584,800 imperial acres. It is divided into three divisions or wards, called the Upper, Middle, and Lower wards; but formerly the county was much more extensive, and there were only two divisions, called the Over and Nether wards of Clydesdale. Hamilton of Wishaw, in his 'Description of the Sheriffdom of Lanark,' says, "The shyre of Lanark was anciently of greater extent than now it is; for there was comprehended in it the whole sheriffdom of Renfrew, lying laigher upon Clyde, called of old the Baronie of Renfrew, (and is yett so designed when the Prince's titles are enumerate,) untill it was disjoyned therefra hy King Rohert the Third, in anno 1402, at such time as he erected what had been his father's patrimonie before his accession to the Crown, in ane principalitie in favour of his sone Prince James. And then, because of the largeness of its extent, it was dyvided into two wairds, called the Upper and the Nether ward; and the burgh of Lanark declared to be the head-burgh of the upper ward, and Rutherglen of the Nether ward; and since the dissolving of the shire of Renfrew from the sheriffdome of Lanark, the hurgh of Lanark is the head-hurgh of the sheriffdome of Lanark, and Rutherglen the head-hurgh of the Nether ward thereof." Such is the account of Hamilton of Wishaw, whose research and painstaking render him generally worthy of credit; but other accounts affirm that the disjunction of Renfrew from Lanarkshire did not take place till the reign of James II. It is unnecessary to quote the arguments and evidence of the various writers as to the period of this disjunction. It is enough for our purpose, that previous to the first quarter of the 15th century, Lanarkshire was much more extensive than it now is. The county continued to form only two wards until the middle of the last century, when, from the increase of the population, it was deemed judicious to form it into three wards; viz., the Upper ward, of which Lanark still continued to be the chief town; the Middle ward, of which Hamilton was appointed the chief town and seat of justice; and the Lower ward, of which Glasgow took the place of Rutherglen as the metropolis. Glasgow is, of course, the headquarters of the circuit-justiciary and other courts, and the residence of the sheriff-depute and two substitutes; but substitutes are also appointed over the Middle and Upper wards, and hold their courts at Hamilton and Lanark. Including the various *quoad civilia* parishes into which the city of Glasgow has,

\* The name of the shire is believed to be derived from that of the county-town. Lanark derives its Celtic appellation from the British *Lanerc*, which signifies in Welsh, 'a vale, or level space of ground.' Several places in Scotland, which have the name of Lendrick, are understood to be derived from the same British source.

from time to time, been divided, there are, in all, 48 parishes in the shire; viz.,—

IN THE UPPER WARD.

Lanark,	Coulter,
Lesmahago,	Lamination and Wandell,
Carmichael,	Libberton,
Ritvenain,	Biggar,
Covington,	Waiston,
Symington,	Dolphinton,
Wiston and Robertson,	Duusyre,
Douglas,	Carawath,
Crawford,	Carstairs,
Crawfordjohn,	Carluke.
Small part of Moffat,	

IN THE MIDDLE WARD.

Hamilton,	Cambusnethan,
Blantyre,	Snotts,
East Kilbride,	Dalziel,
Avondale,	Bothwell,
Glasford,	East or New Monkland,
Stonehouse,	West or Old Monkland.
Dalsert,	

IN THE LOWER WARD.

The parishes in Glasgow,	Rutherglen,
Barony parish,	Carmunnock,
Calder,	Govan,
Cambuslang,	Part of Cathcart.

Of the total area or superficies of the county, the three wards contain the following proportions:—

	Miles.	Scotch Statute Acres.
Lower ward . . . . .	78 75	40,878
Middle ward . . . . .	202 50	153,954
Upper ward . . . . .	544 75	277,246

Total miles 926 Total statute acres 471,273

By the government census of 1831, there were in Glasgow and the county of Lanark, 58,747 inhabited houses, 234 building, and 2,423 uninhabited. In the same year, the population of the various wards, and the total for the county, was as follows:—

	Town and Village Population.	Rural Population.	Total.
Lower ward . . . . .	208,536	8,100	216,836
Middle ward . . . . .	37,189	27,534	64,743
Upper ward . . . . .	17,421	18,990	3,211
	263,016	53,744	316,790

By the census of 1841, there were in Glasgow and the county of Lanark, 81,376 inhabited houses; 804 building, and 3,840 uninhabited; and in the same year the population of the wards, and of the county, was as follows:—

Lower ward . . . . .	300,593
Middle ward . . . . .	96,772
Upper ward . . . . .	36,834
	434,199

This total comprises 82,730 distinct families, including 211,666 males, and 222,533 females. From the last census it appears that a very great increase of population has taken place in different parts of Lanarkshire since 1831. Glasgow, including the suburban parishes, has increased 39·37 per cent. In New Monkland parish, including the burgh of Airdrie, the increase, since 1831, has been 107·91 per cent.; and in the parish of Old Monkland, the increase has been 105·37 per cent.; and Bothwell parish has increased 100·75 per cent. There has been an increase of population in all the parishes of the Middle and Lower wards since the former census, though in some of these parishes the increase has been much smaller than in others. In Kilbride, the increase being 0·50 per cent.; in Carmunnock, 3·61, and so on. In the Upper ward, again, it appears that a decrease of population has taken place in some of the parishes since 1831, amounting, in Biggar, to 2·61 per cent., in Carmichael to 8·78 per cent., &c.; the total increase of population in the county being about 37 per cent.

It also comes out that, of the whole population of the county of Lanark, the inhabitants of the royalty of Glasgow amount to 28·29 per cent.; those of harony parish to 25·15 per cent.; of Gorbals parish, to 11·54 per cent., &c. There is a very great difference in the proportion of males and females residing within the various parishes of Lanarkshire. In Blantyre there are 1367·52 females for every 1,000 males, and in Old Monkland there are only 796·80 females to every 1,000 males. This difference may be attributed chiefly to the nature of the public works carried on in these parishes,—a greater number of females being required for the cotton-works of Blantyre, and a greater number of males for the iron and coal works of Old Monkland. Of the whole population of Lanarkshire, including Glasgow, there are 1051·34 females to every 1,000 males,—being 31·07 females more than is the case in the proportion of females to the same number of males in the whole of England. In 1801, the population of Lanarkshire was 146,699; in 1811, 190,924; in 1821, 244,387; and in 1831, 316,790. From 1801 to 1811, the increase was 31 per cent.; from 1811 to 1821, the increase was 27 per cent.; and from 1821 to 1831, the increase was 30 per cent.

The parishes in Lanarkshire are formed into four presbyteries, with a few additions from other counties; viz., the presbyteries of Lanark, Hamilton, Biggar, and Glasgow,—and the majority of them are situated in the synod of Glasgow and Ayr, of which they constitute the major portion.

In a county of such vast extent, it is reasonable to believe that every variety of soil and aspect is developed. The Upper ward contains about three-fifths of the whole superficies, and while it is the most extensive, the land is, at the same time, the least valuable. It consists, to a great extent, of moorland pasture, with ‘hills on hills confusedly hurled;’ and though by far the larger portion of this division is uncultivated, and cannot be deemed capable of much agricultural improvement, there are sunny and fertile spots between, which are at once pleasing to the eye, and profitable to the agriculturist. Even in the wildest parts of the Upper ward, these verdant holms stretch to a considerable extent along both banks of the Clyde and its tributaries, and where they are adorned with new plantation, or dotted with old timber, the landscape is one of surpassing loveliness. Many of the hills are covered with verdure to the summit, and the quality of the sheep, which are reared upon them, speak intelligibly of the richness of the pastures, but withal, the general aspect of the district is sterile and uninviting; and the loftiness and stern grandeur which characterize even the bleakest of the Highland mountains, are unknown to the hills of Lanarkshire. Mr. Naismith, describing this part of the county in 1794, says, “The mountains are so huddled together, that their grandeur is lost to the eye of a beholder. When he traverses a hollow, only the sides of the nearest mountain are presented to his view, and when he climbs an eminence, he sees nothing but a confused group of rugged tops, with the naked rock frequently appearing among the herbage.” As the hills undulate towards the Middle ward of the county, their aspect is much softened, and the country presents every alternation of sylvan sweetness, with hill and dale, wood and wold, meadow and streamlet. The scenery of various localities, in the Upper ward, are well known from this cause to tourists, of which the Falls of Clyde, near the town of Lanark, is not the least interesting portion. There is no part of Scotland in which industry, perseverance, and the lights of science, as applicable to agriculture, have more successfully developed themselves than in

the Upper ward, where native sterility has been overcome by the improved practice, and increased knowledge of the husbandman, and along the great mail line of road from Glasgow to Carlisle in particular, smiling arable farms have risen up, where, 30 years ago, there was nothing but stunted herbage, unproductive moss, or luxuriant furze or heather. Even the pasture-lands have been much improved of late by the new system, and particularly by the extent to which tile-draining has been carried in this, as well as in every other part of the county. This picture, however, only applies to a small portion of the Upper ward, and though the soil is daily changing for the better, still its general characteristics are those of churlishness. Wheat has been grown, but not extensively, for it has been found that this grain has never paid the farmer, except in the most propitious and sunniest seasons. Oats, however, are extensively cultivated, and for them the soil appears to be by nature adapted, as well as for barley, though not to the same extent. Potatoes are raised in large amount, and they thrive as well, and are of as fair quality, as those grown upon the lower and warmer districts of the county. Turnip husbandry has also been introduced here with considerable success, and on the whole, by changing for the better the old system of rotation, it has been the means of considerably increasing the products of the soil. In former years flax was grown to considerable extent, spun into yarn by the women of the district, and sold by them into the markets of Lanark, Carnwath, Biggar, and others; but the facilities for the introduction of flax from the Baltic, and more than this, the cheapness and improved quality of cotton-cloth, has almost extirpated this species of cultivation from the land, and those industrious dames who spent their days in 'Twining out a thread wi' little din,' are now rarely met with either in cot-house, hamlet, or village.

The Middle ward is much less mountainous than the Upper, and at its commencement the loftiness of the hills falls away, and the declivity extends towards the north-west. The surface is everywhere broken into inequalities, and throughout there is little level space, except the valleys on each bank of the CLYDE: which see. The cultivated land of this ward is generally from 250 to 300 feet above the level of the sea, and even this elevation is considerably lower than the locality of the town of Hamilton. The soil is as various as the undulations it presents, but in general it may be said to consist of clay, intermixed with sand, and along the valley of the Clyde rich alluvial soils are met with upon a gravel bed. Within these last 20 years, the mosses in this district were computed to extend to more than 40,000 acres, or nearly one-third of the whole ward; but a considerable extent of these have now been brought under tillage, by the enterprise of the tenant and the encouragement of the landlord, and every year sees the unprofitable dominion of the morass lessened. If the soil is various, its productions are equally so. In some of the wet and cold districts which are met with in Shotts and elsewhere, wheat is generally as little cultivated as in the pastoral parishes of the Upper ward; but it is worthy of remark that there are none of the divisions of the Middle district which cannot boast of some portions of fertile soil within their bounds, particularly if they are watered by any of the tributaries of the Clyde. In ordinary cases, however, every kind of produce which enters into the farmer's catalogue is here cultivated with success. The most fertile portion of the Middle ward is that extending on each bank of the Clyde, stretching from Lanark to below the town of Hamilton, and

comprehending part of Cambusnethan, with the parishes of Dalserf, Hamilton, Blantyre, Dalziel, Bothwell, and Old Monkland. A great portion of this territory is owned by his Grace of Hamilton, and the Lord of Douglas, and all of it is in a high state of cultivation. The landscape here is peculiarly soft and inviting. For all the elements of rural sweetness, the drive between Lanark and Hamilton is not perhaps equalled by any other in the kingdom, if we except perhaps that along the banks of the Esk between Langholm and Langtown, on the Scotch and English border. The hills never rise certainly into towering magnificence, but they swell gently to a considerable elevation on either bank of the river, and are generally either covered with luxuriant pasture, or thriving eopsewood to the very summit. The glades, too, generally present the bold front of some olden mansion of a Lord of the manor, with its beautiful policy, studded by timber of ancient growth; or mayhap the elegant modern dwelling of a proprietor, who has replaced by it the keep or tower which served as a dwelling-place to his fathers. Here, too, are the orchards which, in spring time and summer, are well and truly designated the pride of Clydesdale. It is said that orchard husbandry was introduced into this district by the Romans, but whether or not this may be the case, the banks of this noble stream have long been celebrated for the fruits they bear; and, though this species of cultivation is not now so profitable as it used to be, it is still followed to a great extent, and it will be matter of much regret if this part of the country should at any time be deprived of its choicest, chastest ornament, from the worldly considerations of pounds, shillings, and pence. [See article on CLYDESDALE.] In the end of April, or beginning of May, when the gorgeous flush of blossom decks the trees, and the perfume scents the gale, the traveller feels as if he were in reality in the land of the Faëry, where "apple-blossom is strewn upon the wind." It is for its mineral wealth, however, that the Middle ward is so much and so deservedly celebrated; but this subject will be forthwith noticed.

The Lower ward comprehends a fertile district, but it is the least interesting of the three, so far as the external beauties of nature are concerned. It is, however, by far the most important, from possessing the city of Glasgow, and that immense hive of population, whose ingenuity and untiring industry has done so much to enrich the northern part of the kingdom, and render the phrase of "puir auld Scotland" an unmeaning and obsolete one. It might be expected from the leviathan maw which is here required to be filled, that for miles around Glasgow, the soil would either be laid out in pasture, or in gardens devoted to the rearing of kitchen-produce. Such is not the case, however, and it is to be regretted. Corn fields press upon the very suburbs, but Glasgow has to depend principally upon Ireland and the east coast of Scotland for the vegetables which are every day used by high and low.

The Clyde—which so far as the West of Scotland is concerned, may aptly be termed the "Father of Waters"—receives into its bosom all the rivers or streamlets of any note in this county. First is the Daer, which, had full justice been done to it, should have given that well known name which the Clyde now bears. Then there is the Duneaton, which rises at the base of Cairntable-hill, and, after a course of a few miles through Crawfordjohn parish, joins the Clyde. The Douglas flows through the lovely dale of that name, and empties itself into the Clyde a little above Bonnington-falls; the Culter divides the parish of that name, and passes through a smiling glen;

the North Medwin waters the parish of Carnwath, and is joined by the South Medwin before mingling its united stream with the Clyde; the Mouse, rising in Carnwath, flows through Carstairs into the parish of Lanark, winds through the charming glen of Cartlane-craigs, and falls into the Clyde opposite Kirkfield-bank, about a mile from the town of Lanark; the Nethan rises in Lesmahago, and after flowing through a most beautiful district of country, studded with the seats of the landed aristocracy, joins the Clyde at Clydesgrove; the Avon rises on the borders of Ayrshire, divides the parish of Avondale or Strathavon; it then enters Stonehouse, and becomes the boundary between this parish and Glassford, and at another part between it and Dalsersf; it then passes on to Hamilton, where the channel becomes bold and romantic in a high degree, the banks occasionally rising to the height of 300 feet above the bed of the dashing stream, and the summits crowned with gnarled oak of the growth of centuries; having forced its way through this rocky course, it then enters the fertile holms of Hamilton, and completes its course by mingling with the Clyde at Hamilton-bridge. The South Calder rises in the bleak moorland district of Linlithgowshire, near Tarrymuck, and after passing between Shotts and Camhusnethan on the one hand, and between Dalziel and Shotts on the other, and finally forming a part of the boundary of Bothwell, falls into the Clyde after a course of nearly 20 miles. The North Calder has its rise near Bertram-Shotts, and after watering Old Monkland, increases the Clyde at Daldowie; the Calder-water, or for distinction's sake the Rotten Calder, rises on a moor in East Kilbride, and flowing through that parish by the name of the Park-burn, passes into Blantyre parish, at which it commingles with the Rottenburn, and after skirting that parish, Killbride, and Cambuslang, joins the Clyde at Turnwheel. Lastly, we have the classic Kelvin, which takes its rise in the parish of Kilsyth in Stirlingshire, and towards the close of its course divides Govan parish from the Barony parish of Glasgow, losing its waters in the Clyde opposite the pretty village of Govan. [See separate articles on these streams.] The county is little celebrated for its lakes or lochs. The Crane-loch is situated in a wild and bleak district in the parish of Dunsyre, at an elevation of 800 feet above the level of the adjacent streams; it is about a mile in circumference. The White-loch, also about a mile in circumference, is situated in Carnwath, but instead of being bleak and inhospitable in appearance, it is fringed on two sides by some fine timber. Lang-loch, situated between the town of Lanark and Hyndford-bridge, is a sheet of water of great length, though remarkably narrow. Bishop's-loch covers between 80 and 90 acres in the parish of Old Monkland; Woodend-loch, 50 acres; and Lochend-loch, 40 acres. Lam-loch is a large sheet of water in the parish of Cadder; and here is also Loch-Grog, of smaller extent, and gradually becoming less, from the progress of draining. There are also Rohroyston-loch, which is rapidly undergoing the same process; Johnston-loch, nearly a mile in circumference; and Gastinqueen-loch of less extent. There are the Hogganfield and Frankfield lochs in the Barony-parish, the water from which turns the wheels of the town mills. The last we shall notice is a lake or reservoir formed by art for a most important purpose, viz., for supplying the Monkland and the Forth and Clyde canals. It is situated in the parishes of New Monkland and Shotts, and its superficies extend to more than 300 acres.

The mountains in Lanarkshire which deserve the name, are all situated in the hilly range of the south-

ern division or Upper ward. Those principally worth mention are the lofty Louthers, on the borders of Dumfries-shire, which have an average elevation of 2,450 feet above the level of the sea, and the highest peak towers to the height of 3,100 feet; Culter-fell is 2,330 feet; Tinto is 2,236 feet; Cairntable, on the borders of Ayrshire, is 1,630 feet; Dolpinton-hill is 1,550 feet; and Dunsyre-hill 1,230 feet. Perhaps the highest inhabited land in Scotland is situated in this county, viz., the mining village of Leadhills, which is 1,300 feet above the level of the sea. The town of Lanark has an elevation of 656 feet. The Middle and Lower wards possess no elevated features of this kind, but are in general so open in their view towards the frith of Clyde, that from any portion of the rising ground varying from 150 to 200 feet above the level of the sea, the spectator may descry on a clear day the serrated peaks of the Isle of Arran, at a distance of 50 miles.

Respectable as Lanarkshire has now been rendered in an agricultural point of view, by the enterprise of her proprietors and farmers, it is not from the productions of its surface-soil that the district has become by far the most populous and wealthy in Scotland, and its name has become known to the uttermost parts of the sea. It is to her ample possession of the mineral treasures of coal, iron, and lead, that this shire owes its supremacy over all other districts in North Britain, and the majority of those in England. A detailed geological description of the county would be too voluminous for these pages; but a vidimus of the various strata may not be uninteresting, though brief. In the Upper ward, the mountainous ranges are generally composed of grawacke, or trap-rock, and indeed these constitute the principal formation of the extensive range of hills, which, with greater or less of regularity, run from the confines of the county of Ayr to the Pentlands. In treating of this subject, Mr. Patrick gives the following comprehensive account in his valuable work:—"If," says he, "we take the granite rocks of Galloway as the base, we have superincumbent upon them; first, the grawacke of Leadhills and Wanlockhead; second, the red sandstone over which the Clyde is precipitated at Lanark; and, third, the coal formation of the Middle and Lower wards, consisting of bituminous shale, coal, grey limestone, grey sandstone, and clay ironstone, thus affording a beautiful illustration of the transition and carboniferous epochs." The lofty territory of Leadhills is perhaps the most ancient mining district in Scotland. Lead has been successfully worked here for several centuries, and besides rich veins of this mineral, gold and silver have been found to exist in it, and have been worked, particularly in the reign of James V. of Scotland, who employed miners from Germany in this service. The precious metals were no doubt found, and coins struck from them, called the bonnet-piece; but it was soon discovered that even gold might be hought too dear, or, in other words, that the cost of the workmanship far exceeded the value of the precious metal which it produced. The search for gold and silver was therefore abandoned, and the occupation of the miners has been confined to the working of lead. Copper ore has been found in this mineral district in small quantity, and a vein of antimony is known to exist, but neither are sufficiently abundant to encourage the working on a large scale. Spars of every kind, some of them surpassingly beautiful, are found to accompany the principal mineral, lead, the veins of which generally run south-east and north-west, with an eastward dip of one foot in three. Lead is known to exist in some of the parishes adjacent to Crawford, in

which Leadhills is situated, but it has not been worked, and possibly it may have been ascertained, that it could not be worked to compete with the ancient and long-opened mines of Leadhills in Lanark, and Wanlockhead in Dumfries-shire. Ironstone is known to exist in most of the parishes of the Upper ward, but it has only been worked in those of Carluke and Carnwath; and with the exception of an interval of a few years, works have been in operation in the latter for a period of sixty years. The black-band ironstone, which is the most valuable, is found abundantly in Cambusnethan, and the Sbotts company have furnaces constantly in operation. In Bertram-Sbotts, the mineral is also abundant and easily worked, and there are two extensive works in separate divisions of the parish, one of which was erected in 1787, and the other in 1802. Old Monkland is also rich in this mineral treasure, and from it the extensive works around are partly supplied, including those of Carron, Clyde, Gartsherrie, and Calder. Old Monkland, however, is the principal seat of this manufacture. It is, in every sense of the word, a land of iron; and the flames which belch from its numerous furnaces serve to illumine the country for miles around on the darkest nights. About twenty pits are in the course of being worked, producing in abundance the valuable black-band, which contains in general so much coal intermixed as to melt itself with little or no addition of fuel. Here there are 35 furnaces in blast, and about 20 more are intended to be erected in the course of the next few years. But exhaustless as the under ground supplies may seem, there cannot be a sufficient quantity raised to feed the many furnaces, and in consequence, a great proportion of the ironstone used is brought from the other parishes above-named. The vast extension of the engineering or machine-making trade of Glasgow and the west of Scotland, during the last twenty years, but more particularly the introduction of railroads at a still more recent period, have given an impetus to the iron manufacture which is scarcely credible; and it may be truly said, that thousands now derive from it their daily bread, and princely fortunes have been accumulated almost with the rapidity, and certainly with much more of credit and honesty, than characterized the aggrandizing efforts of the first Spaniards in Peru, or the early English adventurers to the East. As one instance of the value of ironstone upon an estate, it is matter of fact and publicity, that on the lands of Rochsillob, in the parish of New Monkland, belonging to Sir William Alexander, the mines produce an annual revenue of £12,600; while the soil which covers so much treasure did not, when let for tillage, produce above £500 yearly. It is not easy to ascertain the aggregate amount of the mineral produce of Lanarkshire, by reason of its vastness; but as a proof of its rapid and great growth, it may be stated, that the Monkland district is known to turn out nearly 200,000 tons annually, while only a few years previous to 1800, it did not produce more than 4,000 tons. There are also extensive works at Govan, in the immediate vicinity of Glasgow, where four blast furnaces are in operation, and as many more in the course of erection. The flames from these works illumine the houses of many thousands of the population on the south-east side of Gorbals. It may also be mentioned, that to many of the iron establishments in the county, hot-iron manufactories are being joined, and this trade—which is new in this district, or at least new on a large scale—promises to become a source of increased industrial occupation, and of wealth. Great as the iron trade of Lanarkshire already is, it is apparent even to one who has looked very cursorily into the matter, that it is still

only in its infancy, for it possesses within itself the elements of almost boundless extension. [For additional particulars see GLASGOW, under the head *Iron trade*.]

Valuable, however, though the iron of Clydesdale may be, it derives its great value from a still more important subterranean treasure, viz., the coal-field of the same district, which is by far the most extensive and valuable in Scotland. It forms the best part of that great field which crosses the northern part of the kingdom from east to west, and stretching in Lanarkshire to the extent of 30 miles. It has been reckoned that the coal-field of this county contains 110 square miles, and in the ordinary acceptation of the term, the supply may be said to be exhaustless. The geological positions of the various strata are so well described by Mr. Naismith in his agricultural survey of Clydesdale, that it has been deemed advisable to transfer his account to these pages. Mr. Naismith says:—"A number of these strata or seams lie above that which is generally called, around the city of Glasgow, the *upper coal*, because it is the first that is found worth digging to any extent. This stratum is composed entirely of what is called *rough coal* in Scotland, except a small part near the middle of it of a kind called *splint*. 2. About 16 or 17 fathoms under that lies the *ell coal*, so called because it was first found of this thickness, but it is frequently from 4 to 6 feet thick. It is composed of two kinds, called *yolk* and *cherry coal*, with sometimes a parting of splint, and sometimes not. This is a fine caking coal, or what is called in England a close-burning coal, and is much esteemed for the blacksmith's forge. 3. At from 10 to 17 fathoms below the last, lies the seam called the *main coal*, from its possessing all the good qualities found in any of the other strata. It contains *rough coal*, splint, and *parrot*, or *jet coal*, and is preferred to all the others as the most profitable. Its thickness is from 3½ to 9 feet. Sometimes a thin bed of stone is found about the middle of the seam, and the thickness is 10 feet. 4. About 13 or 14 fathoms lower lies the *humph coal*. It consists of yolk and rough coal, with a thin parting of splint. In some places it is without the splint, and unworkable, being much interlaced with these laminae of stone, and a kind of petrified black clay called *blaise*, black bituminous shale, and slate clay. 5. Below the humph coal lies the hard coal, sometimes at 14 fathoms distant. It consists solely of splint and parrot coal, and is found to be the best in the county for the smelting of iron. It is also very good for family use. 6. At a fathom and a-half lower is found the soft coal, from 30 inches to 6 feet thick. It is composed of the rough, yolk, and cherry coals, cakes much in burning, and is esteemed a good coal for the blacksmith's forge. 7. About 13 or 14 fathoms below this lies a coal, called about Glasgow the *sour-milk coal*. As it burns slowly, and affords but a weak heat, it is what the miners call a lean coal, and has therefore been but little wrought. There are a number of these seams under the sour-milk coal, all of a lean quality, and generally much interlaced with laminae of stone, blaise, or shiver. Under the last mentioned have been found several strata of excellent lime; and more of these thin seams of coal again have been discovered under the lime, but all of them which have yet been tried are of a lean quality. The lime found near the surface on the elevated ground, is supposed to be a continuation of some one or other of the last mentioned strata, found under the coal, which, in the course of their natural rise, have come within reach, in the places where the superincumbent strata of coal, and all its accompanying fossils, did not exist; as lime worth the working has never yet been dis-

covered above these coal strata, nor in any place, till after the valuable seams of coal have skirted out at the surface; and any coal which has been found under the surface-lime is of the same lean quality with that which lies under the deep buried strata of lime. The above is the number and order of the coal strata everywhere along the Clyde, where they are entire. However, this is not always the case. All the mineral strata lie inclining towards the river on both sides, generally somewhat obliquely, and with various degrees and directions of declivity, rising, as they recede from it, till they skirt, or, as it is expressed by miners, crop out one after another; so that the first coal which is found in some places is perhaps the third or fourth in the above mentioned order. These are distinguished by the name of the Clyde strata, or seams of coal, and not only lie along the sides of that river, through all the plain country, but branch out less or more along the principal streams, on some of them to a great extent. Besides these there are other seams of coal in the county, of a somewhat different nature. In the parish of Shotts a fine yolk coal is wrought, resembling the coal found upon the sides of the Forth, and supposed to be a continuation of one of the same strata. Upon the sides of the Douglas river are extensive collieries, which supply some of the southern provinces where that fuel is wanting. The coal here is also similar to that on the Forth. On the south-west boundary of the county is coal of the same quality with that wrought on the coast of Ayrshire. It crops out at the surface about the middle of Avondale parish. There are still some other variations in the coal strata which merit attention. Near the northern boundary of the county a species is found distinguished by the name of the *blind coal*, from its burning with intense heat without flame. This must no doubt have been deprived of the fixed air by means of subterranean fire. It is used for the same purposes as coke, and even preferred to coke artificially made, its effluvia being still less offensive. The blind coal is always found under a covering of horizontal whin; and where the same seam is traced till it comes under the freestone rock, its qualities are entirely changed, and it becomes in every respect the common pit-coal. Another species of coal, the qualities of which are directly opposite to those of the last, is found in different parts of the county. It is here called the *cannel* or *light coal*, and is said to be the parrot or jet coal of the third seam in the above enumeration, divested of the other kinds which accompany it when the seam is complete. But when this is found alone, it seems to be still more exquisitely inflammable; it takes flame the moment it is brought in contact with the fire, and a small fragment of it may be carried about in the hand like a flambeau, and will continue for a long time to give a vivid light."

Limestone is found abundantly throughout the coal district, and some of it is of excellent quality. It is generally found below the lowest coal stratum, and rarely is it got near the surface. It is found in the following parishes, and worked to considerable extent in many of them, viz. Carluke, Carnwath, East Kilbride, Avondale, Glassford, Stonehaven, Lesmahago, Douglas, Hamilton, and Blantyre. Freestone of excellent quality is found throughout the county, and in all the coal districts. It is found in distinct strata of red and white, and sometimes of a mixed colour, and so beautifully blended as to resemble marble. The colour of the houses, however, will generally denote the description of stone which prevails in the vicinity; but it is generally found that on the east side of the Clyde the red sandstone predominates, while on the west and south the white stone is the standard. The parish of Carluke is par-

ticularly rich in fossil remains, as well as many others in the coal district. Some years ago nearly thirty fossil-trees were discovered standing in their natural position on the banks of the Kelvin, in the parish of Govan; but the most interesting organic remains are those of plants, animals, and shells, some of them of a kind and race now extinct. It would, however, be tedious to enter upon this subject in detail. It may only be stated, that no other county in Scotland presents a more extensive field for the research of the geologist. There are few of the parishes in the county, too, which cannot boast of a mineral spring, or springs, which are used to considerable extent, especially by the lower orders.

The wind in this county is computed to blow about two-thirds of the year from the south-west and west, over a vast ocean, where no land intervenes to prevent its coming to the coast saturated with the moisture of the vast Atlantic. The winds from the east are sharper, blow less frequently, and their force is somewhat broken by the high land on the east side of the country; so that the cold damps, so prevalent on the east coast, do not often arrive here, and consequently the cold is moderate. Intense frost is seldom of long continuance, and deep, long-lying snow is rare. Wind from the north-east is next in frequency to that from the south-west, which is generally attended by fair weather. Rains from the north-west, north, and north-east, are neither frequent nor heavy, but are little conducive to vegetation. One cause of the slow and imperfect progress, and consequent lateness of the Lanarkshire harvests, is, that when a course of dry weather does not happen in the early part of spring, the seed-time must either be deferred to a late period, or the seed committed to the crude soil in an improper state of reception.

The Lanarkshire breed of horses claims particular notice. The present breed was introduced into Scotland nearly two centuries ago, by one of the predecessors of the Duke of Hamilton. He brought into the country six coach-horses, all stallions, originally from Flanders, and sent them to Strathaven, the castle of which was then habitable. They were of a black colour, and extremely handsome. The farmers of the neighbourhood, readily embracing the opportunity, crossed this foreign breed with the common Scottish mare, and thereby procured a breed superior to either. From this a strong and hardy race of horses was soon spread through the country. Those of a smaller size are well-adapted for the plough, on account of their quick step and steady draught; and those of a larger size are employed in carts upon the high roads. The colts are sold at the fairs of Lanark, Carnwath, Rutherglen, and Glasgow, and are in request all over Scotland and England. The loads which some of these horses draw are immense.

The rise and progress of the manufactures of Lanarkshire belong so intimately to the history of Glasgow, that it is not necessary to treat of them at length here. Previous to the beginning of the last century, manufactures either did not exist in Scotland, or they were of the most contemptible kind, and this will readily be believed when the fact is stated, that, for 20 years after its establishment in 1695, the hank of Scotland could not employ £30,000 annually in the business of the whole kingdom. Branches of the hank were established in several of the Scottish towns, and Glasgow amongst the rest, but after a trial, the hank directors found themselves compelled to give up their provincial offices, and bring their hooks, notes, and specie to Edinburgh "by horse carriage." Even so late as 1727, the counties of Perth and Forfar possessed more exten-

sive manufactures than Lanarkshire. About 1750, however, the beneficial effects of the union had begun to be felt, and the industry and resources of the county to be fully developed. Two banks were then started in the city of Glasgow—the one by Dunlop, Houston, and company, and the other by Cochran, Murdoch, and company. The trade with Virginia sprung up and flourished, and the various new trades and manufactures which it called into existence and fostered, extended their benefits over the whole county. But its great rise may be dated from 1784, when the cotton trade was introduced, after Arkwright's magnificent invention had become fully understood, and its practice was open to the whole country from the expiry of the patent. Lanarkshire was particularly qualified for embracing this new trade—first, from its possession of an exhaustless supply of coal, and next, from possessing the sea-ports on the Clyde, by means of which the merchants of Glasgow could hold communication with almost all the markets of the world. Wealth flowed into the county; old coal mines were worked on improved principles with renewed spirit, and new ones opened. The iron trade was called into existence; crowds of population thronged not only into Glasgow, but to those localities in the county where these mineral treasures most abounded; the superficies of the land, from the near presence of a wealthy commercial and manufacturing capital, grew in fertility and beauty, and thus Lanarkshire received an impetus which has long since accorded her the first rank for population, wealth, and importance among the counties of Scotland.

Although a commercial and manufacturing aristocracy have now grown up in the county by the most honourable of all pursuits, for in benefitting themselves they have vastly benefitted others, there still remain many ancient families of note, the ancestors of some of whom are not unworthily known to Scottish history. A few may be named; and first, the Hamiltons, the Duke of which is the premier peer of Scotland; to this family also belong the noble houses of Belhaven and Dalziel, and many others of the same name of honourable status in the county; the old Douglasses of the Angus line are lineally represented on the female side by Baron Douglas, and collaterally by other families of the county. There are still, too, the Lockharts of Lee, with many offshoots from the parent branch; the Baillies of Lamington, the Rosses of Bonnington, the Colebrookes of Crauford, the Veres of Stonebyres, &c. There are also many goodly and noble mansions scattered over the county, in addition to the well-known palace of Hamilton, and the castles of Douglas and Bothwell, but as these are fully noticed in the description of the parishes in which they are situated, it is not necessary here to repeat.

The county of Lanark returns one member to parliament, and had a constituency of 2,705 voters in 1832, and of 4,001 voters in 1841. Glasgow, within its bounds, returns two members. Lanark, Hamilton, and Airdrie, within the county; Falkirk in Stirlingshire, and Linlithgow, in the shire of that name, return a burgh-member; and Rutherglen in the Lower ward, is associated in a similar privilege with the burghs of Kilmarnock, Dumharton, Port-Glasgow, and Renfrew. Thus the county is represented in the Commons' House of parliament directly or indirectly by five members.

The number of parochial schools within the county, in 1834, was 72, and of schools not parochial, 352. The former were attended, between Ladyday and Michaelmas 1833, by a maximum of about 27,000 pupils, and a minimum of about 19,250.

As Lanarkshire derives its great importance from

its modern improvements, rapidly advancing population, manufactures, and mineral wealth, it is not surprising that its former history is much less interesting and eventful than that of many other districts in North Britain, which are now vastly inferior to it in population, wealth, or importance. Originally, Lanarkshire was peopled by the ancient tribe of Britons called the Damnii, and their language may still be traced in the names of the waters and various other places in the district. These barbarians gave place to the Romans, whose temporary possession of these parts may still be traced by the remains of their roads and camps in many parts of the county, and also by their tombs, utensils, and weapons of warfare, which have often been turned up by the ploughshare or the spade in the process of excavating and emhanking. In subduing the original inhabitants the Romans did much to civilize them, and introduce the arts of industry and peace; and it is recorded, as has been already observed, that they were the first to beautify and enrich the face of the country by the planting of those orchards for which Clydesdale has for ages been so famous. The inroad, however, of the Scandinavian and other savage tribes, pressing upon the heart of the Roman empire, induced them to withdraw their legions, artificers, and husbandmen from the extremities of their dominions, and thus Clydesdale was again left in the possession of the semi-barbarous Damnii. By them was founded the kingdom of Strathclyde, which gradually extended until it included within its ample limits Liddesdale, Teviotdale, Dumfries-shire, Galloway, Ayrshire, Lanarkshire, Renfrewshire, part of Peebles-shire, the western part of Stirlingshire, and the greater portion of Dumhartonsire, forming, indeed, a kingdom which embraced the greater part of Scotland south of the Forth, with the exception of ancient Lothian. Sometimes they were united under one valorous chief, and at others the leaders of subordinate tribes in the general confederacy contended for the mastery. Meantime these Strathcludensians were often assailed by the Picts, from the northern side of the Forth, by the Scoto-Irish from Cantyre, or the Saxons from the north of England, who envied them their fair domains on the Clyde. Their capital was taken, their dominion circumscribed, yet were they never formally conquered, though it is believed, that after the union of the Scots and Picts, they were amalgamated with the other rude materials which formed the Scottish dynasty under Kenneth. Many of the Strathcludensians preferred expatriation to acknowledging any other sovereign but one of their own choosing; and with heavy hearts they left the warm vales of Clydesdale, and wending their path southward, found an abiding-place among the hills and dales of Wales. After the formation of the Scottish kingdom, Lanarkshire suffered more or less from the domestic conflicts between the kings and Gallovidian chiefs, or the wars of England. The history of this period is uninteresting, however, although Lanarkshire continued to progress in rustic wealth, and its civilization was accelerated by the foundation of the bishopric of Glasgow, and the settlement, in the district, of several distinguished Flemings, from a family of which people were descended the once all-powerful and haughty Douglasses. The death of Alexander III., without male issue, left the kingdom a prey to intrigue, contest, and competition, which only ended after years of domestic strife by the consolidation of the independence of the kingdom, which was achieved by Bruce at Bannockburn. But the precursor to this was the patriotic exertions of the celebrated Sir William Wallace, whose first exploit was that of driving the English out of the town of Lanark. The

'good Sir James Douglas,' perhaps, contributed more than any other man to the eventful triumph of Bruce, and, in consequence, that part of the county in which his estates and castles were situated was more than once subjected to the fire and sword of the English. After this, however, Lanarkshire enjoyed a long period of domestic peace, until power and prosperity had changed this celebrated family from being the best and first subjects of the Crown into its most turbulent and dangerous rival: see DOUGLAS. In the reign of James II. the ambition of the Douglasses, added to the intrigues of the 1st Lord Hamilton, plunged Lanarkshire into the horrors of civil war, and the following account of one of the royal raids will show what this unfortunate district suffered from the turbulence of its chiefs:—"In March, 1455, James the Second cast doune the castel of Inverayne; and syne incontinent past to Glasgu, and gaderit the westland men, with part of the Areschery [Irishery], and passit to Lanerik, and to Douglas, and syne brynt all Douglassdale, and all A vendale, and all the Lord Hammiltoun's lands, and heriit them clerlye; and syne passit to Edinburgh, and fra their till the forest, with one host of Lawland men. And all that wald nocht cum till him furthwith, he tuke their guidis and brynt their places, and took faitie of all the gentilles clerlie. And all this tyme the Lord Hamiltoun was in England till he gottyn suplie, and couth get name bot gif the Douglas and he would have bene Englismen, and maid the aith. And incontinent after, the king passit in proper person, and put an sege till Abercorn: And within iii days Lord Hamiltoun come till him till Abercorn, and put him, lyf, landis, and guidis, in the King's will purelie and sempillye, throu the menys of his ewe James of Levingston, that tyme Chalmerlane of Scotland. And the King resavit him till grace, and send him on incontinent with the Erl of Orkney, that tyme Chancellor of Scotland, till remain in ward in the castel of Roslyne, at the King's will. And thus he [Lord Hamiltoun] left the Erl of Douglas all begylt, as men said." [Gray's MS. Chronicle.] Such was one of the infictions upon Lanarkshire from the ambition of its local chiefs; but from this period the county has little place in local history till the escape of Queen Mary from Lochleven-castle, the assembling of her army at Hamilton, and its defeat by the Regent Murray at Langside, near Glasgow. Again the county was peaceful till the thirty years war of the persecution, caused by the resistance of the Scottish Presbyterians to submit to 'black prelacy,' which was sought to be imposed on them by the royal Charleses. The western counties were the chief scene of this devoted resistance to oppression, and the punishment inflicted by the 'Highland host,' the battles of Drumclog and Bothwell, and the sufferings unto the death by this heroic people, by famine, ill-usage, and military persecution, are too well-known to require a minute detail here. In all these, however, Lanarkshire had her full share. But the revolution of 1688 brought more peaceful times, and it is a fact not generally known that the declaration of the Prince of Orange was published at Glasgow before its publication in any other part of Scotland, though it is proper to state that this publicity was not given to it by the magistrates of the city. In proportion, however, as Lanarkshire ardently favoured and supported the Revolution, it bitterly opposed the Union of 1707. The Duke of Hamilton and several of the barons were also loud and sincere in their opposition; and there was scarcely a town or village in the county which did not make a demonstration against this then obnoxious national measure. The Glasgow rabblers are spoken of in terms the reverse of courteous by the historians of

the Union; but no outbreak of moment took place, and it is no stigma cast upon the reflection of our forefathers to assume, that while they regarded that great measure as one which cut up their nationality by the roots, they could not foresee the vast advantages which would result to this part of Scotland by participating in the trade of England, and having free access to her colonies. Since this period there is nothing in the civil history of Lanarkshire but that which is common to the whole kingdom.—The sheriffdom of Lanark was formed at a very early date, and is believed to have been in existence so early as the reign of the lawgiving David I. In these early and troublous times, it was held by various persons, and finally fell into the grasping hands of the Douglas family, who held it as a hereditary source of honour and power. After their downfall, it was granted in fee to the Hamiltons, who held it as a hereditary appendage to their titles and possessions for many generations. Occasionally, but rarely, it was held by other noblemen, and among others by the Earl of Selkirk, upon whom the office was conferred in 1716, the heir of Hamilton being then under age, and held by him till his death in 1739. Upon the death of the Earl, James the 6th Duke of Hamilton took possession of the office, as hereditary sheriff, without any formal grant; and upon a change of system being about to take place, he claimed, in 1747, the sum of £10,000, as compensation for the sheriffdom. This claim was disallowed by the judges; but they allowed him £3,000 for the lordship and jurisdiction of the regality of Hamilton. At this time, Mr. William Cross, advocate, was appointed the first sheriff of Lanarkshire under the new system, the salary being then £200 per annum.

LANGHOLM, a parish in Eskdale, Dumfriesshire; bounded on the north by Wester Kirk and Ewes; on the east by Ewes and Canobie; on the south by Canobie and Half-Morton; and on the west by Middlebie and Tundergarth. Its greatest length, from a bend in the Tarras above Peterburn on the east, to the boundary beyond Glenlaggan head on the west, is 8 miles; its greatest breadth, from an angle north-east of the point where the Esk comes down upon it on the north, to the point where Irvine-burn strikes the boundary on the south, is 6½ miles; and its superficial area is 30 square miles, or 15,272 Scottish acres. The Esk, approaching from the north, flows 1½ mile along the western boundary of a considerable northerly projection of the parish, and then runs 4½ miles—measuring in a straight line—through the interior; but it makes several bold windings, and divides about one-third of the parish on its left bank, from the remaining two-thirds on its right. Ewes water, approaching also from the north, but at a point a mile east of the Ewes, runs 1½ mile to a confluence with that stream at the town. Tarras-water, after striking the north-east angle of the parish, wends along the whole eastern and south-eastern boundary, and joins the Esk when just about to make its exit. Wauchope-water rises, under the name of Laggan-burn, in the extreme north-west corner, and performing a double-curved course in the form of an inverted and prostrate S, drains very nearly all the western and larger division of the parish, and falls into the Esk at the town of Langholm, a few yards below the point where it is entered on the opposite bank by the Ewes. Irvine-burn rises in the interior, runs 1¼ mile southward, and then traces the boundary 1½ mile eastward to the Esk. Excellent trout abound in all the four principal streams, are largest in the Tarras, and are of peculiarly delicate flavour both in that river and in the Wauchope. No district in the south of Scotland is more attrac-

tive than Langholm to both the angler and the fowler. In the western district are three medicinal springs,—one sulphureous, which is said to give relief in scrofulous and cutaneous disorders,—and two chalybeate, one of them very strong. The ground along the Esk and the Ewes is flat, and well-sheltered by plantations and thriving hedges; and having a light loamy soil, cultivated with care, it yields the most luxuriant crops. A few orchards in the vicinity of the town are very fructiferous. Other parts of the parish, comprehending most of its area, consist chiefly of smooth hills, verdant to their summits, and parcelled out into sheep-farms. The proportions of arable land and of pasture over the whole area, are to each other very nearly as 2 to 13. Upwards of 400 acres are under plantation. The Dean banks, through which the post-road passes along the west side of the Esk, and the woods of Broomholm on the opposite side form a fine forest, consisting of many valuable as well as beautiful trees. Farm-buildings and enclosures are in a style subservient alike to utility and to ornament. Whatever skill and enterprise could suggest has been achieved for the improvement of both the arable and the pastoral grounds. From 8,000 to 10,000 Cheviot sheep feed on the pastures, and undergo the process of smearing. The breed of black cattle reared is the Galloway. Lead-ore occurs on the farm of Westwater, and on the estate of Broomholm. Coal commences at Langholm-bridge, and stretches away thence beyond the parish to the Solway frith. The chief proprietor of the parish is the Duke of Buccleuch. Langholm-lodge, a seat of the Duke, and Broomholm-house, the seat of George Maxwell, Esq., are both delightfully situated on the left bank of the Esk, the former half-a-mile above the town, and the latter  $1\frac{3}{4}$  mile below it. Over the Ewes, between Langholm lodge and the town, is a beautiful bridge, 100 feet in span. Over the Esk, uniting the old and the new parts of the town, and forming the commencement of the road into upper Eskdale, is another bridge of three arches. The two bridges stand nearly parallel, and are not above a gun-shot from each other, the two rivers uniting immediately below them. About half-a-mile south of the town, leading off from the post-road at a paper-mill to the right bank of the Esk, is a third bridge of three arches. The road which comes down the right bank of the Ewes, passes through the town, and then runs along the left bank of the Esk, is the great mail-road between Carlisle and Edinburgh, and also the post-road between Carlisle and Berwick, the roads becoming identified at the town of Hawick. A road, going off from the town westward, runs  $5\frac{1}{2}$  miles up Wauchope-water and one of its tributaries, and then points the way into Annandale and Nithsdale. The Roman road of communication between Netherbie and Castle O'er, or Overhie, can still be traced to have entered the parish at its south-east corner, crossed the Esk a little above Broomholm, and run thence north-westward till it passed into Westerkirk. Langholm-castle, a plain square tower or peel-house, now in a state of ruin, was anciently the property of the Armstrongs, the powerful family of Border free-hooters: See CANOBLE. On Langholm-holm, "Johnnie Armstrong of Gilnockie, and his gallant company of thirty-six men," when going to meet King James V., "ran their horse and brak their spears," when—

"The ladies lookit frae their loft windows,  
Saying, God send our men well back again!"

At the confluence of the Esk and the Ewes is a small fragment of a castle, formerly the property of the Nithsdale family, lords of regality of Eskdale. Wauchope-castle, romantically situated on the brow of a

precipice, overlooking the rush of Wauchope-water among pointed rocks, and the pendent oaks and underwood of a picturesque hank on the opposite side, was the first residence of the Lindsays in Scotland, and bears marks, in the vestiges of the fosse and other outworks, of having been a place of strength. This family, from the manor of Lindsai in Essex with Malcolm Canmore, received from him the lands of Wauchopedale—the name still given to the basin of the Wauchope—and diverged into the family of Crawford, and the other noble families of their name. Pennant, when visiting the house of Broomholm,—in the vicinity of which an old tower was taken down about a century ago,—was of opinion that it stands in the centre of the site of an old British town, and corresponds to Cæsar's description, "*Oppidum sylvæ paludihusque munitum quo*," &c. Cæs. de Bell. Gall. Lib. v. 17. The castle of Barntaloch, near Staplegorton, which surmounted a rocky precipice on the Esk, and around which was a hugh-of-harony, with an annual great fair, has utterly disappeared. The towers of Irvine, Nease, Hill, and Cawfield, also are among the things which were. About 60 years ago were found in the parish Roman coins, chiefly denarii aurei, of the reigns of Nero, Vespasian, Otho, and Domitian. Population, in 1801, 2,039; in 1831, 2,676. Houses 407. Assessed property, in 1815, £6,134.

Langholm gives name to a presbytery in the synod of Dumfries. Patrons, the Crown and the Duke of Buccleuch. Stipend £222 8s. 8d.; glebe £27 10s. Unappropriated tinds £285 8s. 11d. The church was built in 1779. Sitings about 800. In the town are two meeting-houses, belonging respectively to the United Secession and the Relief.—Parochial schoolmaster's salary £34, with £40 fees, and £20 other emoluments. The parish-school is attended by a maximum of 100 scholars; and 3 non-parochial schools by a maximum of 159. One of the latter is a free school, recently erected by one of the heritors, and brings the master the interest of £600, on condition of gratuitously teaching 25 children; and another has attached to it a salary of £3, with a house and garden. Several female teachers also have schools attended aggregately by about 80 scholars.—To Langholm belongs *quoad sacra*, the *quoad civilia* parish of HALF-MORTON: which see. The parish proper, or *quoad civilia*, comprehends the ancient parishes of Staplegorton and Wauchope. Staplegorton includes all the district east of the Esk, and also some territory on its west hank. The church stood on the east side of the Esk, above Patholm, and is still commemorated by its burying-ground. The parish, as to its ecclesiastical property, was given, in the 12th century, by William de Cunighuro, to the monks of Kelso; and it passed at the Reformation to the Earl of Roxburgh, but was purchased back by the Crown, and enjoyed, for a brief period, by the bishop of Galloway. The old parish of Wauchope consisted of the district now called Wauchopedale. The church was given, in the 13th century, or earlier, to the priory of Canohie, a cell of the abbey of Jedburgh; and after the Reformation, it passed to the Earl of Buccleuch. The church stood near the old castle of Wauchope; and its burying-ground yet remains. The present united parish was erected in 1703. The presbytery of Langholm was formed in 1743, at the demolition of the presbytery of Middlehie, by uniting to the five parishes of Eskdale, the parish of Castletown, formerly in the presbytery of Jedburgh.—Among eminent natives of Langholm are Admiral Sir Thomas Pasley, who played a conspicuous part under Earl Howe, in the sea-fight of 1st June, 1794; Colonels John Little and Matthew Murray, who

made a figure in the wars against Tippoo Saib; William Julius Meikle, the translator of 'Camoens Luciad'; Thomas Telford, Esq., the celebrated civil engineer; Admiral Sir Pulteney Malcolm; and David Irvine, LL.D., librarian to the faculty of advocates, and the author of the 'Life of George Buchanan,' and other works.

LANGHOLM, a hurgh-of-barony and the capital of the above parish, and of Eskdale, stands on the Esk at the confluence with it of the Ewes and the Wauchope, 12 miles from Longtown, 21 from Carlisle, 18 from Annan, 30 from Dumfries, and 23 from Hawick. The town is emhosomed in one of the sweetest landscapes in Scotland,—neither extensive, romantic, nor grand, but, in the strictest sense, beautiful. The old part of the town, or what is called Old Langholm, stands on the east bank of the Esk, immediately below the influx of the Ewes, and stretches south-eastward along the Edinburgh and Carlisle road. It consists of one principal street, with a market-place near its middle. Many of the houses are in a superior style for a place of its size; and all are roofed with blue slate quarried in the vicinity. At the market-place stand the town-hall and jail, built in 1811, ornamented with a spire, and handsome in appearance, and having in front a monument [now crecting] to Admiral Sir Pulteney Malcolm. On a rising ground behind the town stands the parish-church. Several good shops enliven the street, and the Crown inn is well known to travellers, tourists, and sportsmen. The new part of the town, or New Langholm, stands on the west bank of the Esk, immediately above the influx of Wauchope-water, and hestrides the road which leads from the town to Upper Eskdale. It consists of nearly 150 houses, built in regular street arrangement, in the form of a triangle. The inhabitants are mostly trades-people, and pay a small quit-rent for their house and garden; and, for from 3s. to 14s. an acre on leases of 14 years, they have 2 or 4 acres of land,—2, if their house be one story high, and 4, if it be 2 stories. They have also, for 18s. a-year, a cow pastured on a common set entirely apart for their use. The feus are all held from the Duke of Buccleuch. The village was commenced in 1778; and several years before the close of the century it numbered about 100 houses. A cotton manufactory was, about 50 years ago, established at New Langholm; but it has at times been threatened with extinction, and employed at the commencement as many persons as it does still,—between 80 and 100. But the weaving of serges, checks, and shepherds' plaids, and the manufacture of woollen yarns and hose, though not individually important, aggregately afford considerable employment. The number of handlooms for cotton-fabrics in the town and its vicinity was, in 1828, 300,—and, in 1838, 250,—all plain. The town has likewise a distillery, a brewery, and some dye-houses. Looking at the great advantages of the place—abundance of coal and peat, a profusion of water-power, and far superior facilities of communication to those of the thriving towns of Hawick and Galashiels—a stranger is puzzled to comprehend why its manufactures are not abundantly prosperous. The town has branch-offices of the British Linen company's bank, and the National bank of Scotland; two subscription libraries,—one of them large and rich; a farming society; a friendly society; and a savings' bank. A weekly market is held on Wednesday; and four annual fairs,—one of them on the 26th of July for lambs, and one of the principal fairs in the South of Scotland,—and the others on the 16th of April, the last Tuesday of May, O. S., and the 4th Tuesday of September, for the hiring of farm-servants and the sale of stock.—The town was

erected into a hurgh-of-barony, by a charter from the Crown, dated 7th April, 1643. The Duke of Buccleuch is the superior, and appoints a haron-haillie, who again appoints a depute. Courts are sometimes held for trial of assaults, and other petty offences. But the cases for trial are few; and the punishment inflicted is generally fine or imprisonment,—the fine being given to the poor. A voluntary association of the inhabitants attends to matters of police,—chiefly the lighting and cleaning of the streets. The expense amounts generally to about £50, and, so far as not defrayed by an annual donation of 40 guineas from the Duke of Buccleuch, is made up by subscription. The members of the association annually elect a committee of 7, and vest them with the police executive. The population is about 1,900. The number of persons whose rents, in property or tenantry, amount to £10 and upwards, is 85; and the number whose rents amount to £5, and are under £10, is 106.—The town is noted, among the curious, for the manner in which it tamed shrews, and for the character which—previous to Christian enlightenment driving notions of witchcraft out of fashion, and showing that the thing called so in the Bible was simply heathen divination—it ascribed to its witches. An instrument called "the branks," was so formed as to fit firmly upon the head, and to project into the mouth a sharp spike for commanding and squeezing down the tongue. The tool was kept by the chief magistrate, and hung up *in terrorem* before the scolds of the place. Whatever woman was too shrewish to be overawed by its moral influence, was treated to an acquaintance with its physical powers; and, having had it imposed on her as a head-gear, was paraded through the town under the roar of ridicule, and the taunts of scorn. Few shrews, it is said, allowed their tongues, when once released, to wag so wildly again as to bring them a second time acquainted with "the branks." Dr. Plot, the historian of Staffordshire, records that a similar discipline was once practised in that county, and sagaciously opines that it is "much to be preferred to the ducking-stool, which not only endangers the health of the patient, but also gives the tongue liberty betwixt every dip,—to neither of which disadvantages this is at all liable." The Langholm witches, it seems, were as extraordinary specimens of womanhood in their class, as the Langholm vixens were in theirs, and demanded proportionally sharp methods of punishment. Usurping the craft of the accoucheur, they were wouit—so the monstrously absurd superstition of the time believed—to transfer the anguish of parturition from the mother to the father; and, in an age when, to the infamy of Scotland, the faggot was lighted for many an aged female who happened to have lost the bloom of health and contracted a love for retirement, these reputed witches, possessing such extraordinary powers, were, of course, severely done to death. A spot in the neighbourhood of Langholm-castle is still pointed out where some of them were burnt during last century.

LANG-NEWTON, an ancient vicarage, in the district of Jedburgh, valued, in 1,220, at eight merks. The churchyard continues to be used. It anciently belonged to the monastery of Jedburgh, and is now annexed to the parish of Ancrum. See ANCRUM.

LANGSIDE, an inconsiderable village in the north-west of the parish of Cathcart, Renfrewshire, distant about 2 miles south of Glasgow, and 7 miles and 2 furlongs east of the cross of Paisley. Here, on 13th May, 1568, the adherents of Queen Mary were completely defeated by the Regent Murray: See CATHCART and CROOKSTON. At the field of

battle, on the summit of a height called Camphill, there is a circular or elliptical enclosure, about 360 feet in circumference, to which the name of 'Queen Mary's camp' is commonly attached. This is manifestly a popular perversion of fact, for neither the Queen nor her army ever reached that hill; and as to the Regent, he only took possession of it at the beginning of the engagement. Indeed, the scene of the conflict was so unpremeditated, that neither party had time to form any intrenchment. That in question is probably of Roman formation. It commanded an extensive view of the surrounding country, and was within a few miles of the Roman station at Paisley. The hattle of Langside forms the subject of some interesting and stirring passages in Scott's historical romance of 'The Abbot.' The latest and most accurate account of it is given in Mr. Tytler's 'History of Scotland.'

LANGTON, a parish in the centre of Berwickshire, lying partly in the Merse, and partly among the Lammermoor-hills; and bounded on the north by Longformacus; on the north-east by Danse and Edrom; on the south by Edrom and Polwarth; and on the west by Longformacus. It is nearly triangular, but with sinuous outline; and, measuring in a straight line, extends 6 miles on its north-east side;  $4\frac{1}{2}$  on its south side; and  $3\frac{1}{2}$  on its west side. Its area is about 7,200 acres. About four-sevenths of the surface from the northern angle downwards is upland, divided into sheep farms of heathy and coarse grass pasture, and commanding a view of the whole luxuriant expanse of the Merse and of Northumberland, as far as Wooler. The heights are called Langton-Edge, and have an extreme altitude of about 900 feet. The Lowland division has, in general, a reddish loam well-adapted to the raising of oats and barley, and, in some fields, deep, rich, and fructiferous in wheat; and it is all finely enclosed with stone or hedge fences, and beautifully embellished with plantation. The proportions of arable ground, and of ground covered with wood, are as 10 to 3. Of four rills which rise in the interior, and run eastward as tributaries of Blackadder-water, two run for a considerable way respectively on the southern and on the north-eastern boundary, and one—Langton-hurn, a strong, clear stream—drains a large part of the parish, flows, for some time, between steep banks richly clothed in copsewood, and afterwards meanders among the fine scenery of Langton wood. On a hill in the farm of Raeleugh-head are distinct traces of two military stations, supposed to have been Danish. On Camp-muir, in the farm of Langhope-birks, are traces of an encampment made by a party of troops, both foot and horse, stationed there, in the reign of William and Mary, to overawe the Jacobites. In the vicinity of a place called Battle-moor, several urns and stone-coffins have been found. The ancient little town of Langton straggled over a length of about half-a-mile, and during the unsettled period of the international wars, was a place of some consequence. Like other Border towns, it suffered at different times from incursions, and in particular, was burnt in 1558 by Sir Henry Percy and Sir George Bowes. But, in 1760, it was peacefully razed to the ground, and substituted, at about half-a-mile from its site, by the pleasant modern village of GAVINTON: which see. The estate of Langton, including very nearly all the parish, as well as part of Dunse and Longformacus, was purchased, in 1758, by David Gavin, Esq., and immediately made the scene of georgical and planting operations, which raised it to opulence and mantled it in beauty. Through his daughter, who became first marchioness of Breadalbane, it passed into the possession of the present Marquis; and now

—with the fine mansion and ornate grounds of Langton-house in its centre—is one of the loveliest spots in the Merse. The turnpike between Dunse and Edinburgh by way of Lauder, runs through the lowland district, and sends off a branch here toward Greenlaw. Population, in 1801, 428; in 1831, 443. Houses 88. Assessed property, in 1815, £5,644.—Langton is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, the Marquis of Breadalbane. Stipend £214 19s. 11d.; glebe £24 2s. Schoolmaster's salary £25 13s. 2d., with about £24 fees.—During the reign of David I., the manor of Langton, with the advowson of the church, belonged to Roger de Ow, a follower of Earl Henry, the heir-apparent of the throne. De Ow gave the church, with its pertinents, to the monks of Kelso; and was succeeded in the possession of the manor, first by the family of Vetereponte or Vipont, one of whom fell in the battle of Bannockburn, and next by the family of Coekburn, one of whom was created a baronet by Charles I., and the last of whom sold it to Mr. Gavin.

LANGWALL (THE), a river in Caithness, which, joined by the Berriedale, falls into the sea near the Ord, or southern extremity of the county.

LANTON, a village at the west base of Dunian hill, a little east of the Berwick and Carlisle turnpike;  $2\frac{1}{2}$  miles west of Jedburgh, 12 miles from Kelso, and 9 from Hawick, in the parish of Jedburgh, Roxburghshire. It is a poor-looking place, the site of a semi-parochial school, and a preaching-station of the Establishment, the inhabitants of the district around it not having easy communication with Jedburgh in consequence of the intervention of the Dunian. Population, about 230.

LAOGHAL (LOCH), a lake in the parish of Tongue, Sutherlandshire; about 4 miles long, and 1 broad. From it the river Torridale takes its rise. On the sides of this lake rise the lofty mountains of Benlaoghal and Benhope.

LAPPOCH, a dangerous roek, about 100 yards long, and dry at low water, in the bay of Ayr. It lies about  $1\frac{1}{2}$  mile south-south-west of the bar of Irvine; and is in a line with Irvine steeple, the half-tide roek and Lady-Isle: See LADY-ISLE. Between it and the coast is a broad channel from 7 to 8 fathoms deep.

LARBERT, a parish in Stirlingshire, part of the united parish of Larbert and Dunipace. It is bounded on the north by the Pow, which divides it from St. Ninians; on the north-east by Airth; on the east by Bothkennar; on the south by the Carron, which divides it from Falkirk; and on the west by Dunipace. In itself it is nearly a square  $2\frac{3}{4}$  miles deep; but, since about 1620, it has been united on equal terms to Dunipace, and it measures, jointly with that parish, 8 miles in length from east to west, and about 2 miles in mean breadth. The ground, over both parishes, is for the most part level, with a soil light and dry, and in part clayey; and it is beautifully cultivated, enclosed, and sheltered, and teems with the attractions of mansion and demesne, of neat farm-stead and fertile fields, and of stirring villages and important manufactures. Herhershshire is a fine old baronial mansion celebrated in the ancient ballad of Gil Morice, as the "Lord Bernard's Ha'." Kinnaird-house was once the residence of the Aethiopian traveller Bruce, a native of the parish, and was the scene of his death and of the seemingly trivial accident which occasioned it; and it possesses many memorials of him in the curiosities which he brought from the wide and wondrous field of his researches. The other mansions are Larbert, Dunipace, Woodside, Carron-hall, Carron-Park, and Carbrook. The chief village and scene of stir and manu-

facture is CARRON: which see. The villages of Kinfaid and Stenhousemuir, situated in the vicinity of Carron, are occupied by colliers employed in rich neighbouring coalmines. CARRONSHORE is separately noticed. Larbert, running along the Edinburgh and Stirling turnpike from the bank of the Carron, is a pleasant village, 2 miles from Falkirk and 9 from Stirling, delightfully situated, commanding a charming view of the surrounding country, and adorned with an elegant Gothic church. DUNIPACE, as to its interesting antiquities and other objects, has been separately described. Near Carron stood the famous ARTHUR'S OVEN: which see. At Larbert is a Danish fort. The Roman causeway from the camp of Carmuir in Falkirk, across the Carron a little west of Larbert, and stretching nearly in a straight line to Stirling-castle, is still entire in many parts both in Larbert and Dunipace. The great north road from Glasgow to Perth and the turnpike from Edinburgh to Stirling, cut the united parish northward, to become identified  $5\frac{1}{2}$  miles after leaving it at St. Ninians. Population, in 1801, 4,217; in 1831, 5,526. Houses 710. Assessed property, in 1815, £7,950.—The united parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Crown. Stipend £271 3s. 4d.; glebe £26 10s. Unappropriated teinds £1,180 2s. 8d. The ancient churches were chapels subordinate to the church of Egglis or St. Ninians; and they were, along with that church, given by Robert, bishop of St. Andrews, to the monks of Camhuskenneth. There are two parish-churches; that of Larbert, built about 1820; and that of Dunipace, in 1833. In 1838, measures were adopted and subscriptions commenced for erecting a *quoad sacra* parish-church in the eastern district of Larbert. The parish minister officiates alternately in the parish-churches, and employs either a stated or an occasional assistant. An ecclesiastical survey, in 1838, exhibited the population as then consisting of 4,085 churchmen, and 1,455 dissenters,—in all 5,540 persons, chiefly Carron-iron-workmen, calico-printers, colliers, and Carron carters. Two parochial schools are attended by a maximum of 142 scholars; and ten private schools by a maximum of 444. Salary of each parish-schoolmaster £34 4s., with fees, and a house and garden.

LARGO, a parish in Fifeshire, at the bottom of the bay of the frith of Forth to which it gives name. It extends to the north, at the east end, for about  $4\frac{1}{2}$  miles; but at the west end, little more than 3 miles. Its breadth on the south, along the shore, is only about  $2\frac{3}{4}$  miles; but at the north it is about  $4\frac{1}{2}$  miles. On the south it is bounded partly by Largo bay, and partly by the parish of Newburn; on the east by the parishes of Newburn and Kilconquhar; on the north by the parish of Ceres; and on the west by the parish of Scoonie. The shore is in general low and sandy, but the ground soon begins to rise towards the north. The surface of the parish is throughout exceedingly diversified by rising grounds and valleys, and beautifully ornamented with wood of various kinds. On the east side of the parish, and at the distance of about 2 miles from the shore, Largo-law rises to the height of about 910 feet above the level of the sea. It is of a beautiful conical form, green to the summit, where it is cleft in two, and exhibits a series of basaltic columns. From this hill, a splendid and extensive view of the whole surrounding country, the frith of Forth and its islands, and the opposite shore of the Lothians, is obtained. West of Largo-law a deep ravine, called Keil's den, and through which flows a small burn, intersects the parish from north to south, for about 2 miles. It is finely wooded, is exceedingly picturesque, and forms

a favourite walk for persons residing at Largo during the summer for the benefit of sea-bathing. Houses, in 1831, 479. Assessed property, in 1815, £8,281. The population, in 1801, was 1,867; in 1831, 2,567. Of this population about 1,761 resided in villages, and 806 in the country.—The villages are Lower Largo, including Temple and Drummochy, situated near the sea, with a population, in 1831, of 567; Upper Largo, with a population of 413; Lundinmill, population 453; and Backmuir of Gilston, and Woodside, population 316. A steam-boat plies twice a-day between Largo and Newhaven during summer, and once during the winter-months. The harbour, which is at the mouth of the Keil-burn, is not good, but has been considerably improved by General Durham, so that the steam-boat can, in general, enter the harbour and land passengers at the pier. There are three small vessels belonging to it. In old times a trade was carried on from this place with Campvere and Rotterdam in coal, salt, iron, sandstone, &c.; and more recently with Norway in wood; but the whole of this is now at an end. The nearest market-towns are Leven and Colinsburgh, each about 3 miles distant.—The estate of Largo, the most extensive in the parish, is now the property of Thomas Calderwood Durham, Esq., who succeeded to his uncle, the late General James Durham. At no great distance from the village of Upper Largo, is the mansion-house,—an elegant modern dwelling, situated on a pleasant slope, with a southern exposure, and surrounded with enclosed grounds, well laid out, and richly ornamented with a great deal of fine wood. The barony of Largo was conferred by James III. in 1482, by charter under the great seal, on Sir Andrew Wood, his naval commander, in acknowledgment for his brilliant achievements against the English.\* The objects of antiquity in this parish are more than usually numerous, and some of them peculiarly interesting. Within the grounds which surround Largo-house is a circular tower, which formed part of the old castle inhabited by Sir Andrew Wood, and which, it is alleged, once formed a jointure-house of the queens of Scotland. On the banks of the water of Keil, to the north of Largo-house, is an old square tower, part of the castle of Balcruvie, anciently also called Peteruvie. In all probability this castle was erected by Sir John Lindsay, as a separate residence

\* An account of this brave man, who retained the friendship, not only of James III., but of his son, James IV., has been given in our article FIFESHIRE. Sir Andrew, like Commodore Trunton, brought a considerable portion of his nautical ideas and manners with him on shore. He caused a canal to be formed from his house almost down to the church, and on this he used to sail in his barge in state every sabbath-day! From the descendants of Sir Andrew, this barony came to a Mr. Peter Black, and from him to Sir Alexander Gibson of Durie, who, in August, 1663, during his father's lifetime, had a charter. "Alexander Gibson, juniori de Durie, terrarum baronia de Largo, &c." He does not appear to have long retained them, but to have disposed of them to Sir Alexander Durham, 3d son of Sir James Durham of Pitkerrow, descended from Sir William Durham of Grange, a man of rank and distinction, who figured during the reign of Robert Bruce. Sir Alexander Durham was a great loyalist, and for his services to the royal family was knighted by Charles II., and appointed lord-lyon, king-at-arms, in 1660. He was also a colonel of a regiment, and receiver-general of the land-tax of Scotland. His elder brother, James Durham of Pitkerrow, was also of the loyal party, and a captain in Sir Alexander's regiment. Afterward he betook himself to the study of theology, and became an eminent divine. He was first one of the ministers of Edinburgh, also one of the King's chaplains, and attended his majesty to the battle of Dunbar. He was afterwards minister of the High church of Glasgow, and the author of several works on divinity. He married Margaret, daughter of Sir — Mure of Glandarston, widow of the well-known Zacharias Boyd, his colleague. By this marriage he had two sons; Francis, who succeeded his uncle, Sir Alexander, in the estate of Largo; and James, who succeeded his brother Francis. He married Margaret, daughter of Sir Thomas Rutherford of Huntly, who, upon the failure of issue male of her father and brother, became heir of line to the title of Lord Rutherford, on which account he quartered the arms of Rutherford with those of Durham. The late General James Durham was his great-grandson.

during his father's lifetime. The tradition is, that Baleruvie belonged to the family of Crawford; but this is a mistake originating in the fact that the family of Lindsay, at a subsequent period, succeeded to the estates and titles of the Earl of Crawford. In the centre of the present house of Lundin, which is of modern erection, there is a square tower of great antiquity, which formed part of the ancient castle of Lundin, the residence of the family of Lundin.—There is another class of antiquities, however, in this parish of far more ancient date, and of much greater interest than attaches to these old towers, interesting though they no doubt are. South-east of Lundin house, and between it and the high road, are three upright stones, of red sandstone, commonly called "the standing stones of Lundin," which have obviously formed part of one of these circles of stones, believed to have been Druidical temples; and of which Stonehenge in England is the largest and most remarkable example now existing. The Lundin stones are rude blocks of a triangular form, and are each about eighteen feet in height, and supposed to be nearly as much below ground. The fragments of a fourth stone, which appeared to have been of equal magnitude, recently lay near them. Sibbald says, that in his time it was alleged, "that some ancient sepulchres had been found in their neighbourhood." By some it has been supposed that these stones were erected in commemoration of the death of some of the Danish chiefs, who fell in battle here, during the time they were making incursions on our shores; but this is an extremely improbable conjecture, and there seems to be no reason to doubt, that they are remains of the Druidical worship. In the lawn in front of Largo-house is one of those carved stones called Runic. A considerable number of years ago one-half of this stone was found on the estate of Largo; and, at a subsequent period, the other half was found at a place more than a mile distant. Being found to be part of the same ancient relique, they were built into a wall in order to preserve them; but General Durbam had the two pieces removed, and erected on a pedestal, in their present situation on the lawn. This singular monument presents on the one side a Maltese cross, something like that on the cross at Craill; the upper part of the stone presenting a circle, ornamented in the style of a part of Craill cross, and one of the side slabs of the St. Andrews sarcophagus. On the right side of the body of the cross, below the transepts, are two fishes or serpents intertwined, having heads like horses; and on the left, something like a figure sitting having an elephant's head, of which the trunk is apparent. The body of the cross has been ornamented with a variety of carving, some of which would appear to have been serpents intertwined. The reverse side of this monument represents the usual hunting scene which this class of remains almost invariably represents.—On an artificial rising ground or tumulus to the north of Largo-house, called Norrie's law, about the year 1819, a man digging sand, it is reported, came accidentally upon a stone coffin, in which was found a complete suit of scale-armour, which, with the shield, sword-handle, and scabbard, was entirely of silver. A few portions of the armour were rescued from destruction, but the greater part is known to have been disposed of by the finder to different silversmiths.—The late Sir John Leslie, K. G., professor of natural philosophy in the university of Edinburgh, was born in this parish in 1766. In the village of Lower Largo, Alexander Selkirk was born in 1676. Little is known of him in early life, except that he went to sea; and that on one occasion when at home, he committed an assault on his brother, which led to his being brought before the kirk-session of his native parish. In 1703,

he engaged as sailing-master on board the Cinque Ports, bound for the South sea, and having quarrelled with the captain, he was put ashore on the uninhabited island of Juan Fernandez, where he remained in entire solitude four years and four months. He was at length discovered, and brought to England by Captain Wood Rogers; and subsequently returned to Largo, where he remained for some time. From his adventure in the island of Juan Fernandez, Daniel Defoe took the hint for his inimitable romance of Robinson Crusoe. Selkirk brought home with him his gun, sea-chest, and drinking cup, which he had with him on the island; and they are still preserved, in the house in which he was born, by the descendant of one of his brothers.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Durham of Largo. Stipend £253 9s. 7d.; glebe £31. Unappropriated teinds £140 14s. The parish-church is situated in the village of Upper Largo. It was built in 1817, and in 1826 there was taken into the new building, an aisle belonging to the old church, which supported the spire, and bears the date of 1623. It is seated to accommodate upwards of 800.—There are two dissenting chapels in the parish, both situated in the village of Lower Largo: a Relief chapel and a Baptist chapel. The number of dissenters within the parish is about 200. There are four schools in the parish. The parochial teacher has the maximum salary. Of the three other schools, two have salaries of £5 each from the heritors, besides their school-fees. A subscription library has been established for a number of years, and contains upwards of 500 volumes.—By a deed of mortification dated 7th July, 1659, John Wood, a younger son of the family of Wood of Largo, bequeathed the sum of £68,418 Scots for the purpose of building and endowing an hospital within the parish, for the maintenance of 13 indigent and enfeebled persons of the name of Wood, besides a gardener, a porter, and a chaplain; the building was commenced in April 1665, and completed about the end of the same year. It appears to have been first inhabited about Candlemas, 1667. The following is the account given by Lamont in his Diary of this: "1665, April.—About the beginning of this month, the hospitall att the church of Largo in Fyffe, appointed to be bueldd by the deceased John Wood, was founded at this tyme, by Robert Mill, measter measson in Edh., and some men that he hyred for the worke, some meassons, some quarriers, some barrowmen, to the number of 18 or 20 persons, or thereby. He vndertooke to huedl itt for a penny, and to deliver the keys to the ouerseirs, viz. E<sup>r</sup> of Weyns, Lundy, Largo, Kirke sessiown of Largo, Balfowre, Pat. Scot of Langshaw, and S<sup>r</sup> Tho. Gourlay of Kincragie, and M<sup>r</sup> John Alleys advocat in Edb. Some say that he was to have for the worke, being compleit, nyne thowsande merkes scots, and iff itt was founde weill done 500 merkes more. About the end of An. 1665, the roofe was put on this bueldding, and sclaited and glassed. It consisted of thrie roofes, one to the east, one to the north, and one to the west. The entrie of itt looked to the south. It was a huedding that consisted of 14 divers rowmes, with a publicke hall; in each rowme ther was a bed, a closett, and a lowme, being all fyre rowmes, with a large garden; a stone bridge for its entrie; a house besyde for the gardiner two stories high. About 6 persons were entered to stay att the said hospitall about Candelmisse 1667." In 1830 this building was found to be in a state of great decay, and a new one was erected by the patrons, which is not only much more commodious but is an elegant and ornamental building, in the Elizabethan style. The de-

signs were furnished by Mr. James Leslie, civil engineer. The whole expense of the erection was £2,000 sterling. It is fitted to accommodate 16 individuals, each having a sitting and a sleeping apartment. In the centre is a large hall, where the inmates are conveyed to prayers, morning and evening; above which is a room for the meetings of the patrons. The annual allowance to each inmate is £15 sterling, paid monthly, and a supply of vegetables. The funds arise from the interest of £2,000 sterling, and the rent of a farm, which averages about £280 sterling. The patrons are the Earl of Wemyss, the lairds of Largo, Lundin, and Balfour, with the minister and kirk-session of Largo. Little is known of Mr. Wood, the founder, except that he was a cadet of the house of Wood of Largo; that he was, as Lamont says, "sometime a courtier," that he was designed of "Orkie," and that besides this hospital, he founded a school at Drumeldrie, and built at his own expense, a wall round the churchyard at Largo.

LARGS, a parish in the extreme north-west of Cunningham, Ayrshire; bounded on the north and east by Renfrewshire; on the south-east by Kilbirnie and Dalry; on the south by West Kilbride; and on the west by the frith of Clyde. Its length from Kelly-burn, which forms its boundary on the north, to a point a little south of the village of Fairley, is about 9 miles; its breadth, from the hill of Stake on the east to the village of Largs on the west, is  $3\frac{3}{4}$  miles; and its area is estimated at 19,743 acres. The hills, which begin to rise in the parishes of Greenock, Kilmacolm, Lochwinnoch, Kilbirnie, and Dalry, meet in a kind of general summit at the eastern boundary of Largs, and hem it in so curiously from all the cultivated country to the north, east, and south-east, as to have occasioned the proverbial expression, "Out of the world, and into the Largs." The uplands gradually descend as they approach the shore; and they terminate in abrupt declivities, some of which are almost perpendicular, as if part of their base had been forcefully dissevered. Yet, though the hills are high, they are but thinly patched with heath, and have a coat of prime pastoral verdure, and, in some instances, exhibit undoubted marks of having once been cropped with grain. For a mile from the northern boundary, the uplands form at their base what seems an impregnable bulwark or perpendicular massive breastwork of rock, rising in some places 50 or 60 feet above the road, and seeming to overhang it. When covered with icicles, and lit up by sunshine in winter, this huge natural wall is a gorgeous object, a stupendous cabinet of the richest gems. South of the point where it terminates, a conical mountain, green to the top, contributes a feature alike bold and beautiful to the landscape. Farther south, the grounds fall off in gentle gradients, and yield in fine slopes to the course of Nuddesdale-water, a considerable stream. Behind the village of Largs, the country opens into a beautiful plain, extending nearly a mile from the beach to the foot of the mountains. No parish in the west of Scotland, and few in the Highlands, can surpass Largs in the beauty and romance of the landscape which stretches along its own area, or is hung out within view of both its uplands and its plains. Its coast-line is almost parallel with that of Bute, and looks right across to that beautiful island, to the entrance of the Kyles of Bute, to Toward-Point in Cowall, to a profusion of fine headlands, and wooded slopes, and broken surfaces coming down thence and from the Larger Cumbray, to kiss the waters of the Clyde, and to the magnificent and singularly varied alpine scenery which rises up in the distance, and makes acquaintance with the clouds. About one-sixth of the whole area of the parish is arable; about

1,000 acres of the high grounds are of little value; a fair and even large proportion of the sea-board or low grounds, is frilled and clumped with wood; and the rest of the area is devoted to the pasturage of sheep and black cattle, chiefly for the market of Glasgow. The soil of the arable land in the southern district is light and sandy, producing tolerable crops with little culture, if the season be not unusually dry; and, in the northern district, is a light red earth, lying on rock of the same colour, and inferior to the former for both tillage and pasture. Neither lime nor coals worth working have been discovered in the parish, and cannot be procured nearer than Stevenston, 11 miles from the southern boundary. Gogo-water,  $5\frac{1}{2}$  miles in length of course, rises near the eastern limit, and runs westward to the frith immediately south of the village of Largs. Noddesdale-water, 6 miles long, rises near the north-east extremity, and runs south-westward to the frith, at a point just a mile north of the mouth of the Gogo. "Noddesdale," says Sir John Sinclair's statist, "is a very impetuous stream. It runs through Mr. Brisbane's pleasure-grounds, where it has often committed great depredations. Mr. Brisbane has frequently endeavoured to embank it, and has been at great pains and expense in raising mounds of earth to turn its course, but in vain." Rigghill-burn, rising very near the source of Noddesdale, enters the frith  $2\frac{1}{2}$  miles farther north. Kelly-burn, welling up on the northern boundary, traces it for  $3\frac{1}{2}$  miles westward to the sea. Rotten-burn, rising on the north-eastern boundary, runs along it for  $3\frac{1}{2}$  miles north-westward, and passes into Renfrewshire. The fisheries along the coast are of considerable value, and send their produce to the towns on the Clyde.—Kelburn-house, a seat of the Earl of Glasgow,  $1\frac{1}{2}$  mile south-east of the village of Largs, and half-a-mile from the shore, is remarkable for the romantic scenery of a glen a quarter of a mile long, immediately behind it. At the head of the glen is an abrupt, rough, lofty precipice, over which leaps a brook into a path just wide enough to permit the flow of its waters. From the sides of the path, the ground rapidly ascends, mountain high, forming a chasm which, if naked, would be tremendous, but which is so clothed with trees, and otherwise decorated by art, as to be beautiful. Near the house, the brook leaps over another precipice, 50 feet sheer down, into a vast basin which seems scooped out of both sides of the glen.—Brisbane-house, the seat of Sir T. Brisbane, Bart.,  $1\frac{3}{4}$  mile north of Largs, is another fine mansion, surrounded with picturesque grounds. In the house is preserved an oaken chair, dated 1357, and carved on the back with the arms and initials of the Brisbane family.—Skelmorly-castle, 2 miles farther north, the property successively of the Montgomerys of Skelmorly, the Montgomerys of Coysfield, and the Earls of Eglinton, was built partly in 1502, and partly in 1636.—Knock-castle, built about 350 years ago, but now in ruins, was the property of an ancient family of the name of Fraser, descended from John Fraser, 3d son of Hugh Fraser of Lovat. The circumjacent lands were granted to Fraser in 1402, by Robert III., and are now part of the Brisbane estate.—The castle of Fairley [see FAIRLEY], built in 1521, and now belonging to the Earl of Glasgow, was the property of the ancient family of Fairley, said to be descended from a natural son of Robert II., and will be remembered as the scene of the ballad "Hardiknutte."—A small hill called Margaret's-Law, having been opened in 1772, in search of materials for enclosures, was found to be an artificial accumulation of stones, amounting to 15,000 cart-loads, and having in its centre five stone-coffins with human skulls and bones,

and earthen urns, which were believed to have been there since the battle of Largs. The grand antiquities of the parish are memorials of this battle, fought on the 2d October, 1263, between Haco of Norway, and Alexander III. of Scotland. Haco, to enforce his claims on the sovereignty of the Hebrides, sailed up the frith of Clyde with a numerous fleet and army, and anchored in the sound between the coast and the Cumbrays. Alexander had used every stratagem to gain time, and at length lay encamped, with about 1,500 well-appointed cavalry, and a numerous host of inferior soldiery, on the heights behind Largs overlooking the sea. On the night preceding the 2d October, Haco suffered fearful damage from a powerful storm blowing right up the frith and sound upon his fleet, and, in the morning, was obliged, while most of his forces were either drowned or struggling for the preservation of his remaining ships, to effect an embarrassed landing with a dispirited band only about 900 in number. Instantly confronted with the fresh and strong force of Alexander, part of the Norwegian little army was driven hack into the sea, and part retired sword in hand, and fighting all the way, to a place a little below Kelburn. A few more of the Norwegians having landed, the apparently overpowering force of Alexander was resisted in a continuous fight, till the cloud of night sheltered Haco's little shattered remnant, and allowed them to withdraw to their ships. Haco got leave from the Scottish king peacefully to inter his numerous followers who had fallen; and, in a few days afterwards, he collected the relics of his fleet, and sailed away to Orkney, there to die in December under the pressure of his sorrow. The chief scene of the contest is supposed to have been a large plain southward of the village of Largs, still presenting a recumbent stone 10 feet long, which once stood upright, and is believed to have been placed over the grave of a chieftain; and vestiges of cairns and tumuli formed, as is said, over pits into which the bodies of the slain were thrown. Within the parish of Dalry, immediately beyond the south-east boundary of Largs, is a farm called Campbill, where the Scottish army are said to have encamped previous to the engagement. Between that place and the village of Largs, is Routdon-hurn, having on its bank a cairn in which a stone-coffin was found, and supposed to have received its name of Routdon or Routdane, from having been the place where a detachment of Haco's army were routed. Some way down the burn is Burly-gate; nearer the sea, in the Earl of Glasgow's plantations, is Killing-craig; and farther to the south is Keping-burn, where, it is said, a number of the fleeing Norwegians were met by Sir Robert Boyd, ancestor of the Earls of Kilmarnock, afterwards the tried friend of Robert Bruce, and put to the sword.—The parish has only three lines of road, one along the shore, and one north-westward, and one westward, from the village of Largs. At the southern extremity of the parish stands the village of FAIRLEY: which see. Population, in 1801, 1,361; in 1831, 2,848. Houses 393. Assessed property, in 1815, £6,259.

The village of LARGS is beautifully and salubriously situated on the coast,  $8\frac{1}{2}$  miles from Innerkip, 9 from Kilbirnie, and  $13\frac{1}{2}$  from Saltcoats. It is built upon a large deposit of gravel, that must at one time have formed part of the channel of the frith. Its appearance is neat and cheerful, and, in connexion with the scenery around it, is eminently beautiful. The place is a favourite retreat during the summer months, of families from Glasgow, Greenock; and other towns, for ruralizing and sea-bathing; and is, in all respects, worthy of the abundant patronage it enjoys. Numerous pleasant and even handsome buildings line its little streets, built and arranged in a style to afford

equal accommodation and comfort to visitors chary of their enjoyments. Smiling villas straggle away from its ends, or surmount knolly heights in its vicinity. A handsome parish-church lifts conspicuously into view an ornamental spire. A quay, sufficiently good for speedy and safe landing of passengers and goods, is overlooked, after a considerable intermediate esplanade, by a fine terrace, or single-sided street. All the very rich and extensive marine and land prospect, noticed in our account of the parish, is hung out before it. An air so pure surrounds it as to have enabled it stoutly to compete with Rothesay the fame of being the Montpellier of the west of Scotland. An elegant suite of baths—four of them modelled after those at Seafield between Leith and Portobello, and one of them a vapour-bath—was built in 1816 by public subscription. Connected with the baths are a reading-room and library; and in other parts of the town are circulating libraries. Four or five steam-boats touch daily in summer, and one or two daily in winter, on their way between Glasgow and intermediate places on the one side, and Millport, Ardrrossan, and Ayr, on the other; and they have access at all states of the tide, the depth of water almost at the very shore being several fathoms. A large part of the inhabitants depend mainly on rents, and perquisites, and profits drawn from summer visitors; a few are maintained by the fisheries; and a considerable number act as the poor subordinates of the Glasgow manufacturers. In 1838, there were in the town and its vicinity 150 hand-loom, all plain, and employed in cotton fabrics. There is also, we understand, a small manufactory of tartan. The place has a branch-office of the Western bank of Scotland, and several benevolent and religious institutions. A weekly market is held on Thursday; and annual fairs are held on the 1st Tuesday of February, the 2d Tuesday of June, the 3d Tuesday of July, and the 4th Tuesday of October. The June fair falls on St. Columba's day, vulgarly called Colm's day; and, though now of very diminished importance, was anciently the rendezvous of Highlanders and Lowlanders for the mutual exchange of their commodities, and exhibited probably more grotesque moral scenes than any which can now be witnessed in Scotland. Hucksters in the Highland clachans, and pedlars among the Highland wastes, rubbed the edge off the fair's importance, and steam-boat intercommunication has all but wholly demolished it. Yet the statistic in the Old Statistical Account, writing not quite half-a-century ago, says:—"This fair is famous over the west of Scotland, and continues from Monday to Thursday. Great numbers of people, from 40 to 50 miles round, resort to it, some for business, and some for pleasure. Upwards of 100 boats are often to be seen, on this occasion, riding in the bay. The whole week is a kind of jubilee to the inhabitants, and a scene of diversion to others. Such a vast multitude cannot be accommodated with beds; and the Highlanders, in particular, do not seem to think such accommodation necessary. They spend the whole night in rustic sports, carousing and dancing on the green to the sound of the hagpipe. Every one who chooses is allowed to join in this, which forms their principal amusement." At each end of the village is a moat, the supposed seat of feudal courts of justice. On a small holm at Outerwards, on Noddesdale-water, were discovered the foundations of several small buildings, huts or cottages, said to have been the retreat of numbers of the inhabitants from a visit of the plague which, in 1644, desolated the village. On the north side of the parish-church is an aisle of singular character, built, in 1636, by Sir Robert Montgomery of Skelmorly. It is richly and tastefully carved, and forms an arch and two compart-

ments, supported by 18 pillars of the Corinthian order, surmounted with cherubim. Above the arch is a small pyramid, finished at top with a globe. On the roof are painted the twelve signs of the zodiac, several views of the mansion of Skelmorly, and the figure of a lady, a member of the Skelmorly family, receiving a mortal kick from a horse. In various parts are also texts of Scripture and escutcheons. Below is a vault, to which Sir Robert usually repaired at night for devotion and meditation,—in a sense burying himself alive. Two leaden coffins, containing the remains of Sir Robert and his lady, Margaret Douglas, daughter of an ancestor of the Dukes of Queensberry, occupy separate niches. On Sir Robert's is inscribed,—

“Ipse mihi præmortuus fui: Fato funera,  
Præripui. Unicum, idque Cæsarium  
Exemplar, inter tot mortales secutus.”

This obviously alludes to the emperor Charles V., who had his obsequies performed before his death; and may be translated, “I predeceased myself; I anticipated my destined funeral; alone, among all mortals, following the example of Cæsar.” Sir James, a successor of Sir Robert, displayed a moral eccentricity of another kind: he first acted a distinguished part among the presbyterians at the Revolution, and afterwards became an ultra-jacobite, and plotted for the restoration of the Stuarts.—The village has no charter whatever to regulate its government, and is not a burgh either of barony or of regality. No means are possessed for the administration of law but such as proceed from the sheriff's authority, whose court is at Ayr, 30 miles distant; from the acting and authority of justices of the peace resident in the town and neighbourhood; and from the baron-baillie appointed by the superior, who now rarely interferes. The justices hold a court monthly, which has a clerk and fiscal, where cases of small debt and breaches of the peace are tried; but they cannot dispense with written papers in even the most petty cases, nor punish delinquents summarily, as in police-courts,—so that even a trivial assault cannot be prosecuted for, but at an expense of several pounds. Population of the village and suburbs, in 1831, 2,045.—Largs is in the presbytery of Greenock, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend £246 5s. 11d.; glebe £36 8s. Unappropriated teinds £688 17s. 5d. The church was built in 1812, and enlarged in 1833. Sittings 1,268.—There are two dissenting meeting-houses, both situated in the village of Largs. The United Secession congregation was established in 1780; built their first meeting-house in 1781, and rebuilt it in 1826, with manse and offices, at a cost of £1,340. Sittings 690. Stipend £180.—The Relief congregation was established in 1833. Meeting-house built in 1838, at a cost of £550. Sittings 460.—There is a small Roman Catholic congregation in the town.—An ecclesiastical survey in 1837–8, showed the population of the *quoad sacra* parish then to be 2,140 churchmen, 820 dissenters, 11 nondescripts,—in all 2,971.—The south end of the parish is included in the *quoad sacra* parish of FAIRLEY: which see. The parochial school was attended, in 1834, by only three scholars, and eleven private schools by a maximum of 433. Parish schoolmaster's salary £25 13s. 3½d., with £1 10s. 6d. fees, and the interest of £175 4s. 8d. other emoluments.—The district of Cunningham appears to have anciently formed two distinct territories,—the southern and larger one called Cunningham, and the northern and smaller one called Largs. On the death of Alan, lord of Galloway, in 1234, the lordship of Largs was inherited by his daughter Devergilla; from her it passed to her son John Baliol, the competitor for the Scottish crown; and on his

forfeiture, it was conferred by Robert Bruce on his son-in-law, Walter, the steward of Scotland. Hitherto the church had been a rectory; but now it was given by Walter to the monks of Paisley, and it continued with them till the Reformation. In 1587, the tithes and patronage, in common with the other property of the monks, were erected into a temporal lordship, with the title of Lord Paisley, in favour of Lord Claud Hamilton. In 1621, they were inherited by James, Earl of Abercorn; and in the reign of Charles I., they passed to Sir Robert Montgomery of Skelmorly. The church was dedicated to St. Columba.

LARKHALL, a large village and *quoad sacra* parish in the parish of Dalsert, in the Middle ward of Lanarkshire. The church, built in 1835, at an expense of £900, contains 720 sittings. There are also a Relief and an Independent church here. Population of the *quoad sacra* parish 2,200.

LASSWADE,\* a parish in Edinburghshire; bounded on the north by Colinton and Libberton; on the north-east by Dalkeith and Newbattle; on the east by Cockpen and Carrington; on the south by Penicuik; and on the west by Penicuik and Glencross. Its greatest length, from north to south, is 8 miles; and its greatest breadth 6; but nowhere, except over a very brief distance at its north end, is it broader than 3 miles. A projecting wing at the north-west extremity is occupied by the eastern termination of the Pentland hills, covered partly with heath, and partly with fine pasture. An extensive tract, from the southern boundary to about 2 miles into the interior, is moorish and mossy upland, bleak and unsheltered. The rest of the surface, comprising much the greater part, is a rich and beautiful plain, generally fertile in its soil, primely managed in its husbandry, opulently shaded and adorned with wood, and very picturesquely featured and diversified in its scenery. About 1,000 acres are covered with copse-wood and plantation,—oak, ash, elm, Scotch fir, spruce, and larch. The North Esk comes down upon a point about a mile from the south-west extremity, runs 1½ mile along the western boundary, and then, assuming a north-easterly direction, cuts the rest of the parish into nearly equal parts. Its bed, while traversing the plain, is a deep and singularly romantic, long, sinuous, bold ravine; paved, in many places, at the bottom, with ledging and variform rocks; often steep, perpendicular, and even overhanging on its sides; and almost everywhere, in tiny plain or slope or swell or precipice, profusely adorned with copsewood and trees. Recesses, contractions, angularities, rapid and circling sinuosities, combine with the remarkably varied surface of its sides to render its scenery equal in mingled picturesqueness and romance to any in Scotland. The river seems all the way to be merrily frolicsome; now russhing along a shelving gradient, now hiding itself behind rocks and weeping wood, and making sudden but always mirthful transitions in its woods. Various ancient and interesting edifices, and a series of modern mansions and villas, crown the precipices, or sit ensconced in the fairy nooks. The most remarkable, of the former, are the castle and the chapel of ROSLIN, and the old mansion and the caves of HAWTHORNDEN: which see.—Among the numerous gentlemen's seats which line both sides of the river, Mavisbank, resembling an Italian villa, Dryden and Rosebank, on the left bank, and Auchindinny, Pol-

\* The name is popularly said to have originated in the circumstance of a lass doing the service of a ferry-boat, and wading across the river with travellers; but is derived by the learned George Chalmers from the Anglo-Saxon *Laeswe*, and the Old English *wegle*, meaning jointly ‘a well-watered pasture of common use,’ and not obscurely descriptive of the site of the village.

ton, Glenesk, Goston, and Eldin, on the right bank, are the chief. Eldin, the last of these, was the seat of John Clerk, Esq., the author of the celebrated work on naval tactics. Many villas and cottages straggle along at intervals, or hang on the outskirts of Lasswade and Roslin; and are occupied chiefly as summer-houses, as scenes of ruralizing, as places which vie in sunniness and beauty with retreats among the fascinating streams and lakes of Lomhardy, by the citizens of Edinburgh. One of the cottages near the village of Lasswade was the residence, during some of the happiest years of his life, of Sir Walter Scott. But the grandest modern structure is Melville-castle, situated, nearly a mile below the village, on a secluded but charming piece of low ground, on the left margin of the Esk, surrounded by high banks, picturesque, wooded, and adorned. This fine castellated edifice, with circular towers, the seat of Viscount Melville, was built near the end of last century on the site of an ancient edifice of the same name, which tradition incorrectly says belonged to David Rizzio, and was occasionally inhabited by Mary. Melville-castle was visited in 1822, and much admired, by George IV.—Along the Esk, chiefly between Roslin and Lasswade, are several paper-mills and bleachfields; at  $1\frac{1}{2}$  mile above Roslin, is an extensive gunpowder manufactory; and at Lasswade are a paper-mill, a distillery, a candle manufactory, oatmeal and harley mills, an iron and brass foundry, and a manufactory of fine carpets and damasks. The carpet manufactory is peculiarly celebrated. While Brussels and Wilton fabrics, similar to those of Kilmarnock, are produced, a mechanical improvement has superseded the necessity of draw-boys, and the new machine is simpler than a jacquard. The Persian fabric produced at Kilmarnock is here extended to broad carpets, the web being shot across by means of a cross-bow; and the carpets are woven in this way in their entire breadth, the pattern being tied in by boys, as in the Persian rugs. The workmen earn in gross wages from 20s. to 25s. per week; but are frequently idle, waiting six or eight days for wehs. The number of looms, in 1828, was 21; in 1838, 50. The parish has long been famous for its oatmeal. Through the recommendation, as is believed, of the first Lord Melville, its produce in this article, drew the notice of George III., became the breakfast material of his numerous family during their years of childhood, and was regularly furnished to the royal residence by a miller of the village named Muter. Great quantities of fruit, vegetables, and daily produce are sent to the market of Edinburgh. Except the north-west corner, where primitive rocks rise up in the Pentlands, the whole parish lies upon the various secondary formations summarily called the coal-metals, including sandstone, clays of great variety, a very great number of distinct seams of coal, and three strata of limestone. On the west side of the river the metals stand much on edge, having, in some places, a dip of 65 degrees. The workable coal-seams, in the barony of Loanhead, are 25 in number, and from 2 to 10 feet thick; and by a cross level mine from the river, have been worked from the grass downward to the depth of 270 feet. On the east side of the river, the metals have so small a dip, amounting to about 1 in 7 or 8, that the coal-seams, in contradistinction to the edge coals, as they are called, on the west side, have got the name of the flat broad coals. One of the coal-mines, on the boundary with Libberton, was accidentally ignited about the year 1770, and during upwards of twenty years resisted every effort made for the extinction of its fire. Besides furnishing supplies for local consumption and to other quarters, the parish sends annually about 30,000 tons of coals

to Edinburgh.—Near the house of Mavisbank is a supposed Roman station, pointed out in General Roy's maps as the place where the Romans passed the North Esk on their way to Cramond. The chief object is a circular earthen mound of considerable height, begirt with ramparts, now cut into terraces; where have been found antique weapons, hridge hits, surgical instruments, and other relics. In a neighbouring farm is a tumulus, whence have been dug urns filled with burnt bones. Near Roslin is the scene of a battle, or rather of three battles in one day, fought, on the 24th February, 1303, between the Scotch and the English, conflictingly narrated by the historians of the two nations, but painted by those of Scotland in colours not a little flattering to Scottish bravery. During a truce, Ralph Confrey, treasurer to Edward I., invaded Scotland at the head of 30,000 men, well-armed, and mostly horsemen. With a view to plunder, he divided them into three hodies, and, on reaching the neighbourhood of Roslin encamped them in three stations. Hearing of his invasion, Sir Simon Fraser and Sir John Comyn, drew together at Biggar as many men as they could hastily muster, amounting to 8,000, or at most to 10,000; and with these they expeditiously marched in search of the enemy. Falling unexpectedly on the first division of the English, the Scottish forces totally overthrew and routed them, driving those who escaped the sword and capture confusedly back on the second camp. While the Scotch were dividing the spoil, the second English division suddenly alarmed, and in motion, precipitated themselves to the conflict, and met the same fate as the first division. Scarcely had the Scotch begun to take a refreshment, when a third army appeared in view; and though thinned in numbers and exhausted by fatigue, they were strong in the moral energy of having in so brief a space won two battles, and rushing impetuously on the crest-fallen reserved hody of the English, soon dealt them the carnage and discomfiture with which the other invading bodies had been punished. Blundering tactics on the English side, and skill and animation on the side of the Scotch, thus worked out for the latter the host of conquering in one day three armies, each of which was fully equal to them in numbers, and probably superior in appointments.—The village of Lasswade is most picturesquely situated on the left bank of the North Esk, 6 miles south-east of Edinburgh, and 2 miles west of Dalkeith; and it is united by a good stone-hridge to the village of Westmill of Lasswade, politically comprehended in the parish of Cockpen, but forming compactly with it one little town. On the Cockpen side are some of the public works, and a large proportion of the population. The united village stands on too romantic a site to have regularity of street arrangement consistently with picturesqueness of effect. Its white-washed church surmounts a height rising up from the left side of the dell, and its pretty stone cottages lie emhosomed below in woods and luxuriant gardens, the whole encompassed with scenery of uncommon beauty. The fixed population in Lasswade proper is about 260; but, owing to the influx during summer of numerous lodgers from Edinburgh and elsewhere, it receives for that part of the year large additions. The village of ROSLIN [which see] is 3 miles distant. The populous village of LOANHEAD [which see], stands half-way between Lasswade and Roslin, half-a-mile north of the river. Springfield, with a population of about 200, chiefly paper-makers, and situated  $1\frac{1}{2}$  mile above Lasswade, immediately on the right bank of the Esk, at the bottom of the dell, is noted for its rural beauty. Auchindenny, also inhabited by paper-makers, and on the right hank of the river at the boundary with

Penicuik, is distant from the villages of Lasswade and Penicuik respectively 5 miles and  $1\frac{1}{2}$  mile. Harper's brae and Pentland are hamlets on the outskirts of the parish. The turnpike from Edinburgh to Dumfries, by way of Howgate, bisects the parish lengthways; that from Edinburgh to Peebles runs across it through the village of Lasswade; and that from Edinburgh, down Gala-water, briefly touches its northern extremity. But a prime facility of communication is connexion with the Edinburgh and Dalkeith railway. Population, in 1801, 3,348; in 1831, 4,252. Houses 874. Assessed property, in 1815, £19,417.—Lasswade is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Sir George Clerk, Baronet. Stipend £180 4s. 1d.; glebe £35. Unappropriated tithes £15 11s. 1d. Church built about 1792. Sittings 1,000.—An United Secession congregation was established in the village of Lasswade in 1830; and their place of worship, built in the same year, cost, along with a manse, £1,950. Sittings 655. Stipend £160, with a manse and garden worth £50.—The Reformed Presbyterian congregation of Loanhead was established in its present form in 1818; but dates, through meetings held in the village of Pentland and in adjacent places among the Pentland hills, as high as the times of the persecution. Their place of worship was built about 53 years ago. Sittings 400. Stipend £90, with a house and half-an-acre of ground, and expenses of attending church courts.—The southern part of the parish was erected, in 1835, into the *quoad sacra* parish of ROSLIN: which see. Deducing that district, the parish measures 6 miles by 3, and, in 1838, was reported by the minister to have a population of 1,800 churehmen, and 810 dissenters,—in all, 2,610 persons. The *quoad sacra* parish comprehends the original parish of Lasswade, the chief part of Melville, and a considerable part of Pentland: see MELVILLE and PENTLAND.—Lasswade was anciently the richest parish in Mid-Lothian except St. Cuthberts. The church, with its pertinents, became, in the 12th century, a mensal church of the bishop of St. Andrews; it afterwards was a prebend of St. Salvador's college, St. Andrews; and, in the reign of James III., it was, by the Pope's authority, transferred to the dean of the collegiate church of Restalrig. Long after the large accessions from Pentland on the west, and Melville on the north, were made to the territory, the old parochial place of worship, which had witnessed every change from before the Reformation till the final settlement of the Church of Scotland in her present form, continued to be in use; and it now exists, not far from its conspicuous modern successor, in the form of a frail ruin, timidly enseened from the public gaze amidst a cluster of trees. One of its aisles is the burying-place of the noble family of Melville, and contains the ashes of the first Lord Melville, the distinguished figurant in the ministry of Mr. Pitt.—The parochial school is attended by at most 70 scholars. Master's salary £34 4s. 4½d., with £48 fees. Eleven private schools are attended by a maximum of 637 scholars; and afford tuition in French, music, drawing, and the more common departments.

LATHERON, a parish in the county of Caithness, situated at the southern extremity of the shire; and bounded by Halkirk on the north; Watten and Wick on the north-east; the German ocean on the south-east; and Loth and Kildonan on the west. It extends 27 miles north from the Ord, along the coast; and is from 10 to 15 miles broad. The area has been estimated at 140,000 imperial acres, of which about one-tenth are arable. The appearance is diversified, partly flat, and partly mountainous,

intersected by several straths or valleys, which are watered by small rivers running from the high lands to the sea. The principal rivers are the Dunbeath, Langwell, and Berriedale, all of which contain salmon, and have their source at from 12 to 16 miles from the sea. There are three large hills,—Mortven, Scaraben, and the Maiden Pap. The coast is bold and rocky, but possesses several harbours. The principal headlands are the Ord, Berriedale-head, and Clythness. The herring, cod, salmon, and lobster fisheries are actively prosecuted on the coast. In 1838, these fisheries employed 325 boats, and 2,540 hands in all; and the number of barrels of fish cured exceeded 40,000. The soil is in general poor and stony; but the average rent of arable land is 25s. per acre. On the hills are fed great numbers of sheep and blaek cattle. Along the sea-coast there are several old castles, which have been of considerable strength in former times, besides the remains of many Pietish houses and cairns. One of the principal of these is Achaistal castle. William Sutherland, commonly called 'William More,' or 'William the Big,' from his gigantic stature, was born in this parish, about the end of the 14th century: he measured 9 feet 5 inches in height, and his body is said to have been well proportioned. Population, in 1801, 3,612; in 1831, 7,020. Houses 1,354. Assessed property £1,414.—There is no market-town. The largest village is Lybster with a population of about 400.—This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir James Colquhoun, Bart. Stipend £219 5s.; glebe £15. Church built in 1734; repaired in 1822; sittings 900. Unappropriated tithes £225 18s. 2d. Berriedale church was built in 1826; sittings 300. Lybster church, in the village of that name, was built in 1836; sittings 805. There is a mission at Bruan in the eastern extremity of the parish.—There are one parochial school, and 14 private schools in the parish. The salary of the parish schoolmaster is the maximum. About £340 has been left in different benefactions to the poor of this parish.

LATHRISK. See KETTLE.

LAUDER, a parish consisting of a large main body and a small detached section, in the district of Lauderdale, Berwickshire. The detached section is nearly a square,  $1\frac{1}{2}$  mile deep, lies  $1\frac{1}{4}$  south of the nearest point of the main body, and is bounded on the east by Legerwood and Earlston; partly on the south by the latter parish; and on all other sides by Melrose in Roxburghshire. The main body is nearly a parallelogram, stretching from north-east to south-west, with an isosceles triangle attached to it on the north-west;—the parallelogram measuring  $9\frac{3}{4}$  miles by  $4\frac{1}{2}$ , and the triangle  $3\frac{3}{4}$  on its short side, and  $5\frac{1}{4}$  on each of its equal sides; and it is bounded on the north-east by Haddingtonshire, Longformacus, and a detached part of Cranshaw; on the south-east by Westruther and Legerwood; on the south and south-west by Melrose in Roxburghshire; and on the west by Stow in Mid Lothian and by Channelkirk. The area of the whole parish is about 58 square miles. Leader-water rises in the extreme north-west corner, flows  $5\frac{1}{2}$  miles along the boundary with Channelkirk, runs  $4\frac{1}{2}$  miles south-eastward through the interior, forms for  $\frac{3}{4}$  of a mile the boundary with Legerwood, and after traversing the intermediate space, traces the whole eastern boundary of the detached section, and passes away from the parish. Whaplawburn,  $5\frac{1}{4}$  miles long, Earnsclueh-water,  $6\frac{1}{2}$  or 7 miles long, and Blythe-water  $7\frac{1}{2}$  or 8 miles long, all rise in various head-waters very near the north-east boundary, and flow south-westward to the Leader. The last of these streams—Blythe-water

—jointly with its main tributary, traces for  $6\frac{1}{4}$  miles the south-east boundary. Perennial springs, both many and copious, well up from sand or gravel, or from whinstone rock, and give an abundant supply of prime water. The surface along the north-east extremity, an extent of 8 miles, is the water-shedding line of the Lammermoor hills, and includes Lammerlaw, the summit which gives name to the broad and far-stretching range. For some way into the interior it has the bleak aspect and russet dress by which the higher grounds of the Lammermoors are distinguished; but as it becomes furrowed and watered by the streams, it becomes verdant and even beautiful, the hills moderate in height, mostly green, and at last, in many instances, ploughed to the summit. From the southern extremity upward extends the vale of the Leader, varying, for a long way, from 2 miles to 1 mile in breadth, and not yielding dominion to the hills till it has traversed two-thirds the length of the parish. All this vale, as well as much of the slope which forms its screens, is beautifully cultivated, and has a fine appearance. Depressions in the hilly ranges form openings from its side, and pleasingly diversify the landscape. About one-third of the entire area of the parish is arable; carpeted with a soil, in general light and dry,—in many instances clayey,—and over a considerable extent richly loamy and superincumbent on sand or gravel. Though only about 200 acres of matured wood beautifies the district, a large amount of young plantation is thrivingly on the growth. The uplands are, for the most part, excellent sheep-walks, and maintain numerous flocks of Cheviots, and a few of the black-faced breed. Whinstone rock, of a kind excellent both as building material and for road-metal, is abundant. Slate occurs, but of inferior quality. Copper-ore likewise exists, but not plentifully enough to compensate mining. There are in the parish several hamlets, the largest containing, in 1837, only 69 persons. Many Pietish and Scottish encampments, either round or oval, are in the parish and its neighbourhood; and many tumuli exist on Lauder-moor, on the old road to Melrose. Fragments of swords, bows, and arrows, found on the moor—the arrows pointed with flint-stone—indicate the place to have been the scene of ancient though unrecorded and forgotten battles. Between the burgh and the Leader stands, on a beautiful lawn, Lauder fort, now called **THRILESTANE CASTLE**: which see. Lauder was the birth-place of Sir John Maitland, Lord Thirlestane, who, in the reign of James VI., filled the offices successively of lord-privy-seal, secretary-of-state, and chancellor of Scotland; and it enjoyed, for a brief period, the ministry of the Rev. James Guthrie, the first of the Scottish martyrs after the Restoration. The chief landed proprietors are the Earl of Lauderdale, the Marquis of Tweeddale, and Lord Maitland. The parish is traversed down the vale of the Leader, and then eastward by the eastern mail-road between Edinburgh and London, and has a turnpike on the other side of the Leader. Population, in 1801, 1,760; in 1831, 2,063. Houses 356. Assessed property, in 1815, £12,621.

Lauder gives name to a presbytery in the synod of Merse and Teviotdale. Patron, the Earl of Lauderdale. Stipend £272 1s. 7d.; glebe £18. Unappropriated tithes £181 2s. 2d. The church was built in 1673, and repaired in 1820. Sittings 773.—In the parish are two dissenting congregations. The United Secession one was established, and built their chapel, of 432 sittings, in 1794. Stipend £100; with the interest of £100, a piece of land worth £1 10s., and a house, garden, and stable, worth about £20. The Relief congregation was established in 1836, and their place of worship built next year at

a cost of £500. Sittings 320, with space for enlargement. The population was stated by the parish-minister, in 1837, to consist of 1,516 churchmen, 518 dissenters, and 34 nondescripts,—in all, 2,068 persons.—The parish-school is attended by a maximum of 120 scholars, and 3 private schools, by a maximum of 128. All are situated in the burgh. Parish-schoolmaster's salary, who employs an assistant, £30, with £70 fees, and £7 15s. of other emoluments.—The presbytery of Lauder is of later date than the regimen of the Reformation, having been formed only in 1768; and includes 7 parishes in Berwickshire, and 2 in Roxburghshire. The ancient parish-church appears to have early been of great value; and in the ancient Taxatio was appreciated at 90 marks, while that of Channelkirk was appreciated at only 40. In the reign of David I., the advowson, along with almost the whole of Lauderdale, was given to Sir Hugh Morville, constable of Scotland; and through many a changeful age it continued an appurtenant of the manor, till it passed into the possession of Devorgillar, the wife of the first John Baliol. By this lady, the church, with its pertinents, was given to the monks of Dryburgh; and it continued to be a vicarage under them till the Reformation. The parish-church, which preceded the present structure, stood on the north side of the town opposite Thirlestane-castle, and was, in July, 1482, the scene of the meeting of the Scottish nobles which issued in the murder of James the Third's menials on Lauder bridge, and in the capture and imprisonment of the king. The house in Lauder in which the king was seized was not long ago standing. Subordinate to the parish or mother church were anciently two chapels. One stood at Redslie in the detached part of the parish, and is commemorated in the name Chapel, home by a farm in its vicinity; and the other stood on the right bank of the Leader at the southern extremity of the main body of the parish, and dedicated to St. Leonard's. The former was confirmed by Malcolm IV., and the latter given by Sir Richard Morville, who died in 1189, to the monks of Dryburgh. Contiguous to St. Leonard's chapel stood an hospital, dedicated to the same saint, and founded, during the Scoto-Saxon period, probably by Sir Hugh Morville. Both structures are commemorated in the name St. Leonard's, home by a mansion near their site. 'St. Leonard's hanks' are celebrated in Scottish song.

LAUDER, an ancient town, a royal burgh, the seat of a presbytery, and the capital of Lauderdale, runs along the turnpike between Edinburgh and Kelso, parallel with the river Leader, at the distance of nearly half-a-mile from that stream; and is distant 7 miles from Earlston, 12 from Greenlaw, 17 from Kelso, 18 from Dunse, 21 from Coldstream, 21 from Jedburgh, 25 from Edinburgh, and 32 from Berwick. It is a very inconsiderable burgh, situated in a thinly peopled district,—a place of no trade but what is strictly local,—a town, in all respects stationary, having had no extension of its buildings for a great period of years, and giving no prospect of future extension either immediate or remote. The main part of the town is a single street, 700 yards long, of very various width, and not quite straight, stretching from north-west to south-east along the highway: upwards of 400 yards from its north-west end, the street attains its greatest width, and begins to be split over the distance of about 110 yards into two thoroughfares, by a line of buildings running along its middle. The north-west end of the intersecting line is the town-house, with the jail, dingy, and of very unburghal appearance. The jail may be used as a temporary lock-up-house for petty brawlers, or for persons not committed for trial; but it

has no suitable accommodation as a place of prolonged confinement for either criminals or debtors. The parish-church stands a little off the street-line, immediately south-west of the town-house; and, though cruciform and pretending, is a poor unimposing edifice. The site of an ancient cross in front of the town-house, is marked—as in Edinburgh, Glasgow, and some other places—by a radiated pavement. Diagonally across the north-west end of the main street, stretching nearly east and west, is another street, partly one-sided, and altogether 350 yards long. Describing the segment of a circle on the south-west side of the main street, and running nearly parallel to it on the north-east side, are two thoroughfares, almost altogether unedificed, and bearing the absurd names of the Upper and the Under Backsides. The park wall of Thirlestane-castle screens the whole of the north-eastern of these thoroughfares, and forms on that side the boundary of the burgh; and the lawn and other grounds of the noble residence occupy all the space thence to the Leader. The whole town is plain and irregular in its houses, desolate and chilly in the aspect of its streets, cold and stagnant in the seeming animus of its people's occupations, and, in general, just as dull a place as can well be conceived. Yet it has a tiny sort of importance as the scene of a small weekly corn-market, and as the residence of mechanics and small retailers. In the town are a branch-office of the bank of Scotland, a subscription library, a mechanic's library, two Sabbath school libraries, a friendly society, a free-mason's society, and a bible and missionary society. The Lauderdale agricultural society, under the patronage of the Earl of Lauderdale, also holds its meetings in the town. Annual fairs are held in the beginning of March for selling seed-corn, and hiring hands; in April and October for hiring half-yearly farm-servants; in June for milk-cows; and in July for lambs. Four coaches daily pass through the town, between Edinburgh on one side, and Dunse, Kelso, and Newcastle, on the other.—Lauder is the only royal burgh in Berwickshire, and unites with Haddington, North Berwick, Dunbar, and Jedburgh, in sending a member to parliament. Constituency, in 1832, 34; of whom only 21 were resident burghesses; in 1840, 56. Municipal constituency in 1840, 52. The burgh is believed to have been erected during the reign of William the Lion. The early charters having been lost amid the anarchy and violence of the Border wars, a charter of *novo damus* was given by James IV. in 1502, and ratified next year by parliament. As defined under the Reform act, the burgh excludes the town's common, and a considerable landward district, comprehended in the old royalty, but includes a small portion of formerly uncomprehended kirklands to the south-west of the town. The burgh property is of very considerable value, lies under peculiar circumstances, and consists mainly of a common upwards of 1,700 acres in extent, and having 895 of its acres arable. The common is said to have been possessed for a long period by the burghesses as their private property, and the rights of possession are also said to have been anciently regulated by certain rules, varying as the burghesses were resident or non-resident within the town. The arable land, consisting chiefly of the three hills of Scaralawhill, Staunchlawhill, and Chesterhill, is said to have been cropped in rotation; and the proceeds of the portion under tillage were equally distributed by lot among the whole of the burghesses, while the resident burghesses alone possessed a right to the pasturage upon which each was entitled to graze a certain number of cattle. The debt of the town having accumulated to an inconvenient amount, the magistrates, about

the year 1814, enclosed a part of the common with the view of letting it as an arable farm to the best bidder, and disposing of the rents for the purposes of the burgh. This enclosure, however, was resisted by some of the burghesses, who, in virtue of a clause in the charter of James IV., claimed a feudal title to the common. A long and keen litigation now ensued before the court-of-session, and, in 1825, ended in favour of the magistrates and town-council. The common is much more valuable than might be supposed from the rents or grass-mails stated in the accounts. Every resident burghess is accustomed to send so many cattle, horses, and sheep, to pasture on the common, for small rents nearly elusory. There is also a part of the common each year in tillage, which, in like manner, is given to such persons, whether resident or not, as may possess burghess acres in lease and otherwise, and may choose to take part of it for nominal rents. These portions for tillage are given by lot, and the extent of land assigned to each is proportioned to the number of burghess acres which the party drawing the lot possesses, and that whether he be entered a burghess or not. These lots are drawn for periodically, according to the course of cropping thought suitable for each division of the common, to be thrown into tillage. The magistrates and council fix the rents both of the pasture and tillage, and also lay down the course of cropping. The regulations are always entered in the minutes of council. As the possession stands at present, however, comparatively few inhabitants or proprietors within burgh derive any benefit from this common, which is appropriated and divided among those who have been enabled to purchase the privilege of burghesses on the high terms prescribed by the corporation. In this manner a few make a monopoly of the whole common property of the burgh, and this, too, at a time when it is difficult to raise funds for completing important public works necessary in the burgh for the comfort and health of the inhabitants. In 1833, the revenue of the burgh was £307 7s. 9d.; its expenditure £326 18s. 11½d.; the revenue from its property included in the total revenue, £264 15s. 3d.; debts due to it, £341 19s. 9½d.; debts due by it, £2,913 19s. 7½d. In 1839-40, the revenue was £280. Among charges of expenditure are some curious ones for a burgh,—such as for tar and butter, for rams, for grazing rams, and for tavern-bills. There are no incorporated trades, the burghesses forming the only public body. By the regulations of the town-council, alleged to have been confirmed by usage, the right of being entered burghesses is made dependent on the possession of a small portion of a tract of land situated between the town and the common, which is termed 'a burghess acre.' No party is made a burghess who has not one of these burghess acres; and an entrant is, moreover, made to pay the comparatively larger entrance-fine of £30. The ground in question was in early times divided into 315 burghess acres; but in consequence of the reduced number of burghesses, and the difficulties attending the allocation of the town's common, a new division took place in 1744, and the number of burghess acres is said to have been then fixed at 105. The size of the burghess acre, therefore, now became enlarged, and was made to consist of a lot varying from an acre-and-a-half to three acres Scots. These lots were at one time of great value, from the privilege which they conferred, or at least enabled the proprietors to acquire; and it is still of considerable value. Hence, although really not worth more than £60, each of these burghess acres, or lots, at one time was sold for £250; and though the value is considerably fallen since the decision of the case in 1825, in

favour of the magistrates, these lots still bring prices varying from £150 to £200. There has been no change in the sett of the burgh for a very long period. The number of the council is 17, consisting of 2 bailies and 15 councillors, of whom 4 annually retired prior to the Reform act. As there were—or in 1832—only 21 resident burgesses, and as the terms of admission to the rights of a hurgess are so exceedingly high, a monopoly of a very severe and exclusive description in such a community as that of Lauder has evidently been established in the persons of those who have latterly obtained the privilege of hurgesses, and the 17 councillors are obviously chosen by 21 individuals who seem to possess, or at least to claim, a personal interest in the property of the town adverse to the rest of the community. The magistrates appoint their town-clerk, treasurer, and 2 town-officers,—one of whom acts as drummer, and the other as jailer, and they have a voice in the election of the burgh-schoolmaster; but they possess no other patronage; nor have they, so far back as the records extend, exercised civil jurisdiction of any importance. There is no established police, and the streets are not lighted or watched. A subscription was commenced about ten years ago to bring the town, what it greatly needed, a supply of water; but, at the date of the commissioner's visit in 1833, it was stated to be insufficient. Population of the burgh, in 1837, 1,043.

**LAUDERDALE**, an ancient district of Berwickshire, the western one of the three into which the county was divided. In geographical distribution, and agricultural properties, Berwickshire is all strictly divisible into simply the Lammermoors and the Merse; the upper and the lower parts of Lauderdale belonging respectively to these just as distinctly as any other part of the county. The limits of Lauderdale, so far as the usage of calling it a distinct district, cannot be defined, and must probably be understood as including simply the basin of the Leader and its tributaries, so far as the basin is in Berwickshire. Even anciently the limits appear to have been very different in successive periods, and to have marked fluctuations both in the kind and in the extent of the civil jurisdiction within them. Maps of Lauderdale, Merse, and Lammermoor, were made by Timothy Pont in the reign of Charles I. and inserted in Blaeu's Atlas Scotiae. The author of Caledonia—guided apparently by these maps—states the area of Lauderdale to be 105 square miles,—that of Lammermoor to be 138½,—and that of the Merse to be 202½. At the abolition of hereditary jurisdictions, the Earl of Lauderdale received the same compensation for the regality of Thirlestane as for the bailiery of Lauderdale,—£500. For a notice of the noble family to whom the district gives title, see article **THIRLESTANE-CASTLE**.

**LAUDER BURN**, an inconsiderable brook, which—1 mile after its rise in the parish of Melrose—traces for 1¼ mile north-vestward the boundary-line between Roxburghshire and Berwickshire, and then runs 3 miles north-eastward and eastward through the parish, and past the south end of the burgh of Lauder to the Leader, ¾ of a mile below Thirlestane-castle.

**LAURANCE (ST.)**. See **SLAMANNAN**.

**LAURENCEKIRK**, or **LAWRENCEKIRK**, anciently **CONVETH**, a parish in Kincardineshire; bounded on the north by Fordoun; on the east, south-east, and south by Garvoek; and on the south-west by Marykirk. The form is triangular; its greatest length being from south-west to north-east 4 miles; and its greatest breadth from south-east to north-west 3½ miles: square area 5,381 imperial acres. Houses 360. Assessed property, in 1815,

£5,272. Population, in 1801, 1,215; in 1831, 1,886; in 1838, about 2,000. The parish is watered by the Luther and its tributaries. A ridge of hills runs from east to west through the whole district, sloping gradually to the south and north, in gentle and picturesque undulations of surface. The soil south of the Luther is chiefly a deep and fertile clay loam, incumbent on clay and freestone: to the north it is moorish and every way inferior. Of the arable land 5,000 acres are in a good state of cultivation: there are also some thriving plantations. Amongst live stock, great attention is paid to the rearing of black cattle, chiefly for the London and the Glasgow markets. To the former, they are now frequently sent by steamers from Aberdeen, Montrose, and Dundee. The parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, St. Mary's college, St. Andrews. Stipend £243 9d. 8d.; glebe £20. Unappropriated teinds £673 12s. 4d. Church built in 1804, and enlarged by 194 sittings in 1819: total sittings 766. There is an Episcopalian chapel, built in 1793; sittings 205; stipend about £100 per annum, with parsonage-house and glebe: the stipend is partly secured on the estate of Johnston, by deed of Lord Gardenstone, who procured funds for the erection of the chapel to which he himself largely contributed. A Berean congregation was established in 1801. There are three libraries of a public nature in this parish; one, consisting of upwards of 1,000 volumes, belonging to the Episcopal clergy of the diocese of Brechin, and contained in the Episcopal chapel; another, founded by the late Lord Gardenstone as 'the Public Library of Laurencekirk;' and a parochial library, consisting of about 300 volumes. There are four Friendly societies in the parish, and the Mearns-shire Farmers' society holds its meetings at the village of Laurencekirk.—The parochial schoolmaster's salary is £20; fees and other emoluments £40 9s. 5d.; besides upwards of 10 bolls of meal. There are 8 private schools in the parish.

**LAURENCEKIRK**, a village, and burgh-of-barony, in the above parish, is situated on the road from Perth to Aberdeen; 93 miles north of Edinburgh; 10 north-west of Montrose; and 7 west of Bervie. It chiefly consists of one street, about a mile in length. In 1730, the population did not exceed 80 persons, and, in 1762, it had even decreased to 54. At this period the estate of Johnston was purchased by the late talented and eccentric Lord Gardenstone, a judge of the Court-of-session, distinguished for his speculative turn of mind, and his successful cultivation of the belles lettres. His lordship having determined on creating a town here, in 1765 laid out a part of his property in building ground, began to build, and soon attracted settlers. In 1779, he obtained for his new village the status and privileges of a free burgh-of-barony, the Crown charter empowering the inhabitants triennially to choose a bailie and four councillors, and to hold a weekly market and an annual fair, collect dues and customs, &c.: the extent and nature of the jurisdiction granted to the magistrates, however, has been a subject of uncertainty. The public-spirited proprietor also built an elegant inn, with a select library and museum adjoining to it, chiefly for the amusement of travellers; and he encouraged, and contributed liberally to, the establishment of a bleachfield, and the introduction of the linen manufacture. At the present time hand-loom weaving forms the chief dependence of the whole parish. The population of the village, since the Old Statistical Account was written, has increased from 500 to upwards of 1,400 inhabitants, while the rural population has actually diminished about 100.

The spread of machinery, however, has been operating injuriously here, as elsewhere, on the poor handloom weavers. They are chiefly employed by companies in Aherdeen. A new and local species of manufacture—that of snuff-boxes—has sprung up, and obtained for the village no little fame. The Laurencekirk snuff-boxes are made of wood, in a style similar to those of Cumnock in Ayrshire. It was in the little inn of Laurencekirk that the celebrated Dr. Pitcairn first encountered the afterwards still more celebrated Ruddiman, then the parish schoolmaster. Being much astonished with the youth's learning, he drew him from his obscurity by procuring him an appointment in Edinburgh, where his valuable talents were secured for the use of a more extended circle than the parish school of Laurencekirk commanded. It is a remarkable circumstance, also, that Laurencekirk, small and thinly peopled as it formerly was, had the additional merit of giving birth to the illustrious Dr. Beattie, who, in a way somewhat similar to the case of Ruddiman, was brought into notice by Lord Gardenstone; his lordship having found him acting as schoolmaster of the adjacent parish of Fordoun.

**LAURIESTON**, a considerable village in the parish,  $1\frac{1}{2}$  mile east of the town, of Falkirk, Stirlingshire. It stands on the mail-road between Edinburgh and Falkirk, and is the site of three private schools, and of a very recently erected *quoad sacra* parish-church. Its inhabitants are principally mailers, agricultural labourers, and weavers. It was enlarged by Sir Lawrence Dundas, and from him took the name of Laurencetown, abbreviated into Laurieston; but it was called originally Langton, and afterwards Merchiston. Population, in 1831, 1,306.

**LAVEN-CASTLE**. See **INNERKIP**.

**LAWERS**, a mission, in the parishes of Kenmore and Weem, Perthshire. It measures 5 miles by 4, and is under the Society for propagating Christian knowledge. About 55 years ago, the mission of Ardeonaig or **LOCHTAYSIDE** [which see] was disjoined from Kenmore and Weem; and from that mission the mission of Lawers was disjoined in 1833. The church was built in 1833, at the expense solely of the late Marquis of Breadalbane. Sittings 550. Stipend £50; glebe £12. The population consists wholly of small farmers, agricultural labourers, and artisans; and, according to the missionary's report, amounted, in 1836, to 1,050.

**LAWRENCE (St.)**. See **HADDINGTON**.

**LAXAY**, a small island on the south-east coast of Lewis.

**LAXFORD (THE)**, a river in Sutherlandshire, which takes its rise from Loch-Stalk, in the parish of Edderachylis, and falls into an arm of the sea called the hay of Laxford, where there is excellent anchorage.

**LEADER (THE)**, a small river traversing the district of Lauderdale, Berwickshire, and, for some distance, dividing that county from Roxburghshire. After leaving the main body of the parish of **LAUDER** [which see], it pursues a course of 6 miles almost uniformly due south to the Tweed, 2 miles below Melrose. For  $1\frac{1}{2}$  mile it divides Legerwood in Berwickshire from Melrose in Roxburghshire; for  $1\frac{1}{2}$  mile it divides Legerwood and Earlston from the detached part of Lauder; for  $\frac{1}{4}$  of a mile it runs across a small projection of Earlston; and thence to the Tweed, it divides Earlston from Melrose. It runs with considerable rapidity, is a good trouting stream, and boasts some fine scenery on its banks, particularly as it approaches the Tweed. Some of the localities which overlook it are celebrated in the old song of 'Leader haughs and Yarrow.'

**LEADHILLS**, a mining village, in the moorland parish of Crawford, situated at the southern extremity of the county of Lanark, about 1,300 feet above the level of the sea, and perhaps the highest inhabited land in Scotland. It is 46 miles from Edinburgh; 44 from Glasgow; 15 from Douglas mill; and 16 from Thornhill in Dumfries-shire. The aspect of the country around is of the most sterile description imaginable, consisting of hills above hills of scanty herbage or heather, and elevated though it may be, the village occupies a position in a valley, from one side of which a bleak lofty ridge ascends to the height of 2,450 feet. The view from this point is truly magnificent, embracing on the north the Pentland hills; on the south, the ample sweep of the Solway frith, the Isle of Man, and beyond the mountains of Hellvellyn and Skiddaw in Cumberland; and on the west, the eye ranges over Ailsa-Craig, the serrated peaks of the Isle of Arran, the lofty Benlomond, and the Paps of Jura. This inhospitable region has attracted to it an industrious community from the lead which has been worked there almost, it may be said, from time immemorial. It is surmised that the prevailing mineral was first worked here by the Romans; at all events, they are known to have worked lead-mines in England; one of their principal military roads passed through the parish of Crawford, and the remains of their camps and stations are still visible in the neighbourhood. If worked by that enterprising people, a long period of inactivity followed; for it is matter of pretty authentic tradition, that one of the recent lead veins in modern times, was discovered by a man named Matthew Templeton, in 1517, though the written records, concerning their operation, do not reach further back than about the year 1600. Leadhills is only about a mile distant from the sister mining village of **WANLOCKHEAD** in Dumfries-shire [which see], the former belonging to the Earl of Hopetoun, the latter to the Duke of Buccleuch, and constituting between them perhaps the richest lead-mining district in the country. Besides galena, no fewer than nine species of lead-ore occur here. In the zenith of the trade, in 1810, Leadhills produced about 1,400 tons annually, valued, according to the then current price, at more than £45,000; but of late years both the price and the quantity produced have materially fallen off, the mines only yielding from 700 to 800 tons annually, and in consequence, the circumstances of the villagers are not so comfortable as they were wont to be. The works are managed by the Scots Mining company, who have at all times a responsible agent resident upon the spot, and the rent of the Earl of Hopetoun, the proprietor, is said to be every sixth bar of lead produced. Gold is found in all the neighbouring streams in minute particles, and at one time the search for this precious mineral was conducted on a very extensive scale, and in the reign of Elizabeth both English and German miners were employed at Leadhills, in this work, by special consent of the then Scottish regent. In particular, Sir Bevis Bulmer, by command of Queen Elizabeth, and by permission of James VI., spent portions of several years in superintending these operations, and gold was found, part of which was fashioned into the coin called the bonnet or unicorn piece. A detail of these operations, in manuscript, is still preserved in the Advocates' library in Edinburgh, in which it is stated, that occasionally native gold was found in these hills of the weight of from one to several ounces. In recent times, however, the quantities recovered have been quite insignificant in amount, and these have been obtained more by accident than design, for more than two centuries have elapsed since the regular mining operations for the acqui-

tion of this precious metal were abandoned. The inhabitants of Leadhills, who are almost entirely supported by the mines, have long maintained the character of a primitive and excellent race. Almost secluded from the busy world beyond—unvisited either by the tourist or the commercial traveller, they nestle in their bleak mountain homes, and contrive to make themselves comfortable by an orderly life, spent in the pursuit of knowledge and the practice of industry. So early as 1741, a library was established amongst them, which now numbers nearly 2,000 volumes, and this so far accounts for the remark of casual visitors, that they are here surprised to meet with men who mix so little in the busy world, and yet know infinitely more of its concerns, and of history and science, than the great mass of well-paid workmen in our large towns and cities. The soil is of the most wretched description, and under ordinary circumstances only fit for the maintenance here and there of a flock of black-faced or mountain sheep. But the Earl of Hopetoun having kindly granted portions of land rent-free to the miners, for the sake of improvement, this has given full scope to spade husbandry, and they have reclaimed, as it were from the wilderness, the soil of nearly a mile square around their dwellings. Although only two cows were kept in the village 100 years ago, there are now between 80 and 90, and the produce of the little fields of the miners is principally hay, potatoes, and oats—the two latter, however, a most precarious crop in backward seasons. The main supplies of the miners and their families is drawn, therefore, from more fertile districts around, and about the beginning of winter a large supply of oatmeal is stored by the company, and sold out to the inhabitants at a moderate rate. Leadhills has the honour of having given birth to Allan Ramsay, the author of the pleasant pastoral of the 'Gentle Shepherd,' and whose reputation as a Scottish poet would have been an envied one, but that the immortal ploughman hard of Ayrshire succeeded him. Ramsay's father was manager of the mines, and he was born there in 1686, where he spent his earliest years. The site of the cottage is still pointed out. There is a *quoad sacra* church in the village, and the emoluments of the minister are from £70 to £80 per annum, with a house; the schoolmaster has about £30, and also a free house. Leadhills is a post-town, and there are two fairs held in the year, principally intended for the supply of the villagers with some of the necessaries of life; but they are generally well-attended by the surrounding rural population. Inhabitants, in 1836, 1,207.

LECROPT,\* a parish of compact form, having about two-thirds of its extent in Perthshire, and about one-third in Stirlingshire, and lying, at its nearest point, within  $1\frac{1}{2}$  mile of the town of Stirling. It is an oblong, stretching north-westward and south-eastward; and is bounded on the north-east by Dunblane; on the east by Logie; on the south by St. Ninians; on the south-west by Kincardine; and on the west by Kilmadock. Its mean length is about  $2\frac{3}{4}$  miles; and its mean breadth about  $1\frac{3}{4}$ . The Teath traces the whole of the boundary on the south-west, a distance, in a straight line, of  $2\frac{1}{4}$  miles, and then falls into the Forth; the united stream, or the Forth, traces the whole of it on the south, a distance of 1 mile in a straight line, but of about 2 along the channel; and the Allan traces the whole of it on the east, a distance, in a straight line, of  $1\frac{1}{2}$  mile. The streams produce salmon, trout, pikes, and perch. Across the Forth, after it begins to

touch the parish, extends from hank to hank a ledge of rocks which terminates the flow of the tide and the navigableness of the river. On the rocky ledge are the well-known cruives of Craighorth, which, when kept in proper repair, produce a great capture of salmon. All the rivers, but especially the Allan, wear here richly ornamental dresses; and just after the Allan comes down upon the parish, are the sweet scenes of the Bridge of Allan and the circumjacent country. See ALLAN [BRIDGE OF]. Through the middle of the parish, lengthways, and almost from end to end, extends a beautiful hank. All the surface south and south-west of this is rich carse ground, without a single stone or pebble, tastefully enclosed, and in the fullest and most luxuriant cultivation. From the hank north-eastward, the surface rises with a gentle ascent, partakes the character of what, in the vicinity of carse lands, is called dry field, is all enclosed either with stone walls, or hedge and ditch, and exhibits many opulent results of agricultural improvement. A great variety of thriving planted trees shelter and adorn the dry field; and a large remnant of an ancient natural forest, consisting chiefly of oaks, is cut twice in 24 years, and affords a plentiful supply of timber for the various purposes of husbandry. The carse is too valuable for grain crops to be more than very thinly sprinkled with trees. From the hank, and from points of upland beyond it, magnificent prospects are obtained of the rich flat basin of the Teath and the Forth, and of the zone now of low heights, now of hold hills, and now of grand mountain-summits which encinctures it. The parish is conspicuous for the produce of the orchard and the aviary; and it has several grain mills, and mills for the manufacture of coarse paper. An artificial eminence on the east side of the parish seems to have been a post of the Romans, near the great road to the church at Ardoch. Near the elegant mansion of Keir,  $\frac{3}{4}$  of a mile north-west of the church, is one of the chain of rude forts, all called Keir's, which run along the north face of the strath of the Teath, and were built by the Caledonians to watch the motions of the troops stationed on the great Roman wall. In the immediate vicinity of the church are those very marked monuments of feudal times and jurisprudence, a Court-hill and a Gallow-hill. The road from Stirling to Callander traverses nearly the extreme length of the parish. Population of the Perthshire part, in 1801, 260; in 1831, 189. Houses 33. Assessed property, in 1815, £1,790. Population of the Stirlingshire part, in 1801, 248; in 1831, 254. Houses 41. Assessed property, in 1815, £3,383.—Lecropt is in the presbytery of Dunblane, and synod of Perth and Stirling, Patron, Stirling and Keir. Stipend £147 13s. 8d.; glebe £16 10s. The church is a very beautiful modern Gothic edifice. Schoolmaster's salary £34 4s. 4½d., with about £12 fees, and about £3 other emoluments. There is an infant school.

LEDNOCK (THE), a rivulet of the parish of Comrie, Perthshire. It rises in the north-west extremity of the parish, and flows  $8\frac{1}{2}$  miles south-eastward to the Earn at the village of Comrie, forming, over the last  $2\frac{1}{2}$  miles of its course, the boundary-line with the Monivard. The valley along which it passes lies from 200 to 350 feet above sea-level, is romantic in its scenery, and takes from the stream the name of Glenlednock. Several fine cascades occur on the stream, particularly one called the Caldron, about a mile above its mouth. Small trout are abundant.

LEE (THE). See NORTH ESK.

LEET (THE), a rivulet of the Merse, Berwickshire. It rises near the extreme north of the parish of Whitsome; flows 5 miles south-westward through

\* Lecropt—or Lecroch, *Lecroch*, 'the half of the hill,' in allusion to the configuration of the surface—anciently belonged to the monks of Cambuskenneth.

that parish and Swinton,—divides, for 2 miles southward, Swinton and Coldstream on the east, from Eccles on the west,—and runs sinuously 5 miles south-eastward over a geographical distance of 3½ miles, through Coldstream parish to the Tweed at the town of Coldstream.

LEGERWOOD, a parish of very irregular outline, with two large angular projections on its east side, and two smaller ones respectively at its northern and southern extremities, in the western part of Berwickshire. It is bounded on the north-west by Lauder; on the north-east by Westruther; on the east by Gordon; on the south-east and south by Earlston; and on the west by the detached part of Lauder, and by Melrose in Roxburghshire. Its extreme length from north to south is 5½ miles; its mean breadth is between 2½ and 3 miles; and its area is about 15 square miles. The southern division is wholly occupied by a very broad based height, called Legerwood-hill, whose summit is geographically from 1 to 1½ mile in the interior of the parish, and whose sides slope gently to the southern, eastern, and western boundaries. The north corner sends up 1,090 feet above sea-level, around an imposing elevation called Boon-hill. From this height a hilly ridge runs southward near the western boundary till not far from the north base of Legerwood-hill; and thence it sends off a ridge north-eastward to the most easterly point of the parish. The glens or vales among the hills are of considerable width; and, together with the soft slopes of the uplands, surrender very nearly one-half of the entire area, carpeted generally with a deep dark-coloured mould, to the stated or occasional dominion of the plough. About 300 acres are under wood. Both natural and cultivated pastures are devoted to sheep-husbandry; and give the district very much the appearance of being primely a sheep-walk. The breeds pastured are the Cheviot and the Leicester. Pure and perennial springs abound. Blythe-water, or Boon-dreigh, traces all the north-western boundary a distance of 2½ miles; and Leader-water, into which the Blythe falls, traces all the western boundary, a distance of 2¾ miles. Several brooks drain the interior, and run along the glens. The chief landed proprietors are the Marquis of Tweeddale and Henry Ker Seymer, Esq. of Morriston. Birkhill-side, the chief inhabited mansion, and the seat of Colonel Shillinglaw, another proprietor, stands on the Leader. A few houses of the kirk-town of Legerwood are not a village,—scarcely even a hamlet. Towers or peel-houses are at Whitelaid and Corsbie. British camps appear to have been on Legerwood and Birkenside hills. The new turnpike between Edinburgh and Hawick passes along the west side of the parish; and that between Edinburgh and Glasgow runs across one of its eastern projections. Population, in 1801, 495; in 1831, 565. Houses 92. Assessed property, in 1815, £4,923.—Legerwood is in the presbytery of Lauder, and synd of Merse and Teviotdale. Patron, Ker of Morriston. Stipend £205 4s. 6d.; glebe £15. Unappropriated teinds £86 8s. 10d. Walter Steward of Scotland obtained from Malcolm IV. the lands of Legerwood and Birkenside, and gave the church, with its pertinents, to the monks of Paisley. Schoolmaster's salary £28, with a house and garden, £20 fees, and £5 10s. other emoluments.

LEITH, a district suburban to Edinburgh, lying between it and the frith of Forth, and comprising its port, some outskirts of its streets, part of its parliamentary territory, and a considerable portion of its environs. Parochially, Leith is divided, *quoad civilia*, into North Leith and South Leith, and *quoad sacra*, into the additional parishes of Newhaven, St.

Thomas', and St. John's. NEWHAVEN will be noticed in a separate article.

NORTH LEITH is bounded on the north by the frith of Forth; on the east and south-east by the Water of Leith, which divides it from South Leith; and on the south and west by St. Cuthbert's. It is of an oblong form lying east and west; measures about 1½ mile in length by half-a-mile of extreme breadth; and has an area of only about 270 acres. Its surface is level, or very slightly variegated; and, with the exception of some garden grounds, and a few fields, is all covered by villas, by the villages of Newhaven and Hillhouse-field, and by the town of North Leith. Between North Leith and Newhaven, the coast has, to a considerable breadth, been washed away by the frith, and has received the aid of a very powerful bulwark of stone to protect it from further loss. In the year 1595, the links of North Leith, lying along the coast, were let at an annual rent of 6 merks, while those of South Leith were let at a rent of 30; so that they must then have been one-fifth of the extent of the latter, or nearly ¼ of a mile long, and two or three hundred yards in breadth. For many years, however, they have entirely disappeared; and what must formerly have been an expansive and beautiful plain, is now an irreclaimable waste, regularly flooded by the tide, and displaying at low water a thick aspersation of stones and pebbles washed completely free from mould or soil. The population of the parish, in 1801, was 3,228; in 1831, 7,416. Houses, in 1831, 448. According to an ecclesiastical survey in 1835, it was then 7,559; of whom 4,758 nominally belonged to the Establishment, 2,383 were known to belong to other denominations, and 418 were not known to profess connexion with any religious body. The parish-church was built in 1815-16. Sittings 1,768. Stipend £285 9s.; glebe, including sums derived from fees and rents, £394 16s. 4d. Two missionaries maintained by the parochial mission of North and South Leith, and salaried at £50 each, labour in the districts respectively of Newhaven and Hillhouse-field, and of Coalhill, Brigend, and adjacent places.—An United Secession congregation in the parish was established in 1816, and erected a place of worship in 1819. Sittings 1,100. Stipend £280.—North Leith, previous to the Reformation, belonged partly to the parish of Holyrood-house, and partly to that of St. Cuthbert's. The port of Inverleith, as it was then called, the village of Newhaven and the adjacent fields, which jointly constituted the St. Cuthbert's portion, were, along with one-half of the fishery, given by David I. to the monks of Holyrood. A chapel, in the reign of James IV., was built in North Leith by Robert Bellenden, abbot of Holyrood, endowed by him, and dedicated to St. Ninian. This chapel continued subordinate to the abbey till the Reformation; but, along with the chaplain's house, the tithes, and other pertinents, it was, after that event, purchased by the inhabitants from John Bothwell, the commendator of Holyrood. The spirited purchasers immediately rebuilt both the place of worship and the parsonage; and, in 1606, obtained an act of parliament erecting the district into a parish. In 1630, the commissioners for teinds and plantation of kirks added Newhaven and the rest of the area which had belonged to St. Cuthbert's. In 1633, the parish, thus enlarged, was annexed to the episcopate of Edinburgh. Anciently an hospital and a chapel, dedicated to St. Nicholas, stood on the site of the Citadel; and they are commemorated in the name of the alley called St. Nicholas'-wynd. North Leith is in the presbytery of Edinburgh, and synd of

Lothian and Tweeddale. Patrons, the heads of families. In 1834, there were 16 schools; one of them parochial, conducted by a master and an assistant; and attended by a maximum of 63 scholars; and 15 non-parochial, conducted by 18 teachers, and attended by a maximum of 1,033 scholars. Parish schoolmaster's salary £21, with about £8 fees, and £40 arising from the offices of recorder and session-clerk. Assessed property, in 1815, £15,415.

SOUTH LEITH is bounded on the north-east by the frith of Forth; on the south by Duddingston and Canongate; and on the west by some parishes of the Royalty of Edinburgh, and by St. Cuttbert's and North Leith. It is nearly triangular in form; measures  $2\frac{3}{4}$  miles on the north-east side,  $2\frac{3}{4}$  on the south side, and  $1\frac{3}{4}$  on the west side; and has an area of about 1,200 acres. The boundary is traced for some way with Duddingston by the Fishwife's-causeway; it then passes nearly along the road between Edinburgh and Portobello till past Jock's Lodge; it next makes a projecting sweep so as to include Parson's-green; and after skirting Arthur's-seat and the King's-park it runs along the north back of Canongate, debouches through Low Calton, goes down Leith-walk till nearly opposite the mansion of Pilrig, and then moves due westward in a zigzag line to the Water of Leith, and follows that stream to the sea. The parish thus includes, besides its landward districts, Calton-hill, parts of Calton and Canongate, Abbey-hill, Norton-place, the east side of Leith-walk, Jock's Lodge, Restalrig, and the whole town of South Leith. Except on Calton-hill the soil, not occupied by buildings, is all susceptible of high cultivation, and has had imposed on it dresses of utility and ornament in keeping with its close vicinity to the metropolis. Irrigated and very fertile meadows, green and beautiful esplanades laid out as promenading-grounds, neat, tidy, and extensive nurseries, and elegant fruit, flower, and vegetable gardens, combine, with a few corn-fields, and the little lake of Lochend, and a profusion of odoriferous enclosures, and a rich sprinkling of villas and their attendant flower-plots, to render the open or unedified area eminently attractive. The east corner is part of the lands formerly called the Figgate Whins, notable alike for their having been abandoned to barrenness, disposed of for almost a nominal compensation, and georgically worked into fertility. The built districts, which are compact with the metropolis, have been noticed in the description of EDINBURGH. Separate articles are devoted also to CALTON-HILL, JOCK'S LODGE, LOCHEND, and RESTALRIG. The mansions and villas are so numerous that to notice all would be tedious, and to notice a few would be invidious. The beach, all the way from South Leith to the eastern boundary, is not a little attractive to sea-bathers; a fine clean sandy bottom,—an inclination or slope quite gentle enough to assure the most timid,—and a limpid roll, or ripple, or burnished face of water, the very look of which is luxury on a summer's day. Population of the parish, in 1801, 12,044; in 1831, 18,439. Houses 1,443. Assessed property, in 1815, £29,048.—The parish is a collegiate charge in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron of the first charge, the Crown; of the second, the kirk-session and the incorporations. Stipend of the first minister £395 19s. 11d., with a glebe worth £80, and an allowance of £80 for a manse; of the second minister £247 1s. 2d. Unappropriated teinds £636 2s. 4d. The parish-church is of unascertained antiquity, but is supposed by Maitland, in his history of Edinburgh, to have been built prior to the year 1492; and it has undergone no alteration within the memory of man, except the removal, in 1791, of a gallery which stood

across a window, and obstructed the light. Sittings 1,347. Three missionaries, maintained by the United parochial mission, salaried at £50 each, and all licentiates of the Establishment, officiated, in 1835, at five preaching-stations,—respectively in Restalrig, Burns-street, the Charity school-house, Lawrie's-close, and Broad-wynd. Two missionaries, maintained by the Leith town-mission, but unsanctioned by the Establishment ministers, also laboured in the parish. The dissenting congregations of the parish are eight. The Episcopalian congregation of St. James' chapel was established about 115 years ago; and received, 41 years ago, an accession of a non-juring congregation of an earlier date. The chapel was built in 1805, at the expense of about £1,600. Sittings 380. Stipend £200. The minister holds a service every Sabbath morning at Piershill-barracks.—The Wesleyan Methodist congregation was established some years previous to 1818. Their place of worship was, along with three or four attached houses, built in that year at an expense of £5,000; but was afterwards contracted in its accommodation. Sittings 400. Stipend £120.—The United Secession congregation of Kirkgate was established in 1775. Sittings in their place of worship 1,025. Stipend £260.—The Independent congregation was formed in 1803, and their chapel was built in 1826, at a cost of £2,000. Sittings 520. Stipend £100.—The Relief congregation's place of worship was built in 1825. Sittings 1,230. Stipend £210.—A congregation in Storey's-alley, calling itself Independent, was commenced in 1832. The meeting-house is the property of the United Secession congregation of the Links, was built 54 years ago, and is rented for £18. Sittings 660. Stipend £50.—The United Secession congregation of the Links was formed about the year 1786; and their present place of worship was erected about 14 years ago. Sittings 1,254. Stipend £262.—The Separatist congregation was established in 1818, and assembles for worship in a Mason-lodge in Constitution-court, rented at £2 12s. Sittings from 200 to 300. No stipend.—An ecclesiastical census of 1835, including St. John's *quoad sacra* parish, and a small district, included in the *quoad sacra* parish of Portobello, showed the population then to be 15,792; of whom 7,423 belonged to the Establishment, 7,360 belonged to other denominations, and 1,609 were not known to belong to any religious body.—In 1834 26 schools, all non-parochial, were conducted by 26 teachers, and attended by a maximum of 1,815 scholars, and a minimum of 1,489.

The ancient seat and name of the parish of South Leith was Restalrig. In 1214 Thomas de Restalrig, or Restalrig, made a grant of some tenements which he describes as situated "southward of the High-street," probably the present Leith-walk, "between Edinburgh and Leith;" and, in conformity with the usage of the period, he perhaps had a church on the manor, from which he took his name. A church, with parochial jurisdiction, existed at Restalrig, at all events, in 1296; for, in that year, Adam of St. Edmunds, "parson of Restelric," swore fealty to Edward I., and had a precept for the delivery of all his rights. During the reign of Robert I. the Logans obtained possession of the manor and the advowson; and they continued to exercise the power of both barons and patrons till the commencement of the 17th century, when they suffered forfeiture for participation in Gowrie's conspiracy. A collegiate establishment was organized in the church; but it does not seem to have interfered with the patronage. The establishment was set up by James III. and at first included only a dean and canon, supported by the revenue of the parish-church of Lasswade; in 1512 it received from James IV. the addition of six prebendaries,

supported by the revenues of the parsonage of St. Mary of Rothesay, by a rent of £20 from the King's new works in Leith, and by the chapelry of St. Trednan's isle, which had been erected in Restalrig church; and in 1515 it got from James V., the accession of two singing boys, and the grant of the ten pound lands of the parish of Kirkhill, and some rents and tenements in Canongate. A chapel, dedicated to the Virgin Mary, and situated in the town of South Leith, preceded, for probably a century, the origin of the collegiate establishment; and was enriched with many donations and annuities for the support, within it, of altars or chapeltries dedicated to St. Peter, St. Barbara, and probably other saints. To this chapel—the choir of which was destroyed in 1544 by the English invaders under the Earl of Hertford—the General Assembly of 1560 drove the parishioners, by dooming the parish and collegiate church to destruction as a monument of idolatry. The revenues of the chapeltries or altarges were now appropriated for the support of the reformed ministers, and half-a-century later, or in 1609, the chapel of St. Mary was constituted by act of parliament the parish-church, and invested with all the revenues and pertinents of Restalrig. The cemetery of the ancient church continues to be in use for the dead, and the walls and area of the chapel for the living.—A canoury or preceptory of religious knights, called canons of St. Anthony, and the only establishment of its class in Scotland, was, in 1435, founded in the town by Robert Logan of Restalrig. The canons were brought from St. Anthony of Vienne in France, the seat of their order; and they followed the rule of St. Augustine. They had, on the south-west corner of the alley which was named from them St. Anthony's-wynd, a church, a cemetery, a monastery, and gardens; they possessed various lands, tenements, and rents about Edinburgh and Leith; they got a grant of the church of Hales, in East Lothian; and they obtained a right to a Scottish quart of every tun of wine which was imported into Leith. In 1614 the preceptory was suppressed; its right of wine was transferred to the magistrates for the uses of the town; and all its other rights and possessions were given to the kirk-session for endowing a benevolent establishment under the name of King James' hospital. Not a vestige of the buildings now remains, except some old vaults. But the seal of the convent—exhibiting St. Anthony habited in a hermit's mantle, with a book in one hand, a staff in the other, a belled sow at his foot, and a cross over his head, and bearing the legend, “S. Commune Preceptorie Sancti Antonii Prope Leicbt,”—is preserved in the Advocates' library.

ST. JOHN'S OF LEITH was, in 1834, divided from the parish of South Leith by the General Assembly. It is a town parish  $\frac{3}{4}$  of a mile long, and  $\frac{1}{2}$  of a mile broad. According to the minister's survey, in 1835, its population consisted then of 1,497 churchmen, 1,290 dissenters, and 148 nondescripts,—in all, 2,935 persons. The church was built in 1770, as a chapel-of-ease, and has at various periods been repaired. Sitings 1,000. Stipend £250, with a manse worth £18.

ST. THOMAS' OF LEITH, was erected into a *quoad sacra* parish by the General Assembly of 1840. The church was gifted to the Establishment by John Gladstone, Esq., of Pasque; and is a remarkable and solitary instance of a place of worship, in reformed Scotland, having had the power of patronage imposed on it by the sole deed of an ecclesiastical court. The same General Assembly which made the boldest of all demonstrations in support of a veto upon presentations, and which preceded a stirring movement in demand of the abolition of all patronage, took St. Thomas' church into its communion,

and invested it with *quoad sacra* parochial jurisdiction, on the admitted and stipulated ground that the election of its minister should be patronial! In February, 1841, Mr. Gladstone presented a minister to the charge.

LEITH, the sea-port of Edinburgh, a parliamentary burgh, and a populous and important town, stands, as to its proper or assigned houndaries, from  $\frac{3}{4}$  to  $1\frac{3}{4}$  mile north of Edinburgh,—as to its street-lines and edified area, connected with Edinburgh by the long street called Leith-walk, and extensively built on both sides,—and as to parochial territory, intermingled with Edinburgh, as regards both the metropolis edified area and its parliamentary burgh. The limits of Leith, as a town, were, previous to 1827, quite uncertain. What popularly bore the name, comprehended the barony of South Leith, part of North Leith connected with the burgh of Canongate, the regality of citadel belonging to the corporation of Edinburgh, and the halliary of St. Anthony's, belonging to the kirk-session of South Leith. In 1827, the boundaries were adjusted by a statute providing for the municipal government of the town and suburbs; and, generally speaking, were, Seafield toll-bar on the east, the frith of Forth on the north, the stone-bridge at Leith-mills on the west, and the foot of Leith-walk on the south. This territory was to be called 'The Town of Leith.' More extensive boundaries were assigned by the 2d and 3d Will. IV., cap. 65; and, in a general view, these are the frith on the north, a line from Lochend to the frith on the east, the middle of Leith-walk on the south, and Wardie-burn on the west. The burgh, if it filled this territory strictly as a town, would vie with the metropolis in extent; for, in that case, it would be a town of 7 furlongs in breadth from north to south, and of  $2\frac{1}{2}$  miles or upwards in length from east to west. The limits include all the parish of North Leith, with, of course, the large suburb and separate harbour of Newhaven,—a portion of St. Cuthbert's, about equal in extent to North Leith parish,—and very nearly one-third of the parish of South Leith. Viewed apart from arbitrary allocations, and regarded simply as a compact field of streets and houses, Leith, with the addition of its portion of Leith-walk and of some small suburban and straggling extensions, measures about  $\frac{3}{4}$  of a mile in length, and, at its broadest part, half-a-mile in breadth,—the length being parallel with the frith.

The site of the town is disadvantageous for the purposes at once of the port, the police, and the artist,—affording indifferent accommodations and capacities for a harbour, poor facilities for the drainage and cleaning of the streets, and little scope for the imposing or agreeable intersectioning of thoroughfares, or location of public buildings. An expanse of low ground, generally as level as a bowling-green, receding from a flat sandy beach, which is left dry by the ebbing tide over a mile's breadth from high-water mark, could not, by even surpassing skill, be made the arena of either a picturesque town, or a very prosperous and facile port. The water of Leith, indeed, bisects the dreary level, or the insensibly descending slope; but it is here a sluggish, and, at most seasons, an inconsiderable stream, having scarcely power enough to carry its own freight of alluvium into the sea, and no capacity for sweeping tidily away the drainings of a large town, or bringing boldly up into its recess a deep flood, or a sufficient sea-room of ship-bearing tide. The town, like its cognominal parochial territory, is cut by this rivulet into the divisions of North Leith and South Leith. A stone-bridge, built by Robert Ballendean, abbot of Holyrood, to afford the inhabitants on the east side access to the chapel which he erected in North

Leith, was, for a long period, the only medium of connexion between the two divisions. This venerable bridge having been at length removed, its place was supplied by two wooden drawbridges, which, besides doubling the facility of communication, admit the entrance and the egress of vessels on the bosom of the tide. On the southern outskirts of the town, too, a handsome stone-bridge was, several years ago, erected over the river, to carry a thoroughfare from the foot of Leith-walk direct into North Leith. Seen from any of the high grounds of Edinburgh, or even closely examined in a walk round its own immediate environs, the town appears to be, if not picturesque, at least neat, showy, in some places beautiful, and in others eminently elegant. But, with some not very trivial exceptions, it is a field of waste lands and manure plots, with the enclosures and approaches of a garden,—a confused arena of filthy alleys and squalid lanes, and dingy streets,—encircled with a broad belt of gay and attractive buildings. North Leith, which contains the docks, and anciently comprehended the citadel and the chief seat of traffic, was of old a congeries of low houses, huddled into groups or irregular lines, and straddling their way among nuisance in front and in rear, very much in the style of a Portuguese or Spanish town of the present day. But within the last thirty years, and particularly since about 1818, it has undergone great and renovating changes; and besides being disencumbered of the ungainly citadel and a crowd of pauper tenements which cowered slothfully in the vicinity, it now presents toward the south and the west some entirely new streets, which vie in elegance with those of the second-rate parts of the New Town of Edinburgh. Leith-walk, which, in consequence of its connecting thoroughfare along the new bridge with North Leith, may be viewed as common to the two divisions of the town, though in its own direct northward course it leads right into the principal thoroughfares of South Leith,—this spacious and beautiful street, so far as it belongs to Leith, is even more attractive than in its Edinburgh portion, rising in a gentle, almost imperceptible, and very regular ascent,—alternately edified with neat houses or splendid mansions, and ruralized with nursery-grounds, or openings to the fields,—and commanding, over all its length, one of the most superb views of Arthur's-seat and the Calton-hill, and the waving surface and outline of Edinburgh. Diverging a little eastward from the foot of Leith-walk, a brief thoroughfare leads the way into Leith-links. This is a beautiful grassy plain of nearly a mile in length from west to east, and of very considerable breadth, used as the play-ground of a company of golfers, and as the bleaching-ground and public promenade of the inhabitants of the town. On its east side, it is skirted by some fine fields and pleasure-grounds, and looks up an agreeable ridgy slope which intervenes, to the ancient village of Restalrig; on its south side, it has a rugged and rather picturesque frame-work of varied scenery, partly urban, and partly seaward; and on its south and west sides, it is edified with rows of private houses, and in two or three instances mottled with public edifices, which would be as harmonious with the immediate outskirts of Edinburgh, as they are highly ornamental to those of Leith. Immediately behind the west side of the Links, but with the intervention of some brief and limited streets and places, modern in structure, and of fair appearance, Constitution-street leads down toward the sea from Leith-walk, and, at its termination, sends off Bernard-street westward, to communicate with the quay near the heach. Both of these streets are modern and spacious, generally well-edified, and in some places handsome. Somewhat parallel with

Constitution-street, going off, like it, in continuation of Leith-walk, and forming with it at the point of plunging into the town a very acute angle, is Kirkgate,—a street containing many modern houses, but, in general, orientally narrow, and looking foully like a street of Lishon. From the foot of Kirkgate, a thoroughfare, more disagreeable still, and bearing the dreary, but not inexpressive name, of Tolhooth-wynd, goes off westward to the quay, at a point south of the termination of Bernard-street. This wynd and Kirkgate are noticeable chiefly from their having anciently formed the outlet from the quay to the country, and the path of communication between the metropolis and the harbour. The quay is the most ancient part of the town; and, apart from its accommodation for vessels, consists of a terrace or one-sided street, curiously and antiquely varied in the appearance of its houses, and winding paralleled with the river for about half-a-mile from the shore. From this terrace, alleys and lanes diverge eastward, to be crossed and chequered with narrow thoroughfares connecting them, and to form with these the great body of the town, or at least the seat of by far the greater part of its population. But one broad dach with the hush will give a picture of them all,—“they are, for the most part, irregularly and confusedly built,”—and are “extremely filthy, crowded, and inelegant.”

The Exchange buildings, erected at the cost of £16,000, and situated at the foot of Constitution-street, are a large and elegant structure in the Grecian style of architecture, three stories high, ornamented with Ionic pillars, and containing a hotel, a spacious assembly-room, and a commodious public news-room. The whole pile and its accommodations, while they showily adorn the town, rather display the taste and public spirit of a few individuals, than indicate the amount of the town's prosperity, or the range of its commercial importance.—The Custom-house, built in 1812, at the cost of £12,000, and situated at the North Leith, or west end of the lower drawbridge, is a noble edifice, likewise in the Grecian style, and adorned in front with pillars and pediment.—The new Court-house, built at the expense of £3,300, and situated at the corner of Constitution-street and Charlotte-street, is a square building, by far the most elegant edifice in the town, and forming, both in chasteness of design, and in neatness of execution, a very favourable, though limited specimen of modern architecture. Its interior arrangements are as commodious as its external aspect is agreeable, and afford accommodation for both the sheriff-court and the police establishment.—The Leith Bank's office, built in 1806, situated on the south side of Bernard-street, is a small hut neat and even handsome building, surmounted by a vane.—The Tolhooth, situated on the south side of the Tolhooth-wynd, occupies the site of a predecessor which was built in 1565, and became decayed or ruinous after the commencement of the present century. The modern edifice was erected in 1822, at the expense of the city of Edinburgh, and is in the Saxon style of architecture. But though it has several suites of well-lighted cells, and is said to be ‘a very complete jail,’ it remained, at the date of the commissioners' Report on Municipal Corporations, and possibly remains still, unlegalized. An objection having been judiciously made to its security, the court-of-session refused an application to legalize it; and a misunderstanding having afterwards arisen between the corporation of Edinburgh and the community of Leith, the place was neglected, and not allowed the benefit of any further proceedings in its favour. A lock-up-house, consisting of cold, damp, and unhealthy cells, such as endangered

life, was coolly permitted to do for the police-prisoners the honours and offices of the sinecure tolbooth. —The Seafield baths, situated at the eastern extremity of the Links, overlooking one of the finest parts of the delightful heath, and built in 1813 at an expense of £800, are a capacious and neat structure, containing a hotel and suite of baths, constructed and arranged on a plan which has been thought worthy of imitation in later erections of the same class at other sea-bathing resorts. The establishment was erected by shareholders, and does not want from good management; but, owing to its distance from Edinburgh, it has proved a failure. —The Grammar-school, or High school, built in 1806, and situated on the south-west corner of the Links, is a spacious oblong building, in the Grecian style of architecture, surmounted by a small spire and clock, and internally arranged into excellent apartments for two classes in classics, two in English, one in mathematics, and one in writing and arithmetic. The predecessor of this edifice—vvhich is neither burgh-school nor parish-school, but is anomalously managed by several bodies who have no mutual connexion—stood in the Kirkgate, and, unlike the present one, was endowed with considerable funds. —Dr. Bell's school, built in 1839, and situated in Great Junction-street, the thoroughfare between the foot of Leith-walk and the Stone-bridge, is a large and elegant Gothic edifice. The amount of funds transferred from the bequest of Dr. Bell, the well-known founder of the Madras system of education, for the establishing and endowing of this school, was nearly £10,000. —The Trinity-house, erected in 1817, at the cost of £2,500, and occupying a confined site on the west side of Kirkgate, is a handsome Grecian edifice, the successor of a venerable building which stood on the same spot, and was erected in 1555. In one apartment there is an ancient view of Leith; and in the large hall used for the meetings of the masters, there are several good portraits, particularly one of Mary of Lorraine by Mytens, and one of Admiral Lord Duncan. From time immemorial the shipmasters and mariners of Leith received from all the vessels of the port, and all Scottish vessels visiting it, certain duties called 'primo gilt,' which were expended in aiding poor sailors; and near the middle of the 16th century they acquired a legal right to levy the prime gilt dues, and apply them in maintaining an hospital, and sustaining 'poor, old, infirm, and weak mariners.' Previous to 1797, the association, though calling itself 'The Corporation of Shipmasters of the Trinity-house of Leith,' were a corporation only by the courtesy of popular language, and possessed the powers of only a charitable body; but in that year they were regularly erected by charter into a corporate body, whose office-bearers were to be a master, an assistant-master, a deputy-master, a manager, a treasurer, and a clerk, and were vested with powers—reserving, however, the powers of the corporation of the city of Edinburgh—to examine, and under their common seal to license persons to be pilots, and to exact admission-fees from the licentiates. During the year ending 25th December, 1833, their income was £2,159 1s. 5d., and their expenditure £2,335 9s. 1d.; and, in 1834, their property in houses, government stock, and other items, amounted to £17,761, and their annual revenue from prime gilt to £756 7s. 6d. —The Markets of Leith, occupying the site of the old custom-house and excise-office, a little east of the jail in Tolbooth-wynd, are commodious and of creditable appearance, and have their areas surrounded with neatly constructed stalls. They were long but vainly demanded by the inhabitants from the corporation of Edinburgh, who had

power to hinder or promote their erection; they were eventually reared, in 1818, by the impelling influence of a voluntary subscription, and by means of a compromise which subjected them to feu-duties to Edinburgh of £219; and when completed, they formed a prominent and very vexatious subject of dispute in the course of a long and mischievous misunderstanding between the metropolis and its port.

Ancient civil edifices, extinct public buildings, and remarkable localities form quite as interesting a chapter in the topography of Leith as that of existing and modern public structures. Not the least noticeable were its fortifications. Those which rendered it a walled town were raised in 1549, amid the hurricane which swept over Scotland during the infancy of Mary; they were built by D'Essé, the French general, to give Mary of Lorraine's party a footing against Edinburgh castle, which held out for the Protestants; and they were strong enough to offer successful defiance to all the besieging efforts of the Protestant forces. Captain Colepepper, in Sir Walter Scott's tale of 'the Fortunes of Nigel,' indeed speaks of them with merry and swaggering contempt. "You speak," says he, "of the siege of Leith; and I have seen the place. A pretty kind of a hamlet it is, with a plain wall or rampart, and a pigeon-house or two of a tower at every angle. Daggers and scabbards! if a leaguer of our days had been 24 hours, not to say months, before it, without carrying the place and all its cock-lofts one after another by pure storm, they would have deserved no better grace than the provost-marshal gives when his noose is rieved." The rampart was octagonal, with a bastion at each of the eight angles. The first bastion, called Ramsay's fort, was situated on the east side of the river between the beach and the west end of the present Bernard-street, and was designed to protect the harbour. The wall ran from this in a south-east direction; and the second bastion stood on the site of the present Exchange buildings, and long survived in some remains which were ascended by a flight of stone steps, and used as a promenade under the name of the Ladies'-walk. The site of the third bastion was opposite the point where Coatfield-lane now joins Constitution-street; that of the fourth was at the top of Kirkgate; that of the fifth is not accurately known. The wall came down on the river exactly 115 yards below the site of the new stone-bridge at the saw-mills, and was connected with its continuation on the west side of the stream by means of a wooden-bridge. The sixth bastion, though its site, like that of the fifth, is not precisely ascertained, must have stood on the west side of the river, and in its immediate vicinity; the seventh stood near the site of the citadel; and the eighth stood at the Sandport, overlooking the harbour, and corresponding with Ramsay's fort on the opposite side of the stream. Of the various forts, one was called St. Anthony's, from the vicinity to it of St. Anthony's preceptory; and another, and the chief, was called the Block-house, and formed the grand outlet for sallies upon besiegers. The wall was constructed wholly of stone, and seems to have been a line of stout masonry; and the bastions were of great strength. The fortifications, after the triumph of the Protestant party in 1560, were so far destroyed as to be rendered useless; they were temporarily re-edified in 1571, by the Earl of Morton, during the regency of the Earl of Lennox; but they have long since been so entirely razed as to betray an occasional and small vestige only during the yawn of some ephemeral excavation. On the links are still some moundish, though inconsiderable, memorials of works thrown up by the besieging Protestant forces, either to cover their advance toward the rampart, or

to mount their artillery for playing upon it and its defenders.—The citadel of Leith was greatly enlarged, and, in fact, chiefly constructed, by the army of Oliver Cromwell. It stood on the North Leith side of the river, and covered a considerable area. It was pentagonal in outline, or in its exterior defence, with a bastion at each of the five angles; and it had a principal gate opening to the east. In the interior it had a ledgy ascent of fortification, excellent magazines, stores, and houses for the garrison, a suitable place of worship, and a spacious courtyard. After the Restoration, these erections were in a great measure destroyed, and the site of them granted to the Duke of Lauderdale, then prime minister for Scotland to Charles II. No vestige of the defences now remains, except a Saxon archway, and a few yards of the wall,—the archway now surmounted by a modern house.—Lord Balmerino's house, a stately old mansion, stood a little off the line of Kirkgate, between Charlotte-street and Coatfield-lane, and was entered by a low arched close from Kirkgate, and through a garden from Constitution-street. Charles II., when invited, in 1650, to Scotland by the Scottish parliament, slept in this house on the night after his arrival at the port. The house was taken down only three or four years ago.—Various fabrics compete for the notoriety of having been the residence, during the period of her military quarrel with the Protestants, of Mary of Lorraine, the Queen-regent, and the mother of Queen Mary. What seems to have been the real house, and that also which received for a season Oliver Cromwell, was a building of rather elegant exterior, situated in Queen-street, formerly called the Paunch-market. The house was taken down within the last two years. Its window-frames were all formed of oak, richly carved; and the panellings of the doors were of the same wood, and beautifully embellished.—A fine old mansion, spacious, of imposing aspect, sculptured with crowns, sceptres, and other decorations, and said to have been the residence of the Regent Lennox, stands between the end of Tolbooth-wynd and St. Andrew's-street, in a filthy court pompously called Parliament-square, and entered by a small lane leading off from the north side of St. Andrew's-street, nearly opposite the end of the Sheep's-head-wynd.—The King's-work, a cluster of very ancient buildings, occupying a large area, and occasionally graced with the presence of majesty, stood between Bernard-street and the Broad-wynd.—The house inhabited by the parents of John Home, the author of 'The Tragedy of Douglas,' and in which he was born in 1722, stood at the corner of Quality-street, and was pulled down 15 or 20 years ago, to make room for new buildings.—The locality formerly called Little London is between Bernard-street and Quality-street.—The Timber-house is in the vicinity, and though entirely changed in appearance, it retains its ancient name, slightly disguised in the corrupted form of Timber-bush.—The spot on which George IV. landed, on occasion of his visit to Scotland in 1822, is in front of the Ship-tavern, and is indicated by an iron plate with an inscription.—Leith-fort stands about half-a-mile west of the custom-house. Originally it was merely a battery of 9 guns, hastily constructed in an emergency for defending the harbour toward the close of the American war; but it has long been a spacious artillery barracks, and a station for a considerable park of artillery, and is kept in excellent order.

The ecclesiastical edifices of Leith demand a moment's notice additional to the statistical details respecting them given in our account of the parishes. The parish-church of North Leith, situated at the western extremity of the town, and in the vicinity

of Leith-fort, is a very handsome though unpretending structure, built in a plain style of architecture, with a fine portico and columns, and surmounted by a tasteful spire 140 feet high. In consequence of the commercial transfer of its original transfer by money-purchase from the commendator of Holyrood to the inhabitants of the town, it possesses the attributes—rather remarkable in a Scottish parish-church of the present day—of being free from patronage, and of bringing its minister, though by commutation into money-payment, the tithes of all the fish landed on the beach. The old church, the re-erection by the public-spirited purchasers immediately after the Reformation, still stands in a hye-street near the end of the upper drawbridge, abandoned to secular purposes, and lifting its wan and withered spire as if in deprecation of the neglect and contumely heaped on its old age and venerable history.—The parish-church of South Leith, the ancient chapel of St. Mary, situated in Kirkgate, is a time-worn but sturdy Gothic structure, originally cruciform, but deprived of its nave in 1544 by the Earl of Hertford. In 1674, a stone tower, sending aloft a spire of wood and metal, was erected at the west end; and, in 1681, a clock was added. In the south-west corner of the cemetery which surrounds the church, stood King James' hospital. David Lindsay, who baptized Charles I., and became Bishop of Ross, and Logan, the author, real or reputed, of prose and poetical works of great fame, but the inglorious and but lately detected pirate of some manuscripts of the Scottish Kirke White, Michael Bruce, were ministers of this church.—St. John's church, situated in Constitution-street, is a plain but very spacious edifice; and attracts notice from having been so long the scene of the unctuous and odoriferous ministrations of Dr. Colquhoun, the author of several very devout and much appreciated though somewhat scholastic works.—St. Thomas' church, situated on the Sheriff-brae, is clustered with a manse, a school-house, and an asylum, and forms with them an elegant range of Gothic edifices, constructed at a cost of £10,000, from a design by John Henderson, Esq. of Edinburgh. The asylum is a refuge and an hospital for persons afflicted with curable diseases, and accommodates 10 patients and inmates.—The Episcopalian chapel, situated in Constitution-street, is a neat edifice, and draws attention from the literary celebrity of its minister, Dr. Michael Russell, the author of a continuation of 'Prideaux's Connexion of Sacred and Profane History,' and of some other elegantly composed works.—The United Secession chapel of Kirkgate is noticeable, chiefly from association with one of its ministers, Mr. Culbertson, who wrote an expository work on the Apocalypse, and died about 20 years ago.—The United Secession chapel of North Leith, situated near the Citadel, has a Gothic front, and wears an aspect of some pretension.—The United Secession chapel of the Links is a very fine edifice, more tasteful than most modern buildings of its class, quite ornamental to the district in which it stands, and forming with the Grammar-school a fine feature in the architectural fringing of the very spacious and airy promenade.—The Relief chapel, situated in Great Junction-street, vies with the two modern Secession chapels; and the Independent place of worship is a pleasing structure. The modern ecclesiastical edifices, in the aggregate, display more taste than almost any equal number erected at similar cost in other localities.

Leith harbour consists of the gut formed by the discharge of the water of Leith, and is entirely tidal. It was formerly, with the exception of being traversed by the shallow and unimportant stream, quite dry at low water; and even yet it has then a very

trifling depth. The water of Leith, having to make its way to the sea across the very broad flat shore called Leith-sands, and alternately flooded by the tide and left entirely dry, the channel was, in its natural state, subject to much fluctuation, according to the different direction of the wind and set of the tides. A bar, too—such as is thrown up at the entrance of every river-harbour—lies across its mouth, and must necessarily be formed at the point where the antagonist currents of the river and the tide become equal in force, bring each other up into equipoise or stagnation, and let down in a deposit whatever silt they contain. The river, constantly and to an important amount, variegates both the depth of the harbour and the height and position of the bar, according to the fluctuations which occur in the volume of its water, or the rapidity of its discharge; for, in a season of drought, it leaves everything open to the invasion of sediments from the tide, and in a season of rain, it scours away lodgments made on its bed, drives seaward and diminishes in bulkiness the bar, and deepens the channel toward the side streams of the firth. All attempts, therefore, to obtain a good or practicable harbour at Leith, were necessarily limited to the erection of broad piers far seaward at points not touched by the river, or the construction of long pier lines fitted to divert the current of the tides and give the river a mastery over them, and enable it to sweep away or diminish the bar, and to the cutting of docks for the reception of vessels on the bosom of high water, and the maintaining of accommodation for them beyond the ruthless mercy of the receding tide. A wooden pier was constructed, or a previously existing one renovated, by the Earl of Hertford, when he visited the port in 1544; but it was destroyed on his departure, and has left no relic to indicate its exact site. Another wooden pier was erected early in the 17th century, and, during about 240 years, hurried its strong pillars in a compact hed of whinstone and clay, and withstood the rough contacts of shipping and the weather; and has at last, only a few months ago, disappeared before the progress of costly and massive improvement. Between the years 1720 and 1730 a stone-pier, in continuation of this wooden one, which very trivially assisted the poor natural facilities of the harbour, was carried 100 yards seaward, constructed partly of stones from the ruins of a curious coal-pit at Culross; and this, in some degree, remedied the difficulty and hazardousness of the navigation inward, but still left the entrance of the harbour encumbered with a bar, shifting and unsafe. Contemporaneous in origin with this improvement was the oldest dock, commenced in 1720, and situated on the west side of the river, behind a house not far from Bridge-street, and bearing the date 1622. During the remainder of the 18th century, various surveys and reports were made with a view to further improvement; but they led to nothing except the construction in 1777 of a short pier, afterwards known as the custom-house quay. The accommodation for shipping was insufficient and unendurable, the common quays being the chief landing-places, and the channel of the river offering to vessels only a seat of uncovered and adhesive mud at the recess of the tides; and as the trade of the port rapidly increased toward the close of the century, the accommodation loudly demanded both enlargement and amelioration. The late John Rennie, Esq., civil engineer, was now employed, in 1799, to examine the ground, and to form designs of docks and extended piers on a scale somewhat proportioned to the amount of the emergency. The gravamen of his report was, that no permanent and uniform depth of water along the harbour or gut of the river could be

obtained, and no achievement could be effected toward the extinction of a shifting bar, except by carrying a pier or weir on the east side of the channel quite across the sands into low water, but that by this means 3 or possibly 4 feet of additional depth of water might be obtained; yet, though the soundness of his principle has been vindicated by the result of subsequent operations which were undertaken by its guidance, little or nothing was done at his suggestion, nor for many years afterwards with regard to the piers or entrance. An immediate result, however, was the construction of a splendid suite of docks, at the cost of about £285,000. Two wet docks, each 250 yards long and 100 wide, were, with three graving-docks on their north side, commenced in 1800 and completed in 1817, and were protected from the sea by a strong retaining wall. A third and larger dock on the west, designed to reach nearly to Newhaven, was projected; but this and all kindred matters which accorded with the magnificence of Mr. Rennie's designs and of the intentions of his employers, the town-council of Edinburgh, were thrown into abeyance during that eminent engineer's life by a total failure of funds. In 1824, in response to renewed and aroused demand, the late Mr. W. Chapman of Newcastle was employed to make surveys and plans; and as the result of his report, and of subsequent voluminous correspondence with government on the subject of a naval and store-yard, the eastern pier was extended about 1,500 feet so as to have an entire length of 2,550 feet, or more than half-a-mile, a western pier and breakwater was erected to the extent of 1,500 feet, and terminating within 200 feet of the other, and a part of the western end of the western dock was set apart as a store-yard for the naval service. After many and agitating movements to find some remedy for the admitted and great existing evils, Mr. Walker and Mr. Cubhitt, two eminent engineers in London, were sent down in the winter of 1838-9, by the Lords of the Treasury, to undertake jointly the duty of providing their lordships "with such a plan as will secure to the port of Leith the additional accommodation required by its shipping and commercial interests, including the provision of a low-water pier," the cost being limited to £125,000. These gentlemen, after inspecting the ground, and considering the previous plans of various engineers, differed from each other in opinion, and formed and recommended three different designs,—Mr. Walker two, and Mr. Cubhitt one. The details of only that to which the Lords of the Treasury gave preference, and which was one of Mr. Walker's, need be stated. This plan, by which the present harbour is rendered subservient to the projected improvement, is to extend a breakwater, with a platform, to 2,000 feet beyond the present pier-head, but of greater strength than the existing pier. This breakwater runs, on the plan, nearly directly north from the pier-head, curving inwards at the extremity. On the opposite or west side, a breakwater is to be carried out from the north-west angle of the wet docks, and at right angles to the shore, for the space of about 2,300 feet, when it turns off directly north to the extent of 1,000 feet, curving inwards until it faces the opposite point of the eastern breakwater, the two ends converging something like a lobster's claw, and leaving an intervening space or harbour entrance. Opposite and parallel to this western breakwater, but at a distance of 320 feet, Mr. Walker proposes to run a quay of 1,450 feet length from the dock walls, by which means an inner harbour will be formed 1,450 feet in length, and 320 feet in width, with a depth of 12 feet at low-water. The existing breakwater, of course, falls to be removed. At first

the estimated cost of this eastern harbour, which was £122,000, did not include an entrance from the above inner harbour into the docks; but on the suggestion of the Lords of the Treasury, Mr. Walker subsequently reported, that his plan could be so modified as to admit of a lock on the inner harbour, without interfering with the general design, or materially with the estimate. This modification involves an alteration in the mode of constructing the eastern breakwater of the outer harbour, and the 1,450 feet quay of the inner harbour, the diminished cost of the alteration affording, we presume, a sum sufficient for a new communication with the docks, which the Lords of the Treasury consider a *sine qua non*. The leading feature of this eastern plan is, that the breakwaters are carried out to a depth of 10 or 11 feet at low-water spring tides, which can be increased by dredging to 12 feet.

By far the worst circumstance which, in modern times, has damaged the port, and one which has even very seriously menaced its trade with ruin, is its predicament in reference to steam-vessels. Some steamers built to ply from it have been so constructed as, with a sacrifice of their speed or sailing powers, not to suffer much injury from entering the harbour; but others—and these just the sort of vessels which are intrinsically most serviceable to a great port, such as the Watt, the Soho, and the Monarch—cannot approach.

To attempt even a summary of the financial history and relations of the harbour, in a way to be intelligible, would, without devoting a space to the topic which our limits forbid, and no reader's patience could endure, be utterly vain. The town-council of Edinburgh, in a rugged and perplexing superiority over Leith, the origin and general nature of which we have afterwards to relate, involved almost every detail in the affairs and vicissitudes of the harbour in the labyrinth of a financial history, which no man can traverse without a guide; and when the city became bankrupt in 1833, the confusion and rubbish which choked up every pathway of this labyrinth became such, that even a guide himself was almost nonplussed how to proceed. In lieu of a useless effort at history, we shall give four tabular views of the affairs during several years preceding the date of the city's insolvency:—

No. I.—ABSTRACT ACCOUNT OF THE REVENUE AND EXPENDITURE RELATIVE TO THE DOCKS OF LEITH, IN 1827, 1830, AND 1833.

	Year to 15th May, 1827.	Year to 15th May, 1830.	Year to 15th May, 1833.
Sums of gross revenue,	£6,942	£9,738	£9,664
Sum of expenses of management, improvements, repairs, &c.,	7,070	3,171	2,611
Nett revenue,	6,567	6	7,052
With a shortcoming for the first year of which applied to the payments to exchequer on account of debt to government,	659	11	9
With £10,350 due, but unpaid for year 1833,			10,350
Makes deficiency,	788	1	3,297

No. II.—ABSTRACT ACCOUNTS OF THE GROSS PRODUCE OF THE HARBOUR OF LEITH, FROM WHITSUNDAY 1826, TO WHITSUNDAY 1833.

1.—Abstract Account in relation to the Shore Dues levied at the Port of Leith, from Whitsunday 1826, to Whitsunday 1833.

From Whitsunday	1826, to Whitsunday	1827,	Gross produce.
Do.	1827,	Do.	1828,

Sum,			6,540

No. III.—ABSTRACT OF THE GROSS AND NETT PRODUCE OF THE HARBOUR AND DOCKS OF LEITH,—THE PAYMENTS MADE TO GOVERNMENT ON ACCOUNT OF INTEREST AND SINKING FUND ON ITS DEBT,—FROM WHITSUNDAY 1826, TO WHITSUNDAY 1833.

From Whitsunday	Docks and Harbour.	Nett.	Paid to Government by City of Edinburgh, on Account of Interest and Sinking Fund.
1826, to 1827,	£14,770	3 2	£3,775
1827, to 1828,	15,267	13 8	7,573
1828, to 1829,	15,718	13 10	10,344
1829, to 1830,	16,356	17 6	11,126
1830, to 1831,	17,501	15 9	11,747
1831, to 1832,	16,642	19 2	11,817
1832, to 1833,	16,965	13 0	12,217
Sum,	113,223	16 3	68,603

No. IV.—ABSTRACT ACCOUNT IN RELATION TO THE MERK PER TON, LEVIED AT THE PORT OF LEITH, FROM WHITSUNDAY 1826, TO WHITSUNDAY 1833.

From Whitsunday	Gross Produce.	Nett Produce.
1826, to 1827,	£4,601	16 11
1827, to 1828,	3,871	16 0
1828, to 1829,	3,550	19 10
1829, to 1830,	3,754	16 9
1830, to 1831,	3,875	10 2
1831, to 1832,	3,524	11 3
1832, to 1833,	3,491	14 6
Sum,	26,071	5 7

The harbour and docks are now under the management of commissioners specially appointed according to the acts 1st and 2d Victoria, cap. 55, 27th July, 1838; and they appear, after a long period of fluctuation, and latterly of serious declension in prosperity, to have attained at last a thriving condition. Their present state may be judged of by the following summary of custom-dues received during the years ending 5th July, 1839, and 5th July, 1840, and during the quarters ending at the same dates:—

Receipt ended July 5th, 1840,	£597,772	3 2
July 5th, 1839,	546,888	16 5
Increase,	£50,883	6 9
Receipt for quarter ended July 5th, 1840,	£160,877	5 5
July 5th, 1839,	136,451	18 6
Sum,	£24,425	6 11

A view of the tonnage of shipping belonging to the port, shows a steady and rapid increase from the middle of last century till its close, a slow increase thence till 1826, and a decrease of 3,601 tons between that year and 1835.

Steam-vessels, either from Leith or from Newhaven, ply to Hamburg and Rotterdam once a fortnight; to London every Tuesday, Wednesday, Thursday, and Saturday; to Hull every Wednesday and Saturday; to Newcastle every Wednesday and Friday; to Berwick-upon-Tweed every Wednesday and Friday; to Shetland, Orkney, Caithness, and places intermediate between the last and the Forth, once a week; to Inverness, Fort-George, Invergordon, Cromarty, Findhorn, Burghead, Banff, and places farther south, twice a week; to Aberdeen, Stonehaven, Johnshaven, Montrose, and places farther south, four days a week; to Montrose, Arbroath, and places intermediate between the latter and the Forth, once a week; to Dundee, Elie, Anstruther,

and Crail, daily; to Dysart, Leven, and Largo, twice a-day; to Kirkcaldy, Kinghorn, Pettycur, and Burntisland, several times a-day; and to Stirling, calling at Queensferry, Charleston, Bo'ness, Kincairdine, and Alloa, once a day. The London and Leith Old Shipping company have five smacks and a schooner which sail from Leith on Tuesdays and Fridays. The London and Edinburgh Shipping company have seven smacks which sail from Leith on Tuesdays and Fridays, an hour before high-water. The London, Leith, Edinburgh, and Glasgow Shipping company have six sailing-packets which leave Leith for London on Tuesdays and Fridays, and a steam-conveyance for goods between Leith, Glasgow, and Greenock on Tuesdays, Thursdays, and Saturdays. The Carron company have four smacks which sail from Leith for Liverpool on or about the 7th, 17th, and 27th of every month. The Hull and Leith Shipping company have vessels regularly plying between Leith and Hull. The Leith and Newcastle Old Shipping company have three vessels. The Leith, Hamburgh, and Rotterdam Shipping company have seven vessels which sail from Leith every alternate Tuesday and Friday. The Inverness and Leith Shipping company two vessels. Another company have two smacks between Inverness and Leith, one of which sails from Leith every eight days. The Ross and Morayshire, the Thurso, the Wick and Leith, and the Leith and Helmsdale Shipping companies, have each two smacks plying regularly between Leith and the ports indicated in their titles. The Elie and Leith Shipping company have two packets, one of which leaves Leith every Thursday and Friday about two hours before high-water. One of two—Anstruther and Leith packets—sails from Leith every Tuesday and Friday. The Kirkcaldy and Leith Shipping company have two packets, one of which leaves Leith every Wednesday and Saturday. The Leith and Greenock Shipping company have four vessels plying between Leith and Greenock. The Dundee, Perth, and London Shipping company have four smacks which sail on Wednesdays and Saturdays from Leith to Dundee and Perth. The Stirling and Leith Shipping company have five smacks. Several ships belonging to the port are employed in the Greenland whale-fishery; and a considerable number trade with distant foreign ports, especially with those of the Baltic and the West Indies. The larger vessels occupy the docks, and the coasting vessels lie, for the most part, in the harbour of the river.

Along the south side of the docks stands a line of lofty and spacious warehouses, almost all of origin contemporaneous with the docks, and employed for bonding corn, wines, and other importations, and for kindred purposes subservient to the business of a harbour. In consequence of the want of a powder-magazine, gunpowder sent from the mills of Mid-Lothian for embarkation, and too dangerous a commodity to be admitted to any ordinary storing-place, or to lie on board of vessels in the harbour, has frequently, when vessels do not sail at the time expected, to be carted back to await the postponed date of sailing, and, in some instances, has been driven six times between the mills and the port, a distance each time, in going and returning, of 20 or 24 miles, before it could be embarked. Opposite the entrance of the harbour is a round Martello tower. On the end of the old pier stands a lighthouse for the guidance of vessels entering the harbour: it has a stationary light, and exhibits it during the period of there being not less than 9 feet of water on the bar. Some distance landward of it on the pier, stands a signal-tower, whence a series of signals are displayed during the day to proclaim the progress or retrogression of the tide. The general anchoring-

ground of vessels is 2 miles from land; and, in the case of large steamers, is westward of Leith, or nearly opposite Newhaven. The roadstead during the war was the station of an admiral's guard-ship and several cruizers. The quarantine-station of the port is Inverkeithing hay on the Fife coast,  $8\frac{3}{4}$  miles in a direct line north-west by west of the entrance of Leith harbour.

The principal articles of importation from foreign countries are wines, tobacco, timber, hemp, tallow, and West Indian produce. The whole Baltic trade with the east of Scotland was at one time concentrated in Leith; but it has been so spiritedly and successfully competed for by Kirkcaldy, Arbroath, Montrose, and Aberdeen, but especially by Dundee, as to have left to its old haunt but a scanty memorial of their former intimacy. In connexion with the naval station in the roads, the port enjoyed much prosperity during the war from a place for the condemnation and sale of prize-vessels; and, in consequence of Buonaparte's notable continental scheme of prevention, it was the seat of an extensive traffic for smuggling British goods into the continent by way of Heligoland, which employed many vessels, crowded its harbour, and greatly enriched not a few of its inhabitants. Foreign speculations, however, came, in numerous instances, to be severely unsuccessful; and their failure, combined with the disadvantageousness of the harbour, and the oppressiveness of dues, to produce that efflux of prosperity the ebb of which seems now to have been reached to give place, it is hoped, to a steady and wealth-bearing flood.

Leith, though not in a strict sense a manufacturing town, or the seat of any staple produce, possesses a great variety of productive establishments,—some of them of considerable or even great magnitude. Ship building is carried on in several yards, and has produced many large steamers and bulky sailing-vessels. The *Fury*, the first line-of-battle ship constructed in Scotland after the Union, was built on the site of the present customhouse. A Government steamer, larger than any steam-ship ever previously built in Leith, and a merchant-ship larger than any sailing-vessel ever previously constructed in the place, were both commenced in 1840.—Two sailcloth-factories, belonging respectively to Messrs. Hay & Co. and to Mr. Hutton, had, in 1838, 100 looms, and employed workmen on wages varying, according to the individual's age or strength, from 10 to 16 shillings.—Along the shore of South Leith are seven huge conical chimneys, manufactories of glass, chiefly in the department of common ale and wine bottles. This manufacture—which, more than any other, gives a characteristic trait to both the employments and the hughal landscape of Leith—is usually supposed to have been introduced by English settlers in the time of Cromwell.—In the centre of the town a corn-mill, propelled by steam, and of stupendous dimensions as compared with the usual buildings of its class, towers aloft in its huge hulk above the surface of the little undulating sea of roofs, and forms a bold variety in the sky-line of the town. This establishment was commenced in 1829–30, and, very heterogeneously, is united in the same premises to a suite of baths of all sorts, to which access is afforded on low rates of charge.—Warehouses of great extent are the seats of an extensive traffic with large districts of Scotland, for the transmission to them of wines, foreign and British spirits, and similar or kindred articles of luxury. Other manufacturing establishments than those already named, are some manufactories of cordage, several breweries, a distillery, places for the rectifying of spirits, an extensive sugar-refining establishment, a

large meat-preserving work, some soap and candle manufactories, and several cooperages and saw-mills.

The hanking-offices in Leith are those of the Leith Banking company, the Edinburgh and Leith bank, the Commercial bank of Scotland, the National bank of Scotland, the British Linen company, the Bank of Scotland, and the Royal bank of Scotland. The institutions of the town, additional to some which have been incidentally mentioned, are the Savings'-bank society, the Branch Railway company, the Gas-light company, the Public library, the Mechanics' institution, the Mechanics' friendly society, the Philharmonic society, the Society of Carpenters, the Society of Shipowners in the frith of Forth, the Auxiliary Missionary society, the Juvenile Auxiliary Bible and Missionary society, the Auxiliary society for promoting Christianity among the Jews, and for aiding the British and Foreign Bible society, the Religious Tract society, the Seaman's Friend society, the Local Sabbath School society, the Boys' Charity school, the Society for relief of the destitute sick, the Female society for relieving aged and indigent women, and the Leith Dispensary and Edinburgh and Leith Humane society. A newspaper was commenced in the town in 1809, but did not succeed; nor can publishing enterprise in any department be expected, so far to compete with the lofty literary movements of the metropolis, as to find a fair arena in such close vicinity as Leith. The only periodical publication of the town is the 'Commercial List.'

Leith races, which have furnished a subject of drollery and satire to several writers, and figure in the conversation of thousands of persons still living, as scenes of surpassing grotesqueness and folly, owed their origin, like the theatre of Edinburgh and other matters of popular dissipation, to the influence of the corrupt times which immediately succeeded the Restoration, and of the demoralizing sojourn of the Duke of York, the future James VII., in the Scottish metropolis. During fifty years after their introduction they shared the attention of the loose youths of the period, with cock-fighting and various other forms of brutal pastime. The course or racing-ground was Leith-sands, an expanse, as we have already had occasion to notice, regularly covered by the flowing tide, and peculiarly heavy, from the softness and yieldingness of its surface, for the fleet tread of a mettled racing-horse. Yet, in spite of the unfavourableness of the ground, and of its being available only during the recess of the tide, the races seem to have been annually maintained, with hardly an intermission, till the year 1816; and they were conducted and enjoyed with a degree of spirit and of enthusiastic abandonment to fun and dissipation unknown in most other racing-grounds. They usually occurred in the last week of July or the first week of August; and, being formally under the patronage of the magistrates of Edinburgh, were regarded as the signal of a carnival-week to all the children, fools, and fashionable idlers of the metropolis and its vicinity. The city-officers usually walked in procession, in full costume, every morning of the week, from the council-chambers to the racing-ground, one of their number bearing aloft on the top of a long pole what was called 'the City purse,' flauntingly decorated with ribbons, and the town-drummer beating a tattoo at his heels. Crowds of youths on the outlook from every street and alley on the line of march, and preferring 'gaun doon wi' the purse' to a less pompous mode of travelling to the races, made constant and grotesque additions to the ridiculous procession, and, long before it reached Leith, swelled it out to a sea of heads, hatted, bonnetted, and bare, in the midst of which hobbled hither and thither the ribbony 'city purse,' unrelieved by any other object on which the

eye could rest, and appearing like a painted buoy on the distant waves. This motley procession, and the masses who preferred securing good vantage-ground to the eclat of escorting the purse, covered every spot whence a view could be obtained of the race, or where an outbreak of any sort could be obtained to the fermenting spirit of frolic in their breasts. The pier was crowdedly occupied as 'a stand;' the outskirts of the sands were flanked by a long array of canvassed and blanketed hoots for the sale of intoxicating liquors; and large parts of the area were occupied by showmen, mountebanks, hobby-horsemen, thimble-riggers, wheel-of-fortunemen, and other adepts in the crafts of corruption and legalized cozenage. Each day's racing was but a prefatory flourish to a career of criminal folly; the foolish wealthy moving off the grounds to scatter their remaining wits on the floors of ball-rooms and places of assembly, and the foolish vulgar continuing on the ground to dispute its possession with the town-guard, and to raise skirmishes and battles which sometimes ended in a general *mêlée*, rolled up Leith-walk, and threatened to destroy the public peace of the metropolis. On Saturday, the last day of the races, a 'subscription' for the horses beaten during the week, gave the quadrupeds of the carnival an opportunity of contesting the negative honour of not being the worst runner of the year, and afforded to the bipeds an occasion of bringing the follies of the week to a grand finale of hoisterousness, outrage, unreason, and even bloodshed. In 1816 the races—not so much to put an end to the disgracefulness of their accompaniments, as for the sake of having ground which should be literally 'the turf'—were removed to the Links of Musselburgh. Yet, so strong was the dissatisfaction occasioned by the removal, and so intense the longings of many persons, even after a lapse of 13 or 14 years, to witness again such follies as the credit of the town should seek to be forgotten, that attempts were made, in 1839 and 1840, to have the Leith races restored.—A favourite amusement, manly and healthful in its character, but liable to be adventitiously associated with some repulsive abuses, is the ancient game of golf, played upon the Links. A house, for the special use of the golfers, stands near the end of the eastern road, overlooking the play-ground. Previous to the erection of this building, a tavern on the west side of the Kirkgate, was the favourite resort of many players after a bout of their amusement, and the scene of many an unbecoming revel. A number of lively, adde-headed, aged gentlemen, about the middle of the 18th century, made golfing almost their sole employment; and, though all upwards of 70 years of age, are declared by Smollett never to have gone to bed without swilling the larger part of a gallon of claret. Charles I., James VII., and many persons of distinction, have golfed on Leith links; but the golfers—though doubtless with crowds of honourable exception—have so far associated their pastime with follies which are intrinsically quite foreign to it, as to have made its resources for healthful exercise not quite compatible with nicety of moral or at least religious reputation.

Leith is now governed by a provost, 4 bailies, a treasurer, and 10 councillors. But its government was anciently very anomalous, inefficient, and changeable, and altogether enthralled to Edinburgh; and even as reported on by the commissioners on municipal corporations, it exhibits a strange and absurd medley. 1. There is the burgh-of-barony of South Leith, of which the council of Edinburgh are the superiors. 2. North Leith forms a part of the regality of the Canongate, of which regality likewise the council of Edinburgh are the superiors. 3. There

is the regality of the citadel of Leith, which is locally situated within North Leith, but which is legally a separate and independent territory. That regality was, in 1663, conveyed by the Earl of Lauderdale to the council of Edinburgh, who thus acquired the right of nominating bailies of regality. 4. There is a separate territory adjoining South Leith, called 'St. Anthony's,' the bailie and clerk of which are appointed by the kirk-session of South Leith, by virtue of a charter of James VI., dated 2d March, 1614. The magistrates of South Leith have not been in the use of exercising jurisdiction over that territory, as bailies or justices of the peace. 5. The magistrates and council of Edinburgh have an admiralty jurisdiction, which extends over South and North Leith, the Citadel, Newhaven, the whole of the parliamentary burgh, and likewise Edinburgh and its suburbs. This jurisdiction is believed to have been originally still more extensive, comprehending a district of several miles round Edinburgh. It is exercised by the council of Edinburgh, by appointing admirals. At the last election the powers were conferred on the provost of Leith as admiral, and on the bailies as admirals-depute. 6. By the 3<sup>d</sup> and 4<sup>o</sup> Will. IV. c. 77, there are conferred upon the magistrates and council, elected in terms of that statute, the jurisdiction and powers competent to magistrates of royal burghs. These extend over the whole parliamentary boundaries. 7. By the 7<sup>o</sup> and 8<sup>o</sup> Geo. IV. c. 112, s. 4, powers are given to the sheriff-depute of the county of Edinburgh to appoint "a sheriff-substitute in and for the said town of Leith, and such district adjoining thereto as to the said sheriff-depute shall seem proper for the due administration of the same." And by section 5 the judge-admiral of Scotland was empowered to grant "to the said sheriff-substitute of the said district of the town of Leith a deputation of his said judge-admiral's powers and jurisdiction over the bounds and territories of the said district of the town of Leith, and upon such part of the waters of the frith of Forth as the said judge-admiral shall judge necessary and expedient." And if such deputation shall be granted, "the commissioners of police of the said town of Leith shall be obliged, and they are hereby obliged and required, to make payment to the said sheriff-substitute, in addition to any salary to be received by him from any other source as sheriff-substitute, of the sum of £200 per annum, to be paid half-yearly, and to be raised and levied by assessment upon the property within the district aforesaid." The ordinary powers of a sheriff-substitute and admiral-depute are conferred by the 6th section. These rights of jurisdiction extend over "the town of Leith," according to the boundaries described under the 2d and 3d sections, the tenor of which was formerly stated. In terms of these sections a sheriff-substitute and admiral-depute was appointed, who receives a salary of £300 a-year from the Crown, and is bound to reside within the town of Leith. 8. By the 129th section of the same statute it is enacted, "That the said magistrates and the said sheriff-substitute, or any one of them within their respective jurisdictions, shall have jurisdiction in all offences, matters, and things relating to the police of the said district of the town of Leith, arising under this act;" but under the proviso (130th section), "that nothing in this act contained shall be construed to confer upon the magistrates, or any of them, any power or authority beyond the limits of their respective existing jurisdictions." The jurisdiction of the magistrates was exercised by holding courts in South Leith, both as bailies of that barony, and as bailies of the separate and independent territory of the regality of Citadel. The court of admiralty was like-

wise held in South Leith. The magistrates sat by virtue of their appointment from the council of Edinburgh, and acted with the assistance of an assessor, who likewise was appointed by that council. The present magistrates hold their bailie-court by virtue of their statutory powers, and their admiralty-court by virtue of their appointment, in the same place, and according to the same forms. In terms of the statute, the sheriff-substitute and the magistrates, as judges of police, must hold their courts within the 'Town of Leith.' The town-council have the appointment of the town-clerk, with a salary of £30 and fees; an assessor, with a salary of £50, but no fees; and two town-officers, with a salary each of £15 and fees. The property, revenue, expenditure, and debts of the town, as exhibited in the Report of the Commissioners on Municipal corporations, are too complicated in themselves, and too much affected by connexion with the insolvency of Edinburgh, to be intelligibly stated within reasonably small limits. Even a tabular view of the general state of the funds, which we shall quote, is subject to the modifications that the debt it mentions of £2,564 1s. 4<sup>d</sup>. from the market-trustees was a very doubtful recovery, and might be worth only £960, and that the sum of £150 15s. which it mentions as due by the commissioners of police, was attached by arrestment on the dependence of an action at the instance of the town-council of Edinburgh, for an alleged preferable claim. The tabular view is as follows:—

Charge.		£	s.	d.
Court-house, value of		3,260	10	8 <sup>3</sup> / <sub>4</sub>
Trustees of Leith new markets, debt due from Commissioners of Police of Leith, sum due by them for rent of court-house, £119 16s., and feu-duty of dung-depot, £31, for half-year ending Whitsunday 1832		2,564	1	4 <sup>3</sup> / <sub>4</sub>
Ditto, ditto, half expense of feu-contract of dung-depot		150	15	0

There are in the town four principal corporations,—the ship-masters, the traffickers, the malt-men, and the trades.—The ship-masters, ordinarily called the Trinity-house, have been already noticed in connexion with their public building.—The traffickers or merchant company have lost their charter, and are merely a benefit society, without the power of compelling entries. Applicants for membership are admitted by ballot, and may be excluded without reason assigned. The number of members, in 1833, was 100; the value of property, £7,000; the annual income, £707 10s. 7d.; the annual expenditure, £577 12s. 9d.; the annual allowance to a widow, £20.—The malt-men are noticed in the statute 1503 cap. 92; were deprived of their deacon in the reign of James VI.; and had their privileges restored in 1665. They claim no exclusive privileges; and practise the same mode of admission as the traffickers. Terms of membership are £20 entry-money, and £1 annual payment. In 1833-4 their property amounted to £2,798 3s. 1d.; their annual income, £187 11s. 6d.; their annual expenditure, £157 16s. 11d.; their annual allowance to a widow, £7 10s.; the num-

ber of their members 25.—The Trades' corporation is multiform. Independently of any of the particular trades, there is a body called 'the Conventry,' consisting of nineteen members delegated from each trade, all deacons and treasurers, and constituting, or deemed to be, a separate corporation. But the body, though as ancient as at least 1594, is of doubtful origin, was voted by several of the trades' corporations, in 1832, to be useless, has, since then, a very questionable existence, and needs not be farther noticed. The incorporated trades are nine,—wrights, coopers, hammermen, hakers, tailors, cordiners, fleshers, harhers, and weavers. In 1834, the wrights were 50 in number; their entrance-fee, to a stranger, from £53 11s. to £143 6s. 6d., according to the person's age; their property about £6,000;—the coopers were 32; entry-money from £60 to £100; property about £2,000;—the hammermen were 11; entry-money £25; property £440, besides church-seats;—the hakers were 24; entry-money £100; property about £5,400;—the tailors were 19; entry-money £40; property about £3,000, subject to a debt of £1,300;—the cordiners were 19; entry-money £35; property £1,800, subject to a debt of about £1,200;—the fleshers were 5; entry-money £60; property and debt each about £128; hut the former, aided by a rental of £8 from church-seats, and a small revenue called 'Box pennies,' exacted as a duty on cattle and sheep from fleshers who do not enter with the corporation;—the harhers were pretty numerous, and their property yielded about £12 a-year;—the weavers were 25; entry-money £1; property £125, and some church-seats. All the corporations, except the weavers, possess the usual exclusive privileges within the burgh-of-harony of South Leith, and have enforced them with more or less rigour; and all received their powers by seals of cause, of ancient dates, granted by Logan of Restalrig. Numerous tradesmen beyond the limits of the privileged district exercise the same callings as those within that district.—The commissioners of police consist of the magistrates of Edinburgb and Leith, the masters of the corporations and certain other functionaries ex-officio; and of representatives chosen by the occupants of houses whose rents amount to £15. The electors vote in ten wards. A police assessment, not exceeding 1s. 6d. per pound, is imposed on the occupants of all houses and other subjects of upwards of £3 yearly rent. In the year 1832-3 the amount of assessment was £3,362 15s. 3d.; of monies received, £5,254 12s. 5d.; of expenditure, £5,654 3s. 3d. The inhabitants, about the year 1750, raised a voluntary contribution to bring water to the town in a leaden pipe of 1½ inch bore from Lochend; and they afterwards contributed to the expense of the great improvements in Edinburgb by means of the bridges, on condition that they should receive a share of the new supply of water about to be brought to the metropolis. Till very lately they had to content themselves with the puddled produce of the lake; hut they are now supplied from the same pure sources as the inhabitants of Edinburgb. The gas-light company, who furnished coal-gas for lighting the streets at night, have part of the metropolis within the range of their supply. Besides the ordinary police-force of the town there is a dock-police, consisting merely of watchmen around the docks, paid and superintended by the dock-commissioners. The superintendent of the town-police has no authority over them; hut as the dock-commissioners have no police-office, they bring their prisoners to that of the town.—Leith unites with Musselburgh, Portobello, and Newhaven in sending a member to parliament. Parliamentary and municipal constituency, in 1839, 1,272.

On the 28th of May, 1329, the city of Edinburgb obtained from Robert I. a grant by charter of "the harbour and mills of Leith with their appurtenances, for the payment of fifty-two merks yearly." The town-council of the city, not content with this privilege, took possession of the ground adjacent to the barhour, along the hanks of the river. Toward the close of the century, Sir Robert Logan of Restalrig, the baronial superior of the grounds, and a man of heartless, greedy, and rapacious character, contested their assumed claims, and obliged them to take a concession of them from him by purchase and charter. On the 31st May, 1398, he granted them by charter a right to waste lands in the vicinity of the harbour for the erection of quays and wharfs, and for the loading of goods, and a liberty to have shops and granaries on these lands, and to break the grounds of his harony with roads for the service of navigation. Sir Robert afterwards teased and perplexed the town-council with points of litigation; and he eventually roused them to adopt a strong measure for satiating at once his avarice and their own ambition. Bought over by them with a large sum of money drawn from their treasury, the unprincipled haron, in February 1413, granted them an extraordinary charter, "an exclusive, ruinous, and enslaving bond," restraining the inhabitants of Leith from carrying on any sort of trade, from possessing warehouses or shops, and from keeping inns or houses of entertainment for strangers, and thus flinging the place, in the guise of a manacled slave, at the feet of the metropolitan purchasers. But the town-council of Edinburgb, not even yet content with the power accorded them over Leith, ordained, in the year 1485, that no merchant of Edinburgb should become partner in business with an inhabitant of Leith, under penalty of 40 shillings, and of a year's deprivation of the freedom of the city; and on future occasions, they enacted that no revenue of the city should be farmed by an inhabitant of Leith, or by any person in partnership with a Leithian,—and that no staple goods should, except under a severe penalty, be either sold in Leith, or deposited in any of its warehouses. Edinburgb's extraordinary rights were duly confirmed, and afterwards carried to an acme, by royal charters. James I., by a charter dated 4th November, 1454, granted to Edinburgb "the haven-silver, customs, and duty of ships, vessels, and merchandize coming to the road and harbour of Leith." And James II., on 16th November, 1482, granted to them a charter, containing a detail of the customs, profits, exactions, commodities, and revenues of the port and road of Leith. By a grant of James IV., dated 9th March, 1510, a right was given to the city of Edinburgb to the new port, denominated Newhaven, lately made by the said king on the sea-coast, with the lands thereunto belonging, lying between the chapel of St. Nicholas and the lands of Wairdie brae, with certain faculties and privileges. By a charter hearing the same date, James IV. confirmed the charter by Logan of Restalrig, formerly mentioned. On 8th October, 1550, Mary ratified an act and decret of the Lords-of-session against the inhabitants of North Leith, "adjudging the provost and hailiffs of our said town of Edinburgb to be proper judges for the said inhabitants in the petty customs of Leith, belonging to our foresaid town of Edinburgb." The Queen-regent, Mary of Lorraine, in 1555, granted the inhabitants of Leith a contract to erect the town into a hurgb-of-harony, to continue valid till she should erect it into a royal hurgb; and as a preparatory measure, she purchased, overtly for their use and with money which they themselves furnished, the superiority of the town from Logan of Restalrig.

But she did not fulfil her engagements, and is generally alleged to have been bribed with 20,000 merks from the city of Edinburgh to break them. Mary, her daughter, among other shifts to raise money in her difficulties, mortgaged, in 1565, to Edinburgh the superiority of Leith, redeemable for 1,000 merks; she requested the town-council by letter, in 1566, to delay the assumption of the superiority; but she obtained short indulgence, and could not prevent the consequences of her hasty act from falling on the devoted town. On the 2d of July, 1567, the citizens of Edinburgh marched in military order to Leith, went through some evolutions designed to represent or constitute a capture or conquest, and formally trampled the independence of the town in the dust. Many severe laws, in years succeeding this epoch, were enacted relative to the public and the private trade of Leith. James VI. was plied by the inhabitants with appeals and efforts designed to draw from him some deliverance from their thraldom; but he accepted some private arrangement with the town-council of Edinburgh, and placed the powers and supremacy of that body on higher vantage-ground than before. On the 25th March, 1596, he empowered, by a letter of gift under the privy-seal, the corporation of Edinburgh to levy a certain tax during a certain period, towards supporting, erecting, and repairing the hulwark, pier, and port of Leith; and on the 15th March, 1603, he, by a charter of confirmation and *novo damus*, confirmed all the grants which had been made to them from the commencement of their ascendancy. This confirming charter demands a moment's detail as exhibiting, in their matured form, the oppressive powers which Edinburgh, till so recent a date, wielded over all the interests of Leith. After a special enumeration, there were confirmed all other charters, statutes, and rights in favour of the town of Edinburgh, "together with the aforesaid ports and roads of Leith and Newhaven, anchorage and customs, great and small, belonging to the said town, both within and without the said burgh, ports, and districts aforesaid;" and all jurisdictions, fairs, and markets, and all other liberties used and wont. Among a number of rights granted of new to Edinburgh there are the following, which relate to Leith and Newhaven. First, For all sorts of merchandise coming in and going out at the ports of Leith and Newhaven, which ought to be weighed in Edinburgh, freemen of other burghs breaking bulk to pay for each stone-weight one penny; and unfreemen, whether they break bulk or not, two penuies. Secondly, The port of Leith, and adjoining houses, "with all the privileges, customs, and conveniences thereunto belonging, and, in particular, all the privileges, customs, harbour, dock, and shore silver, anchorage, golden pennies, exactions, rents, duties, and casualties of the said port, haven, road, and towns of Leith and Newhaven," according to a table inserted, which is "to be observed and kept by all our subjects and strangers using the said ports of Leith and Newhaven, to be published in the said town of Leith, that none may pretend ignorance." A table is then engrossed, enumerating certain duties on articles both of necessity and luxury, the amounts of which are lower to freemen than to unfreemen. Thirdly, Certain places are annexed to Leith. Fourthly, There is a clause strictly forbidding and discharging the housing and keeping foreign merchandise and timber within any other part of Leith except "the common closets," since called 'The Burse,' under pain of escheat to the town of Edinburgh, and empowering duties to be levied for warehouse-room. Fifthly, Power is granted to enlarge and extend the said port, shore, and haven of Leith

towards the sea, with the hulwarks on both sides of the river, and to build, strengthen, and fortify the same in a substantial manner, both for duration and the safety of ships. Sixthly, Confirmation is given of the grants by Logan of Restalrig, and there are conferred of new the port of Newhaven and its appurtenances, together with the duties already named, including haven and shore silver, anchorage, dock silver, and golden penny. And, seventhly, By different clauses the jurisdiction is confirmed. This charter was followed by one of confirmation and *novo damus* by Charles I., dated 23d October, 1636, which it would be superfluous to recite, as the clauses are substantially the same as those which have been detailed.

The earliest mention of Leith which has been traced occurs in the charter of the abbey of Holyrood, founded by David I., in which it is called Inverleith. In 1313, and again in 1410, all the vessels in the harbour were burnt by the English. In 1488, it was seized by the insurgent nobles who rose against James III., and was the scene of an interview between James IV. and the celebrated Sir Andrew Wood, who kept the mastery of the frith of Forth. In 1511, either in Leith or at Newhaven, "ane varie monstrous great schip called the Michael," was built, and, according to Pitscottie, required such a mass of timber for her construction, "that she waisted all the woodis in Fyfe, except Falkland wood, besides the timber that came out of Norway." In 1544, the Earl of Hertford, at the head of 10,000 men, took possession of Leith, seized all the vessels in the harbour, left the place in keeping of 1,500 soldiers till he burned Edinburgh and wasted the circumjacent country, and then, on taking leave with his army and booty, committed the whole port to the flames. Three years afterwards, the same general, who had now become Duke of Somerset, and was fresh from the fatal battle of Pinkie, again set it on fire, though not with such an amount of injurious effect as before; and, on this occasion, carried off 35 vessels from the harbour. From 1548 to 1560, Leith, by becoming the fortified seat of the court and headquarters of the Queen-regent's army and of her French auxiliaries, figured prominently in the greater part of the stirring events which occurred during the civil war between Mary of Lorraine and the Lords of the congregation. Its port received the shipping and the supplies which were designed for the Queen-regent's service; its fortifications enclosed alternately a garrison and an army, whose accoutrements had no opportunity of becoming rusted; and its gates poured forth detachments and sallying parties, who fought many a skirmish with portions of the Protestant forces on the plain between Leith and Edinburgh. In October 1559, the Lords of the congregation regularly invested the town with an army, and attempted to enter it by means of scaling-ladders; but they could make no impression, and were eventually, and with great slaughter, driven back by a desperate sally of the besieged. In April of the next year, the forces of the congregation, now aided by an army of 6,000 men under Lord Grey of Wilton, despatched to their assistance by Elizabeth, again invested the town, and, on this occasion, inflicted upon it a protracted, disastrous, and sanguinary contest. Leith, though suffering dreadfully from famine, kept the besiegers, during two months, fully at bay, yet without acquiring any advantage. Both parties being at length heartily tired of the contest, and willingly entering into a treaty which stipulated that the French forces in the town should leave the kingdom, and he allowed to retire unmolested, Leith was immediately dismantled and restored to tranquillity. The discovery, in late years,

of several cart-loads of horses' heads in a closed up well at the head of the Links, was a singular but very expressive monument of the slaughter which the siege occasioned. On the 20th August, 1561, Queen Mary landed at the town, to take possession of the throne of her ancestors, and attracted such demonstrations of joy as gave it a widely contrasted appearance to that which it had worn for a series of years. No vestige now remains of the pier which received her, and which must have been constructed subsequently to the destruction of the original one by the Earl of Hertford. During the minority of James VI., Leith figured in various transactions which belong strictly to the general history of the kingdom. From November 1571 till August of next year, and again in 1596-7, the town was the seat of the High Court of Justiciary; and in 1572, it was the meeting-place of a General Assembly which made some important enactments. In 1578, an act of parliament was passed to prevent "the taking away great quantities of victual, flesh, from Leith, under the pretence of victualling ships." A reconciliation having, in the same year, been effected between the Earl of Morton and the Scottish nobles opposed to him, the Earls of Morton, Argyle, Montrose, Athole, and Buchan, Lord Boyd, and several other persons of distinction, dined or caroused together in an hostelry of Leith kept by a William Cant. In 1584, the town was appointed the chief fish-market for herrings and the other produce of the Forth. On the 6th May, 1590, James VI., after lying six days in the roads, landed at the pier with his queen, Anne of Denmark, and excited shouts of jubilation from the inhabitants. In 1610, thirty-eight English sailors were hanged within high-water mark on the sands for piracies in the Western Islands,—thirty of them in July, and eight in December. In October 1643, the Solemn League and Covenant was sworn and subscribed with great solemnity, and many grave demonstrations of thorough zeal by the inhabitants. Four years afterwards 2,430 persons, constituting about one-half of the entire population, were, in the course of six or eight months, swept away by the plague. The churchyard's being utterly deficient in accommodation for their bodies, many of them were buried in the Links, near Wellington-street, and on the north side of the road leading to Hermitage-bill. Till very recent times, masses of half-decayed bones wrapped in the blankets in which the victims died, have in many instances been dug up in the trenching of the adjoining fields and gardens. So fearful were the combined ravages of the plague and an accompanying famine, that parliament, relieving the number of the dead to exceed that of the living, empowered the magistrates to seize, for the use of survivors, whatever grain they could find in warehouses and cellars, and allowed them to make payment at their leisure, and to find means of making it by appeals to the humanity of their landward countrymen. In 1650, after Cromwell's defeat of the Scottish forces at Dunbar, Lambert, his major-general, while he himself proceeded to Edinburgh, took possession of Leith. A monthly assessment of about £22 sterling was now imposed on the town, and, after so very recent and terrible devastations from pestilence and famine, was felt to be a grievous exaction. On General Monk's appointment to be commander-in-chief, he adopted Leith as his head-quarters and his home; and, while residing in the town, he induced many English families of considerable wealth and of great mercantile enterprise to become settlers. The incomers gave a grand impulse to the mercantile spirit of the port, and established some manufactures which continue to flourish till the present day; yet, though they felt painfully the restrictions imposed

by the dominant town-council of Edinburgh, and had a republican government to appeal to for redress, they did not succeed in extirpating the inhabitants from any part of their ancient thralldom. Though, so early as 1610, a Henry Anderson had obtained the privilege of running a huge and cumbersome four-wheeled vehicle between Edinburgh and Leith, at the fare of two shillings Scottish, or twopence sterling, the town-council, in 1660, granted "liberty and tolerance to William Woodcock, late officer in Leith, to fit and set up ane hackney coach, betwixt Leith and the fute of Leith-wynd in Edinburgh." In 1691, Viscount Tarbet, afterwards 2d Earl of Cromarty, and two persons of the names of Mowat and Sinclair, raised a tavern brawl of great notoriety in a greatly frequented hostelry in the Kirkgate, and were concerned, while the brawl lasted, in the murder of a French Protestant refugee and military officer named Elias Parret Sieur de la Roche. In 1705, Captain Green of the Worcester, and three of his crew, were hanged within flood-mark on the sands, for a very curiously discovered piracy and murder, committed in 1703 on the crew of a Scottish vessel off the coast of Malabar. During the rebellion of 1715, Brigadier Macintosh of Borlam, and a party of Highlanders who followed his banner, briefly occupied the citadel, and, being menaced by the Duke of Argyle who was at the time in Edinburgh, hastily plundered the custom-house, flung open the doors of the prison, and made a night retreat over the sands at low water. "The approach of 50,000 cannibals," says Alexander Campbell, the historian of Leith, "could not have discomposed the heroic Edinburghers more than did the proceedings of old Macintosh and his little band. The volunteers were called to arms: the whole pugnacious strength of the town, consisting of cohorts from the Canongate, and hogs from St. Mary's-wynd, were summoned forth to battle." In 1778, the revolted Seafort regiment of Highlanders [see EDINBURGH], made Leith the scene of some of their movements. Next year, 50 Highlanders, who had been recruited for the 42d and 71st regiments, mutinied at Leith, whither they were brought for embarkation, and firmly refused to go on board the transports. A serjeant of a party of the South Fencibles, who were sent from Edinburgh castle to apprehend the mutineers, having been twice and fatally poniarded in an attempt to do his duty, a *mêlée* occurred in front of the street line between the Old Ship tavern and the Britannia inn, in the course of which a captain of the Fencibles was killed, and 12 of the Highlanders were killed, and 20 severely wounded. In 1779, the noted Paul Jones appeared in the frith, and struck such a panic into the inhabitants that a battery, the embryo of the present fort, was hastily constructed to dispute his entering the harbour; but he was driven away by a storm, and providentially hindered from inflicting damage on the town. In 1822, Leith had all the eclat of being the scene of George IV.'s arrival to visit his Scottish metropolis. See EDINBURGH.

While this page is passing through the press, we have received the following details of the census of Leith as taken in 1841:

I.—SOUTH LEITH.		
	Inhabited Houses.	Population.
Parish of South Leith, . . . . .	3,422	19,712
Population in 1831, . . . . .		18,490
Apparent increase, . . . . .		1,222
But deduct Piershill-barracks, and seamen at home, neither included in census of 1831, . . . . .		297
Real increase in last ten years, . . . . .		925

## II.—NORTH LEITH.

Parish of North Leith, . . . . .	1,418	8,230
Population in 1831, . . . . .		7,416
Apparent increase, . . . . .		814
But deduct Leith fort, and seamen at home, neither included in census of 1831, . . . . .		354
Real increase in last ten years, . . . . .		460

## PARLIAMENTARY BURGH OF LEITH.

Total of the parishes of South and North Leith, as given above, added, . . . . .	4,870	27,942
But deduct part of South Leith parish within the parliamentary burgh of Edinburgh, . . . . .	559	3,229
Also part of South Leith within the parliamentary burgh of Portobello, . . . . .	19	109
Also part of South Leith not in any burgh; Jock's Lodge and Restalrig, including Piershill-barracks, . . . . .	86	671
All without the parliamentary burgh of Leith, . . . . .	664	4,009
Parishes of South and North Leith within burgh of Leith, . . . . .	4,206	23,933
Add part of St. Cuthbert's parish within the parliamentary burgh of Leith, . . . . .	372	2,224
Seamen and others in the vessels in the docks, . . . . .		366
Total population at home in burgh of Leith, . . . . .	4,578	26,523
Seamen at sea or in foreign parts, . . . . .		566
Excess of other persons temporarily absent over those temporarily present in Leith on the night of 6th June, 1841, . . . . .		111
		27,150
Deduct persons in docks not belonging to Leith, . . . . .		342
		26,808

## PARISHES WITHIN BURGH OF LEITH.

Parish of South Leith within burgh of Leith, excluding St. John's, . . . . .	2,180	12,290
St. John's <i>quoad sacra</i> parish, . . . . .	578	3,413
Parish of North Leith within burgh of Leith, excluding Newhaven, . . . . .	1,048	6,128
Newhaven <i>quoad sacra</i> parish, . . . . .	400	2,102
Parish of St. Cuthbert's within burgh of Leith, . . . . .	372	2,224
	4,578	26,157
Add excess of seamen abroad, persons in docks, and others temporarily absent above those temporarily present, . . . . .		651
Total, . . . . .		26,808

The oldest person in Leith is a man who is 100 years of age; his wife is 80. There is one woman above 95, and three men above 90.

The apparent increase in the parishes of South and North Leith is 2,057; but the true increase is only 1,336.

**LEITH (WATER OF)**, a small river of Edinburghshire, entering the frith of Forth at Leith harbour. It rises at the south-east extremity of the parish of Mid-Calder, from three springs, at a place called Leith-head, on the west side of one of the Pentlands, named West Cairn-hill, within a mile of one of the sources in Peebles-shire of one of the head-streams of Lyne-water, a tributary of the Tweed. Having flowed 3 miles northward through Mid-Calder, it receives a tiny tributary from Cauldstane-slap, a noted pass between Tweeddale and Mid-Lothian. It now runs 3 miles between Kirknewton on its left bank, and Mid-Calder and Currie on its right; 4½ miles through Currie, receiving on the right the waters of Bevilaw burn; 2½ miles, measured in a straight line, but a much greater distance along its channel, through Colinton; 1 mile circuitously, partly across a tiny wing of Colinton, and partly between that parish and Corstorphine on its left bank, and St. Cuthbert's on its right; 4 miles, measured in a straight line, through St. Cuthbert's, and ½ of a mile between North and South Leith. Its general direction, after leaving Mid-Calder, is north-

cast; and its entire length of course in a straight line is about 19 miles, and including windings about 25 or 26. During a drought, or even in weather but very moderately dry, the Water of Leith is a trivial stream, and has not a volume greater than that of many a burn or short-coursed brook; but, in a season of rain, it becomes swollen and impetuous, and combines the characteristics of a river and a mountain torrent. While in the vicinity of Edinburgh it wanders along a deep and picturesque dell; but between the metropolis and Leith it is so completely drawn off in dry weather into a mill-lead as to leave its channel almost empty, and, from being made a common-sewer, becomes at all times, except during a freshet, a real nuisance to the population of its banks. The stream, in general, has a large share of the picturesqueness and romance which distinguish so many of the rivers of Scotland. At one time it trots along deep narrow glens amid rocks and hanging woods; and at another it glides among beautiful haughs, fertile in corn and grass. On its banks are extensive plantations, many elegant mansions, several fine rural villages, one of the most superb suburban districts of Edinburgh, and the most densely peopled portion of the town of Leith. Among its bridges are an elegant stone one built in 1840, and the viaduct of the Edinburgh and Newhaven railway, both at the village of Cannonmills,—the stupendous and magnificent Dean-bridge behind Moray-place in the western New town of Edinburgh,—the viaduct of the Edinburgh and Glasgow railway, a mile farther up;—and the aqueduct of the Union canal at Slateford. The Water of Leith is probably the most useful stream of its size in Scotland; for even some years ago it drove in the course of 10 miles, 14 corn-mills, 12 barley-mills, 24 flour-mills, 7 saw-mills, 5 fulling-mills, 5 snuff-mills, 4 paper-mills, 2 lint-mills, and 2 leather-mills,—the rent of some of which, in the vicinity of the metropolis, was then upwards of £20 sterling per foot of waterfall. In the ravine, ⅓ of a mile above Stoekbridge, and on the old road by the Dean from Edinburgh to Queensferry, stands the ancient village called Water of Leith. It is an irregularly built mean-looking place; but has some extensive flour-mills and granaries.

**LEITHEN (THE)**, a rivulet of Peebles-shire, rising in the extreme north-west angle of the parish of Innerleithen, and falling into the Tweed exactly a mile after passing Innerleithen church. See **INNERLEITHEN**.

**LEITHOLM**, a village, 7½ miles north-east of Kelso, and 5½ miles east of Greenlaw, on the north road between Kelso and Berwick, in the parish of Eccles, Berwickshire. It has a Relief meeting-house, and a voluntary school, and was anciently the site of a Romish chapel, subordinate to the parish-church. An old ash called 'the Chapel-tree,' and a hillock which it surmounts called 'the Chapel-knowe,' indicate where the chapel stood. The area of what was the cemetery is now subjected to the plough, but at no late date gave up bones and pieces of coffins. Population about 350.

**LEITOWN**, a village with about 110 inhabitants, in the parish of Errol, Perthshire.

**LEMPITLAW**, a village with about 140 inhabitants, an endowed school, and 3 small farmsteads, with accompanying cottages, 4½ miles east of Kelso, in the parish of Sprouston, Roxburghshire. The village gave name to an ancient parish now annexed to **SPROUSTON**: which see.

**LEMNO**. See **ABERLEMNO**.

**LENNEL**, the ancient name of the parish of Coldstream, and also an existing village in that parish, Berwickshire: see **COLDSTREAM**. The ancient village, or kirktown, stood on the steep bank

of the Tweed, a mile below Coldstream, and was destroyed by predatory incursion during the Border wars. The ruins of the church still exist; but great part of the cemetery has been swept away by the Tweed. The modern village bears the name of New Lennel, and is inconsiderable in size. The mansion-houses of Lennel and Hirsell are in the vicinity respectively of the ancient church and chapel of the parish.

LENNOCK (THE), a small stream in the parish of Birnie, Morayshire, tributary to the Lossie.

LENNOX, the ancient county of Dumharton, comprehending the whole of the modern county and a large part of Stirlingshire, and part of the counties of Perth and Renfrew. The original name was *Leven-ach*, 'the field of the Leven,' and very appropriately designated the basin, not only of the river Leven, but also of Loch-Lomond, anciently called Loch-Leven. Levenachs, in the plural number, come to be the name of all the extensive and contiguous possessions of the powerful Earls of the soil; and, being spelt and written Levenax, was easily and naturally corrupted into Lennox. In the 13th century, Lennox and the sheriffdom of Dumharton appear to have been co-extensive; but afterwards, in consequence of great alterations and considerable curtailments upon the sheriffdom, they ceased to be identical. The origin of the earldom of Lennox is obscure. Arkil, a Saxon, and a baron of Northumbria, who took refuge from the vengeance of the Norman William, under the protection of Malcolm Canmore, appears to have been the founder of the original Lennox family. His son Alwyn seems to have been the first Earl. But dying, when his son and heir was a minor, early in the reign of William the Lion, David, Earl of Huntingdon, received from the king the earldom in ward, and appears to have held it during a considerable period. Alwyn, the 2d Earl, recovered possession some time before 1199. Maldwen, the 3d Earl, obtained from Alexander II., in 1238, a confirmatory charter of the earldom as held by his father; but was not allowed the castle of Dumharton, nor the lands, port, and fisheries of Murrach. In 1284, Earl Malcolm concurred with the 'Magnates Scotie,' in swearing to acknowledge Margaret of Norway as heir-apparent to Alexander the Third's throne; and, in 1290, he appeared in the assembly of the states at Birgham, and consented to the marriage of Margaret with the son of Edward I. Next year, when Margaret's death opened the competition for the Crown, Malcolm was one of the nominees of Robert Bruce; and resistance to England becoming necessary, he, in 1296, assembled his followers, and, with other Scottish leaders, invaded Cumberland and assaulted Carlisle. While Sir John Menteith, the faithless and inglorious betrayer of the patriot Wallace, prostituted his power as governor of Dumharton-castle, and sheriff of Dumhartonshire, in favour of Edward I., Malcolm went boldly out, and achieved feats as a supporter of Robert Bruce; and he continued, after Bruce's death, to maintain the independence of the kingdom, till, in 1333, he fell with hoary locks, but fighting like a youthful warrior, at Halidon-hill. In 1424, after the restoration of James I., Earl Duncan became involved in the fate of his son-in-law, Murdoch, Duke of Albany, the Regent; and for some real or merely imputed crime, which no known history specifies, he was, in May next year, along with the Duke and two of the Duke's sons, beheaded at Stirling. Though Duncan left, by his second marriage, a legitimate son, called Donald of Lennox; yet his daughter Isabella, Duchess of Albany, while obtaining to regular entry to the earldom as heiress, appears to have enjoyed it during the reign of James

II.; and she resided in the castle of Inchmurrin in Loch-Lomond, the chief message of the earldom, and there granted charters to vassals, as Countess of Lennox, and made gifts of portions of the property to religious establishments. After this lady's death in 1459, a long contest took place for the earldom between the heirs of her sisters, Elizabeth and Margaret, the second and third daughters of Duncan, whose priority of age was not ascertained by evidence, or admitted of keen and plausible dispute. The vast landed property of Lennox was dismembered or cut into moieties; but the honours, the superiority, and the principal message of the earldom—the grand object of dispute—could be awarded to only one part, and were not finally adjudged till 1493. Sir John Stewart of Darnley had married Elizabeth; and their grandson, besides being declared heir to half the Lennox estate, became Lord Darnley and Earl of Lennox. Sir Robert Menteith of Rusky had married Margaret; and their moiety of the Lennox estate, came, with the estate of Rusky, to be divided, in the persons of their great granddaughters, the co-heiresses, between Sir John Haldane of Gleneglis, who had married the elder, and Sir John Napier of Merchiston, who had married the younger. In 1471, the earldom being in the king's hands by the non-entry of any heir was given, during his life, to Andrew, Lord Avondale, the chancellor. After the fall of James III., John Lord Darnley appears to have been awarded the Lennox honours by the new government; and, in 1488, he sat as Earl of Lennox in the first parliament, and received for himself and his son Matthew Stewart, the ward and revenues of Dumharton-castle, which had been held by Lord Avondale. But only next year he took arms against the young king, drew besieging forces upon his fortresses both of Crookston and Dumharton, suffered a defeat or rather a night surprise and rout at Tilly-moss, on the south side of the Forth above Stirling, saw the castle of Dumharton, which was maintained by four of his sons, yield to a vigorous siege of six weeks, headed by the king and the ministers of state, and, after all, succeeded in making his peace with government, and obtaining a full pardon for himself and his followers. Matthew, the next Earl, whose accession took place in 1494, led the men of Lennox to the fatal field of Flodden, where he and the Earl of Argyle commanded the right wing of the Scottish army, and, with many of their followers, were hewn down amid vain efforts of valour. John, the son and successor of Matthew, played an active part during the turbulent minority of James V. In 1514, he, along with the Earl of Glencairn, assailed the castle of Dumharton during a tempestuous night, and, breaking open the lower gate, succeeded in taking it; in 1516, he was imprisoned by the Regent Albany, to compel him to surrender the fortress as the key of the west, and was obliged to comply; and, in 1526, he assembled a force of 10,000 men, and marched toward Edinburgh to the rescue of the young king from the power of the Douglasses. Matthew, the next Earl, a very conspicuous figure in history, obtained, in 1531, for 19 years, the tenure of the governorship and revenues of Dumharton-castle. Early in the reign of Mary, some French ships arriving in the Clyde with supplies for the queen, he, by artful persuasion, got the captains to land 30,000 crowns of silver and a quantity of arms and ammunition in the castle; and he immediately joined with other malcontents in an abortive but comprised and pardoned attempt to overthrow the government. In May and June 1544, he secretly entered the service of Henry VIII., engaging every effort to seize and deliver to England the Scottish queen, the isle of Bute, and

the castle and territories of Dumbarton, and obtaining from the king the Lady Margaret Douglas in marriage, and lands in England to the annual value of 6,800 marks Scots. Sent soon afterwards to the Clyde with 18 English ships and 600 soldiers, he was civilly received by George Stirling of Glorat, whom he had left in charge of Dumbarton-castle as his deputy; but he no sooner hinted to that official his design, and offered him a pension from Henry, than he and his Englishmen were turned out of the fortress, and compelled to return to their ships. The Earl and his party now ravaged and wasted, with fire and sword, the islands of Arran and Bute, and other places in the west; and in October, 1545, he was declared by parliament to have incurred forfeiture. He continued an active partizan in the hostilities against Scotland of Henry VIII. and his successor, received from the former a grant of the manor of Temple-Newson in Yorkshire, and during 20 years, remained in England an exile from his native land. Father of the ill-fated Lord Darnley, the husband of Mary, and grandfather of James VI., he eventually rose in the revolving politics of the period to the uppermost side of the wheel, and for a period filled the office of Regent, and vice-regally swayed the sceptre of his grandson. Holding at Stirling-castle, in September, 1571, what the opposite party in politics called 'the black parliament,' he was mortally wounded in an attack made upon the town by a small force who designed to take the fortress by surprise. The earldom of Lennox now devolved on James VI. as the next heir; and in April, 1572, it and the lordship of Darnley, with the whole of the family property and heritable jurisdictions, were given to Lord Charles Stewart, the king's uncle, and Lord Darnley's younger brother. But he dying in 1576 without male issue, they again devolved to the king, and were given, in 1578, to the king's grand-uncle, Lord Robert Stewart, bishop of Caithness,—resigned by him in 1579, in exchange for the earldom of March,—and given, in 1579-80, to Esme Stewart, Lord D'Auhigny. In August, 1581, Esme, this last favourite among the royal kinsmen, and the holder of the office of chamberlain of Scotland, was raised to the dignity of the Duke of Lennox and Earl of Darnley; and his son Ludovic, the second Duke, received from the king additional offices and grants of property, and, among other preferments, was made custodian of Dumbarton-castle, and the owner of its pertinents and revenues. In 1672, Charles, the 6th Duke, dying without issue, the peerage, with all its accumulated honours and possessions, went once more to the Crown, devolving on Charles II., as the nearest collateral heir-male; and the revenues of the estates were settled for life on the dowager Duchess. In 1680, Charles II. granted to his illegitimate son, Charles, horn of Louise Renée de Penancoet de Keranalle, Duchess of Portsmouth and D'Auhigny, the dukedom of Lennox, and earldom of Darnley in Scotland, and the dukedom of Richmond and earldom of March in the peerage of England. After the death of the Dowager-duchess in 1702, the Duke of Richmond and Lennox sold the whole of his property in Scotland, the Marquis of Montrose purchasing most of it, as well as many of its jurisdictions. In 1836, Charles, 5th Duke of Richmond and Lennox, succeeded to the Gordon estates.

In the reign of James IV. the sheriffdom of Dumbartonshire was made hereditary in the family of Lennox, Earl Matthew obtaining, in 1503, a grant which united the office to the earldom. The office continued a pertinent of the Earls and Dukes for two centuries, and was usually executed by deputy-sheriffs of their appointment. The Marquis of

Montrose, who was created Duke in 1707, purchased at once the sheriffdom of the county, the custodianship of Dumbarton castle, and the jurisdiction of the regality of Lennox, along with the large part of the Lennox property bought from the first Duke of Richmond and Lennox. The Earls and Dukes of Lennox had a very ample jurisdiction over all their estates, both in and beyond Dumbartonshire, comprehended in the regality of Lennox; and their vassals also had powers of jurisdiction within the lands held by them, subject to the remarkable condition that all the criminals condemned in their courts should be executed on the Earl's gallows. At the abolition of heritable jurisdictions in 1748, the Duke of Montrose claimed for the regality of Lennox £4,000, but was allowed only £578 18s. 4d.

**LENNOX-HILLS**, a range of heights stretching east-north-eastward from Dumharton to Stirling, along the middle of the ancient district of Lennox. The range is interrupted by the valley of the Blanc, and, from Dumbarton thither, is called the Kilpatrick hills. The name Lennox-hills is more strictly applied to the heights between the valley of the Blanc and Stirling, which, in their various parts are called the Killearn, the Campsie, the Kilsyth, the Dundaff, the Fintry, and the Gargunnoch hills. The range, after being interrupted by the valley of the Forth, passes on, under the name of the Oehil-hills, till it reaches the vicinity of the Tay. Throughout the whole of the strictly Lennox-hills, and in a less degree in the Kilpatrick-hills, are stupendous colonnades and precipices of basalt. In the parishes of Killearn, Strathblane, and Fintry, in particular, the arrays of basaltic columns are magnificent. The hills are composed chiefly of trap and whinstone, and offer many features of interest to the mineralogist and the philosopher; nor do they less challenge the attention of the agriculturist and the grazier. In the Dundaff section, indeed, a stunted heath occupies a considerable space, though not to the exclusion of excellent pasturage; but everywhere else, the hills, with very trivial exceptions, are carpeted with fine grass, unsurpassed for pasturage in Scotland. The soil is chiefly arenaceous, mingled with till. The summits rise in Campsie to the height of 1,500 feet, and in Kilsyth to the height of 1,300; but in many places they ascend no higher than to be inconsiderable hills. See article **CAMPSIE-FELLS**.

**LENNOXTOWN**, a considerable village in the parish of Campsie, Stirlingshire; 9 miles north of Glasgow;  $6\frac{1}{2}$  west of Kilsyth; 20 from Stirling; and about a mile from the southern base of Campsie-fells. A calico printing establishment in the village employs upwards of 800 persons. Two other similar establishments, two bleachfields, and several collieries and limeworks, are in the vicinity. The Campsie alum-work is at the east end of the village; contributing, in its huge red mounds of burnt alum schist, and its little forest of tall brick chimney-stalks, a grotesque feature to the landscape in which it lies. Lennoxtown is the polling-place for its district of Stirlingshire, the seat of sheriff and of justice-of-peace courts, and the site of a Relief meeting-house, a Roman Catholic chapel, several private schools, and a handsome new infant school-house, built at a large cost, and chiefly by subscription. The village stands on the grounds, and is under the superiority, of J. L. Kincaid Lennox, Esq., who claims to be the direct descendant and the nearest heir in the male line of the ancient or original noble family of Lennox. A mile west of the village stands Lennox castle, the seat of that gentleman, one of the most spacious and superb mansions in Scotland. The edifice is built in the old Norman style of architecture, and commands from its lofty towers an in-

teresting though not very extensive prospect. As it was commenced only 4 years ago, it wants as yet the rich accompaniments of wooded and ornamented demesne, hut promises, from the plans adopted for laying out its grounds, to be as rich in the dress of its immediate landscape as in the beauty and sumptuousness of its own features. Population of Lennox-town, in 1841, 2,821. See article CAMPSIE.

LEINTRATHEN. See LINTRATHEN.

LENY (THE PASS OF), commencing two miles west of the village of Callendar, carrying up a road much frequented by tourists from that village to Loch-Earn-head, and constituting a narrow and most romantic mountain-gorge, partly occupied by Loch-Lubnaig, and partly traversed by the broken and impetuous stream which rushes thence as a head-water of the Teath, is thus described by Sir Walter Scott in the opening scene of the Legend of Montrose: "Their course had been, for some time, along the banks of a lake, whose deep waters reflected the crimson beams of the western sun. The broken path, which they pursued with some difficulty, was in some places shaded by ancient birches and oak-trees, and in others overhung by fragments of huge rock. Elsewhere the hill which formed the northern side of this beautiful sheet of water, arose in steep but less precipitous acclivity, and was arrayed in heath of the darkest purple." Its beauties have also been immortalized in the poem of 'The Lady of the Lake.'

LENZIE. See KIRKINTILLOCH.

LEOCHEL (THE). See LEOCHEL and CUSHNIE.

LEOCHEL-CUSHNIE, an united parish in Aberdeenshire; bounded on the north by Alford; on the east by Tough, and Lumphanan; on the south by Tarland; and on the west by Towie. It extends from east to west about 6 miles; and from north to south 3 to 6 miles. Houses 203. Assessed property, in 1815, £1,035. Population, in 1821, 763; in 1831, 1,077. The surface of Leochel is hilly; but the hill of Corse is the only remarkable elevation. Cushnie lies at the head of a large open glen, and is mountainous and rocky. The small river Leochel rises in this united parish by three sources; and running northwards, enters the Don near Alfordkirk. The soil in the valleys here is a strong and fertile clay,—on the hill-sides, a rich and equally fertile loam. The parish is, for the most part, arable and well-cultivated; but the hill-tops are chiefly covered with heath, and abound with various sorts of game. Around Craigievar-castle, the seat of Sir Charles Forhes, Bart., are extensive and thriving plantations. Here are ruins of other two ancient castles,—those of Lenturk and Corse:—the latter was long the seat of the family of Forhes, one of whom, Patrick Forhes of Corse, horn in this castle, became bishop of Aberdeen, and author of a Commentary on the Revelation, and other works: he died in 1635. There are several Druidical temples in this parish, and on the top of Corse-hill are vestiges of an encampment. Cushnie was annexed to Leochel in 1798. The parish is in the synod of Aberdeen, and presbytery of Alford. Patrons, Sir John Forhes, Bart., and Lumsden of Cushnie. Stipend £196 10s. 5d.; glebe £18.—There are two parochial schools: salary of master of Cushnie school £25 13s. 3½d., with £13 fees, and other emoluments: of Leochel school £25 13s. 3½d., with £8 fees. There are two private schools, one of which was endowed by Sir Charles Forhes.

LEONARD'S (ST.). See articles ANDREWS (ST.), and LAUDER.

LERWICK, a parish on the mainland of Shetland. It extends about 6 miles along the coast; but is nowhere above a mile in breadth. On the

east and north-east it is bounded by the sea, which separates it from Bressay island, and forms the excellent harbour called Bressay sound: see BRESSAY. The surface is rocky and mountainous; but there are fine arable fields on the sea-coast, the soil of which, though light and sandy, is fertile and productive. Near the north end of the town is a small fortification, originally erected by Cromwell, but repaired in 1781, called Fort-Charlotte, which commands the north entry to Bressay sound. There are the remains of two ancient Danish castles, about a-mile-and-half south from the town. Population, in 1801, 1,706; in 1831, 3,194. Houses 386. Assessed property, in 1815, £2,906.—This parish is in the presbytery of Lerwick, and synod of Shetland. Stipend £113 17s. 9d. Patron, the Earl of Zetland. There are an Independent and a Methodist chapel in the town. The landward part of the parish is called Gulberwick.

LERWICK, a town in the above parish, and the seat of the courts of the stewardry. It is situated on the spacious harbour called Lerwick or Bressay sound; and derives its consequence from its being the seat of the courts of law, and the resort of vessels employed in the whale and herring-fishery, which make this hay their place of rendezvous. It consists of one principal street next the quay, with several lanes branching off; no regularity has been observed in former times in the position of the houses, some of which project almost quite across the street. Lerwick contains about 1,000 inhabitants. Straw-plaiting is the only species of manufacture carried on here. The general appearance of the town has of late years been much improved by several handsome houses, built in the modern style. Lerwick was founded about the beginning of the 17th century, but has a much older appearance than many towns of treble its age.

LESLIE, a parish in Fifeshire, at the southern base of the Lomond-hills, between them and the river Leven, which traverses its southern boundary, dividing it from Kinglassie. It is intersected by two smaller streams, one flowing from the north to the south, the other from the west, and both joining the Leven a little below Leslie-house. The extensive woods which surround Leslie-house, that of Strathendry and other places, with the streams, and varied and undulating nature of the ground, give much interest and beauty to the entire landscape of the parish. Its length from east to west is nearly 5 miles; its breadth, about 2 miles. It is bounded on the south by the parish of Kinglassie; on the east by Markineh; on the north by Falkland; and on the west by Portmoak in the shire of Kinross. Population, in 1801, 1,609; in 1831, 2,749. The village of Leslie is a burgh-of-barony holding under the Earls of Rothes. It is governed by two bailies and sixteen councillors. The records are said to go back for 300 years. There is a sub-post-office dependent on Kirkcaldy in the village. There are no weekly markets, but there are two fairs,—one in spring for the sale of cattle and show of horses, which is well attended, and the other in autumn, which has much fallen off of late years. The population of the burgh in 1831, was 1,821. The nearest market-towns are Cupar and Kirkcaldy. The number of imperial acres in the parish, either in cultivation or occasionally in tillage, are 4,324; the number in pasture, but which have been cultivated, 965; the number in wood, 350; and in undivided common, 27. The average amount of raw agricultural produce of the parish has been calculated at £7,450 sterling. The produce of mines, lime, and quarries, at £300. The annual value of real property for which the parish was assessed, in

1815, was £6,411 sterling; the valued rent is £4,561 Scots. The manufactures of this parish are very considerable, there being six mills for spinning flax, the largest of which are those of Prinlaws, belonging to Mr. Fergus, partly moved by the water of Leven, and partly by steam. There are three bleachfields in the parish. Weaving of linen and cotton goods is also carried on to a considerable extent. At the east end of the parish is Leslie-house, with its magnificently wooded grounds, the residence of the Earl of Rothes. This house was built, and great additions made to the plantations, by the celebrated Duke of Rothes, Lord-chancellor of Scotland during the reign of Charles II. It originally formed a quadrangle, enclosing in the centre an extensive court-yard, but three of the sides were burnt down in December 1763. The fourth side was repaired, and forms the present house. The picture-gallery in this part of the building, which is hung with portraits of connections of the family, is three feet longer than the gallery at Holyroodhouse.\*—This parish is in the presbytery of Kirkealdy, and synod of Fife. Patron, the Earl of Rothes. Stipend £257 8s. 6d.; glebe £18. The church of Leslie stands near the village, and was erected in 1820. It is a handsome structure, seated for 850.—There is also a chapel in connection with the church of Scotland at Prinlaws, the incumbent of which, besides preaching on Sabbath, teaches the school there, and receives a salary from Mr. Fergus.—There are two chapels in connection with the United Associate synod in the parish; also a chapel connected with the Associate synod of Original Seceders, and a small congregation of Baptists.—The parish-school is situated at the village of Leslie; the teacher has the maximum salary. The teacher of the school at Prinlaws has also a salary besides his fees. There are three or four other schools in the parish, the teachers of which are unendowed.

LESLIE, or LESLY, a small parish in the district of Garioch, Aberdeenshire; bounded on the north by Kinnethmont; on the east by Premnay; on the south by Keig, and Tullynessle; and on the west by Clatt; square area 4 miles. Houses 96. Assessed property, in 1815, £1,018. Population, in 1801, 367; in 1831, 473. This parish is rather billy in its aspect, but the soil is good, consisting, in the lower grounds, of a rich and deep mould; and in the higher, of a lighter loam,—both very fertile.

\* Among the pictures at Leslie-house may be mentioned those of the fifth Earl and his Countess, by Jamieson; the Duke and Duchess of Rothes; the celebrated Duke of Lauderdale and his Duchess; the Princess of Modena; General John, Earl of Rothes, by Sir Joshua Reynolds; Archbishop Tillotson; and a portrait of Rembrandt by himself. Some fine specimens of tapestry also adorn the walls, the subjects of which are partly scriptural and partly classic; but the brightness of the colouring is now considerably diminished from the effects of time. Among the curious relics of former times still preserved in the house, may be mentioned the dagger with its sheath, used by Norman Leslie, master of Rothes, at the murder of Cardinal Beaton; and the magnificent sword of state carried by the Duke of Rothes at the coronation of Charles II. at Scone. The ancient family of Rothes derive their descent from Bartholomew, a Flemish baron, who settled with his followers in the district of Garioch, in Aberdeenshire, in the reign of William the Lion. He obtained the barony of Lesly in that district, from which his descendants adopted their name. Norman de Lesly, the 4th in descent from him, obtained from Alexander III., in 1283, a grant of the woods and lands of Fetkill, which came afterwards to be called Lesly; and which have since remained in the possession of the family. George de Lesly of Rothes, the 9th in descent from the first settler, was created Earl of Rothes previous to March, 1457. John, the 6th Earl of Rothes, was created Duke of Rothes, Marquis of Balleanbreich, Earl of Lesly, Viscount of Lutgoun, Lord Ancheronzie and Caskelberry in 1650, with remainder to his male issue only, and his lordship having only two daughters, these honours became extinct. His eldest daughter, however, succeeded to the original titles, and having married Charles, 5th Earl of Haddington, her eldest son became 7th Earl of Rothes, and her second son 6th Earl of Haddington. The present noble lord is the 11th Earl of Rothes, and 16th Lord Lesly.

The water of Gadie, celebrated by the elegant Latin poet, Arthur Johnstone, runs through the parish from west to east. In several places, towards the south, a beautiful species of greenish-coloured amianthus is found, and is usually converted into snuff-boxes or other trinkets. Several remains of druidical temples and cairns, and an encampment, have been traced. The parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Hay of Rannoch. Stipend £158 14s. 6d.; glebe £11 5s.—Schoolmaster's salary £25 13s. 4d., with fees, &c. £16 16s. 1d.

LESMAHAGO, a large and important parish in the Upper ward of Lanarkshire, stretching along the south-west bank of the Clyde; bounded by the parishes of Dalsert and Carlisle on the north; by Douglas and Muirkirk on the south; by Lanark and Carmichael on the east; and by Strathaven and Stonehouse on the west. It is about 14 miles in length, and in several parts is 12 in breadth, and contains 34,000 acres. The greater part of the superficies of this parish is at least 500 feet above the level of the sea; and, on the western side, where they divide the counties of Lanark and Ayr, the mountains frequently rise to an elevation of 1,200 feet. The celebrated Falls of Clyde, viz. Bonniton, Corehouse, and Stonehyres, are formed in the course of the river along the borders of Lesmahago. "The banks of the Clyde in this parish are very bold, rising in many places abruptly into hills of considerable height, everywhere divided into deep gulleets, formed by the numerous brooks and torrents which fall into the river. The intermixture of coppice-woods, plantations of forest trees, and sloping open glades; of swelling eminences, deep ravines, and towering hills on both sides of the river, added to the windings of its copious stream, and the magnificent falls above-mentioned, exhibit to the eye of the passenger, at every change of situation, new landscapes strikingly sublime and beautiful." [Old Statistical Account.] The parish is watered, in addition to the Clyde, by the Peniel, the Douglas, the Logan, the Nethan, the Kype, the Cannar, and some still more insignificant streamlets, which all find their way into the Clyde. Two-thirds or nearly three-fourths of the land in the parish, is under cultivation. The principal village or post-town in the parish is called Lesmahago, or, more properly, Abbey-Green, from being built upon part of the lands attached to the principal religious house in the district in former times. It lies in a beautiful position on the banks of the Nethan, about 6 miles from the town of Lanark. The names of the other villages are Kirkfieldbank, Kirkmuirhill, Boghead, and Nethanfoot, between all of which and the city of Glasgow, the communication is easy and frequent both by coach and carrier. The great Glasgow and Carlisle mail-road, and the Glasgow and Lanark road, run through the parish for several miles, and in addition to these the parish-roads are extensive and well-kept, and all the streams which occur in their course are spanned by substantial bridges. Not more than the third of the families in the parish are employed in agricultural pursuits, the great majority being supported by weaving, working at the coal-mines or lime-works, or acting as country artisans. In 1801, the population was 3,070; in 1811, 4,464; in 1821, 5,592; in 1831, 6,409; and, in 1841, 6,902,—composed of 3,416 males, and 3,486 females. There are 1,428 inhabited houses. Assessed property, in 1815, £17,481.—The parish is in the presbytery of Lanark, and synod of Glasgow and Ayr, and comprises one of the very few parochial districts in Scotland in which the charge is collegiate, which it has continued to be since the Reformation. The church is

situated in the village of Ahbey-Green, and was rebuilt and enlarged in 1804 for 1,330 sitters. The stipend of both ministers is the same, viz. £283 4s. 2d. per annum; each of them has a manse, and the 1st minister a glebe, the 2d a garden. The value of the glebe is about £20 per annum, and of the garden about £5. Unappropriated tinds £403 9s. 8d. Patron of both charges, the Duke of Hamilton. There is a *quoad sacra* church in the parish, called the North church.—The Original Burgher congregation was established in 1813, and a church was built in 1816, at an expense of £600, calculated to accommodate 530 sitters. The minister has a manse, and a stipend of £100 per annum.—The United Secession congregation at Crossford was established in 1830, in which year the church was built at an expense of £350, for 350 sitters. The minister has a stipend of £88 per annum, with £4 for sacramental expenses, in addition to a manse and glebe. There is also a small congregation of Old Independents, in which an elder officiates without any emolument.—The parish is well-supplied with the means of education, by six or seven schools, in addition to the parochial one. The principal or parochial master has the maximum salary of about £38 per annum, with fully £40 as school-fees, in addition to perquisites arising from the office of session-clerk. The heritors have granted the value of a chalders annually, which is divided among the teachers of other schools in the parish not strictly parochial; and in all, about 600 children usually attend school at the same time in the different seminaries within the bounds.

Lesmahago was celebrated in the olden time for its monastery. It was also called Lesmachute, from *Les* or *Lys*, signifying, in the old British language, 'a green,' 'a court,' or 'an enclosed place,' and *Machute*, a saint, who died in the 6th century, and was buried in the parish. A church was founded at a very early period in this place, and dedicated to this saint. Many relics connected with him were found and deposited in the holy building, and it appears from the accounts of the old Scottish treasurer, that James V. having obtained a bone of St. Machute, or Mahago, caused it to be encased in silver, gilt, by one John Mossman, a goldsmith in Edinburgh, at considerable expense, so that it might be carefully preserved. The tomb of the saint was illuminated by a number of wax-lights, and various donations were from time to time granted to the monks of Lesmachute for this purpose. Among others, Robert I. made a grant of a rent of 10 marks sterling, from his mills of Carluke, in lieu of which the monks were required to find a number of wax-lights, of a pound-weight each, to burn on Sundays and festival-days at the tomb of St. Machute. In the reign of David I. the church and lands of Lesmahago, with all their pertinents, were granted to the abbot and monks of Kelso, that they might hold the church as a cell of Kelso. At the same time, the king granted to the church of Lesmahago the privilege of a sanctuary, to which all persons might flee for protection, with the exception of those who were guilty of murder or dismembering. The abbot and monks of Kelso accordingly erected buildings here, and transferred to it a number of their own order, dedicating the new monastery to the Virgin Mary and St. Machute. Being less liable than Kelso to be annoyed by the invasions of the English, Lesmahago frequently formed a safe retreat to the monks of the former place; but still it was not altogether exempt from the effects of these hostile incursions. About 1336, John of Eltham, Earl of Cornwall, and brother of Edward III., ravaged Clydesdale with a body of English troops, and took up his residence for a time

at the abbey of Lesmahago; before leaving it, he burned the monastery and church, and sacrificed a number of people who had taken shelter within the walls. The Earl of Cornwall soon after joined his brother Edward at Perth, and some of the historians of the time state that a quarrel having arisen between the king and earl, caused by the haughtiness of the latter, he was stabbed by the monarch, and soon thereafter died, thus avenging, according to Wyntown, the burning of the abbey. That the Earl of Cornwall died at Perth in October 1336, is undoubted, but whether the burning of the monastery had anything to do with his death, or whether he fell by the hands of his royal brother, is more questionable. The monks of Lesmahago were enriched by the bequests or donations of pious individuals, or by the purchase of lands, and at various times they received charters of protection and immunity from the Scottish kings, by whom also their territory was erected into a barony, with the usual jurisdiction. At the Reformation, when the old order of things was overturned, and the tomb of the saint violated and destroyed, the rental of the monastery, according to Keith's History, was as follows:—£1,214 4s. 6d. Scots; 15 chalders, 8 bolls, 1 firloft, and 2 pecks of bear; 41 chalders, 8 bolls, and 3 firlofts of meal; and 4 chalders, 3 bolls of oats. The church property of this opulent monastery, passed in succession into the hands of several great families until it was finally purchased in the early part of the 17th century, from the Earl of Roxburgh, by James, Marquis of Hamilton. During the ferment of the Reformation, the fine ecclesiastical erections connected with the monastery, fell a sacrifice to the zealous fury of the Reformers, the whole being consumed by fire, with the exception of the tower which supported the spire of the church. The precincts of the monastery were long celebrated for their beautiful gardens, and the present village of Abbey-Green is built upon a part of the olden lawn. The parish still retains the privilege of holding a weekly market and annual fairs, which, however, are not now regarded as of much importance. There is little of interest connected with the civil history of the parish. When Queen Mary escaped from Lochleven, she remained for a few days in the Castle of Draphane or Craignethan, and the room in which she slept, before she passed on to the fatal field of Langside, is still pointed out amongst the ruins, which occupy a bold and rugged position at the junction of the streamlet Nethan with the river Clyde. This was anciently the residence of Sir James Hamilton, a bastard son of the Earl of Hamilton, who in the reign of James V. acquired an unenviable notoriety from his fierce disposition and cruel actions. In recent times, the ruins of Craignethan have become still more famous, from their undoubted identification with the Tillietudlem of 'Old Mortality;' see CRAIGNETHAN. The inhabitants of Lesmahago acted a prominent part in the struggle against the imposition of 'black prelatie' in the reigns of Charles II. and James II., and many of the Covenanters who fell at Bothwell bridge were natives of the parish. The drum and colours used by them on that memorable occasion are still preserved. Several of the pious heroes of that time are buried in the churchyard, where their monuments still exist: amongst others, that of the good David Steel, who was killed by Captain Crichton, a trooper, whose very name is still considered a polluted thing in the parish. It was in Lesmahago that the celebrated Colonel Rumbold was apprehended by Hamilton of Raploch in 1685, after the dispersion of the army of Argyle. Rumbold is remembered as having been one of the chief movers in the Ryehouse plot. At a later period,

Macdonald of Kinloch-Moydart, *nide-de-camp* to Charles Edward Stuart, was apprehended here, while on his way to join the Prince during his chivalrous march in England, by a young clergyman named Linning, and a joiner named Meikle. For this service, Linning was afterwards rewarded by being appointed one of the ministers of the parish; but the Highlanders, on their return north, burned Meikle's house in revenge. The unfortunate Macdonald was conveyed from Lesmahago to Edinburgh Castle, and from thence to Carlisle, where he was tried, condemned, and executed. A Roman road is known to have passed through a part of the parish, but it has long since been obliterated by the hand of improvement; a Roman vase and Roman coins have been found in the parish, and some years ago an ancient Caledonian battle-axe was dug up, and is now in the possession of the proprietor of the estate of Blackwood.

**LESUDDEN.** See BOSWELL'S (ST.).

**LESWALT**, a parish in the Rhinns of Galloway, Wigtownshire; bounded on the north by Kirkcolm; on the east by Loch-Ryan and Stranraer; on the south-east by Inch; on the south by Portpatrick; and on the west by the Irish channel. Its greatest length, from north to south, is 8 miles; its greatest breadth is 7 miles; and its area is 56 square miles. Its form is not very far from being a square. The surface, except along Loch-Ryan, where it becomes level, is very hilly and broken. Large tracts of moss, in some quarters compete for prominence with fine meadows, pasture-grounds, and arable lands on others. The soil, over a great part of the eastern division, is rich and fertile; but, toward the Irish channel and along the south, it is, in general, sandy, gravelly, or otherwise very thin and poor. A large proportion of the entire area is abandoned wholly to sheep and cattle. The coast-line, on the west, about 8 miles in extent, is bold, rocky, broken, and contorted, abounding in awful cliffs, cavernous openings, and precipitous chasms. Except in a creek, called Saltpan, where salt used to be manufactured, and where a small harbour might be constructed, about midway between the two extremes of the parish, access is nowhere possible to a vessel on the west. But in Soleburn-hay in Loch-Ryan, 3 miles north of Stranraer, vessels lie in great safety, and discharge manorial cargoes for the use of the farmer. Fine red cod and other fish abound on the coast, but are unheeded by the parishioners, and allowed to be picked up by boatmen from Portpatrick. Oysters abound in Loch-Ryan. Two considerable brooks, Solchurn and Pooltanton, both frequented by salmon, rise in the interior, and run, the former to Soleburn-hay in Loch-Ryan, and the latter southward to achieve a longish course to the head of Lucc-hay in the parish of Old Luce. Several unimportant rills run to the Irish channel. Red sandstone and greywacke—the latter often of very fine appearance—are quarried as building material. The climate, though very changeable, and subject to severe storms, and long series of heavy rains, is far from being unhealthy. Lochnav-castle, in its loch, wood, and estate, forms the grand and almost only attraction of the parish. Since it passed to Sir Andrew Agnew, Bart., from his father, it has, in every particular, been remarkably improved. The castle stands on an eminence  $5\frac{1}{2}$  miles north-west of Stranraer, is a very ancient edifice, and bears marks, in the remains of a very deep fosse, and in other particulars, of having once been strongly fortified. On its west side is a very beautiful lake, nearly half-a-mile long, once drained, and its bed turned into meadowland, but reinstated in its watery honours and decorations by the present proprietor. A plantation

around the castle contains some old trees, but has chiefly been raised within the last 28 or 30 years, and forms the only exception to the treelessness of the parish. The estate of Lochnav, especially in the vicinity of the castle, has been richly improved and tastefully decorated. Good roads run along Loch-Ryan, past Lochnav, and along the Irish channel. Four villages, Clayhole, Hillhead, Foulford, and Broadstone, have unitedly upwards of 900 inhabitants, but are all situated within the parliamentary burgh of Stranraer. Population, in 1801, 1,329; in 1831, 2,636. Houses 448. Assessed property, in 1815, £7,315.—Leswalt is in the presbytery of Stranraer, and synod of Galloway. Patron, the Crown. Stipend, £142 13s. 7d.; glebe £15. The church was built in 1828. Sittings 550. An ecclesiastical census of 1836 showed the population then to be 2,640; of whom 1,704 were churchmen, 876 were dissenters, and 60 were nondescripts. The dissenters, and also some churchmen, are connected with congregations in Stranraer. Five large farms of Kirkeolm are attached *quoad sacra* to Leswalt.—The parish-school was attended, in 1834, by 212 scholars, and five private schools, one of them a boarding-school, by 154. Parish schoolmaster's salary £25 13s. 3d., with from £10 to £20 fees, and from £5 to £10 other emoluments. The church was anciently a vicarage under the monks of Tonguehead.

**LETHAM**, a village in Fifeshire, in the parish of Monimail, 4 miles west of Cupar, and 5 east of Auchtermuchty. Population 440. There is a fair held here in the first week of June.

**LETHEM**, a considerable village in the parish of Dunnichen, Forfarshire;  $5\frac{1}{2}$  miles from Forfar, and 11 from Arbroath. It stands on the swell or summit of a table-land, and commands a somewhat extensive prospect. Attached to it in a hollow on the south, traversed by Vinney-water, is a minor village called the Den of Lethem. The late Mr. Dempster of Dunnichen was the founder of Lethem, and he laid out for it such a regular and extensive plan as indicated alike refined taste and overheated expectation. The earliest settlers delighted in their old age to chaperone a stranger through corn-fields, and along rugged paths, pointing out to him, far away from the village, street lines, and sites of city-greatness, which his most heated fancy failed to see either in the rough spots before him, or in the visions of futurity. Yet the place has not wanted prosperity, and is steadily, though slowly, on the increase. A linen-hall has been converted into a school-house. A spinning-mill, in the Den of Lethem, employs a number of persons; but a large proportion of the inhabitants, women and youths as well as men, are weavers in the employ of the manufacturers of Dundee. Two fairs are held in the village for the sale of cattle and the hiring of servants. The place has two meeting-houses,—one Independent, and the other United Secession: it has also a library. Population about 1,000.

**LETHENDY AND KINLOCH**, two parishes in the north-east division of Perthshire, united within the last 50 years. Their mutual position is unfavourable to their joint description. Lethendy is a stripe of 3 miles in length from east to west, with a mean breadth of about 1 mile, but sends northward an angular projection from its north-east corner; and it is bounded on the north by Clunie; on the east by Blaugowrie; on the south by Caputh; and on the west by Caputh, Clunie, and a small detached part of Caputh. The Tay formerly washed part of its southern side, but has retired southward, from half-a-mile to 2 miles, by cuts made at different periods, leaving, in several places, marks of its former course. Lunan-water runs across the north-east projection,

and along the eastern boundary. The soil, in the western half, is a black mould inclining to reddish clay, exceedingly rich, and adapted to every kind of crop; hut, toward the east, it becomes blacker, more wet, and less productive. The district is a hanging plain, inclining to the south, and throughout is highly cultivated. In the south-east corner are about 50 or 60 acres of natural wood. Two roads, one from north to south, and the other from east to west, cut the parish into four nearly equal parts.—Kinloch is a curiously outlined irregular stripe stretching from north-north-west to south-south-west; 9 miles in extreme length,  $2\frac{1}{2}$  in extreme breadth, but rarely more than 1 mile broad, and tapering at its southern extremity to a point which touches the angle of the north-east projection of Lethendy. It is bounded on the north by Bendochy; on the west by Blair-Gowrie; on the south-west by Clunie; and on the west by Clunie and a detached part of Blair-Gowrie. Drummellie-loch, 1 mile long and half-a-mile broad, stretches along the south-west boundary. Rae-loch and Fenzies-loch, both of very considerably smaller dimensions, lie respectively  $\frac{3}{4}$  of a mile east and  $1\frac{1}{4}$  mile south-east of the former,—the latter being on the eastern boundary, and very near the point of contact with Lethendy. All the lakes abound in pike, perch, and eel. A brook coming in from Clunie runs  $2\frac{1}{4}$  miles along the south-west boundary to Drummellie-loch. Lunan-water, having entered the same lake on the side of Cluny, emerges from it on the south-west boundary, and flows  $1\frac{1}{4}$  mile along that boundary to Lethendy. In this stream, and in the lake, fat or good-conditioned trout are found earlier in the season than in any other waters within a considerable distance. Lornty-hurn runs across the parish at its broadest part, forms the southern boundary of an easterly projection  $1\frac{1}{2}$  mile from the main body of the parish, and passes on to fall into Airdle-water  $1\frac{1}{4}$  mile onward in Blair-Gowrie. Airdle-water traces the whole of the northern boundary, yet touches the parish for only  $1\frac{1}{4}$  mile. From both Rae-loch and Fenzies-loch, and also from a marsh connected with the former, vast quantities of rich shell marl have been carried away to the great improvement of circumjacent soils. Between the lakes Drummellie and Rae stands the mansion of Marlee, beautifully emhosomed among wood. The surface of the parish, for  $2\frac{1}{4}$  miles from the extreme southern angle, is flat; and thence till within a mile of the Airdle, it rises in a slow though broken or varied ascent. Cochrage-height, properly a muir and high-lying moss, abounding in grouse and blackcock, is the only elevation which can be called a hill. Two-thirds of the parish from the south upward, in the beautiful lakes and richly-cultivated fields of the plain, in the southern exposure of the enclosed and agriculturally improved ascent, and in the plantations of the estate of Marlee and the seats and woods of other proprietors, exhibit a scene of calm and pleasing beauty. Near Loch-Drummellie is a Druidical temple. On a projection of the steep bank of the deep glen traversed by Lornty-hurn, stands the castle of Glassclune, of very high but unknown antiquity, and originally a place of very great strength. A muir in the parish exhibits a vast number of tumuli, called the Haer-Cairns, and has half-added the heads of many antiquarians by its stout claims to be regarded as the scene of the far-famed battle of the Grampians. Had Jonathan Oldbuck been owner of the place, he would at least have had such relics on it as would have made defiance to the spoil-sport of the most peering gaherlunzie. The parish is cut from east to west by the road between Blairgowrie and Dunkeld, and from south to north by that between Kinclaven and the bridge of Cally. Population of

Lethendy, in 1801, 345; in 1831, 306. Houses 68. Assessed property, in 1815, £1,040. Population of Kinloch, in 1801, 367; in 1831, 402. Houses 73. Assessed property, in 1815, £2,795.—The united parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Crown. Stipend £211 1s. 1d.; glebe, value not stated. Salary of the Lethendy schoolmaster £25, with about £12 fees, and about £3 other emoluments; of the Kinloch schoolmaster £35, with about the same fees and other emoluments as the other master. The united parish has acquired notoriety, inferior only to that of Auchterarder and that of Marnoch, from the working of the General Assembly's Veto act. See article AUCHTERARDER.

LETHNOT, a parish in the northern part of the Grampian district of Forfarshire; bounded on the west and north by Lochlee; on the north-east by Edzell; on the south-east by Strickathrow and Menmuir; on the south by Fearn and Tannadice; and on the south-west by Cortachie. Its extreme length, from the source of the highest head-stream of West-water on the west to the point where that stream leaves it on the east, is 13 miles; and its greatest breadth, from West-warren on the north to the point where it is first touched by Pelphrie-hurn on the south, is  $5\frac{1}{2}$  miles; hut, for 6 miles from its west end it expands from a breadth of only  $1\frac{1}{4}$  mile to one of only  $3\frac{1}{2}$ ; and over its eastern half it has a mean breadth of not more than 4 miles. Except along the south-east, a distance of  $4\frac{1}{2}$  miles, and along an adjoining mile on the north-east, the whole parish is walled in by water-shedding lines of the Grampians, running up at the western extremity to nearly the highest summits of the Binchinnin mountains, and enclosing as they trend along in the figure of a slender oval, the basin of all the upper streams of West-water. That stream, under the name of the water of Saugh, rises close on the western extremity, and flowing generally south-eastward, hut making one large detour, cuts the parish lengthways into two nearly equal parts; and it then, suddenly debouching, runs  $2\frac{1}{2}$  miles north-eastward along its south-east boundary. About a dozen considerable brooks, besides smaller ones, cleave down the congeries of hill and mountain which occupies the main area of the parish, and run slantingly to West-water. In most of these is the common trout, and in West-water itself are three species of freshwater trout. Pelphrie-burn, approaching from the south-west, runs  $2\frac{1}{2}$  miles along the south-east boundary, till it meets Westwater, falls into it, and drives it along that boundary in a continuous line. Inward from this water boundary-line—altogether 5 miles in length—is a belt of arable ground, averaging, even up to the ploughable limit of the hills, not more than  $\frac{1}{2}$  of a mile in breadth. Nearly all the rest of the parish, except some laugh-ground in the glen of West-water, is either strictly pastoral, or wildly waste. The soil of the arable land is, in some places, clayey, and, in others, a rich loam on a till bottom. A great number of chalybeate springs exist in various localities, are in some instances strong, and have proved beneficial; and they seem to have been denied the honours of fashionable resort simply on account of the pastoral seclusion of the district. The parish has no road in its west end, hut in the arable part, and two-thirds way up its central glen is sufficiently provided with both roads and bridges. A hundred years ago the inhabitants were in a semibarbarous condition, and are reported by the statist in the Old Account to have, as to many leading points of civilization, undergone wondrous changes within from 20 to 50 years of the date of his writing. Population, in

1801, 489; in 1831, 404. Houses 94. Assessed property, in 1815, £749. Lethnot is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend £158 6s. 11d.; glebe £5. Schoolmaster's salary £34, with £10 fees, and a house and garden. A small school is maintained in a remote part of the parish by private subscription during four months in winter.—The present parish comprehends the ancient parishes of Lethnot and Navar, lying respectively on the left and the right sides of West-water, and united in 1723. Lethnot, previous to that date, formed one charge with the very spacious adjacent parish of Lochlee, the minister preaching one Sabbath in the latter, and two in Lethnot. Navar gave the title of Baron to the Earls of Panmure.

**LETTERFEARN**, or **ARDINTOUL**, an extensive district in the parish of Glenshiel, Ross-shire. It stretches along the banks of Loch-Duich, and contains upwards of 6,300 imperial acres, of which about 560 are arable, 530 home-pasture, and the rest hill-grazing. See **GLENSHIEL**.

**LETTERFINDLAY**, an inn, 14 miles north-east of Fort-William; on the eastern bank of Loch-Lochy, on the great military road to Inverness.

**LEUCHARS**,\* a parish in Fifeshire, on the north bank of the Eden and its estuary, which divide it from the parish of St. Andrews. It is bounded on the south by the parishes of Kemback and St. Andrews; on the east by the German ocean; on the north by the parishes of Ferry-port-on-Craig and Forgund; and on the west of those of Logie and Darsie. The breadth of the parish from south to north is very varied: for a considerable portion of its extent towards the east it is scarcely 4 miles; and at the extreme west, where a part of it separates the parishes of Logie and Darsie, it measures only from 1 to 2 miles in this direction. Its length from east to west is equally varied: for about a mile in breadth, near the south, it is  $6\frac{3}{4}$  miles; farther north, it is only  $4\frac{1}{4}$  miles in length. From south-west to north-east it measures about 8 miles. The general appearance of the surface of the parish is that of an extensive plain, seldom more than 15 feet above the level of the sea; but towards the west and north-west, it gradually rises, till it reaches the summit of that portion of the Ochil-hills which separates it from the parish of Logie. From various situations on these heights, an extensive view of the level part of the parish of St. Andrews, and of the German ocean is obtained. The parish generally is bare of wood; but in some places this ornament of the land is not deficient. There are two villages in the parish, Leuchars and Balmullo. Leuchars contains about 614 inhabitants, and is situated about a mile from the south boundary of the parish, and about half-way between the east and west boundaries. There is a penny post-office in the village, dependent upon the post-office at Cupar. The other village, which contains 230 inhabitants, is situated on the line of road from Cupar to Dundee. Two fairs are held annually at the village of Leuchars, for the sale of cattle and small wares; but, like those in many other small towns and villages, they are now but little attended. Population, in 1801, 1,687; in 1831, 1,869. In the western division of the parish the soils are clay, soft loam, and gravel; but in the east and north-east it is light and

sandy, and for a considerable extent in Tentsmuir entirely sand. There are 6,310 Scots acres under regular cultivation; 3,060 acres of poor clay, and light land often in pasture; and 360 acres under wood. The value of assessed property, in 1815, was £14,957.—Nothing now remains of the ancient castle of Leuchars, although its site is still pointed out, a short way north of the village. It stood upon a bank of earth, on the edge of a swamp, and was surrounded by a deep broad ditch, which enclosed about three acres of ground, and must have been a place of great strength in former times. It was no doubt the residence of the Celtic chief, Ness, the son of William, whose daughter was married to Robert de Quinci; and it appears to have been the principal residence of their son, Seyer de Quinci, Earl of Winchester, and where he held his baronial court, as many of his charters are dated thence; and in a dispute with Duncan, the son of Hamelin, about the lands of Duglyn, in the Ochils, he brought Duncan to acknowledge a release of his claims, in his court,—"in plena curia mea apud Locres." In 1327, it was taken and demolished by the English, under the Earl of Pembroke, but was no doubt subsequently rebuilt.—South-east of the village of Leuchars is Earls-hall, said by Sibbald to have been anciently a portion of the estates of the Earls of Fife, who had a residence here, whence it derived its title of Earls-hall.—The fine old house of Earls-hall is beautifully situated amid venerable trees, and forms an exceedingly interesting object in the landscape of this part of the parish. It appears, from initials, arms, and dates, on various parts of the house and offices, to have been erected towards the close of the 16th or beginning of the 17th century; but principally by William Bruce, whose initials and arms with those of his wife, Dame Agnes Lindsay, and the dates 1617 and 1620, are still to be seen. The house was inhabited until sold to the present proprietor, and might at no great expense be still rendered habitable. The object of greatest interest in this house is the great hall, which is 50 feet in length by 18 in breadth, with a fine arched roof on which are painted and emblazoned the arms of the family, and of a number of noble families with whom they claimed affinity.—North of Earls-hall, and north-east of the village of Leuchars, is Pitlithie, the property of William Lawson, Esq. Here there is said to have anciently been a royal hunting-seat. In a field near the present house there stood till lately a venerable spreading thorn tree, on which tradition says the king's hawks were accustomed to roost. In the first Statistical Account it is said that it was James VI. who used this place as a hunting-lodge. We should rather be inclined to think, however, that it must have been James III. or James IV. who had a residence here, as Sir William Bruce of Earls-hall had a charter of the lands of Pitlithie from the latter monarch, which he afterwards conferred upon his second son, Robert Bruce. But whichever of the Scottish kings it was, it is very obvious that this neighbourhood, from its vicinity to the sea-shore, to the estuary of the Eden, and being surrounded with marshes, must have been well-calculated for enjoying the sport of hawking.—East and north-east of this part of the parish to the German ocean, is an extensive flat sandy tract of ground called Tentsmuirs, which appears to have been at one time submerged, and has either been laid dry by the retreat of the sea, or by a slight upheave of this part of the coast. Formerly this tract was inhabited by a number of small crofters, who were rude in their manners, and at one time much given to smuggling. They were alleged to have been descended from some Danes shipwrecked upon this part of the coast; but Mr.

\* The name of this parish is of Celtic derivation, and descriptive of what the appearance of that portion of it in the neighbourhood of the castle and village at one time was. *Lethur* in the ancient British, and *Leucher* in the Irish, means 'a stream that forms pools and marshes;' and, until they were drained, the low and level grounds, for miles to the east and west of the village of Leuchars, were under water for the greater part of the year.

Kettle, in his first statistical account of the parish, says he had been able to find no authority for this statement.—These crofters have now been all for many years removed, and the muir formed into some extensive farms. A great portion of it, however, is incapable of cultivation, and is employed in rearing sheep; the rabbits which at one time occupied a considerable part of it having been nearly all extirpated. This parish is in the presbytery of St. Andrews, and synod of Fiffe. Patron, the Crown. Stipend £238 11s. 10d.; glebe £30. Unappropriated Crown tinds £527 11s. 8d. The church formerly belonged to the priory of St. Andrews, the monks of which drew the tithes and supplied the cure. It is situated in the village of Leuchars; and is an old building, which appears to have been erected at four different periods,\* hut is comfortable

\* The eastern portion of the building, which has formed the original church, is obviously of great antiquity, and is exceedingly interesting as exhibiting a beautiful example of ancient architecture. It is in the Norman style; and is worthy of particular notice, as being the only parish-church in Scotland now remaining in that early style. It consists of two parts, a rectangular portion which had formed the chancel, and a semicircular apsis at the east end, of less breadth and height, in which the altar had been placed. Its extreme length within the walls, from what had formed the western entrance to the east end of the apsis is 33 feet; the breadth of the chancel about 18 feet, and of the apsis 12 feet. The height of the walls of the chancel is 22 feet, and of those of the apsis about 15 feet. The thickness of the walls is about 3 feet. The walls of the chancel on the outside, both on the south and north, present two stages of stories. The lower stage is ornamented with four double columns, and two single columns at each end, with ornamented capitals, from which spring semicircular arches, which interlace each other, forming pointed arches at their intersection. Above these arches there is a band or fillet forming the base of the second story, and supporting four double and two single columns as on the lower stage. From these spring five semicircular arches, ornamented with a double moulding, the inner being a zigzag or chevron moulding, such as is generally found on buildings of this style, and the outer a billet moulding. Above these arches is a range of corbels carved into grotesque heads, supporting the upper part of the wall which slightly projects, and from which springs the roof. The wall of the chancel is pierced in the second story with two windows on the south side and one on the north: they are narrow and semicircular at top, and are ornamented on the inside with pillars, and rich mouldings from the soffets of the arches. The apsis also presents two stories. They are both decorated with pillars and arches with chevron and billet mouldings, and surmounted by a range of grotesque corbel heads, as on the chancel; but the arches of the lower stage do not interlace each other as in the lower stage of the chancel. The upper stage of the apsis is also pierced with three windows similar to the chancel, and similarly ornamented in the inside; one of these fronts the east, one the south-east, and the other north-east. A lofty arch opened from the apsis into the chancel, and another appears to have formed the western entrance, both of which are ornamented with three slender pillars. The portion of the church immediately west of this seems to have been erected at a subsequent period, and to have formed a nave, whilst the chancel then formed the choir of the church. A third portion appears to have been added about the period of the Reformation, to increase the accommodation, and a fourth portion, forming an aisle on the north, some time in the last century, for the same purpose. The three last erected portions form the present place of worship, the communication with the older portion except a small door being now closed up. The floor of the old chancel is formed of grave-stones, and it is now little else than a tomb. One of the grave-stones has the figure of a lady carved upon it, and from the inscription, had been placed there in memory of Dame Agnes Lindsay, the wife of William Bruce of Earlshall, who appears to have erected a considerable portion of that ancient mansion. The appearance of this unique piece of Norman architecture has been considerably injured by modern alteration. The windows on the south side of the chancel, and one in the apsis, have been built up, and square windows inserted, divided by a single stone mullion. The roof of the apsis, too, has been destroyed by the erection of an ugly heltry over it, and the other two windows are partially blocked up by a rude arch thrown across the building to support it. It is highly to be wished that these modern barbarisms were removed, and that this beautiful little chapel were restored, as far as possible, to its original appearance; which might be done at no great expense. Nothing is known as to the exact period when this portion of the church was built; but from the style of the architecture, it must have been in the 12th, or early in the 13th century. Robert de Quinci obtained the lordship of Leuchars by marriage with the daughter of Ness during the reign of William the Lyon; and his son Seyer de Quinci, Earl of Winchester, succeeded him in 1190, and died in 1219. As he resided at Leuchars-castle, and had his principal court there, it seems extremely probable that it was erected by him, some time between these two periods, as a place of worship for himself and his family.

and well-lighted, and seated for 850 sitters.—There is only one dissenting chapel in the parish, which is situated at the village of Balmullo. It is connected with the Associate Synod of Original Seceders. The parish school is in the village of Leuchars, and is well-attended. Besides his fees, the teacher has a dwelling-house and school-room, the maximum salary, and the interest of 2,000 merks Scots, with a glebe of two acres of land hequeathed by the Rev. Alexander Henderson. Besides the parish-school there are three other schools in the parish. One of these is supported by Mr. Lindsay of Balcarres, and in it sewing and English reading are taught at a cheap rate. The other two are supported by the fees alone, and are well-attended. There is also a well-attended Sabbath evening school. A parish-library has been instituted by private subscription, which contains a considerable number of volumes on general literature. Where the schoolhouse now stands, there was once a chapel dedicated to St. Bennet, of which Sir Thomas Wemyss was chaplain at the Reformation. No remains of it now exist, hut stone coffins enclosing human bones have been found near its site. It is said that a chapel also stood near the house of Ardit, where a small field was called the glebe; and at Easter Dron there was another chapel and burying-ground, where a field also retained the name of the glebe. On Craigie-hill an earthen vase was found in 1808, which contained 100 silver coins in excellent preservation. They were Roman, and mostly of the emperors Severus, Antoninus, Faustina, &c.

LEUTHER. See LUTHER.

LEVEN, a village in the parish of Scoonie, in Fifeshire; 9 miles east of Kirkcaldy, and 2 south of Kennoway. It is situated at the mouth of the river Leven, which here forms a safe harbour for small vessels, admitting vessels of 300 tons burthen at spring-tides. There is another harbour at the ancient and decayed town of Methill, about a mile to the west. Between Methill and the mouth of the Leven there are some fine open links or downs. On the inner side of these downs lies the neat village of Duhieside, belonging to the parish of Markinch, which is connected by a handsome suspension-bridge with the town of Leven. This very useful erection cost altogether about £530, which was raised in shares by a joint-stock company. A half-penny is charged for each person passing. The staple trade of Leven is the weaving of linen goods, which employs a considerable number of hands. For the preparation and spinning of flax there are extensive works at Kirkland, on the right bank of the Leven, about half-a-mile above the town. It consists of two principal streets, which run parallel to each other, with a variety of cross lanes branching off from them; and contains about 2,000 inhabitants, who are chiefly employed in the manufacture of coarse linen. There are here a brick and a tile-work, a hone-mill, a flax spinning-mill, and an iron-foundry. It has seven annual fairs, viz., on the 2d Wednesday in April, O.S.; the 2d Wednesday in June, and the 1st and last Wednesday in July; the 3d Wednesday in August; the 3d Wednesday in September; and 3d Wednesday in October. The Commercial bank has a branch here. See SCOONIE.

LEVEN-CASTLE. See INNERKIP.

LEVEN (Loch), † a beautiful expanse of water, † "The name, Lochleven, finely discriminates its gentle imagery, *Llwo*, BRIT., *Loch*, GAEL., signify 'a lake,' 'an inlet of the sea,' 'a large diffusion of inland water.' *Llyvn*, *Llyvyn*, BRIT., 'smooth,' 'even,' 'level'; *Leanhain*, GAEL., *nha* as *o*, 'smooth,' 'plain,' 'even'; *Llwo-Llyvn*, *Loch-Leavain*, 'the lake of the tranquil or waveless water.' Perhaps from *Llyvyn*, BRIT., 'an elm,' or *Llyvyn*, 'belonging to, or abounding with elm-trees,' *Loch-Leven* may have been denominated 'the Lake of Elms;' and, probably, of old, these trees may have been numerous on its shores."—*Kennedy's 'Glenochel'*, vol. i. p. 144.

in the immediate neighbourhood of the burgh of Kinross, and in the south-east quarter of the small shire of that name. Its circumference is about 10 or 11 miles; and its bosom is studded with several little islands, which break the uniformity of its surface and increase its beauty. The general character of the scenery which surrounds it is soft and gentle, and not altogether deficient in variety. The vale of Kinross environs it on the west and north-west, with all its variety of plantations, arable and pasturc-fields, pleasure-grounds and other materials of rural beauty. On this side, also, close to the margin of the lake, are seen the ancient town of Kinross, and Kinross-house, with its adjacent garden and grounds: see KINROSS. About a mile east from this, also near the lake, are the ruins of BURLEIGH-CASTLE: which see. The plain of Orwell hounds the lake on the north; the western termination of the Lomond-hills on the north-east; and the hill of Bannarty on the south-east side. In this direction, lying between the West-Lomond hill and the low hill of Balhedie, is a level tract of carse-ground, about 3 miles in length and 1 in breadth, through which the Leven flows, after leaving the lake, towards the frith of Forth. "Loch-Leven," says a statistical writer, "is popularly believed to be mysteriously connected with the number eleven, being eleven miles round, surrounded by eleven hills, fed by eleven streams, peopled by eleven kinds of fish, and studded by eleven islands. But some of these properties seem quite fanciful; others are untrue." The chief islands in the lake are only two in number; the island opposite Kinross, on which the ruins of the castle stand, and the Inch of Loch-Leven, or St. Serf's isle, near the east end, on which are the remains of a religious house. This religious house, it is alleged, must have been originally erected here upwards of a thousand years ago; but only a trifling fragment of the ruins is now left. A few sheep and cattle, which feed upon its grassy surface, are now the only inhabitants of St. Serf's isle; but something has been done of late to improve the appearance of these islets, by transporting soil to them, and planting a few trees on them. The island on which the ruins of the castle stand is about 2 acres in extent; and here, it is said, a fortress was first built by Congal, the son of Dongart, king of the Picts. "In the wars which harassed Scotland, during the minority of David II., the castle of Loch-Leven was held in the patriotic interest by Allen de Vipont, against the troops of Edward III., who acted in behalf of Edward Baliol. John de Strivilin blockaded it, erected a fortress in the churchyard of Kinross, which occupies the point of a neighbouring promontory; and, at the lower end of the lake, where the water of Leven issues out of it, it is said, that he raised a strong and lofty hulwark, by means of which he hoped to lay the castle under water, and constrain Vipont to surrender. The water continued to rise daily, and the besiegers thought themselves certain of success, when, the English general and most of his troops having left the camp to celebrate the festival of St. Margaret at Dunfermline, the besieged, seizing the favourable opportunity, (June 19, 1335,) after much labour and perseverance, broke through the barrier, when the water rushed out with such impetuosity, as to overwhelm the English encamped on that side." Loch-Leven, however, derives its chief historical interest from the fact of its castle having been the prison of Queen Mary, after her surrender to the confederated Lords at Carberry hill. In the reign of Robert III., a branch of the family of Douglas, had obtained a grant of the castle of Loch-Leven, with lands on the shore of the lake. In the middle of the 16th century, Sir Robert Douglas of Loch-Leven, the near kinsman of the famous

James Earl of Morton, and stepfather to the equally well-known James Earl of Murray, natural brother to the Queen, was, in consequence of his connexion with the leaders of her disaffected subjects, selected as the jailer of the unfortunate Mary, who was imprisoned here on the 16th June, 1567. Here, on the 4th July following, she was visited by Lord Ruthven, Lord Lindsay of the Byres, and Sir Robert Melville, in name of the confederated lords, by whom she was forced to sign an instrument, resigning the crown to her infant son, who, a few days thereafter, was inaugurated at Stirling under the title of James VI. The scene which then occurred, as well as the subsequent escape of the Queen, have been made leading incidents, by Sir Walter Scott, in his novel of 'The Abbot'; and few descriptions in fictitious narrative can be compared, for graphic delineation and intense pathos, with his account of the unhappy lady's resignation of the crown of her fathers. The leading features of his picture are, no doubt, historically true; but the filling up is entirely the work of his own creative fancy. Who that has read this narrative, and looks upon the ruins of the castle of Loch-Leven, can fail to recollect this admirable piece of historical painting—for so we are entitled to call it: the tears of the defenceless Queen, the determination of Ruthven, and the stern rudeness of old Lindsay of the Byres? On the 2d of May, 1568, after an imprisonment of about eleven months, Mary effected her escape from the castle, by the aid of a young relation of the family. A previous attempt, made on the 25th of April preceding, had been discovered, and George Douglas, the younger son of Sir Robert, was expelled the castle for being concerned in it. Nothing daunted, however, she still meditated her escape; and George Douglas, continuing to hover in the neighbourhood, was enabled to keep up a correspondence with her, and with others in the castle. "There was in the castle," says Sir Walter Scott in a note to 'The Abbot,' "a lad, named William Douglas, some relation probably of the haron, and about eighteen years old. This youth proved as accessible to Queen Mary's prayers and promises as the brother of his patron George Douglas." This young man stole the keys of the castle from the table where they lay, while his lord was at supper. "He let the Queen and a waiting-woman out of the apartment where they were secured, and out of the door itself, embarked with them in a small skiff, and rowed them to the shore. To prevent instant pursuit, he, for precaution's sake, locked the iron grated door of the tower, and threw the keys into the lake.\* They found George Douglas and the Queen's servant, Beaton, waiting for them, and Lord Seyton and James Hamilton of Orhieston in attendance, at the head of a party of faithful followers, with whom they fled to Niddrie castle, and from thence to Hamilton." Tradition still points out the spot on the south side of the lake where Queen Mary landed: it is at some distance from Kinross, in which town her opponents were quartered. Her subsequent defeat at Langside, and her immediate flight into England, were within a few days, the unfortunate result of her long-meditated, and well-executed escape from Loch-Leven.†

\* A bunch of large keys, supposed to be those thrown into the lake on this occasion, were discovered in the month of October, 1805, on the sandy shore of the lake, near Kinross-house. Another bunch of eight ancient keys were found, a few years ago, in the bed of the lake, between the old churchyard of Kinross, and a small island about half-a-mile from the castle.

† Queen Mary was not the only prisoner of eminence who had been confined in this castle. The Earl of Northumberland, after his rebellion in England, having been seized in Scotland, was confined in it for three years, from 1569 to 1572, when he was basely given up to Elizabeth, by whom he was executed.

The castle of Loch-Leven with its court-yard occupied a considerable portion of the island: the remaining portion was chiefly occupied by the garden. It is now a mere waste, but it still exhibits a few fruit trees in a wild and decayed state. The court-yard, formerly rank with nettles and hemlock, was cleared out in the summer of 1840, and the accumulated soil removed from different parts of the buildings. The great tower, or keep, of the castle, stood in the north-west corner of the court-yard, on the side of the island next Kinross. It is of a square form, four stories in height, the walls being upwards of six feet thick. The entrance is in the second story, and must have been ascended to by an outside stair, having probably a drawbridge at top; but all vestiges of this stair have now disappeared. The door opened at once into the great hall of the castle, which occupied the whole of the second flat of the building. Immediately within the door-way, and at the entrance to the hall, is a square opening into the vaults below, which must have been covered with wood. The intention of this seems obviously to have been an additional means of defence; because, though after all the outworks had been gained by the enemy, and the defences to the door of the keep forced, the garrison, occupying the hall, could have thrown down this opening any of the assailants who might attempt to cross it. The two upper stories of the keep appear to have been occupied as bedchambers. The court-yard, which was of considerable extent, and surrounded by high walls flanked at the corners by towers, contained a variety of buildings for the accommodation of the family and the garrison. Among these, not the least important was the chapel, which stood west of the great tower, and on the west side of the court-yard. At the south-east corner is a round tower which flanks and must have defended the south and east walls, in which it is said Queen Mary was confined. Of course, there is only the authority of tradition for this; but if it was the case, the poor lady had but small accommodation during her imprisonment. The entrance to the court-yard was by an arched door-way in the north wall, immediately adjoining the great tower, by which it was consequently entirely commanded. The island on which the castle stands, is at no great distance from the western shore of the lake; and between it and the point of a promontory on that side, a causeway of large stones runs beneath the water, which is here so shallow, that, in dry seasons when the surface is low, a man can wade along this extraordinary pavement. How such a work was executed, or for what purpose, it is not easy to discover. The trout produced in Loch-Leven are of acknowledged excellence. The following remarks regarding this fish are from the Statistical report:—"The high flavour and bright red colour of the trout, seem evidently to arise from the food which nature has provided for them in the loch. A considerable part of the bottom is oozy and spongy, from which aquatic herbs spring up in abundance; and so vigorous are they in many parts as, towards the beginning of autumn, to cover the surface with their flowers. The trouts, especially when large, lie much in that kind of bottom; and gentlemen accustomed to make observations in angling, know well that, even in clear running rivers, where their course takes a direction through a long tract of meadow or oozy ground, the trout which feed on that ground, if of size, are generally more or less of a pink colour in the flesh. But what appears to contribute most to the rich taste of Loch-Leven trout, is the vast quantity of a small shell-fish, red in its colour, which abounds all over the bottom of the lake, especially among the

aquatic weeds. The trouts, when caught, have often their stomachs full of them. These observations may account for a phenomenon of another kind. In Loch-Leven are all the different species of hill, or burn, or river-trout, that are to be met with in Scotland, evidently appearing from the different manner in which they are spotted. Yet all these different kinds, after being two years in the loch, and arriving at three quarters or a pound weight, are red in the flesh, as all the trout of every kind in the loch are, except, perhaps, those newly brought down by floods, and such as are sickly. The silver grey trout, with about four or five spots on the middle of each side, is apparently the original native of the loch, and, in many respects, the finest fish of the whole." The fishing is alleged to have been considerably injured by a partial draining of the loch which has been effected at an enormous expense, but with a disproportionate beneficial result—the value of the land reclaimed amounting to little more than the cost of the works. The height of the loch being considerably reduced, it was feared at one time that the small island containing the castle, would become joined to the main land by the subsiding of the water, and would lose its classic associations by becoming a suburb of Kinross. The appearance of the island, by being raised higher out of the loch than before, is, however, much improved, while the dark and massy ruins of the castle still frown over the silvery waters of the lake as in days of yore.—The annual average rise and fall on the loch is about 3 feet; but in the autumn of 1839 it rose 15 inches within 48 hours.

LEVEN (THE), a river in Fifeshire, which issues from the south-east end of Loch-Leven, and, after a course almost due east of about 12 or 14 miles, falls into the sea at the town of Leven. It is joined by the Lothry a short way below Leslie-house, and by the Orr half-a-mile above Cameron-bridge. The Leven is a pure and limpid stream, whose waters are peculiarly adapted to the purposes of bleaching and paper-making. Its current is very rapid, having a fall of no less than 310 feet in the above distance.

LEVEN (THE), a beautiful though brief river of Dumhartshire, carrying off the tributary and superfluous waters of Loch-Lomond, from the foot of that lake at Balloch, to the Clyde at Dumharton-castle. Notice of most particulars connected with it has been taken in the article BONHILL: which see. During the first half of its course, it bisects the parish of Bonhill; and, during the second half, it divides that parish and Dumharton on the east from Cardross on the west. Owing to the purity of its water, its banks are dotted with print-works and kindred manufactories. The vale along which it flows is exquisitely beautiful, and teems with population. On its banks are the large villages of Alexandria, Bonhill, and Renton, and the burgh of Dumharton, with its suburb of Bridgend. Mr. Galbraith has calculated the quantity of water discharged by the Leven to be about 59,939 cubic feet per minute, when the river is rather below its average height; or 877,925,685 tons per annum.

LEVEN (LOCH), an arm of the sea, on the west coast of the Highlands, protruded a length of 12 or 13 miles inland, from Loch-Linnhe; and separating the county of Argyle on the south, from Invernessshire on the north. On the Argyleshire side is BALAHULISH, with its slate-quarries, and in the vicinity is the famed vale of GLENCOE: see these articles. A small river called the Leven, the issue of a series of small lakes farther to the east, flows into it at the head. Macculloch says—"It is with justice that Glencoe is celebrated as one of the wildest and most romantic specimens of Scottish scenery; but those who have written about Glencoe, forget to

*John & Son & Co. Ltd.*

PRINTED BY

write about Loch-Leven, and those who occupy a clay in wandering from the inns at Balahulish through its strange and rocky valley, forget to open their eyes upon those beautiful landscapes which surround them on all sides, and which render Loch-Leven a spot that Scotland does not often exceed, either in its interior lakes or its maritime inlets. From its mouth to its furthest extremity—a distance of 12 miles—this loch is one continued succession of landscapes on both sides, the northern shore being accessible by the ancient road which crosses the Devil's Staircase; but the southern one turning away from the water near to the quarries. The chief beauties, however, lie at the lower half; the interest of the scenes diminishing after passing the contraction which takes place near the entrance of Glencoe; and the furthest extremity being rather wild than beautiful."

**LEVEN-SEAT**, a mountain in the parish of Carnwath, in Lanarkshire, 1,200 feet above the level of the Clyde.

**LEVERN (THE)**, also written Lavern and Laveran, a small river in Renfrewshire, which has its source in the Long-loch, a lake in the parish of Neilston. Taking a north-easterly course, it passes the villages of Neilston, Barrhead, and Hurlet, and receives other two rivulets, called the Kirkton and the Brock, and finally falls into the White Cart, near Crookston-castle, about 3 miles south-east of Paisley. It exhibits various scenes of sequestered and even romantic beauty. Before reaching the level ground, its velocity is very considerable, and there are several waterfalls which may justify the derivation of the name from the Celtic words *laver-an*, signifying 'the noisy stream.' The cascades in Killoch-glen form a miniature resemblance of the three celebrated falls on the Clyde. On the banks of the Lavern are six cotton-mills, four printfields, three bleachfields, and other works, giving employment to a great number of people. It appears from the privy seal register, under date 3d December, 1553, that the noble family of Sempell, besides being heritable sheriffs of Renfrewshire, held the offices of coroner and mayor in the bounds betwixt this river and the Black Cart. The English chronicler, Ailred or Ethelred, incorrectly called Aldred, when mentioning the clans who composed the numerous army of David I. at the battle of the Standard, in 1138, says that the men of Lothian, with the islanders and the Lavernani, formed the third line. (Tertium cuneum, Laodenenses, cum Insulanis et Lavernanis, fecerunt.) But who were the Lavernani? To this puzzling question, George Chalmers, in his Account of Renfrewshire, confidently declares, "The answer must be,—the men of Lavernside, one of the finest streams in this country, which, after many a circle, joins the White Cart below Paisley, near Crookston-castle."\* This answer, although accepted by subsequent writers as sufficient, we are disposed to consider unsatisfactory. The Lavern is an inconsiderable stream, which runs a course of only about 10 miles; and it is very improbable that, in the year 1138, when the small district it traverses was thinly peopled, and overrun with wood, there could have gone from thence so many fighting men as would form a division of an army so large as the Scottish host at the battle of the Standard. Even at the present day, when the district teems with inhabitants, the supposition would be improbable. In short, the conclusion arrived at by Chalmers appears to have been founded merely on the similarity of words, and it is manifest that he was unacquainted with this quarter of the country; for he twice over states that the junction of the Lavern with the

White Cart is *below* Paisley, instead of *above* it.† We are inclined to concur with the judicious Hailes, who says, "I prefer the opinion of those who observe that the people of Lorn are here understood. In the Gaelic language they are called *Labhern*, pronounced *Lavern*. This word, extended by a Latin termination, might naturally enough have produced *Lovernanus*, *Lavernani*."‡ In support of this opinion, we would add, that Lorn was an extensive and warlike region, and that soldiers from it were more likely to be mentioned by name, and to be ranged with the men of the isles, than the few that the district now treated of could have sent forth to battle.

**LEVERN**, a *quoad sacra* parish in Renfrewshire, traversed by the above river, from which it received its name. It was formed in 1834 by authority of the presbytery, from the south-east part of the Abbey parish of Paisley, and, to a small extent, from the parishes of Eastwood and Neilston. The extent of the parish is 2,275 acres; greatest length 3 miles; greatest breadth 2½ miles. It is chiefly landward. There are several small villages or hamlets. According to a survey taken by the minister, assisted by an elder, in 1837, the population then consisted of 1,373 churchmen, 392 dissenters, and 10 persons not known to belong to any denomination,—in all 1,775. Of these there were 144 resident in that portion of the parish which was disjoined from Eastwood, and 16 in that which was disjoined from Neilston. The parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patrons, the communicants. The church was built in 1834, and opened for public worship in 1835. Including session-house, gates, and porches, since added, the cost was £889 8s. 1d. Sittings 660. The stipend is liable to fluctuation. The minimum is £84; and there is a house and garden, whose annual value is £20.—A Wesleyan Methodist congregation was established in 1810. It assembles in the upper part of a building, which was erected in the same year, and cost £2,000. Sittings 650. The average amount of stipend is about £100. A furnished house is provided for the minister.

**LEWIS**,§ one of the largest of the Hebrides, parted by two arms of the sea into two divisions,—the southern, called Harris, and the northern, Lewis. The whole island is 82 miles long from the sound of Bernera to the Butt of Lewis, in a direction running south-west and north-east; and the average breadth may be 11 miles; superficies 451,000 acres. The total length of Lewis is 40 miles, from the boundary-line to the Butt; and its greatest breadth is rather more than 20. Lewis belongs to Ross-shire; but Harris is annexed to the county of Inverness: see **HARRIS**. The surface of Lewis—which is of a triangular figure, with the apex to the north—is not so rugged and mountainous as the southern district; and the low grounds are covered with lakes, mosses, and swamps. On the coast, the land is of a sandy soil, but is tolerably fertile when well-manured with sea-weed. The numerous bays of Lewis,—Loch-Bernera, Loch-Roig, Loch-Carlawa, with their subordinate indentations,—Loch-Luerhost, Loch-Renhulavig, Loch-Seaforth, and Loch-Clay, afford great quantities of shell-fish; and the coasts are well-adapted for the white fish and herring fisheries, which are prosecuted to advantage. The rocky cliffs which form the Butt, or northern extremity of Lewis, rise to the height of 60 or 80 feet, and are broken into very rugged and picturesque forms. The loftiest mountain is that of Suaneval, which Dr.

† Supra, and (same vol.) p. 581, note.

‡ Annals, vol. i. p. 75.

§ The etymology of this name is very doubtful. It is commonly used with the article, 'The Lewis.'

Macculloch supposes to be nearly equal in height to Clisseval in Harris, or about 2,700 feet. A group of hills, on the north side of Loch-Bernera, attain a height of about 800 feet. Gneiss is the predominant and fundamental rock. The rivers abound with trout and salmon. From the number of large roots of trees which are everywhere dug up, it would appear that, in former times, the island had been clothed with wood; but there is now scarce a tree to be seen, except in a small plantation of birch and hazel in the neighbourhood of Seaforth-house, the seat of Lord Seaforth. Every part of the island exhibits monuments of antiquity, as duns, fortified castles, Druidical edifices, cairns, and upright stones. The most remarkable one, which appears to have been subservient to the religious rites of the Druids, is near the small village of Calarnish, in the parish of Uig; see UIG. Besides the town of STORNOWAY [which see] there are several small villages. The chief employment of the inhabitants is the rearing of sheep and black cattle, and the fishery. Lewis is divided into four parishes; viz., BARVAS, LOCHS, STORNOWAY, and UIG; see these articles. A number of small adjacent islets and rocks belong to the district of Lewis, some of which are inhabited, but the greater number are too trivial to deserve particular notice.—Population, in 1801, 9,168; in 1831, 14,541. Houses 2,904.

The reports of the Glenkens society state, that the huts of the peasantry of Lewis "are, in general, indescribably filthy. There is only an annual sweeping of their houses. The people and cattle are under the same roof, and on the same area. Very few of the country dwellings have a single pane of glass. There is one hole in the roof to allow the excess of smoke to escape, and another on the top of the wall; the latter at night, or during a storm through the day, being stopped with a wisp. Wood is so scarce and so dear that it cannot be had in sufficient quantity to make a good roof. The roofs have no eaves. The thatch in general is made of stubble or potato-stalks, which are spread on the scanty wooden roof, and bound by heather or straw ropes, which again are at each side of the roof fastened by stones, called anchors, resting on the top of the broad wall. On this wall it is no unusual sight to see sheep and calves feeding, and making a short passage into the byre through the roof! The doors of the houses are so low, that whoever would gain admittance must humbly himself, and continue in that posture till he reach the fire, which is always in the middle of the floor, and very often he must grope his way, or he led by the band. From the slightness of the wooden rafters, much straw or stubble cannot be laid for thatch, but just sufficient to exclude the daylight. The thatch is not expected at first to keep out much rain until it is properly saturated with soot; hut to compensate for this defect, the inmates are practical chemists; they keep plenty of peats on the fire; the interior is soon filled with smoke; the smoke and increasing heat repel the rain, for a great proportion of what falls on the roof is returned to the atmosphere by evaporation. These houses, after a smart shower, appear like so many salt-pans or brew-houses in operation." This account is said to apply very generally to the habitations of the whole of the small farmers. Good management of any kind is not to be expected from people whose domestic habits are so barbarous. They depend upon the produce of the place for almost every thing. Even their clothing is almost exclusively of their own manufacture. Their time, when occupied at all, is "devoted indiscriminately to the mixed avocations of husbandry, fishing, kelp-making, grazing," &c. Their agriculture is wretched. "The women are miserable slaves;

they do the work of brutes, carry the manure in creels on their backs from the byre to the field, and use their fingers as a five-pronged grape to fill them. The thatch of the houses saturated by the smoke with sooty particles is considered valuable, for every summer the roof is stripped, and the inner layer of straw, which contains the soot, is carried carefully to the potato or barley field, and strewed on the crop. Small tenants and cottars generally till the ground by the Chinese plough of one stilt or handle, and the cas-chrom, a clumsy instrument like a large club shod with iron at the point, and a pin at the angle for the labourer's foot. It is a disgrace to see women working with it. No sickle is used for the harley among the small tenants: the stalk is plucked, the ground is left bare." The return is very scanty in some places, occasionally insufficient for the consumption of the population. It can excite no surprise that, with all these discomforts, the inhabitants of the Lewis, in the opinion of a medical man resident on the spot, "may be said to die at an early age." Still they are deeply attached to the land of their birth; a great proportion of them are altogether uneducated; and it is said that the people of Barvas even keep their children from school, lest, being thus made acquainted with better countries, they should be induced to leave their own inhospitable home.—Macculloch made here a discovery of a race of people entirely different from the ordinary Highlanders. We shall allow him to tell the circumstance in his own words:—"At the Butt, which forms the northern headland, we found many boats employed in fishing; and their whole style appeared so new, that we lay to for the purpose of bringing one of them alongside. They were manned by nine men, having eight rowers in double banks,—a practice nowhere else in this country. We found them a lively, good-humoured people, totally unlike, in manners as well as persons, to their neighbours. They present an interesting singularity in the population of these islands, being of pure Danish origin, although speaking unmixed Gaelic, as our seamen assured us. It would not have been easy to mistake them for Highlanders; as they resembled exactly the people whom we had every day met manning the northern timber-freighted ships. Fat and fair, with the ruddy complexions and the blue eyes of their race, their manners appeared peculiarly mild and pleasing, although their aspect seemed, at first sight, rude enough; their hair being matted, as if from their birth it had never been profaned by comb or scissors; and their dress being of woollen only, with conical caps, and without handkerchief or vestige of linen. We found, on subsequent inquiry, that they constituted an independent colony, if it may so be called; scarcely mixing with their neighbours, and never indeed but when brought unavoidably into contact with them, as at markets: the other inhabitants, in return, considering them in the light of foreigners, and maintaining no voluntary communication with them. They were, however, well-spoken of, as acute and intelligent, and as being very industrious fishermen. They possess this green northern extremity of the island in joint tenantry; and their agriculture appeared to be carried on in the same slovenly manner that it usually is upon this system. Judging from their aspect, however, we considered them as much better fed than their neighbours, and understood that they only fished for their own consumption. The existence of a detachment of the original Northmen who so long possessed a large share in these islands, in a state of such purity, and of a separation which is almost hostile, appears a remarkable circumstance; but it is, perhaps, more remarkable that it should be the

case nowhere else, and that the breed should, throughout all the rest of the islands, have so completely coalesced with the native Celts. Even in Shetland and Orkney, where a separate northern breed might have been more naturally expected, nothing of this kind occurs, nor do the natives of these islands present, by any means, such distinct traces of a Scandinavian origin as this little community. The characteristic circumstance of the matted hair, is peculiar to these few individuals, yet scrupulously preserved; and it must have descended, with them, from the most ancient times. That the whole of this island, or at least the greater part, was originally Norwegian, is not improbable; and Macleod, to whom, as chief, it belonged, was unquestionably of northern descent."

LEYS. See BANCHORY-TERNAN.

LHANBRYD, or ST. ANDREW'S LHANBRYD, a parish in Morayshire; bounded on the north by the Moray frith; on the east by Urquhart; on the south by Elgin; and on the west by Drainy, from which it is separated by the Lossie. Its length, from east to south, is upwards of 4 miles: breadth, from east to west, about 3 miles. Houses 211. Assessed property, in 1815, £1,826. Population, in 1801, 799; in 1831, 1,087.—This parish forms a plain diversified with low hills. The soil is sandy, but in general fertile; 4,000 acres of the land are under cultivation, and about 700 are under wood. The partial drainage of Spynie-loch, which lies on the confines of this parish, has been noticed under article DRAINY: which see. There are an extensive distillery here, and two other manufactories, in one of which wool is converted into blankets, flannel, &c.: at Newmill there is a cast-iron foundry. There is a Druidical monument in this parish nearly entire: another has been latterly destroyed.—The parish is in the presbytery of Elgin, and synod of Moray. Patrons, the Crown and the Earl of Moray. Stipend £206 19s.; value of glebe not stated. Schoolmaster's salary £27 15s. 6d., bequeathed by an ancestor of the family of Fife, besides other resources, amounting, in all, nearly to the maximum allowed by 43° Geo. III. cap. 54: fees £10 per annum. There is a private academy at Calcots. The Rev. William Leslie, author of a Survey of the Province of Moray, &c. was minister of this parish. He died in April, 1839, at an advanced age.

LIBBERTON, a parish in the upper ward of Lanarkshire, including the old parish of Quothquan, or Quodquam, which was annexed to it in 1669. It is bounded by Carnwath on the north; Symington and Biggar on the south; Biggar and Walston on the east; and Covington and Pittenain on the west. Its form is very irregular; it extends about 7 miles in length,  $4\frac{1}{2}$  miles in breadth, and contains about 14 square miles, or 8,700 imperial acres. The face of the country exhibits considerable diversity in appearance. The western division along the banks of Clyde, presents an extensive stretch of haughs or fertile soil, which are frequently overflowed by the inundations of that river. As the land recedes from the Clyde towards the eastern side of the parish, it becomes elevated, the grain later in ripening, and less productive. The parish is both pastoral and agricultural, and in all there may be about 500 acres of plantation scattered here and there over its surface. In addition to the Clyde, the parish is watered by the North and South Medwins, which form a junction here, before they discharge their waters into the larger river. It is worthy of note that a small branch of the South Medwin, instead of running to the west, like the parent-stream, flows off to the eastward, divides at Dolphinton, the counties of Lanark and Peebles, and then falls into the Tweed.

The only hill or mountain in the parish which deserves notice is Couthboun-Law or Quothquan-Law, which rises 600 feet above the level of the Clyde, is green and verdant to the very summit, and forms altogether a most beautiful feature in the landscape. Upon this hill is shown a large rough stone, hollowed out in the middle, which is dignified with the name of Wallace's chair, from the popular tradition which exists in the country, and which the people dwell on with fond delight, that the patriot warrior was at one time located here, and held conferences with his band before the battle of Biggar. According to Blind Harry, Sir Thomas Gray, a priest, who attended Wallace, and assisted in recording his patriotic actions, was parson of Libberton. This honour has been claimed for the parish of Liberton in Mid-Lothian; but it is well known that Clydesdale is the principal scene of the deeds of daring of this heroic man. The only public road in the parish is that between Glasgow and Peebles, which traverses it about a mile, and the parish roads are not generally in the best order. Carnwath is the post-town and nearest market; it is fully 2 miles from the church of Libberton. There are no valuable minerals, the coal which is used being principally conveyed from Douglas or Carnwath, at a distance of from 8 to 11 miles from the respective portions of the parish. Population, in 1811, 749; in 1821, 785; in 1831, 773; and in 1841, 790, with 175 inhabited houses. Assessed property, £3,790.—Libberton is situated in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patron, Sir Norman Macdonald Lockhart of Lee and Carnwath. The church was built in 1812 for 450 sitters, which is quite sufficient for the wants of the parish. Stipend £226 3s. 1d.; glebe £16.—The ordinary branches of education are taught in the parish. The salary of the parochial master is £30 per annum, with about £20 of school-fees, and other emoluments, consisting of session-clerkship, &c. There is also a school at Quothquan, supported by a small mortification, and the school-fees. There are attached a free dwelling-house and school-room. The principal proprietors in the parish are Sir N. McDonald Lockhart, and Mr. Chancellor of Shieldhill and Quothquan. This portion of the Lockhart estates was sold by the 4th Earl of Carnwath, in 1676, to Sir George Lockhart, afterwards President of the Court-of-session, who was assassinated in March 1689, and they have remained in the family ever since. The lands of Quothquan and Shieldhill have, however, been in possession of the Chancellor family for more than 400 years, a charter being still extant containing a grant of them by Lord Sommerville to the ancestor of the Chancellor family. The proprietor of the estate in the time of Queen Mary took part with that fair and unfortunate princess, and was engaged at the battle of Langside, in consequence of which his mansion-house at Quothquan was soon afterwards burned down by the adherents of the victorious Regent Murray. The residence was then removed to Shieldhill, its present site. The parishioners of Libberton were amongst those who zealously took part in the resistance to Episcopacy in the time of Charles II., and in Wodrow's history it is stated that the parish of Libberton was fined £252 8s. Scots, and Quothquan £182 16s. Scots, for nonconformity. James Chancellor of Shieldhill was imprisoned after the battle of Bothwell bridge, on the charge of having harboured some of the fugitive insurgents, but he was soon thereafter liberated for lack of proof. There are some obscure remains of a camp or fortification in the parish, believed to be of Pictish origin.

LIBBERTON, a parish in Edinburghshire, stretch-

ing from near the eastern termination of the Pentland hills to within a few yards of the frith of Forth at Magdalene bridge, and from the immediate vicinity of Edinburgh to within a mile of Dalkeith. It consists of a main body, not far from being square, presenting angles nearly to the cardinal points of the compass, and measuring about  $2\frac{1}{2}$  or 3 miles deep; and of two angular projections from its north corner,—one, half-a-mile broad at its base, running  $\frac{3}{4}$  of a mile north-north-westward to Salishury Green,—and the other,  $1\frac{1}{4}$  broad at its base, running 3 miles north-eastward to the vicinity of the frith of Forth. Its area is variously computed to contain 4,140 and upwards of 4,700 acres. It is bounded on the north-west by St. Cuthbert's; on the north by Duddingston; on the east by Inveresk, Newton, and Dalkeith; on the south by Lassvade; and on the west by Colinton. The parish is one of the richest and most beautiful in the Lothians. Its surface is exquisitely diversified, with low broad ridges, gentle rising grounds, undulating swells, and intermediate plains, nowhere attaining sufficient elevation to be called a hill, nor anywhere subsiding long from the constant and ever-varying curve of heauty. The Braid hills and the Blackford hills send down their cultivated eastern slopes within the western limits. As to relative position, the parish lies in the very core of the rich hanging plain or northerly exposed lands of Mid-Lothian, and commands from its mild heights prospects the most sumptuous of the urban landscape and romantic hills of the metropolis, the dark form and waving outline of the Pentland hills and their spurs, the minutely featured scenery of the exulting Lothians, the frith of Forth, the clear coast-line and white-washed towns and distant hills of Fife, and the blue bold sky-line of mountain-ranges away in the far perspective. The parish itself has a thousand attractions, and is dressed out in neatness of enclosures, profusion of garden-grounds, opulence of cultivation, elegance or tidiness of mansion, village, and cottage, and husy stir and enterprise of population which indicate full consciousness of the immediate vicinity of the proudest metropolis in Europe. Two rivulets, though very inconsiderable in volume, diffuse vegetable wealth along their banks, and drive a surprisingly large number of mills. One of them, approaching from the west, runs first  $1\frac{1}{4}$  mile along the southern boundary, then  $4\frac{1}{2}$  miles north-eastward through the interior to Niddry Mains, and then  $1\frac{1}{2}$  mile along the northern boundary, to fall into the frith a few yards onward at Magdalene bridge. The other, Braid-hurn, runs across it on the north over a distance of only  $2\frac{1}{4}$  or  $2\frac{1}{2}$  miles, coming in from St. Cuthbert's, flowing past Netber Liberton, and passing away into Duddingston. The soil of the parish, though naturally poor and unkindly, has, in most parts, been improved by georgical appliances into a rich and very fertile loam, and is, in other places, but over comparatively a small extent, either a thin wet clay or a dry gravel. Hardly an acre of waste ground exists, and where the soil continues to be inferior, skill and labour are rapidly enriching it; and owing to the vicinity of Edinburgh, the prevailing good land pays exceedingly high rents. Nearly six-sevenths of the whole area are constantly subjected to the plough, and the rest is disposed in gardens, sbruhherics, wood, and grass. Mines of great value, of various produce, and of considerable antiquity, exist at GILMERTON and BURDIEHOUSE: See these articles. Quarries of prime sandstone for building exist at Straiton, Craigmillar, and Niddry. At St. Catherine's, a mile south of Kirk-Liberton village, is a bituminous spring, anciently called the Balm well, which partly holds mineral oil or petroleum in solution, and partly throws it up in numer-

ous little masses to the surface. The well was, in popish days, made a convenient tool of priestcraft, figured in monkish legends and popular credulity as an object of miraculous origin, had an annual procession made to it by a body of nuns in honour of St. Catherine, was honoured with the visit and some special attentions of James VI., and enjoyed the fame—founded probably on some instances of real utility—of having high, perhaps supernatural, power over certain diseases. Close on the western extremity of the parish, is the hill of Galachlaw, famous as the site of Oliver Cromwell's encampment, in 1650, with a force of 16,000, previous to the battle of Dunbar. A little east of it, at Mortonhall, are some tumuli, supposed to have been of Roman origin. Borough-muir, a place repeatedly made prominent in the warlike history of Scotland and its metropolis, is within the parish. In the demesne of Drum, the ancient residence of the family of Somerville, stands part of the old market-cross of Edinburgh, removed thither in 1756. But the grand civil antiquity of the parish is CRAIGMILLAR CASTLE: which see. Besides Mortonhall and Drum, there are the mansions of Inch House, built in 1617,—Brunstane, built by Lord Lauderdale in 1639,—Niddry, an ancient haronial edifice, modernized and extended by a recent addition,—Southfield,—More-dun,—St. Catherine's,—Mount Vernon,—Sunnyside,—and several villas. At eight of these are large, beautiful, and very fructiferous gardens; and at Niddry and More-dun are very splendid holly hedges, of great height and density, and of massive and imposing aspect. The villages of GILMERTON, BURDIEHOUSE, and NIDDRY, are separately noticed. Kirk-Liberton, the site of the parish-church, and a neat small village, stands on the summit of a low broad-based ridge,  $2\frac{3}{4}$  miles from the Tron church of Edinburgh. Nether Liberton,  $\frac{3}{4}$  of a mile nearer Edinburgh, is only a small hamlet. About 15 other villages and hamlets are in the parish, but possess importance only in the aggregate. The parish is traversed across its main body by four of the great lines of turnpike which diverge from the metropolis, and across its eastern projection by the Edinburgh and Dalkeith railway. Population, in 1801, 3,565; in 1831, 4,063. Houses 865. Assessed property, in 1815, £28,904.
